The following simple method of transferring prints to wood, etc., was lately described in "Camera Craft." The piece of wood (or metal) is well polished where the print is to be placed and a coat of copal varnish given the surface. Before this is entirely dry, the print which has previously been given a bath in weak formalin, is placed face downward in the desired position and well rubbed into contact. Allowing the varnish to become thoroughly dry the print is well wet with water, and gentle rubbing entirely removes the paper, leaving the film containing the picture firmly attached to the wood. Another coat of varnish completes the process. The prints are made on Giant Aristo paper and are of course reversed. This can be avoided if the negative be a film, as it can be printed from the reverse side. The results are most pleasing, and prints so transferred ought to prove very effective in combination with the now so popular burnt wood work.

The Letter-Box

Ralph B. Deal: If you could see the pile of photographs we receive every month, you would not ask us to enter into their comparative merits. R. W. Chamberlain: To make blue-print paper a simple formula is: Citrate of iron and ammonia 1 ounce, water 4 ounces, Label this: Solution No. 1. Bolution No. 2 should consist of: Red prussiate of potash 1 ounce and water 4 ounces. Both solutions must be kept in glass-stoppered bottles, in a dark place. Care should be taken in handling Solution No. 2, as the ferricyanide of potassium it contains is a deadly poison. Mix equal parts of whatever quantity may be needed to cover the paper; an ounce altogether will probably be sufficient. Apply the mixture rapidly to unglazed paper (having first dampened the sheet) with a brush or sponge, putting on merely sufficient to tint the paper and avoiding streaks. The color is then a pale greenish yellow. Of course this work should be done in a dark-room or away from bright light When the paper dries, it is ready for printing. We believe, on the whole, you will find

"A SUNBONNET BABY" Photo by Howard Bartlett, Qeonomowoc, Wis-

it just as economical to buy your blue-print paper. J. E. Guest: Why not try both the Special and Regular and see which yields the best resuit? We cannot give you any further information in regard to the subject mentioned at the close of your letter. Harvey Offner: If you were going to produce photographs for sale, it would be advisable to buy a 5s7 camera; at any rate do not get anything smaller than a 4x5. Good work in photography, as in everything else always pays. Plates are preferable for a beginner. Geo. C. Ogle: Apparently your trouble is due to the lack of density of the negative. L. Culver. Photographs may be entered at any time.

#### What Makes the Sky Blue?

The sky has long been a puzzle to physicists. There are two mysteries to explain about it—its reflection of light and its color. The old view was that the blue of the sky was due simply to atmospheric oxygen. Oxygen has a faint blue tint, and the sky was due simply to atmospheric oxygen. Oxygen has a faint blue tint, and the idea was that several miles of the gas, even when diluted as it is in the air, would have a bright blue color. But this did not account for the intense illumination of the sky, and of recent years Tyndall's "dust theory," or some modification of it, has been generally accepted. This regards the blue color as an optical effect, like the color of very thin smoke, due to excessively fine particles floating in the air, which would also account for the large proportion of reflected light from the sky. Recent calculations by Professor Spring, of Liege, Belgium, however, indicate that the dust in the air is not sufficient in amount, nor finely enough divided, to support this explanation, and he rejects it for this and other reasons. He has gone back to the old oxygen theory and accounts for the general illumination of the sky on the hypothesis, first advanced by Hagenbach, that intermingled layers of different density, in the atmosphere, give it the power of reflecting light.—"Success Magazine."

# The Boy Mechanic and Electrician III

A Permanent Department

Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns.

Edited by Robt. G. Griswold

# Experimental Lessons In

periment.

Long before the discovery of electricity the ancient Greeks knew of small, black stones found in Magnesia, of Asia city the ancient Greeks knew of small, black stones found in Magnesia, of Asia Minor, that possessed this property of attracting to them small pieces of iron. It was at that time thought to be a magic property, as scientific learning had not advanced very far. Then about the twelfth century it was discovered that they also possessed the very remarkable property of pointing towards the north when suspended by a fine thread. They soon turned this property to account in navigation, and, as soon as they learned to rely upon its actions they began to push out upon the high seas with greater boldness. Owing to the fact that this stone would always point in one direction, no matter how many times it was disturbed, they called it a "leading stone," and this name has since been corrupted to "lodestone," a term that we now hear applied to the little keeper that is supplied with all horseshoe magnets. This natural magnet is one of the many ores of iron, and its technical name is "magnetite."

But if we were to take a piece of hard steel, such as a knife blade, and stroke it several times in the same direction with one of the natural magnets, we would find that the blade now possessed a new property that it had not had before; it would be a magnet itself and would pick up small bits of iron or steel, the same as the lodestone had done. But there has been no apparent loss of

the same as the lodestone had done. But there has been no apparent loss of

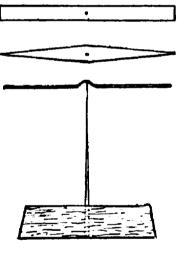

Fig 1.

strength on the part of the lodestone by imparting this magnetic property to the blade, and this is one of the most interesting facts about a magnet—it will magnetize another bar of steel without apparently diminishing its own strength in the least.

If you live near a mineralogist, or a

dealer in minerals, secure a small speci-men of magnetic magnetite for experi-ments. You will also need a two or three-jnch horseshoe magnet, a few needles, a piece of a mainspring from a

three-inch horseshoe magnet, a few needles, a piece of a mainspring from a watch and some fine iron filings.

Experiment 15.—Sprinkle some iron filings on a sheet of paper and lay the piece of magnetite (or lodestone) in them. Then pick it up and notice how many of the filings adhere to it. And they do not adhere all over, but just at opposite ends, and 'ou cannot make them adhere at any other points, or at least in any great quantities. A few pieces may adhere here and there where a sharp point projects.

This is due to the fact that any magnetized hody, like a har, always shows this magnetic property most at two opposite ends or points, and these points are called the "poles" of the magnet, about which we will learn more later. The reason why the magnetism is stronger at these points than elsewhere will also be explained.

Experiment 16.—Now lay a large sew-

Experiment 16.—Now lay a large sewing needle in the pile of filings and notice that they do not adhere to it; it is not a magnet. But now stroke it with the lodestone in one direction only, returning the stone to the other end by the path indicated with a dotted line. Do the path indicated with a dotted line. In this ten or twelve times, and then place in the filings. When it is lifted from them great tufts of filings will adhere to the ends, just as they did to the stone. It has now become a magnet and retain its magnetism for a long

If you rub a piece of soft iron wire in the same manner you will see that it will not become a magnet, excepting for the time that the stone is in contact with it. Hardened steel is the only material that will retain its magnetism for any length of time, with the exception of the nat-ural magnet.

In investigating magnetic fields (a magnetic field is that space surrounding a magnet in which the magnetic influence acts) a magnetic needle is often

used. This is simply a piece of magnetized steel supported on a fine point as a pivot.

To make one, get a piece of old mainspring from a watchmaker and heat it to a cherry red. Then bury it in the ashes so that it will cool very slowly, and when cold, file it to the diamond shape shown in Fig. 1. It should not be over an inch in length. Mark the exact center and make a small dent with the end of a large needle, using care to see that it does not go completely through. Experimental Lessons In

Flectricity

Lesson II.

MAGNETISM.

OUBTLESS you have possessed at some time a small horseshoe magnet that has interested and amused you by the hour with its invisible force of atraction for small bits of iron or steel. And you have wondered how it could pick up the small objects, even though separated from them by a considerable space, and why it always chose objects of iron or steel and had no effect upon other substances.

This invisible force, called magnetism, is what we shall study about in this lesson. It is simply a piece of magnetized steel supported on a fine point as a pivot.

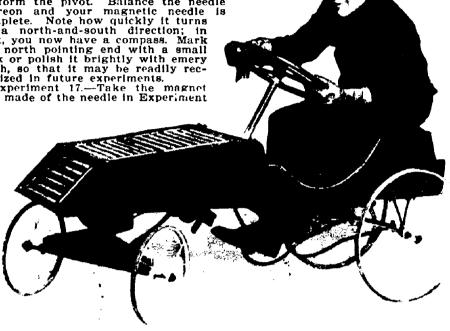

To make one, get a piece of old mainspring from a watchmaker and heat it to a cherry red. Then bury it in the ashes so that it will cool very slowly, and when cold, file it to the diamond shape shown in Fig. 1. It should not be over an inch in length. Mark the exact center and make a small dent with the end of a large needle, using care to see that it does not go completely through. Bend as shown and harden again by heating to a cherry red and dropping suddenly into ac up of cold water.

Now stroke it with a horseshoe magnetized water with the power of the forms of wood and drive a needle through it to form the pivot. Balance the needle is to form the pivot. Balance the needle is complete. Note how quickly it turns a current of electricity will always set to a north-and-south direction; in fact, you now have a compass. Mark the north pointing end with a small nick or polish it brightly with emery cloth, so that it may be readily rec-

over an inch in length. Mark the exact lible center and make a small dent with the end of a large needle, using care to see with that it does not go completely through. Bend as shown and harden again by heating to a cherry red and dropping suddenly into ac up of cold water.

Now stroke it with a horseshoe magnet several times, when it will become strongly magnetized. Make a small base of wood and drive a needle through it rms to form the pivot. Balance the needle thereon and your magnetic needle is complete. Note how quickly it turns set to a north-and-south direction; in fact, you now have a compass. Mark the north pointing end with a small nick or polish it brightly with emery cloth, so that it may be readily recomplication.

Experiment 17.—Take the magnet you made of the needle in Experiment

STANTON D. WILLARD AND HIS BOME-MADE AUTO

16, and present first one end to the ends of the compass needle and then the other. You will notice that when a certain end of the needle is brought near the polished end of the compass needle, it attracts it, and the other end will repel it. In fact, they are upon each other exactly the same as did the electrified pith balls in our first lesson.

If you were to make another compass needle supported as the first, and then bring the two north-pointing ends together, you would notice that they repelled each other and that the south-(Continued on page 226.)

The ends were then nailed in place and two places fifteen inches long cut from the two places affice in inches long cut from the two places affice in inches long cut from the two places iffteen inches long cut from the two places and the hood, one being nailed on securely and the other hinged to it, as shown in Fig. 8. A dash-hoard, shown by dotted lines B C, was then put in to close the end of the hood, a strip A being nailed across the top to meet the hinged lid.

In mounting the front axle I cut and shaped two places of the two by four scantling, as shown in Fig. 9. A hole for the bolt was hored through each with an augur. One of these places and the other inches long cut from the cover inches long cut from the welve-linch board to form the cover of the hood, one being nailed on securely and the other hinged to it, as shown in Fig. 8. A dash-hoard, shown in Fig. 8. A dash-hoard, shown in Fig. 9. A hole for the bolt was hored through each bring the form the well-repeal to the hood, one being nailed on securely and the other hinged to it, as shown in Fig. 8. A dash-hoard, shown in Fig. 8.

If you were to make another compass needle supported as the first, and then bring the two north-pointing ends together, you would notice that they repelled each other and that the south
(Continued on pape 226.)

How I Built My Auto-Wagon

By STANTON D. WILLARD

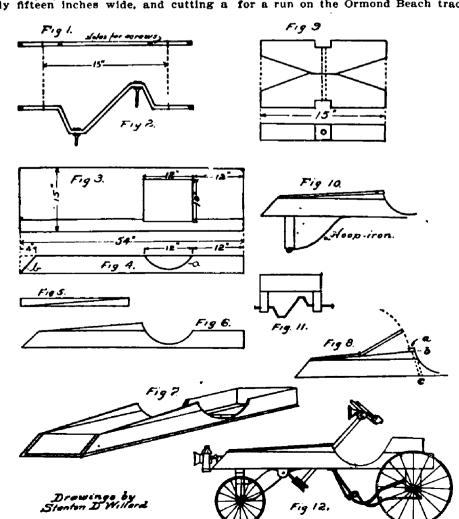

A AUTO-WAGON is four-and-a-half

In mounting the front axle I cut and shaped two pleces of the two by four scanling, as shown in Fig. 9. A hole for the bolt was hored through each with an augur. One of these pieces was fastened to the bottom of the body, and to the other was secured the square axle holes previously bored in them. A brace was made of hoop iron and secured to the bottom of the upper piece and the under side of the body, Fig. 10.

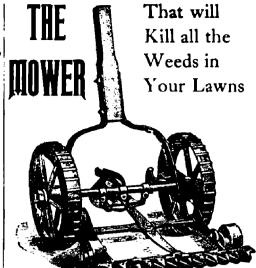

I had the iron bearings for the rear

Y AUTO-WAGONis four-and-a-half feet long by fifteen inches wide. I bought the axles; the wheels and rear axle, with pedals attached, as shown in Fig. 2, was taken from an old tricycle, while the front axle was simply a square rod, Fig. 1, the ends of which were turned to act as journals upon which the wheels revolved.

For the body, I purchased the following lumber: One board eight feet long, twelve inches wide and one inch thick; one board eighteen feet long, four inchs wide and one inch thick; and eight feet of two by four-inch scantling. The floor of the hody I made as in Fig. 3, by nailing together a twelve and a fourinch strip, planing the edges until exactly fifteen inches wide, and cutting a

# How to Make a Telephone Bismuth 5 parts, lead 3 parts, tin 2 parts, melts at 212°. Bismuth 2, lead 1, tin 1, melts at 200°. Bismuth 4, cadmium 1, lead 2, tin 1, melts at 165°.

By WILLIAM BUSHNELL STOUT

DID YOU EVER make a telephone?
"Oh, no," I hear you say; "that's too hard." It isn't, though, and I'm going to tell you how to make a telephone that will work for quite a distance, is easy to make, and will give you lots of fun.
The oddest kind of a telephone I ever saw the hove make was where they tied a

you lots of fun.

The oddest kind of a telephone I ever saw the boys make was where they tied a string between two cans picked up in the back yard; the strings running through holes in the bottom of the can and tied to shoebuttons inside.

You know if you take a tin can and talk into it, holding your fingers on the bottom at the same time, you can feel the whole can shake, or vibrate.

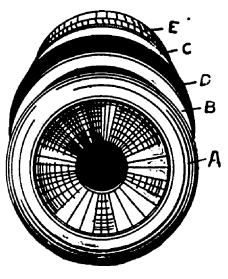

And so, you see, when you connect the bottoms of two cans with a string and shake one by talking into it, the string will shake the bottom of the other can at the other end; and, since it shakes just like the first can, it will say the same words, or make the same noises.

Thus we have a telephone that will work; but the tin is too stiff and the line not stiff enough for good work.

Well, let us make a "phone" that works on this same principle, but make it better so it will work for a greater distance. Then, too, we want some way to "ring up" the other end.

For this improved telephone, first take a piece of pine and cut from it a circle about

For this improved telephone, first take a piece of pine and cut from it a circle about four inches in diameter.

the piece A; if of wood, they may be cut of grape basket cover.

A four-inch circle of half inch wood, with a half-inch hole in its center is next made; and, after this, a springy lath, selected straight grained and free from knots, to act as a spring to keep the line tight and ring the hell.

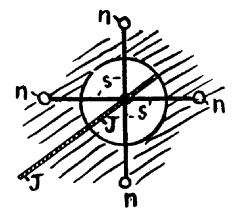

Two inches from one end of this lath, a half-inch hole is bored to correspond with the hole bored in the half-inch piece E.

And now for the "diaphragm," or the part which shakes or "vibrates" when you talk, corresponding with the bottom of the

part which shakes or "vibrates" when you talk, corresponding with the bottom of the tin can in the other phone. This is best cut from "tin-type tin," but may be cut from a sheet of very thin tin or iron.

I have made telephones of this kind with paper diaphragms which worked very well, by gluing stout writing paper between the washers when the paper was wet. On drying, the paper was as tight as a drum head and did me excellent service.

We are now ready to put our phone together.

And now run your line, with as few bends as possible, to your chum's phone.

If there are any turns, they should be arranged as in the drawings, R being a right-angled turn (to be avoided), N a smaller turn, while K shows the method of supporting the line J and keeping it from sagging.

It is needless to say that the line should be stretched as tight as allowable. Great care should be taken that the line touches nothing solid, as that would hinder its

Bell

vibrating and keep the phone from work-

Two crossed strings, fastened to tacks as shown, will prevent the line from touching at the hole H. This is shown in the

Through the center of this bore a oneinch hole and slant it off on one side to
form a funnel-shaped mouthpiece; rounding off the edge also till the piece looks
like A in the figures.

Next, cut two or three heavy washers,
of pasteboard, or wood, a quarter of an
inch wide, and of the same diameter as
the piece A; if of wood, they may be cut
of grape basket cover.

Two crossed strings, fastened to tacks

#### Query Box

How far will the wireless telegraph instruments described in the January issue operate?—F. H., Galva, Ill.
Ans. These instruments should transmit messages for one or two miles with ease, but this power to transmit for a considerable distance depends largely upon the battery power and delicacy of the coherer. With a very sensitive coherer messages should be easily detected at a distance of ten miles.

tected at a distance of ten miles.

Please give me a formula for an alloy of very low melting-point, yet of sufficient strength for balance wheels, pulleys, lathe tall stocks, and tool-rests.—J. H., Galveston, Tex.

Ans. Fusible alloys are very poor materials for this purpose as they possess little strength. Some of the following may be of value to you:

Kindly tell me through your column the approximate cost of the materials used in building the wireless telegraph instruments described in the January and February issues.—
A. D., Dorchester, Mass.
Ans. The cost of the bare materials for the entire set should not be over

for the entire set should not be over \$6.50. The wire, batteries and insulating materials are the parts that cost most; the other parts can generally be picked up about a house, and if not, they cost but little.

Can I use my five-ohm learner's outfit for the wireless telegraph sounder? How shall I wind the magnets to get the best results? Where can I get No. 16 bare copper wire, and other parts needed? What should the spark rods be made of?—R P. V., Pittsfield, III. Ans. Your five-ohm instrument would work with this set without re-winding. If it does not, try winding the magnets with a smaller size of wire until the resistance is sufficiently high to balance the tapper magnets. Any house dealing the tapper magnets. Any house dealing in electrical supplies can supply you with the things you need. Make the spark-

phragm bore a one-inch hole and run a string (hemp shoe cord is very good), through the hole and through a small hole in the center of your diaphragm D. Inside the phone the string is tied to a shoe button, as shown, to keep it from pulling out, For a long line use fine wire instead of string.

The wireless instruments described in the January issue are designed to use four layers of wire in the primary, while most coils have only two. Please explain this. Does it make any difference if No. 36 cotton covered wire is used instead of silk? About how large are the blocks upon which the coherer, sounder and relay are mounted?—J. S. S., Hillsdale, Mich.

Mich.

Ans. The four layers of wire were used in this design to give a stronger magnetic field with small battery power than would be possible with only two layers. Four layers have a tendency to make a coil sluggish where rapid work is required, and would not have been used. make a coil sluggish where rapid work is required, and would not have been used except for the fact that the expense to the amateur was considered. Cotton covered wire will do us well as silk, and is much cheaper, but it does not lay as closely when wound on the core. The size of the blocks you mention is immaterial; about two or two and a half inches high should be satisfactory.

What kind of wire is used for the acrial.

What kind of wire is used for the acrial wire? What is meant by taking the clip from the coherer and placing it on the coil terminal? Why are two coherers necessary? Is a hattery necessary for the ground wire?—
H. M., Toronto, Can
Ans. Bare copper wire. The wire is

Ans. Bare copper wire. The wire is supported by some insulating medium, such as the porcelain knobs used by electricians. The clip is provided as a ready means for connecting either the coll or the coherer to the aerial wire. When you are sending a message the clip is attached to one terminal of the coll so that the impulse travels directly up the aerial wire, but when receiving, connect the clip to the coherer so that the impulse received is transmitted directly to the filings, which, of course, are the only things that act under the influence of the impulse. These in turn close the circuit for the relay and that operates the tapper and sounder. An extra coherer was suggested so that one could be taken apart for renewing the extra conerer was suggested so that one could be taken apart for renewing the filings when they refused to act, and the instrument still be in working order. These filings gradually become oxidized and they should then be replaced with fresh. No, a battery is not needed for the ground wire.

How much larger must the induction coils be for telegraphing a distance of fifteen miles? About how many cells of hattery would be required for operating these coils? There are several steel wind-mills within a radius of fifteen miles of either end of my proposed line. Would they affect the operation of a wireless telegraph line, and could this disturbance, if any, be remedied by raising the aerial wires above the height of the wind-mills?—F. D., Hinckley, III.

any, be remedied by raising the aerial wires above the height of the wind-mills?—F. D., Hinckley, Ill.

Ans. Use silk covered magnet wire, No. 36, on the secondary, without any paper between the layers, and make the primary of two layers only. The secondary will require at least a pound and a half of wire, and two will make it much better. Run your aerial wires up at least fifty feet. A battery power of about ten volts and eight or ten amperes should be sufficient with a delicate coherer. The wind-mills will have little effect unless directly in line between the two stations. In that case they might intercept so many waves that those getting past would be of little value.

Does the armature touch the ends of the

Does the armature touch the ends of the magnets? If not, how far distant should they be? Does the sounder-tongue strike both the upper and lower jaws of the anvil?—W. E. A., San Pedro, Cal.

Ans. No, the armature does not touch the magnets, but comes very close to them, say by about 1-64 of an inch. Yes, the tongue should strike both the upper and leaves. and lower jaws, as the interval hetween these taps determines the signal.

## The American Boy

Copyright, 1805, by The Sprague Publishing Company

#### THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postofiles as Second-class Matter

he American Boy is an illustrated monthly paper of 32 pages. Its sub-scription price is \$1.00 a year, payable in advance. Foreign subscriptions, \$1.50.

New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter tered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper or wrapper shows to what time your subscription is paid.

Important-All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed. Subscribers can, by watching the expiration date on their address label, renew early and thus be sure of getting all the numbers as issued.

Letters should be addressed and drafts made payable to The Sprague Publishing Co., Majestic Building. Detroit, Mich.

GRIPPITH OGDEN ELLIS, J. COTNER, Ja.,

President and Editor. Vice-President and Ass't Editor. Secretary and Treasurer.

## Fun Wanted

THE publishers of The American Boy want stories full of humorsuch stories as boys will laugh over. The stories should be suited to boys of the age of sixteen. The humor should be clean and wholesome, but not of the silly style nor childish. Such as are accompanied by illustrations will be most appreciated and will bring the highest compensation. Do not send mere jokes or anecdotes. Stories of from 1000 to 3000 words are wanted

The Sprague Publishing Co., Detroit, Mich.

#### Lessons in Electricity

(Continued from page 224.)

pointing end of one would attract the north-pointing end of the other. Therefore, the north end, or north pole, as it is called, repels the other north pole and attracts the south pole, from which we derive the rule, "like poles repel, unlike attract."

Experiment 18.—Magnetize piece of watch spring that has not been annealed as we did for Experiment 16, and note that it is a magnet, attracting and note that it is a magnet, attracting filings to either end. Now break it in half and try it again on filings. Each piece is now a magnet, as perfect as the first. Again break each half into two and test these pieces; they will still be perfect magnets, and so you might go on dividing each piece until you got them so small that you could not handle them, but they would all be perfect magnets.

It is impossible to make a magnet with one pole only. There must always

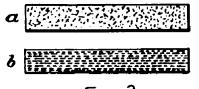

Fig 2

be an opposite pole, no matter how long or how short the magnet.

or how short the magnet.

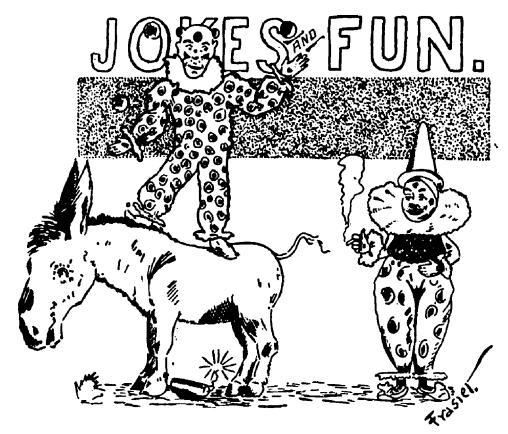

In Fig. 2 is given a diagram illustrating the theory of the force of magnetism, and how it affects the structure of iron or steel. Iron and steel, like all other materials, are composed of minute particles called molecules, which are ordinarily arranged in a topsy-turvy fashion as in A, but just as soon as the force of magnetism enters the piece these molecules arrange themselves in straight lines, as in B. In the case of soft iron this molecular change is not permanent, but when hardened steel is magnetized, the molecules remain in their new positions and the bar becomes a permanent magnet.

their new positions and the par becomes a permanent magnet.
Scientists have agreed upon speaking of this magnetic force as a form of energy that travels in straight or curved lines, and we therefore speak of the magnetism as "lines of force," leaving one pole of a magnet and returning through the other pole.

(To be continued.)

#### The Best

The Gopher Tangle Club, Hastings, Minnesota, in a letter of February 9th says the tangles in THE AMERICAN BOY are the best to be found in any paper that they have yet seen. They add: "The excellence of the puzzles seems to run through the whole paper and makes it the best boy's paper in the world."

#### A Living Question Mark

Father had finished his supper and picked up the daily paper, when Willie, who is a living question mark, commenced in a drawling monotone, showing that he was thinking and that something heavy was weighing on his mind and needed parental enlightenment.

"Papa, oh, papa!"

"Papa, oh, papa!"
"Well, what is it, son?" father answered. "Do they make whalebone out of whales?"

whales?"

"Yes, son," said father, glad for once that he could an wer Willie's question.

"Then do they make sealing wax out of seals?"

Father did not think this question even worthy of reply.

"Papa, are people of Greece greasers?"

No answer.

"Then I reckon people of Cork are

"Then I reckon people of Cork are corkers."
The paper was particularly interest-

Willie was silent for nearly five minutes, and then asked, "I read in a book today that a man was a flower; does that make me a sunflower?"

Willie was discouraged to think that the questions should go unanswered,

withe was discouraged to think that his questions should go unanswered, and then turned to his mother: "Mamma, do squaws wear war hoops?"
Father was getting tired of these questions, and turned to Willie and said, "William, it is time for you to go to bed."

Willie started, but at the stair door turned and asked innocently, "Is my little trundle bed a boycott?"—Northern Christian Advocate.

#### The Hardships of a Boy

I like roast beef and lemonade, And ham and gingerbread, And apple pie and pickles, just Before I go to bed.

But ma she says it wouldn't do To eat a single bite; She says that little hoys who eat Such things would die at night.

I'd hate like anything to die, Yet eating is such joy; Between the two it's pretty hard To be a little boy.

### A Strenuous "Arrangement"

A down-town broker some time ago engaged an office boy to serve during the illness of the lad who regularly performed the duties of that post. Tommy, the new boy, proved to be a jewel, and when Joe, the former incumbent, returned for duty the broker was looth to late ed for duty the broker was loath to let Tommy go. But the other lad wanted to come back and pleaded hard for rein-

"Well," said the broker, "you may have the place again if you can arrange matters with Tommy."

"I guess I can do that," replied Joe, as he went in search of the troublesome

he went in search of the country of the Tommy.

When the broker returned to his office an hour later he found Joe in charge. Tommy was nowhere to be seen. The office looked as if it had been struck by a cyclone. The glass in the private door was smashed, chairs were overturned and ink had been spilled upon the

#### Wasn't all in Johnnie

"Johnnie," said his mother, severely, "Johnnie," said his mother, severely,
"some one has taken a big piece of ginger-bread out of the pantry."

Johnnie biushed guiltily.
"Oh, Johnnie!" she exclaimed, "I didn't
think it was in you."
""Tisn't—not all of it, mother." replied Johnnie. "Part of it's in Elsie!"—
Spare Moments.

Two lads once tried with eggs to pick, To see which was the master.

They hit quite hard, but neither broke,

For hoth were filled with plaster.

---Words and picture by C. P. Winter.

#### The Conquest of Mickey McCloskey (Continued from page 218.)

boy is not goin' to lave us; fall in, boys." boy is not goin' to lave us; fall in, boys."

Under her instructions Buck and Ben
alternately took turns in rubbing the
arms and legs of the sick boy; but nine,
ten, eleven o'clock and midnight came,
and Mickey showed no signs of reviving
strength. The solemn tones of the big
bell in the clock tower of the school
house only three squares away tolled one
and two and the weary watchers saw house only three squares away toiled one and two and the weary watchers saw the life slowly ebbing out. But they worked on. Three o'clock and a faint ray of hope stimulated efforts. Four o'clock was tolled off by the solemn beli that sounded so like a funeral knell, and still Mickey's pulse heat faintly. With the first streak of day the Irish lad opened his eyes and found three anxious faces bent over his couch. Death had been conquered.

It was a merry day when Mickey McCloskey appeared at the grammar school when two weeks of rest had brought back the bloom of health. A ripple of applause ran through the room when Professor Walker at the roll call read out the name—

"Michael J. McCloskey."

No reproof came from the disciplinarian at an outbreak that at another time would have merited a stern reproof.

"Professor Walker." said a clear voice.

"and struggle. They are at the blockhouse! Where is the youngster?

Can't see him—yes—there he is battering at the door with the butt of his rifle.

Look! the enemy is on the run! At 'em! "Hooray for Dixle!" a big fellow from Alabama shouts.

"Yes, 'n' hooray for the corn-fed boys of old Kansas!" yells another.

"Call off that boy! Call off that boy! Call off that boy! We want to get action on the shanty with a barker!"

Can't see him—yes—there he is battering at the door with the butt of his rifle.

"Yes, 'n' hooray for Dixle!" a big fellow from Alabama shouts.

"Yes, 'n' hooray for the corn-fed boys of old Kansas!" yells another.

"Call off that boy! Call off that boy! Call off that boy! Call off nothing!

proof.

"Professor Walker," said a clear voice, and Buck Andrews rose. "I want to make an explanation," and again the applause ran through the room "I want to apologize to the bravest boy in the grammar school for the insult I offered to him last September. And I want to say that I bear him no ill for the artistic decoration he performed for my benefit that day. We started out to conquer Mickey McCloskey—he has conquered us."

door was smashed, chairs were overturned and ink had been spilled upon the
carpet.

"What does this mean, Joe?" inquired
the amazed broker.

"Tommy's gone, sir," replied Joe, smiling. "I arranged it with him all right,
all right."—Exchange.

conquer Mickey McCloskey—he has conquered us."

And Professor Walker only smiled in
approval as the fifty boys in the room
rose to their feet and gave vent to their
satisfaction in the school yell. Peace
hath its conquests
no less than war.

#### IN THE THICK OF THE FIGHT

HE trenches were not deep. Under a blistering sun, lying close to the parched earth, the line of Yankees waited. Now and then a mischievous volunteer slowly raised his hat on the end of a bayonet a few inches above the ridge which did for breastworks.

above the ridge which did for breast-works.

Crack! crack! from tree and thicket came swarms of bullets, many of which passed over with a b-z-z! bing-g-g!—sounds not unlike those made by flying beetles—and some of them punctured the hat, which the Spaniards thought contained the head of a curious fellow.

Hark! A rumbling sound is heard—the tramp of hundreds of feet; and now a Spanish masked battery on the hillside in front is in action. Wicked shells screech and whiz overhead. The tramping draws nearer. Above the sound is heard the Yankee yell and soon there rushes by a charging regiment. The long-looked-for order to move is passed up and down the waiting line, and into the hail of bullets the volunteers charge.

See! it's every fellow for himself, with

See! it's every fellow for himself, with the volunteers. The raw recruits have had little discipline. What's the use of discipline, now, anyway? Yonder are the Spaniards. It's a case of win the charge or run and be driven into the sea; and Yankees don't run.

Who is that youngster yonder without a hat? Look at him! Why, he's trying to get ahead of that solid wall of regulars! His 'eeth are set; his eyes flash ulars! His teeth are set; his eyes flash fire. As he runs he tears loose the neck band of his shirt so he can breathe easier. Now, he throws away his canteen; now his canvas jacket is cast aside. He's down! No, he isn't! There—that is he! he only stumbled over a vine. He'll make it! Why, the silly boy won't last five minutes if he insists on trying to reach the enemy's blockhouse so far ahead of the others.

Heavens! What a fire! There must be ten thousand Spanish troops scattered

ten thousand Spanish troops scattered about up yonder. What's the matter now? Nothing. He only paused to snatch a flag from a color bearer. He's ahead! There he goes—they can't hit him, it seems.

Hurrah! hurrah! He has planted the flag! He turns and waves to the oncoming troops.

coming troops.

"Come on, fellers, let's eat 'em up!" he cries excitedly.

Does he think he's in a football game? The top of the hill is reached. The savage Yankee rallying cry is heard over the roar of guns. The line has suffered a great deal, but—

There they go! It's almost a hand-to-hand struggle. They are at the block-house! Where is the youngster?

Can't see him—yes—there he is battering at the door with the butt of his rifie.

Call off nothing! He hears! See, he's dropped flat on the ground.
"Let it go! Wow! Give 'em another like that!"

like that!"
There's a hole now. The youngster is going in. See him fight! The Spaniards have run up the white flag. Is the yellow-headed fellow safe? Of course. Who else is that on top of the blockhouse with the stars and stripes?
"Holler, boys, holler! If you can't yell any more, get clubs and pound!"
"What a racket!

"What a racket!

"For heaven's sake, Robert! Robert! Are you crazy? Are you trying to kill us? Robert!"

"Pa! What's the matter?"

"Matter! What's the matter? Look at that door—that window—that curtain!"

Then a puzzied boy assumed a foolish air and didn't know what to say.

Bobby had, just before going to bed, been reading tales from the history of the Cuban campaign. He dreamed he was in the thickest of the fight, a yellow-headed, hatless volunteer helping to make history. He got up in his sleep, and, as he charged through the house, grasped the plano stool. With this for a weapon he battered in the door of his parents' room and made things fly for a moment or two. When finally awakened, he found his father treed on the dresser, the glass of which was shattered into a million pieces. One window of the room was smashed and the curtain torn to shreds. Another "Spaniard," Bobby's mother, ventured forth from a closet whence she hau retreated for safety when the lad and his nightmare were running ahead of the main body of troops in Cuba, capturing blockhouses, planting flags on the prizes and putting to rout the Spanish troops.

## How to Play the Mandolin TAUGHT IN EIGHT LESSONS By LILLIAN STANDIFORD

#### FOURTH LESSON.

A practice of the following melody will teach the pupil how to skip from one ng to another. Count four in a measure, and observe the quarter rests by taking string to another. Count the pick off the strings.

Notice in the Polka, you have a new note—the eighth note. It is made like a quarter note, with a hook added. It gets half a count; two eighth notes get one count. You count two in a measure in two-four time. In the first measure you

count "one and two and." The second measure is counted one and two. You stay twice as long on the quarter note as on the eighth note. Play these pieces over and over. Always play a new piece very slow at first until you get acquainted with the notes; then try and play faster. Keep your eyes on the music, count the time first,

move to adjacent let-ters using each once only and find the sur-names of seven Amer-icans whose deeds are commemorated on a certain day in May —The Gopher.

#### MAY GEOGRAPHY.

These are the outlines of thirteen counties, all found in one certain coast state. The initials of the county names, when arranged in correct order, will spell a May holiday, observed in the United States. The drawing is by the author of the Tangle.

#### DOUBLE ACROSTIC.

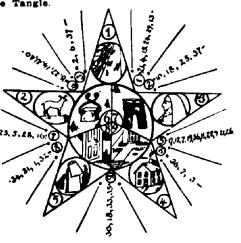

The words are of uniform length. The initials spell the surname of a celebrated American ornithologist, of French descent, born in May, 1780; the finals, a famous Swiss-American naturalist, born in May, 1807.

1. The name of that Herod, king of Judea, whose awful desth is told of in Acts. 2. A lake in Maine and New Hampshire. 3. A bay on the east coast of Africa. 4. The hero of the Odyssey. 5. The god of wine. 6. The present king of Sweden and Norway. 7. A city of Mississippi.

#### -8. John McCarthy.

#### SHAKESPEAREAN ENIGMA.

The key words are represented by the nine numbered pictures within the star, and the guide numbers to the key words are outside the star. The whole is a well-known quotation, of 37 letters, from one of Shakespeare's tragedies. The drawing is by the author of the Tangle.

-George F. Cook.

MAY ACROSTIC. The initial letters of the following surnames in order spell the name of an early American settlement, established by English colonists in May, whose anniversary will be celebrated in two years. The surnames are of varying

tn. The first Secretary of State. 2. The first -President. 3. The Postmaster-General Vice-President.

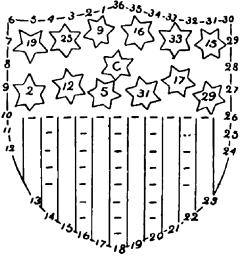

the Interior.

#### -John E. Caughey.

TANGLED SQUARES. 

#### EMBLEMATIC TANGLE.

From 1 to 9, a state admitted in May. 8 to 10, President Lincoln's pet name for one of his sons. 13 to 17, the "Valley" at which Washington wintered in 1777. 13 to 23, a flower emblematic of fidelity. 24 to 20, a surname of the American general who was chief engineer for the erection of the pedestal of the Bartholdi statue of Liberty in New York harbor. 31 to 27, surname of the officer who captured Ticonderoga in May, 1775. 1 to 31, a state which organized as a territory in May, 1864.

Across, 10 to 26 (13 letters), a May holiday. The alternate stripes are to be read downward, and are defined as follows, beginning at the left: 10, 11, 12, a retreat. The chief seaport of Peru (6 letters). Roaming (8 letters). Tumultuous (9 letters). Introductory music to an opera (8 letters). A character in the Comedy of Errors (6 letters). 26, 25, 24, an affirmative.

The letters to be placed in the stars are the letters of the corresponding numbers in

The letters to be placed in the state and the letters of the corresponding numbers in the edge of the shield, and, including the C in the center star, when properly arranged will spell an emblem of the United States.

—Benjamin L. Miller.

#### FLOOD ACROSTIC.

All words of the same length. The initials in order spell an American city that was destroyed by a flood on a May day of the last century with a loss of at least 3,000 lives.

1. The largest body of the solar system, except the sun. 2. The last king of Ireland. 3. The first editor of "The Century," author of "Sevenoaks."

4. The goddess of divine retribution. 5. A river that forms part of the United States boundary. 6. A celebrated American clergyman, whose church in Brooklyn was burned three times. 7. Nero's wife. 8. The recently deceased American general, diplomat, lawyer and author, who wrote "Ben Hur" 9. A private secretary of President Lincoln.

—Eugene A. Scanlon.

#### TANGLED ADVERTISERS.

Here are the first words of certain advertise-ments that appeared in the February 1905, AMERICAN BOY. Take the very first letter of the name appended to each of these ad-vertisements, in the order here given, and obtain the name of another advertiser in the

vertisements, in an obtain the name issue.

(1) Your name of another advertiser in the same issue.

(1) Your name valuable to us. (2) 50 bulbs 25 cents. (3) 120 all different, rare Zansibar, China, Fiji. etc. (4) Which will you sleep on tonight. (5) Free, a good unused stamp catalogued 25c. (6) 5 cents buys the beautiful Triangle stamp. (7) Do you want to earn a dollar? (8) 300 Foreign stamps, 10c. (9) Plays for Parlor, School Room or Stage. (10) Free, 100 var. Foreign Stamps. ## Rough Skin and Smooth

Your skin becomes rough and chapped when the pores are deficient in their natural oils. This is why strong soap is so bad for the hands. It destroys the oils provided by nature to keep the skin soft and pliable—as oil affects leather—and so while the pores must be cleansed and kept open, these wonderful oils must not be exhausted. The soap problem, therefore, has ever been to cleanse and preserve and now

has solved it. A cleanser that gently dissolves the dirt as warmth dissolves snow; a soap and yet more than soap. Composed of those oils most helpful to the skin-Palm Oil, Olive Oil and Cocoa Butter-PALMOLIVE supplies what other soaps destroy, and the skin in its gratitude becomes soft, white and smooth, staying so as long as you use PALMOLIVE.

For the hands, the face, the bath, the nursery, there is no soap like PALMOLIVE, as you realize at the first using and yet, owing to the perfect method of making, you can enjoy its luxury for 10 cents a cake. Sold wherever soap is sold, or sent by mail on receipt of 15 cents and the name of a dealer who does not keer it. Isn't the common sense of it worth this investment?

## HOW TO PLANT A TREE

Written for The American Boy by W. W. BARRETT, Ex-State Superintendent of Irrigation and Forestry, and State Fish Commissioner of North Dakota

If every boy who reads The American Boy were to plant a little tree in May it would mean a quarter of a million more trees. How many of our readers will do it?—The Editor.

The TREE MUST be sound and roots. If the tree should be of large size healthy and have good roots. Pro- and much exposed, it should be well of itself.

In planting a tree be on the alert; exercise thought, judgment and skill in every move and step, as regards condition of the ground, tree, protection of roots from sun and wind, moisture for the roots, trimming, manner of planting and proper protection from injury, and cultivation, and in all things necessary for the life and growth of the plant, and, conditions being right, success will crown your efforts in the way of a hardy and thrifty tree, the beauty and use of which may last through conturies of time as a token of your good work and use in the world. Then plant the trees and beautify the earth and bless the children of men.

tille tree in May it would mean a quarter of a millim more trees. How many of our readers could do it.—The Editor.

THE TREE MUST be sound and roots. If the tree should be of large size the county of the county o

chafing, place rags between the tree and the opening in the staying boards. See skipper was playing line with a large that the tree is well cultivated, the weeds steel shark hook baited with a big

"To tell the truth, sir," said the mate, "neither of them is either useful or ornamental, and if you were to stick the pair of them on the hook they never would be missed, except perhaps by the cook, who is kept busy all the time for the hungry young imps. Say the word, sir, and I'll have them on the hook in a jiffy."

The mate spoke as if he were terribly

The mate spoke as if he were terribly in earnest, and the boys, conscious, perhaps, that they had been quite troublesome to the mate since first they came aboard, began to be alarmed. The captain paused undecidedly, and then resumed his playing of the bait. His work was in vain. He couldn't interest the shark in the game at all. Finally the skipper hauled the hook and bait aboard, as if he had grown tired of the sport.

The mate took hold of the fishing line, coiling it down close for running. Then he swung the hook at the shark with all his might, and hit him fair in the head with. There was a great commotion in the water. The shark, roused to action, rushed at the bait, swallowed it and darted off. The other end of the line was fast to a cleat in the rail, and in a few seconds the shark was brought up all standing, with the barb of the hook fast in his guillet.

A great flurry followed, the shark struggling ineffectually to rid himself of the sharp hook. The captain came on deck, madder than a hornet that another should succeed where he had failed.

"Get the watch aft, Mr. Connery; hoist this beast in the waist. I don't want my quarter-deck messed up with his slaughter," he ordered in sharp tones.

Several sallors shuffled aft, and soon hauled the shark to a convenient place, where he was holsted aboard. As soon as he reached the deck, his tail was cut off by the carpenter with a well directed blow of his sharp axe. It is the unwritten law of the sea that Chips, the carpenter, shall always perform this duty, and that Slushy, the cook, shall rip him open and fall heir to whatever his interior may contain.

The carpenter fell heir to the backbone, of which he made a handsome The mate spoke as if he were terribly

## Rough Skin and Smooth

Your skin becomes rough and chapped when the pores are deficient in their natural oils. This is why strong soap is so bad for the hands. It destroys the oils provided by nature to keep the skin soft and pliable—as oil affects leather—and so while the pores must be cleansed and kept open, these wonderful oils must not be exhausted. The soap problem, therefore, has ever been to cleanse and preserve and now

# **PALMOLIVE**

has solved it. A cleanser that gently dissolves the dirt as warmth dissolves snow; a soap and yet more than soap. Composed of those oils most helpful to the skin—Palm Oil, Olive Oil and Cocoa Butter—PALMOLIVE supplies what other soaps destroy, and the skin in its gratitude becomes soft, white and smooth, staying so as long as you use PALMOLIVE.

For the hands, the face, the bath, the nursery, there is no soap like PALMOLIVE, as you realize at the first using, and yet, owing to the perfect method of making, you can enjoy its luxury for 10 cents a cake. Sold wherever soap is sold, or sent by mail on receipt of 15 cents and the name of a dealer who does not keep it. Isn't the common sense of it worth this investment?

# American Boy Day Celebrations

AT PORTLAND, OREGON, July 5th. The Exposition management have designated July 5th as American Boy Day. The exercises will be held in the Exposition Auditorium, which seats 2,500 persons. Boys and their friends, old and young, are invited. The Exposition Band will be in attendance. President Goode, of the Exposition, will deliver an address of welcome. There will be boy orators, poets, singers, instrumental soloists. There will be a salute to the flag, the reading of messages from Governors and other distinguished people, and other special features. The editor of The American Boy will preside. There will be special fireworks in the evening.

AT BOSTON, MASS., date not fixed. There will be present the boys' clubs of the city and vicinity, and hundreds of boys from all over New England. The program will be similar in character to that given at Portland, with different performers.

AT CHAUTAUQUA, N. Y., July 22nd. Morning, afternoon and evening. The program will be much the same as that at Portland. A large chorus in addition.

AT OTHER PLACES. Celebrations may also be held in San Francisco, Cal.; Cairo, Ill.; Bedford, Pa.; and Lexington, N. C. Individual Companies of the Order of the American Boy are preparing to celebrate in their home towns.

CAN YOU TAKE PART?

WHAT CAN YOU DO?

#### (BEGUN IN DECEMBER) CHAPTER XVI.

SENTENCED TO BE SHOT.

T WAS so incredible that Sing-Hi should be Takahaki, and that Takahaki, formerly a cadet at Annapolis, then an officer in the Japanese navy, and last heard from as one of a forlorn hope dashing into the mine-strewn harbor at Port Arthur, should be Sing-Hi, that for a moment Dunster gazed at the smiling figure before him in speechless amazement.

"Are you really my friend Taki Matsu?" he finally asked, still doubting. "If so, why are you here in this disguise? How did you get here? I thought you were at Port Arthur. Do you not know that discovery would mean certain death, and that I could not lift a hand to save you?

"Yes, Dun Brown, I am your friend Takimat, and I am here because you are here with that boat submarine that you bring for Japan.'

"How did you know I was bringing it?"

"I am not know it was you. It is said only that one man to represent the builder will come, and I am detail to receive that boat at Hakodate, to make him ready for the service, and then to have him in command. In a destroyer I go to Hakodate and there we wait. We know of the ships out from this place but may not attack them, only watch. Then in a hurry we get order: 'Proceed quick vicinity Vladivostok. Await return of Russian squadron. Plan destruction of Cochise containing submarine, now prize of Rurik.' So we come, we hide, we make of junk a floating mine and in it I seek to diss-troy that Cochise."

"You, Taki!" exclaimed Dunster. "Were you in

command of that wretched junk?'

Yes, Dun Brown, I am have that great honor. So I try and put her in front of Cochise, knowing that no ship of the Rus-si-an will turn to save poor Chinese junk. But Cochise did turn, I know not why, and so save himself. Then I do what is next best thing and blow up that cruiser; but also I save myself for try once more and diss-troy that submarine. I am fish from the water and brought on the shore where some soldier say 'Go to work, pig!' and I stretcher carry. Then I see my friend Dun Brown and almost I holler. But I say, 'Stop; he will need servant,' and I come here quick for that honorable position. I meet that Frenchman. He hear me speak some English word and ask me if I want easy job for which he give me plenty eat and twenty kopek each day. I say maybe so, what is it? He say it is be servant of one Englishman who is prisoner, and rip-port to him every day what that prisoner will say and do. Also to give him every day eighty kopek of what that prisoner will pay. Also to speak so little of English that the prisoner may not know is very little money for do so much thing, and he say, 'Go away then, I find other man.' Then I say: 'No, your excellency, I very poor man with old father and mother very hungry, so that I must have even such little money and I will try be servant.' For two day he listen, listen, all the time, and I am 'fraid to speak. Now he is go see Governor-General, and I find that chance. But, my friend, my dear friend Dun Brown, why do you come to this place of so great danger? Is it that you may be shot for spy, or sent to mines for life? Are you not knowing that the Delar man is one Russky who goes to America for find out things, who work in that shipyard and see you there, who know all the time of that submarine and send here word of it? For to get it only is why those Vladivostok ships go out. That now is known.

"Taki," broke in Dunster at this point, "I came because I couldn't help it. I have told you why I hated Russia, and why my ancestors fought her. Of course I did not mean to come here. I expected to land in Japan and there get the submarine ready for business. I am supposed to be a correspondent, and had papers proving me to be one; but they have been taken from me. I came on the Cochise and it was I who altered her course so that she should not strike your junk. Would you still have tried to blow up that ship, Taki, if you had known that I was on board?" "Yes, Dun Brown. For the Mikado I must even

diss-troy my best friend, but also would I diss-troy myself at same time. If I blow you up, I, too, would not be save. But why-

At this moment came a sharp rap on the door and an effort was made to open it.

Copyright, 1904, by Harper & Brothers.

Takahaki sprang to unlock it, while Dunster dropped into a chair and picked up a book. As the door was opened Commander Zemaloffsky, closely followed by M. Delar, entered the room. Both visitors glanced quickly but searchingly about the apartment.

"We are sorry to have interrupted Monsieur Brownleigh's conversation," said the Russian officer, gazing keenly at Dunster, "but an affair of some urgency must be our excuse."

"Conversation?" repeated the young American, as though not comprehending the other's meaning. "Ah, yes! You perhaps overheard me reading aloud to myself. I often do so when there is no one to talk

"Your English-speaking servant?" suggested the

Russian.

"My English-speaking servant!" laughed Dunster. "That of course is your joke, Monsieur; but it is a sorry one for me, seeing that I am paying a rouble each day to hear this parrot of a Chinaman repeat over and over, three phrases of my native tongue 'Me spik Melican, Name Sing-Hi, Me git um queek' seems to be the extent of his English at present and I have little hope of teaching him more, for he appears very stupid."

'Undoubtedly so." agreed the other; "but probably he is as good as you will find among the low-class Chinese. Without exception they are ignorant as pigs, and the Japs are no better. All these yellow heathen simply are imitators—parrots, if you like. But, Monsieur, let us speak of your own affairs, which have reached a grave crisis. For two days have you been on tmai-

"Have I?" queried Dunster. "I did not know it." "Yes. That is, your case has been considered in all its aspects by a court-martial composed of the highest military officials now in Vladivostok, and I am commissioned to deliver to you their decision In spite of your American papers, you are believed to be a Russian subject acting in the interests of Japan. Russia's most deadly enemy, and therefore a traitor to our imperial master the Czar. For this crime there is but one punishment, and it is death. This being the case, I have the honor to inform you that you are sentenced to be shot at sunset of this very evening."

For a moment Dunster stared at the man who had so calmly uttered these awful words, with a white face and incredulous eyes.

You cannot mean that!" he finally gasped, as he stood clenching the back of a chair for support against the deadly faintness that had seized him. "You are joking, of course, and attempting to frighten me. Such a thing as a trial without the accused being heard in his own defense, or at least being present, is unknown in these days. Even if such a farce had taken place, I should appeal to the American consul for protection, or at any rate to see that I was given a trial with legal formalities and the opportunity of preparing a defense. I easily can prove that I am American both by birth and citizenship; and if so much as a hair of my head is harmed without every opportunity being granted me for producing that evidence, your government will be called to account by mine. And I warn you, sir, that the day on which Russia arouses the wrath of the American people will be the sorriest in all her sorrowful history. But of course you are only attempting to frighten me."

'Alas! my dear Monsieur Brownleigh, I am not." replied the officer. "You do not seem to consider that this is a time of war, that Vladivostok is no longer a commercial port open to the trade of the world, but a military base, subject to the conditions of blocks de, with consular service suspended, and civil government replaced by martial law. Not only are you charged with treason against our most illustrious master, but also with having deliberately and of set purpose caused the destruction of one of the imperial cruisers but three days since in this very harbor. No, my friend, a just sentence has been passed upon you, and it surely will be executed unless-

"Unless what?" asked Dunster, as the other paused.

"Unless you agree to certain conditions that I am authorized to offer, in which case the extreme penalty may be commuted for a milder form of punishment.

'What are they?"

"That you will place your knowledge of submarines at the service of the Russian government. and supervise for it, as you proposed to do for Japan. the assembling and outfitting of the boat so fortunately come into our possession with the capture of the Cochise. That, when the submarine is ready for sea, you will serve in her as engineer, giving instruction, to the full extent of your knowledge, to every person designated to receive it, and at the same time will obey implicitly the orders of the commanding officer. By accepting these conditions, and pledging your word for their fulfillment, you may at least save your life, which otherwise will be forfelted."

Of course the Russian officer did not use the fluent English here recorded, and in his efforts to make his meaning clear he frequently had to rely upon the aid of M. Delar. Now that individual, turning to Dunster, said:

"I urge you to accept this proposition, Brownleigh. Under the circumstances I call it a most liberal one: and anyway it cannot make the slightest difference to an American which side he serves in this most regrettable war.

Turning scornfully from the man whom he now knew to be the cause of all his present trouble, Dunster addressed himself to M. Zemaloffsky, saying:

Before giving you an answer, sir, I demand to be relieved of the presence of this contemptible spy, with whom I refuse to hold any further communication. He is-

"Monsieur," interrupted the Russian sternly, "it is not for you to make demands, but only to accept or reject, without delay, the proposition presented. What is your answer, yes or no?"

For a minute Dunster hesitated, with his mind a ferment of indecision, while the two men searched his face as though to read his very thoughts. Passing beyond them, his eye fell on Takahaki, who, during the foregoing scene, had been stolidly engaged in removing stains from a coat, apparently without giving heed to what the other occupants of the room were saying or doing. Now he was gazing intently at his friend and as their eyes met he almost imperceptibly nodded his head. Then he resumed his task as though absolutely indifferent to everything else. But his signal was understood, and in an instant Dunster's indecision had vanished.

"Monsieur Zemaloffsky," he said in a firm voice.
"I accept your proposition. I will serve the Russian government to the extent of putting the submarine into as perfect condition as my knowledge will permit; and afterwards I will act as her engineer to the best of my ability, obeying implicitly the orders of the officer in command. At the same time, I want it distinctly understood that I make this promise upon compulsion and under protest. Also that I shall use every effort to call the attention of the American government to my situation."

#### CHAPTER XVII.

COUNT CABIMIR OF WARSAW.

At one end of the Viadivostok water front is a complete naval station containing docks, shipyards, arsenal, machine shops, etc. At the other end of the town are the warehouses and wharves of commerce and beyond them is the merchant ship anchorage. Here, too, crowning a low hill, is the massive log

stockade of the Vladivostok prison in which are detained such Siberian exiles as had almost succeeded in making their escape on board outgoing vessels, only to be detected at the last moment and returned to the chains that, after years of ceaseless effort, they fondly believed they had cast off forever. It is one of the saddest prisons in the world, for, standing on the very brink of freedom, it is the burial-place of hope. From it prisoners are only sent to the living death of Saghalin, the "Isle of the Lost;" or if their identity can be discovered, they are returned to the dreadful places in the remote interior from which, through sufferings far worse than death, they have effected escapes, months, and even years, before.

To this stronghold of sorrow was Dunster Brownleigh taken immediately upon agreeing to Commander Zemaloffsky's proposition, by a couple of soldiers who had waited in the hotel apartment adjoining his, and he was told that here he must remain until his services should be required.

Although thus thrown into one of the worst of Siberian prisons and allowed no intercourse with the outside world, the young American was granted certain privileges not shared by his fellow-unfortunates. Thus he was allowed to draw money on his own letter of credit, to hire a servant, to rent from the warden a single room log hut in which to live, and in it to surround himself with a number of rude comforts. Above all he was permitted to retain all the hair of his head, while most of the prisoners were made at once ridiculous, and conspicuous beyond all chance of escaping recognition as a convict, by having one half of the head and face clean shaven. At the time of his entrance to the prison Dunster's name was taken from him, and thereafter he was known only as "No. 40."

When permission was granted him to maintain a servant at his own expense, he was asked whether he would continue to employ Sing-Hi, who could be allowed to wait on him only from sunrise to sunset, and must be expelled from the prison at night, or if he would prefer to employ one of the convicts, whose services would be at his disposal at all hours. He promptly replied that, stupid and high-priced as Sing-Hi was, he preferred to retain the Chinese "boy," who had become used to his ways. This was entirely satisfactory to the authorities, who continued to regard Sing-Hi as devoted to their interests, and the latter received orders to watch his master in prison as closely as before, making daily reports of all that he said and did, to M. Delar. In order to provide him with something to report, Dunster prepared, with every appearance of secrecy, a number of letters to various Amercan officials at home and in Japan, as well as to his own father. These he gave to his servant, one at a time, with promises of large rewards if he should succeed in smuggling them from the city. Of course every one of these was promptly delivered to M. Delar, who not only praised the "boy" for his faithfulness to the Russian cause, but allowed him to retain the money given him by Dunster for expenses.

Besides preparing these letters for the entertainment of his enemies, Dunster found so little to occupy him in that dreary prison that time hung heavily on his hands. The great, cheerless barracks, crowded with idle convicts, sleeping, quarrelling, or gambling, so reeked with filth and vermin that after a single inspection, he was thankful not to be obliged to enter them again. He spent much time in tramping briskly from end to end of the prison yard, and always while thus walking he sought to plan some means of escape from the perilous situation into which the Fates had thrown him. On one occasion he was so preoccupied by his thoughts that he carelessly brushed against an aged man who was tottering slowly along in the same direction. The collision was a slight one, but to Dunster's dismay, it was sufficient to overbalance the old man and cause him

Springing to the stranger's assistance, the young American raised him to his feet with profuse apologies. To these the old man replied with gentle courtesy, that it was his own fault for attempting to walk abroad while enfeebled by prolonged illness. Suddenly Dunster realized that both of them were speaking in Polish, and that he thus was revealing his knowledge of that tongue, which above all things he desired to keep secret. Also he noticed that the old man's face had been cut by his fall and was bleeding.

"Come to my quarters, little father, that I may bathe thy face," he said; and the old man consented to be led away. They made slow progress to Dunster's hut, and when they reached it the stranger's exhaustion was so evident that the other persuaded him to lie down on the bed while he wiped his face with a handkerchief dipped in a basin of water.

As Dunster removed the blood and dust from the wrinkled face he noted that its features, though ravaged by age and long years of suffering, were refined and that the snow-white beard had not been shaved according to the degrading custom of the prison, nor had the scanty locks been cut. These he gently combed and brushed, while the old man murmured

"What comfort! What luxury! A bed of such ease! A kerchief of linen! A comb and brush other than of twigs! Ah! the ages that have passed since I knew such things."

Our lad was about to question his visitor about himself when the door was flung open and the warden of the prison entered the room.

Dunster sprang to the attitude of attention that he knew the etiquette of the occasion demanded, and the old man on the bed attempted to do likewise, but fell weakly back.

What have we here?" demanded the intruder. "Do you not know, sir, that without permission you may not have guests? What is your connection with this convict?

"There is no connection whatever between us," replied Dunster. "I know nothing of him, nor did I ever lay eyes on him until a few minutes since, when by accident I knocked him down as we walked in the yard. Then I brought him here to repair as far

as possible the damage done. I did not know that it was forbidden. Now I ask your permission to keep him a little longer, until he shall have recovered from the shock, for he seems very feeble."

The man hesitated. "Of course," continued Dunster quickly, "I shall be only too glad to meet any expense that may be incurred by permitting him to remain.

"Very well," replied the warden; "I probably shall have to put on an extra guard at a cost of about ten roubles. If you care to pay that sum the old man may stay with you as long as you like."

A handful of silver being transferred from Dunster's pocket to that of the warden, the latter continued in a more friendly tone: "I must, however. warn you that you will be held largely responsible for the safe-keeping of this prisoner, who is a most desperate character. Some months ago, just before the outbreak of the war, he was detected stowed away in the cargo of an American ship as she was about leaving this port. He fought with the police and compelled such severe treatment before being subdued that he has been in the hospital most of the time since. He had no passport on his person, and has obstinately maintained silence as to his past history; but by diligent inquiry we believe we have located him. If our information is correct he is a political exile of the most dangerous type, who was sentenced to the mines of Nertchinsk for life. Twice has he escaped, and upon his first recapture he fought so fiercely as to kill two of those who sought to subdue him. For this he was severely punished; but apparently the lesson did him no good, for a few years later he headed an insurrection of convicts in which many were killed; but in the confusion he, with some others, got away. The others are known to be dead or recaptured, and now we think we have the leader. I was about to order him into irons this very day. So you see you have undertaken no small task though he is old and appears feeble, an appearance no doubt assumed for a purpose. Look out that he does not attempt to kill you; and call a guard to take him away whenever you tire of his presence, which you are certain to do in a short Wishing you joy of your new plaything, I have the honor to bid you a very good day.

During this conversation, which the warden had conducted in the broken English of the port, the speaker stood close beside the old man, who lay motionless and with closed eyes as though asleep Nor did Dunster seek to wake him until Sing-Hi arrived with a bountiful dinner. Then he gently aroused his guest and invited him to partake of food. The latter did not need urging, but ate like one famished, ravenously and in silence. He uttered no word until the meal was ended and Sing-Hi had departed with the dishes, leaving only a samovar of tea. Then, still speaking in Polish, the old man said:

'My son, it is more years than I can count since I have tasted food so delicious and so nourishing as that provided by thy bounty. That thou, a prisoner in this place, art able to procure it arouses my curiosity. May I ask that you gratify the whim of an old man by relating such of thy history as it may be deemed prudent for a stranger to learn? But first tell me where you acquired a knowledge of English, the blessed tongue of freedom?"

"How did you know that I spoke English?" asked Dunster, somewhat startled by this revelation.

While pretending to be asleep, I overheard your conversation with the warden and the fragment of my own history that he disclosed."

"Then you, too, speak English!" exclaimed the young American, regarding his guest with increased interest.

"I speak it now very little," was the reply; "but once was it a language dear to me. Also, through it was my life ruined. It is the cause of all my mis-

"You are a Pole?" asked Dunster with a sudden inspiration.

"I am, or rather I was."

"Of Warsaw?"

"Yes. But why do you ask?"

"And you taught English to the students of tho

'My son, it is true," replied the old man, trembling with excitement, "but how have you this knowl-

edge?"
"Are you the Count Casimir?"

"I am number ninety and one," answered the other gazing furtively about him, and speaking in a tenso whisper. "But perhaps once I was called as you say."

"Also, perhaps, once you were called——" Here Dunster bent to the other's ear and whispered a single word.

The old man uttered a cry that was almost a scream, sprang to his feet, tottered and would have fallen had not Dunster caught him and gently laid him on the bed.

'Who art thou that you should know that name?" gasped the exile, staring at the young American with

dilated eyes. "Quick! thy history." For answer Dunster tore from his neck that which the superstitious Russians had regarded as an Ikon and so allowed him to retain, pressed its secret spring, and took from it a bit of paper traced with characters in faded brown. Holding it before the eyes of his guest, he said slowly:

"Father, I am Casimir, son of thy daughter Mirska, who was born in free America according to thy instructions herein contained."

'My daughter! Had I then a daughter? How have I wondered and longed to know if I was a father, to know if my child lived and of its welfare; but in all the years until now there has come to me no word. Oh, blessed Lord! Thou are indeed good and merciful. And thou, my son! blood of my blood, and bone of my bone! To think that I am permitted to gaze upon the face of my own! But Nanisha, my wife, my beloved! What of her? Speak quickly, for I am weakened by great joy."

"Thy wife and my grandmother received the note traced with thy blood and followed its instructions. She fled to America, where my mother was born and grew up to marry my father. My grandmother lived

peacefully and happily, though always her thoughts were with thee, until I was old enough to know and love her. Then she passed easily away, filled with the hope of meeting thee."

"And my whole life since that dreadful day has been devoted to regaining her!" muttered the old "Always have I been beaten and baffled; but now nothing can longer separate us. No human force may avail to keep us apart. My son, shortly wilt thou be the Count Casimir of Warsaw. The name is one borne by kings and hated by Russia; but through all the centuries it is untainted by dishonor. My son-

As the old man's voice lingered fondly over the words, the door was flung open and Takahaki hur-

riedly entered the room.
"They are coming!" he exclaimed, breathlessly "The soldiers are coming to carry away the old man! For him are chains ordered, and the cell of darkness."

#### CHAPTER XVIII.

#### ASSEMBLING THE SUBMABINE.

Takahaki had spoken in English and the old man understood him.

Dunster started to his feet and would have barred the door, but his grandfather detained him.

"My son," he said, in a voice so faint that the young man was obliged to bend his head to catch the words, 'resist them not, nor let them know that we are aught but strangers. They cannot harm me now, nor force me to their will. I am summoned by a Power mightier than those of earth. Embrace me, my son, my dear son. Sever one of my white locks and hereafter bend all thy energies to placing it in the hands of my daughter Mirska. 'Mirska;' yes, that was the name on which we had decided, should the child ba a girl. It is a sweet name, and was my mother's. Now am I to meet them; Mirska, my mother, Nanisha, my wife, and the myriad of glorious ancestors who await my coming. Oh, blessed Saviour! through death dost Thou send the greatest happiness of life. Hark! they come! Then must I go. My son, farewell!"

As the old man sank peacefully back on Dunster's pillow, an officer, halting a file of white-bloused soldiers outside, entered the room. Having no knowledge of English he did not attempt to address Dunster, but stepping directly to the bed on which the Count Casimir lay, he said, roughly:
"Get up, old man. Your hour of luxurious living

is ended and you will now return to the chains that so well become you. Move spryly or a sword-prick shall stir thy sluggish blood."

For answer, the aged exile opened wide his eyes and a smile of wonderful radiance flashed across his worn features; but he uttered no word.

The officer raised a hand as though for a blow. but before it could fall he was hurled to the farthest corner of the room. Striking the log wall with a crash, he dropped to the floor and ere he could regain his feet, Dunster Brownleigh towered above him with

blazing eyes.
"Dog!" he cried, in vilely accented but perfectly intelligible Russian, "how dared you lift a hand against a noble of Poland? Crawl back on your knees and make to him humble apology for the dastard act. Do it, or by the heavens above, you will never leave this room alive! 'Tis useless to look toward the door. That is barred, and you will have issued your last order long before your soldiers can force an entrance. Therefore, crawl, worm! and crawl quickly before I crush out your human sem-

So fierce was the speaker's aspect, and so evident was his strength that the man, recalling tales he had heard of the terrible Americans, dared not disobey. Thus was presented, in that prison hut, the startling picture of a Russian officer, rather stout and in full uniform, creeping, with extreme difficulty, on hands and knees, to the bedside of a Siberian convict and muttering an apology for an act that he had not committed.

"Now, stand up and gaze upon your work," commanded Dunster, sternly, and the man scrambled to his feet. On the pallet before him lay the waxen face of death. During those brief minutes of strife the Count Casimir of Warsaw had passed forever beyond the reach of Russian tyranny, and had entered upon the one form of freedom that is absolute. he had gone happily was evidenced by the smile of utter content that still lingered on the worn features; but that his death had been caused by a sudden spasm of the heart was shown by a trickle of blood from the recent cut on his forehead.

Twas cowardly to strike a helpless old man," said Dunster; "and to strike him a blow so terrible as to cause death is an offense that may bring to you very serious trouble. I am not ignorant that no convict, even the most unruly, may be done to his death, save by order of a court, or in self-defense. Therefore-

"But I struck him not!" interrupted fiv officer.

eagerly. "Do not seek to escape the penalty by lying," cried the young American fiercely. "Is not that blood a proof? Did not I see the blow? and is there not in the room another witness as well? If I choose to state the facts your punishment is assured, as also is the ridicule that will greet the Russian officer who crawled on hands and knees to beg forgiveness of a convict. But I am not hard-hearted, and am willing to make terms. Give me your word of honor that you will make no mention of my knowledge of Russian or of the personal encounter between us, and I, too, will promise to keep silence concerning all that has taken place. My servant also shall remain dumb. Is it agreed?

"Surely it is agreed," replied the officer, eagerly.

"And you pass your word of honor as a gentleman and a soldier?'

"I pass my word of honor."

"It is well," said Dunster, "and the incident shall go unnoticed. You are free, sir, to proceed with your

As the relieved officer stepped to throw open the door and summon his men, the young American pressed a furtive kiss on the placid brow of the dead, and severed one of the snow-white locks soldiers bore away the fragile body of his grandfather, found and lost within an hour. As they disappeared, Takahaki, standing stiffly at attention, and with hand raised in salute, broke the silence he had maintained during the whole affair by saying:

"It is the braveness of my friend Dun Brown that I am sarute. Also am I first to sarute my friend the

Count Casimir of Warsaw. Is it not?"

"Why, yes," replied the other, somewhat doubtfully. "I suppose in a way you are right, Taki. At the same time it isn't worth mentioning, for you know as well as I, that it is better to be just a plain. everyday American than to be all the Counts in the world. So I guess we won't say anything more about that part of it."

With this momentous incident closed, another phase of Dunster Brownleigh's captivity was ushered in; for, early on the following morning he was informed that his promised services were needed at the other end of the town, and in company with a guard, he was driven to the Vladivostok naval depot. Here he found a confused mass of steel plates and intricate machinery, discharged from the Cochise and awaiting his technical skill to be assembled into the deadly shape of a submarine torpedo boat.

In order to save the time required to convey the young mechanic to and from his prison hut, he was assigned quarters at the naval station, and was notified that he might occupy them until the completion of his task, though always under guard. Also, he was allowed to retain the servant, through whom the Russians fancied they were gathering so much information concerning him. With the constant presence of this trusted friend thus assured, Dunster tackled his difficult problem with a light heart. He would complete that submarine to the minutest detail, and then he and Taki would use her to make good their escape; when or how he did not know, nor did he care at present. There were long weeks ahead in which to contrive and plan.

The Vladivostok yard was not equipped with the latest machinery, nor with the most skilled workmen, both of these having been rushed to Port Arthur to keep in repair the fleet of splendid warships there gathered, and at which Admiral Togo was ceaselessly hammering. Among the force remaining at his disposal Dunster soon found that the Chinese were more skillful, more tractable, and quicker to learn than were the Russian workmen. Consequently he used

the former whenever it was possible to do so. Thus he gained a double advantage; for as he could not speak Chinese and so must have an interpreter, he was able to promote his servant to that office. this way he could have Takahaki's invaluable aid at every stage of the work without exciting suspicion.

In all the time thus spent together the lads strictly maintained their assumed relationship of master and servant. Nor did they find many opportunities for private converse, since an armed guard always paced before Dunster's room at night, while during the day he was never without the companionship of Russian officers desirous of learning what they might concern-

ing the construction of submarines.

The work of assembling the frame and skin of the boat proceeded rapidly, every piece of the cigarshaped steel structure being marked or numbered and accurately fitted for its appointed place. With this task finished came the tedious task of setting up the delicate and infinitely complicated machinery that should give life to the inert hull. There was the powerful gasoline engine that should drive the boat at ten knots on the surface or with base of the conning tower awash, and there was the auxiliary electric motor that would propel her at half that speed when submerged. Besides these were air compressors, fans, air and bilge pumps, batteries and indicators, all connected by an infinity of pipes and wires as complex and bewildering as the arterial system of a human body. At these things Dunster worked as never before in his life, day after day, and often far into the night through weeks that lengthened into months, and always Takahaki was beside him. The Japanese middy was ever ready with the right tool or the word of advice that should solve an apparently hopeless problem, never attracting attention to himself, but placing at his friend's disposal such an orderly mass of exact mechanical, electrical, and chemical knowledge as showed him to be an absolute master of the situation, and caused even Dunster to regard this unobtrusive helper with admiring wonder.

Summer had passed and autumn was merging into winter before the submarine was pronounced ready for launching and for her trial trip; but as yet the officer selected to command her had not appeared. M. Delar, who often visited the navy yard and always with a show of friendship for Dunster, informed him that this person was of wide experience with submarines and would be able to detect at a glance any defects or mistakes in the work; but he failed to

mention either his name or rank. In fact very little information of any kind was allowed to reach our lads, both of whom were strictly

confined to the narrow limits within which they lived and labored. They knew that merchant ships laden with provisions, coal and military supplies entered and left Vladivostok harbor with a freedom that proved the non-existence of a direct blockade, and from this they argued that the entire naval strength of Japan still was needed in the vicinity of Port Arthur. They only heard faint rumors of the great land battles of Nanshan and Liao Yang, and even these Russian disasters were reported in Vladivostok as signal victories for the troops of the Czar.

There was, however, one evidence of Russian reverses that could not be concealed even from them. and on it they based their faith in the continued success of the Japanese arms. Late in the summer the Vladivostok cruiser squadron had again gone to sea. only to limp back to port, some ten days later, riddled with shot and minus one of their number. The splendid Rurik was missing, and it was rumored that she had been sunk by Admiral Kamimura in the straits of Korea. Following close upon this news came the startling rumor that the Novik, fastest cruiser of the Russian navy, had been destroyed in Aniva Bay off the coast of Saghalin.

"If that is true then must Port Arthur be fallen," whispered Takahaki as he served his friend's dinner, "for she was of the fleet in that harbor. If such great thing has happen then quickly will this port be blockade and some friend of us will close at hand be."

Sustained by this hope, the young constructors pushed their work with redoubled energy, until at length all was in readiness for the launching. This would take place immediately upon arrival of the boat's commander, who was daily expected. As yet his name had not been divulged, but one day, as Dunster stood inside the conning tower testing the new adjustible alliscope that formed an important part of the boat's equipment, a startling apparition was flashed from his reflector. By means of the alliscope, while remaining completely hidden within the boat, he could obtain a very fair view of outside objects in every direction. He was engaged in estimating the radius of sight thus granted, when suddenly a familiar figure walked into the reflected field of vision and halted, apparently pointing directly towards him with outstretched arm. For a moment the young American was puzzled; then, with a sinking heart, he remembered. The figure, now uniformed as an officer of the Russian navy, was that of Suwarrow Suwarrowvitch, late of Land the giant tackle of its strongest football team.

(To be continued.)

#### "BE A SOMEBODY" By FRED MYRON COLBY-

ERHAPS YOU have all read the old story of Hercules' choice. As the legend goes, when the hero was a youth just starting out in the world, he came to a fork in the road. While hesitating which to take two beautiful women appeared to him, each advising him the right road to take. One told him that by following his left hand road he would find the way easy and full of delight. It was a smooth, pleasant path under shady trees and through grassy meadows where the birds sang all the

The other was the road to Accompashment. It was a hard, stony way, leading over hills and mountains and across foaming streams and through dangerous forests and morasses. By following it he would find many obstacles to be overcome and he would have to fight many battles, but he was sure to win glory in the end.

day long. They called it the road to Pleasure.

We know, of course, which road the hero took, for if he had not taken the path to Accomplishment we should never have heard of Hercules and his twelve labors and all the brave things that he did.

It is a choice that every young man has to make. Many young folks ramble along as easy as they can, content to take the smooth, pleasant road that requires little exertion. But the bright, ambitious boy who is determined to be "a somebody" will not travel

Much depends on the way you start and your determination. Of course it is much easier to walk along a smooth, level road than it is to climb, but if you do not climb, you will never reach the heights. All great men have been willing to climb.

Bulwer-Lytton, the famous novelist, once said in an address to a school of boys: "As I look at your young faces I go back to the days when I, too, tried for prizes, sometimes succeeding, sometimes failing. I was as fond of play as any of you, and in the summer weather I fear my head might have been more full of cricket than of Terrence or even Homer.

But still I can always remember that, whether at work or at play, I had always a deep, though quiet, determination, that sooner or later I would be a somebody or would do a something. That determination continues with me to this hour."

Do not these words give the key to his success? He had a determination to do something, and having this object in view he became a somebody. This is the way in which we all must work if we intend doing anything worth doing at all.

Work toward an end, boys, and let that end be to be a somebody. From your early school days keep this in view. Let whatever you accomplish each day be only a stepping-stone to something yet higher and better.

Possibly you may not accomplish all you wish; we cannot all be Presidents; but that is no reason why you should not make an endeavor. He who climbs the mountain may not reach the top, it is true, but even halfway toward the summit he will be above the fogs of the valley, and the fairer view he gets will be well worth the climbing.

Do not falter because you fail once. Keep striving and you will do a something. Climb, though it

be ever so slowly, but whatever you do, climb. Do not be content to live on from day to day with no fixed end in view. Be a somebody.

#### Took the Boy's Suggestion

A traveling man relates that while riding on the new Orient line between Harper and Anthony a few days ago, one of the side rods of the engine broke, and the other side stopped on a "dead center," so

#### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 10 - From the Governor of Ohio

GOVERNOR MYRON T. HERRICE, OF OHIO

STATE OF OHIO

Executive Department

OFFICE OF THE GOVERNOR

Columbus

The American boy has the largest apportunities in life of any in the whole world. All that is necessary is for hom to be hement, to be true, to be fair to all in his every day life, and reward will surely sens to him.

that when the repair was made it was impossible to start the train again. He says:

"The engineer, the conductor and all the passengers took turns going over the thing and trying to devise a way to make it run. Finally a boy came out of the field where he had been ploughing to see what was going on. He crawled through the wire fence and sat down on the bank and fanned himself with his straw hat. 'If you'd back that last car up the grade an' let 'er come down kerchunk, that 'ud start 'er,' he finally suggested deliberately.

"The railroad men sniffed contemptuously, but the passengers sided with the boy. Finally the conductor gave orders that the rear car be uncoupled. No less than fifty passengers caught hold and pushed the car up the grade. Once at the top the car was let go. The loose coach gained momentum as it came down hill, and in spite of the engineer's admonition to 'let her come down easy,' the emergency battering ram crashed into the train with a tremendous thump. The engine was bumped off 'centre' all right."—Kansas City Star.

## A Sample American Youth

(From the Illustrated Sporting News.)

New York has cause for self-congratulation in the representative that the State has chosen for the Cecil Rhodes scholarship at Oxford in the person of Warren Ellis Schutt, Cornell, 1905. The sturdy Ithacau will be as splendid a type of American manhood as will be sent abroad to the English university by any State in the Union. Schutt's career is thoroughly interesting. He is the son of a prosperous farmer who lives six miles from Ithaca. Young Schutt got his primary education at a country school near his home. and then won a four-year scholarship in the Ithaca High School in a competitive examination. Instead of moving into Ithaca to live, or even driving to and from school with one of his father's teams, as he might easily have done, Schutt walked to and from the high school each morning and night. In this way he prepared for Cornell University. His first year in college he continued to walk to and from his home. His scholarship continued to be of the same high standard as in high school, and he took all the prizes and scholarships to which he was eligible, ending up with the Cecil Rhodes scholarship at Oxford University. In his sophomore year for the first time Schutt entered college athletics. There the trainer took him under his care and developed him into the greatest cross-country runner in the country. It was here his twelve miles of daily walking to and from his home counted in Schutt's favor in the physical condition of the athlete. He ran in Cornell's victorious cross-country teams against Harvard, Yale, Princeton and Pennsylvania. On the track team ho captured the two-mile intercollegiate run and lowered the time. Last May he duplicated the feat and was subsequently elected captain of Cornell's 1905 track team. This position he will, of course, resign upon his going to England. He is only 20 years old, stands more than six feet in height and weighs 165 pounds.

# BUNKER HILL DAY IN BOSTON

¬O THE wail of the fife and the snarl of the drum Those Hedgers and Ditchers of Bunker Hill come,

Down out of the battle with rumble and roll, Straight across the two ages, right into the soul, And bringing for captive the Day that they won With a deed that like Joshua halted the sun. Like bells in their towers tolled the guns from the town,

Beat that low earthen bulwark so sullen and brown,

As if Titans last night had plowed the one bout And abandoned the field for a Yankee redoubt: But for token of life that the parapet gave

You might as well play on Miles Standish's grave!

Call the roll, Sergeant Time! Match the day if you can:

Waterloo was for Britons-Bunker Hill is for man!"

Bunker Hill Day in Boston is a sort of an avant courier of the Fourth of July. It is quite as much of a holiday as Independence Day so far as the suspension of all business is concerned. There is almost as much noise in the early part of the day, and Old Glory is flung to the breeze from every flagstaff. Red, white and blue bunting adorns many of the buildings and Bunker Hill is the Mecca of thousands. It is the greatest day of the year in Charlestown, and she puts her best foot forward. There is always a parade, and last year this part of the day's exercises was made particularly interesting by the addition of a float on which was the old Liberty Bell, which had been brought from Philadelphia expressly for this purpose, Mayor Weaver coming with it. This year the chief event of the day will be the unveiling of a statue to the noble General Warren of Roxbury, who lost his life at the battle of Bunker Hill and who, the year before his death, gave public expression to his patriotism in a long ballad or poem entitled "Free America." One stanza was exempufied in his own heroic conduct at the battle of Bunker Hill. It was as follows:

> "Lift up your hands, ye heroes, And swear with proud disdain, The wretch that would ensuare you, Shall lay his snares in vain; Should Europe empty all her force, We'll meet her in array, And fight and shout, and shout and fight For North America."

The entire poem, which was patriotic if not perfect as a poetic outburst, was published in all of the Massachusetts papers of that day, and it added to the high esteem in which Joseph Warren was held by the people. He was at this time Dr. Joseph Warren. and his home was in Roxbury, where he had been born in the year 1741. His superior intelligence, his manliness and his outspoken patriotism won for him the respect and admiration of his countrymen. No braver or better man than Joseph Warren fell at the battle of Bunker Hill. The Provincial Congress had made Dr. Warren a major general two days before the battle. Warren was at this time President of the Congress. It was on the night of the 16th of June when the Provincials left Cambridge Common to steal a march on the British and

By J. L. HARBOUR

STATUE OF GENERAL WARREN

take possession of Bunker Hill and fortify it. There were about one thousand men, led by Colonel William Prescott, of Pepperell, a brave man and true. The men lined up in front of the headquarters of the Committee of Safety and of General Ward. Just before they started President Langdon of Harvard College stood on the steps of the house—afterward the birthplace of Oliver Wendell Holmes-and offered prayer. Then the men stole away into the darkness toward Charlestown. The soldiers carried fowling pieces without bayonets, and they had but a limited supply of powder and ball, but more was to follow. When near Bunker Hill the troops were joined by General Putnam and Major Brooks.

Not until the eastern sky had begun to glow with the first faint rays of the morning did the British know that the Provincials had taken possession of Bunker Hill. Five British warships were at anchor in Boston harbor, and there was a good deal of commotion on those vessels of King George when it was known that the Yankees were working like beavers on their fortifications on Bunker Hill. A British sergeant who "ran to poetry" tuned up his harp and wrote these lines:

"The seventeenth, at break of day, The Yankees did surprise us, With their strong works they had thrown up, To burn the town and drive us. But soon we had an order come, An order to defeat them-Like rebels stout they stood it out. And thought we ne'er could beat them.

"About the hour of twelve that day An order came for marching-With three good flints and sixty rounds, Each man hoped to discharge them. We marched down to the Long Wharf, Where boats were ready waiting, With expedition we embarked, Our ships kept cannonading.

This merry ditty was sung by the British to the tune of "Yankee Doodle." Like all ballads of those days it did not lack length as it had ten stanzas, closing with the following reference to John Hancock and John Adams, whom the British proposed to execute "without benefit of clergy" once they laid hands on them:

> "As for their king, that John Hancock, Or Adams, if they're taken, Their heads for signs shall hang up high Upon that hill called Beacon.

It was about three in the afternoon when the fighting began in dead earnest. The Provincials were waiting for the order to fire from Prescott, whose words on this occasion have become a matter of history-"Don't fire till I tell you! Don't fire till you see the whites of their eyes!" The battle was short and decisive. It lasted but little more than an hour but in that brief time the British lost 1,054 while the American loss was but 449, which was about one-fourth of the entire number they had in action, some recruits having come to them after the main

part of the troops had left Cambridge the night before. The British lost more than one-third of their entire force. General Howe lost every officer on his staff. It could have been said of those early New Englanders, as it was said of the men of New England during the Civil War, that they were the hardest to get into a fight, and the most terrible to meet in a conflict, of any men on the globe. Although they lost the day at the battle of Bunker Hill they amazed the British by their fighting capacity, and the number of British killed gives the lie to the rhymester we have already quoted when he says in the eighth verse of his cheery ditty:

> "And when the works we got into, And put them to the flight, sir, Some of them did hide themselves, And others died of fright, sir."

The time came when the British discovered that fright is an unknown feeling to the New England soldier when his blood is up. And if the Americans could have had a sufficient supply of ammunition the boastful and triumphant lay of the British war poet could never have been written. General Gage was horrified over his losses. He wrote the following words later, and in them is a certain tribute to the courage and the capacity of the Yankees: "The trials we have made show that the rebels are not the despicable rabble too many have supposed them to be," and he admitted in the same letter that "the conquest of this country is not easy." Later the British discovered that the conquest of this country was not only difficult, but that it was impossible.

The death of General Warren added to the sorrow the people felt over the defeat of the American soldiers. Abigail Adams, who with her little son, John Quincy Adams, climbed to the top of Penn's Hill near her home, ten miles from Charlestown, and watched the smoke of battle and listened to the booming of the cannon, wrote to her husband the following day: "My bursting heart must find vent in my pen. I have just heard that our dear friend Dr. Warren is no more but fell gloriously fighting for his country; saying, better to die honorably in the field than ignominously hang upon the gallows. Great is our loss.'

The monument of which all true Bostonians and all true Americans are so proud is 220 feet high. It was begun in 1825 and the corner stone was laid by Lafayette while the oration was by Daniel Webster, and the latter was also the orator when the monument was completed and dedicated on the 23d of July, 1842. President Tyler and his cabinet were the guests of honor, and it was at the laying of the corner stone of the monument that Webster gave utterance to the famous words: "Let our object be, our country, our whole country, and nothing but our country." men who fell at Burker Hill had the spirit of these words in their hearts. There are tens of thousands of graves of soldiers who lost their lives in American wars which give mute testimony to the fact that country was dearer to them than life.

#### American Boy Day in Boston

What more appropriate place for the celebrating of American Boy Day than historic old Boston. Look out for date. The leaders of boys in and about Boston are at work on the plans.

Greece today.

IN BIG OUTDOOR athletic meets nowadays there is oftentimes scheduled a Marathon race. Every boy knows what this is but not every boy knows how this severe test of endurance gained its name, nor that the first Marathon race was run against Death by a man wounded, bleeding and exhausted by hard fighting before even the start was made. The story of that race and the events that led up to it still lives in

JOHN C.

**FITZPATRICK** 

Pheidippides, twice winner of that coveted laure! crown of the Olympic games—the darling of the stadium—was the best runner in all Greece. Slender and straight but deep chested and muscular, with clean-cut, beautiful legs, the equal of which were not in Hellas, he stood before the Athenian Senate. Persia had come. Darius the Great had thrown an army of 120,000 men across the Ægean Sea, sacked the city of Eretria and landed at Marathon. Athens was in a tumult but it was the tumult of patriotic valor, not fear, and Pheidippides was dispatched to Sparta for aid. Here was need for strength and speed and a careful husbanding of both. One hundred and fifty miles was the distance. Like an arrow from a bow Pheidippides sped through the city; the people cheered him as he went. Through the great gate and down the hillside he flew, those wonderful legs moving with ease and precision and all the smooth steadiness of machinery. A few moments and he disappeared into the forest and the watching Athenians, breathing a prayer to the gods for his safety, turned to their hurried preparations for defense.

Hour after hour Pheidippides swung on. His pace was swift but not furious, for well he knew the many leagues that lay before him. On he went, now dipping into hollows, now rising above the wooded ridge but ever on, on, on with steady stride. The glories of the Grecian sunset shone in his face, the shadows lengthened and the night shut down before he slackened his pace. A brief rest and aided by the rising moon the tireless man again fell into his stride. On through the night, on through the dim, cold hours of early morn he ran; flitting through the forest like some frightened ghost and passing with light and even step across the damp levels of the lowlands. With the coming of the warm and friendly sun he dropped into a walk, halted and sought sleep beneath a great overhang of rock. Not long did he slumber; before the sun was two hours high those magnificent legs were again winging up the great highway of the Peloponnesus and climbing with steady push the ris ing and rocky heights of the Spartan peninsula. All day long he traveled and all day long the road was a continuous ascent. At sunset he paused and for the first time looked back; Greece in all her rich beauty lay at his feet; beyond, through those dark and rugged hills, lay Sparta. From his great height he could almost imagine a glimpse of his beloved Athens, gleaming white and fair among the purples and golds of the clear distance, Athens! his city! for which he would gladly at all times give his life's blood; his heart throbbed within him and turning he plunged forward into the hills at top speed. As long as the light lasted he ran and with the darkness, laid him down to sleep until the moon should come again. He was awakened by its rays shining full in his face. A hasty drink at a mountain rill and he was off, running steadily, steadily. The ground though wild and rocky was more level now and in an hour's run the dense wood thinned, the earth sloped away in rapid descent and clear and cold in the moonlight Sparta lay at his feet. Pheidippides paused, struck by the beauty of the scene, the dark, densely wooded slopes, the bare, brown fields and the white walls and yellow lights of the city all misty and dim in the cold moonlight. And as he gazed a chill crept over his heart; it was all so bleak and drear, so different from the warm and friendly land back through the mountains; even the moon seemed changed and glared upon him with sardonic sneer. Shaking off his forebodings he flew down the hillside like a bird, across the level spaces and up to the city gates—a

challenge, an answer and he was through. He had come one hundred and fifty miles and crossed a range of mountains in thirty-six hours.

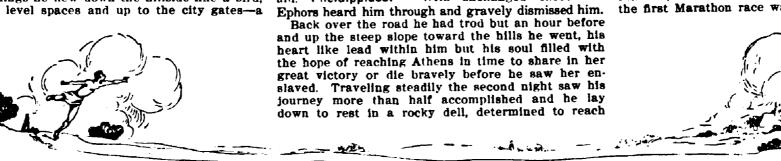

The solemn Ephors, the guardians and legislators of Sparta, were assembled. To the nervously waiting Pheidippides the bare walled, low ceilinged Council Room, the rude and fitfully glaring lamps lighting the circle of hard, stern faces, was as some torture chamber. And torture chamber it was to the warmhearted Athenian, for the fate of Athens and of all Greece seemed dependent upon that slow, chill discussion, and scarce could he contain himself as the talk went round and Sparta's ever-living jealousy came clearly to the fore. The council closed with what to Pheidippides seemed Athens' death sentence. Sparta cleverly shielded her desertion of Greece behind an ancient oracle. Aid would be sent, but the Augurs forbade under penalty of defeat any warlike expedition before a full moon. In three

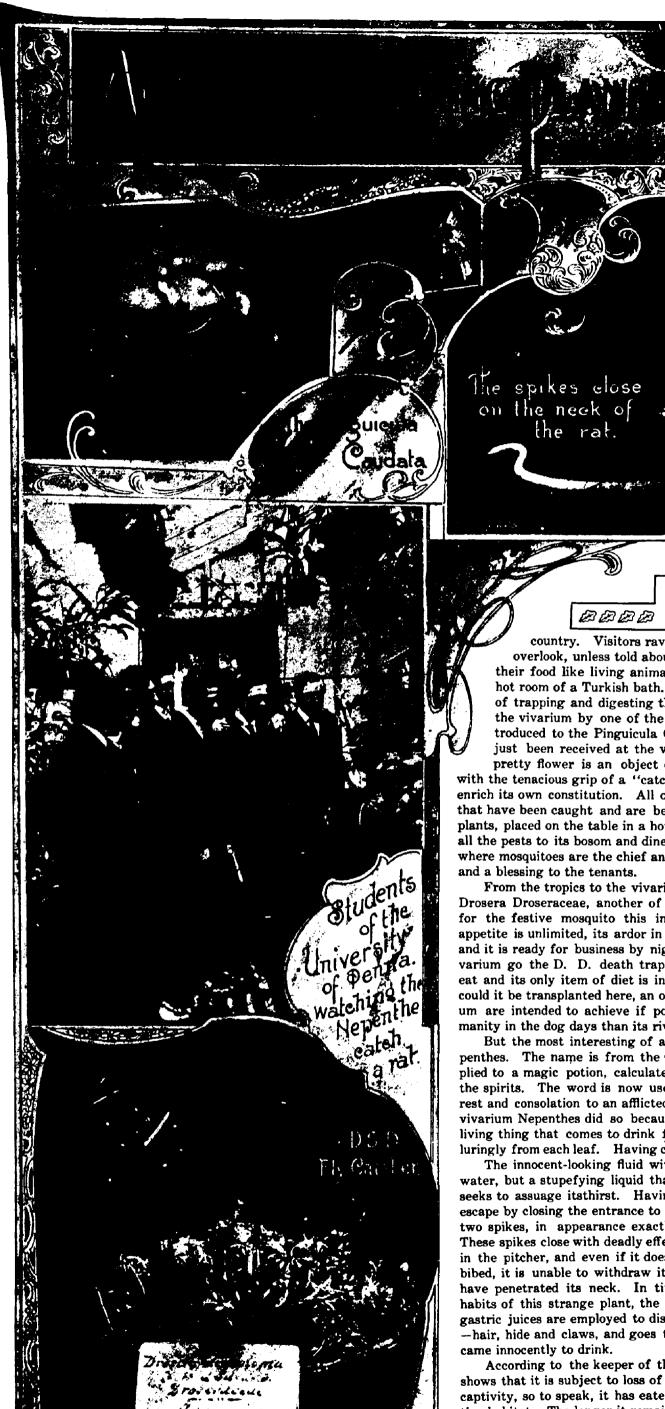

nights more would this be, then would the Spartan army march. Pheidippides was stunned. In vain did he plead and argue, the Spartan heart was adamant. He saw the uselessness of effort and in fine scorn closed his appeal. Standing before that stony hearted circle his bitterness burst forth: "And this, O! Sparta, is the word I will bring to Athens. Sparta sends aid—from a nation of soldiers comes one man to fight for the liberty of Greece. Behold Sparta's aid.—Pheidippides!" With unchanged faces the Ephors heard him through and gravely dismissed him.

Athens before another sunset. The moon was sinking in the west when he woke and the liquid plash of a mountain brook lured him into a small amphitheatre of rock and shrubbery. He found the spring and knelt upon the moss to cool his dry throat. A sudden sighing melody broke on his ear, he turned and his blood went cold while his heart pounded and beat madly against his ribs. There against the fateful moon loomed the form of the great god Pan. An ivy garland drooped from his brow and pressed against his bearded lips were those wonderful pipes, instruments of melody divine. A sweet, long-drawn. plaintive note and the god spoke: "Pheidippides, well beloved, fear not. Thou art of Athens and Athens I love, but I would know why, of all Hellas, Athens worships me not. Stay, answer not. Take thou this fennel bough, return to Athens, bid her take heart; Pan loves her and will she but rear him an altar, will fight for her and in the coming battle will be with her on the field. And for thee, Pheidippides, who hath striven for thine Athens, it shall be granted to thee to fight bravely and well in her defense and afterwards to gain the honor of honors with sweet release and rest from all care and trouble—the greatest gift of the gods." The fennel bough, heavy with dew, fell lightly across the shoulders of the crouching Athenian, a sighing breeze stirred the foliage and Pan was gone, but the soft music of his pipes lingered among the rocks and bushes like some sweet perfume. Deeply stirred and heartened to greater effort than before, Pheidippides sped across the country. He reached the city and delivered Sparta's answer, but its discouragement was forgotten in the promise of the mighty Pan.

Rapidly were the arrangements completed and the little army of 10,000 men marched slowly through the Pentellicus hills to the level plains of Marathon. Of that wonderful battle there is no time to speak here. Miltiades handled his small force with deadly skill and effect against the vast Persian host. Its defeat was emphatic and it was pushed back in confusion and great slaughter to its ships. In the fighting that morning none fought more bravely than Pheidippides; where the struggle was fiercest he was ever at the front, and when the day was won more than one dark stain upon his armor was not caused by Persian blood alone. Miltiades, standing on that victorious and bloody field, called for a messenger to carry the glad tidings to the anxiously waiting Athens. Pheidippides stepped forth. No one deserved the honor more and in the excitement none noticed his condition. He flung aside his armor, stripped off his tunic to the waist and once again those muscular legs began their swinging stride. The Marathon race was on. Mile after mile he ran, but more weakly now and once and again he stumbled. The exertion served to keep open his wounds, and blood mingled with the sweat that streamed over his clest and down his legs to splash upon the soil for which he was giving his life. It was a grim race, with Death galloping ever beside him and anon reaching out its bony hands to stay his course; but as often as the sick faintness would come creeping. Pheidippides, gathering all his remaining strength, would plunge forward with a sobbing shout: "Athena! Athena!! Help, O Pan!!" Struggling, stumbling and reeling he ran. At last—at last the white columns of the Parthenon burst on his swimming sight, at last he could see the beautiful height of the Acropolis; Athens, glorious Athens, rose toward him and through his blurring vision he saw the people streaming from the city gates. One more great effort, "Help, O ye gods!" \* \* \* His sight suddenly cleared. his reeling steps grew firm, his stride lengthened, his breath came free, Pheidippides, fastest runner in all Greece, was coming to Athens with tidings from Marathon. In all his life he had never run as he then ran; easily, gracefully and swift as the rush of the flying deer he sped up to the gate and into the middle of that surging, hysterical crowd. Lightly he stopped, up went his hand toward the sky, his head was raised, his figure straight and tall; covered with dust, streaming with blood and sweat, he was yet Pheidippides, the darling of the stadium, best runner in all Greece. For an instant thus he stood, his figure drawn to its full height, then a single word burst from his lips and rang like a trumpet call clear and high across the city: "Victory!" The blood gushed from his lips, he spun round and fell into the eager outstretched arms as the echoes flung back that triumphant word. The great Pan's promise was fulfilled; those wonderful legs were at rest forever; the first Marathon race was won.

N AN unpretentious looking building attached to the University of Pennsylvania, and visited but seldom even by the students themselves, is the most remarkable collection of plants in the

country. Visitors rave over the collection of orchids in this vivarium, but overlook, unless told about it, the corner where the plants that catch and eat their food like living animals thrive in a temperature that reminds one of the hot room of a Turkish bath. These curious plants are to be seen in the very act of trapping and digesting their food. If you are lucky enough to be taken to the vivarium by one of the learned professors of the university you will be introduced to the Pinguicula Caudata, a small and modest looking plant that has just been received at the vivarium, and which, despite its shy looks and its pretty flower is an object of horror to the insect world, for it holds to them with the tenacious grip of a "catch 'em alive" fly paper, and in time absorbs them to enrich its own constitution. All over the leaves of this pretty plant are dead insects that have been caught and are being slowly digested by the plant. A few of these plants, placed on the table in a house infested by flies would, it is said, in time gather all the pests to its bosom and dine off their remains. Placed on the porch of a house where mosquitoes are the chief annoyance the Pinguicula Caudata would prove a boon

From the tropics to the vivarium of the University of Pennsylvania has come the Drosera Droseraceae, another of the "eat 'em alive" variety of plants. As a trap for the festive mosquito this interesting plant is said to have no superior. Its appetite is unlimited, its ardor in the work of luring insects to their doom is tireless, and it is ready for business by night or day, for so far as the observations in the vivarium go the D. D. death trap for flies requires no sleep. Its sole diversion is to eat and its only item of diet is insects. In the tropics it is a most useful plant and could it be transplanted here, an object that the experiments at the University vivarium are intended to achieve if possible, it would be no less a blessing to tortured humanity in the dog days than its rival as a fly catcher the Pinguicula Caudata.

But the most interesting of all these tropical plants at the vivarium are the Nepenthes. The name is from the Greek, meaning removing sorrow. It has been applied to a magic potion, calculated to banish the remembrance of grief, and enliven the spirits. The word is now used figuratively to express any remedy which gives rest and consolation to an afflicted mind. The humorist who named the plants at the vivarium Nepenthes did so because they settle, once and for all, the troubles of any living thing that comes to drink from the pitcher-like structure that is suspended alluringly from each leaf. Having captured the thirsty one the plant eats it at its leisure.

The innocent-looking fluid with which the pitchers of this plant are filled is not water, but a stupefying liquid that numbs the senses of the rat, mouse or roach that seeks to assuage itsthirst. Having stupefied the intruder, the plant then prevents its escape by closing the entrance to the pitcher. In the lid of this curious receptacle are two spikes, in appearance exactly like the fangs of a rattlesnake raised to strike. These spikes close with deadly effect on the neck of the rat which has inserted its head in the pitcher, and even if it does not succumb to the effect of the drug it has imbibed, it is unable to withdraw its head from the trap by reason of the spikes that have penetrated its neck. In time, according to those who are familiar with the habits of this strange plant, the prisoner is drawn into the interior of the pitcher, gastric juices are employed to dissolve the body, and in time the creature is absorbed—hair, hide and claws, and goes to nourish the plant at whose inviting cup the victim came innocently to drink.

According to the keeper of the vivarium, a close study of the habits of this plant shows that it is subject to loss of appetite just as human beings are. Since being in captivity, so to speak, it has eaten less than report says it is accustomed to in its native habitat. The longer it remains in the artificially heated atmosphere of the vivarium the less it seems to want to eat, although there is no sign that it suffers from this voluntary deprivation. Food that it has captured from the live things that make their home in the vivarium remains undigested in the pitchers for a long time; where once the merest touch would electrify the plant into life and cause it to close its fangs in search of a victim, the queer, uncanny thing now languidly and leisurely responds to extraneous influences.

There are a number of these Nepenthes now planted in the vivarium of the University, and they are a source of never ending interest to the botanists who visit this adjunct to the Biological department of the college. To what use they could be put in this country is not plain. As rat, mouse or roach traps they would doubtless be invaluable in any household, but the temperature at which the house would have to be kept to ensure the plants living would make their presence the greater of two evils.

# My Four Years at West Point Pony, Cart in Harness, Free

(BEGUN IN SEPTEMBER)

AT WEST POINT.

O ILLUSTRATE the method of conducting recitations at the U. S. Military Academy, let us suppose that I am in the second section of mathematics—(this, however, is a mere

supposition).
It is 7:53 in the morning, and the bugler is just blowing call to quarters. I come sauntering out of the hall of barracks, book in hand, taking a farewell look at the different eliminations for equations of two unknown quantities. Other plebs appear and are gathering on the pavement south of the plazza. It is hardly time for the upper classment to show themselves on the pavement, but they begin to collect at

upper classmen to show themselves on the paverment, but they begin to collect at about one minute before eight.

Each pleb has a question to ask some other pleb about the lesson of the day. The second pleb replies by asking pleb No 1 another question. Pleb No 1 retorts with another interrogation point, and then rushes off to still another classmate, until, finally, the bugler sounds the assembly, as the clock strikes eight.

Every man knows about where his section forms and is there in a moment. Up-

proceed to their various section-rooms.

As soon as the section marcher reaches the proper room, he halts his men, faces them toward the wall, and orders "Break ranks, March!" The cadets then hang up their caps and enter the room, the section hang up their caps and enter the room, the section marcher last, closing the door after him. The room contains a row of desks on the north and one on the south side. The instructor has a desk on the farther side of the room from the door. The cadets take seats according to rank, the senior being in the seat nearest and to the the seat nearest and to the right of the instructor, and so on in rank down one row, then beginning at the seat to the left of the in-structor down to the seat of the tail man of the sec-

tion.

The cadets proceed to their respective seats and remain standing until the section marcher, who advances to the steam-heater in the center of the room, has made his report, when they all seat themselves together. They then take

section marcher, who advances to the steam-heater in the center of the room, has made his report, when they all seat themselves together. They then take down the next lesson, posted on the blackboard behind the instructor, and every man closes his book. Steady'—the instructor first asks if there are any questions on the lesson of the own. Don't you believe anything of the day of the would be willy cadet takes advantage of this opportunity, for two reation have "caught on" and figured out sons—either to show off what he knows (although he does not make his remarks that instructor as the cadets say "bugling it," for the shugle sounds the recali in the hall at several members of this astute section. But it doesn't take an instructor long to find out these men—then look out for squalls.

When all the necessary explanations have been made, our instructor takes up ble sections to a sale the end of the size of the scales to the cadets of the section of the day to rask the cadets of the section of the day to rask the cadets of the section of the size of the section of the size of the section of the day to rask the cadets say "bugling it," for the hall at part of the sounds the recali in the hall at part of the section of the size of the section of the size of the section of the size of the section of the day to rask the cadets say "bugling it," for the hall at part of the section of the size of the deal of the section of the size of the size of the deal of the size of the deal of the size of the size

have been made, our instructor takes up about half-way through the first term. On

boards." The men doomed to these boards deduce step by step all the general rules in the lesson of the day, and often those in the lesson of the day before.

Nothing is assumed in mathematics at West Point. Everything is deduced, and in fact these deductions are the main features of mathematics at the Academy. tures of mathematics at the Academy. "Side boards" where problems are solved in a systematic manner and explained in some cases, are only incidental. And mere memorizing of the words in the book won't do (i.e. in the Mathematical Department— it serves well in the other departments) for even if the instructor does not interfor even if the instructor does not inter-rupt you with several questions during your recitation, he will fire a volley at you when you are through that will drive both words and "math" from your brain. Learn the whys and wherefores—don't get rattled and never admit that you don't know what

and never assumption on the plantform, near takes his position on the plantform, near to say.

The men are at liberty to make the necessary notes to elucidate their respective subjects, after having written their names in the upper right hand corner of their boards. In the meantime, the instructor calls up a cadet on "questions." This man takes his position on the platform, near accordingly, after brushing upon it. I went to the English section-room prepared to do wonders. I wouldn't write notes on my

By A GRADUATE

HOW RECITATIONS ARE CONDUCTED to questions by the instructor, tells all he knows. If the cadet has "boned questions," or if he is good at memorizing, he has a fair chance for a "max" (maximum, 3—minimum, 0); but if he is a "side board fiend" and has cut questions, and tells the instructor that an equation is a similitude of similar similarities, and that an identical equation is a similarities, and that an identical equation is a similarities, and that an identical equation is a similarities. cal equation is one whose identity we can easily recognize (definitions I overheard one day), he will need a microscope when he examines his weekly marks posted in

the gymnasium on Saturday.

As soon as the instructor has finished with the man on questions, he calls upon the one at the first front board to recite.

If this man is not ready, he calls on the second front board, and so on in order.

The first front board is the one opposite and to the right of the instructor as he

section) stands in front facing his section, side and are marched back to the area of day shouts "Form your sections."—"Right face!"—"Call your rolls!" These comsay that a certain instructor "runs a denatcher faces to the front. As soon as they all have faced toward him, the officer of the day says "Resport!" and the marchers report in order. The O. D. then commands may all have face!" and "March off your sections!" The sections then file into the west door of the Academic Building and proceed to their various section-rooms.

Side and are marched back to the area of ported.

As for the other department, that of modern languages, there was nothing particularly difficult. In fact, the man who mands having been obeyed, the section tail," which means that he gives out subgets found in English ought to have been found on the preliminary examination. There is no excuse for it. While I would not advise any one to cut the Department of Modern Languages, it is a fact that when there is one man found in this department, that of modern languages, there was nothing particularly difficult. In fact, the man who modern languages, there was nothing particularly difficult. In fact, the man who modern languages, there was nothing particularly difficult. In fact, the man who modern languages, there was nothing particularly difficult. In fact, the man who modern languages, there was nothing particularly difficult. In fact, the man who modern languages, there was nothing particularly difficult. In fact, the man who modern languages, there was nothing particularly difficult. In fact, the man who modern languages, there was nothing particularly difficult. In fact, the man who modern languages, the was for the under languages, the was for it would not advise any one to cut the Department of Modern Languages, it is a fact that when there is one man found in this department. There are five found in mathematics.

Having finished with the Academical Department, let us go to the Tactical Department. # 18 a list # ##

have been made, our instructor takes up about natively independent on the made, our instructor takes up about natively independent on the made in the made in the lesson. Our instructor blackboards at the side of the room opposite the instructor are technically known as "front boards." Sometimes one or two additional boards are created "front boards." The men doomed to these boards recitation, although quite ignoring the district step by step all the general rules words of the book and omitting a few said that we should read it over, although we would not be required to learn it. Nevertheless, he gave the subject to the marcher of my section who made a pretty recitation, although quite ignoring the words of the book and omitting a few minor details. I was the next ranking min and had been pushing him hard. was a chance to gain a file.

I reasoned that the next day I would get "probs" in "math," and the Essay in the review English lesson. I cut my "math" lesson dead and devoted every spare moment to the memorizing of this essay which was three pages long and in very fine print. Before I went to bed. I handed the rhetoric to my roommate and he heard me recite word for word the whole essay with no omission except punctuation marks.

The next day in "math" I was required

The next day in "math" I was required to deduce the rule for the "greatest common divisor." But somehow it wouldn't deduce, and, while I was nosing the board, the Professor walked in. He saw the point and said he would hear what I had to say. Well, I had lots to say, but it wasn't relevant or strictly true in a mathematical series.

board as the other cadets did. I would merely write "Campbeil's Essay on Style" in large bold letters, then face about im-mediately. When called upon, I would not move my pointer or change my posi-tion once. I would gaze into space and let the words flow forth in one uninterrupted the words flow forth in one uninterrupted

When the subjects were given out, the "endth" man of the section was required to discuss the Essay, and I was awarded Simile, Hyperbole, and Metaphor. My recitation was almost as doleful as my math display in the morning.

This was the last time I ever "boned details."

Algebra is completed in the first term

Algebra is completed in the first term, Algebra is completed in the first term, and the course includes nearly everything there is in algebra. It was all plain sailing for most cadets who had studied algebra before, until we reached quadratics. But we did not stop here. We pushed into chance and probabilities, logarithms (not mere tables but the whys and wherefores of logs), equations of the mth degree, and the upper sections took Sturm's Theorem Each pleb has a question to ask some other pleb about the lesson of the day. Each cadet, when ready to recite, takes of logs), equations of the whys and wherefores of logs), equations of the whys and wherefores of logs), equations of the mth degree, and holds his position at that side of his board most remote from the instructor, stands up with another interrogation point, and then rushes off to still another classmate, until, finally, the bugler sounds the assembly, as the clock strikes eight.

Every man knows about where his section forms and is there in a moment. Upper classmen rush out of the halls buttoning up their dress coats as they come, and conficer of the Day can "skin" them for a late.

The sections form in order of rank from east to west. The ranking section of the first man "Mr. Y, i will first class is at the eastern extremity of the line, and the fourth class immortals are at the west end of the line. The section, stands in front facing his section. As the bugle-call ends, the officer of the Day tan "sections"—"Right in not uncommon to hear the cadets of moderu languages, there was nothing partitimes (not more takes of logs), equations of the mth degree, and the upper sections took Sturm's Theorem. Referring to logarithms, do you know what a modulus is, and the modulus of one system of logarithms being given out the sword manual, and he keeps it at this position except when necessary to use it to point out something on his board.

When a cadet is called upon, he gives what is called his "enunciation," beginning up their dress coats as they come, and ended upon, he gives what is called his "enunciation," beginning up their dress coats as they come, and ended to demonstrate.

If none of the front-board men are ready of the instructor's negative quantities, whole numbers and fractions. If in multiplying 20 by 2, you failed to use the arithmetical complement every time that it was applicable, you were reported.

As for the other takes logarithms (not mere takes of logs), equations of these the unit

Having finished with the Academical Department, let us go to the Tactical Department. On every fair day in September (Saturdays and Sundays excluded) we had battalion drill. This is really a beautiful drill, and I would advise persons wishing to visit the Point to go there either in September or in May, when it takes place.

A word to visitors that will save them lots of trouble, when they wish to see a particular cadet. After you reach the summit of the hill, leading from the railway station to the plain above, walk westward until you reach the main road.

above, walk westward un-til you reach the main road runi.ing north and south.
Walk up this road in a
northerly direction until
you strike another running east and west. Turn to the left and walk past the north end of the long, brown building (the Academic building) until you come to the cadet barracks,

dent's quarters and we broke ranks for several minutes, while the band played. As soon as it ceased, we had to be in our places behind the stacks. At 5:15, we were formed in columns or battalion front and marched back to barracks. The last few days of the month were devoted to skirmish drill. Skirmishers deployed all over the plain, and fired volleys into imaginary foes

Although these drills were somewhat tedious, the weather was beautiful. June is the loveliest and gayest month at West Point and September is the loveliest and Point and September is the loveliest and saddest. Though the air was warm and hazy and the trees green with their summer verdure, the wind stealing over the bosom of the river, brought with it an almost imperceptible chill, telling that summer was over and the "melancholy days had come."

(To be continued.)

We are Going to Give Away Two beautiful Postplete one to the brightest boy and one to the brightest girl
who secures the most subscribers to Hunas Lirs, a magazine of
twday, on or before August let. Not only this, but we shall
give away 104 Other Beautiful prizes, and for every subscriber that you obtain for our new magazine at only 50 cents a
year, we will pay you a bandseme cash commission.

This Cash is in addition to the many prizes. We will send
you ten. Aftern or wently five copies of Hunas Lirs, together
with subscription blanks and receipts, delivering them to you
without any cost. These you will give away to your friends,
and nine out of ten of them will gladly give you a year's subseription after seeing our magazine. It is the brightest and
best magazine ever published at 50 cents a year. It comperes
favorably with the dollar magazines.

If you take right hold of this now and put in only a part
of your spars time you will earn a great deal of spending
many for yearself, and who knows but what you may secure
the Peny, Cart and Harses.

The not let any other bay or girl get ahead of you. Write
us today. This effer is grantine, honest and most liberal
Just send us your name and address on a pastal card, telling
us you want the pony rig, that you will work for us. Do it
now. Tomorrow may be to late; some one may get shead of you.

This happened while filling the position of lecturer on chemistry at the Castle Street Academy, Reading. He used for pursue his studies, and found the old-man, whose temper had often been tried fashioned fiint and steel extremely inspired by the defective quality of the watch springs then in use.

This happened while filling the position of lecturer on chemistry at the Castle Street Academy, Reading. He used to rise at 4 in the morning, in order to pursue his studies, and found the old-man, whose temper had often been tried fashioned fiint and steel extremely inspired by the defective quality of the watch springs then in use.

He sometimes wondered if it were not possible to make these articles of like nature, and at last came to the conclusion that if he could only melt a piece of steel and cast it into an ingot, its composition would be the same throughout.

He experimented, and at last succeeded. The supply created the demand. And ere long Huntsman was turning out cast steel ingots by the hundreds of tons, and reaping a fortune.

The workmen in the mills were paid very high wages, and were sworn to secrecy. Nor did they betray their trustation at least not wittingly.

But one bitter night they gave shelter to a wan, half-frozen lad, dressed in tattered corduroys. He asked no questions. Indeed, he seemed dozing most of the time in the warm glow of the furnaces.

Nevertheless, when he went he took the secret of steel casting with him, and within half a dozen weeks there were as many mill owners in Sheffield working the new process.

Samuel Crompton, a boy of 16, copied the best features of the spinning machine invented by Hargresses and Ark
Lord Armstrong as a boy was intended for the law, but as it happened there was a water wheel of curious construction near the office where he worked, and the man who owned it explained its mechanism to the inquisitive lad. He also explained to him an idea he had for utilizing the power of falling water in order to lift great weights.

A few brief words set young Armstrong thinking. A little later he started was that there was perfected, in due course of time, the enormously powerful hydraulic crane, which has rendered possible the ambitious enterprises of the modern builder.

Last and most wonderful of all, comes

modern builder.

Last, and most wonderius of any the case of the little Italian lad, Gugliel-mo Marconi, who, through seeing a con-Last, and most wonderful of all, comes

mo Marconi, who, through sceing a conjurer perform certain tricks by means of electrical agency, was enabled not so very long afterward to astonish the world with wireless telegraphy.

His first experiments were carried on in a field on his father's farm, and his apparatus consisted merely of tin biscuit boxes set up on poles of varying heights, one of which was connected with a crude transmitter and the other with an equally crude receiver, both of

with an equally crude receiver, both of his own manufacture.

This was in 1886, when he was in his fourteenth year, and he was barely 21, a shy, modest, beardless stripling, when

## BOYS AS MONEY MAKERS TAND MONEY SAVERST

#### Save Your Money

By HILDA RICHMOND

fevery boy and every girl had been taught to save the pennies given them in their youth there would be less talk about how to save the young people," said a public speaker at an educational gathering not long ago. At first thought this seems like a broad statement, but there is much truth to hack it up. The lecturer had been telling of two boys who accidentally broke a window playing ball, and while one was required to pay his share of the damage out of his own savings, the other boy's father came to his rescue and paid his bill without a word. As a result the latter went on breaking windows, while the former sought a safe place for his fun where no windows were near.

A certain wise business man refuses to hire any boy who has not a savings book or something to show for previous labor when he makes his application. "How much have you earned since you began working?" is his first question, and then "How much have you saved?" If the boy has had a meager salary and has had to help at home ten cents a week is sometimes sufficient guarantee of his good intentions, while many a youth has been turned away with excellent recommendations because out of fair wages he cannot show a cent of savings. The business man has been called unwise and unfair to dismiss bright boys for that one reason, but he is satisfied with his method and has never had reason to regret it.

"Would you mind telling me why you don't need me any longer?" asked a boy respectfully when he was dismissed from a store not long ago.

"You are in debt to two or three merchants around town and if we do not pay you enough to keep you honest you had better find a better place," was the reply.

"I am honest," said the boy, "and I intend to pay those debts as soon as I can

"I am honest," said the boy, "and I intend to pay those debts as soon as I can

who has ability enough to pay as he some money."

"That may be, but we prefer a boy who has ability enough to pay as he goes and save a little besides," and the subject was dismissed.

The workman who owns his own home is a better citizen and a better worker.

The workman who owns his own home is a better citizen and a better worker than the man who boasts that he doesn't pay taxes, and, for the same reason, the young man with a little bank account is more apt to be temperate, honest and careful than the youth who flings his money to the winds and boasts that he intends to have a good time once in his life anyway. It is unfortunate that so many parents allow their children to grow up without definite ideas of earning and saving money, but even if the early education has been neglected the young people themselves may begin putting away something for the independence all men and women should strive for in mature years.

About fifteen year ago four young men

for in mature years.

About fifteen year ago four young men started in similar positions with the same wages, and all had about the same general start in life. They had common school educations, good health, and were considered as belonging to the same "set" in their native town. In time all married and had families and, of course, had sickness and the usual expenses incident to married life. Out of the four but one has anything to his credit while the others live from hand to mouth in spite of fair wages. They are in debt more than half their time and look with envious eyes at their friend who saved spite of fair wages. They are in debt more than half their time and look with envious eyes at their friend who saved his money. To them it is a case of pure luck that he has sufficient income to keep him without working if he should so choose to do, but the wise young man knows better. When his comrades laughed at him because he could not afford money for cigars and to have a good time "with the boys," he quietly went his way and is now able to take vacation trips and have a good time not "with the boys," he quietly went his way and is now able to take vacation trips and have a good time not "with the boys," he quietly went his way and is now able to take vacation trips and have a good time of the boys, are looked upon as "slow pay" by the merchants with whom they deal, and everyone can tell you that when a man gets that reputation he has few friends.

If you can only save ten cents a week by all means put that amount away. The habit of saving will grow on you and you will soon be able to pass the tempting candy, fruit or other things that make holes in your allowance or wages at a time, and as there is a colored

ing candy, fruit or other things that make holes in your allowance or wages without a wish for them. Eating between meals is a poor practice anyway, and the sooner it is broken up the better. A boy who delivered papers and never had a cent to show for his work vas asked what he spent his money for and he said it all went for things to eat. On his way from school to the newspaper office he bought candy and fruit and nuts, and when he came back stopped again for more of the same stuff. One of his comrades always spent five cents for a sandwich before going out in the cold, and then hurried home to a warm supper when his delivery was finin the cold, and then hurried nome to a warm supper when his delivery was finished, but that was entirely too tame for the other lad. He earned the money himself and he intended to have the good of it. Perhaps he kept his word, but the doctor has him as a patient now for a bad case of indigestion and the boy's other is spending money lavishly for father is spending money lavishly for

It does not follow if you are saving money that you must be stingy and selfish. On the contrary you will find yourself able to make better presents at selish. On the tolking yourself able to make better presents at Christmas and help with charitable undertakings than ever before. The habit of cutting off the useless things provides money for real pleasures, and the boy who can give his mother a really nice present is happier than the one who must buy some trifle because he has selfishly wasted his money on himself. Many a boy thinks it impossible to give five cents to the church collection every Sunday, but spends that amount every day for something that does him more harm than good.

"I wouldn't have the place if they'd offer it to me," said a young man boastingly the other day when speaking of a vacant place in a bank. "Those old fogles ask if a man goes to bed early the publisher, Harry R. Marlow. of Warren, Ohio. The current issue contains and the National Amateur Press Association, and the

and a lot of stuff like that. pect to be young but once and I intend to have a good time."
"Don't take the trouble to have your

"Don't take the trouble to have your resignation ready, young man," said one of the bank directors who overheard the conversation. "We want a youth with brains and the position will remain vacant till we can find such a person. We never hire the employes of tobacco merchants and saloons, for that is what cigarette smokers and beer drinkers are," and he passed on, followed by the loud, silly laugh of the boaster.

Yes, you will never be young but once, but youth is not the only time in life. There are young men at fifty and old men at twenty, so prolong your best days

There are young men at fifty and old men at twenty, so prolong your best days as late in life as possible. When you plan to save by-and-by remember that now is the time to form the habit. Money wisely saved has a power for good in your life that you cannot afford to despise, and it will help you over many a stumbling block when the cares of later years come upon you of later years come upon you.

#### Another Secret of Success

Recently the writer chanced to enter a store where a traveling salesman was displaying his samples. The proprietor of the store was a friend of mine, and being in no hurry, I watched while the drummer closed several sales.

"I wouldn't buy heavily in that, Mr. Carlton," said the salesman, referring to a sample which had interested the merchant. "Try a small case, if you wish, but don't put much money into it. We thought it was going to be a great seller, but somehow the public don't seem to take kindly to the article."

"That drummer must be a personal friend of yours," I remarked, after the salesman had packed his grips and taken his departure. "There are not many drummers on the road who would advise a tradesman not to purchase freely of one of their samples."

drummers on the road who would advise a tradesman not to purchase freely of one of their samples."

"No, I've only met him in a husiness way," was the reply. "But he is a man who takes an interest in every man's business whose trade is in touch with his own. He is the best salesman that the Potter Company has on the road, and that is saying a good deal."

Another secret of success! Not think-ing entirely of self, determined to win at the expense of another, but considering another's success, hoping and expecting to win through that success.—Frederick E. Burnham in Forward.

### 

- Edited by W. R. MURPHY -

The editor still has a number of amateur papers which he will distribute to those who send him a 2c stamp for postuge. Letters are answered in the order of their receipt, so if you fail to receive your papers at once don't write indignantly by the next mail. They will come in due time.

amateur journalist of Australia. He has done a creditable job. At Sea was printed one page at a time, and as there is a colored border around each page this means that the number of "impressions" was doubled. The are poems, essays, etc., by Edwin B Swift, Charles W. Heins, Alf. H. Pearce, Frank L. Wilmot, Foster Gliroy, Alice Heins, Louis E. Bisch and M. E. Lee. All in all the issue is well worth preservation.

Variety is the spice of life to amateur journalists as well as to other folk, and this fact is recognized by John W. Smith, editor of THE AMATEURIST, of Philadelphia. In the of THE AMATEURIST, of Philadelphia. In the January issue he presents eight closely printed pages of matter interesting to amateur journalists. Three poems of more than the average worth grace the front page, that entitled "Kabibonokka" (the north wind) being especially effective in its imitation of the wind's movements. The rest of the paper is filled with comments, editorials, criticisms and announcements.

THE SEARCHLIGHT is now in its seventh volume forty-five numbers having of Warren, Ohio. The current issue contains an entertaining article on Amateur Journalism

THE MITE does not belie its name, for its pages measure only 3½ by 5 inches. For such a small sheet it contains a good deal of reading matter. Richard Kevern contributes an essay on "Architecture and Printing," which gives many interesting facts. Richard is also the editor of The Mite and comments on some of his exchanges. His address is 114 Hull street, Cleveland, Ohio.

There is another MITE, published at Olean, New York, 2y D. W. Prosser. The work is evidently done on rather a small press. The printing is clear enough, but the margins are very uneven. A little practice will enable the young printer to get his columns straight The chief contribution is a composition upon George Washington. George Washington.

George Washington.

THE HOBO is the same size as The Mite, first mentioned, and is published by a friend of Richard Kevern, William Feather, of 87 Aetna street, Cleveland, Ohio. Many boys are discouraged if their papers are not large in size, but Will takes a sensible view of the matter. He writes as follows: "Do 'thumbnails' do any good? Decidedly yes. By thumbnails I mean papers of the size of The Hobo down. Did you ever publish a thumbnail? Of course you did. Was there any thing to it but the subscription price and a few funny sayings? Well, no, but the next issue was better, and it kept getting better and larger right along. To this we echo a hearty Amen. Some of the leading amateur, and professional papers as well, started very modestly. All hall to the small boy with a printing press. Long may he flourish."

#### Plea for Boy Journalists

James M Beck, Timothy L. Woodruff, Charles H. Young and a number of other busy men in New York, who in earlier days edited and published amateur journals and magazines, have appealed to President Roosevelt to use his influence to have amateur publications admitted to the privileges of second class mail matter.

Mr. Young, who is president of the Fossils,

an association of men who were interested in amateur journalism prior to 1889, wrote this letter to the President, explaining the situa-

letter to the President, tapically the state I mail a few examples of the printing and editing of amateur journals and magazines of the present time. With this, I enclose, a letter of the Hon. James M. Beck, who when a boy published a like sheet, and a letter of E. M. Lind, the present official head of amateur journalism.

Ism.

It is the only school beyond the grammar school to which many American youths ever attain. Its field of activity is very much circumscribed at present, because the Post Office Department will not send the publications through the mails at newspaper rates as they used to do in the days when Mr. Beck and myself were identified with the printing and editing of like sheets twenty-five years ago.

and calting of like sheets twenty-live years ago.

In order to accomplish the result of encouraging such effort, no change in the law is required, merely a change in the rules, made to enforce the law as it exists. The rules have been narrowed to keep advertising sheets

have been narrowed to keep advertising sheets from going through the mails at newspaper rates, and have resulted in keeping out the only papers and magazines which contain no advertisements whatever.

I feel assured from my acquaintance with you that if in the multitude of larger things you have to occupy your time and attention, you could give this matter a few moments' thought, you would open the door for the youth of America, and give them the opportunity which only the well-to-do can now afford, but which in my time was embraced by the poorest of poor boys.

Our Editor is on the look-out for boys who are ready to take part in American Boy Day celebrations.

## Vacation Money

51 Dartinouth St.

Cleveland, O.

ty, New Hampshire. It was there in Lemster Woods that Scott and his younger brother, Abner, met with the adventure brother, Abner, met with the adventure which is here related.

It was late in the afternoon of a gusty March day in the spring following the removal to the new home. The boys were with their father in the sugar-camp. In those early days the family depended for their yearly supply of "sweetening" on the product of the maple sugar season, and as the process of evaporating sap in an iron kettle was necessarily slow and the sugar season short, the great rot was kept bolling continually, the boys watching the fire one night and their father the next.

The camp was in the edge of the forest where the sugar maples stood thickest. The huge kettle was slung on poles over a crackling, roaring fire; nearby, under a fir tree that served as a protection from the wind, was a stack of pine blankets, where the boys took turns sleeping through the night; this afternoon they were busy dragging in drip the boys flate the woods, while their father with a clumsy yoke on his shoulders, from either end of which dangled a pail, brought in the sap from the wooden buckets on the tapped trees and poured it into a tub from which the kettle was to be filled as often as necessary.

Finally the sap was all gathered and with parting injunctions to the boys mot to both fall asleep at the same time and let the kettle burn, Mr. Kinson, tired with a night and day of hard work, tramped off home. The boys finished their chopping and as darkness stole over the forest they set their supper to warm and prepared to make themselves as completed and function of the face the wolf as it sprang to warm and prepared to make themselves and the face the wolf as it sprang to warm and prepared to make themselves and the face the wolf as it sprang to warm and prepared to make themselves and the face the wolf as it sprang to warm and prepared to make themselves and the face the wolf as it sprang to warm and prepared to make themselves and the face the

Finally the sap was all gathered and with parting injunctions to the boys not to both fall asleep at the same time and let the kettle burn, Mr. Kinson, tired with a night and day of hard work, tramped off home. The boys finished their chopping and as darkness stole over the forest they set their supper to warm and prepared to make themselves as comfortable as possible for the night. On the wooded slope of Lemster Mountain some two miles away there was a stir in the black shadows of the rocks and a lean, gray shape stole forth and, after sniffing the wind in a vain attempt to discover scent of possible prey, crept down the slope into the deeper night of the woods below. The old Lemster wolf was starving. For two days he had not tasted meat, and for weeks his almost continuous hunting had been rewarded with but an occasional rabbit or stray partridge which but served to whet his ravenous appetite.

among shadows, he moved, and shrinking far hack under low spruce boughs, peered out fascinated at the fire that leaped and crackled and flung its protecting brightness over the figures of the boys as they sat talking in low tones or moving about to put more wood on the fire or refil the steaming kettle. The flames lesped higher and with hate watcher shrank farther back into the darkness and crouched with gleaming eyes fixed on the boys in the glowing eyes fixed on the boys in the glowing eyes fixed on the boys in the glowing tolicile. Hour after hour he watched.

The boys at last grew silent and drowsy in the heat; Abner crept under the blankets of the bunk and slept, while Scott nodded more and more often in the comfortable warmth, rousing each time with greater difficulty as the fire grew low, till finally he sild from his log seat to the ground and with head pillowed on his arms he, too, slept.

All was silent now about the camp. The fire burned lower and lower, and so its circle of light narrowed, the wolf's fear gave place to something like contempt, and he crept closer. A stick burned through and fell with a snap that sent the flames leaping up for a moment and caused the wolf to shrink back behind the wooupile. Scott stirred warlly around the dying fire, he approached the tree under which Abner the floor, his ears pricked forward as proached the tree under which Abner the floor, his ears pricked forward as proached the tree under which Abner the floor, his ears pricked forward as proached the tree under which Abner the floor, his ears pricked forward as proached the tree under which Abner the floor, his ears pricked forward as proached the tree under which Abner the floor, his ears pricked forward as proached the tree under which Abner the floor, his ears pricked forward as the floor, his ears pricked forward as proached the tree under which Abner the floor, his ears pricked forward as the

the night visitant stole on. Skirting Bose warily around the dying fire, he approached the tree under which Abner though lay wrapped in his blankets. On he trotted crept, still onward from tree to tree, let out.

to the older boy, who, awakened by Abner's shouts, scrambled to his feet just in time to face the wolf as it sprang toward him.

Instantly the quick-witted boy snatched a bucketful of sap left in filling the kettle and flung it full in the face of the onrushing animal. Blinded and gasping, the wolf's fierce onslaught was checked for a moment; then Scott darted to the other side of the dead fire and, dipping his bucket into the steaming kettle, ran forward and dashed a full gallon of the scalding hot syrup at the beast as it crouched to spring. It struck in the side of the dead fire and, dipping his bucket into the steaming kettle, ran forward and dashed a full gallon of the scalding hot syrup at the beast as it crouched to spring. It struck in the side of the coin."

VVIII IS TOUT IVIOUTO!

"When I have my shoes shined by an American bootblack," says Dr. David G. Wylie, of the Scotch Presbyterian church, New York city, "I never have to invice in the sport of the scotch Presbyterian church, New York city, "I never have to is 'Speed' and the spirit of his motto is in his work. He takes a few hasty rubs across the tips, whisks off a dipping his bucket into the steaming done—except taking the coin."

The crowd of boys who heard this shouted their approval as most American boys would.

"The boys," was her first thought, and opening the door, the pair harkened for some sound from the some sound from the woods. There it was, a faint cry that set the dog again to whining piteously.

again to whining piteously. "Sam, get up quick; there's something happened to the boys!" called Mrs. Kinson, and almost sooner than it takes to tell it Mr. Kinson, armed with his musket and with Bose in the lead, was hurrying toward the camp, leaving the anxious mother listening in the open door.

the anxious mother listening in the open door.

The wolf, meantime, infur.ated at the escape of his prey and the smart of his burns, seemed to possess but one desire, and that was to get at the boy shivering beneath the sapholder. He dashed at the tub as though he would annihilate it, he leaped upon it, he bit and clawed it, but finding the hard wood too tough for his old teeth, he set to work to dig underneath, working ever harder and faster as though spurred on by Abner's yells in the tree above.

scott knew that if the wolf made a Scott knew that if the wolf made a hole large enough to get his head through that the tub would be overturned. He had no weapon of defense except the jackknife in his pocket, and this he got out with some difficulty in his cramped quarters and opening the stout blade, held it ready for use. The wolf was digging more furiously: a little more and the awful head would shove its way inside. The boy breathed hard and gripped his knife for the coming struggle.

and gripped his knife for the coming struggle.

Hark! What was that? A familiar bark rang out close at hand. The wolf had stopped digging. There was the sound of a tussle outside and Abner's voice, "The wolf, father! Scott's under the tub!" and then the loud report of a musket, and in another minute the tub was lifted and Scott and Abner were safe, while on the ground lay the dead body of the Lemster wolf.

#### What is Your Motto?

pain and fury, dashed 'round and 'round the boy in a circle, looking for a chance to take him unawares. "Climb a tree! Oh, do something!" implored Abner in horror, expecting every moment to see the wolf pull down his victim, and at the same time he clambered down from his perch to share his brother's peril.

the floor, his ears pricked forward as though listening intently, and at once trotted to the door and scratched to be

"But," continued the kind-hearted minister, "when I give the job to one of those little dark-eyed sons of Italy to whom the word 'shine' forms a large part of their English vocabulary, then part of their English vocabulary, then I always settle down for a delay. One of these little fellows will forget all about time and will only think of the job before him. He first cleans the leather with water, then puts on a coat of blacking and rubs it off, puts on another coat and rubs that off, too; then he puts on the polish. He is never satisfied with his work till every bit of the shoe has a luster that it does one good to look at He, too, has a motto. Who can guess what it is, in one word? Yes, you arright, my boy—it is 'Thoroughness'—and it has an advantage over speed."

#### We Wish We Could Attend

Now we are beginning to receive invitations to commencement and class-day exercises. We are interested in the day exercises. We are interested in the success of every boy who writes THE AMERICAN BOY, and it would be a great pleasure to us to listen to their salutatories, valedictories, essays and orations, on the occasion of their graduation.

#### Portland Picture Postals

Now that the Exposition at Portland is about to open, we are receiving picture postal cards from our Oregon boy friends—particularly those who live in Portland. They serve not only to please the editor, but to please one small boy in the editor's home, who is making a collection of picture postals, so they are doubly appreciated.

BEGUN IN MAY-PART II HE hands of the big round clock in the House pointed to 12, December 5; the gavel of the Speaker descended with a thump and Congress was in session for the "short term," which expired March 4. Paul Rollins had greeted his page companions cordially, noting several strange faces cordially, noting several strange faces and the absence of several familiar ones. He possessed the respect of his fellows, who were compelled to acknowledge his efficiency and manliness, but there was a guif between them—a feeling that he was not of them. He did not participate in their discussions of the races and theaters or fritter away his time in the aters, or fritter away his time in the recital of gossip, but, during the forenoon, after the "records" had been bound and bills filed, devoted his leisure moments to his books.

ments to his books.

Paul had become quite well acquainted with many congressmen, and Mr. Rogers of Pennsylvania had taken a particular fancy to the boy, impressed by his busines-like address and the speed with which he executed tasks. If he had a really important errand Mr. Rogers would oftentimes make a special request that Bolling he sent

would oftentimes make a special request that Rollins be sent.
On this particular day Paul had just handed Mr. Rogers his 2 o'clock mail. As the congressman hastily scanned the parcel his attention was attracted by the address on the top letter.
"Senior Rogers," he muttered. "I wonder if the man who wrote that imagines we are graded here according to seniority."

"Did you speak to me, sir?" asked Paul returning to the desk.
"No, I was just thinking aloud; here is a person who addresses me as 'Senior Propers'"

Rogers."

Paul glanced at the envelope. "Oh, that is 'Senor,' the Spanish word corresponding to our 'Mister:' you see, the letter is postmarked Havana."

"So it is; I wonder what complaint this Cuhan friend has to register now. Do you speak Spanish, Paul?"

"A little; I've been studying it for about a year."

Mr. Rogers proceeded to open his main and the page retired.

"Tell your chief I want Rollins." said Mr. Rogers to the page who answered it were

Mr. Rogers to the page who answered

"Here, Paul, see if you can make anything out of this; this letter from Havana," said the congressman, handing the sheet of strange writing to the boy. "I probably will not get the translation absolutely accurate," replied Paul, "but I may be able to give you the meaning. This letter is from Mr. Valquez, who says he owns a plantation in Puerto Principe. Cuba, capable of producing the who says he owns a plantation in Fuerto Principe, Cuba, capable of producing the finest tobacco in the world. He wants you to organize a company to buy his land and cultivate it. He says you can make a great deal of money out of it, and invites you to come and examine the plantation." plantation.

piantation."
"He does, eh? Well, Mr. Val—Val—whatever his name is, will have to wait until there is less fighting in Cuba before he can interest me in real estate

Congressman Rogers took occasion to Congressman Hogers took occasion to mention this incident to some of his colleagues, and Paul earned several dollars during the next three months translating Spanish into English. Upon one occasion the Committee on Foreign Affairs, dealing with some Cuban matter, came to a standstill; nobody present could interpret a Spanish document. Mr. Rogers, who was a member of the comcould interpret a Spanish document. Mr. Rogers, who was a member of the committee, suggested to the chairman that a page in the House—Paul Rollins by name—could possibly help the committee out of its dilemma. The Iowa page hoy was sent for and quickly gave a free translation of the document. The members of the committee were really more interested in the spectacle of a seventeen-year-old page acting as interpreter for a committee of the House of Representatives, than in the subject matter of the Spanish document. The chairman thanked Paul on behalf of the committee, and he returned to his duties on mittee, and he returned to his duties on the floor tingling with pleasure. The session passed quickly and March

4th Paul was at liberty. At the disburs-ing office where he applied for the four days' pay due him he received a warrant for \$75. "You have made a mistake," said he, handing the check back to the officer; "I am entitled to only \$10 for four days."

"It's correct," replied the disbursing clerk, returning the warrant; "the appropriation for the short session always covers 120 days, or until March 31."

Paul was much elated over this unexpected windfall. He had been in a quandary what to do about school. To go home now would throw him behind in his studies, yet he had not felt that he could afford to remain just for school. "Stev until Type and in the meantime."

"Stay until June and in the meantime take up shorthand and typewriting, days," suggested Mr. Sanderson. "If you apply yourself you can acquire a fair knowledge of it in three months; it's a

write 110 words a minute from dictation and make a typewriter talk. During the summer he earned nearly fifty dollars taking notes at trials and in doing work for lawyers at odd times. Incidentally, from March 4 until December 6 Paul grew three or four inches in height. When he called on Mr. Sanderson the Saturday before the beginning of the session, that official exclaimed: "In the name of the King of Brobdignags, Rollins, what have you been feeding on during the last nine months? You've grown a foot, I should say. You are no longer available as a page; I'm afraid I will have to turn you loose, Paul, and I am mighty sorry, too; you have given splendid service, but you know as well as I do that you are too big for a page—you were rather over-

big for a page—you were rather oversize last session."

This was rather a staggering salutation, but Paul was not altogether unprepared for it. He realized his size was

be here Tuesday; I guess the jig is up, sald Sanderson.

said Sanderson.

"It does seem hard luck that nature should knock a fellow out of his job. Say, Mr. Sanderson, why cannot you detail me to a place at the front, near the assistant doorkeeper, to look after hurry calls? I know when a member wants a page by his actions, and could accomplish as much as two boys responding to regular calls. If I did not sit with the other boys by the annunciator my size would not be an objection."

"Page to the assistant doorkeeper, as

"Page to the assistant doorkeeper, as it were," suggested Sanderson; "well, that isn't a bad idea. We'll try it, any-

that isn't a bad idea. We'll try it, anyanyanyanyanymay. I'll speak to Sloan. You report to
him at a quarter to twelve.
The innovation worked like a charm.
Paul was everywhere, and, as the chief
nsiapage remarked, the new plan reduced
Paul, regular calls ten per cent.
One day after the holidays Congressquezt,
man Shane gave Paul a nod. "Go to
uerto the private booth," he said, "and telephone Hendee & Co., brokers, and get
vants the present quotations on Mallenble
y his
can looks. Don't come back till you get it."
Paul hurried to the telephone. Both

"Malleable preferred broke badly fifteen minutes ago; it is now 67%—3% under the opening; been heavy all the

morning."

Paul rushed back to Shane. "Where have you been this hour; how's the market?" he demanded, without giving opportunity for reply. Paul gave him the paper upon which he had written the quotations

The congressman's face was livid. "When did you get this?" he hissed. "Just this minute," replied the page. "This minute! Why didn't you get me the information I asked for an hour

ago? Your dawdling has lost me more than your lazy skin is worth."
"Mr. Shane, it is just thirty minutes since you sent me. I've been waiting at the telephone booth during all that at the telephone booth during all that time. Congressmen Jackson and Olcott were using the booths; Mr. Jackson was still talking when I left; I got word from Hendee & Co. just as quickly as possible. I am sorry if you have lost money, but it was not my fault."

Short rushed to the telephone booth

Shane rushed to the telephone booth, then went direct to the office of the doorkeeper. "What member is behind Rollins, the page?" he demanded.
"He has no member; he is my personal appointee," replied Sanderson. "Why, what's the matter?"

appointee," replied Sanderson. "Why, what's the matter?"
"Well, I want him discharged at once;

I sent him on an errand and he loafed around an hour, resulting in heavy financial loss to me.

"I am surprised to hear this. Rollins is the best boy I have on the floor; are you sure there is no mistake about this?"

you sure there is no mistake about this?"
"Sanderson, I want young Rollins discharged. Do you understand?"
Colonel Shane was a member of great power and influence, the head of the "combine" which distributed the big offices in the House—that of doorkeeper being one of the best.
"Very well, Mr. Shane. I will discharge Rollins, if you insist on it," replied the official.

Paul told the doorkeeper the story of apply yourself you can acquire a fair raul told the doorkeeper the story of knowledge of it in three months; it's a his trouble with Shane, exactly as it ocmighty convenient accomplishment." curred. "I believe you, and you are not Paul accepted the advice, and early in June, when he started for home, he could go," said Sanderson. "Do not ask for

reasons; I cannot give them to you. You will draw your salary until your successor is sworn in, but you need not again

The boy thanked the doorkeeper for his kindnesses of the past and walked out. Turing into the main corridor, he met Mr. Rogers.

"Not on duty today?" inquired the congressman.

"I was until a few moments ago; I have been discharged."
"Discharged! You don't mean it!
What's the trouble? But I cannot stop

now; come to my home tonight; I want to hear all about it."

"Those are the exact facts in the case, Mr. Rogers," declared Paul that evening, having narrated the details of the

sing, having narrated the details of the stock market episode.

For several moments the congressman remained silent. "Paul, my private secretary has completed his law course, and wants to hang out his shingle. I shall need a new clerk, but it is imperative that he should write shorthand. How long would it take you to learn to write 'pot hooks?"

"I am a fairly good stenographer and typewriter now," responded Paul. "I remained here three months last spring and took a course."

"Well, I declare, Paul, you are a trump! When I am in straits for a Spanish interpreter you are at my elbow; when our committee gets stalled.

Spanish interpreter you are at my elbow; when our committee gets stalled, you pull us out of the difficulty, and now that I need a clerk I find you out of a job and equipped to take up the work. I fancy you don't know much about politics, but you will learn quickly enough in the Tenth district. Then it's understood you succeed Mr. Harris February 1. By the way, you know the salary of a member's clerk is \$1,200 per annum; of course you are with me all the time, either at my home or in Washthe time, either at my home or in Washington."

ington."

Mr. Sanderson heartily congratulated his former page upon his promotion "Rare opportunity, young man; Rogers is one of the best men in the House." Then the doorkeeper, at Rollins' suggestion, outlined the duties of a congressman's clerk and pointed out how he might employ the two weeks prior to February 1st in preparation.

size last session."

This was rather a staggering salutation, but Paul was not altogether unprepared for it. He realized his size was against him.

"Through whose influence have I been retained \*during the two sessions," inquired Paul.

"You have been charged to me, personally. The pageship belonging to Congressman Anderson, who died, I assumed for your benefit."

"Couldn't you exchange the pageship for a messengership; some congressman might be willing to bring a boy instead of a man; that would give you a vacancy," suggested Paul.

The doorkeeper thought a moment. "Then how in the name of Socrates did you obtain all this information? I actually believe you know more about the district than I do; you are not a messengerson."

"I find every congressman has his man here except Kirgsley, and his man will be here Tuesday; I guess the jig is up," said Sanderson."

Paul?" asked Mr. Rogers at the close of the first day. The clerk said he had not. "Then how in the name of Socrates did you obtain all this information? I actually believe you know more about the district than I do; you are not a mind-reader as well as a dabster in Spanish, are you?"

"Oh, no. There is nothing occult in my knowledge; all I know about the district may be learned at the Congressional Library and at the Postoffice Department. I had nothing particular to do the last two weeks, so I spent my time reading up."

It is not important to follow Paul Rol-

It is not important to follow Paul Rollins in detail through the first few years he was clerk to Congressman Rogers. He quickly grasped the routine work; inaugurated a new scheme for handling the large pension correspondence; could tell in a moment the status of all postoffice in a moment the status of all postoffice cases, and knew the name of every rural free delivery carrier in the district. He also conducted a modest literary bureau, furnishing the daily papers in Jefferson, Lake City and Marshall, with telegraphic bulletins of important district matters and weekly letters by mail summing up the general legislation. The papers were glad to get this news and offered to compensate Rollins, but he declined to accept any pay, assuring the editors that accept any pay, assuring the editors that it was a labor of love and required but an hour or so each week.

an hour or so each week.

When twenty-four years of age, Rollins, who had taken to politics as a duck to water, was chosen chairman of the Eden county central committee. That spring, for the first time since his first nomination, Mr. Rogers found strong opposition. In Madison and Windsor dissatisfaction was expressed over his attitude on an important bill, and indications pointed to the nomination of State Senator Harrington of Windsor county, It was understood many of the politic-

Senator Harrington of Windsor county. It was understood many of the politicians of Madison were for Harrington.
Paul Rollins, his ear always pressed against the ground to catch the first inharmonious vibrations, had quickly inharmonious vibrations, had quickly noted the signs of an approaching storm. Before the politicians of Madison knew what was in the air Rollins had quietly dropped into Lake City and had a talk with Fred Foster, an extremely popular attorney and stanch friend of Congressman Rogers. The situation was canvassed at length and Foster consented, in the event of certain developments, to come out as a candidate for Congress and select a delegation favorable to Rogers for second choice.

and select a delegation tavorable to Rog-ers for second choice.

The following evening, unannounced.
Paul visited Lanark, the second city of importance, located in the west end of Windsor, and for two hours was closeted with Harvey Maxwell, a powerful politi-cal factor and close friend of Rogers. A few days later the Lanark Daily Herald contained a paragraph to the effect that Senator Harrington might not have a clear field in selecting the Windsor deleclear field in selecting the Windsor delegation to the district convention; that the gossips were grooming Harvey Maxwell for Congress Mr. Maxwell declined to commit himself, but admitted his friends were urging him to enter the congressional race.

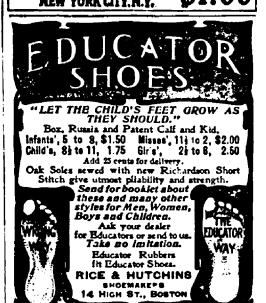

Two days later the Marshall Evening Star formally announced the candidacy of Mr. Harrington and the next day the

Star formally announced the candidacy of Mr. Harrington, and the next day the Lake City Tribune brought out Fred. Foster as Madison's candidate. The following Monday the Lanark Herald declared that if the congressional race was to be a "free-for-all" its esteemed townsman, Harvey Maxwell, would ask the support of the Windsor delegation. Eden county was, of course, solid for Rogers.

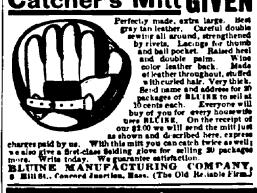

Rogers. to the meantime Rollins had written Judge Fuller, assistant United States attorney general at Washington, a resi-

# EVERYBODY

THE editor of The American Boy has charge of American Boy Day celebrations at Portland (July 5), Chautauqua (July 22), and Boston (date not fixed), and at other places where the day may be celebrated, as Bedford, Pa.; Lexington, N. C.; San Francisco, Cal., and Cairo, Ill. He wants the names of talented boys whom he may engage for these celebrationsparticularly boys who can declaim, write and speak orations. sing, play a musical instrument. They must be boys who can perform especially well, as they will appear before very large audiences. No boy will appear at any two places. New England boys are wanted for Boston; middle States boys, preferably, for Chautauqua; western boys for Portland. There is no fund pro-

vided to pay the expenses of these boys; they must pay heir own. The experience will be well worth what it will cost them. At St. Louis last year we had boy performers from nearly a dozen States. Two, only, were from St. Louis. Advise the undersigned quick of any way you can help in procuring talent. Make your suggestions at once. This is the second great step in making American Boy Day a regular feature of our national life, and you can help make it a success. Then, too, it is not too late to begin planning for a celebration in your own town. Do you WM. C. SPRAGUŁ, want it? Address

> Editor, THE AMERICAN BOY, Detroit, Mich.

On closing this page for the printer we learn that Bedford, Pa., will celebrate American Boy Day July 4th. We shall be glad to hear from Pennsylvania, Delaware, New Jersey and Maryland boys, telling us they can be present and assist.

#### The Origin and Early History of Baseball By A. G. SPALDING **3**20

A Famous Old Time Baseball Player

"HOW'S THE GAME GOIN', JIMMY ?"

(Continued from May Number.)

AVING FRAMED a constitution that was satisfactory, and certainly drastic enough for the new conditions that it was sought to bring ditions that it was sought to bring about, the next question was how it could be put into operation. The feeling at that time among the eastern clubs of New York, Philadelphia, Boston and Hartford was very strong against the western clubs, especially Chicago. Mr. Hulbert had little difficulty in bringing the four western clubs—St. Louis, Cincinnati, Louis-ville and Chicago—into this revolution-ary scheme, and after this was quietly accomplished Mr. Hulbert sent a personal invitation to the presidents of the four eastern clubs above named to meet him at the Grand Central hotel in New York city February 7, 1876, with the result at the Grand Central hotel in New York city February 7, 1876, with the result that then and there was organized the National League of Professional Baseball Clubs, with ex-Governor Bulkeley of Connecticut as its first president and N. E. Young as secretary. This old organization, be it said to its credit, has from that day practically governed the game in the game's best interest, and today professional baseball is conducted on a higher plane than any other professional sport in the world. Gambling is entirely exterminated, the honesty of the game is above reproach, and dissipation among is above reproach, and dissipation among the players is a thing of the past. It must not be understood that all of the abuses that had gradually crept into the abuses that had gradually crept into the game were removed by the wording of that constitution of the newly organized National League, for it took five years to convince the public that the league was sincere in its efforts. At the second meeting of the National League, in December, 1876, when Mr. Hulbert was elected president, it became necessary to exact from membership two clubs, represented elected president, it became necessary to expel from membership two clubs, representing the great cities of New York and Philadelphia, for breaking their contractual obligations, by not playing return games due the western clubs. Both of these clubs, whose officials had been the leading spirits in the defunct National Association, thought they were powerful enough to break the rules of the new National League as they had done with its predecessor, but they did

not know W. A. Hulbert. These two clubs were promptly notified to appear before the National League and show cause why they should not be expelled. Having failed to "jolly" the thing through at the last moment, both clubs became alarmed and appeared before the league for trial, represented by able lawyers, while Mr. A. G. Mills, who has done so much for professional baseball, appeared as prosecuting attorney for the National League, with the result that both the New York and Philadelphia clubs were expelled. This bold, but necessary, act reduced the membership of the National League to five clubs in 1877 and seven clubs in 1878, and it was not until 1879 that the full quota of eight clubs was restored.

restored.

At the league's second annual meeting, November, 1877. It became necessary to expel four noted players—Devlin, Hall, Craver and Nichols—for crooked-Hall, Craver and Nichols—for crookedness, they having been tried and convicted of selling games while playing for the Louisville club. In that connection I recall an affecting scene that occurred soon after this expulsion, when Devlin, a noted pitcher, appeared in Mr. Hulbert's office and on bended knees and with uplifted hands begged Mr. Hulbert to reinstate him. "I ask this," says Devlin. "not so much for myself, but for my wife and children, who are prostrated wife and children, who are prostrated with grief. I am guilty and ought to be punished, but if you will reinstate me and remove the stigma from my family, I will agree never to touch a ball again." I will agree never to touch a ball again."
Devlin was in tears, and so was Hulbert.
Mr. Hulbert replied: "Devlin, this is what I think of you personally (handing him \$50), but you have been convicted of selling games, you have disgraced your profession, you have retarded, if not entirely nullified, the efforts of the National League to purify baseball, and so long as I am its president or responsible for its acts, you and your associates in this crime will never be reinstated, so get out of here and never let me see your face again."

From that day to this there has not

From that day to this there has not been a single occasion to expel a player for crookedness, and the integrity of

baseball now stands above reproach. In 1881 ten prominent players were expelled from the National League for

dissipation, which has resulted in practically eliminating this vice from the game, and it has now become an established requisite that ball players must lead abstemious lives in order to maintain their standard of skill as players, demanded by the club officials and the public officials and the

Before Mr. Hulbert died, in 1882, he had the satisfaction of seeing gambling entirely eliminated from the game. integrity of play thoroughly established, dissipation driven from the players ranks, and the national game reinstated in public favor, as evidenced by the enormous crowds that now attend the games.

while Henry Chadwick is called the "Father of Baseball," William A. Hulbert was its savior—God bless his memory—and it is no small honor to have been the savior of a nation's sport. Baseball is a sentiment and not a business; a sport and not a commodity, and the great difficulty that league and club officials have in legislating for the game is trying to adjust a business harness to this fractious animal. With all their experience and efforts it frequently happens that when the championship race is on, the business harness gives way somewhere and the baseball magnates are at each other's throats trying to repair the break.

The press devotes much space to these baseball business wranglings, and casual observers might be justified in con-

ual observers might be justified in considering baseball managers a lot of hyenas; but, as a matter of fact, they are, as a rule, high grade men, honestly trying to satisfy their local patrons and advance and safeguard the game itself.

Baseball is also a great spectator's game, and I believe that I am within the bounds of truth when I assert that more people annually attend baseball matches than attend all other athletic games in the world put together. In making this assertion I am not unmindful of the enormous crowds that attend cricket and football games in this and other English speaking countries. tries.

tries.

It seems unnecessary to explain the game itself, for every American boy is born with a baseball and bat in his grasp. He understands the rudiments of the game before he knows his A B C's, and grows into youth and manhood with a natural affection for the sport. The mental and physical activity of baseball make it a great educator and training school for the boys of our nation; it teaches them to be alert, quick of thought and action, necessitates controlling one's nerves and temper under exciting conditions, and especially its a boy for the rough and tumble commercial life of today.

a boy for the rough and tumble commercial life of today.

Baseball is the father or forerunner of athletic sports in the United States, which were practically unknown to this country before the Civil War. Forty years ago it was a discredit for a man to be seen with any kind of athletic implement, but now it is a badge of honor. Baseball was the spark that brought into action that natural, inhorn Anglo-Saxon love of all kinds of athletic sports, and today the youth and young men of the United States can hold their own with the leading athletes of the world. There is today no greater moral and uplifting force influencing the youth of this country than athletics, when kept within reasonable bounds.

rountry than athletics, when kept within reasonable bounds.

Wellington said that "the battle of Waterloo was won on the cricket fields of England," and President Roosevelt is credited with a somewhat similar statement that "the battle of San Juan Hill was won on the baseball and football fields of America."

The spirit of baseball has permeated into every part of our strenuous life; it exists in all business enterprises; it is seen in our President, in the Cabinet, in Congress, in the pulpit, in the countinghouse, and factory; and if renewed energy is sought, fresh enthusiasm or inspiration required in any of these places, it can always be aroused by the utterance of these two well understood words, "play ball."

the United States ample reason to regard the coming exposition as a matter of na-tional interest.

of the frunk bine same fect.

The rates now agreed upon are one dollar plus the regular first-class one-way fare to Chicago, plus the rate of \$56.50 offered for the round trip to Portland from that city. The regular fare one way from Chicago to Portland is \$61.50, \$5 more than the special round-trip rate. The effect of the arrangement force, therefore, is to make the \$61.50, \$5 more than the special round-trip rate. The effect of the arrangement now in force, therefore, is to make the round-trip rate from points east of Chi-cago \$4 less than the regular one-way rate to Portland. For example, the regu-lar fare from New York to Portland is \$81.50, and from New York to Chicago \$20. The round-trip rate to Portland during the Lewis and Clark Exposition is \$21 (the regular one-way fare to Chi-cago plus \$1), plus \$56.50, the rate of-fered for the round trip from Chicago to Portland, or \$77.50, which is \$4 less than \$81.50, the regular one-way rate in ef-fect between New York and Portland. The rate for the round trip to Portland from St. Louis, arranged some time ago.

rne rate for the round trip to Fortland from St. Louis, arranged some time ago, is \$52.50, while the rate from St. Paul, Minneapolis, Duluth and Superior is \$45, both of these rates being less than the regular one-way fare.

regular one-way fure.

The new rates decided upon make the trans-continental trip for the first time within the reach of people of moderate means, and thousands are expected to journey west this summer, as it is unlikely that a similar rate will be offered for years to come. The Lewis and Clark Exposition, which is to be held at Portland from June 1 to October 15, will be in itself well worth the journey across the continent to see.

The Lewis and Clark

Expedition

Every American boy should ere this be aware that Lewis and Clark were two great American historical characters. dead and gone those many years, who, one hundred years ago, explored the great country lying west of the Masis-intental trip, which make it possible for a person living in the east to visit the apoint near its headwaters, crossing the Rocky mountains overland and voyaging down the Columbia river to its mouth at the Pacific ocean. They should know that the success of this expedition, which was sent out by President Thomas Jefferson, resulted in the acquisition of 307,000 square miltes of territory by the United States, out of which three great states have been way fare to Chicago, plus the rate of way fare to Chicago, plus the rate of the Lewis and Clark exposition is to complete the coming exposition as a matter of national interest.

Louis Exposition, and, being more compactly arranged, may be seen within the coming exposition as a matter of national interest.

Louis Exposition, and, being more compactly arranged, may be seen within the coming exposition as a matter of national interest.

All Aboard for the Portland

Exposition

The Fuir will not be so large as the St. Louis Exposition, and, being more compactly arranged, may be seen within the time and means the average person has at his disposal. Though a which im every sense of the term, for almost every states will erect buildings and the Union and almost every states will erect buildings and the Union and almost every states will erect buildings and the Union and almost every states will every states to visit the appropriate participation, while ten or twelve states will every states with the tunion at the subject of the term, for almost covery states will every states with the time and means the set use of the Exposition in every sense of the term, for almost covery states will every sense of the term, for almost covery states will every states will every states with the Louis Exposition, and the States in the S memorate. Every western state will have a magnificent display of its resources, housed in a characteristic building, and the easterner who is anxious to learn just what sort of a country the Pa-cific Northwest really is may find out by

cific Northwest really is may find out by visiting the exposition, thus saving hundreds of dollars which might be expended in getting the same information by examining the whole country first hand. The rates which the railroads have made are good for ninety days, but not later than November 30, and provide for almost unlimited stop-over privilege, which make possible trips to scenic points of world renown at comparatively litle additional expense. Yellowstone Park may be visited on a stop-over via the Northern Pacific route. For \$11 additional to the cost of his excursion ticket, the visitor may make the trip to Portditional to the cost of his excursion ticket, the visitor may make the trip to Portland by way of one of the northern routes, and return by a southern route through California, or vice versa. There are many points of great scenic and historical interest which may be reached from Portland in half a day or less, at very little expense. Such side trips include a trip up the Columbia river, through unsurpassed scenery, a journey to the top of Mount Hood, more than 12,-000 feet high, or an excursion to the seasihore or up the Willamette Valley, the most fertile agricultural region in the world.

great country lying west of the Mississippi, going up the Missouri river from St. Louis to a point near its headwaters, crossing the Rocky mountains overland and voyaging down the Columbia river to its mouth at the Pacific ocean. They should know that the success of this expedition, which was sent out by President Thomas Jefferson, resulted in the acquisition of 307.000 square miles of territory by the United States, out of which three great states have been carved—Oregon, Washington and Idaho—not to mention considerable silices along the western parts of Wyoming and Montans. along the western parts of Wyoming and Montana.

It is not believed that ignorance as to the meaning and importance of the Lewis and Clark Centennial Exposition is very widespread, even in the east, where as a rule, matters of western history are not considered of intimate interest to the average citizen. But the Lewis and Clark expedition which is to be commemorated at Portland this year by a great international exposition, was of such importance in the growth of our great nation that it would seem that no one should neglect to study it. Capt. Meriwether Lewis and his associate, Capt. William Clark, were the first Americans to make the journey across the continent. The country which, largely by reason of their exploration, was added to our domain, gave the United States its first coast line on the Pacific, and this acquisition led, more or less directly, to the subsequent annexation of California, Alaska, Hawaii, Guam and the Philippines.

But if the acquisition of the Oregon

the Philippines.

But if the acquisition of the Oregon country alone had been the ultimate result of this expedition, that fact furnishes the people of the Pacific Northwest with a sufficient reason for celebrating the anniversary of the event, and it gives the people of the remainder of the Philippines.

# HENDRICKS' LAST RUN

Written for The American Boy By ETHELBERT W. WALDRON

ENNINGS came across the ball in his lab. jacket and stuck his head in at the door.

"Come over and take a hand, Sike."

Mason was gathering up some books from the table.

"Can't now. Got a two o'clock. My, you medics take life easy. Over in our department, hump's the word, from start to finish. Say. Jennings, you look guilty;

department, hump's the word, from start to finish. Say, Jennings, you look guilty; you're bolting."

"No, I ain't. Old Bowler's sick. You come over then, Hen."

"No, I can't either," said Hendricks, fingering a couple of letters Mason had just brought up. "I've got to read some letters."

"Oh, the dickens!" Jennings slammed the door and slouched back down the

After Mason had gone out Hendricks reached over for the paper-knife and shoved his chair nearer the window. He

reached over for the paper-knife and shoved his chair nearer the window. He hesitated which one to open first. One had on it the postmark of an eastern university town; the other was from his father. He slit open the first envelope and drew out the typewritten sheet.

"Dear Hendricks"—it began—"I am to be the first to tell you that you have been awarded the Culver fellowship. I want to congratulate you, and I feel that the Founders ought to be congratulated too in securing a man so worthy to carry out its purpose. These are rather high-flown words, are they not?—but I feel that they are true ones. You know I was pretty sure all along that the fellowship would be yours, but both Murray and Harper had such a strong backing that I confess lately I have been somewhat skeptical. Yesterday, though, O'Donnell got interested and in the afternoon we went over to see the committee. They gave out their decision last evening.

"Now of course you know, Hendricks,

noon we went over to see the committee. They gave out their decision last evening.

"Now of course you know. Hendricks, that we haven't done all this for nothing; such is human selfishness. What we ask of you is that you will not run for your University this year. We are certain of taking the coming Intercollegiate, but next year, with Ryall and Howe and Nevin gone, the outlook will be discouraging, unless we can get hold of some new material. You would take both of your events here, for you know Pennsy loses Travis this year, too. O'Donnell has been watching you ever since you clipped the record for the haif at the Western Intercollegiate two years ago, and I need not tell you it was his eye for our track prospects that made him throw his influence with mine. You have now served your University three seasons; you have but one more year to run, whether it be here or there. I do not see how your college could reasonably demand you to put away your own interests in favor of—

And so on to the end. Hendricks folded up the letter and slipped it back into its envelope. Then, slitting open his father's letter, he glanced rapidly through the closely written pages, the short, concise sentences he knew so well.

—"and I hope. John,"—it ended—"that you will get this fellowship you were talking of. Since that is the kind of work you like, you ought to endeavor to be the best man in it you can make yourself. You know I cannot help you any after this year, so that unless you do get some such chance, further advanced work must be put off till you have earned some money of your own."

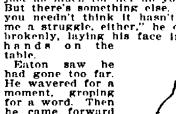

For a long time the man sat looking down into the street. It was a soft,

vanced work must be put off till you have earned some money of your own."

For a long time the man sat looking down into the street. It was a soft, slushy day in early February. Suddenly, glancing up, he remembered he had a four o'clock in Tappan. Snatching up a note-book, he hurried down stairs. Just off the campus he saw Eaton, the track captain, who hailed him from across the street to stop a moment, but the Library clock had struck the hour a block back, and Hendricks shook him off with a nod and sprinted for his class.

When he came out of Tappan at five, on the steps he ran into Crockett, the two-mile man.

on the steps he ran into Crockett, the two-mile man.
"Hello there, Hen." he jerked out, pulling Hendricks out of the crowd; "why weren't you out to the run yesterday? You not being there put us out a good deal. Fitz was going to divide the squad up and have you lead out the short distance men, but as it was we had to run the whole lot together. There's nothing like getting out and getting toughened

what I was saying, and I—I beg your pardon." Something came up in the man's throat and seemed to choke him. "But you must think this over, Hen," the captain went on. "You know we can't lose you." He turned and took his hat from a chair. Hendricks lifted his head from his arms; then he got up and took Eaton's hand, without trying to answer him. Together they moved toward the door, and Hendricks held it open till Eaton reached the bottom of the stairs.

ward the door, and Hendricks held it open till Eaton reached the bottom of the stairs.

The Cornell meet came and went, a victory for Michigan. But this result had been almost assured, even with the loss of Hendricks, for Cornell, already weak, had been crippled at the last moment by the throwing out of Quinn for ineligibility. As the struggle with Michigan's great western rival drew nearer, however, a feeling of gloom settled down on the student body. This was the fifth and deciding indoor meet of a series of five between the two Universities, and to the winner went the coveted Woodruff trophy. On paper Chicago looked the victor; the only chance for Michigan seemed to be that of Palmer, the forty-yard man, who had seconded Hendricks well in the half and quarter for two seasons, being able to stand all three events. But everyone knew that this was something less than a probability. Nevertheless the outcome hung in the balance: the interest grew intense.

Before seven o'clock of the evening of the meet the crowd had begun to stream up the broad stone steps of the Waterman gym, and at eight the great room was jammed. It was like a vast amphitheatre, with the wall of faces coiled around the great white sweep of floor, and, higher up, the crowd massed on the seats back of the running-track. The band was there, too, playing the old familiar airs and some new ones that just then had the popular ear.

Mason and Hendricks sat in one corner on the top tier of benches back of the track. Just under them, over the railling, was the little knot of Chicago men, who had been given seats at one end of the floor, and who were answering the roll of cheers from the Michigan throats with their short, snappy yell. As the meet progressed, some surprises came to light. Michigan took the forty-yard dash and Cl-icago the hurdles, as

gan throats with their short, snappy yell. As the meet progressed, some surprises came to light. Michigan took the forty-yard dash and Cl-icago the hurdles, as had been figured, but in the high jump Chicago unexpectedly won out at five feet eleven, while the shot put and pole-vault, both conceded to Chicago, were carried off by Colby, a fresh law who had begin to do promising work a few

Mason went from supper to Glee Club practice, as Hendricks came back to the room alone. He was just lighting the hardone. Supper the bard the door slam with the heart of the door slam with t

se Mention The American Boy When Writing

The burning sun made the dustladen air feel like
fire. The grass on the ground was
tramped down by thousands of feet, and
the only protection and cover were the
cornfields, whose tail, withered stalks
concealed friend and enemy alike.
A company of Russian infantry came
rushing back, and threw themselves down
among the cornstalks, which trembled in
the air for a few seconds, then all was
quiet.

the air for a few seconds, then all was quiet.

In disorder, without leaders, they had fied like a herd of scared sheep, inspired only by the instinct of self-preservat on, the desire to live. And now they were lying there in groups, silent and downcast, hardly able to breathe, listening and trembing at every sound, insane from fright, panic stricken. From the direction from which they had come, and, as it seemed, directly from the yellowish green wall of cornstalks which stood between them and the enemy, came the sound of rifle shots, with a noise as of peas thrown by the handful on a drum. Sometimes stronger, sometimes weaker, sometimes in voileys came the sound, accompanied on and off by the roar of the field artillery.

Hardly had they thrown themselves d win when the bullets began to strike the ground all around them but they remained motionless, every man clutching his rifle in his hands, careful not to look at his neighbod, every man ashamed of his own cowardice. Thus passed a whole minute—an eternity of death and destruct, on it seemed.

A man in the uniform of a captain came running toward the cornfield whi h had

ardice. Thus passed a whole minute—an eternity of death and destruct.on it seemed. A man in the uniform of a captain came running toward the cornfield whi h had swallowed up the company. He had lost his sword and his uniform was torn and dusty. He was furious, his face d storted with rage. He had been in command of these people, lived with them, loved them as children. He knew every one of them his life, his character, he had led them into death, the death which threatened them from behind those hastily constructed trenches which were visible in the horizon, and they had betrayed his faith in them and fled. How he hated them in this moment!

He rushed into the cornfield breathless, unable to raise his voice to call them back, broken down with despair.

They were all there—he knew it, he felt it, only a few steps from him, stricken with fear of death, and he dd not have the strength to call them back to inspire them with new courage.

The old, scarred veteran officer, stern and grim though he looked, suddenly bezan

them with new courage.

The old, scarred veteran officer, stern and grim though he looked, suddenly began to sob, and sank exhausted to the ground, never once thinking of the bullets which struck everywhere around him, almost wishing that one of them would kill him.

What was his life worth after this disgrace? Where were they, the miserable cowards?

The cornstalks parted slowly, and among them appeared the grimy face of the old

Quick as lightning the captain jumped to

Quick as lightning the captain jumped to his feet.
"Thou also—thou also Stephen Antanovitch!" he shouted and rushed toward the old sergeant, who stood there pale and trembling, afraid to meet the eye of his superior officer.
"Oh, captain, captain," he groaned, "I do not under tand how it happened."
"Thou dost not know?"
The sergeant stood at attention, his hand raised in respectful salute.
The fist of the officer struck the pale

stirred.

"We might call the roll, captain."

"Call the roll of cowards, contemptible scoundrels! What good would that do?"
"Call them by name, captain. They will respond." It was an idea after all.

And with a voice as if he had been standing on the parade ground the captain began calling the names of his men.
"Dead! Wounded! Missing!" replied the

sergeant. But one at a time the men came forward

took their accustomed places in the ranks, saluting their captain with downcast eyes, crushed by the feeling of their shame.

And he stood before them, as if he never noticed the wounded, stern and forbidling.

He was no longer their beloved captain but a merciless judge.
"What have you done?"
The pale faces turned still paler, but no answer came, the groaning of the wounded was the only sound which broke the awful stilence.

"What have you done? You have forgot ten your oath, disgraced your uniform You cowards, you miserable, contemptible cowards!"

cowards!"

Bullets sang and whistled around them but this handful of men stood there motionless, at attention.

"We have forgotten the Czar, forgotten our oath!"—It came with a moan from the ranks. "We are guilty; thou must pronounce our sentence, captain!"

The captain heard it and his heart filled with joy. He did not notice the "thou." His eves shone, his chest labored heavily.

"Children," he said, "also I am guilty that I let this happen. Let us march into death!"

He put on his old fusty cap, pierced by

He put on his old fusty cap, pierced by bullets, made the sign of the cross and

said:
"Forgive your old captain, brethren!"
Forgive us, captain!"
"The Little Father forgive us all!"
"Forward, march!" came the command.
The Russian column had been beaten and were in full retreat before the enemy.

then out of a cornfield came a handful of soldiers. Silently they marched on in then out of a confield came a handful of soldiers. Silently they marched on in close formation, keeping perfect time as if on parade though their faces were stern and set. An old captain in a uniform torn with builets marched in front and not a man fell back, even the wounded rising again when they had fallen. The trumpets sounded the retreat but the company did not near. They had sentenced themselves to death and they kept on advancing.

When they came near the Japanese lines they charged bavonets and cheered, a weak cheer it is true, which was soon drowned by the "Banzal" of the enemy. But a mighty response came, the Russian reserves came to the aid of their heroic comrades, who were being mowed down by the enemy, a hundred to one.

Toward evening, when the sun went down behind the Yentai mines and the blood bespattered fields, the Japanese had been driven back and Kuroki's flanking movement had failed.

And in the morning when the order of

movement had failed.

movement had failed.

And in the morning, when the order of the day was read, a company was mentioned, which had marched alone against the attacking enemy, and though it had been almost wiped out had made it possible to take those little furrows which in military language are called trenches and breastworks and had changed the whole outcome of the battle.

#### HENDRICKS' LAST RUN

(Continued from page 244.)

in a flash, a wave of hand-clapping swept around the amphitheater, lost the next instant in a deafening cheer:
"Hendricks! Hendricks!"
"Hendricks!"
Hendricks!"
Hendricks!"

"Hendricks!"
Hendricks felt Mason's hand pulling him back, and a voice in his ear saying. "You're a fool, you're a fool, Hen, to go now,"—but he did not heed it. Something strong was carrying him away, bearing him along in its arms resistlessly. Like a man in a trance, he clambered down the tiers of seats. The trainer, waiting for him grasped him by trainer, waiting for him, grasped him by the arm.

"You'll run, Hendricks? You must. The Chicago men agree to let you in. Come

Hendricks looked out over the Michigan crowd, shouting at him almost fiercely. The past slipped away from him, the future was gone; only the present, bold and alluring, clamored at his ears.
"Yes." he answered, "I will."
Away the two men went through the throng, leaving behind them a very babel of voices.

On the mark—set—and away, with the crack of the pistol. Seven laps! As he ran, his old confidence came back to

him. One—two—three—four, around and around, and always the Chicago runners just opposite, a half a lap ahead, a half a lap behind. Then, all at once, he knew that his lapse of training was going to tell. A tiny rasping catch intruded, imperceptibly, on the come and go of his breath. The old pain over the heart, that he had not known since a hoy, began to throb, faintly at first, then stronger, till each breath was an agony. He looked across. The Chicago runners were hitting up the pace—they had gained a little. And Farquhar, running badly, was twenty yards behind.

An anarchy of sound deafened him. He could see nothing now but the thin ribbon of track curving away from him, around and around and around. Suddenly the noises sank to a hush. It was very

the noises sank to a hush. It was very still, only the pat, pat, pat, of his shoes in the dragging seconds. A deadly weariness—tired, so tired; he stretched out his arms to go to sleep. And then,

then-A stunning shout, a fierce exultant shout, smote him like a blow. This time he did fall—out of his dream, into a dozen warm, impulsive arms that lifted him from his feet.
"Did I win—did I win?" he tried to say, but the words would not come. And somehow, the tumult of voices merged into the old song, the battle chant of Michigan: then--

throng, leaving behind them a very base of voices.

"Say." said someone, leaning over and touching Hendricks' roommate on the shoulder, "Isn't it queer Chicago lets him in? They know what he can do."

"They're counting on him being out of trim. If he don't go in we'll have to forfeit the event to them; they don't want to take the meet that way."

The Chicago runners trotted out, and took their places at the north side of the track, and a moment later Hendricks. In his old track suit with the blue M across the breast, and Farquhar, his second. slipped through the crowd to their positions opposite.

On the mark—set—and away, with the old song, the battle chant of Michigan:

"Oh, how we ran!"

They were carrying him down the stairs now. The bold, alluring present was slipping away—the past and future thronging back. The broken hopes, the vears of toil to come—all for this. Was it worth it? Something in him leaped up, answering:

"Yes! Yes! Yes!"

"Yes! Yes! Yes!"

"Rah! Rah! Rah!

"Rah! Rah!

"Hendricks!"

Then he knew he was right.

# HAMMOND'S SLUG SHOT KILLS POTATO BUGS, CUR-

Sold in large or small lots.

Ask for Pumphlet.

To the Editor of American Gardening: In your issue of June 18, on page 399, I notice a good

article on the Colorado Beetle or Potato Bug. For the benefit of your numerous readers I would advise them to try Hammond's Slug Shot. I have used it here this season with excellent results on Potatoes, Egg Plants, Cucumbers and Squash, for potato bugs, and also for striped beetles, and it is the best remedy I know of, simple and effective. I purchased two of the dusters, and they are very useful articles. The best time to dust the plants is early morning, as the substance adheres much better when the dew is on. A light dusting is sufficient, and woe betide the bugs or the larvæ. Once they get a taste of it they seem to GEORGE STANDEN, shrivel up right away.

Millbrook, N. Y., 1904.

Gardener to Col. D. S. Lamont.

# lys to follow advice &

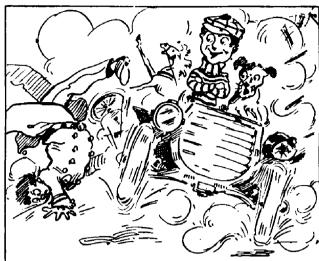

"Dickey, don't touch anything while I'm gone."
"Why, Pa, I know how to stop it!"
"Do as I tell you; don't touch anything."

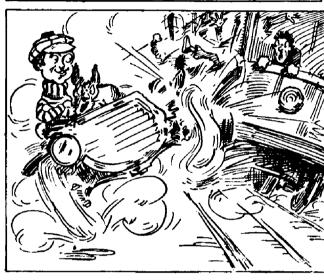

"Oh, goe! She's started—but Pa told me not to touch anything!"

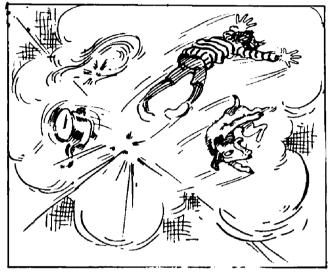

"He told me not to touch anything!!"

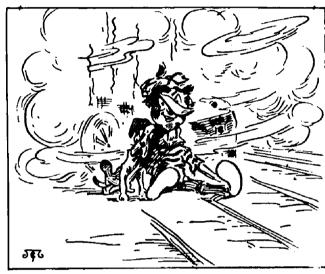

"He told me not to touch anything!!!"

"He told me not to ---!!!---!!!"

"And I didn't."

Perhaps these jokes are old. And should be on the shelf. If you can do it better. Send in a few yourself.

#### A New Experience

The master of a small school received the following note explaining the ab-sence of one of his pupils the day be-

Plese excooze Henny for absents yesriese excooze fieling for absents yes-terday, Him an' me got a chance at a ride to a funeral in a charrige, an' I let him stay to home, as he had never rode in a charrige an' never went to a funeral, nor had many other pleasures. So plese excooze."

#### Every Little Helps

"I think my oldest boy has the making of a great humorist in him," says the man with the pickle nose. "That so," asks the man with the onion

eyes. "Yes. " "Yes. Why, say, he can spell a great deal worse than Josh Billings ever could."

#### A Curious Errand

As an instance of the curious errands which district messenger boys are called upon to perform, it is said that one of these lads was recently despatched at

less than two hours' notice from London to Queenstown, to catch the American steamer there, with a parcel containing only an ear trumpet!

#### Result of Environment

There was once a Good Little Boy. There was once a Good Little Boy. He never played hooky from school, or stole rides on street cars, or threw rocks at policemen, or pulled pickets off fences, or made faces at his betters.

This was because he lived away in the middle of Africa, where there were no schools, nor street cars, nor policemen, nor betters.

Consequently he escanded being held up

Consequently he escaped being held up as a Good Example to his little playmates.—Chicago Tribune.

#### Doubted Its Newness

In a certain home where the stork re-cently visited there is a six-year-old son of inquiring mind. When he was first taken in to see the new arrival he exclaimed:

"Oh, mamma, it hasn't any teeth! Oh, mamma, it hasn't any hair!"

Then, clasping his hands in despair, he cried: "Somebody has done us! It's an old baby."—Philadelphia Public Led-

rammatical error, misproneunces a word or seeks assistance from a fellow-player, shall be deemed guilty of an outside play, and his side shall be penalized five yards.

Resuming Play.—On resuming play after a touchdown, one of the players, known as "it," is blindfolded and the other players join hands and circle round him, singing:

London bridge is falling down. Falling down, falling down. London bridge is falling down, So farewell, my ladies.

So farewell, my ladies.

While the players are circling around, the player known as "it" touches one of the players in a gentlemanly manner and asks him three questions, which must be answered. Then he tries to guess the name of the player. If he succeeds he advances the ball five yards.

Conduct.—No pushing, scuffling, or hoisterous conversation will be permitted. Both players and spectators must maintain absolute silence during the mental tests.—Ex.

mental tests.—Ex.

#### The Origin of Slang

A curious experience was that of the headmaster of an Essex, England, school, who found one morning that, owing to head the bull, as Ursus gave him another the trust of the children.

twist.

"Come off your perch," growled tabby, making another spring at the cage.

"I'm in the soup," gasped the oyster, as he dropped to the bottom of the plate.

"You're a bird," said the fox, as he gobbled up another hen.

"Don't try to string me," said the rattler to the blacksnake, coiling himself into a plumbing.

"It's a lead pipe cinch," said the rat, gnawing his way through another piece of pipe.

the illness or resignations of his assistants, there was no one but himself to teach 260 boys. He did not attempt the task.

'momma" of Washington Pizarro's continued well being. He found that treasured youth flourishing, though in a more restrained manner than at first. It must fairly be confessed that the tremendous wealth and influence of his father, and the benefits that the latter was conferring on Crosscombe, had not induced the masters to treat the American boy with any particular favoritism. Rather you might say that it made them unusually strict with him. At any rate, on Pizarro being detected in the act of copying his Latin prose from a gifted friend, Magruder had him out like a shot, and gave him six cuts with all his well-known vigor. What is more, Pizarro, instead of yelling or appealing to Pickens senior, as the fellows had fully expected, took his punishment like a Yankee brick, only seeming a little surprised at Magruder's audacity, and remarked afterwards that Maggie was a very decent chap indeed. Of course, there were three or four of the boys who made up to Pizarro from the first on account of his pater and his great command of pocket-money—Puffy Adams, for instance. Puffy, whom his godfathers and godmothers had been misguided enough to name Charles Stuart, always introduced himself to a new boy on his very first day, and undertook to show him round Crosscombe, the tour invariably ending at Mrs. Popjoy's tuckshop. On such occasions it was beautiful to see the pair together—the new fellow regarding his kind cicerone with undisguised admiration, while Puffy's fat face beamed patronizingly upon him, as they took the path to the village.

In the case of young Pickens, the Headmaster had been particularly emphatic in desiring the elder boys to be kind to the stranger in their midst, and to do all in their power to make him feel at home. Adoms expressed himself as zealous to carry out these instructions.

to do all in their power to make him feel at home. Adoms expressed himself as at home. Adoms expressed himself as zealous to carry out these instructions. Some sceptical persons hinted that his philanthropic intentions were grounded

nis giory. A tremendous swell, with half a dozen English and foreign degrees, was coming from Owens College, Manchester, to take command of Cross-combe science; for Doctor Hardress had risen to the occasion, and meant to further develop the modern side of the musle-master's province, would now have to give lessons on that useful but humble instrument generally known as the second fiddle.

Long before the laboratories were in working order, Mr. Pickens came posting down to Crosscombe to inspect his ing down to Crosscombe to inspect his myrmidons and assure himself and "momma" of Washington Pizarro's continued well being. He found that treasured youth flourishingt, though in a more restrained manner than at first. It must

Before his unfortunate victim could with a demure smile. If Magruder only utter a word in his astonishment, the American had ascended the stone steps, original of the hero, Sir Ablative Absond. with a bow to Mrs. Popjoy, disappeared. As soon as the unlucky Adams had reduced with great success at a midnight covered from the first surprise, he got performance in the Red Dormitory!

on the fact that he was already deep in Mrs. Popjoy's books, and that his credit in that quarter was completely exhausted. Disregarding these cynics, however, Puffy made himself known to Pizarro on the day following Mr. Pickens's first visit, and proposed a walk. Pizarro accepted with alacrity.

"Well, now, I was just suffering for a walk to take the kinks out of my benders," he said, and though Adams was totally ignorant of the dialect which his own acquaintance spoke, he undersided to make a bolt for it himself. But the lady of the shop was too quick for him. Darting round the corner of the counter, she selzed her levant-old, and, with a strength with which he would never have credited her, dragged the fat youth struggling and kicking back into the shop, crammed him down into his own kitchen chair, and stood over him panting, but triumphant.

"You'd ought to be ashamed of your-breath reset!" she cried when her heath reset.

Court New York

Just then came the expected knock at the door, and Magruder turned to greet Monsieur, who advanced, beaming as usual, and after punctiliously saluting Maggie, turned and deposited in one corner the large, green umbrella with a yellow handle, without which he was never seen abroad. Scandalous rumor asserted that he sometimes used its ample folds for the conveyance of small articles of greengrocery, and certainly the presence of a cabbage or two would have made little difference to its contour.

Having disposed of this treasure, Monsieur advanced to the front row of desks and, taking no notice of the anarchy which followed Magruder's departure from the room, removed his large, gold spectacles and proceeded to polish their glasses with a piece of chamois leather. Then, with some difficulty, for he was of a stout, comfortable figure, he scaled the stool of the high, old-fashioned desk, never used by any other master, and secluded himself from public view behind its lattice-work, which only afforded itful glimpses of the world beyond. In consequence, the French hour from twelve to one on alternate mornings was always looked forward to by the boys as an excellent opportunity for settling always looked forward to by the boys as an excellent opportunity for settling private affairs, whether of honor or recreation, which had been perforce neglected under the iron despotism of the masters who preceded Monsieur Bon-

Then did the surreptitious apple appear from its gloomy seclusion in the locker and publicly refresh its tired locker and publicly refresh its tired owner, paper darts flew about unchecked, the quarrels of the morning culminated in a series of single combats, and projects for the afternoon were openly discussed by the more peaceful youngsters. When the noise grew beyond bearing, Monsieur Felix would leap from his high stool, hurl himself into the midst of the fray, and selze by the ear the nearest of the offenders. Then there would be a short period of comparative quiet, until Monsieur had ensconced himself once more in his high bower and resumed the in his high bower and resumed the moony gold spectacles which in moments of excitement he would dash impetuously from his eyes upon the desk before

"Please, Mossoo, will you speak to Biggs Major. He's sticking a pair of compasses into me," cried a pale, puffy boy with hulging eyes, as Monsieur took

"Beegs again! Wait but one little moment, bad subject, till I box your head!" cried Monsieur, glaring in the direction of the culprit. "Provis, my poor child, do me the favor to advertise me at once if he recommences! Attention, all the world, while I call the names." He took the class list in his hand and proceeded to do so. When he came to the end of the long roll, he glanced at Briant through the moony gold spectacles and asked him from what part of France he came." part of France he came."
"Je suis Normand, monsieur," said

"Et de quel départment, mon enfant?" queried Monsieur, adding René's name to the list.

Du Calvado, Monsieur," René replied.

A shade of disappointment seemed to cross Monsieur Bontemp's good-humored face. He had probably hoped to find in Briant a Lorrainer like himself. How-

Of Interest to Boy Poets

THE publishers of The American Boy offer a prize of \$25.00 to the boy under eighteen years of age who sends by June 20th the best original poem of seven verses, entitled American Boy Day. The poem must contain nothing relating to THE AMERICAN BOY magazine. \$10.00 will be given to the boy who sends the next best. The first prize poem will be read at the American Boy Day celebrations at the Portland Exposition, at Chautauqua, N. Y., at Boston, Mass., and at other minor celebrations throughout the country.

A prize of \$10.00 will be given to the boy under eighteen years of age who sends us by June 20th the best four verse poem, entitled, "Our Country's Boys," that may be sung to the tune "America." \$5.00 will be given for the next best. The first prize poem will be sung at the celebrations of American Boy Day. All poems must be in our hands by June

#### A YOUNG ORATOR

In October, 1904, Chancellor Chaplin of the Washington University of St. Louis, Missouri, offered a twenty-dollar gold medal to be given to the best orator in Dade county, Missouri, including fifth, sixth, seventh and eighth grades. The district schools were to hold contests and their winners meet in township contests, the winners in the townships were then

"Is Life so Dear, or Peace so Sweet, as to be Purchased at the Price of Chains and Slavery? Forbid it, Almighty God !"

to meet in the county seat and the boy and girl who were winners in the county were required then to meet a representative from Everton, Lockwood and Greenfield (city schools), and the winner in the final contest was to receive a twenty-dollar gold medal. On the 17th of this month (March) the final contest was held at Greenfield, and Umphrey Lee was awarded the prize as the best orator in the county of the grades mentioned.

Master Umphrey had not yet reached his twelfth birthday. When nine years of age he taught a Sabbath school class and represented his church in an association meetings. He is in the eighth grade. to meet in the county seat and the boy

#### THE DAKOTA JACK RABBIT

F. W. Laurie, an eleven-year-old Do-land, South Dakota, boy, writes us that he lives on a farm some six miles out of he lives on a farm some six miles out of town and he wonders whether the boys in the east ever saw a Dakota jack rabbit. They are very plentiful in the neighborhood of his home, and he has great fun hunting them. In the winter they prowl about the houses and barns at night and in the daytime hide out on the prairie. They are hard to see when the snow is on the ground, for they are white, excepting a black tip on the end of each ear. Their color during the summer is gray. Boys in the cities will envy this boy, who rides a pony and shoots a 22 rifle.

#### SOMETHING ABOUT JELLYFISHES

Paul Bell, an eleven-year-old Negau-nee, Michigan, lad, writes that a few years ago, in going from Seattle to Ta-coma by boat, he could in some places look far down into the water and see the little animals known as jellyfishes. Some of them, he says, are red and some are orange in color, and they are very pretty with their tentacles darting out

behind them. "Their mouths are in the middle of their stomachs, and little feel-ers grow out from the flat part of their

#### PATRIOTISM AND PROMPTNESS

Some time ago the Merchants' Association of New York city issued a statement in which it called attention to the indifference of public school graduates to the need of being punctual at all times. It was suggested that the schools do something to make the boys realize that it is very important to be on time—that there are really very few valid excuses for being late.

Public School No. 166, at Eighty-ninth street and Amsterdam avenue, was quick to act on the suggestion. An organization was formed among the boys, the officers and members of which are piedged to do all in their power to make the tardy and late boy reform. The first move of this organization was to procure two flags, one the star-spangled banner, the other a pure white pennant, with a black L in the center. Each school morning one of the boys lets the stars and stripes wave from a conspicuous place till 8:45 o'clock.

Those who reach the school house before this flag is furled are on time and they are patriotically reminded of their punctuality. Those, however, who find themselves walking into the school building under the blotted banner feel at once a reproach for their tardiness. The boy who has charge of the hoisting and furling of the flags says that the scene on the street when he makes the change is a very lively one. He can see boys

running as for dear life, from all direc-

The plan has been tried for two years and has been the means of greatly reducing the lateness of this school.

#### A GRATEFUL MOTHER

The following from one who calls herself "the most grateful of mothers." and sends us \$2, one of which is to renew her boy's subscription and the other to use as we see fit, may prove of interest as showing the influence of THE AMERICAN BOY in the lives of some boys. She says:

"Your last talk on boys quitting school

"Your last talk on boys quitting school actually saved my boy the eighth grade. He quit school and was absent two days unknown to me. After he received your last issue he came voluntarily to me and confessed that your talk hurt his conscience so much that he could not sleep. He made the remarkable statement that if he had not seen it he would never have returned to school. Imagine my estonishment after all these years never have returned to school. Imagine my astonishment, after all these years, and he a fine scholar! I could scarcely realize my lack of influence. You have a great opportunity to reach boys indifferent to home influences. My boy loves THE AMERICAN BOY. He will never give me any rest until I read it. He is a bright boy and a boy of good principles. I will always do my best to influence mothers to take THE AMERICAN BOY."

A VOLUME TOWN THE MALERICAN BOY."

Rockwell Kempton, North Adams, Michigan, is meeting with unusual suc-cess for a hoy in the raising of White Wyandot poultry. What this young man

ONE OF YOUNG KEMPTON'S PRIZE WINNERS

can do in the raising of fine stock is in-dicated by the picture of one of his prize-winners shown herewith, the picture be-ing from a photograph. Rockwell has taken prizes in many stock shows and fairs. In one show, where there was big competition, he won twelve prizes.

#### ARE WE PATRIOTIC?

Several boys have found fault with the position taken by a writer in our April number who intimated that he thought patriotism was at a low ebb in the United States. Among those who complain of the sentiment expressed in that article is Gilbert Clayton of Edmond, Kansas. He calls attention to the promptness with which the volunteers responded on the occasion of the breaking out of the Civil war, and later of the Spanish-American war. He thinks that if the occasion were to arise for a display of patriotism there would be found no lack of it in our country. He thinks we are the equal of the Japanese in our love of country and willingness to serve it. He believes every man, woman and child in the United States reveres the Stars and Stripes. He suggests that the flag should float over every schoolhouse in the land. Furthermore, he does not believe in looking on the dark side of such matters, and suggests that there is more to be grateful for than to be anxious over in this country. Several boys have found fault with the

#### BROKE THE RECORD AND BROKE HIS ARM

Gus Brown, a Port Chester, New York, boy, may well be called an expert break-er. He breaks school records and has remarkable skill in breaking his arm. In 1903 he won a silver medal for a In 1903 he won a silver medal for a year's perfect attendance at school. The following year he won a copy of Long-fellow's poems for perfect attendance. During that year he broke his arm while playing tag, and later in the year broke it again while sliding down hill, and with all this he managed to win a prize at school.

#### THREE YOUNG WATER CHAMPIONS Young

The three children shown in the accompanying picture are without doubt the champion swimmers of their age in the world. Their names are Charles, Lorena and Barbara Johnson, and their home is Lima, Ohio. Their father was an instructor in swimming in Cincinnati at one time. They learned to swim al-

most as soon as they learned to walk. Lorena and Barbara, at the age of five and six years, respectively, made the remarkable record of swimming three miles in forty-two minutes, accompanied by their father. Three boys started with them in the race, but one dropped out at the end of a quarter of a mile, and the other two at the end of a mile.

GEO. W. MRUCE, A. B., Pres.

#### Britain's Most Popular Seaman

While the Anglo-Saxon world is re-calling the fame of Admiral Nelson, who, just a century ago, at the cost of his life

ADMIRAL LORD CHARLES BERESFORD

won the great sea fight at Trafalgar, attention naturally turns towards another British seaman who is an authority upon Nelson's career:—Lord Charles Beresford, Admiral, commanding the Channel squadron.

He is the typical English sailorman,—and an Irishman. Forty-six years ago, when a lad of thirteen, Beresford joined the navy and has ever since been rising slowly but surely through all its grades. Three medals for life-saving has he won; thrice has he been mentioned in disspatches for conspicuous bravery under fire; while for merits and bravery he wears across his broad chest six decorations of honor.

Yet the man who today flies his flag from H. M. S. Caesar, is more than just a sailor, albeit so good a one. He is known throughout England for his daring riding to hounds, is an ardent cyclist, and (this is his pet hobby) is a first-rate carpenter. His home holds the bench and tools of the craft, and not the least part of his time ashore is spent there among the shavings.

He is a practical joker, too, history telling of at least one instance when he allowed his mischievous wits play, in spite of the scene of the joke being so august a place as the House of Commons. One gouty old member used to retire to a bench under the gallery, take off his

august a place as the House of Commons. One gouty old member used to retire to a bench under the gallery, take off his boots, and sleep soundly till wakened by the bell which marks a "division." or vote. One night, this gentleman, aroused by the bell, could find only one boot. No trace was there of the other, and rather than lose his vote his fellows hustled him into the lobby with one red sock showing glaringly. Then—amid roars of good-natured laughter—"Charley" Beresford "accidentally" discovered the missing shoe under his own seat!

#### A Just and Kindly Judge

That friend of American boys, and friend of THE AMERICAN BOY. Judge Ben B. Lindsey of the Juvenile Court of Denver, writes to the editor:
"What we are trying to do is to keep children out of court and advance those conditions which, if permitted to go uncorrected, lead children to the court. Four-fifths of the boys that come before me are just av-

before me are just average boys—no different from other boys.
They have simply been caught in some miscaught in some mischief and are not victious. Our court is for the benefit of this majority, rather than for the small minority that may be called victious. We believe that what we do to improve the condition of the civils. the condition of the children of the city is the best work for the state. We therefore believe in boys' clubs, boys' playgrounds and other institutions that the other the natural enabsorb ergy of a boy. I visit-ed eight or ten states during four weeks of

ed eight or ten states during four weeks of last winter, arguing in behalf of the Juvenile Court system, and I succeeded in getting laws passed in six of the states which I visited. I found in Nashville, Tenn., that 681 white boys had been jailed during the year. In Washington City there were 1,680 arrests among children under sixteen years of age in a year. I talked to many little fellows as young as nine, ten and eleven years old, who were occupying cells with men. In Peoria, Illinois, a railroad official testified that 82 boys were known to be stealing coal and grain from the railroad cars. They were all boys who were out of school and on the streets. Many of them had from time to time been arrested, but this did not stop the trouble. Yet Illinois has a Juvenile Court law, though little enforced outside of Chicago. We have reason to believe that there were 100,000 boys brought to the criminal courts and the jails of this country last year. Such a system as we have in Denver would correct these boys and at the same time protect them from the evils of criminal courts and the degrading influences of jails." courts and the degrading influences of

Judge Lindsey is to preside over the meeting of the Committee on Children's Courts and Probation Work for Children at the next annual conference of charities and corrections, which meets at Portland July 15.

It may not be known generally that Judge Lindsey has been enabled for several years through the liberality of several business men of Denver, to give out one hundred and fifty free subscriptions to THE AMERICAN BOY to the boys that come into his court.

#### The "Grand Old Man of Opera-plus-Laughter"

All the world knows him as "Gilbert the of the Gilbert and Sullivan operas," though he has a christian name, which is William. A handsome old gentleman rapidly nearing the seventies, he lives today in a charming country home in Middlesex, England, but the genial pro-prietor of "Grimsdyke" was not always so well off in this world's goods; quite

prietor of "Grimsdyke" was not always so well off in this world's goods; quite the contrary.

He began life as a lawyer, but things went so slowly that he took to writing "on the side," as Sir Arthur Sullivan, the partner of his later triumphs, described it. This, too, seemed to pay little or nothing till at last the young man evolved the words which the theatregoers now know as "A Trial by Jury." That turned the corner. After that came "Pinafore" and "Patience" and "The Mikado," each spelling success with a larger and larger S.

In connection with "A Trial by Jury" there is told a story decidedly characteristic of Mr. Gilbert. He took the manuscript to a Mr. Emden, then manager of one of London's foremost playhouses, and that gentleman seemed favorably impressed with the younger man's work. "I guess it'll do," said he; "What do you want for it?"

want for it?

want for it?"

"Thirty guineas," was the bashful suggestion of the budding dramatist,—about \$158 in American money.

"Make it pounds, and I'll take it," replied Emden, and Gilbert eagerly agreed to forfeit eight dollars. As the manager handed over the check, he said:

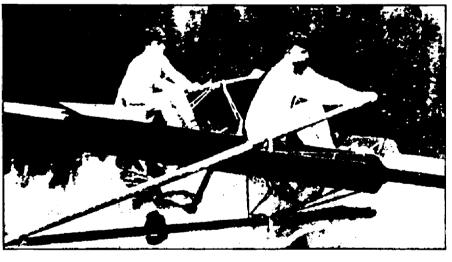

WILLIAM S. GILBERT

"Let me give you a piece of advice. Never again sell anyone such good stuff for less than a hundred pounds. Good-

"Grand Old Man of Opera-plus-The Laughter" declares he never forgot that caution,—or disobeyed it!

#### An Athletic Statesman

Statesmen who "go in for" out-of-door sports are not confined to America. Roosevelt fences and boxes and rides

SIR CHARLES DILKE AND HIS BOY ROWING ON THE THAMES

of the foremost figures in English public life, does all these things and adds to them the trying exercises of the cricket field and the rowing shell. -but Sir Charles Dilke.

field and the rowing shell.

A Cambridge man, a lawyer of ability, an ex-member of Parliament, a former cabinet officer, an authority upon colonial problems, and a philanthronist energetically pushing the erection of model tenements for laborers,—Sir Charles is yet hest known among his fellows for athletic prowess. He rides well, is a first-rate bat at cricket, and is an expert fencer and boxer, while scarcely a day passes that he is not on the river stroking his sturdy son in the "working-hoat," to which this rublicist of sixtytwo declares he owes his splendid health. Add to all this that the man is the author Add to all this that the man is the author of seven volumes, and it is evident he is no idler; and here is the brief secret of his success: "Live up to a system."

He practices what he preaches. He rises at 7:30 and walks a mile before breakfast, which comes at 9:30 to the minute. Then letters are answered and the papers read, but at 10:30 he is ready for a few moments' keen fencing, followed at 11 by a cross-country canter— eight miles, perhaps, before luncheon. At 3 he is in his sent in the Commons, but other writing has been done before that, and more follows after the house has and more follows after the house has risen, unless, as often happens, the sitting continues till midnight. The only day of the six when he retires before twelve is Saturday; and on Sundays he invariably takes "a day off"—"plays hookey," he says.

#### Feudal King Who Rules Today

Menelik II, "Emperor of Ethiopia and King of Kings," is to visit Europe, and the world is properly interested. For

KING MENELIK II

here is a man not only directly descended

here is a man not only directly descended from Solomon, but actually a sovereign of a very feudal sort still holding power, in this young twentieth century, over 150,000 square miles and 3,500,000 people. Abyssinia, Menelik's country, is a land of small towns, wretched roads and ignorant inhabitants, but these same black folk are nothing if not picturesque. An army of 150,000 warriors awaits the king's commands, all mounted, all armed with modern rifles, and most of them king's commands, all mounted, all armed with modern rifies, and most of them wearing from their brawny shoulders tawny lion-skins. This last is their badge of bravery,—quite as the Victoria Cross is in England,—and is an honor conferred by the monarch's own hands. These men can march and fight for three days without food, in spite of hot deserts and hilly country. and hilly country.

Nor is Menclik himself less brave and

Nor is Mencilk nimself less brave and hardy. At the battle of Adowa, nine years ago, when the Abyssinians faced the Italians, and while the Mausers of the Europeans were doing deadly execution among the dark-skinned warriors, the emperor was in the very forefront of the fighting, armed only with his sword

After military exercises Menclik com-mands his men to squat on the ground in long lines and fire ball cartridges into in long lines and fire ball cartridges into the air. The falling bullets generally kill or wound some of his subjects, but that is a small matter in his eyes if only he can thereby teach his people to be brave. And they are. Many of them are in the habit of attacking lions armed only with a spear, which naturally requires immense coolness and skill if the king of beasts is not to come off victor.

#### Poor, But Rich

Once, in New England, says a writer in the Outlook. I was driving with an old farmer, and some of the men of the neighborhood came under criticism. Speaking of a prominent man in the village. I asked, "Is he a man of means?"

"Well, sir." the farmer replied, "he ain't got much money, but he's mighty rich."

rich."
"He has a great deal of land, then?" 1

"No, sir, he ain't got much land, neither, but still he is mighty rich."

The old farmer, with a rleased smile, ob-served my puzzled look for a moment, and then

went to bed owing any man a cent in all his life. He lives as well as as good as a bond, and every man, woman and child in the town looks

got much money, and he ain't got much land, but still he is a mighty rich man, because he's got all he needs and all he wants."

I assented to the old farmer's deductions, for I thought them entirely cor-rect. When a man has all he needs and all he wants he is certainly rich, and when he lacks these things he is cer-

#### This Bov Means Business

John Ringo, Clinton, Kentucky, pays for THE AMERICAN BOY out of his own pocket. He is a sheep raiser on a small scale, having fifteen head of sheep and two lambs. When he was six years old his grandfather gave him one old sheep and two lambs. He is now fifteen years old and see how his stock has increased. He has a bicycle and a horse, which he has hought with his own money, and in addition has \$100 in the bank. He has bought his own clothes ever He has bought his own clothes since he got his first sheep.

#### From Montana

Earle Metier, Gallop, Montana, aged 13, Earle Metier, Gallon, Montana, aged 13, writes a very appreciative letter regarding THE AMERICAN BOY, and particularly regarding the continued story, "For the Mikado" He says he thinks he will be a farmer when he grows up. "The principal sports out here are hunting, fishing, skating and coasting. I am in the seventh grade at school. Our nearest town is twelve miles from here."

#### What Our Military **School** Will do for Your Boy

#### Make a Man of Him

A strong, healthy, clean, honest, intelligent, nanly man-full of the snap and vigor and joy of life-able to do things-competent to control others through having first learned to control

#### The Michigan Military Academy

can develop all that is best in your boy. Splendid academic work, exceptionally able faculty, highmoral tone, and a military discipline which creites ideal conditions for study. There is absence of vice, bad associations, social and other distrac tions which retard mental and physical growth

#### The Discipline is Strict, But Just

The military features are so fascinating that he cheerfully accepts the strict regulations. He learns obedience, industry, self respect, clean-liness, orderly methods, promptness, regularity Heenjoys doing what he ought to do. He is glad to retire at "taps," healthfully tired. He is up a "reveille," refreshed and wide awake, ready for the new day's work with a clear brain and active body.

#### 95% of Our Graduates

are today filling enviable positions in the business and professional world. Military training does and professional world. Military training does not signify a military career. The 5'2 who elect the military career, follow it successfully, keyeral now holding important positions in the United States army. We have more graduates at West Point than any other military school. Ours is a military school conducted by military men. Captain Cress, 4th U.S. Cavally, our Superintendent and Military Instructor, graduated from West Point in 18'4, has had over twenty years service, and is on the active list. Our military training system is admittedly the finest in the country outside of West Point.

The Academic Courses.

#### The Academic Courses

cover 8th Grammar Grade and High School cover 8th Grammar Grade and High School work. Our diplomas admit to any college or university where certificates are accepted. Our instructors are live, up-to-day men, in the prime of life, seasoned by experience in leading colleges and universities. Mr. Hull, the Head Master, is eminently fitted by education and varied experiences to direct our academic work. The four persons prominent in the management of the school have each a son in attendance.

#### Our Location at Orchard Lake

is ideal. The college, campus, farm, etc. are situated high and dry, with perfect drainage, pure water, healthiest of climates. The site overlooks three of Michigan's most beautiful inland lakes. Bracing air, wholesome food, regular exercise and recreation, quickly develop hearty appetites and vigorous constitutions. The services of our staff physician have not been necessary during present school year. present school year.

A Boy's Mental Capacity Improves with his physical development. Military training gives him an erect figure, graceful carriage and a perfect control of himself mentally and physically that will last to the end of his days. Parents and Guardians Are Invited

to write us for literature giving full description, views, courses of study, terms, etc.

Address General Harris A.Wheeler, President, at Orchard Lake, or at the Chicago office in the Old Colony Building.

#### College Life

man a cent in all his life. He lives as well as he wants to live, and he pays as he goes; he doesn't owe anything, and he ain't afraid of anybody; he tells every man the truth, and does his duty by himself, his family and his neighbors, his word is as good as a bond, and the class room, the laboratory, the lecture hall, of books, experiments and quizzes. The former is a curriculum of the campus, the dormitory, the bleachers and the athletic field, the eating club, the chapter house, the literary hall, the tasks! The callow "freshie" learns more about human nature in general and his the chapter house, the literary hall, the tasks! The callow "freshie" learns more about human nature in general, and his own bumptious self in particular, between the October and June of his first college year than all the parental advice and training of the previous ten years have sufficed to give him. A good, wholesome hazing—in any of the myriad forms in which it is administered—is a good thing for any man's son to get as good thing for any man's son to get as a freshman and to repay as sophomore.

good thing for any man's son to get as a freshman and to repay as sophomore. It is a good thing to go to a college old enough to have established student traditions, and spirited enough to enforce them. It is not well that a freshman comport himself as he will or enjoy the freedom of the campus until he have duly earned it.

That thing known as a "college atmosphere," though elusive, is very real. Whether justly or not—but surely with a certain measure of justice—one college prides itself on its retinement (which, viewed from without, is sometimes mistaken for snobbishness); another is, or wishes to be, noted for pluck and grit; another for democracy and good-fellowship; another for student honor; and so on. Whatever the quality, or the combination of qualities, college atmosphere counts,—Walter L. Hervey, in The Chautauguan for April.

The editor of The American Boy wishes to meet you at Portland, Ore., July 5th.

SHRILL whistle sounded from the the street. Fred hastily bolted the last mouthful of his pie, pushed back his chair from the dinnertable, caught up his cap and was gone before Mrs. West had time to reprove him. Once outside he looked up and down the street unconcernedly.

"Hello, there!" came a familiar voice from the corner.

"Hello yourself Ted Eastman!" Fred.

from the corner.

"Hello, yourself, Ted Eastman!" Fred called back.

"Come here."

"What for?"

"I want to tell you something."

Fred sauntered leisurely down the walk, his hands in his pockets. He usually did what Ted proposed, but he always took great care to appear indifferent. He had no idea of letting Ted think he was curious about his news now.

here, and they had stacks of fun I tell you."

Fred looked skeptical. "I shouldn't think they'd treat you for making a racket," he observed sagely.

"Well, they do though," affirmed Ted.
"You'll see. We want the biggest kind of a racket. Jim Barnes is going to bring a big cow-bell and Jack White has got a big dinner-bell that they used to have on the farm; the Brown boys'll bring those whistles that screech so, you know, and the Weston boys have got those big tin horns they had last 'lection. Now, what'll you bring?"

"I don't believe ma'll let me go," said Fred dublously.

"Oh, pshaw! We won't be gone long. You can just slip out of the back door and nobody'll ever know the difference. They're making a whole lot of lee-cream—strawberry and chocolate, and banana and every kind," he went on alluringly, as Fred still looked doubtful. "Come on; course you'll come. It'll be no end of fun. What'll you bring? Say, bring your brother Henry's cornet."

"Well, maybe," agreed Fred, slowly.

bring? Say, bring your brother Henry's cornet."

"Well, maybe," agreed Fred, slowly.

"All right, then. Be at our barn at half-past seven, sharp. Well, I've got to see some more of the kids. So long," and Ted disappeared down the street.

It was half-past 7 o'clock that evening before Fred could sl'p out of the house unnoticed, with Henry's beloved cornet under his jacket; so when he reached the Eastman barn he found the other boys impatiently waiting for him. There were a dozen boys besides Ted and himself, and each had some article capable of contributing to the racket.

"Here's Fred," shouted Ted. "Hurry up, there we're all waiting for you. Come on now," he continued, motioning to the other boys, "Fall in line everybody."

The boys tumbled hastily off the boxes and barrels where they had been perched,

and barrels where they had been perched, formed into line, and marched out of the door to the soft "dub," "dub" of Tom Brown's tin pan.

Down the back alley they hurried, across the wide school grounds, and around to the front of the brightly lighted house where Mr. Wright lived. There they stopped irresolutely and gazed curiously at the

house.

The shade was raised an inch or two and Fred and Ted pushed to the front and looked through the crack. They stared admiringly at the great masses of flowers. that decorated the room, then craned their

"What are they going to do now?" "What are they going to do now?" whispered Fred as a young lady seated herself at the piano and began to play. The boys looked on with wide, interested eyes as a door opened and the bride and groom entered the room and took their places under a large floral bell, with the grey-haired minister before them, holding a book in his hand. A silence had fallen on the room and the solemn service began.

"'Spose it's time to begin?" whispered

Spose it's time to begin?" whispered

"I guess so," began Ted doubtfully. "Yes; of course it is," he continued, motioning to the boys behind him. "All ready, kids! Now!"

At the word a deafening din arose; the tin pans rattled and banged, the cow-bells clattered and clanged, the horns tooted distractingly. Pandemonlum seemed to have broken loose. Fred had kept his eye on the room within and now almost dropped the cornet in his delight at the effect produced by the sudden uproar.

A door opened and a man strode out The more timid of the boys hastened to put

a safe distance between themselves and the house, but Ted stood his ground.
"Get out of here, you young scamps," ordered the man threateningly.
"Treat then," returned Ted, courageously.

"Come on, kids. Don't be scared off.
We'll make 'em treat us yet 'fore we stop.
They've got oceans of ice-cream in there
and we're going to have some," cried Ted.
Thus encouraged the others ventured back
and soon the uproar was worse than be-

Thus encouraged the others ventured back and soon the uproar was worse than before.

The boys had been too busy to notice that they had called out the neighbors on each side, or to see the signals that passed between them; so the sudden "swish" of a stream of cold water from the garden hose from the house on one side nearly took them off their feet. Back and forth like a flash played the hose over the dazed crowd who stood bewildered for a moment, then the notion of the house, pursued by that cold, relentless stream of water that seemed to be everywhere at once and to go through and through them. Around the corner they dodged wildly, only to be met by another blinding stream full in their faces from the opposite direction. They plunged across the lawn under the fire of both streams of water, rolled and stumbled down the bank to the walk, and dashed away down the street, fourteen drenched, miserable boys, shivering and shaking as the chilly October wind blew through their wet clothes, their path marked by scattered hats, belis, pans

"Not much we don't treat you, you young ragamuffins," went on the man indignantly. "Clear out of here as quick as you know how, or I'll have you arrested." Then he turned and went in the house and the door closed.

ids. Don't be scared off. It treat us yet 'fore we stoppeans of ice-cream in there is to have some," cried Ted, ged the others ventured back uproar was worse than beand been too busy to notice called out the neighbors on see the signals that passed so the sudden 'swish' of a water from the garden hose.

"Not much we don't against his will to join a certain fast set of young inen for a night ride, with a supper at a country inn. Long before a he got home he was disgusted with their loud, boisterous ways, their vulgar jests and profane language. He rated him-self soundly for his folly and determined to have more will power the next time he was tempted to mingle with such company. He did stay away from them entirely and supposed no one knew of the escapade till he was summoned to the office and discharged at the close of the day's business two weeks later. "I have it on reliable authority that you were in the company of young Brown and his friends." said his employer as he handed him his pay. "We cannot afford to employ men with friends like Brown, and therefore we will not need your services any longer."

That one sin lost him a fine position,

That one sin lost him a fine position, and, worse than all, the man who had and, worse than all, the man who had seen him in the crowd at the inn spread the information far and wide in the town where both lived. It was literally "known of all men." You will say this is an extreme case. If so they are happening every day. A small boy in the same town began doing errands in a store and was liked by all for his good manners and unobtrusive ways. It was noticed by the boys at school that he always had money for candy and fruits and nuts, so he had plenty of friends among them. The man for whom he worked also noticed that fact and soon found the lad was spending twice as much as he earned. He was caught taking small sums out of the old-fashioned money drawer and discharged. He has had a dozen different places since then, but each time some one has whispered to the employer the secret of his first trouble and he is discharged.

great care to appear indifferent. He had no idea of letting Ted think he was curious about his news now.

"Well, what is it?" he asked as he reached the corner and leaned against the fence with an indifferent air.

Ted drew himself up and looked important. "Say, did you know there's going to be a wedding tonight down at Wright's?" he asked with an air of mystery.

Fr.d shook his head and looked mildly interested "No; is there?"

"Yes, there is. Mrs. Wright told my mother all about it this morning. And if you want the tallest kind of a lark you just be on hand tonight."

"What for?" Fred's curiosity was becoming aroused.

"Us kids are going to shivaree 'em," announced Ted, impressively.

Fred looked rather blank. "What's that?" he inquired.

Don't you know what a shivaree is, Fred West?" Ted exclaimed contemptuously. "Why, everybody just takes tin pans and cow-bells and horns and everything, and then you go there and make all kinds of a racket so the folks can't hear themselves think, and then they come out and invite you in and treat you—give you lee-cream and cake. My cous hen that lives out West told me all about it. He went to one just before he came out here, and they had stacks of fun I tell you."

Fred looked skeptical. "I shouldn't think they'd treat you for making a racket," he

to keep out the cutting wind. He crept in at the back door, a forlorn looking boy, dripping wet, his teeth chattering with the cold, his hat gone and Henry's cornet gone, too, his face and clothing streaked with too, his face and clothing streaked with mud, showing the effects of his roll down

#### Someone is Watching You

Boys, did any of you ever apply for a place anywhere and have the man to whom you applied say something like this, "We have a number of boys who have asked for the situation but have not yet decided which we will take. Come back in a few days and we will let you know." Did you ever stop to think what those few days were for and did you go back to find the place taken? If you have not, your experience has been the exceptional one unless you were very well known to the employer and he decided known to the employer and he decided

Perhaps you have never naid much at-Perhaps you have never paid much attention when the minister has called attention to the fact that men and women are living epistles known and read of all men in his sermon some Sunday morning, and that there is any connection between the text and the fact connection between the text and the fact that you are politely told when you go back at the end of the few days that another boy has been chosen. Whether you believe it or not, the man you hoped to work for has been industriously looking you up to see what sort of a person you are, and it may be he has found something you would not care to have him read. There is no more certain fact than the plain statement of the Bible. There is no more certain fact than the plain statement of the Bible, "Be sure your sins will find you out." They may not be very large sins, but the merchant is looking for a boy with a clean life every page of which is open for inspection.

A young man was persuaded much is a looking man was persuaded much is a looking man was persuaded much is a looking for a looking for a looking man was persuaded much is the coil of a boa-consection), Monsieur, who had resumed his strictor.

It will readily be imagined that this siny top-hat and the green cumbrellis intercepted Briant as he was passing and gave him a warm invitation to visit him the class who were too remote to avail the class who were

Of course even dishonest boys do find places, but they are not the responsible ones in life. There are plenty of places where it is impossible to steal, so the men debarred from the positions of trust naturally drift into the ones they can fill. Dishonest men do get into good places, too, for a while, and when their sins find them out innocent people suffer. It usually happens in such cases that the employers have disregarded the plain warning of dissipated lives and refused for friendship's sake to discharge the unworthy man. When it becomes known that the cashier of a bank is a gambler or otherwise strays from the paths of honesty the bank suffers whether he ever touches a cent of its money unlawfully or not. Business men can not afford to employ any but clean men. too, his face and clothing streaked with mud, showing the bank.

Now if there was one thing that Fred hated more than any other it was to be laughed at; so when he heard voices in the dining-room, he drew back dreading to go in and face the ridicule he feared he might hear a bright idea struck him; he could go around to the side door and into the atting room; then he could get up to his room without anyone seeing him.

No sooner thought of than he scurried around the house, pushed open the sitting-room door and dodged in. He was inside before he discovered that the choir had met to practice the hymns for the next Sunday and were sitting there waiting for the organist.

Fred's appearance was greeted by a chorus of exclamations and questions. He tried to escape, but they would not let him off and he had to tell the whole story and endure the shouts of laughter and the saliles of wit with which it was received. The story was too good to keep and for weeks Fred could not appear on the street without hearing some reference to the shivaree—that was even worse than having to open his bank and take out half the money he had saved for a new bicycle to buy Henry a new cornet.

We have to ask for employment, but this is a strange world and strange things happort you without work, you owe it to the shivaree—that was even worse than having to open his bank and take out half the money he had saved for a new bicycle to buy Henry a new cornet.

We have to ask for employment, but this is a strange world and strange things happort you without work, you owe it to the shivaree—that was even worse than having to open his bank and take out half the money he had saved for a new bicycle to buy Henry a new cornet.

ever, he immediately told the new boy that his tongue at least was Parisian; while the rest of the class exulted in the accession of a recruit so well qualified to assist his senior companions in the unnoying intricacies of the language of Molière. Several score of boys immediately resolved to coax, bribe, or bully "Froggy Junior," as they unanimously designated him, into doing their exercises and compositions for them. The great Charles Stuart Adams, with his usual talent for reflecting the opinion of the majority, expressed the prevailing idea with admirable terseness.

"Now, that we have a young frog in the class, I vote we make him hop for us."

Accordingly, while Monsieur was giving Accordingly, while Monsieur was giving the usual dictation, Briant's immediate neighbors piled themselves upon him in a compact mass and copied his work with a devout zeal which was rather embarrassing. Puffy in particular almost lay upon the French boy's shoulder, and gasped wheezly into his ear. Every now and then Briant would shake himself good humoredly and for a moment get rid of his tormentors, but they soon clustered upon him again, and Adams' fat arm was like the coil of a bos-con-

wilder spirits began to exchange missiles; and presently a little paper dart, which had missed its way, came fluttering, over the top of the high desk and lit upon the open pages of Monsieur's Chateaubriand.

Chateaubriand.

Monsieur immediately bounced off his stool like an india-rubber ball, every hair of his gray whiskers curling into wrath, and fell impetuously upon a mild being named Shadwell, who happened at that moment to be gazing upwards in cowlike contemplation; and began to flap his projecting ears with the outraged classic.

flap his projecting ears with the outraged classic.

"Aha! mauvais garnement," shouted Monsieur Felix. "Is it that I have caught you this time? Take that, little impertinent! That will teach you to ombog me again!" Once more the "spirit of Christianity" descended, noisily but harmlessly, for the benevolent Monsieur was always desperately afraid of hurting his victim. Then, the stammering Medlicott, next neighbor of the innocent sufferer, waved a deprecatory hand, and arrested that of Monsieur. "Pup-pup-pup-please, sir, tut-tut-tut-'twasn't him; tut-tut-'twas Pop-pop-my then the stammering the stammering hand."

"Speak then my shift!" antended.

tair nunting distance and then slipped out of his seat and darted down the third row of desks with the master hot upon his trail.

It was a brisk bit of cross-country work, up and down the long rows of rejoicing youngsters, overturning an inkstand or two and several slates on the way—Monsieur, still fairly fresh, though a long way behind. Then round the corner by the blackboard, making that respectable institution stagger as they passed, and into the open country of clear floor beyond, Monsieur beginning to pant a little and to mutter incoherent exclamations.

"You're gaining, Mossoo. Put it on!" from some audacious urchin.

A sudden double by Postlethwalte, who, leaving the open, plunges into the ravines by the fire-place; where Monsieur, close up, almost comes to grief over the tongs. Down the gangways by the windows Postlethwaite draws away again, and is leaving Monsieur fast, when the latter, with an expiring effort, gets near enough to hurl the Chateaubriand full at his back. At the same moment Postlethwaite catches his foot in the folds of a window-curtain, and the triumphant Monsieur Fellx, with a crow of delight, sees him measure his length upon the floor, with the book upon his guilty head.

But what is this solemn hush which has suddenly fallen upon the school-

But what is this solemn hush which

But what is this solemn hush which has suddenly fallen upon the school-room? and why do the boys, lately so rampant, check their laughter and direct uneasy glances to the door?

There, calm and terrible, with a look of grave surprise upon his face, stands Doctor Hardress himself, who has come to pay his usual morning visit to the French class, and arrives just in time to see the exciting close of the chase, and to offer his congratulations to the victor.

victor.

It was a difficult situation, but Monsieur, as soon as he recovered his breath, proved quite equal to it. What chiefly distressed him was that the Head should have been kept standing for the last half-minute without the punctilious greetings which he was accustomed to receive from our French master. These he now hastened to render, and, disregarding the Doctor's somewhat sarcastic condolence on the state of heat to which he had brought himself, endeavored to shield the unfortunate Postlethwaite, who stood rubbing his elbows and parrying with difficulty the stern questions of the Head. In the most gen-

vored to shield the unfortunate Postlethwaite, who stood rubbing his elbows and parrying with difficulty the stern questions of the Head. In the most generous manner Monsieur assumed the entire blame for the scene which had just taken place, and absolutely declined to hand over his prisoner to the superior court of punishment.

"The poor child!" he said. "It was but a mere betise of which he has been guilty. It was I who have lost the head. Permit, I pray you, that we speak no more of it!"

In fact he made it a point of honor that amnesty should be granted; and on such occasions Monsieur could appear a very grand gentleman of France indeed. So the Head, who had the highest respect for him, on account of the sacrifices which he knew Monsieur had made for the sake of his political principles, gracefully yielded, and let Postlethwaito off, after a short but impressive lecture.

"Jolly decent of old Froggie!" was the unanimous verdict of his pupils when the Doctor had departed; and for the rest of the hour the class was as quiet and orderly as a Quaker meeting or a hive of Isaac Watt's own celebrated busy bees. As for Monsieur Felix himself, he beamed upon us through the lattice of the high desk like the sun behind clouds, and helped everyone over the awkward idioms in translation with the most amiable readiness.

When noon arrived, and the bell

#### OR, INTERESTING THE SCHOOL CHILDREN OF THE STATE The Sylvaton Idea or, interesting the school children of the state in tree planting and forestry in all its phases

By W. W. BARRETT, Ex-State Superintendent of Irrigation and Forestry and State Fish Commissioner of North Dakota

JITH THE FULLEST pleasure I appear in the pages of THE AMERICAN BOY because it teaches those things which for over three score have been advocated by my pen ongue—cultivation of manliness in

together with electrical and other forces, and that it is related to all other planets and is greatly in-fluenced and modified by the heat and light of the sun. These are some of the prime agencies in the economy of creation, and all are absolutely necessary for its harmonious and perfect operations.

One of the most impor-tant growths in plant life tant growths in plant life is trees. These are not only fascinating and beautiful, but indispensably needful, like water and air, for the proper balancing and exercise of nature. Since man first found existence upon the earth, trees have been the study, admiration and joy of seekers after knowledge and truth. And as the readers of THE AMERICAN BOY, being thoughtful investigators, cannot but feel an interest in "the children of the forest." I seek to give some light upon a forestry system operating in North Dakota.

Coming here as a pionear in 1882. I found rich These are not

North Dakota.

Coming here as a pioneer in 1883, I found rich soils, but the country was one vast barren, treeless region, save some helts of forests along the rivers and upon some of the lakes. I soon discovered the great need of our plains was trees, and after careful study of the question for a number of years I devised and put into practical operation into practical operation

#### The Sylvaton Idea,

the object sought being to interest and educate the school children, boys and girls alike, of the state in tree culture and forestry in all its different phases, and kindred subjects. The name has its origin in the word sylva, signifying "forest tively" ton being added. Its fully organized and has been in effective force since 1892. Its principles are enumerated under twenty-cight tenets, embracing forestry in all its branches and its congeners. The North Dakota State Sylvaton Society, by vir-

pies are enumerated under thems, religious tenets, embracing forestry in all its nent from the press, educators, state of the state. More bank to State Sylvaton Society, by virtue of its constitution, includes all the school children of the state. Among its principal objects may be mentioned these: On each annual Arbor Day, to encurse pleasant and disciplinary exercises and assist in planting trees, shrubbery and flowers, not alone in the schools and public parks, along streets and highways, but especially at the home—places on the farm and ranches—and those located on village and city lots also, and likewise stimulate tree-planting at all times where desired whenever the season and conditions for their growth will allow. And not only to plant the trees allow. And not only to make their mature, habsuitably, but to make their nature, habsuich ways as will insure their growth for the profitable benefits and aesthetic adornments to be derived therefrom, making forestry a life-study in useful and idealistic application. The young boys and girls, thus disciplined, will as a rule be the devoted and intelligent foresters in connection with their various callings of the state and nation.

The Sylvaton literature placed before the public through the press, books, pumbled the public through the press, books, pumblets and in other ways, has established to the public through the press, books, pumblets and in other ways, has established to the public through the press, books, pumblets and in other ways, has established to the public through the press, books, pumblets and in other ways, has established to the public through the press, books, pumblets and in other ways, has established to the fact that it is a great factor in proceed to the fact that it is a great factor in proceed to the fact that it is a great factor in proceed to the fact that it is a great factor in proceed to the fact that it is a great factor in proceed to the fact that it is a great factor in proceed to the fact that it is a fact in the fact that it is

years have been advocated by my pen and tongue—cultivation of manliness in muscle, mind and morals, or the wise development of the physical, mental, moral and spiritual natures of the young, promotive of health, harmony and happiness. Those thus trained cannot but become students of not only themselves, but the great book of nature.

By observation and study we find all parts of nature in correlation. The earth has marked grand divisions and elements, such as the rocks, soil, water, air, animal and plant life, together with electrical

Millions of Forest Seeds and Trees for Arbor Dny Plantings.

From year to year the North Dakota State Sylvaton Society has furnished, as a free gift, millions of forest seeds and small trees to the school children of the

The Sylvatons' Museum and Their Exhibits at Different World's Fairs.

Through the active and considerate ef-

Through the active and considerate efforts of the Sylvatons the North Dakota State Sylvatons' Museum was established in the State Capitol at Bismarck, North Dakota, giving a most comprehensive, fascinating and instructive display of the natural resources, industrial developments, progress and history of North Dakota and the West, Here are exhibited all kinds of grains, forest seeds, woods, minerals, fossils, petrifactions, historical pictures, photographs and feathers of "Old Abe," the Wisconsin war eagle, etc. It is an object school most highly valued and a credit to the valued and a credit to the state and the West. An-other Sylvaton Museum is located at my Sylvaton ranch, near Church's Ferry, North Dakota, containing over ten thousand of valuable and instruc-

taining over ten thousand of valuable and instructive specimens representing the mineral and veget able productions of North Dakota.

The Sylvatons' exhibits at the Chicago, Omaha, Buffalo and the St. Louis World's Fairs were many and of a high order of merit, unique, most captivating and highly educational in their teachings, and they received the close attention and praise of the considerate and the cultured inspectors and judges, and at each fair they won the highest awards in the way of gold and silver medals. way of medals.

medals.

As set forth in the twenty-eighth section of the principles of the Sylvatons, it will be found they aim to study and obey all the laws of human life; to advocate and strive to sustain all innate human rights, liberty natriotism and all

The Merciful Man An incident occurred the other day that I think is worth relating. It was about 3 o'clock in the afternoon and I was out taking a stroll, when I noticed a man driving along the road. Suddenly his ho se stumbled. He gave it a cut with the whip and proceeded but a few with the whip and proceeded but a few feet when the poor animal stumbled again. This time he got out and clubbed it. Having already called the attention of a passerby to the scene which was being enacted, and seeing he was not inclined to interfere, I ventured to say to the brute who was belaboring the poor, patient animal:

"Your horse did not stumble on purpose. Look at his feet; something may be the matter with them."

The man gave me a very severe look,

The man gave me a very severe look, that plainly indicated I had better mind my own business. Seeing he had no intention of acting upon my suggestion, I went to the horse's rescue, and picking up one of its forefeet removed therefrom a sharp-nointed stone which was the a sharp-pointed stone, which was the cause of all the trouble. The faithful anicause of all the trouble. The faithful animal looked gratefully at me, as though he understood, and indeed, he did understand the whole proceedings. The man took his seat in the vehicle and drove off, pondering deeply, no doubt, on the unnecessary sufferings to which poor animals are subjected at the hands of merciless owners. Who was it said, "The merciful man is merciful to his beast"?—Ontario Sun.

# An Offer To All **Poorly Paid** Men

To every man, and woman too, who is struggling along against adversity, striving to make the best of an uncongenial position and a poor salary, the International Correspondence Schools, the standing and achievements of which are known and honored everywhere, makes this offer: If you will indicate by a mark like this X on the coupon below, which occupation you prefer, the I. C. S. will at its own expense and without obligation on your part, show you how it is not only possible, but actually easy for you to enter that occupation, not as a poorly paid apprentice, but with all the qualifications necessary to command a good salary.

Have you enough curiosity to ask HOW?

## How to Make a Simple but Useful Splice-Jointed Fishing Rod, Without Ferrules

By JOHN HARRINGTON KEENE

THERE IS ALWAYS great satisfaction in making one's own tackle of any and all kinds, where practicable, and the youthful angler should above all things be able to construct his rod, if he does not succeed in making his own hooks, lines and flies.

The art of the rodmaker has always been a fine one, and to rightly construct one of the rods of a veterun Mitchell or Eggleston is to do something which few amateurs can do, though my friend Mr. Tryon, the celebrated artist, is an extremely fine rodmaker and has rivaled if not surpassed the superb productions of the makers above named. The tyro who is only yet learning the use of tools and the qualities of the wood to be employed, is not to be expected to produce the finished work of the masters, but the making of a useful and simple rod which will he sufficient in all ways for hait and making of a useful and simple rod which will be sufficient in all ways for bait and other fishing, is not at all difficult, and I propose to explain by the ald of diagrams how any boy may do this to his own credit and pleasure.

Most rods are in three lengths or ioints and the

1 inch. Inches. diameter 18 iz.

joints, and the ends of these lengths are pro-vided with fer-rules which fit rules which hi into one another as is shown in Fig. 1. A is the outside ferrule, and into it fits a and into it fits a smaller ferrule on the next length; B is the ferrule rim, added for strength, and C is the shoulder; D D are the lengths on which the socket are sesorte end and the socket are se-curely fitted. This constitutes the usual joint of the three-piece fishing rod, and to construct it would require skill quite above that possessed by most young anglers. I am anglers. I am going to tell him how he can make a rod without ferruled joints, that will be that will be equally as secure when jointed, and may be readily taken apart.

Fig. 2 shows the rod. It is eight feet ten inches in length, and made in two parts, which are

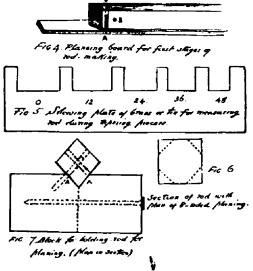

and made in two parts, which are tapered and spliced together with a strong line, as shown at A. Details of the making of this splice will be given later. A plan is first made giving measureplan is first made giving measurements, which must be followed. The young rodmaker will then run less chance of error in the construction

the method. The wood, which may be either lance-

wood, ash, or hickory, should be one inch square and in two four-foot lengths. one length is intended for the lower or the upper or tip. They are both reduced to the taper shown on the plan.

In order to do this easily make a plan-ing board, as shown in Fig. 4, consisting of a twelve-inch pine board, secured firmly to a table or bench as shown in Fig. 4. Two small holes are drilled at B B in one end of the square stick, and an iron pin (or nail) is driven into the board for holding the piece while plan-

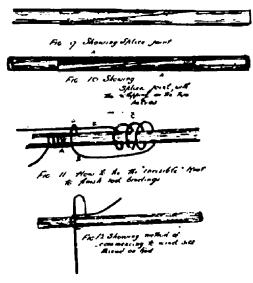

Each of the two lengths are planed to a taper on the four sides, and the various diameters are taken from the plan. Thus, at a point twelve inches from the handle it tapers to the diameter shown at 12; at 24 inches and 36 inches it tapers more, until at 48 inches it is just half the diameter of the butt end. The tip end or length is planed to a taper, being half an inch in diameter at one end and one-eighth of an inch at the extreme tip. When this is done we have two joints of four feet in length, one being one inch at the thickest and half an inch at the thinnest end. and the an inch at the thinnest end, and the other being half an inch at the thickest and one-eighth of an inch at the thin-

down the octagon until it loses its angles and approaches a circular shape. To accomplish this the plane is not much needed, although if set for a fine cut it

To accomplish this the plane is not much needed, although if set for a fine cut it may be employed to reduce the angles at first, and the rest may be accomplished by scraping down with a piece of steel or glass until true, finally smoothing down with fine sandpaper.

The two adjoining ends (at the joint) are now cut to a taper, as shown in the diagram Fig. 9. This work may be started by means of a sharp jackknife, but must be finished most carefully and evenly by a file and sandpaper. See that the parts fit exactly as shown in the diagram, and when they do, wind each half of the taper splice with fine waxed sewing silk (see Fig. 10 at A and A). These whippings or bindings are to protect the fragile wood of the joint, and to make them neat and even they should be finished off with what is known as the "invisible knot." Fig. 11 shows the way this knot is tied. A is the whipping, B is the silk, which is loosely wrapped in the coils C, and the end passed at E under D. B is then wrapped tightly next to A with the three coils at C, and then E and F are drawn through D and the tightly wrapped C coils, and the knot thus made is quite invisible and entirely secure. Fig. 12 shows simply and plainly how to hegin the winding of waxed silk on any part of the rod. Fig. 11 shows how to end it. Having wound the splicing parts of the two

joints with waxed silk, and varnished them with white shellac spirit varnish, tie at A and A (Fig. 13), at each end of the splice, a piece of pin wire bent as shown at B. Behind these loops and held tightly by the whipping, is attached about one yard of good chalk line, which may be wound spirally very tightly around the two spliced tapers as shown. When these two tapered ends are thus bound together they make the best possible joint. Some of the finest salmon and fly rods in Scotland and England

sible joint. Some of the finest salmon and fly rods in Scotland and England are made in this way, and are known as the Castle Connell rods.

The guides for the line, which may now be placed on the rod, are easily made from German silver wire in the snake shape shown in Fig. 14. Four of these are usually necessary to a rod such as has been described, and on the tip a simple ring can be placed made

and one-eighth of an inch at the thinnest. Both joints are now four square.

In order to gauge the size at every 12 inches of length it is well to make a gauge of thin brass or tin, like Fig. 5.

Cut with a sharp pair of shears and carefully file the notches to the proper widths indicated on the plan. This is a very useful tool in rodmaking.

The square joints are now to be rounded, but the first stage of the process is the planing off of the four cor-

#### Edward Everett Hale to the Boys

Rev. Dr. Edward Everett Hale of New York city recently addresed the Young People's Loyal Legion Temperance Society. His address was on the word, "Together." The following is an extract from it:

from it:

"Jesus says in one place that each man must carry his own burden," said Dr. Hale. "Only a little further on He says that each man must carry the other man's burdens. How can we get around this seeming contradiction? What it means is simply that first of all each man must carry what is directly laid on his shoulders, and then he must in addition be ready to take his share of the common load. That is what it means. Only by so doing can we make ourselves as useful as it is within our power to be. And in order to be able to do so we must first of all remember that our body is

as useful as it is within our power to be. And in order to be able to do so we must first of all remember that our body is 'the temple of God.'

"Always remember that, and keep that temple pure and worthy of Him who is to reside there. Only in a pure body can the soul be pure. And it is for this reason that we take and keep the pledge framed by this organization to which you all belong.

"The next thing is to carry the other man's burden. I recall a visit I paid to a prominent minister whose church stands right in the heart of this city's great east side. A fine edifice and a great congregation—a great work. They had clubs and clubrooms, and did this thing and the other thing to raise the members. And yet the minister—say that his first name was George—was not satisfied.

and the other thing to raise the members. And yet the minister—say that his first name was George—was not satisfied. And he told me all about his troubles. He told me that his clubs and societies and classes that were so successful in outward appearance seemed to suffer from some kind of dry rot. I listened long to him and then I said:

"'See here, George, I know what is the matter with you. You think too much of yourself. You are all the time planning how to improve yourself and how to entertain yourself, i. e., your own people. You have reading rooms and libraries and courses of instruction and helpful organizations, but all for yourself. What are you doing for the other man? Nothing! You are not giving him a thought, and that is why there is no real life in your undertakings.

"'Suppose you pick up a paper tomorrow and find out who has been hurt the

people. You have reading rooms and libraries and courses of instruction and helpful organizations, but all for yourself. What are you doing for the other man? Nothing! You are not giving him a thought, and that is why there is no real life in your undertakings.

"Suppose you pick up a paper tomorrow and find out who has been hurt the day before—some workman fallen from the scaffolding of some building, or anything of that kind. Then find out all about the people of that man. See whether you can do anything for him or for them. Put up this to your boys and girls. Teach them to think of others and to live for others—to cary the other man's burdens—and you will see that you have no further cause to talk of dry rot and indifference.'

"He said he would follow my advice, and I have reason to believe that he did."

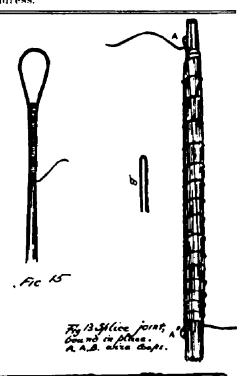

and I have reason to believe that he did. And what he taught his children and young people and parishioners to do, that is what I want you to do. Then your organization will grow so fast and so far that there will be no holding it back. And to that work I wish you all luck."

#### Canny John Sherman

The late Secretary John Sherman showed his talent for financiering at an early age. He and two of his brothers had been given a sum of money with which to pay their board while on a shooting trip for a week at the house of a farmer near Lancaster, O., their home. The week ended, John ordered the wagon and paid his board. But the farmer refused the money, saying that the sons of Judge Sherman would always be welcome guests. When John found that he did not have to pay his board he sent the wagon back to the barn and stayed another week.—Lippincot's Magazine.

#### A Word to Boy Musicians

One of our readers, who is a cornetist in an orchestra, asks why we do not have a Boy Musicians' Correspondence Club. He thinks that there are many boys throughout the country interested in music, who will be glad to correspond with one another. As to whether there are enough boys interested in this subject to form a club, we shall leave it to the boys to say. All of you, now, who want to join a Boy Musicians' Correspondence club write us on a postal card, say yes, and sign your name and address.

## **Every Boy**

#### Things Worth Remembering

Many of the little problems which we encounter in daily life may be overcome if we but give them a moment's serious thought. And once we discover a method of doing a thing neatly or of saving labor, we should remember just how we did it, for the experience will prove useful to us again some day.

is to warm the neck and make it expand around the stopper, when the latter may be easily removed. All that is necessary is to take a stout piece of string, the coarser the better; give it a turn around the neck, as shown in Fig. 1, and saw hack and forth a minute or two.

If it is a small bottle grip it between the knees and work with both hands, but if it is a large bottle, it is advisable to get another to help you. Let each rest their left hand on the shoulder of the bottle to steady it, and keeping the string taut, work it backwards and forwards.

The friction will make the neck so

The friction will make the neck so warm in a minute or two that the stopper may be lifted out quite easily.

Another source of annoyance is to have

annoyance is to have the cork of a bottle slip inside; sometimes we see two or three corks inside one bottle, yet no effort is made to remove them. People get an idea that once a cork goes inside a bottle that it won't come out again. Nevertheless the operation is extremely

DOTTIE that it won't come out again, Nevertheless the operation is extremely simple. Hold the bottle containing the corks upside down in the left hand and with the right take a loop of string, as shown in Fig. 2.

Insert the loop and catch it around one of the corks, pull hard and the cork files out.

Little helps like these are worth remembering; you will often find them useful in the life at home.

#### The Unchaperoned Boy

We chaperone our girls and carefully guard them against unworthy boys, but we leave the boy to choose for himself his associates and his achievements.

Girls are naturally winsonie, gentle, companionable. They win their way in homes and hearts. But the boy, noisy, awkward, mischievous, is invited into few homes, and feels none too much at home in his own.

About the only door that swings with sure welcome to the boy, about the only chair that is shoved near the fire especially for the boy, about the only place where he is sure of cordial greeting, is where he ought not to go.

It is one of the hardest things in the world to get hold of a boy—to get a sure

world to get hold of a boy-grip on him.

He is hungry for companionship, and he will have it. You can't chain him away from it. He wants the companionship of boys, and nothing will take its

place.

If the rime of selfishness has so encased your heart that the joys and hopes of your boy cannot enter into it, the boy is to be pitied, but so are you.— Milwaukee Journal.

Whenever I see a youth looking for "a soft snap" I pity him. There can be no doubt where he will end, if he does not change his tactics. If he does not brace up, take stock of himself, and put vim and energy into his life, he will surely join the great army of the "might-havebeens."—Success Magazine.

# JAPANESE WAR NEWS

By Jack Van Camp, Tokio, Japan

OTHING in the world so commands and holds the interest of every class and every nation of people as news of war. Life is our most preclous possession, and when nations go to war and the lives of hundreds of thousands of men are risked—and lost, there must be the most intense interest in the affair. This is true of the countries fighting, more than of those that simply look on. And in a nation at war, the interest is more keen where so many soldiers are in action that every neighborhood and almost every family has its representative at the front. In that case there is rejoicing in every victory and terror in every defeat, felt in every little shop and home of the land. For these reasons, if you will remember the tremendous armies that are fighting up in Manchuria, and the scores of thousands slaughtered in the fiercest battles that modern warfare has known, you can easily guess how intense is the interest in war news in Japan.

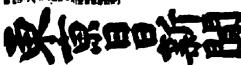

To answer this interest, all

guess how intense is the interest in war news in Japan.

To answer this interest, all over the world the newspapers have spent millions of dollars so that they can publish morning by morning the oftentimes fearful events of the preceding days. In the Russo-Japanese war the papers of other countries have contained more of the news than the papers of those two countries themselves, for in Russia the government has deceived its people and in Japan, in order that the actions of the armies might not be anticipated and hindered by the enemy, much of their doings and movements have been held back by the government had government have governments have been held back by the government.

much of their doings and movements have been held back by the government, and not printed at once by the newspapers. But as soon as any battle was in progress the government gave out the news as rapidly as it was received, and the reports thus given have always been reliable; in the reports coming from Tokio there has been no deceiving. In spite of this serious hindrance the Japanese papers have used the same enterprising methods that the great dailles of America and England newspapers. But as soon as any battle was in progress the government gave out the news as rapidly as it was received, and the reports thus given have always been reliable; in the reports coming from Tokio there has been no deceiving. In spite of this serious hindrance the Japanese papers have used the same enterprising methods that the great dailies of America and England use. They have their correspondents at the front, and their cable dispatches from all parts of the world, so that while we are reading the news from the front we also read what England and America are saying about the war, and the wonderfully twisted accounts that are published at St. Petersburg. One of Russia's first victories was the sinking of a Tokio daily's dispatch boat. These papers are cheap, selling usually at a cent. And they are very widely read, for there are few people in Japan who cannot read. The city papers often have a column in English, containing the war and international news. They have illustrations—usually woodcuts, that look rather crude beside the half-tone pictures of our American dailies, but America leads the world in that sort of work. And these Japanese papers in their editorials, are strong, just in their judgments, considerate, and more moderate and sane than would be the papers of either Europe or America, if they were under the same provocation. would be the papers of either Europe or America, if they were under the same provocation.

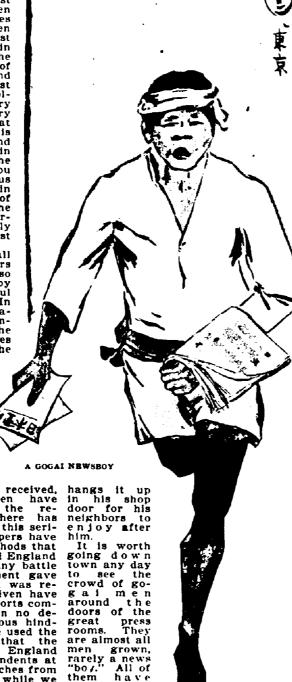

One of the most interesting features of these papers is the extra—the Japanese word is gogal. When things are happening at the front, one may hear nappening at the front, one may hear anytime through the day, and far into the night, a wild jangle of bells, and the oft repeated cry—"gogai," and a runner, scantily clothed, bareheaded, with a bunch of small bells at his girdle, flies down the narrow street and you must hurry if you want to catch him and procure a paper. You hold out a cent which he snatches without stopping and leaves you a sheet of paper like a leaf leaves you a sheet of raper like a leaf from a tablet—the only thing printed on it is the special news, the telegrams. After reading it the purchaser usually

men grown, rarely a news "boy." All of them have the bells — it

the bells—it sounds like an old fashioned sheep stable where the ewes wear bells. And they hang on the iron bars of the windows and crowd for first places at the door—then the extra comes and there dows and crowd for first places at the door—then the extra comes and there is a scramble, and one and another comes out of the melee with a bunch of papers and starts away, shouting, through the street. And the shopkeepers, hearing it, come out, and hold out their money at arm's length—it's like a train taking mail on the fly. So they go, full speed, away to the edges of the city, miles distant—for their legs are the fastest means of travel possible to them—faster than the street cars, and they can sell as they go.

Quite as interesting to most people as papers, are the war pictures. Go along the streets, and every block you will find a crowd of people bunched around a shop front—it is always a picture shop. And

a crowd of people bunched around a shop front—it is always a picture shop. And there, hung clear across its front, open to the street, are the latest color prints and lithographs and half-tones of the war. Now the last are fine. There was never before a year-old war, or one of any age, that had its picture taken so many times as this. The government has gone at it as a scientific way of learning how to make war, and everything that has been done has been photographed. These are published. But they are expensive, and they are black and white, so almost everyone is more interwhite, so almost everyone is more interwhite, so almost everyone is more inter-cated in the wonderful big color-prints in the shop fronts. They may not be very accurate—if they are the armies have done some extraordinary things— but they are interesting, and some are quite artistically done, and there is scarcely a house but has its big war picture that little tinsword soldiers, who some day will be the real sword soldiers under Japan's sun banner, look at often under Japan's sun banner, look at often and dream about. These same shops have very interesting booklets for sale, too, so those boys would tell you—their old fairy tales done over, up-to-date, with war leaders and heroes taking the place of the old characters. Kuropatkin has great prominence in many of these of course. His name in Japanese means "black pigeon," but his picture is usually a black crow, and that black crow has sad experiences in this new fairy lore. War postcards are everywhere, too, and everybody sends them to everybody else. There are plain ones and elaborate ones—that show one view on the surface and another when you look through them to the light. The Postal through them to the light. The Postal Department issues special ones, and you buy them at the little postoffices of every roadside village in Japan. And the sol-diers have postcards supplied them, that the Government franks, so their news comes home to their friends without expense to them.

So the war news comes and goes in many ways—but what effect does it have many ways—out what effect does it have on the people, or the city when it is received? The people who are so interested in knowing the news are every one ready to show their apreciation when a success is achieved; but they are not noisy, there is no uproar; their celebra-(Continued on page 258.)

RIFLES ARE EASILY CLEANED

Cleaned right from the breech. You simply pull the trigger, and the entire breech bolt can be instantly taken out Our 22 calliber, "Junior" Single-shot Riffe is iber, "Junior" Bingle-shot Riffe is not only easier to clean than other riffes, but easier to handle. In no other riffe of similar type can the whole mechanism be removed "without tools." Savage quality all through, and fitted with solid American walnut stock. Watch for other exclusive Savage features. When it comes to riffes, the Savage is different.

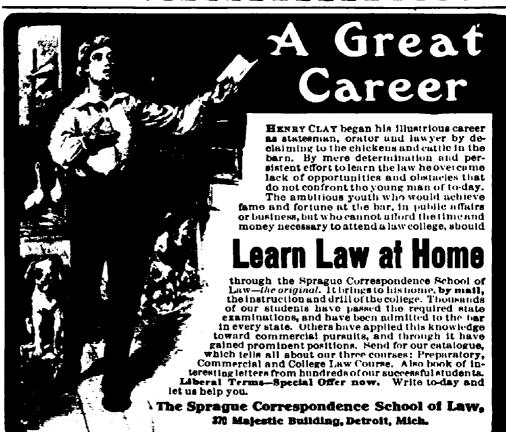

"No savage beast would dark to triffe

"No savage beast would dare to triffe With a man who shoots a Savage Rifle."

#### An Oft-Forged Stamp

An oft-forged stamp the Turkish 25 plastres. black and grey issue of 1884, has again been initated. To stamp collectors possessing genuine specimens for purposes of comparison this latest counterfeit presents no particular danger. A glance at our twin illustration,

GENUINE

showing the genuine stamp on the left and the forgery on the right, will show marked discrepancies, especially in the two inscrip-tions at foot. "Emp. Ottoman" and "25 plas-tres," and also in the scroll ornament between

below the eagle.

French Guiana has a new set of "picture" French Guiana has a new set of "picture" stamps. There are three designs, that for the low values, 1c. to 15c. being a picture of an ant-eater; that for the "medium" values, 20c. to 75c., showing a gold digger at work, and that for the high values of 1, 2 and 5 francs presenting a view of Palm Tree Place, Cayenne.

From Natal comes a series of official postage stamps, the first ever issued in the colony. They are produced by surcharging the ordinary stamps of the King's Head series with the word "official" in sans serif capitals. So far, only the ½d., 1d., 2d., 3d., 6d and 1s. stamps have received the overprint, and it is stated that at present no higher values will be surcharged.

Jaipur, an Indian state, issues a set of three thels of much superior appearance. These are oblong, and give us a much clearer pic-

ture of the national emblem of Jaipur, the Wharlot of the Sun," drawn by a hydra-headed horse. The values and colors are: 1/2 suna, blue; 1 anna, red; 2 annas, olive green. The new Servian stamps, with head of King leter, are printed in black and color, the central portion of the stamp, carrying the head of King Peter, being in black in every Here are the values comprising the

- para, gray and black, paras, pale green and black, paras, rose and black.
- 15 paras, lilac and black.
- 20 paras, yellow and black. 25 paras, blue and black. 50 paras, dark brown and black.
- 1 dinar, bistre and black. 3 dinars, green and black. 5 dinars, violet and black.

From Tasmania comes a provisional stamp in the shape of the 5d. stamp with a black surcharge "1½d." It appears that a gentleman in the colony wrote to the Postmaster Geenral, complaining of the inconvenience of having to attach two separate stamps, %d. having to attach two separate stamps, %u. and 1d., to pictorial postrards and suggesting that a 1½d. value should be provided. The suggestion was acted upon by the authorities, and the stamp now chronicled is the result.— Hobbies

Detroit, Mich.

#### The Prize Offers

In our February issue the coin editor offered two prizes: One for the best list of animals to be found on coins, and the countries in which found. The other for the best answer to the question, "What advantages are to be to be found on coins, and the countries in which found. The other for the best answer to the question, "What advantages are to be derived from the collecting or study of coins?" The special prizes offered were a Judean "mite" for the first, and an Egyptian bronze coin of Ptolemy III for the best answer to the second question. Time limited to April 1. The large number of replies received in answer to these questions go to show the great interest our boys are taking in the science of numismatics. The replies to the first question particularly brought out some very elaborate papers, which showed that the competitors have fine collections or have access to the same. The replies to the second question averaged up more evenly, and it was with no little difficulty that a decision could be arrived at. At the same time the responses to this question did not exhibit the study, preparation and knowledge so prominent in the answers to the first query. On the whole the interest manifested and ability displayed has exceeded our most sanguine expectations. The winners of the prizes are as follows:

First question: Fred J. Vreeland, Paterson. as follows First question: Fred J. Vreeland, Paterson,

them. Caution is necessary in buying many others of the rarer Turkish stamps.—Hobbies.

A Few New Issues

Russia has added two new values to her set—15 kopecs brown, with blue center, and 25 kopecs green, with lilac center. These are of the ordinary current design, with thunderbolts below the eagle.

N. J.

Second question: Charles Leavitt, Manchester, N. H.

Mr. Leavitt is also an easy second in the answer to the first question.

Especial credit in this connection is due the following: H. Maynard Rees, Cieveland, O.; Homer E. Alien, Elyria, O.; Louis Jackson, Muscatine, Iowa, and Edward H. Stein, Westbelow the eagle.

# The Boy Photographer \$

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

PIRST PRIZE PHOTO-BY JOHN GUIBORD, PLATTSBURG, N. Y.

#### The Roll of Honor

The list of those entitled to honorable mention is again a long one and includes: Edwin Paul, F. S. Andrus, Perry N. Trask, L. A. Rumsey, C. F. Gandolfo, A. P. Colby, P. C. Whyte, E. C. Roper, Chas. Early, G. A. Smith, E. Bennett, A. Jackson, H. H. Stoddard, Jr., D. Hafford, for print entitled "Titon Memorial, Tulane University," and H. M. Biggin.

#### Restraining Development

Dr. Leo Backeland in Photographic Life, says that one or two teaspoonfuls of sugar added to four ounces of velox developer will so restrain its action as to enable the operator to see what he is doing and to do it without hurry, without in any way affecting the result. Glycerine has long been used for the same purpose, and is, on the whole, better and easier managed than sugar.—Exchange.

#### Our Prize Pictures

John Guibord, of 60 Court Street, Plattsburg, N. Y., is a newcomer among our champion photographers, but he has fairly won the distinction by the beautiful landscape to which the first prize is awarded this month. The second prize goes to a Cleveland photographer with the poetic name of John Howard Paine. His picture is a flashlight photograph of a living moth that had just emerged from its cocoon. It was taken on a Cramer Crown plate, developed with Rodinol, fixed with acid hypo and printed on Derko paper.

#### A New Contest

In photographic competitions Brownie prints are somewhat at a disadvantage on account of their size and the fact that it is impossible to reproduce them satisfactorily. Nevertheless some very fine photographs may be produced with Brownie cameras, particularly by one who understands their limitations. In order to encourage those of our readers who own a "Brownie," we herewith begin a contest that will be strictly confined to them. Entries will close September 1st, and prize-winners will be announced as soon thereafter as possible. First prize: A copy of Mr. Sprague's "Boy Courier of Napoleon;" second prize, a copy of Mr. Sprague's "Three Boys in the Mountains" The Photograph Editor.

A PAGE WITHOUT A PULL

(Continued from page 241.)

(Continued from page 241.)

dent of Marshall, whose appointment had been made largely through the influence of Congressman Rogers, and advised him of the situation. It was pointed out that Rogers" unpopularity among the people was due to an erroneous impression regarding a bill he had supported. Judge Fuller, of all men, could make it clear that Mr. Rogers' attitude had been justified.

#### A Good Combined Bath

Dissolve two ounces of hyposulphite of soda in sixteen ounces of water and add two grains of chloride of gold. This combined fixing and toning bath should stand at least twenty-four hours before being used, and is not in its best working condition until after several prints have been fixed and toned in it. The above quantity will tone about 50 4x5 prints or half that number of 5x7. The 4x5 prints or half that number of 5x7. The method of using the bath is simplicity itself. Sufficient for the purpose is poured into a suitable tray, and the prints, without previous washing and not more than six at a time, pushed one by one, face down, under the solution. They should then, one by one, be drawn from the bottom and laid face up on top; and the movement repeated till the desired color is reached.—Ex

#### A Simple Sensitizer

The following one solution sensitizer may be applied with a brush or tuft of cotton to almost any kind of material, and will give beautiful prints of colors, depending on its nature or the nature of the size; or the image may be toned with gold or platinum in the ordinary way:

Absolute alcohol to.......100 parts
Apply the solution with a brush, allow to
dry in the dark, which takes about 10 minutes. Expose in cohtact with the negative,
and fix by immersion in two or three baths
of water acidulated with nitric acid, and
then rinse in plain water and dry. It is
advisable, if very rich tones are required, to
dry in front of the fire or iron with a hot
flat-iron. Am. Amateur Photographer.

#### The Letter-Box

J. H. Paine: Photo-micrographs would not receive consideration in our competitions. H. M. Biggin: If plate-holder is thoroughly dried, I do not see how plate could possibly be affected. Albert Swanson: For addresses of dealers in cameras, you are respectfully referred to our advertising columns. State your case to them and they will advise you what to buy. F. E. Holman: Your "Tug of War" came duly to hand, but it is impossible to describe every individual photograph. E. C. Paul: Personally I do think that Pyro

is the best developer. The plates you mention also receive my preference and I think they are just as good as the other brands you named; films are just as convenient as plates, if handled properly. Orlo Palmer: Use 6 ounces of sulphite of soda. Try the following developer: Water 4 ounces, sulphite of sodium (saturated solution) 4 dr., Acetone 2 dr., and Pyro 10 grs. Add a few drops of a 10 per cent. bromide of potassium solution as a restrainer.

#### Various Colors on Velox

The following, especially applicable to velox, is given by W. E. Henry, in Photography, for the production of red, purple and brown tones. Prepare three solutions as follows:

A. Hydroquinone	er.
Sodium sulphite	sr.
Citric acid 25 a	
Potassium bromide 20 p	
Water to 20 c	
B. Sodium hydrate 90 p	
Water to 20	
C. Ammonium bromide120 g	
Ammonium carbonate	cr.
Water to 10	οz.
The total management of the same	

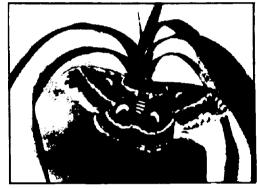

For Red Tones: Develop with A., 1 oz.; B., 1 oz.; C., 6 drachms. Allow for considerable reduction in fixing. Purple Tones: Develop with A., 1 oz.; B., 1 oz.; C., 120 minims. Brown Tones: Develop with A., 1 oz.; B., 1 oz.; C., 60 minims.

#### When Prints Turn Yellow

When Prints Turn Yellow

Some one complains that their prints on developing paper have a habit of turning yellow. Several things may be the cause. If you have been using a reliable developer purchased ready mixed, or one of the powders put out by one of the leading photo firms, and your photos turn out invariably yellow, you need to add some restrainer. The fault may be with the water you use, or from some such cause, but by adding the restrainer given below, clear prints may be assured.

Buy of a druggist one-half ounce cyanide of potassium and put them into a bittle with nine ounces water. To clear the prints, pour your developer in a tray, add about two drops of the above restrainer to an ounce of developer, stir well, then test by printing a strip of the paper from any good negative, and developing it. If the whites still do not come clear, add a few more drops of the restrainer and test again. When the whites come out pure, that batch of developer is O K as long as it lasts.—M. M. French.

SECOND PRIZE PHOTO-BY J. H. PAINE, CLEVELAND, O.

A week later a communication from Judge Fuller was sent setting forth the conditions which rendered it necessary for Congressman Rogers to aid the bill obnoxious to the people of the Tenth district. In clear simple language Indeed trict. In clear, simple language Judge Fuller marshaled the evidence, presenting facts hitherto unknown; analyzed existing and prospective conditions and made it plain that as a patriotic representative of the people, inspired by high

sentative of the people, inspired by high motives, Mr. Rogers could, conscientious ly, have pursued no other course.

The communication was reprinted in many of the newspapers, and produced a profound impression, in fact, could Judge Fuller's letter have been presented two months earlier there would have been no organized opposition to Rogers. The masses of the people were satisfied although in certain quarters the politicians were bent on sending a new marto Congress. Senator Harrington, having announced himself, his supporters declared they would fight it out on that line. The friends of Foster and Maxwell were ready to do as their chiefs desired.

After a bitter contest in Windsor county Maxwell won over Harrington in the county convention, but so much ill-feeling was engendered that the Harrington faction privately declared Maxwell would be knifed at the polls. The district convention was held in Lake City, Rogers was placed in nomination by Eden, Foster by Madison and Maxwell by Windsor. The first ballot stood: Rogers, 14; Maxwell, 16; Foster, 12; necessary to choice, 22. After six ballots without change Foster arose, when Madison was called, and in a plain, straightforward speech pointed out the friction in Windsor, the need of every vote to ensure the success of the ticket, and closed by requesting his delegates to vote for Rogers.

"Twelve votes for Rogers," called out the chairman of the Mudison delegation." Then pandemonium broke loose,

After the excitement had partially subsided Maxwell mounted a chair and moved Rogers' nomination be made unanimous. It carried with a whoop.

Paul Rollins' stock rose far above par. Although he had not appeared conspicu-After a bitter contest in Windsor coun-

This firm has supplied thousands of tents to the United States Government, as well as to large contractors, engineers and others. Their tents are made only of the less material, the acknowledged standard of quality, and now sold direct to the consumer from our factory.

While this tent is excellent for boys for use on lawns, etc.,

ously during the strenuous months just

ously during the strenuous months just passed, the political powers fully realized his skill in directing a most delicate and difficult campaign, with chances two to one against him at the outset.

At the organization of the House the following year Mr. Rogers was made chairman of the Committee on Agriculture, and Paul became clerk to the committee at a salary of \$2,000 per annum. In this capacity he found added opportunity to favor the people of the Tenth district, and the farmers literally swore by their able representative and his thoughtful, obliging cierk.

At subsequent conventions Mr. Rogers was nominated without opposition. Paul Rollins became a powerful factor in the district, and at the age of thirty practically dominated the political destinies of his party. He had enemies, to be sure, but the great mass of the people loved him for his virtues of head and heart, and the politiclans relied implicitly upon his judgment.

A certain day in February dawned bright and balmy. During the afternoon a "northwester" developed, and when the House adjourned Washington was in the grasp of a howling Dakota blizzard. Emerging from the hot chamber protected only by a light overcoat, Mr. Rogers had contracted a severe cold, which rapidly developed into pneumonia, and in four days he was dead.

After the funeral Rollins hurried back

Mr. Rogers had contracted a severe cold, which rapidly developed into pneumonia, and in four days he was dead.

After the funeral Rollins hurried back to Washington. The agricultural appropriation bill was about to be reported to the House. Congressmen may die, but the work of lawmaking goes on without interruption. Paul practically became both chairman and clerk to the committee. The intricate bill, with its hundreds of items, each of which must stand the close scrutiny of a minority eager to pick flaws and which might be amended and torn to pieces on the floor in committee of the whole, was as plain to him as a problem in addition. He sat next to the ranking member of the committee when the bill was under consideration, and, while the name "Mr. Rollins" did not appear in the Congressional Record, he, nevertheless, directed the campaign on the floor and bulwarked the acting chairman against every attack of the minority. Washington papers, the next morning, directed attention to Clerk Rollins' assistance in a highly complimentary manner.

This comment was reprinted generally by the press of the Tenth district, the Lake City Tribune subjoining the query: "Why not Paul Rollins for Representative to succeed Mr. Rogers?"

The alert city editor of the Tribune seized upon this query as a text for interviews with a score of leading citizens of the city. With the exception of two men, who, while in no way disparaging Mr. Rollins, had expressed the belief that the district should be represented by an older head, everybody was for the young man. Fred Foster, whose opinlon on political matters in the county amounted almost to law, came out squarely for Rollins, declaring that his experience made him the logical candi-

could not acquire in four years. The newspapers, not forgetting the services Paul had rendered them gratuitously, editorially endorsed the suggestion, and inside of a week, by common consent, Rollins was as good as nominated. He was nominated and elected by an over-whelming majority at a special election called to fill the vacancy, and when the House reconvened for the long session in December he took the cath as a more in December he took the oath as a mem ber of Congress.

Business was practically suspended.

Business was practically suspended, while Representatives crowded around to congratulate the young man, whom a large number well remembered as a page in the same chamber.

Congressman Rollins invited George Harrington, son of Senator Harrington, to become his private secretary, and Doorkeeper Sanderson appointed the 14-year-old son of Fred Foster a page.

Paul Rollins saw the day when the mighty Colonel Shane came to him in deep humility, with ample appologies for the great wrong he had done him as a page twelve years before.

"Don't apologize, Colonel," said Rollins; "perhaps you did not so intend it, but in having me dismissed you rendered me the greatest service of my life."

me the greatest service of my life."
The record of Paul Rollins in Congress

is worthy the study of every young man in America, but, as a distinguished au-thor has declared, "that is another story."

# The Boy Mechanic and Electrician

A Permanent Department

Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns.

Edited by Robt. G. Griswold

Dear American Boys:

swer each and every one of your many letters as soon as received. Your work and your hobbies interest me greatly, and I want you all to write me whenever you wish, telling me about your own little workshops and interests, and I will try to get an answer to you in

five-sixteenths-inch hole is drilled in the I wish it were possible for me to answer each and every one of your many etters as soon as received. Your work and I want you all to write me whenver you wish, telling me about your will try to get an answer to you in five-sixteenths-inch hole is drilled in the end, into which loose centers are fitted, such as Z. In order that these centers shall fit tightly, they are left slightly large and tapered at M so that they will drive into the hole tightly; when it is necessary to remove them, simply grasp the pulley with the left hand and give the center a twist with a wrench held in the right. One of these centers fitted with a small drill chuck will be found very useful.

own little workshops and interests, and I will try to get an answer to you in some way.

And another thing: I want you all to feel—and I am sure Mr. Sprague does, too—that this department is for you. If there is anything that you would like to know, or if you would like a description of any particular electrical or mechanical instrument or tool, write to me, and as soon as possible your request will be granted. In this way I can judge of the class of matter that you like.

Now, there may be some of you that will not be interested in electricity, so I am going to tell you how to make a small speed or wood-turning lathe; I am sure there are many of you who would like to have a small lathe, and with a little work you may.—Robert G. Griswold.

How to Build a Lathe

Will.E THIS LATHE is not a metal working machine, nor a very experimental working mac

five-eighths-inch bolt driven through the post II. The inside diameter of half-inch pipe is very nearly five-eighths of an inch. The treadle is fastened to the floor at the rear by two strap hinges, and to the driving wheel by a pitman made of hardwood.

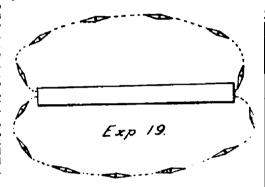

A one-inch leather belt is used to drive the spindle, and after assembling the faces of the pulleys and wheel may be made very smooth by holding a file and

made very smooth by holding a file and sandpaper against them while running. The amateur has many opportunities to exercise his individual tastes in making this lathe, as the design given is intended more as a guide to the essential features than as a perfect model. The fact that the amateur may not have many tools to work with at first has been kept in view in describing this lathe.

longer obey their original tendency to point towards the north, but will arrange themselves along the lines of force traveling from one end of the magnet to the other through the air, and in this way you can very easily trace their path. A very valuable exercise is to make a diagram on paper showing the direction of the needles in different positions. When lines are drawn through these you will have traced the path of the magnetic lines.

In Fig. 3 is given a sketch showing what such a diagram should look like. But this method can be greatly improved upon and permanent pictures made of

EXPERIMENT 20-1-Magnetic Field of a Bar

these lines of force. This is the method used by the illustrious Faraday when experimenting with magnetism.

Experimenting with magnetism.

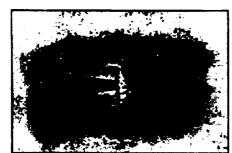

Experiment 20.—Melt a little paraffine in a shallow dish and soak several small sheets of paper in it, allowing the excess to drain off, and pin up by one corner to dry. Now lay a sheet of this prepared paper over a bar magnet, such as the needle you have already magnetized, or any other piece of steel. Place two or three teaspoonfuls of iron filings in a rag to act as a sieve, and dust the fine a rag to act as a sieve, and dust the fine particles over the paper. As they fall they will arrange themselves along the lines of force, and you will have a ple-ture something like Experiment 20-1. A very gentle tapping may assist the fil-ings in arranging themselves. Carefully lift the paper and warm slightly over a stove or lamp, when the paraffine will Experiment 20-5 shows the action bemelt and upon cooling again bind the tween a bar magnet and a horseshoe filings firmly in place as a permanent magnet, with their unlike poles together.

EXPERIMENT 20-6-Composite Field of Bar and Horseshoe Magnets with Unlike Poles op-

have a picture similar to half of Experiment 20-2, which shows how the lines new one of force act between like and unlike the old.

In Experiment 20-3 two horseshoe magnets are shown with their unlike poles close together and the lines of force to the lines of the force to the force to the force to the gap completely. But in Experiment 20-4 the position of the magnets has been reversed, their like poles being placed together. Notice how the repelling action bends the lines of force away from a straight line and

how comparatively clear the space be-

end of the bar magnet has been placed end of the bar magnet has been placed near the two ends of the horseshoe; see how the lines of force bridge across from the unlike poles, while not half an inch away the opposite pole is exerting a repelient action and making practically a clear field. The bending away of these lines is very plainly shown just above the magnet.

above the magnet.

The study of magnetism is so very in-The study of magnetism is so very interesting and there is so much to be learned that it is with regret that this lesson is brought to a close, but there are other experiments that will be given in the next lesson equally interesting and instructive. The point to be uppermost in your minds, however, is not to hurry over a lot of experiments, but to do each one well. Study over it, alter the conditions, devise new experiments for yourself, and, before taking up a new one, learn everything possible about the old.

#### Questions Answered

Will you please publish in your next paper, directions for making batteries to run an electric lamp large enough to light a room 10x9x8 feet?

E. B., Byron, Mich.

Answer.—We shall shortly describe a number of batteries in our experimental lessons, but you will find this means of lighting very expensive, as it requires at least three cells for every two volts that the lamp requires. Thus a ten-volt lamp, would require fifteen cells to light it properly.

Is not No. 18 wire a little too large for the motor described in the March number? Will you please tell me how to wind and connect a three-pole armature to put in place of the one descr.bed? Should not the armature be wound with smaller wire than the field?

R. G. M., Brantford.

R. G. M., Brantford.

Answer.—No. 18 wire is a good size for the field of this motor, but the armature may be wound with smaller wire, say No. 20 or 22. Wind each pole of the armature in the same direction and connect the inside layer of one winding with the outside layer of the next, and connect this junction with one segment of the commutator.

Please tell me the horse-power of Mr. Crowell's motor described in the March "American Boy." How many cells of battery are required to operate it? Can No. 21 magnet wire be used in place of No. 18? In winding the secondary coil, should it be wound in the same direction as the primary?

L. P., Carmi, Ill.

Answer.—It would be a difficult matter to estimate the power of this motor, but it is not very much and would be a very small fraction of a horse-power. Two cells of any good battery should be sufficient. Yes, it makes little difference in what direction the secondary winding is done.

What material, besides tin, could be used in making the field pieces of the motor described in the March number? Could the armature be made of iron or steel?

D. P. F., Oswego, N. Y.

Answer.—The tin mentioned in that article is in reality nothing more than sheet iron coated with a thin coating of tin, and the only other thing that could be used would be the plain sheet iron, as a laminated field of this description is almost perfect. They could also be made of east tron, but would not be seen is almost perfect. They could also be made of cast iron, but would not be so good. You can use cast iron for the armature, but it will not equal the laminated style, and steel is rarely soft enough to demagnetize rapidly, frequently becoming permanently magnetized. ly becoming permanently magnetized.

Will you please tell me how to connect up the condensers in the wireless telegraph ap-paratus? F. H., Detroit, Mich. paratus?

of the bar magnet to the other in well defined paths.

Experiment 20-6 shows the field created when the position of the bar magnet in 20-5 is changed so that the like poles are nearest. This results in the bending away of the lines from each pole of the bar magnet and leaves the field of the horseshoe magnet practically undisturbed.

Experiment 20-7 shows with remarkable clearness how the like poles repel and the unlike attract. In this case the

Where can I buy a book telling how to make coherers that will work for more than a mile? How can one connect three instruments on one line, and can one instrument be switched off the circuit? Can a twenty-ohm sounder be used with the wireless apparatus? Can you tell me how to wind and connect the wires on a three-pole armature to make a dynamo out of it, and also how to wind it for a motor? I have all the parts but cannot wind the armature, and what shall I do with the field maknet wires? Why will a hand-power dynamo not operate a twenty-ohm sounder? Of course I do not expect to use this dynamo for power, but I cannot see why it will not operate this instrument.

J. M. M., Deepwater, Mo.

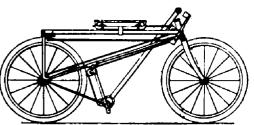

Answer.—There are several books

Answer.—There are several books treating of wireless telegraphy and the instruments, but you would perhaps get as much authentic information from "Wireless Telegraphy," by Charles Henry Sewail, as any other. None of the books that we know of go into detailed information regarding the construction of the various coherers. You may have as many instruments for use in a wireless system as you choose, as they are not connected with one another, but all operate across the intervening space. This difficulty presents itself to the amateur, however. If all the instruments are alike, and have about the same sending power, a message sent out by one instrument will be intercepted by every other instrument, and no secret messages could be sent except in clipher. Two messages being sent at one time would hopelessly confuse the receiver. This difficulty is obviated in practical systems by a process known as "tuning," in which the instruments are tuned to receive vibrations of certain lengths, and let all others pass. If the instruments are once properly tuned, then a message may be sent to any particular instrument by another by setting a certain attachment at a predetermined position. This results in waves of a particular length being sent out and may be received by only such instruments as are in tune. This is difficult for the amateur to accomplish, and was not intended to be used in the set described. This set was designed only for amateur construction and for use on distances of about one mile, over which distance it should work satisfactorily. Many of the readers are experimenting with longer distances, but there are a number of difficulties to be met with in long distance transmission. The twenty-ohm sounder may be used very nicely. There is no difference between the windings of a three-pole armature for use as either a dynamo or motor, but armatures of this type are very inefficient. The field magnet wires are so connected with the brushes that the current will flow through the armature winding, and out of the other b Answer.—There are several books treating of wireless telegraphy and the sounder will require very little current. It may be that the machine is short-circuited.

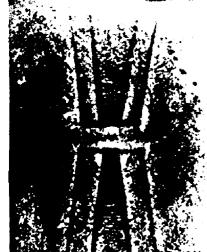

#### Bicycle With Rowing Attachment

Nearly every college gymnasium has a training machine on which rowing can be practiced, but it would seem that an apparatus of this kind which would enable, the user to take his exercise on a country road or compete with another similarly mounted oarsman in a rowing match on a suitable track, would have some atriking advantages over stationary rowing machines.

The rowing bicycle shown is the invention

of Mr. S. L. Batchelor of Grafton, Mass. Inof Mr. S. L. Batchelor of Grafton, Mass. Instead of having handle bars, the steering head carries foot rests and instead of a saddle a sliding seat, such as is used in racing shells, is used. The machine is driven by pulling on handles of long levers which are very much like the oars of a boat. The levers are connected to the driving shaft by ropes and pulleys. It would seem that not only the stroke with the oars might be learned with this apparatus, but the matter of balancing a shell as well.

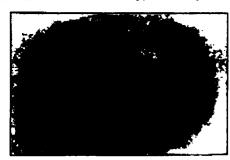

EXPERIMENT 20-2

This picture, as you can readily see,

EXPERIMENT 20-3-Magnetic Field of two Horseshoe Magnets 90° apart. (Unlike) Poles op-

bears out the correctness of the diagram in Fig. 3. Of course, the particles di-rectly above the poles cannot be pre-served in their beauty, as they stand

in tufts almost perpendicular to the

surface of the paper.

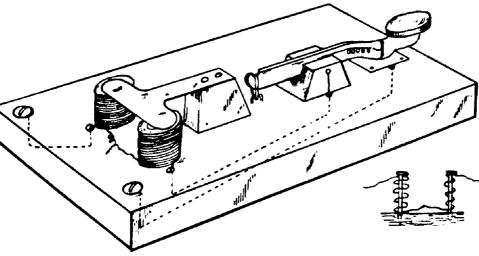

Now lay a sheet of the prepared paper over a horseshoe magnet and sift filings over it as before, and you will

EXPERIMENT 20-5-Composite Field of Bar and Horseshoe Magnets with Like Poles opposed.

These make excellent negatives The lines of force thread from the ends from which photographic prints may be of the bar magnet to the other in well taken, as well as blueprints.

# A Simple Telegraph Instrument

Note: This instrument was designed and constructed by a boy of twelve years, who, in his eagerness to learn by experiment, makes many just such electrical instruments.— Editor.

Two one-inch iron wire nails, with flat heads are wound with three or four layers of fine insulated magnet wire (No. 25), similar to that used on electric bells, leaving about one-fourth inch of the point bare, so that they may be driven into a wooden block three inches long, two inches wide and one-half an inch thick.

inch thick.

About one inch back of these coils is fastened a small block of wood, the top of which is just even with the top of the nails. To this block is fastened a piece of tin (sheet iron coated with tin) shaped like the letter 'T,' the free end being bent up slightly so as to clear the top of the nails by about one-thirty-second of an inch. The wires on the nails are so connected that the current of electricity will pass around them in opposite directions as shown in the sketch. tions, as shown in the sketch.

The key lever is cut from a cigar box The key lever is cut from a cigar box lid to the shape illustrated, and a small hole (a) is either drilled or burnt through with a hot wire. A piece of bare copper wire is then run along the bottom of the key, as shown by the dotted lines. The lever is then mounted in a slotted block, through which passes a pin or small nail and upon which the lever turns. A rubber band passing over the rear end and under a matting tack acts as a spring. A small piece of tin is tacked to the base, directly beneath the knob, and when the lever is pressed down makes contact with the copper down makes contact with the copper

One end of the magnet wire is connected with a binding post and the other with the bare copper wire on the key. The piece of tin is connected with the other binding post. When a cell of battery is connected between the binding posts, each depression of the key results in a sharp click in the sounder, caused by the tin being forcibly drawn down until it strikes the nails.

#### JAPANESE WAR NEWS

(Continued from page 253.)

tion is beautiful rather than noisy. So when a telegram comes, often the first suggestion of news, before the gogals can be printed, is the unfurling of big sun banners over the principal business houses, and the street cars, coming in long procession, bear the same bright flag. As soon as the news gets round, burbs, are lined with war flags and lanterns, the bright colors of the latter being a very pretty part of the decoration by day as well as by night. When dark comes these are all alight, fes-tooned over the streets and swung in front of every house. Down in the city the bank and business buildings are outthe bank and business buildings are outlined in electric and gas lights, as we have seen exposition buildings, and the street car companies run illuminated cars, covered with light bulbs in war designs, that light up all the streets and the sky above. An afternoon program is planned in one of the downtown parks, and 50,000 people are there. And through the afternoon and evening they good up the afternoon and evening they send up fireworks—the bombs carrying great pafireworks—the bombs carrying great paper images in the daytime that expand and float away over the city, and at night, star mines and parachutes that drift away, carrying balls of colored fire. The last of these that I saw, at the Port Arthur celebration, was a star mine, that exploding high in the sky, threw out a great field of white stars, and in the center a cluster of crimson ones in a circle—and there was the flag, the Sun Banner, flaming in the heavens above. And I joined 10,000 others in a long "Banzai" to it. "Banzai," may it float a thousand years!"

## An Analysis of Sprint Running & Starting

With a few points gathered from great runners, great trainers, and personal experience, by J. S. Westney, Instructor, St. Luke's School, Wayne, Pa.

seems about as simple an accomplishment for any able-bodied old line professionals young man as crawling is to a good man in his day, year old baby, yet there is hardly an outdoor sport with more tricks

an outdoor sport with more tricks and "knacks."

At Selby, in Yorkshire, England, last summer I ran across an old-time English professional half-mile champion who was "Piper" Donovan's manager when that wonderful professional sprinter was showing his heels to the English professional sprinter was was showing his heels to the English cracks at the world-renowned Sheffield Handicaps; and by the former I was told that he and two other expert watch-holders on several occasions timed "Piper" Donovan in 93-5 seconds for the hundred yards, and that they would be willing to take affidavit to that effect. When it is recalled that sprinters at that time did not start from a "crouch," but stood with hands well off the ground, Donovan's performance becomes all the more remarkable.

van's performance becomes all the more remarkable.

While at Pennsylvania as track coach the wizard Mike Murphy, now at Yale, used to say: "When I was learning to run I used to get away from the starting position fifty times a day. I would say to myself: "Get on your marks." "Get set." "Go," and at "Go" I would jump away as though I had my worst rival to beat." And "Go" I would jump away as though I had my worst rival to beat." And the old-timers will tell you that there was a day when Mike Murphy would take some beating at lifty yards.

While, of course, starting fifty times a day would soon "tie up" the big muscle in the back of one's log between thigh and knee, vet

the big muscle in the back of one's leg between thigh and knee, yet it is undoubtedly true that constant repetition of the starting motions, with entire concentration of the mind on the one idea of instantaneous action at, or even with, the pistol crack, is necessary to make the process habitual and second nature.

Properly executed, the "crouched" start is a thing of beauty, but there are only a few who ever really "get it down." In attaining that end perhaps the history of the sprint start may be of sid, there was:

1. The standing start, in which the runner simply stood on his marks in a leaning attitude with both hands clear

of the ground.
2. The start in which the runner placed one hand on the track beside him, steadying himself thereby, and the other arm pointing straight up in the air—at the pistol crack the upright arm was swung downward and forward, which motion, it was supposed, would add impetus to the

3. Then came the crouch start commonly in use now, in which both hands
are placed on the track slightly in advance of the runner's most advanced
foot, the initial spring being entirely;
from the feet, and the hands being placed
on the track merely to steady the runner

from the feet, and the hands being placed on the track merely to steady the runner until the pistol crack.

4. And finally there is the "Duffy All Fours Spring," in which both hands and feet are used to give the initial spring and push. Anyone who observes our little champion closely when he is "set" will notice that his shoulders are advanced very much farther than are his hands, which latter are placed on the starting line as is his more advanced foot, and also it will be noticed that his fingers are directed straight forward, making them in effect like so many more toes the starting spring or push from which will throw the body forward and upward, and in conjunction with the spring from the feet, bring the runner into his stride in short order.

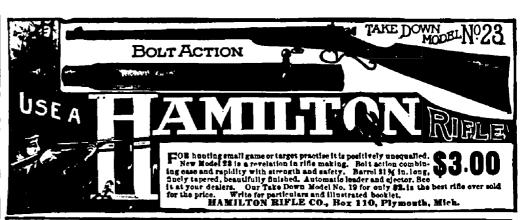

Thus, however paradoxical it may seem, improving evolution in the sprint

Thus, however paradoxical it may seem, improving evolution in the sprint start has, for one purpose at least, bettered man by sending him back with the great natural runners, the quadrupeds. It is safe to say that the sprinters of the next generation will spring from all fours. next generation will spring from all fours

Another little point which it is very hard to drill into a young runner is that at the very start the opposite hand and foot must be advanced at the same time. If instead of doing so the right hand and If instead of doing so the right hand and right foot, or left hand and left foot (as the case may be), are swung forward together, it will be found necessary to lose a swing of the arms, or cut a stride in halves, in order to readjust the motion of the hands and feet so that the opposite hand and foot advance together.

Of course if a man advanced the same hand and foot together he would be a "pacer" or "racker" in so far as it is possible for a biped to be so; and indeed there is a very strong tradition amongst track runners to the effect that the won-

there is a very strong tradition amongst track runners to the effect that the wonderful speed of the old professionals, like Harry Hutchins, was obtained by a modified form of the pacer's gait. They were supposed to run about as follows: The arms, instead of moving forward and back alternately, were moved together, and instead of moving from front to back were swung together from side to side. Furthermore, when the right foot was advanced both arms were swung hard to the left, and vice versa, the arms thereadvanced both arms were swung hard to the left, and vice versa, the arms there-fore swung directly across in front of the runner all the time. If you get up and perform the motions just described you will find that in a modified way you are "pacing." And there really are sev-eral advantages derived from running in that way if one can acquire the knack of it: in the first place, as a straight line is that way if one can acquire the knack of it; in the first place, as a straight line is the shortest distance between two points, the nearer a runner's footprints come to making a straight line, the sooner, other things being equal, will he get to the end of his journey. Now unquestionably running as above described throws the feet more nearly into a straight line, because when both arms are thrown to the side opposite the foot at that instant advancing, the body is turned thereby slightly in the direction in which the arms are thrown, and the advancing leg. slightly in the direction in which the arms are thrown, and the advancing legbeing attached to the body, must necessarily get a slight twist inward, too. That little saving in each stride, multiplied by the forty odd strides taken in running a hundred yards, gives a margin large enough to win many a race. When the arms are used as just outlined above, the accompanying leg motion is most the arms are used as just outlined above, the accompanying leg motion is most largely below the knee, so that the runners, great trainers, and personal specience. by J. S. Westney, Intructor, St. Luke's School, Wayne, Pa. To the uninitiated, sprint running seems about as simple an accomposeems about as simple an accomposite for any able-bodied line professionals, and a rattling specific professionals, and a rattling specific professionals.

Another little knack which is well Another little knack which is well worth while is when about five yards from the finish of a sprint race to throw the body forward and downward until it is almost parallel with the track; that can be best accomplished by projecting both arms hard obliquely in front of you, palms downward, and teaning the body far forward at the same time. I have time and again won races by that kink, and often have thrown myself so far forward that I came within an ace of pitching headlong to the track. Besides gaining headlong to the track. Besides gain-ing perhaps over a foot by the foregoing "lean." It will be found valuable in that rlean," it will be found valuable in that it corrects a tendency, common even amongst old runners, to get the body too erect and to throw the head back, or, in cinder path slang, to "climb the golden stairs" when making the last effort near the tape. The "lean," when practiced enough to become habitual, will be found to entirely correct that speed slackening tendency and to actually add to one's speed over the last few yards.

Still another point to be kept in mind is that a short sprint should be run high on the toes, with the sole of the foot bent down as nearly parallel to the leg

bent down as nearly parallel to the leg above the ankle as possible. One reason for so doing is that the leg is thereby above the ankle as possible. One reason for so doing is that the leg is thereby lengthened a considerable fraction of the distance between heel and toe, and consequently the stride is lengthened in proportion, and another reason is that all of a sprinter's "bound" (as Arthur Duffy calls it) or "spring" is derived from forward of the bail of the foot. It is pretty nearly true that the shorter the tace the higher one should run on one's toes, and vice versa. Thus it would be very hard to sustain the effort of running as high as possible on the toes for the full length of a "220," so it is usually run about medium high up to the last thirty yards or so, and then finished out on the very tips of the toes and with the hody inclined well forward.

In conclusion just a word about those indispensable aids to the sprinter, the arms and chest, for them the ordinary chest-weight work is best. One should use weights that are not too heavy, as a sprinter's muscles must not be tied up by hard work, but should be strong.

use weights that are not too heavy, as a sprinter's muscles must not be tied up by hard work, but should be strong, lithe, and quick to act. Probably the best exercise is to stand with the back to the weights and then pull the ropes sharply in front of you, imitating as much as possible the motions which the arms make in running. arms make in running.

arms make in running.

And above all, when you go out to train take your brains with you, study yourself and your physique, cut out your bad habits, learn your defects and your needs, notice well the "form" or "style" of successful runners, adopt their good points in so far as they will benefit you, and while we cannot all be champions it is safe to say that thoughtful and persistent work will before long land you well within the prizes.

#### Boys' Books Reviewed

SMALL ACCUMULATORS, by Percival Marshall, A. I. Mech. E. This little work gives to the amateur and student of electricity full information on the subject of storage or secondary batteries; how they are made and how used. It is very fully illustrated with drawings which greatly ald the reader in getting a practical and trustworthy knowledge of this important subject. At the end there are given a number of useful recipes as well as a glossary of technical terms and index of useful books. 82 pages. Cloth bound. Price 50 cents. Spon & Chamberlain.

"WATER WINGS" MAKE SWIMMING EASY Any boy or girl can learn to swim in one trial by using a pair of Water Wings. Our picture illustrates how they are worn. Can be carried in the pocket—essily inflated and will float from fifty to two hundred and fifty pounds.

Children who have Water Wings can go in the water with perfect safety. We will send a pair, postage prepaid, to any address on receipt of 25c PARDRIDGE & BLACKWELL 2 to 12 Michigan Ave., Detroit, Mich.

#### Start Bank Account

We are paying \$5.00 per week in cash for smart, hustl. \$5.00 per week in cash girls to introduce our goods. No money required. No watches or cheap jewelry offered, but real cash paid at the end of each week. Send stamp for particulars.

EDEMOUR SHEAR CO., Worcester, Mass.

#### NOW IS THE TIME TO START A LIBRARY

with the following books:
The Study of Electricity and its Laws for Beginners;
Dry Batteries and How to Make Them; Electric
Bells, Annunciators and Alarms; Electrical Circuits and Diagrams; Small Steam Turbines; Small
Dynamos and How to Make Them.
Send for our list of 41 titles.

PRACTICAL ELECTRICS. This is well named a Universal Handy-Book of Every-day Electrical Matters, as it treats of such subjects as connections, alarms, batteries, bells, carbons, induction, intensity and resistance coils, dynamo-electric machines, firerisks, measuring, microphones, motors, phonographs, photophones, storage and telephones. To the scientific amateur in electricity this book will be found most valuable. There are hundreds of illustrations, 135 pages. Cloth bound. Price 75 cents. Spon & Chamberlain. 135 pages. Cloth bo Spon & Chamberlain.

Spon & Chamberlain.

IOEL: A BOY OF GALILEE, by Annie Fellows Johnston. This is a new illustrated edition of a book which had well-merited success when it first appeared some ten years ago. The story is primarily about a boy who lived among the shepherds and fisher folk of Galilee in the time of Christ; but the author's purpose seems to be, and it is well carried out, to present to young readers a picture of the Jewish people of Palestine, their customs and mode of living, their obedience to the Mosaic law and their attitude towards and mode of living. The living the Mosaic law and their attitude towards and their attitude towards and their attitude towards and mode of living. The living the Mosaic law and their attitude towards and mode of living. The living the

RIC GAS LIGHTING, by N. H. schneider. In this age of hurry and bustle, even the use of match or taper ELECTRIC bustle, even the use of match or taper in lighting a gas jet is slow and, of course, there is an element of danger from fire in their use. This book tells how these may be eliminated by the use of a simple and reliable electrical apparatus, which can be installed by anyone of ordinary mechanical ablity. The chapters following the Introductory Remarks, are headed: ity. The chapters following the Introductory Remarks, are headed: Multiple Gas Lighting: Connections and Wiring: Primary Coils and Safety Devices: Lighting of Large Buildings: How to Select Batteries for Gas Lighting. The 75 illustrations will greatly aid the reader in understanding the text, and there is a valuable index at the end of the took. 101 pages. Cloth hound. Price 50 cents. Spon & Chamberlain.

HOW TO INSTALL ELECTRIC BELLS, ANNUNCIATORS AND ALARMS, by N. H. Schneider. Here is a little work which contains a mass of useful information to the boy whose hobby is doing things. By its aid he can save his household quite a lot of useless and annoying running about. It tells how any boy of a practical turn of mind can install the different kinds of electric hells, fire alarms, window and door springs, annunciators and burglar slarms in his home. There are 59 illustrations. 63 pages. Paper cover. Price 25 cents. Spon & Chamberlain.

Spon & Chamberlain.

INDUCTION COILS: How to Make. Use and Repair Them, by N. H. Schneider. This is the second edition, revised and greatly enlarged, of a book of much interest to those who work with electrical apparatus and machinery. The chapter headings are: Coil Construction: Contact Breakers: Insulations and Cements; Condensers: Experiments; Spectrum Analysis: Currents in Vacuo; Rotating Effects: Gas Lighting: Batteries for Coils; Storage or Secondary Cell; Tesla and Hertz Effects; The "Roentgen" Rays and Radiography; Wireless Telegraphy. It will thus be noted that the book is up-to-date in electrical science. There is included a copious index and many illustrations. 269 pages. Cloth bound. Price \$1.00. Spon & Chamberlain.

# How to Play the Mandolin

TAUGHT IN EIGHT LESSONS > By LILLIAN STANDIFORD

#### FIFTH LESSON.

We will now learn to trill. Make the strokes with your pick as fast as you can, backward and forward, on the open strings, practice on the open strings first. until you get a nice, even trill. In making the trill do not count the strokes, but make the pick go as fast as you can from the wrist.

You count three to a measure, in this little waltz; two to the half note and one to a quarter note. Count two evenly for the half note, trilling as fast as you can, Then pick the quarter note. You will notice in the while counting the two. fifteenth measure a tie. Whenever a note is tied you never strike the second one, 73. but hold the first one down until you get through counting for the second note-in this case you trill the note D for five counts, the "rest" answering for the sixth. Practice this waltz until you can play it fast, making a nice, even trill on every half note, and picking every quarter note. Count one for each dot following a half note.

# The GREATEST Little Gun in the World

For a limited time we offer to the sport loving boys of America this splendid rifle, regular factory price of which is \$3.50. You can't afford to miss this opportunity of securing a fine gun for so little money. It is a perfect shooter—of great accuracy and has the fine hang and balance and ease of shooting of more expensive guns; as fe and reliable.

It is the only take-down rifle on the market for anything near the price. Takes long or short rim fre cartridges and weighs only \$1-2 pounds.

It is a fine target gun and will run you up big scores—just the thing for small game, squirrels, rabbits, etc.

rabbits, etc.

Vacation is coming and the boy with this little gun will have lots of sport wherever he goes. You had better write today.

# A Food to Work On

Work! Work!! Work!!!

Lots of energy is needed to keep up the pace. In the struggle, the man with the strong body and clear brain wins out every time.

The man of to-day needs something more than mere food; he needs a food that makes energy—a food to work on.

Although some people may not realize it, yet it is a fact, proved and established beyond doubt, that soda crackers—and this means **Uneeda Biscuit**—are richer in muscle and fat-making elements and have a much higher per cent. of tissue-building properties than any other article of food made from flour.

That this is becoming known more and more every day is attested by the sale of nearly 400,000,000 packages of **Uneeda Biscuit**, the finest soda cracker ever baked. An energy-giving food of surpassing value—sold in a package which brings it to you with all the original flavor and nutriment perfectly preserved. *Truly the food to work on*.

Whoever you are—whatever you are—wherever you work—Uneeda Biscuit.

CHAPTER XIX.

A CAPTAIN TO BE HATED.

UWARROW, having taken a course in mechanics and having spent some weeks in the American shipyard that had turned out this very boat, was now to be her captain. Thus reasoned Dunster Brownleigh. Of course it was so, and how stupid he had been not to have considered this probability long ago. Suwarrow then was the commander whom, to save his own life. he had sworn to obey. How he hated the thought! The idea of obeying that great, supercilious chump! The "holy terror" who once had been so neatly put out of the game by little Taki! It was disgusting; but of course the dose had to be swallowed with such grace as he could muster. And Taki must be warned at once. What a lucky thing that he was on board!

"Oh Sing-Hi! Topside come, klick, klick!"

In a moment Takahaki, who had been directing the labors of a gang of machinery polishers, stood at the foot of the conning-tower ladder with submissive aspect and attentive ear.

'Taki," said the other, almost whispering; "the LuLu giant is outside and coming to take command. Lie low and look out he don't discover you.

That Rus-si-an!" exclaimed Takahaki, though without raising his voice, while his narrow eyes lighted with a great joy. am I most glad." "And no ru-als! Now, Dun Brown

"Yes, but there are rules. I've sworn to obey tho commander of this boat, and if Suwarrow occupies that position, don't you see-

Very well do I see many thing, Dun Brown, and most of all am I see that any more we may not know each other. I am servant, Sing-Hi very stupid, not any English speaking; while you are master, very cross, very tired of stupid servant. Oh, it will be fine, this game for beating that Rus-si-an.

At this point, warned by outside voices close at hand, Takahaki darted back to the engine room where, a moment later, further disguised by a broad streak of greasy grime across his face, he was vigorously polishing machinery as though that were the only thing in life worth doing.

At the same time Dunster raised his head above the conning tower apparently just then aware of the presence of the visitors who already were climbing aboard. With Suwarrow was Commander Zemaloffsky, and as they gained the deck the former staring at the young American, asked of the other officer:

"Is this the engineer?"

"Yes. Allow me to present-

"Never mind an introduction," interrupted Suwarrow. "Already have I met him, and I know him all that is necessary. Let us proceed at once with our inspection of his work."

Dunster's face was in a blaze, and bitter words leaped to his tongue's end; but, with a prudence that would greatly have surprised his more intimate friends, and by a desperate effort, he choked them back and led the way below in silence.

In the handling room Suwarrow made a critical examination of everything within sight and uttered dissatisfied comments in a low tone to his companion; but he only addressed Dunster to ask occasional questions concerning mechanical details. He gave one contemptous glance at the half dozen of Chinese helpers who were at work on the engine, and then paid no further attention to them. Finally he said, so that all might hear:

"Having been notified that this boat was in complete readiness not only for launching but for service, I am amazed to discover many defects in her equipment that must be remedied before she will be fit even for a trial. The auxiliary motor for instance, is so crudely assembled, that I doubt if it will run at all. If it should I will guarantee that it would burn out within five minutes. Therefore it must be taken down and reinstalled according to plans that I will furnish. I find fault with the placing of the storage batteries, with the arrangement of the air compressors, and-

"Excuse me," interrupted Dunster; "but before listening to further criticism of work done in absolute accordance with the builder's plans, I would like to know by what authority this gentleman speaks?

By the authority of the commander whom you are sworn to obey under penalty of being shot as a traitor and a spy," answered Suwarrow insolently.

Dunster turned an inquiring glance towards M.

KIRK MUNROF:

Copyright, 1904, by Harper & Brothers.

Zemaloffsky, who said: "I take pleasure in confirming Lieutenant Suwarrow's statement, and in giving official notification that on account of his especial knowledge of submarine torpedo boats, acquired in the United States of America, he has been appointed to the command of this one with authority to make any changes in her equipment that his experience may suggest.

"Since we are on this subject," remarked Suwarrow, "I will add for Mr. Brownleigh's benefit that it is unfortunate both for his reputation as a submarine expert and as a gentleman that the work done by him on honor is so open to criticism."

"Do you mean to insinuate, sir-," began Dunston

furiously.

"Nothing," broke in Suwarrow, "except that if your mistakes have been made through ignorance, as I trust is the case, it is a pity that you could not have had the advice of a certain Japanese recently deceased, who as I have been told was your room-mate at Annapolis, and who was the best posted man in the academy on the subject of submarines. Even I obtained several valuable hints from him, though of course at the time he was not conscious of having let them escape him."

"Why do you speak of him as deceased?" demanded Dunster.

Because I had the pleasure of putting a fatal bullet through him during a little naval skirmish at Port Arthur, early in the present war.'

"You killed him?"

"Certainly. He was standing on a ledge of rock and as I fired he fell backward into the sea."

"I trust you had a legitimate excuse for the act." "I had the excuse of war, sir; a game that justifies any measure against an enemy. Moreover he would have attempted to shoot me had not his own pistol been rendered useless by the water from which ho had just crawled."

"Then he was helpless, and at your mercy?"

"Oh, no," grinned the Russian, "he was provided with a full assortment of ju-jitsu tricks, which doubtless he would have used had I given him the chance. But, sir, we will waste no more time in discussing those contemptible Japanese, all of whom will soon be driven into the sea. Therefore you may at once turn to and put this craft into condition to do well her part in the good work."

"She already is in condition for service according

to the best of my knowledge and ability." 'Then you have much to learn that I shall teach

you, and to begin with you may take down that auxiliary preparatory to properly re-assembling it." Having delivered this order the new commander.

together with his brother officer, took their departure, leaving behind them a very angry and much perturbed American. Also they left behind them a young Japanese only just now enlightened as to who had ordered the handful of drenched and exhausted survivors of the shattered torpedo boat No. 999 to be fired upon after they had surrendered.

That affair took place at early dawn after the desperate night attack of two Japanese torpedo boats against the Russian battleship Retvizan in Port Arthur harbor. One boat had been sunk with all on board while the other, vitally wounded, had been driven to the beach, there to be torn to splinters by

a tornado of Russian shot. A handful of wretched survivors were discovered by a landing party sent from one of the Russian ships to examine the wreck. Utterly incapable of defense, the Japanese offered to surrender; but they were laughed to scorn, and shot down where they stood. At the first volley their young commander flung himself backward into the sea, preferring to die thus rather than give his hated enemies the satisfaction of killing him.

Encountering a torpedo that had floated from the wreck, he succeeded in so lashing himself to it that he was supported in the water with only his head above the surface. In this way he drifted for hours with the outgoing tide until finally, exhausted to the point of unconsciousness, he was picked up by one of Admiral Togo's scout boats. Skillfully nursed back to life, Midshipman Takahaki Matsu, sole survivor of that desperately brilliant attack, was detached on sick leave and sent to Japan to recover from his tremendous experience. Thus he was enabled to visit his home in Hakodate for the first time since leaving it as a schoolboy about to try for the glittering prize offered by the Tokio examinations.

It readily can be believed that Takahaki's reception in his native city was the most spontaneous outburst of loving pride ever witnessed in that far northern metropolis. Even while the ovation was in progress and the citizens of Hakodate were showering honors on their hero, he received information that he had been promoted to the command of a submarine torpedo boat that was on its way across the Pacific from America. A few days later word was flashed to him of the capture of the freighter Cochise having on board that very boat, together with orders to proceed with all haste to the vicinity of Vladivostok where he would be expected to destroy the stolen craft before it could be made serviceable by the Russians.

All this had been communicated by Takahaki to his friend Dun Brown a few words at a time, during their infrequent opportunities for private intercourse. Always the Japanese middy, now masquerading in the humble guise of a servant, regretted his useless proffer of surrender when wrecked in the harbor of Port Arthur

"For Nippon man to offer that surrender is greatest shame!" he would declare bitterly. "But for sake of those poor fellow most nearly drown without chance to make any fight, I would have die before I hold up my hand. And those Rus-si-ans! They make only laugh. Then they shoot and my poor man fall dead, every one. I tell you, Dun Brown, when I am remember those thing I think almost I go crazy with madness, but always I hope that sometime I will know that officer who order shoot, and same minute fire pistol at me. If I know his name then may I find him, and never any more will he order shoot surrendered man."

Whenever he spoke of that tragic incident Takakahi's eyes would narrow to merest slits, and his face would blacken with rage. Therefore, on the evening after Suwarrow had declared his connection with that Port Arthur affair, Dunster Brownleigh awaited with some anxiety the appearance of Sing-Hi who was due with his supper. He expected a violent outburst; but when his friend entered the room it was with a countenance of such smiling tranquility as aroused his curiosity.

"You seem pleased as pie, Taki. What has gone good with you?" he asked.

"Yes, Dun Brown, I now am very happy. I am know that man. Pretty quick we will go down together in that submarine. If he has fix it the way I tell him long time ago, then never any more will it come up. It will not be happy for him how he will die; but for me will it be very pleasant."

"And how about me?" asked Dunster drily.
"You, Dun Brown? You will not be there. Oh, no! Never must you go down in that submarine at

same time with that LuLu man." "But that is just what I mean to do. Taki."

#### CHAPTER XX.

#### THE NEW COMMANDER.

The internal mechanism of a submarine boat is about as delicate as that of a watch and infinitely more complicated. Also as the submarine is a very new thing, still in process of development, its machinery is constantly changing and becoming more

(Continued on page 266.)

# Archie Comstock's Celebration

By MARGARET HUGHES

stock told his friend, Willis Stapleton, on their way to school one morning after the summer

"The country ain't any place to spend Fourth'July, Billy. In the city, you're 'most always 'roused by the bombs of the feller that beat you gettin' up, an', by the time you're out on the street, there's a big racket that lasts all day and pretty near all night. My! ain't the air smelly of powder! An' next mornin' the town looks like 's if a cyclone'd struck a paper

"Well, up on the farm where we boarded, there wasn't a sound at daybreak 'cept the screechin' of an old peacock! I laid in bed a while, too disgusted to move, an' then I kicked my brother, Bob, an' we talked it over, an' got up a scheme to let the landlady an' the other boarders (there was a lot of 'em) know that Fourth'July had come.

"Bob stole into mother's room, an' got my sister Belle awake—Belle's got a screech that's lots worse'n a peacock's; it makes your back get goosey an' shiver. We all got on our hobnatled shoes, an' collected the tin washbasins an' a dipper an' some sticks from our rooms.

"There was a big, long hall runnin' through the middle of the house, with the staircase at the end, an' our rooms were at the head of the stairs.

"Nobody was awake 'cept us in the whole house when we got out on the landin', an' started down the stairs, lickety-split, Belle a-screechin', Bob a-hollerin,' an' me a-whoopin', an' all of us a-bangin' like all possessed on the tin basins with the dipper an' the sticks. You never heard such a noise in your life. The boarders began screamin', an' runnin' into the hallway; only some just poked their heads out an' sassed. The dogs took up the racket an' howled an' barked somethin' fearful.

"We reached the garden, an' Charlie and Lennie Wiggins, two fellers from the military school, caught on, an' came clatterin' after us, with their guns, an' we fired some salutes; the landlady didn't allow any shootin' 'round the house, neither. I tell you, Billy, between us five, an' the peacock, an' the dogs, an' the guns, there wasn't no need to ring the gettin'-up bell, and there wasn't anybody at Wild Lake Farm that didn't know 'twas Fourth' July.

"Mother scolded when we went in to get ready for breakfast—said she was sorry we had to advatise that she was raisin' three wild Injuns-but the corners of her mouth was turned up, an' I knew she wasn't near as mad as she thought she ought to be.

"Black looks at breakfast? Billy, you oughter seen 'em! One lady jawed all through, but mother said afterwards that she was an old maid, anyway. It's a mighty good thing, Billy, if all old maids are such cross-patches, that they haven't any children.

"But some of the boarders just laffed. only the bald-headed judge-he was furyous, an' kept grumblin' 'bout 'desercation,' an' the 'law forbiddin' such barb'rism. Bimeby, mother got pretty red, an' said how he must 've sworn to hold up the Cons'tution; an' I bet he did, too,-he always looked ready to swear at an'thing.

"Then the landlady—oh, gee! But pa was sendin' pretty big checks up there ev'ry week, so she didn't keep it up-but she remembered 'twas Fourth ' July all right, an' gave us ice cream for dinner. Even punk, boardin'-house ice cream tastes good in the country.

"It got terrible hot after dinner (we used to have dinner at 12 o'clock at the farm), an' we begged mother to let us go swimmin in the lake. Did I tell you there was

a lovely, big lake up there, where we used to go boatin'? But she was afraid we'd get drowned. 'Course, your mother oughten'd be blamed for bein' 'fraid. She wants you to have a good time, all right, but she's never been a boy, and she can't understand that a feller'd rather be doin' things than chasin'

'round the garden with a butterfly net! There was a shallow creek bout half a mile away, where all of us used to go swimmin' on afternoons when mother wouldn't rather sit in the grape arbor tellin' the other ladies how long a feller's curls were when he was a baby, so we went down there an' had a glorious water battle-played Dewey at Manila. Some of the fellers and kids had to be Spaniards, an' the rest of us were 'Mericans, an' ev'ry time a Spaniard got soaked in the face, he had to duck under an' then come up in another place an' be another ship. Wasn't much water left in the creek that day! But say, Billy, it was only 5 o'clock when we got home, an' we'd been waitin' since mornin' for night to come so's to send off our fireworks. Gee! we had a big box, bigger'n we'd had if we was home. Pa sent 'em up to us, an' he just natchully felt he had to send a bigger box than any other feller's dad'd send. He sent candy an' crisps, too; but they got et up the day they came.

"It would've been pretty slow waitin' from supper till dark if Jung, the Chinese cook, didn't discover a snake in the garden. Just a little old gopher, Billy, but you'd oughter seen the fuss he made, runnin' 'round there a-yellin' an' a-squealin', lookin' for somebody an' somethin' to kill it! All the ladies got excited, too, an' went runnin' ev'ry way, with their skirts held up. The judge said so many garters would frighten the gopher, an' all the ladies was

→HIS IS the story that 10-year-old Archie Com- furyous, but he was just scarin' them—1 never seen a garter snake in the garden. Anyway, Billy, when Jung an' the hired man came to kill that gopher snake, there wasn't a sight of him anywhere, and nobody could tell where he'd gone to, either! They won't hurt, you know, Billy; a feller can put 'em right in his pocket.

"Well, it got dark at last, but the landlady wouldn't let us have the fireworks at the house, for fear o' fire, so we all went down to the lake, an', mother got Jung to help us; Chinese bein' the 'riginators of fireworks, she thought Jung'd know all about 'em. Jung wasn't quite so sure he did, when we got through!

"Everybody sat on the grass at the edge of the lake, 'cept Bob, an' me, an' Charlie, an' Lennie Wiggins (they had fireworks, too), an' Jung; us five rowed out to the middle of the lake to send 'em up. Gee, it was pretty! an' you'd oughter heard the 'Ohs!' an' 'Ahs!' from the bank.

"We'd almost reached the last rocket, when Bob started a-laffin' to himself an' a-pointin' to Jung, and say, Billy, a-crawlin' down the monkey's sleeve was that gopher snake!

"THEN WE CAUGHT HOLD O' JUNG, JUS' AS

"When he seen it, he set up a howl, an' jumped wild an' crazy, an' upset the boat. We was all in the water in a jiffy! Mother an' Belle screamed somethin' terrible from the bank, an' I swam for the boat, an' reached it, an' yelled to them that we was all right. Bob an' Charlie reached it, too, an' we righted her, an' then laid down flat, and helped pull in Lennie, who was a-hangin' onto the monkey's pigtail with one hand, an' keepin' floatin' with the other. Then we caught hold o' Jung, jus' as he was goin' down for the very last time, an' pulled him in' an' he sat there a chatterin' in Chinee. Then the hired man rowed out, an' towed

"Pretty strenyus cel-bration? 'Twasn't so bad. But think of the darlin' racket there was in the city! The country's no place to spend Fourth ' July."

A Juvenile House of Representatives

NE OF THE most interesting groups of individuals in Washington city are the pages who are employed in the Senate and House of Representatives to wait upon the members, run errands, act as messengers, and generally to perform such a variety of duties as can scarcely be inventoried. There are from fifteen to twenty of these youngsters each, in the House of Representatives

and in the Senate, ranging in age from ten to fifteen

Thrown into close relationship with all sorts of men, representing every section of the country, they soon acquire many of the traits of those whom they serve, and no sharper, shrewder or more alert little fellows can be found anywhere.

Being in constant attendance on the sessions of the two houses, they soon learn to know as much about the business of Congress and the routine of parliamentary procedure as do their elders, and each one of them, early in his career, comes to regard himself as an embryo statesman.

When not engaged in some duty the pages sit on the steps in front of the reading clerk's desk, intent on the proceedings. When a member wishes to use one of them, he claps his hands, and in an instant one of the pages is flying down the aisle to the member's desk, where he receives his orders. It may be simply to go to the library and get a book, or carry a paper to the clerk's desk to have it read, or to run on an errand to some distant part of the building. or to do one of the hundred of such duties which the page is expected to perform with the utmost celerity; and they are ambitious little fellows, each one being anxious to perform the work assigned to him with the greatest promptness and dispatch.

One of the most amusing sights it has ever been my fortune to witness was, upon one occasion, to see these youngsters play at conducting a ses-

> sion of the House of Representatives. The house does not meet until noon but the pages, unless otherwise employed, usually gather in the hall about nine o'clock and for a little time are busy arranging the members' desks, putting their papers in order, placing a printed copy of the previous day's proceedings on each desk, and performing other duties of like character. When this is done, they frequently organize themselves into a juvenile house and proceed to hold a parliamentary session. One of their number is made speaker and another is made clerk. These take their places at the respective desks, while others arrange themselves in the members' seats, and the house is ready for business. Usually the newest recruit to their ranks is appointed page, and he is required to run at the beck and call of his older and more sedate associates, without daring to question or remonstrate. Everything being in readiness, the speaker raps on his desk with his gavel, usually a ruler, paper weight or some such article, and announces: "The house will be in order." clerk then starts to read the journal of the last day's proceedings, when a little member, rising to his feet, moves that further reading of the journal be dispensed with. "The gentleman from Pohick moves that further reading of the journal be dispensed with. All in favor of that motion will say aye-those opposed nay-the ayes have it and further reading is dispensed with." Then a member from the rear of the house arises in his place and says: "Mr. Speaker, I ask leave to offer the following bill." He then claps his hands for the little page, who rushes down the aisle, takes the paper from the member's hand, and carries it to the clerk's desk and that official reads: 'A bill to allow one month's extra pay to the pages of the House of Representatives for their arduous and exacting work during the closing hours of the last session of the "Mr. Speaker," announces the member in charge, when the clerk has finished reading, "I ask unanimous consent for the immediate consideration of the bill." "The gentleman from Squan Creek asks unanimous consent for the immediate consideration of the bill. Is there objection? The chair hears none. The clerk will read." The bill is again read by its title and the house proceeds to its consideration. Then follows a general debate on the merits of the bill, during which all sorts of parliamentary practice is brought into Amendments are offered, points of

order are raised, some gentleman rises to make a parliamentary inquiry, another to a question of personal privilege, and still another demands a call of the house to ascertain whether a quorum is present, during all of which the youthful speaker makes rulings and decides points, with a promptness and correctness which shows no common knowledge of parliamentary law, and which would do credit to many a presiding officer of older years; and so the session proceeds, to the intense enjoyment of those present, until the entrance of a considerable number of real members puts an end to the proceedings, and one of the youngsters moves "that the house do now adjourn." The motion is put and carried and that important session of the house comes to an end, much to the regret of the participants as well as the spectators.

#### IT WORKED BOTH WAYS

Elihu Root, who has returned to the practice of law in New York City, has engaged a new office boy. Said Mr. Root: "Who carried off my paper basket?" "It was Mr. Reilly," said the boy. "Who is Mr. Reilly?" asked Mr. Root. "The janitor, sir." An hour later Mr. Root asked: "Jimmie, who opened that window?" "Mr. Lantz, sir." "And who is Mr. Lantz?" "The window cleaner, sir." Mr. Root wheeled about and looked at the boy. "See here, James," he said, "we call men by their first names here. We don't 'mister' them in this office. Do you understand?" "Yes, sir." In ten minutes the door opened, and a small shrill voice said: "There's a man here as wants to see you, Elihu."—W. E. S. Fales in Boston Ideas.

ALSE CAPE, Virginia,
Saturday.—Schooner
Mary Ann wrecked
last night on Dead
Man's Reef. Crew rescued
this morning by life saving
crew. Two life savers
drowned."

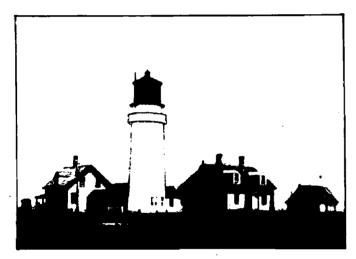

That was all there was to tell the story of heroism, of splendid courage and of fidelity to duty back of those few lines in the daily papers. "Two lifesavers drowned!" That is all the great world would ever know about them. And many people living far inland who never saw the sea and who know nothing of its terrible power would have but a vague idea of just who and what these life-savers were. They do not know the full meaning of the word "surfmen, and they have no idea of what the life of a life-saver is. They do not know that

every night in the year, in quiet calm or in the most fearful storms, the sea coasts are patrolled by brave men ever on the alert for vessels in danger at sea, and when danger comes these patrolmen are strangers to fear, and they risk and lose their lives in trying to save others.

When a ship is wrecked at sea the work of rescuing the crew and passengers is nearly always dangerous, and involves great hardship and suffering, particularly when these disasters come in the winter months. Death claims many life-savers in the course of a year, and these gallant men save many from death.

The coast of Cape Cod has many dangerous places and some fearful wrecks have occurred here. Every town from Monomoy to Provincetown has in its cemeteries unnamed graves of men lost at sea who have lost their lives because of the wrecks on this coast, and the bones or timbers of all sorts of once staunch scafaring craft may be seen here and there along the coast.

The United States Life-Saving Service was established in the year 1872, and previous to this time there was no systematic method of giving help to shipwrecked mariners on this coast. The fishermen in the towns would put out in their boats when it was possible for them to do so, but there was none of the life-saving apparatus one will find in the life-saving

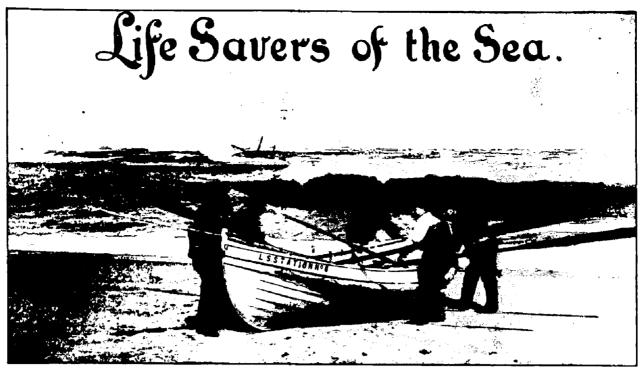

HIGHLAND LIGHT, CAPE OOD

stations of to-day. There were no less than twentythree wrecks on the shores of Cape Cod in the year 1853 and hundreds of lives were lost. Many of these lives might have been saved had the present lifesaving system been in operation. But the most dreadful of the wrecks on Cape Cod occurred within recent years, or on the fifth of December in the year 1893, when the ship Jason was wrecked and all but one of the twenty-five men on board were lost. The Jason was bound for Boston, and was on its way from Calcutta, in India, when it was wrecked in a fearful storm of wind, sleet and snow. Indeed, it was one of the wildest nights ever known on Cape Cod. and that is saying a great deal. One man named Samuel Evans clung to a bale of jute and when the ship went to pieces was washed ashore and quickly cared for by the life-savers The writer of this has stood by the graves of twenty of the crew of the Jason in the little cemetery at Wellfleet, near which town this fearful wreck occurred.

Six years ago the ship Asia was wrecked on the shoals off the island of Nantucket, and the crew of twenty-three men were lost beside the wife and little daughter of the captain. Three sailors clung to a floating timber of the ship and were finally picked up.

To the Massachusetts Humane Society belongs the honor of having made the first movement to attempt organized relief for shipwrecked seafarers in the United States, and particularly on Cape Cod. It began its humane work by building little huts along the coast at points near which wrecks were likely to occur. These huts were intended to shelter those who might reach the shore alive in case of a wreck on the shoals or rocks near these rude little houses of refuge. The first of these little huts was built in the year 1807 on an island near Boston harbor. In the year 1845 this society had no less than eighteen of these life-saving stations on the Massachusetts coast, but there was only volunteer help at any of them.

It was not until the year 1847 that Congress made its first appropriation for rendering assistance from the shore to shipwrecked mariners, although many lighthouses had been erected by the government to

LAUNCHING THE LIFEBOAT

give warning of dangerous places near the shore. In 1849 Congress appropriated twenty thousand dollars for life-saving stations, but it made no provision for trained men to take charge of these stations and they were manned only by volunteers; but after more than three hundred lives had been lost in the wreck of the Powhatan on the coast of New Jersey in the year 1853, keepers were placed in charge of the life-saving stations at the small salary of two hundred dollars a year. Finally the life-saving station of to-day with its paid—though poorly paid—crew, its patrolmen and its thorough equipment of boats and apparatus came into existence, and hundreds and thousands of lives have been saved under the present system of lighthouses and life-saving stations, and thirteen of these stations are on Cape Cod. They are rather unattractive buildings erected solely for utility. The furnishings of the rooms are of the simplest kind. There are four or five rooms on the lower floor and a sleeping room or two upstairs. Every station has a little lookout from which some one at the station keeps a lookout for all vessels out at sea. A high flagstaff indicates the exact location of the stations to those at sea. There are lifeboats, life-preservers, breeches-buoy apparatus, signals of all kinds and everything needed for carrying forward the life-saving work at every station. At many of the stations the men get their own meals, but if the keeper is a married man his wife usually lives at the station, but it is a dreary place for a woman to be, for sometimes there is no house nearer than a mile.

Every day brings its appointed duties to the men at the stations. Monday is a general tidying up day and cleaning of all the apparatus; Tuesday is the day for drilling with the life-boat; Wednesday the men are drilled in the International and General code of signaling; Thursday is the day to drill with beach apparatus and the breeches-buoy; Friday is the day for drilling in the resuscitation of those apparently drowned, and Saturday is wash-day. Sunday is spent quietly in the stations, and if the stations are near villages some of the crew can be spared to attend church.

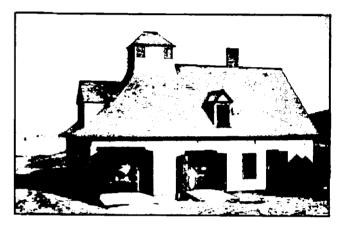

The keeper of a life-saving station is paid but nine hundred dollars a year, and the assistants, or surfmen, receive but sixty-five dollars per month. Vacations are given the men during July and August, but during the other months of the year they are allowed to be away from the station only one day in seven and they are not allowed to be away over night.

There may be many days at a time when the duties of the crew at the station are very light, but when the cold and stormy nights come it is very hard and often perilous work patrolling the wind-swept beaches all night. If the patrolman sees a vessel in distress or one likely to run into danger he fires what

is called a Coston signal, which is a bright red light, and the crew of a vessel in distress know by this token that their situation has been discovered by the life-saving crew and that help will be given as soon as possible. The life-saving stations are five miles apart and halfway between them is what is called a halfway house, which is merely a little hut marking the end of the patrolman's route. When a patrolman reaches this little house he waits for the patrolman to come from the other station, and if he does not come in due time the patrolman who first reaches the halfway house walks on until he meets him, thus making sure that the entire beach has been patrolled.

When a vessel in distress

is sighted at any hour of the day or night the alarm is given at the station as quickly as possible and the men hurry to the rescue with all possible speed. The lifeboat is kept constantly on a running gear with wheels, and horses are hitched to this running gear with all the speed with which horses are hitched to fire engines. The men have been carefully drilled in every little detail of the work, and the horses have also been drilled. As soon as the shore is reached what is called the Lyle gun is fired, and if it is at all possible for the men to

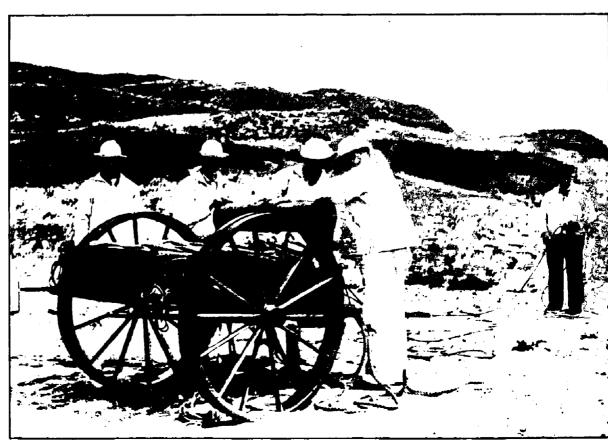

A CAPE OOD LIFE BAVING STATION

do so they set out for the ship in distress in the lifeboat. Sometimes they venture forth when it seems as if it would be impossible for the boat to keep from being capsized, and only the most experienced and courageous men would dare venture forth in it. Lights are kept burning on the shore and if the vessel is not too far out what is called a shot-line is fired, reaching from the shore to the vessel.

The breeches-buoy is an invention by which men are carried from the vessel to the shore by means of a kind of a chair of canvas suspended from a rope reaching from the vessel to the shore and worked by means of a tackle and pulley. It is an unwritten law on board all vessels in danger of being wrecked or destroyed by fire that women and children and helpless persons shall be rescued first, and they are the first persons sent to shore in the breeches-buoy.

The invention of the gun for throwing a line to vessels stranded at sea has been of incalculable value in the work of saving lives. A shot with a rope or line attached to it can be thrown a distance of over six hundred yards by the Lyle gun. This is more than a third of a mile.

There is a keeper with six surfmen at each life-(Continued on page 267.)

DRILLING ON THE BEACH

### FOR THE MIKADO

(Continued from page 263.)

intricate with the rapid invention of methods and appliances. Consequently the submarine expert must devote his entire attention to his specialty and keep in touch with the latest introductions or speedily become a back number. This fate had befallen Lieutenant Suwarrow, now commanding the Apostoloff. as our submarine had been named by her new owners. after a noted Russian experimenter with this type of craft. To begin with, Suwarrow had gained but a superficial knowledge of submarines while in America. and having had nothing to do with them since that time, he now was ignorant of several important, recently perfected, devices in use on the Apostoloff. He was further hampered by the misinformation so cunningly imparted to him by Takahaki when they worked together in the American shipyard.

As a consequence of all this Suwarrow found many things on board not to his liking, and which he ordered changed. Having sworn to obey the commander of the submarine, Dunster Brownleigh made these changes as directed though realizing that they would seriously interfere with operating the boat, if they did not render her helpless and useless. He did utter one protest against a change that would destroy the efficiency of the auxiliary motor, but he was so rudely snubbed for daring to question the methods of his commander, that thereafter he held his peace.

When everything finally was arranged to Suwarrow's satisfaction, and he pronounced the boat ready for launching, ice was forming so rapidly in the harbor that the trial trip must be taken at once or indefinitely postponed. Even now a channel to the open sea was only kept open by the ceaseless efforts of a massive ice-breaker with the hope that several belated, coal-laden steamers, known to be on their way to Vladivostok, still might arrive.

So the Apostoloff was launched with full service equipment, including crew, stores, water, torpedoes, high explosives, and gasoline, on board. The crew consisted of six men; one American acting as chief engineer, and in honor bound to obey the orders of her commander, two Russians, Suwarrow, and another who ranked as assistant engineer and was in training for the position of chief, and three Chinese, one of whom had shown such skill as to be made electrician.

The launching took place in presence of a notable gathering of Russian officials; a priest in gorgeous robes blessed and christened the little craft as she slid easily off the greased ways, and a roar of artillery greeted her entrance into the water. She was launched with her conning-tower hatch tightly closed for fear lest she might sink at the outset: but her bouyancy proved sufficient to lift her deck a foot above the surface and Suwarrow, noting this, flung back the hinged steel cover above which he waved his cap triumphantly to the anxious watchers. Then he gave the order for full speed ahead, and the Apostoloff, looking more like a frisking porpoise than a warship, started down the ice-bordered channel. After going about a verst (two-thirds of a mile) she retraced her course to the point of departure and was received with acclamations by the delighted spectators. The next test was that of diving to the bottom, discharging a dummy torpedo, and again rising to the surface; all of which was successfully accomplished. Then her exultant commander announced that he would run some five versts down the channel with deck awash, dive, and bring his boat back under water; and as this was the most important test of all it was awaited with breathless interest.

So the little craft sped away, sinking lower and lower as she went until only her tiny Russian naval flag, fluttering from a slender steel staff, was visible. In another moment this too disappeared; but the spectators could not tell whether it had been swallowed by distance or had sunk beneath the surface.

A swift torpedo boat had accompanied the Apostoloff on her first trip and was to have kept pace with her on this one so long as she remained on the surface, to render assistance if anything went wrong; but it had been detained at the last moment by the nonarrival of a case of champagne with which its officers proposed to celebrate the success of the submarine's initial trip. Thus the latter was lost to view before her convoy was ready to dart in pursuit. Half an hour later the torpedo boat returned alone and at reduced speed, while her crew anxiously scanned the water on all sides. As she neared the docks eager inquiries were exchanged between the spectators there gathered and her officers.

"Where was the submarine? Had anything happened to her?"

Nobody knew. The torpedo boat had not seen her nor learned anything concerning her movements. She had not returned to the point of departure. Nothing further was known.

Although darkness was gathering, the torpedo boat again dashed down the channel and back, exploring every inch of the dark waters with her powerful searchlight, but without result. Now it was deemed certain that mishap of some kind had overtaken the submarine. All night long tugs kept the channel free from ice and dragged grapnels along its bottom, but the Apostoloff was not located.

On the following day the channel was patrolled as far as the open sea, and late in the afternoon, or twenty-four hours after the submarine had disappeared, three floating bodies, promptly identified as members of the missing crew, were discovered drifting with the tide and taken back to the city. What had happened to them and to the boat with which they had gone down was not learned for many days; and when the story was told in Vladivostok its dwellers had far more important matters to claim their attention.

In the meantime the Apostoloff had so successfully completed the first half of her trial trip that Suwarrow was filled with exultation.

"That she runs so smoothly is a complete vindication of my methods over yours," he remarked to his chief engineer; "and it is good that I arrived on the scene before you had the opportunity for doing mischief."

Dunster made no answer, but devoted himself to his machinery.

"Did you hear me?" shouted the commander.

"Yes, sir."

"Why then did not you answer?"

"I didn't know any answer was required."

"Well it was. And I'll have you to understand that when I honor a subordinate, especially one in your position, by speaking to him, he will promptly appreclate the compliment or suffer the consequences."

"Very good, sir," muttered Dunster, at the samo time biting his under lip until it bled.

A few minutes later the boat was turned, headed directly up channel, the order to dive was given, and the conning-tower hatch was closed. Sea water was admitted to the ballast tanks, the engine was stopped and its supply of gasoline was cut off. Directly afterwards the boat began to sink with Suwarrow noting the depth indicator and all hands standing by in readiness for the next move. At a depth of twenty feet the commander, with hand on steering lever and eyes fixed on a compass card, gave orders to close sea cocks and start up the electric auxiliary.

Takahaki, still in Chinese disguise and acting as electrician, turned on the switch. There was a fizz, a sputter, a shower of sparks, a cloud of stifling smoke, and a horrible odor of burning rubber. Imperfect insulation and a motor hopelessly burned out!

As Suwarrow realized what had happened his face blazed with anger, and springing at the unsuspecting electrician he felled him with a cruel blow. At the same moment he raised his foot to kick the prostrate form; but ere he could accomplish his purpose, Dunster Brownleigh and another were upon him and he was borne to the iron floor. Instantly the second Russian leaped into the fray, drawing his pistol as ho did so and firing a shot that sounded in that confined space with the stunning roar of a thunderbolt. The shot was echoed by a scream, and the melee became so general that for a few moments the entire crew formed a madly struggling heap of humanity. gasping, choking, and fighting tooth and nail. Finally the writhing mass was separated into its component parts. Three men stood up, and three lay starkly motionless, their blood-streaked faces showing ominously white in the electric glare from overhead. One of these was Suwarrow, and another face also was Russian; while the third was of darker complexion. It belonged to one of the engine room crew, and he had been shot through the head. The three who stood up were Dunster Brownleigh, Takahaki, and the remaining Chinese, bruised and battered almost beyond recognition, but alive and with unbroken bones.

"Jiu-jitsu pulled me through," remarked Dunster grimly as soon as he could control his breath. was it with you, Taki?"

"I think same way, Dun Brown," replied the young Japanese with a smile that was rendered ghastly by a cut extending from a corner of his mouth nearly

across his left cheek. "Perhaps that Rus-si-an now will remember that ball-foot game.'

"I doubt if he remembers anything or ever will again, for I believe you have killed him.'

'Maybe so," answered Takahaki indifferently. "And maybe that other Rossky too. Anyway I am hope so for it is trouble to kill same man two time, and he has kill my friend."

"Who do you mean?" asked Dunster, at the same time glancing with partial comprehension at the body

of the dead Chinese lying outstretched on the floor.
"Yes, him Nippon man," said Takahaki, noting the glance. "Same also that one." Here he pointed to the other Chinese who was bending over the body of his countryman.

"Do you mean that they are Japanese?"

"Yes, Nippon Denji."

"Great Scott! No wonder they made good mechanics. But look out, Taki! That chap isn't dead

Suwarrow, merely stunned, had recovered consciousness, and was in the act of drawing a revolver when Dunster's eye caught the motion.

"Then will I quick make him dead!" cried Takahaki savagely, at the same time springing towards the prostrate form.

"Hold on, Taki!" exclaimed the other, seizing his friend's arm. "We mustn't commit murder in cold blood. Tie him if you like, but don't kill him. I won't have it."

For a moment Takahaki hesitated and looked ugly. Then he yielded. Both Suwarrow and the other Russian, who also was found to be alive, were securely bound, and the victors in that under-water battle found opportunity for considering their situation. ,

"We must rise to the surface and blow out," said Dunster, "for this air is too horrible."

At this moment came a voice from the floor and, to the amazement of our friends, Suwarrow interrupted

their planning. "Mr. Brownleigh," he said, and his words, though weakly spoken, were readily heard. "You have sworn on your honor to obey the commander of this craft. I think it is not disputed that I am her commander. Therefore I order you to cut loose these bonds. Also

you will immediately place these two Chinamen

under arrest.' The young American hesitated. It was true that he had pledged his honor to obey this man; but if he should do as he was now bidden what would be the consequences? Certainly his friend's life would be forfeited, and perhaps others as well. What was his

While Dunster was attempting to solve this problem, Takahaki had slipped from the handling room and gone forward to a place in which he had secreted a bundle some days before.

Suddenly, those who remained were confronted by the apparition of a Japanese naval officer in full uniform, including white gloves, who faced them in the glare of the electric lights.

Taki!" gasped Dunster Brownleigh. "You?"

"Lieutenant Matsu, if you will please," replied the other formally. "Now in command of this ship Naisha (the Secret), property of the Mikado of Japan. These men is prisoner of war. This submarine is of Nippon navy. You make swear to obey her commander. So you will if you please obey me. My number one order is not touch those men. Number two order, rise ship

to top of water. Is it good order?"
"They are good orders, sir," was the prompt reply of Chief Engineer Brownleigh as, with mind relieved of a great burden, he saluted the new commander of the submarine. Then he began to obey "good order" number two, by emptying the ballast tanks of their sea water through powerful pumps driven by compressed air, and directly the depth indicator showed the boat to be rising.

A few minutes later she struck against something solid, with such violence that those of her crew who were standing were flung to the floor. After that she remained motionless, and though there was no sound of lapping waves, the indicator showed her to have reached the surface.

(To be continued.)

#### DO WE SHOW RESPECT FOR THE FLAG?

As the following letter from a young man in Pittsburg points a moral, we print it entire:

Editor of the American Boy:

Dear Sir-I have always felt that we Americans are more disrespectful to our flag than any other nation. An American will give up his life for his country, but is slow to show respect for his flag.

During the first two weeks of August last I was encamped at the Military Camp in the Fair Grounds at St. Louis as a member of a military company. Several incidents happened during my stay at the Fair which, as an American, made me blush with shame. One evening my friends and myself attended the Battle of Santiago, on the Pike. The performance ended with the playing of the "Star-Spangled Banner" by the band and the waving of our flag. My friends and myself arose, and found that we were the only ones out of a large audience that did so. An angry usher rushed up to us and told us to be seated, as people could not look over our heads.

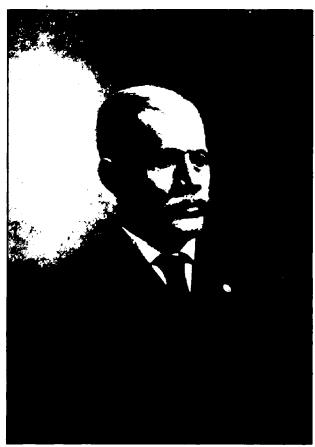

Our company had a drill one day on the Plaza St. Louis, and on our way to and from camp we passed many Jefferson Guards (the World's Fair police), and it was a very rare thing for any of them to remove their hats when our flag passed, but not once did we pass a Filipino who did not salute "Old Glory." Even some of the members of the Mexican Band took off their hats as we passed.

I hope that through your valuable paper you will make an earnest effort to instil into the hearts of American boys a respect and reverence for our country's flag. I remain, sir,

RICHARD E. STIFEL.

#### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 11- From the Governor of Nebraska

GOVERNOR JNO. H. MICKEY, OF NEBRASKA

#### Executive Chamber.

~ June 18, 1904

To the Boys of America:

It should be imbressed on the mind of every

boy that industry is the great key to emocess. Capacity and inclination to work, coupled with correct habits, will enable one to inchige the inflient embition Weelth and actial position sount but for little In the accomplishment of final results. Bersistent industry is everything Let It be remembered that "there is no excellence without labor"

# Hezekiah Butterworth—A FAMOUS WRITER FOR BOYS

TO HAVE WRITTEN more than sixty-books, all of which have created an influence for good and that have given pleasure to thousands of readers both young and old, is to have lived a useful life and one that death will not end. The author of the seventeen "Zig-zag Journeys" books, Mr. Hezekiah Butterworth, has had this honor. Few writers have been given the privilege of writing so many books with so high a degree of popularity. In addition to his long list of books Mr. Butterworth has written many hundreds of stories and poems that have never appeared in book form. Boys and girls all over the land have recited his patriotic and other poems, and many of them have been set to music. His song entitled "The Bird With a Broken Wing" has been sung all over the land, and his cantata "Under the Palms" has been given by many musical societies.

In his later years Mr. Butterworth has written many books for boys in which the central figure has been some noted American with a life history with which all boys should be familiar. This is notably true of his books entitled "In the Boyhood of Lincoln," "In the Days of Jefferson," and in the book in which Franklin is the central figure. Nearly all boys who have even a small library are apt to have one of Mr. Butterworth's books in it, and it will interest them to know something about the author of so many books for the young.

Mr. Butterworth is a native of Warren, Rhode Island. He was born on "Forefathers' Day," in the year 1839. His early life was spent on a farm that had been in the possession of his ancestors for more than two hundred years and that now belongs to Mr. Butterworth. But farming was never to Mr. Butterworth's liking and he fared to Boston at an early age. Boston was then as now the Mecca of many an aspirant for literary honor, and then as now the road to this honor was not an easy one. It is given to few writers to leap into fame at a single bound. Most of them must move step by step up this imaginary ladder, and many must be content to stop a good ways from the top round.

Mr. Butterworth was about thirty years of age when he secured an editorial position on the Youth's

Companion, and for twenty-five years he was one of the editors of that paper and wrote many of the stories that appeared in it. Resigning his editorial

HEZEKIAH BUTTERWORTH

position about ten years ago, Mr. Butterworth has given his time almost entirely to the writing of books. He has traveled extensively and has written a history of South America. He has written a num-

ber of patriotic stories, among them being "The Knight of Liberty" and "The Patriot Schoolmaster."
His "Story of the Hymns" has long been recog-

His "Story of the Hymns" has long been recognized as one of the best of authorities regarding the origin of many of our most beautiful hymns.

Mr. Butterworth was for many years a teacher in the largest Sunday school in Boston, and is now a deacon in one of the largest Baptist churches in that city. There seems to be a fountain of undying youth in Mr. Butterworth's spirit that keeps him in constant harmony and sympathy with the young. He feels as another noted writer must have felt when he wrote: "I love the acquaintance of young people; because, in the first place, I do not like to think myself growing old. In the next place, young acquaintances must last longest, if they do last, and then, sir, young men have more virtues than old men; they have more generous sentiments in every respect."

One who has had the privilege of intimate acquaintance with Mr. Butterworth for many years and who is familiar with all of his books, has been glad to write this of him and of his work: "While Mr. Butterworth has not been a writer of great books, he has written many volumes that have counted for much in the growing good of the world. The youth of his day and generation have been helped by much that he has written, and he has put an undying impress on the age in which he has lived. Not a line that he has written has destroyed character, or been in any way harmful to his readers. With high ideals and an earnest desire to make his work count for good, Mr. Butterworth has been true to himself in all his work, and our American literature could ill afford to have lost much that he has written."

Mr. Butterworth has been famous for his great kindness and helpfulness to struggling young men and women who were trying to make the most and the best of life. He has ever been ready to give sympathy and encouragement, and he has again and again caused a fresh spirit of hopefulness and courage to rise in the downcast who have gone to him for advice and sympathy. A man of this type deserves the success that has come to Hezekiah Butterworth.

Boys should be interested in knowing that Mr. Butterworth has recently become president of the New England Anti-Cigarette League, which numbers hundreds of Boston and New England boys among its members.

## Life-Savers of The Sea

(Continued from page 265.)

saving station on Cape Cod, and after the first of December, an extra man is added for the winter months when the duties of the men are most arduous. It goes without saying that only the most able-bodied men are given positions at a life-saving station, and each applicant must undergo a severe physical examination before he is given a position. Great muscular strength is required, and a life-saving station is no place for a weakling. If a man breaks down under the severe physical stress and strain of the work he is at once discharged, and there is no pension awaiting him no matter how long he may have been in the service. If a life-saver is disabled while on duty he is entitled to his salary for a length of time not exceeding one year. If he loses his life while on duty

LIFE-BAVER ON CAPE OOD WITH COSTON BIGNAL

his widow and children under sixteen years of age are paid his full salary for two years.

The life-saver is expected to save not only life, but also property, and the amount of property saved by these faithful soldiers of the sea every year exceeds in value the cost of maintaining the life-saving

service by our government. Human history records no more thrilling experiences than those of these brave men of the sea and shore who laugh at peril and face with splendid fearlessness death itself while in the performance of their duty. Only too often does one read in the papers accounts of how these brave fellows have lost their lives. The terrible Monomoy tragedy is still fresh in the minds of the people of Cape Cod, even though it may have been forgotten by others. This tragedy of the sea occurred on the 17th of March, in the year 1902. Captain Marshall W. Eldridge and six men belonging to his station, together with five persons they had rescued from the stranded vessel, Wadena, were all lost while trying to reach the shore. One man alone survived, Captain Ellis. This was one of the

most heart-breaking tragedies of recent years. It appealed so powerfully to the people of Boston that a large sum of money was raised in that city for the wives and the children of the crew of the Monomoy life-saving station.

During the year ending June 30, 1904, the life-saving crews of the United States gave assistance to 1061 vessels, with an aggregate value of more than seven millions of dollars. Thirty-three hundred persons were on these vessels, and many of them would undoubtedly have been lost had it not been for the assistance given by the life-saving crews. One hundred and three persons were saved from situations of great peril, and 161 vessels in danger of being stranded were warned of their peril. It cost Uncle

Sam just \$1,766,466 to maintain the life-saving service last year, but far more than that amount in the value of vessels alone was saved, to say nothing of the large number of men, women and children rescued from death.

Only those who have witnessed it can understand the awe-inspiring terror of a great storm at sea, and of how helpless a disabled vessel is when it is at the mercy of wind and waves. No doubt but that in coming years many of these brave fellows of the life-saving service will be enrolled among the beneficiaries of the Andrew Carnegie hero fund, for they are heroes indeed. Better still, some of them have had their names enrolled among those of eternal honor and glory who have given their lives for others.

# What Has Happened on the 4th of July

ANY EVENTS of national and even world-wide importance have happened on our American Fourth of July. While the signing of the splendid Declaration of Independence is far and away the most significant and important of these events, other things have happened on our country's natal day of which the youth of the land should take note.

It might interest many to know that our national hymn, "America," was sung for the first time on the Fourth of July in the city of Boston. This was in the year 1832, and the occasion was a Sunday school concert in the Park Street church in Boston. Dr. S. F. Smith, then a young divinity student at Andover, near Boston, had written the hymn one dreary February day and had sent it to his friend, Lowell Mason, the most prominent man in the musical circles of that day. Within the shadows of this church lie all that is mortal of seven of the early governors of Massachusetts, and many of the men who helped to lay the foundation of our great republic.

It was on the Fourth of July in the year 1793 that John Quincy Adams, the sixth President of the United States, made his first public speech, and from that day he was a man of mark in the country. As a little lad of eleven years he had gone with his mother to the summit of Penn's hill, near his humble home eight miles from Boston, and had watched the smoke rising from the buildings burning in Charlestown at the battle of Bunker Hill, and he used to gallop into Boston on horseback to bring his strongly loyal and patriotic mother, Abigail Adams, news from his father who was attending the Congress in Philadelphia.

Hawthorne, admitted by many to be the greatest novelist America has ever produced, was born in the quaint old town of Salem, in Massachusetts, on the Fourth of July, in the year 1804.

It was on the Fourth of July in the year 1817 when work was commenced on the Erie canal, which was regarded by the people of that day as a stupendous undertaking.

Two ex-presidents of the United States died on the Fourth of July in the year 1826. One was John Adams, second President of the United States, and the other was Thomas Jefferson, the successor of John Adams. Jefferson died a few hours before Adams, but Adams did not know it, and his last words were "Jefferson still survives."

On this same day there came into the world a man whose songs were to delight thousands of his countrymen in coming years. This was Stephen Foster, author of "Suwanee River."

The beginning of our great American railway sys-

tem was on the Fourth of July in the year 1828, when Thomas Carroll, the last survivor of all the signers of the Declaration of Independence, laid the corner

stone of the first railroad in America.

A third President of the United States, James Monroe, died on the Fourth of July in the year 1831. The corner stone of the Great Washington monument at our national capital was laid on the Fourth of July in the year 1848, but the monument was not completed until the year 1884. It is in some respects the most remarkable monument in America and it is the highest monument in the world. Although not at all ornate, its cost has been \$1,187,710.31.

One of the greatest fires in the history of New England occurred on the Fourth of July in the year 1866, at Portland, Maine. It was caused by a firecracker.

Vicksburg surrendered to General Grant on the Fourth of July in the year 1863, and it was on the Fourth of July in the year 1898 when America heard that Cervera's fleet had been destroyed in the Spanish-American war.

No other day in all the year means more to the American people than our own noisy—too noisy—Fourth of July—the day we celebrate.

#### LOUIS AGASSIZ

Louis Agassiz was born in Switzerland in 1807, but spent his life in America, where he became a great naturalist and teacher. On his fiftieth birthday the poet Longfellow dedicated a beautiful little poem to him, and the following four stanzas are well worthy of being learned by all boys. After referring to the child in its cradle, he said:—

And Nature, the old nurse, took
The child upon her knee,
Saying: "Here is a story-book
Thy Father has written for thee.

"Come wander with me," she said
"Into regions yet untrod;
And read what is still unread
In the Manuscripts of God."

And he wandered away and away
With Nature the dear old nurse,
Who sang to him night and day
The rhymes of the universe

And whenever the way seemed long,
Or his heart began to fail,
She would sing a more wonderful song,
Or tell a more marvellous tale.

"I also will take a long plonge!" he

said.
"That's all right, Briant," replied Carclough, "Up you get. Don't come down too flat." His tone was distinctly

patronizing.

"Ah, no!" returned Briant. "I will not come down flat. I sink I will plonge from ze flagstaff there!" he pointed to the little crosstrees near the top of the pole, about seventy feet from the level

the little crosstrees near the top of the pole, about seventy feet from the level of the bath.

"What rot!" cried Carclough. "No fellow could do that. If he did he would jolly well stun himself against the bottom, in such shallow water as this."

"He looks as if he meant business, anyhow!" said Anstruther; for Briant was already at the foot of the flagstaff and preparing to ascend. "By George! the beggar can climb well," he continued in reluctant admiration, as the little Frenchman began to ascend with great rapidity. "But of course he's only gassing when he talks of diving from such a height. I do hate a bragging ass!"

Briant had now arrived at the crosstrees, and sat astride of them for a moment to recover his breath. Then he stood up and waved his hand to the assembled school, for everyone was gazing upwards by this time. There was a cheer.

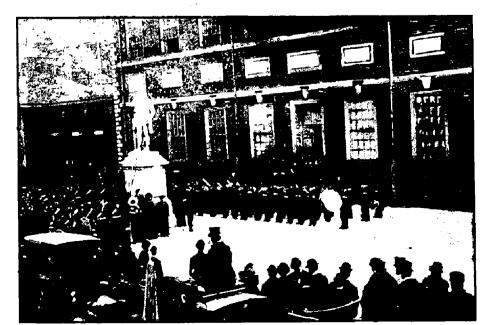

"Come down, you fool!" shouted Car-clough, well aware that he would be held jointly responsible with Boger if any accident occurred. As for that old fraud, he had just stepped over to a

neighboring tavern, as was his usual custom.

"Come down, you young ass!" repeated Carclough at the top of his voice to Briant at the top of the flagstaff. Come down, or I'll give you a thundering licking! There's not seven feet of water there!"

"Vive la France!" cried Briant in answer. "Rule-a-Britannia. God safe ze king! My friend, I will rejoin you there below on the instant." A moment more he stood up against the mast, with his curls flowing in the last answer. Anstruther looked to safe the last answer. Ans

AN ENGLISH SCHOOL STORY—By E. S. TYLEE

A NOTABLE EVENT An English Band Playing The Star Spangled Banner in Front of Independence Hall, Philadelphia, on July 4th, 1904

# Wellesley Hills, Mass.

Characterized by strength of teachers and earnestness of boys.

#### ROCK RIDGE HALL for Older Boys The HAWTHORNE HOUSE for Younger Boys

The many considerations of a boy's life at school form the text of a pamphlet that has been written about this school. Though it may not influence a selection in favor of this school, it will be read with inner est by all who are impressed with the equipment and methods that are essential for a thoroughly modern prejuratory school.

This pamphlet which has been prepared with care and illustrated with numerous photographic reproductions, discribes both by word and picture many details of the school life as well as the advantages, natural beauty and historic interest of the school surroundings. Sent without charge on request.

# The First Declaration of he think that the friendless young Christian captive could dare to raise his eyes to the peerless Zuleika? Ah! I wish I could draw her portrait for you fellows, though I admit," he went on, "that it would be casting pearls before swine who are always lifting up their voices and talking rot about things of which they know nothing. But, she was a rose. Each of her eyes was a great deal larger than her mouth; and when her hair was loose she trod upon it. She loved the handsome young Englishman." "Who was he?" from several voices

who had been appointed governor by his majesty Charles the First, had managed to get all the power into his hands and those of his friends. He was a selfish old tyrant who cared for nothing except his own personal gain, and to have his own way. The people were oppressed by unjust taxes, and while Berkeley and his friends were making enormous fortunes, the poor planters were becoming poorer.

Just at this time to make matters worse, an Indian war broke out. All along the frontier the savages rushed in along the frontier the savages rushed in upon the defenseless settlers, inaugurating a reign of terror. Several hundreds of the whites were massacred. Governor Berkeley was petitioned for aid, but he and his friends were making a good deal of money out of the fur trade, and if troops were sent against the Indians this profitable traffic would be stopped. So he refused the military assistance they asked for.

The people murmured, but they could

this profitable traffic would be stopped. So he refused the military assistance they asked for.

The people murmured, but they could not help themselves, and Gov. Berkeley strutted round in his velvet and lace and Jewels, and kept adding to his heap of gold pleces, while the Indians cominued their inroads. It was a very distributed to their inroads. It was a very distributed their inroads. It was a very distributed their inroads. It was a very distributed to their inroads. It was a very distributed to their inroads. It was a very distributed to their inroads. It was a great of a fact of the Assembly saled with the Governor's commission. It was a great triumph for head of aix hundred "well-armed house-lead of aix hundred "well-armed house-lead of aix hundred "well-armed house-keepers" he swept upon the Indian towns and inflicted injuries upon them white plants are the daring young Virginlan. But the people stood by their leader, and him a rebel, and a force of militia was sent to mission as general to fight the Indians, hut Berkeley refused to sign it. As some of the Assembly sided with the Governor or, the young planter went home to his clearing on the James. But the country was all on fire. Men's minds were ripe

for rebellion. All Virginia was shouting, "Bacon, Bacon." There was no resisting the current. Booted and armed with good broadswords and "fusis," they turned out from lowland manor house and highland log cabin, from plantation and from hundred, and many hundreds of "well armed housekeepers" with Bacon at their head, rode to Jamestown. It was a sultry summer day—July 3rd, 1676—at about two o'clock in the afternoon, when the young patriot arrived at

noon, when the young patriot arrived at the capital. His horsemen bivouacked around the little cluster of houses forming the village, and their general went at once to work. Virginia was in flagrant revolution.

flagrant revolution.

Bacon's drums and trumpets brought Berkeley upon the scene. With all his faults he was no coward. Arrayed as if going to a ball, the flery old cavaller rushed out upon the green, and walking straight toward Bacon, tore open the lace upon his bosom. "Here! shoot me," he cried wrathfully. 'Fore God a fair mark. Shoot."

"Who was he?" from several voices.
" The handsome young Englishman, and looked after his board. Through her intercession poor old Uncle James was brought in from the fields and given some light job about the kitchen, with a pint of wine every day. In many stolen interviews I taught her English and as much as I could remember of the church catechism. Soon I had the joy of wearing her from the ber of the church catechism. Soon I had the joy of weaning her from the errors of Mohammedanism, and receiving the blushing avowal of her affection. I remember—well, never mind. tion. I remember—well, never mind. You chaps are too young, and a precious sight too silly to understand these things. Besides, deep as was our bliss it was of very short duration. In a few months the seething discontent of Muley Hassan's people broke forth in open rebellion. The populace liberated the Christian slaves, who joined in the attack on the fortress. 'Twere useless and harrowing to paint the scene which followed its capture. Prominent among that twining and devastating crowd, and harrowing to paint the scene which followed its capture. Prominent among that twining and devastating crowd, and torch in hand, I regret to say that I observed Uncle James, who urged his comrades to greater excesses, forgetful of the great consideration which had always been shown to his liver complaint. Sword in hand I fought my way to Zuleika's bower. On perceiving me she uttered a joyous cry and fainted gracefully over my left arm. Encumbered by that lovely burden I sped along the flaming galleries, and was just emerging in safety from the stronghold when I encountered Muley Hassan himself wounded but terrible, at the head of the remnant of his followers. The sight of his daughter in my arms fired the jealous rage of the pirate. In vain I demanded of him the rights of single combat. Many a worshipper of the Prophet bit the dust before I succumbed, but at length numbers prevailed and I but at length numbers prevailed and I was overpowered. I saw my beloved Zuleika seized by her enraged parent; l Zuleika seized by her enraged parent; I saw him draw the jeweiled dagger from his sash and plunge it into her tender bosom. I heard the wild cry of his at tendants, horrified at the death of their beloved mistress. And then I saw and heard no more, for I had fainted. You chaps won't hear any more, either, if that blue-faced baboon in the far corner goes on sporting and cheking."

chaps won't hear any more, either, if that blue-faced baboon in the far corner goes on snorting and choking!"

"Don't mind him, Crikey, old man!" said Ascott, who was in the bed next to that of the offender. "If he will pig away at rock cocoa all night," he's bound to do a fit now and then."

"Cram his perfectly unused nail brush down his throat, then, and let us have a little quiet!" said the unappeased Crick-howell. "Where was I? Oh! Yes. Well, when I came to myself, I was lying in the bottom of a large and well-appointed man-of-war's boat, which was cleaving the surf at a good pace while the missiles of the baffled Mohammedans fell harmless behind it. The midshipman in command was chafing my chest with brandy to restore the circulation, assisted by the sturdy boatswain, who shed tears of joy on seeing me restored to consciousness. My first words were:

"Zuleika!" • • • "Only one word, my mannie!" objected Mackenzie, who was Caledonian and

Mackenzie, who was Caledonian and mathematical.

"Some night when we're a little more select here, I'll tell the chosen remnant my adventures among the thievish savages of North Britain, and how I lost my complexion. To resume: The honest boatswain was so unmanned by my pathetic inquiry that he was obliged to swallow the remainder of the brandy before he could reply. Then he first of all touched his breast and afterwards

#### What Our **School** Military Will do for Your Boy

Make a Man of Him

A strong, healthy, clean, honest, intelligent, manly man-full of the snap and vigor and joy of life-able to do things-competent to control others through having first learned to control himself.

The Michigan Military Academy

can develop all that is best in your boy. Splendid academic work, exceptionally able faculty, high moral tone, and a military discipline which creates ideal conditions for study. There is absence of vice, bad associations, social and other distractions which retard mental and physical growth.

#### The Discipline is Strict, But Just

The military features are so fascinating that he cheerfully accepts the strict regulations. He learns obedience, industry, self respect, cleanliness, orderly methods, promptness, regularity Heenjoys doing what he ought to do. He is glad to retire at "taps," healthfully tired. He is up at "reveille," refreshed and wide awake, ready for the new day's work with a clear brain and active body.

#### 95% of Our Graduates

are today filling enviable positions in the business are today filling enviable positions in the business and professional world. Military training does not signify a military career. The 5% who elect the military career, follow it successfully, several now holding important positions in the United States army. We have more graduates at West Point than any other military school. Ours is a military school conducted by military men. Captain Cress, 4th U. S. Cavairy, our Superintendent and Military Instructor, graduated from West Point in 1884, has had over twenty years' service, and is on the active list. Our military training system is admittedly the finest in the country outside of West Point.

#### The Academic Courses

cover 8th Grammar Grade and High School work. Our diplomas admit to any college or university where certificates are accepted. Our instructors are live, up-to-day men, in the prime of life, seasoned by experience in leading colleges and universities. Mr. Hull, the Head Master, is eminently fitted by education and varied experiences to direct our academic work. The four persons prominent in the management of the school have each a son in attendance. school have each a son in attendance

#### Our Location at Orchard Lake

is ideal. The college, campus, farm, etc. are situated high and dry with perfect drainage pure water, healthiest of climates. The site overlooks three of Michigan's most beautiful inland lakes. Bracing air, wholesome food, regular exercise and recreation, quickly develop hearty appetites and vigorous constitutions. The services of our staff physician have not been necessary during present school year.

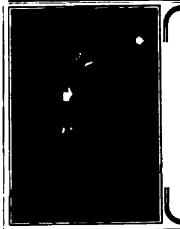

A Boy's Mental Capacity Improves with his physical development. Military training gives him an erect figure, graceful carriage, and a perfect control of himself mentally and physically that will last to the end of his days.

Parents and Guardians Are Invited to write us for literature giving full description. lews, courses of study, terms, etc.

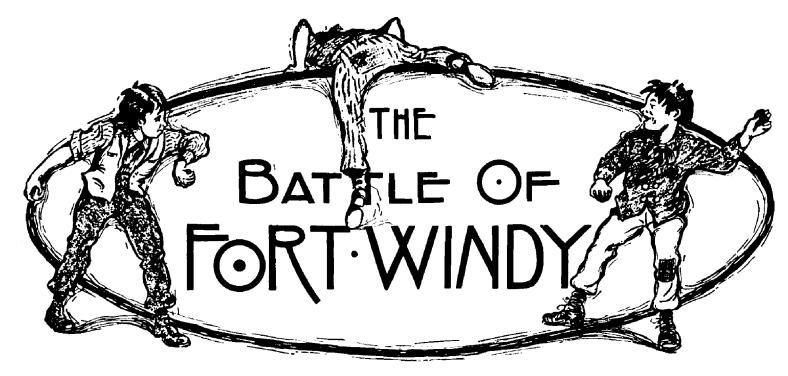

Address General Harris A. Wheeler, President, at Orchard Lake, or at the Chicago office in the Old Colony Building.

"Well, let's challenge the East Windham boys to enter into a fight with us. You know that old deserted house up on Windy Hill?" Yes."

"Yes."

"Bupposing we call that hill Bunker Hill just for the fun of the thing and we fight the East Windham boys for the possession of it and the old house, which we might call Fort Windy, just for fun, you know. We might rig up in red coats as British soldiers and let the East Windham boys pretend that they are the Provincials. Our leader might call himself General Gage and the leader of the Provincials might be General the Conneauer might call himself General Gage and the leader of the Provincials might be General Prescott. He was the American general who 'fit and died' or 'died in a fit' or something of that kind at Bunker Hill, wasn't he?"

"You're a little off in your history."

'You're a little off in your history," "You're a little off in your history," said Lem, "It was Prescott who led the American troops at the battle of Bunker Hill, but it was General Warren who was killed there, and a good man he was."

"Well, let the leader of the East Windham boys call himself General Prescott and I will be General Gage."

"You?"
"I guess I thought this scheme was and

"I guess I thought this scheme up and I ought to be made commander-in-chief of the British forces."

"It was General Howe and not General

Gage who led the British troops at the battle of Bunker Hill. Don't you know how they say that Gage watched the scrimmage from the belfry of the Old North mage from the pelity of the Old North Church there in Boston—the church from the spire of which the signal lantern was hung for Paul Revere the night before the battle of Lexington?"

"Say, if I was as steeped in history as you are, Lem, I'd write a history of the War of the Revolution in fifteen volumes. Well, I'll be General Howe and I think Will

and shallow stream separated the two villages and there were about the same number of boys in each village. There were forty boys in the "British" army and the same number in the "Provincial" army. "But at the real battle of Bunker Hill there were a great many more Britishers than Americans," said Lem. "Yes, and there were more than twice as many of the Britishers killed as there were Americans," replied Lucien. "I remember that much about it. But history isn't going to have a chance to repeat itself too ing to have a chance to repeat itself too closely in this battle, so we will have even sides, won't we, General Prescott?"
"That's what we will, you King George Britisher, you!" to which Lucien retorted

with a stanza from an old doggerel com-posed by one of the sergeant majors of Howe's forces after the battle of Bunker

Howe's forces after the battle of Bunker Hill:
"Brave William Howe, on our right wing, Cried: 'Boys, fight on like thunder, You soon will see the rebels flee With great amaze and wonder!"
"We'll show you how we'll 'flee,' " retorted General Prescott. "We'll send you back to your war ships screeching for quarter!"
"You will ab? See if you de!"

quarter!"
"You will, ch? See if you do!"
The plan agreed upon was that the contending forces should assemble in their respective villages at exactly one o'clock and march to the hill from opposite directions. They should then charge on "Fort Windy" and each side must seek to gain possession of the Fort. It was agreed that one party must eiget every member of the to come to the celebration. I tell you, Lem, let's do something on the Fourth!"

"What?" asked Lem laconically.

"Oh, anything that will give us a chance to whoop and yell and be lively. Wasn't it good old John Adams who said that folks ought to whoop and yell and make all the racket possible on the Fourth of July?"

"I guess he didn't say so in just those words. He said of Independence Day that 'It ought to be solemnized with pomp and parade, with shows, games, sporis, giuns, bells, bonfires, and illuminations, from one end of the continent to the other, from this time forward, forevermore.' I know because I worked it into an essay I had to write on John Adams just before school closed."

"You ought to read that essay to the selectmen who have voted that we are not to do any of the things John Adams said we ought to do on the Fourth of July. I tell you, Lem, I have been trying to think up some way of having some fun on the Fourth ever since I heard that the selectmen were thinking of voting that Windham should not have a celebration this year.

"Well, let's challenge the East Windham

to come to the celebration. I tell you, Lem, in the contest for possession of the Fort, It was agreed that one party must eject every member of the neaty must eject every member of the one party must eject every member of the protated side victorious side to soda water and party the victorious side to soda water and party. All east two hours before being adjudged victors in the contest, The defeated side victorious side to soda water and march as prison-uts, after which Generals Prescott and the challenge and victors in the coi

state of revolt and indignation, and for this reason: The selectmen of the town had voted that there should be no Fourth of July celebration in Windham because of unusual "hard times" and the prevalence of a somewhat malignant type of scarlet fever in the community.

"I think things have come to a pretty pass when Windham acknowledges herself too poor to be patriotic," said Lucien Law to his chum, Lem Dryden. "And as for the scarlet fever, I don't see how having a celebration would cause it to spread since none of those who have it would be likely "I think things have the state of revolt and state of revolt and indignation, and for the state of revolt and shallow stream separated the two villages and there were about the same number of the state of revolt and indignation, and for the state of revolt and indignation, and the prevalence of this k about it."

"I think I see General Howe's followers who have what it will be glad to be General Prescott. Let's go over to Will's house and see what he thinks about it."

"I think I see General Howe hunting up a fight at Bunker Hill," said Lem with a haugh. "You'll lot me be General Prescott to ask him what he thinks about them getting up a fight at Bunker Hill," said Lem with a haugh. "You'll lot me be General Prescott that it was rather incongruous for him to carry done the field at the provincials carried all sorts of old firearms hastily collected from attics. General Prescott that these were "just for show," as about them getting up a fight at Bunker Hill," said Lem with a haugh. "You'll lot me be General Prescott to ask him what he thinks about them getting up a fight at Bunker Hill," said Lem with a haugh. "You'll lot me be General Prescott that it was rather incongruous for him to carry darked they warren suggested to General Prescott that it was rather incongruous for the field at they marched through the you'll a fight at Bunker Hill," said Lem with a haugh. "You'll lot warren suggested to General Prescott that they warren suggested to General Prescott that the

side to the music of drum and fife, and jeering cries rent the air as the two "armies" drew near each other and Fort Windy

les" drew near each other and Fort Windy.
"Hooray for good King George!" screeched the red-coats, and "Down with the oppressor!" yelled the Provincials.
"Surrender, ye Yankee rebels!" shouted General Howe.
"Surrender, ye Red-coat cut-throats!" yelled the Provincials.
"Back to your shops and farms, ye scoundrels!" cried General Howe.
"Take your old taxed tea and hump yourselves back to England with it!" shrieked General Prescott.
"Surrender, and all but those two arch

"Surrender, and all but those two arch fiends, John Hancock and John Adams will be pardoned! They must die like the traitorous dogs that they are!" declared General Howe.

Surrender, and all but those two demons, Howe and Gage, will be forgiven. They must be burned at the stake after they are filled with cold Yankee lead!" replied General Prescott.

General Prescott.

After further civilities of this sort the opposing forces marched to a spot within twenty-five yards of Fort Windy. Then they threw aside their arms, flags, fifes and drums and, at the discharge of a toy pistol, rushed "like demons" for the old and weather beaten house on the crest of the old and it had not been occupied for many years. Every window light was broken and but one or two of the doors were on their for years and the house was worth less than the unpaid taxes on it. It was for the possession of this old shell that the two armies fought for two hours with two armies fought for two hours with neither party any nearer gaining the victory than when the battle first begun. General Prescott had been flung out of windows four or five times and General Howe had once come sliding down the long sloping roof of the "lean-to" and had caught his trousers on a nail at the edge of the roof and had hung suspended between the eaves and the ground while General Warren pelted him with small green apples from an old tree near by until some of his "henchmen" came to the rescue.

General Prescott brought on a violent attack of nosebleed by tumbling down a flight

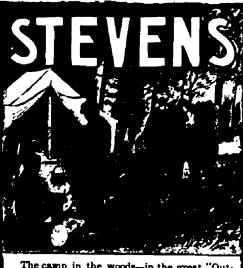

tack of nosebleed by tumbling down a flight of stairs, and General Gage nearly brought of stairs, and General Gage nearly brought hostilities to a close by breaking through the old thin boards covering an old well into which he disappeared. Both sides rushed to the rescue, but, fortunately, the well was but a few feet deep and it had but a foot of water, and the valiant General Gage called out to his followers as they gathered around the well, "Up and at them, my brave fellows! Leave me to my fate, and charge on the vile Yankee rebels in the name of our own King George!" General Gage emerged from the well cov-

General Gage emerged from the well covered with slime, and engaged in a hand to hand conflict with General Prescott which resuted in both generals tumbling into the well, whereupon their followers yelled with glee in a manner that was certainly a great breach of army discipline and of respect for a superior.

for a superior.

It was left to little Tommy Todd, who was nothing but a private in the American army, to bring the battle to a finish. Tom-

"I've got a houseful of growing boys myself, and I declare that they are a great deal more blase than I am. Things that still divert and entertain me have long

still divert and entertain me have long since become a bore to them.

"And I am quite certain that any impostor could befool me, right now, a great deal easier than he could any of those boys. They appear to know all of the kinks. Nowadays, in fact, boys know so blamed much that I gravely doubt if they have as much fun during their youth, and especially during their early manhood, as the boys of my generation did.

"I fell to thinking of all this when I took on a few extra young men—most of them under twenty—in my office the other day. They were well groomed lads, held themselves well, looked alive and alert and seemed to be smarter than steel traps. The sight of them caused me to think of what a Rube of a boy I was when I took my first job—and it was with the same railroad that I am still connected with, by the way.

"I was fifteen and small for my age. I was born and brought up in a little Indiana town.

diana town.

"When I was a bit over thirteen I made up my mind to be a shorthand writer. I peddled newspapers and did odd chores to get the money to attend a shorthand class twice a week in Terre Haute. I studied stenography for about six hours a day and hamboozled all of the boys in my neighborhead to distance to me when I would be the contract to the state of the s hood to dictate to me when I got to the point where I could take dictation. "In just one year I was an expert stenog-

"In just one year I was an expert stenographer—not only an amanuensis stenographer, but able to take speeches. Yet I was about as uncouth a yap of a country boy as ever you heard tell of.
"My mother had a relative who was auditor for a railroad that had its head-quarters in Omaha. She wrote to this relative that she had a boy who was an expert stenographer and experts are and expert stenographer and typewriter and who wanted a job.

expert stenographer and typewriter and who wanted a job.

"The auditor didn't remember how old I was, if he ever knew, and my mother didn't tell him in her letter. He wrote to her to send me along to Omaha and he would put me to work in the railroad's Omaha offices. He enclosed a letter for me to present to the railroad's agent in Chicago to enable me to get transportation from Chicago to Omaha.

"Well when I lef' the little Indiana town for Chicago I had exactly thirty dollars and twenty-five cents in a huge wallet that had belonged to my father. I kent it inside my shirt. The money was what remained of my own savings as news and chore hoy. I had, hesides, one of those hig, old fashioned, black glazed bags, which contained all of my clothes and other possessions, and one of those extremely heavy typewriters of that period.

sessions, and one of those extremely heavy tynewriters of that period.
"The train was late in making Chicago, and it was after office hours when I arrived there. My idea was to get that transportation from Chicago to Omaha and go right through

right through.

"So I started to lug my big black glazed bag and the exceedingly heavy typewriter through the Chicago streets to the office of the railroad agent to whom I had the letter calling for transportation. I was, as I say, only a small boy, and the things were so blamed heavy that I had to drop tem about every half square and rest up.

were so blamed heavy that I had to drop 'em about every half square and rest up. "After about an hour, however, I reached the railroad office. It was then seven o'clock at night, and the agent, of course, had gone home. The janitor of the building gave me his house address.

"I determined to start for his house immediately. But I had no idea of taking a street car to reach his house. The reason for this was that I was afraid to show my money or to break a bill.

"I had spent my odd change for food on the way to Chicago and I had six fludollar bills left. Nothing in the world would have induced me to expose the wallet containing them on a Chicago street car.

"So I walked to the agent's house, which was away over to the South side of Chicago. It makes my arms ache even now to think of that journey. It took me four hours to get to the house and f

"It was eleven o'clock at night when I pulled the doorbell of the railroad agent's house, and the wooden paved street was as quiet as death. I thought it would be all right to pull the doorbell at that hour-

right to pull the doorbell at that hour—didn't know any better.

"I rang for ten minutes before the agent poked his head out of a second story window and gruffly asked what was wanted. I told him.

"'G'way boy!" growled the agent. 'What the dickens do you mean by ringing me up in the middle of the night on such an excuse? Come to my office in the morning and I'll look at your letter.'

"And so there was nothing for me to do but to pick up those two heavy burdens and walk downtown again. I didn't know where to go, but I wanted to get where the lights were.

where to go, but I wanted to get where the lights were.

"It was nearly three o'clock in the morning when I got downtown again. What with fatigue and sleepiness, I was just about able to stand up, and that was all.

"I was also pretty lonesome for home. I was decidedly sorry that I had ever learned to be a shorthand writer. I thought of my cosy bed at home, and, then I dropped my black glazed bag and sat on it and blubbered.

"I was thus engaged when a huge figure

of a uniformed man—I didn't know it then, but he was one of those watchmen who used to patrol the Chicago streets at night —swung by me, carrying a lantern. He saw me, and heard my suppressed blubber-

typewriter and led the way around the corner to one of the few remaining places with lights still going.

"A decent looking young fellow was behind the hotel desk.

"Jack, said the watchman to the hotel clerk, 'here's a lad I've found who wants a night's lodging. He was afraid to go to a hotel, for the reason that he has a great deal of money on his person, and he doesn't want to be robbed, of course. Better have the boy hand you the money to put in the safe, if it's so much.

"'Well, I don't care to be responsible for a large sum of money," said the hotel night clerk, looking at me in a wondering sort of way. 'How much is it, son?'

"It's thirty dollars, sir,' I replied, impressively.

"No, neither of them laughed. They were thoroughly decent fellows, and so they didn't laugh. I don't doubt, however, looking back, that they both wanted to laugh. They merely exchanged amused glances.

"Oh, well, I wouldn't mind assuming that responsibility, son,' said the hotel

glances.

"Oh, well, I wouldn't mind assuming that responsibility, son," said the hotel clerk. Let's have the money."

"I was a bit doubtful about it, even then; but the clerk's honest, kindly countenance reassured me, and I dug the wallet out of its hiding place and handed it over to him. He stuffed it into one of those old fashioned key safes.

saw me, and heard my suppressed blubbering.

"Hey, what's the trouble, son?' he asked me in a kindly sort of way.

"I told him.

"Oh, that's nothing to cry about, buddy,' said the big man with the lantern. 'All you've got to do is to go to a hotel—I can direct you to a cheap one—and get some sleep. You've got the price of a bed, haven't you?'

"That's just what I'm afraid of,' I replied. 'I've got so much money with me that I'm afraid to go to a hotel—'fraid I'll be robbed.'

"Oh, small chance of that, son,' said the big watchman, good naturedly.' The place I'll take you to is all right. Come along. I'll pack your gear—great Scott, this is heavy truck for a little chap like you to be carrying!' and the fine fellow picked up my black glazed bag and the

### THE BATTLE OF FORT WINDY

(Continued from page 270.)

my had spent a fourth of the money he had "saved up" for the Fourth for a huge cannon cracker. When at the end of two hours neither party seemed to be gaining ground and the interest in the fight seemed to be flagging. Private Todd bethought himself of a way of enlivening things up a bit. Retreating to an old shed in the rear of Fort Windy he lighted the fuse of his great cannon cracker and ran toward the fort with it in his hand while he cried

"A shell! a shell! Look out! We'll drive e Red-coats out! Hi there!"

the Red-coats out! Hi there!"
Running to one of the windows he flung
the sizzling cannon cracker into the house
and the room in which it fell was speedily
deserted by both Red-coats and Provincials. some of them leaving through the sashless windows. In a few seconds there was a terrific explosion and Private Todd paled a little when General Gage suddenly

out.

"Gee whiz! The fort is on fire!"

It was even so. The cannon cracker had thrown bits of burning paper in all directions. The old house was dry and inflammable and in an instant flames were coming from doors and windows. Private Todd began to weep in a very unsoldierlike way, having before him a vision of jails and penitentiaries, for a man in the village had but recently been sent to the state prison but recently been sent to the state prison for setting fire to a house.

"But don't you cry, Tommy," said General Gage. "You won't be jerked up forsetting fire to this worthless old shell for—

great Scott!"

The whole house was now wrapped in flames when there suddenly appeared at the attic window away up in the gable of the house a little girl apparently about five

Then General Prescott proved that he was worthy of the name of the brave man he had assumed. Heedless of the fact that the whole lower part of the building was in flames he dashed into the burning house and up the burning stairways into the old attic. He groped his way through smoke and flames to the window, snatched the screaming child up in his arms, hid her curly head in his jacket to keep her from inhaling smoke or flames, groped his way inhaling smoke or flames, groped his way back to the first flight of stairs down which he ran. He reached the top of the second flight of stairs just as they fell away in flames. Then he ran across the burning flames.

He dropped the little girl into the arms held up to receive her and then leaped from the window with his garments in flames. The old well was but ten feet distant, and into it he plunged and sait down in the shallow water. Then he climbed out tant, and into it he plunged and sat down in the shallow water. Then he climbed out with blistered hands and face, and with his eyebrows missing and the ends of his brown hair singed and burned. A great shout went up from both the British and the Provincials and General Gage clapped him on the back and said,

"Good for you, General Prescott! I didn't suppose a Yankee could be so brave!"

A moment later a strange women who

A moment later a strange woman who looked travel-stained and careworn came running up the slope of the hill with pallid face and heaving breast.
"My little girl!" she cried. "I left her

"Here she is!" called out General War-

the house a little girl apparency wears old.

"Mamma! mamma!" she shricked. "Come and get me, mamma! Come! Come!"

No one knew who the child was until later. General Prescott heard the cry and called out,

"Jump. little one! Jump and we will catch you!"

But she was too frightened to heed this call and she could hardly have escaped infury had she obeyed.

But she was too frightened to heed this call and she could hardly have escaped infury had she obeyed.

"Jump. little girl apparency work. She had left the little girl asleep in the old house while she had herself gone to a town two miles from Windham to make inquiries about a woman who owed her a small sum of money. The little girl had been told to play around the old house and when she heard the two "armies" approaching she had hidden in the attic and had remained hidden during all of the fight

had remained hidden during all of the fight for the possession of the old house.

The opposing forces watched the house burn to the ground and then they marched down to the village and each "army" treated the other to soda water and peanuts. Then they ran their races and played their games on the village green and, as General Prescott said at the close of the day, they had "a real good Fourth in spite of the selectmen and the scarlet fever."

#### floor to a window. "Here she is!" he shouted as he leaned far out with the child in his arms. "Catch a Grove

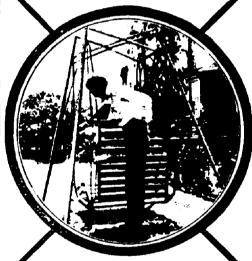

In planting small trees from one to three feet tall for the purpose of startthree feet tall for the purpose of starting a grove or wood lot, the usual way is this: Plow the land deep and pulverize thoroughly; lay off the lot both ways, as is done for corn; see the trees are sound and healthy; and that the roots are in proper order and moist, by dipping in water, or the dirt, manure and water mixture, and near at hand, and thoroughly protected from the sun and wind by the use of blankets, or by heeling in. Use a spade; press it into the soil to a proper depth at the crossing of the rows, and moving the handle forward from your position, open the soil behind the blade and in the opening let your assistant place the roots, being careful they are buried well under ground, nearly two inches lower than they stood in the nursery; let your assistant place the roots, being careful they are buried well under ground, nearly two inches lower than they stood in the nursery; let your assistant place the roots, being careful they are buried well under ground, nearly two inches lower than they stood in the nursery; let your assistant place the roots, being careful they are buried well under ground, nearly two inches lower than they stood in the nursery; let your assistant place the roots, being careful they are buried well under ground, nearly two inches lower than they stood in the nursery; let your assistant place the roots, being the place of the roots of the purpose of the roots of the purpose of the roots of t ground, nearly two inches lower than they stood in the nursery; let your assistant press with his feet the soil in such a manner as to bring it in close contact upon the roots and about the tree, the top of which is to be left standing straight. Continue in this way until the work is finished.

# Eagle Steel Lawn Swing

The Safest and Most Comfortable Swing Made

► HE JOYS of the swing appeal to the grown-up as well as the young. The old rope swing, however, has given place to the modern steel swing—a change that has brought both beauty, convenience and safety. The Eagle Steel Lawn Swing gives you what no other swing does-comfort and absolute safety. It has that easy, level and swinging motion without any tilting, the seats remaining upright, thus making this swing so different and so superior to the or-dinary steel swing. The most sen-sitive as well as the tiniest member of the family can use it with the greatest comfort and pleasure. wings as lightly as a feather in the breeze; it's as safe as a baby's cradle and as comfortable as an easy chair.

HE Eagle Steel Lawn Swing is made for service and hard wear. Not a cheap affair that will soon get out of order, but a substantial swing built of carbon steel that will last a lifetime. No parts to get out of order. So simple it can be put up in ten minutes. When folded occupies but little space. Easy to handle and move. Artistically finished; every part perfect. The Eagle Steel Lawn Swing not only leads in improvements but it's the most reasonable in price. It is guaranteed to be just what is claimed for it. If it isn't the pur-chase money will be refunded and all freight charges paid. Eagle Steel Lawn Swings are for sale by all dealers, or write to the manufacturers for special offer.

A. BUCH'S SONS CO. Orange Street Elizabethtown, Pa.

"Nor Francis of France, for that matter," said Geronimo, with a conscious pride that was excusable. "I like him better than our dark, plotting Don Philip. He was a soldier."

The speaker was not more than twelve or thirteen years of age, a stout, handsome lad, with bright blue eyes and a complexion as fair and rosy as a girl's. He had thrown his cap aside, and his long, curling flaxen hair was brushed back from a broad, high brow, on which even at that early age was plainly stamped the impress of genius and command.

"Will you throw again?" asked one of his companions.

will you throw again?" asked one of his companions.
"Not to-day," answered the successful javelin thrower, carelessly, "but if you please we will have a bout with swords. I will play I am Francis the First at Pavia, and, Pedro, you may be Charles the Fifth."

have defeated Charles."

It seemed like a bit of bravado, but it was not, only the frank, honest expression of a boy who was in deep earnest. The next moment their blades crossed as the two lads threw themselves into position.

"The great Constable is not here to-day to win a battle for Spain," continued the hoy called Geronimo, smiling, "so I do not think there is much danger of Francis losing his sword Look out, Pedro, I have touched you once; next time--ha!"

Pedro's sword flew into the air that instant, struck from his hand by a skillful blow, and fell down at the farther end of the yard, amid the shouts of the eager, watchful group of youngsters, while the conqueror made a threatening flourish with his own blade, and as suddenly desisted, walked slowly to the pile of arms and laid the weapon carefully down.

Two men who were standing at a window of the castle had witnessed this mimic war with a considerable degree of interest, and at its conclusion the elder, a large, heavy man, with a grave, saturnine countenance, dressed in a monkish suit of solemn black turned somewhat abruptly to his companion with the question, "Who is yon lad, Don Luis?"

"That is he—the boy—my Geronimo, your majesty."

"Hush! Not that name here. Remember,

"Hush! Not that name here. Remember, I am only Father Ambrose, a Hieronymite brother. But how comes the boy with such a marvelous skill in arms?" asked the other, bending his stern eyes upon Don

on now?

on now?"

The dark, grave man, clad in the monastic garb, turned to the window again as the sound of many voices and ringing laughter rose to the chamber. Standing there the two men were witnesses of a strange scene.

A motley crowd had gathered in the courtyard. In the midst was a band of wandering Moors, consisting of an old man, one much younger, and three girls, whose gleaming eyes and black, sweeping hair pronounced them of the purest stock of the Abencerrages, a brave, although a conquered race.

The Moorish dancing girls were much admired by the haughty Spaniards, and a

The Moorish dancing girls were much admired by the haughty Spaniards, and a throng of peasants, pages and men-atarms were looking on with gratified wonder at the agile gyrations of the dusky dancers. Whenever they paused the younger Moor passed round his fez, which was immediately filled with clinking silver. Among the horses that the Moors had ridden in on was one as black as night and graceful as an antelope, a pure Arabian, as one could tell by his dainty style and matchless beauty. The steed had attracted considerable attention, and one of the men-at-arms approached the elder Moor and expressed his wish to buy him. "Allah guard thee!" exclaimed the ancient Moslem, stroking his long, gray beard.

"I would not cheat a christian. The horse

him.

At length by the aid of a dozen men De Guzman succeeded in getting a saddle fastened upon him.

Two of the men-at-arms held his head, and De Guzman vauleed into the saddle. The Arabian uttered a wild scream, reared into the air, and sprang away with the speed of a deer while the man-at-arms was flung from the saddle like a stone from a catapult, falling upon his back—fortunately for him—in a soft, grassy spot.

"Mahound's own spirit is in the beast!" he exclaimed, as he rose to his feet more crestfallen than hurt.

ne exclaimed, as he rose to his feet more crestfallen than hurt.

"Said I not he was of no worth to thee?" said the aged Moor, placidly, as he whistled to the fiery animal, which immediately came running up to him and thrust its nose into his hands. "The christian does not live that can back him."

"Nay, but I can ride him." said the boy Geronimo, stepping forward.

"Thou."

"Thou."

"But how is this, Geronimo? Did not Charles defeat Francis?" asked Pedro, as he selected a light rapier from a stack of arms in the courtyard, that the boys had brought from the armory.

"True, but if I had been Francis I would have defeated Charles."

It seemed like a bit of bravado, but it was not, only the frank, honest expression

"Thou."

The white-bearded Moslem gazed earnestly at the broad forehead, the determined mouth, and the flashing eyes of the youthful speaker. The dancing girls had ceased their operations, and they, too, looked at him with a sort of pity and admiring wonder combined.

Geronimo seemed to read their thoughts, and he continued:

Geronimo seemed to read their thoughts, and he continued:
"Thou hast not answered. Is thy offer good to me as well as him? Can I have the horse if I can ride him?"
"Iderim is thine if thou canst ride him, I have said," replied the Moor, compos-

edly.
In an instant Geronimo was upon the steed's back, and the Arabian as quickly sprang away at a mad pace. But a different being from the heavy man-at-arms was upon his back. Geronimo seemed to have grown to him, until horse and boy appeared

"Santiago! that is good stuff to make a monk of!" mused the grave man in black at the casement above them. "A monastery must never curb that spirit. Hark ye, Don Luis de Quijada, I absolve thee. I foresee what the end will be. Eagles' eggs will make eagles, no matter where you hatch them. I am glad you brought me to see the boy. Do you see to his training longer still. I will speak to Philip. There may be need of him. Hush! Who comes?"

There was the sound of hurrying feet in the corridor without the door, and the next moment young Geronimo rusned in, his cheeks flushed with excitement, and his fair locks flying over his shoulders.

"Fie, Master Impatience! Is this the way you rush before company?" asked Don Luis, with bent brows. "It is our good friend, Father Ambrose, who has come to see what progress you are making in your books."

to see what progress you are making in your books."

"Burn the books!" cried the lad, irreverently. "They put me to sleep. But O, I have won such a prize—a pure Arabian, worth his weight in silver reals."

"Where learned you how to handle the javelin and sword so skillfully?" asked the visitor, sharply.

"From an old soldier who lives in the village yonder," answered Geronimo, readily. "He fought in the wars of Charles the Fifth. O, if I could only go to battle."

"Thou mayest have that privilege some day," said Father Ambrose, very gravely. "Perchance, however, as thou art older, thou wilt prefer the calm seclusion of monastic life to the strife and danger of arms."

arms."

"That will never be. Who would be a monk if he could help it?"

The boy's frank speech rather annoyed the visitor, who bit his lips.

"Charles the Fifth, the greatest monarch since Charlemagne, Emperor of Germany, King of the Spains, lord of the Netherlands, half of the Sicilies and of countless realms beyond the seas on whose lands, half of the Sicilies and of count-less realms beyond the seas, on whose dominions the sun never set, renounced all his titles and his state to become a simple monk," said the priest, bending on the youth his strange, dark gaze.

"I have heard he did so because he was disgusted with the cares of royalty," answered Geronimo, "A monastery would kill me."

answered Geronimo. "A monastery would kill me."

"Well, thou art young yet. Meanwhile thou shalt remain here and train that wild steed thou gottest from the Moor. 'Twas a bold deed, though a reckless one, and I believe the old moslem spoke true when he said thou wilt be a great leader of men. May our blessed St. James have you in his keeping."

The boy's heart bounded in his bosom as

The boy's heart bounded in his bosom as The boy's heart bounded in his bosom as he turned from that strange presence. Praise from this singular man was pleasant, but what could he mean by hinting at the great life before him? Would he, indeed, ever become a mighty captain and lead brave men to battle?

For many weeks and months the boy Geronimo pondered on the monk's strange

Geronimo pondered on the monk's strange

One year afterward he learned what they meant, for tidings came to Villagarcia one September day, that Father Ambrose, who, before he resigned his state and took a

before he resigned his state and took a monk's cowl, was known in the world as the Emperor Charles V., had died in the monastery of San Yuste.

And who, you ask, was Geronimo, the boy conqueror, who won Ilderim, "the lightning?" His name is a great one in European history—the victor of Lepanto and Governor of the Netherlands, who gained immortal fame and died before he was thirty-three—Don John of Austria.

gan to relax his speed, then he turned him and guided him to the group of spectators, bringing him to his bearings with the grace and skill of a practiced equestrian.

A shout of applause greeted his triumph. Even De Guzman, smarting from the bruises of his defeat, with the

# The DOY and the Oldsmobile

¶We have a proposition of interest and profit to YOU as a bright, wide-awake American boy.

¶ Isn't it true that you are never so happy and independent as when you are earning your own pocket-money—when you are "doing something." Enterprise appeals to your imagination—arouses your latent activities—makes a man of you.

¶ Out-door sport appeals to you as a live boy, and of all outdoor sport, the automobile is king.

# Boys, Here's Your Chance •

The Oldsmobile is the machine you know about—the one you want. You can own it if you have a fair amount of energy and hustle-in other words, if you are a "live boy."

¶Our proposition offers you not only a chance to own your own machine but to earn some easy pocket money as well. We are offering over \$2,000 in prizes for work which can be done in your spare time, leaving you all your usual time for play.

¶We want to tell you all about it, and want you to sit right down and write us a letter asking for information. Send a two-cent stamp for "A Message to Boys" and get the full details regarding this interesting proposition before the other boys in your neighborhood awake to its possibilities. Don't let the other fellow get in ahead.

Olds Motor Works

# BOYS AS MONEY MAKERS

#### Little Romances of Savings Banks

A ragged little newsboy entered a Pittsburg bank one day and boldly invaded the private office of the president. 'Say, mister," he said, "can I put some money in this bank?"

"Certainly, you can," the president answered; "how much do you want to de-

"Certainly, you can," the president answered; "how much do you want to deposit?"

"A quarter!" exclaimed the youngster, pulling a handful of pennies and nickels out of his pocket. The banker took him over to the receiving teller and introduced him with all the deference that he would have shown to a millionaire.

The boy left the city soon after opening the account, but he kept adding to his deposit from time to time, and, as he was naturally bright and shrewd, everything he undertook prospered. He is back in Pitisburg now, the head of a successful manufacturing concern and one of the bank's most valued customers.

A year ago a proud young father out in Michigan sent \$25 to open an account for his first-born son, then less than a week old. "The boy'll need it some of these days," he wrote, "and we may as well begin to save for him right off." Six months later a tear-dimmed letter came, asking to withdraw the money, to pay the little fellow's funeral expenses.

A working woman in a litle town in New York sent a dollar bill in the name of her daughter, six years of age. "She'll be marrying by and by," she said, "and ought to have something to start life on." That was nearly two years ago, and almost every week since a dollar bill has been added to the account. There'll a snug little marriage portion for the young lady some day, if nothing happens.

Not long ago a woman living in Illi-

Not long ago a woman living in Illi- ing and its other proofs of ignorance on

Gents,

I would like the job you advertize in the paper so please let me no whare to come to see about it. Have had a good job but give it up because of the low pay. I wont work for less than six a week, hope you give saturday afternoon off. If you anscer this let me know hours and wages and what the work is. Would like the place if it would soot me. Write at once as I have another job I may take soon, so let me hear from you by noon tomorrow With kind respect.

A fourth applicant, whose capital let-

A fourth applicant, whose capital letters began and ended with the most elaborate and deeply shaded flourishes, and who had drawn a picture of a bird on the wing at the top of the sheet of paper, wrote as follows:

Dear Sir:
Enclosed find sample of my penmanship which is not my best for I have a poor pen. Can do any kind of fancy writing and am clever at drawing pen pictures. Am fair at figgures. Would like the place if the pay is all right. Can give good recommendations. State full particulars if you reply to this.

The fifth letter was neatly written on

The fifth letter was neatly written on a full sheet of plain, unruled paper, with an envelope to match, and it was as follows:

Dear Sir:
Will you kindly consider me an applicant for the position you have advertised in this morning's Herald? I am sixteen years old and have had some experience in general office work. It would give me pleasure to call on you with references if you would like to have me do so. Very sincerely yours,

Now which one of these five letters do you think would make the best impression on a business man, or on any one of intelligence and discrimination? Surely not the first letter with its bad spell-

IN CAMP ON LAKE CHAMPLAIN Photo by Mrs. E. E. Trumbull, Plattsburg, N. Y.

nois sent five dollars, with explicit instructions not to let her "old man" know about it, as "he'd be after spending every cent of it for drink."—Success,

# Can You Write a Letter?

The ability to write a letter as it should be written is a valuable accomplishment. A poorly written and badly spelled letter always makes a bad impression, and often subjects one to a great deal of ridicule. Some years ago I was employed in the office of a gentleman who wanted to engage a boy for general office duties. An advertisement was inserted in one of the daily papers and all applicants for the place were spectful and willing to serve. He did to apply in their own handwriting. Now, I want to give you some of the responses to that advertisement, just as day afternoon off," as did the writer of the third letter. Altogether, it was a

the part of the writer. And just here let me urge upon you boys the importance of learning to spell correctly. Bad spelling always makes a bad impression on a person of intelligence. Good handwriting does not atone for poor spelling. While inability to spell correctly is not always a sign of ignorance it nearly always excites ridicule, and where one is unacquainted with the writer it creates the impression that he is an ignorant

Now, I want to give you some of the responses to that advertisement, just as they were written by the applicants for the position. Here they are:

Dear Sir,

Please consider Me an applicant for the posishion you advertize in this morning's heraid. I wood like the place real bad so please let me have it.

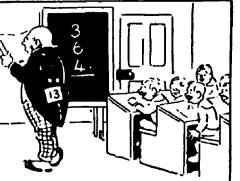

Another applicant—all names will of course be omitted—wrote as follows:

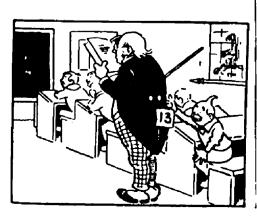

Deare Sir:

I desire to aply for the place you put in the morning paper. Am 15 years ould an think I can fill the bill if wages is sattisfactory an the hours aint too long. Let me know if you want me an I will come an see you an talke things over.

This letter was written on half a sheet of solled note paper and inclosed in a very dirty yellow envelope. A third letter was written with a lead pencil, on a sheet of paper evidently torn from an old record book, and it read as follows:

"Where There's a Will—"

#### Toilet Hints for Boys By R E. M.

Some people seem to think that it is only a girl who needs information about toilet matters, and yet they are very quick to notice if there is anything amiss in the body.

quick to notice if there is anything amiss in the boy's appearance.

Many times the reason for a boy's apparent neglect is because he does not know exactly what is needed, and thinks it is not quite proper for a "man" to bother about such things. Nine times out of ten the mother and sisters are to blame for this view of the matter. It is just as necessary for a boy to be neat about his personal appearance as it is for a girl, and how is he to learn the little "tricks of the trade," unless some one tells him?

The care of the hands and finger nails

The care of the hands and finger nails is important. The hands of boys on the farm soon become hard and calloused, but if they are kept clean and the nails neatly trimmed, the owners need not be ashamed of them. A dish of cornmeal on the wash shelf will assist in keeping the hands clean, and a little cream rubbed into the skin at night, will help to keep them from chapping. A small, stiff brush that can be bought for five cents is excellent for brushing the nails when washing the hands. Nothing about the hand looks worse than a black line at the root of the nail. When warm water is used for washing the hands, be sure to rinse them in cold water, as that contracts the skin again and prevents The care of the hands and finger nails to rinse them in cold water, as that con-tracts the skin again and prevents chapping. Some boys have an idea that it is best to wash in cold water, even in the coldest weather, but this is a mis-take, as warm water will remove the dirt better and the cold rinse tones the skin. Use pure soap for washing the hands and face. White castile is perhaps the

Now, I want to say a word about shaving. Some boys begin shaving too soon, and make themselves ridiculous by scraping their faces with the razor before there is a hint of down to remove. fore there is a hint of down to remove. Others wait too long and allow their faces to show not only the down, but a few scraggly hairs on the chin before they resort to the razor. After these appear it is time to use the razor, and ev-ery boy should learn to use it on his own ery boy should learn to use it on his own face, as there will be times when neither the barber nor his boy chums will be at hand. Use only the best kind of shaving soap, as it takes such a trifle each time that the expense need not matter. To relieve the disagreeable sensation after shaving, dust the face liberally with toilet powder. If sister offers her box of Mennen's, it will be well to accept it gratefully.

box of Mennen's, it will be well to accept it gratefully.

The care of the hair is another thing that is sometimes neglected. Of course, the hair is combed when it needs it, but it should be brushed, as brushing makes the hair soft and teaches it to stay where it belongs. Brush it well every day. every day.

#### Company News

COMPANY News

YOUNG AMERICANS ATHLETIC COMPANY, No. 28, Petaluma, Cal., has now 12 members. Its ball team played its first game on April 27th but was defeated, the score being 28 to 24. Better luck next time. THE SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ill., has now 32 members on its roll. It intends to celebrate its first anniversary on June 13th at Fairview Park in the form of an afternoon and evening plenic, with athletic games and baseball in the afternoon and a supper in the evening. At its anniversary the company will also install new officers. Company picture was duly received. All the members are most enthusiastic and expect to be able to rent a hall this fall as permanent quarters. This company since its inception has been earnest in living up to and practising the great principles of our Order and we trust that the prosperity it presently enjoys will be greatly increased. ROCKY MOUNTAIN BOYS' COMPANY, No. 5, Oxden, Utah, has a nice clubroom fitted up in the home of one of the members. The walls are decorated with pictures of great men. It has nine members \$4.50 in the treasury and 20 volumes of books in its library. Its charier has been framed and it has an O. A. B. Pennant. A baseball outfit was got by selling bluine. July 5 has been fixed by the members on which to give a reception to their parents and friends. This is a first class plan and we trust that the members will acquit themselves in a creditable manner. The company meets every Friday evening, the members giving reading selections, violin and mandolling solos, etc. Dues 5 cts. each meeting. MASSASOIT COMITANY, No. 37, Rockford, Ill., has held its fourth semi-annual election and the new officers are: Raiph H. Woolsey, Capt.; Charley R. Cope. V. C.; Ray C. McLarty, Secty.; Wm. Kellberg, Treas., and the form of the confidence the members have in their officers that they should re-elect them for the third and fourth time. This company is now having a history of its career since organized printed, and the Secretary will rurnish copies to mem make its own by-laws, provided such are in accordance with the principles and purposes of the Order. ## The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS Under the Auspices of "The American Boy"

#### Object:-The Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

BANGAMON BAY LEAF OO. No. 46, DECATUR, ILL.

Now, if the boys of America ever expect to have a permanent yearly celebration of their own, it seems to me that they never can have a better opportunity of making their efforts tell, than now, when the idea is being so energetically and widely spread. Do not think because your town is small and away from the large centres of population that it is useless celebrating. Population, large or small, makes no difference, as a celebration can be as successful in a town of 1,000 people as in one of 100,000 if only the boys will be up and doing. Get your adult friends, parents, teachers and others to interest themselves in the matter. Let them understand that their part in the celebration will only be to procure a suitable meeting place, select the boys to take part, have a few rehearsals and act as chairman of the meeting. We will promise the material for the program. We have still some copies of the pamphlet containing the proceedings of American Boy Day at St. Louis, and we shall gladly send free a copy to such adult friend who writes for it. This will give an idea of how we conducted the "day" at St. Louis. Now, there is no time to lose, so get to work, everyone with a will, and the determination that your celebration of American Boy Day, 1905, shall be a memorable one in your town. We shall also, on receiving intimation from any adult person assuring us that American Boy Day will be celebrated in his town, send copy of a program for the celebration.

#### Correspondence Clubs

The number of boys who are joining these clubs is most gratifying, showing that they are desirous of gaining a store of valuable knowledge and information which will be of the utmost value to them. These clubs have now passed the preliminary stage and are in first class shape. Of course I need not point out that the more boys who join these clubs the greater the benefits that the members will derive. Every boy interested in any line of work or hobby will find it of the greatest benefit to become a member of some one of these clubs.

#### Special Prizes

The three companies who were in the lead in the contest for increased membership on May 31st were: Honest Abe Company, No. 38, Division of New York, Freeport, L. I., N. Y.; Sangamon Bay Leaf Company, No. 45, Division of Illinois, Decatur, Ill.; Anthony Sunflower Company, No. 32, Division of Kansas, Anthony, Kan.

#### Renewing Subscriptions

I again wish to draw the attention of captains to a matter of importance; and that is, that in order to keep up the membership in your companies, you should carefully watch for the expiration of your members' subscriptions and obtain and send in renewal subscriptions before such subscriptions run out.

#### Company Letter and June Program

Detroit, June 10th, 1905. My Dear Captains and Brothers of Our

Detroit, June 10th, 1905.

My Dear Captains and Brothers of Our Order:

Within a few days after this letter reaches you, schools will be closed, and you will be set free for a time from your studies. To some of you it will mean a complete rest from every kind of work, and you will probably do nothing but play. To others it will mean only a change from one kind of work to another. To you all I sincerely wish a great good time, and that you may return to your studies in September with every energy invigorated.

There are other members of our Order who will this month leave the school-room not to enter it again. You now intend to seek out employment whereby you may begin your life's work. With hope and courage you intend to make of yourself something that will count; not one of you, I am sure, has the slightest thought of being a laggard in the, it may be, long race before you. To you, I would say, watch. Do not be willing to jump at the first position offered because of the inducement of salary. Find out what you like best, what you are fitted for, and altho you may not obtain your special work just at the beginning, bend every effort in that direction. Do not, as so many are doing, think that if you get in eight hours' work you are entitled to spend the remaining hours of the day in forgetting your work. You will never amount to much by doing that. It is only by keeping everlastingly at it that success comes, and no man, and no boy, ever achieved success except by putting forth their best energies.

Whatever employment you may ob-

ting forth their best energies.
Whatever employment you may obtain, be diligent and faithful. Don't be shirkers. I think the shirker is the meanest and most contemptible being on earth. You may not be smart or meanest and most contemporation on earth. You may not be smart or extraordinarily brilliant, or be a genius, but you can be faithful, and faithfulness counts. In these days it is the faithful, diligent boy or man who can be relied upon in every emergency whom employers are seeking and to whom they are willing to pay large salaries.

Yours for M. M. M.,

WM. C. SPRAGUE,

President General.

HE Boston English High School orchestra was organized in October, 1887, and has enjoyed a continuous existence. Its efforts in the beginning were not pretentious, but the easy pieces within its scope were well rendered.

well rendered.

The accompanying picture was taken for the St. Louis Exposition and shows thirty-one players. At the present time there are nearly forty members, and every instrument is represented except the oboe.

Though the membership has changed more or less from year to year, it has increased in numbers and musical power. So great has been the improvement in playing orchestral instruments that pieces which

orchestral instruments that pieces which in the beginning were well nigh impossible can now be rendered with little difficulty.

The orchestra has been continually under the direction of its founder—the writer of this article—one of the teachers in the Stuart Cangney and His Two

The present elective system in the Boston high schools allows one diploma point for those who practice vocal music one hour a week, and the orchestral practice in this school is now recognized to be of the same

No financial assistance has ever been given by the city. The property of the Orchestra has been contributed by the members to the amount of \$200 in instruments and library. In the latter are one hundred and thirty selections, among them works by Beethoven, Mendelssohn, Wagner, Schumann, Schubert, Weber, Gounod, Suppe, Moszkowski, Scharwenka, and many American composers.

There are also some thirty manuscript arrangements, the private property of the director. The program at the last graduation contained the overture "The Merry Wives of Windsor," and Wilhelmj's transcription of Walther's "Preislied."

Several members of No financial assist-

also a manufacturer of all kinds of drummer's traps, acquired his interest as a member of the E. H. S. Orchestra.

The organization has often played in connection with the lectures in the Old South Meeting house, and for other educational functions.

Now that instrumental music has been companied.

cational functions.

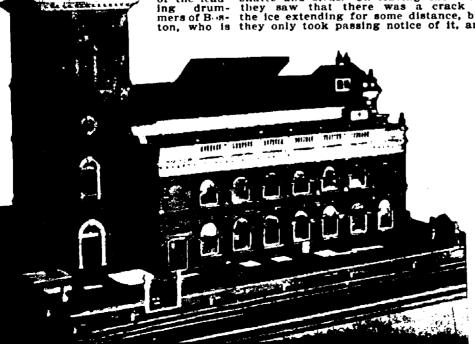

Now that instrumental music has been recognized as a regular study in this school, there is every encouragement for a pupil to keep up practice in ensemble playing; pleasure is added to profit; and he never lacks a delightful means of entertainment for himself and for others. One enjoys music more when he is himself a part of it, and thus busily and happily engaged, he experiences a conscious increuse gaged, he experiences a conscious increase of power which is most exhibarating and healthful.—The American High School.

# Little Sisters, Whom He Saved From Drowning

Stuart Cangney of Catawba Island, Ohio, age nine, recently saved his two little sisters, Verdi and Elizabeth, aged five and seven years, from drowning. The home of these little folks is situated at the north end of Catawba Island, about 100 feet from the water's edge. On the occasion of the rescue the chil-

work. One dren went down to the ice with their of the lead-skates and sleds. On leaving the shore ing drum-they saw that there was a crack in mers of B-18-the ice extending for some distance, but they only took passing notice of it, and

upon which they had been playing broke into small cakes and was distributed far and wide by the heavy seas.

### Smart Ginger

Ginger is an Irish terrier of such uncertain disposi-tion that his master doesn't like to take him along when he expects to meet strang-ers. But Ginger didn't care

ers. But Ginger didn't care so much what his master wanted as what he wanted himself; so he generally followed his owner whether he liked it or not.

A few weeks ago he did this, and when his owner ordered him home, Ginger sneaked along behind him, hiding behind bushes and trees whenever he looked around. When they had gone so far Ginger thought he was safe. He made his appearance, wagging the stump of his ginger-colored tall.

tail.

His master was going out canoeing, and he had to take Ginger along because he could not send him back home. So they went out together and Ginger's owner paddled straight out into the ocean. It was a little rough, and Ginger got tarrible.

straight out into the ocean. It was a little rough, and Ginger got terribly seasick.

Since then Ginger's master has no trouble about making Ginger stay home. Whenever he does not want the dog's company he simply picks up a paddle, and Ginger immediately crawls under the sofa and hides till his master is out of sight.

### A Newsboy With a Voice

Newsboys with voices are not rare, but newsboys with voices like that of Sam-mie Jasper, of Cleveland, Ohio, are not

SAMMIE JASPER

found on every bush. Sammie came from Russia to this country at the age of two and a half years, and is now fourteen. His voice is a clear tenor. Some time ago his singing attracted the attention of crites, who at once saw to it that Sammie got an opportunity to quit selling papers and learn how to make money in some other way. For some time he took part in entertainments in Cleveland homes, and then was sent to New York homes, and then was sent to New York to begin a musical education. If Sammie succeeds, as no doubt he will, for he is a careful and conscientious boy, he will not be the first newsboy who made a success in the line of music.

### Model of Historic Old Christ Church Added to the National Relics in Independence Hall

A model of historic old Christ Church, where Washington and other celebrities worshipped, has just been added to the national relics in Independence Hall. The model was made by the late Joseph E. Hover, of 416 Race street, Philadelphia, and was presented by his heirs. The model is exact in every particular, inside and out, even the gravestones in the yard being accurately reproduced in miniature. The model is accompanied by miniature. The model is accompanied by a leter from Thomas U. Walter, the architect who reconstructed the interior of the church in 1836. In this letter Mr. Walter states that the model is a faithful reproduction of the original.

Old Christ Church is located upon Second street above Market street, in

what was once the fashionable quarter of Philadelphia, but which has for generations been devoted almost entirely to purposes of traffic. The church, which was one of the most notable in which was one of the most notable in the colonies, was completed in 1744, the steeple, however, being finished seven years later. The church was the place of worship of George Washington, Ben-jamin Franklin and many other per-sonages of distinction.

# Do You Want to Change Your Work?

Before the days of the I. C. S., if a man wanted to change his occupation he had to let go the ladder he was on and begin all over again at the bottom of the new ladder. The I. C. S. system of spare time training by mail has changed all that. To-day if a man desires to change to a more remunerative, more congenial occupation he can prepare himself for the new occupation while pursuing the old.

The I. C. S. has made the way and the cost both easy.

If you want to change to a better paying occupation or if you want to advance more rapidly in your present line of work the first thing, the important thing, is to ask HOW by filling in and mailing to us the coupon below.

International Correspondence Schools Please explain, without further obligation on my part, how I can qualify for a larger salary in the position before which I have marked X

in bright colors, such sentiments as the following: "Bound for the land of sunshine, flowers and corn," "A soldier, I fought to make Kansas free, and for my future home," "Three cheers for the Stars and Stripes and for the Homestead Bill," and so on.

Liverymen did a thriving business in those days in Kansas, as there were few

Liverymen did a thriving business in those days in Kansas, as there were few railroads. My trip through the state would in most part have to be made in the saddle. Upon reaching Emporia I cast about for a good saddle horse and was told to take my choice of two Colorado ponies, Black Bess and White Bess. I chose White Bess for several reasons. Her fine shape, her large black eye, Her fine shape, her large black eye, pleased me, and then a white horse does not attract the heat as does a dark one. Bess had never been in a saddle until that year, having run unrestrained from a foal on the prairie.

I had been out about a week on my trip when I reached the brink of the Verdigris river. After swimming the river we had to ascend a very steep hill. Once on top, what a grand view presented itself of gentle, rolling prairie, nature's rich green pasture and meadow-

I set off down the hill in a canter, a

I set off down the hill in a canter, a gait a Colorado pony can keep up all day. Soon I passed a dead Texas steer. I knew it to be a Texas steer by the long horns. His head was turned toward the slaughtering pens of the East, but it was not his to die that death. Shortly afterwards I met a number of Kaw Indians, riding their horses tandem, which I thought a very unsociable and inconvenient way, considering the miles of unfenced and unoccupied prairie around them. Each of them carried quite a quantity of meat. They had evidently been on a hunt and were returning to their homes in the Neosho Valley. Each one as he passed said "How! How!" their usual salutation, but I noticed they looked more at the pony than they did

Shortly after noon I reached a "break" or small canyon, where there was plenty of good water and "break" or small canyon, where there was plenty of good water and short, tender grass, on which Hess might feed. The water was in what was called "drawers," a clear spring of cool water which runs under ground, coming to the surface every few rods. I had brought a lunch, and after selecting a shady place under the shelving of a white magnesia lime rock, above which grew a prairie rose in full bloom, and also what I took to be a wild gooseberry bush, I made a very hearty meal; Bess, too, seemed to be enjoying hers. Long before sundown I could see the "shack," or house, with the high-built corrais of the ranchers. They built the corrals high to keep the wolves from destroying the sheep at night. I reached the ranch at six o'clock.

The next day was very warm and sultry, and I was preparing to return when a heavy storm came up. First there were low, blue-black clouds, accompanied by tremendous wind—a small Kansas cyclone, blowing down

came up. First there were low, blue-black clouds, accompanied by tremendous wind—a small Kansas cyclone, blowing down trees and fences. Immediately after it had passed a bright, saffron-colored cloud came up, bringing with it a very heavy rain, a "cloud-burst," they called it. It was now late in the evening, but as I was anxious to return, I started. About halfway back I had to cross Bird Creck, and as I approached it I could and as I approached it I could hear the roar of the waters. It hear the roar of the waters. It was quite dark, the moon not being up, and, before I arrived at the banks of the creek, the water reached the skirts of the saddle. At last Bess went to her neck. I knew it would be dangerous to go farther at that point, and concluded to go a little way up the stream, hoping to find more shallow water.

The trail showed very little travel, and was hard to keep in the dark. I concluded to count until I crossed, then count in the same way on the other side, and

until I crossed, then count in the same way on the other side, and in that way find the trail. I also dismounted and struck a match, to make sure I was on the right track. Finally I got back to Bird Creek. Five times I tried to cross, but each time was diven back by the depth of the water. I should govern! of the water. I shouted several times

of the water. I shouted several times in order to attract the attention of any house dog, in case I might be within hailing distance of any human habitation; but there came no welcome bark. The moon was giving some light now, but I felt that I was completely lost. I decided to go back from the creek a short distance. Taking off my blanket, I spread it on the grass, and after taking the saddle and bridle off Bess, and fastening her with a lariat, I sat down and lighted my pipe, preparing to spend a long and lonesome night. I could hear the dismal howling of the coyotes, but they were not dangerous. Frogs gave a free concert in the muddy waters of the creek. Occasionally a prairie bird, with free concert in the muddy waters of the of the battle and brought back found with notes of alarm, flew upward, but quickly descended. As I quietly smoked, without any warning, a long-winged bird hit me full in the face. Again and again,

Among the contered and brought back found with his back broken, some distance from the others, trying to drag himself to the river.

Among the relics of this trip I brought

without warning it came, first on one side and then on the other.

About three hours before dawn, Bess, who had been lying down, leaped to her feet with a cry of alarm that sounded almost human. Looking in the direction where the animal was grazing, I saw what at first glance seemed to be a wild cat, but a nearer view revealed a wolf that had in some way lost part of its tail. I got my revolver and kept a watch on him. He kept moving around Bess and me in circles, snarling and sniffing the air. He kept this up for some time, but at last started for the river.

It was with a sigh of relief that I watched his long shadow until he disappeared over the ridge. Bess lay down again, and I took up my lonely vigil, watching for the dawn of the morning. How still it was—nothing but the wash and swirl of the creek.

I must have ben dozing, when Bess gave another alarm. Springing to my feet, I saw that the same wolf had returned with a dozen more. I knew I had cowardly but treacherous brutes to day. Soon I passed a dead Texas steer by the I knew it to be a Texas steer by the long horns. His head was turned toward the slaughtering pens of the East, but it was not his to die that death.

Shortly afterwards I met a number of Kaw Indians, riding their horses tandem, which I thought a very unsociable and inconvenient way. considering the miles of unfenced and unoccupied prairie around them. Each of them carried quite a quantity of meat. They had evidently been on a hunt and were returning to their homes in the Neosho Valley. With my gun in my right hand, I threw their usual salutation, but I noticed they looked more at the pony than they did at me.

With a doyard more. I knew I knew I knew in the accovarily but treacherous brutes to dead with a doyardly but treacherous brutes to deal with. Bess evidently wanted to go to battle. They circled round us, commanded to battle. They circled round us, commanded them and nearer, snarling and mearer, snarling and would break his mother's heart, and at least leave a very sore spot on my own. But—

Is this the only way a mother's heart is ever broken by her sons?

There is something more than school-mok lore to be acquired by our boys in their school days. Their associates are actively molding the character of each other; their frames are settling into health or abnormal conditions; the success or failure of their future careers are broked more at the pony than they did ful wound. He fell back and was pre
Take 1.000 boys who are brought up in the active sports of which foot-

ess or faiture of their future careers are eing decided.

Take 1,000 boys who are brought up in the active sports of which football is a type. Note the fine athletic frames, the ruddy complexions, the clear eyes, the frank, open countenances. The keen, alert BULLETS INTO HIM, KILLING HIM INSTANTLY true value is to be expected.

They may become erudite, but
they will never be men of action. At
least 100 of them die before maturity of
minor ailments and accidents which their minor allments and accidents which their robust competitors would have thrown off with ease. They are a race of weaklings, valetudinarians, shivering over the register while their hearty brethren are enjoying the brisk air outside. Should an emergency arise calling for the exercise of strength and judgment, they may show the same courage as the others, but their shrunken muscles are unfit for the task before them; and if they plunge into the river to rescue the drowning maid, it means simply one more to be drowned or

paring for another attack, when I saw my opportunity and sent two bullets into him, killing him instantly. Before I could make a move, another wolf ran up to his dead comrade, sniffed the carcass, turned his head upward and gave a dismal how! It seemed to be a signal to all the rest, for they hurrled off to

Walnut river.

After the battle I examined Bess. She was severely hurt on the hips and breast. It was well that I placed the lariat around her neck, instead of the front foot, as I generally did, for I believe the rope swinging before her throat saved her life.

When I reached my next stop, which was the home of a friend whom I had known in Ohio, I related my night's experience. We went back to the scene of the battle and brought back four

### Amateur Journalists' Annual Conventions

The work of the Amateur Journalists' year culminates in the annual conventions which are held under the auspices of the national associations. Convention week represents the red letter days of the hobby to the majority of the junior journalists. Crowded into the convention days are any number of pleasant with the whites. Their reservation at this time (1867) was on the Neosho and Post (1867) was on the Neosho and River Valley, about eight miles northwest of the now flourishing city of Emporia. At the same time I purchased the bow, arrow and quiver of old Ehebea then the oldest Indian in the tribe.

Many long years, with their sunshine and shadow, have come and gone since that night in the wilds of Kansas, and I suppose Bess has gone where all good ponies go, and the scars on my writing and hand, and the memories of that and hand, and the memories of that me until I, too, shall have passed over the Great Divide.

A Discussion of Football That

Will Interest Parents

An interesting discussion by physicians on the subject of football recently appeared in the Medical World. Dr. William F. Waugh, of Chicago, writing on the subject says:

"My son, aged 12 just writes me that he game. To have this fine boy killed or maimed would break his mother's heart is game. To have this fine boy killed or maimed would break his mother's heart is ever broken by her sons?

There is something more than school-book lore to be acquired by our boys in their school days. Their associates are actively molding the character of coloner; their frames are settling into the city molding the character of coloner; their frames are settling into the active sports of which for the conventions. A AMERICAN BOY readers will be actively molding the character of coloner; their frames are settling into the city molding the character of coloner; their frames are settling into the city molding the character of coloner; their frames are settling into the city molding the character of coloner; their frames are settling into the city of the conventions. All AMERICAN BOY readers will be cordially welcomed.

Take 1,000 boys who are brought up in the active sports of which for the conventions. All AMERICAN BOY readers will be cordially discussed in the conventions. The conventions at the convention of the convention of the convention at the eature sports of wh and profitable features, which render the occasion one long to be anticipated and longer I suppose Bess has gone where all good ponies go, and the scars on my wrist and hand, and the memories of that night on the lone prairle will be with me until I, too, shall have passed over the Great Divide. A Discussion of Football That

rountenances, the keen, alert glance, and tell me if these are not the men on whom the Nation will depend in its troubles. When occasion arises for the exercise of trated then on May 6 last at the Republican strength and readiness, these men club in New York City at the Reunion of The strength and readiness, these men are on hand to rescue those in peril, extinguish fires, command the crowd. Well developed muscles and practiced minds enable law, medicine and business came from many them to do things for which the states to gather about the festal board and others are unprepared. We will pay tribute to amateur journalism, both for allow that in the training one is the jolly times it had made possible and the the jolly times it had made possible and the drowned, one bursts a blood-vessel, one dies in a scrimmage, and two are maimed for life. The other 995 receive no permanent injury.

Take another 1,000 and educate the jolly times it had made possible and the good it had done in the halcyon days of boyhood. Many clever speeches full of wit and sentiment were made and each "fossil" pledged himself to use his best efforts for the perpetuation of amateur journalism and to aid the young amateurs of today. Space limits prevents a list of the distinguished guests present, but the writer as he traveled to his hotel was full of enthusiasm at the notable and inspiriting occasion. Take another 1,000 and educate them on the principle of avoiding all sports that involve an element of danger. They do not play games, swim, ride, fence, jump, wrestle, leap, box, or row. They are carefully garnered into their little beds at 8 p. m., bathe only in warm water to avoid chilling the skin, eat only sterilized and predigested foods, read only expurgated books of the most inoffensive style, and are in a word brought up on the carefully-shielded-from-harm-and-the-knowledge-of-evil theory. spiriting occasion.

By no mecns so elaborate but every white as enthusiastic was the sixth annual reunion of Philadelphia amateurs, past and present, which was celebrated at the Walnut on May 26 by a reception and dinner. Many glowing words to the efficiency and pleasure of amateur journalism were spoken in the toast responses. Everybody, young and old, had a royal good time. The society seconded the proposal of the Philadelphia Amateur Journalists' Club to hold the 1906 convention of the National Amateur Press Association in the Quaker City and initiated a movement to have a grand raily of amateurs of all periods at the same time.

Philadelphia is a candidate for convention reat, 1906, of the National Amateur Fress Association.

reat, 1906, of the National Amateur Press Association.

Baltimore and New York are tussling for the privilege of entertaining the United Amateur Press Association. Each of these cities promises a cordial welcome and a royal reception to the visiting amateurs.

It is not often the case that three opposing candidates for an important office in an organization have a chance to fulfill its duties during the same year. The mutations, time, rpace and circumstances have brought about just this condition of affairs in the United Amateur Press Association. At the last convention in Baltimore, John W. Smith (The Amateurist), of Philadelphia; Lee B. Chase (The Pennant), of Chicago, and I. Eugene Reymour (The Venture), of Kansas City, were rivals for the office of official editor. J. W. Smith was elected. A business removal to Baltimore necessitated his resignation in November, when I. E. Seymour was appointed. The latter removing to Albany, N. Y., to enter professional journalism, Louis J. Cohen, of Minneapolis, was appointed. He, too, resigned, and Lee B. Chase was appointed. His will prohably stick the matter out, as he is a persevering lad.

# University of Pennsylvania Will Try to Make Every Student an Athlete Automatic Midget Artist's

THE DIRECTORS of the University of Pennsylvania mean that the college shall become one of the foremost athletic centers in the country. With this end in view they have just built a magnificent new gymnasium at a cost of \$525,000, and have searched the continent for a man suitable to take charge of this fine building as physical director of the University. The choice has fallen on Dr. R. Tait McKenzie, President of the American Association of College Gymnasium Directors.

TESTING THE LUNG CAPACITY

Since Dr. McKenzie came to Philadelphia from the McGill University in Canada there has been a mighty stirring among the dry bones of the University. Every student who has athletic ambitions has been requested to call at the office of the physical director, and cards of invitation have been aftered and recorded by one of the scribes in the director, and cards of invitation have been sent to all the college boys, whether athletically inclined or not, asking them to come and be examined with a view to their future usefulness to the college as stars of the cinder path or field. To examine so many boys has proven a Herculean task, but Dr. McKenzie and a staff of assistants have been busy night and day, testing the student's strength, registering his lung capacity, measuring his bleeps and gauging his general efficiency biceps and gauging his general efficiency in a physical sense. As a result the physical condition of all the boys is recorded in the office of the director and Dr. Mc-

TAKING HEAD AND NECK MEASUREMENTS

are fit for nothing but weight lifting and strap breaking. He wishes to so train the boys that they shall be physically fit for the battle of life, as well as able to excel in the particular department of athletics which their muscular development suggests a fitness for a fitness for.

a fitness for.

Dr. McKenzie's method is first to carefully examine the boy, his condition and his family history and then prescribe for him the exercises that are most suitable to his strength. First the student is required to fill out a blank in which are some questions that it would seem are not intimately connected with the boy's physical condition, but which nevertheless must be answered before the physical director can determine precisely how to instruct the young man to exercise. Here are some of these apparently inappropriate questions: priate questions:

priate questions:

Do you resemble your father's or mother's family in general build? Are you subject to colds in the head? Can you breathe freely through each nostril? Do you suffer habitually from cold hands or feet? Do you suffer from sleeplessness?

Having filled out the blank form which contains these and other questions, the student is then introduced to the remarkable collection of apparati in the office of

student is then introduced to the remarkable collection of apparati in the office of the physical director. The measurements and tests that are made while he is moving about the room from one instrument to another consist of:

Body length, breadth of shoulders, breadth of chest, waist and hips, depth of chest and abdomen, girth of neck, chest, waist, hips, forearm, upper arm, thigh, calf, capacity of lungs, strength of legs, back, arm flexors, extensors, strength of grip, total strength, weight, height, etc.

During the examination records are made

office. Most of the apparatus used in connection with the physical test has been designed by Dr. McKenzie and made at the gymnasium under his direction.

signed by Dr. McKenzie and made at the gymnasium under his direction.

Particular care is to be taken at the University of Pennsylvania that no student be allowed to take any part in athletics unless he is physically fit. It will be the duty of the physical director to determine whether or not he is in condition to compete in track or field events or become a candidate for football honors. It has been decided by the faculty that the evils which the medical profession point out in the over-exertion and physical injuries resulting from college sports are brought about by the lack of just such examinations that are now to be compulsory at the University of Pennsylvania. Dr. McKenzie will have a watchful eye on the men during their training and will be in close touch with trainers and coaches. He will seek to bring new men to the track constantly, so that the athletic body shall no longer be limited to the few who volunteer, but comprise all who are physically different tents to the tents of the track constantly to the tents of the few who volunteer, but comprise all who are physically different tents to the tents of the tents of the few who volunteer, but comprise all who are physically different tents of the tents of the few who were the tents of the tents of the few who volunteer, but comprise all who are physically different tents of the tents of the few who were the tents of the tents volunteer, but comprise all who are physically fit for such competitions as are popular between colleges.

between colleges.

Knowing as he will the pedigree and the physical condition of every student at the University, Dr. McKenzie will be able to select from his lists such students as he thinks are likely to make winners in the athletic events and request them to report at the track to test their fitness in compeat the track to test their liness in compe-tition with the regular men. This will obvi-ate to a great extent the trouble that has vexed the souls of trainers and coaches in the past—the shortness of candidates for athletic honors due to the shyness of new men in coming on the track in competition with the regular athletes of the col-

work for which he has been selected. He is famous on both sides of the Atlantic as an artist and sculptor. His work has been exhibited at the Royal Academy and the Salon and received the highest commendatraveled through Europe picking up curious and interesting sketches and ornaments, illustrative of his devotion to the work for which he has just been called to the University of Pennsylvania.

the victims selected for the sophomoric

visitation.

"In the dead vast and middle of the night" a resounding rap on their door "In the dead vast and middle of the night" a resounding rap on their door was the first intimation they received of the honor. For a time a parley was carried on between the inmates and the invaders of room No. 27, but a forcible entry being threatened the callers were reluctantly admitted, finding their hosts not in costumes de rigeur, but in plain robes de nuit.

Each of the six disguised visitors had a small flower-pot, in the bottom of which were live coals, and on top of them and filling each pot were scrapings from the floor of a cigar factory.

Stretching themselves on the floor, in position that outlined the spokes of a wheel, with the flower-pot pipes—a long, red stem inserted near the bottom of each, they proceeded to blow into the room clouds of nauseating smoke that soon told in the stomachs of the embryo preachers. The only pure air in the room was the stratum next to the floor, where the smokers lay.

Ernest B. Gordon, in a biography of

was the stratum next to the floor, where the smokers lay.

Ernest B. Gordon, in a biography of his father, writes thus of that scene:

"Gordon, when freshman of but two weeks' standing, was visited in his room, 'smoked out,' and imperiously ordered by his visitors to mount the table and preach a sermon. The newcomer's resources in that line had not been suspected. With admirable appropriateness he chose as his text, 'A certain man went down from Jerusalem to Jericho and fell among thieves.'

among thieves."
"Never was a more pointed discourse delivered. The listeners, taking umbrage, rushed like the wild beasts at Ephesus upon the preacher, upset the table on which he stood and would have treated him badly indeed if his Christianity had not passed forthwith from the didactic to the muscular phase, and with excellent results. He sprang at the ringleader, tore his coat in halves, and with the efficient co-operation of John Hay, who

er, tore his coat in halves, and with the efficient co-operation of John Hay, who just then appeared on the scene, routed the intruders from the premises."

Duncan, mounted on a chair in the center of a group of applauding sophomores, and collaborating juniors, had just referred to "that monumental work of Daniel Webster, his great dictionary," when the group of juniors, sitting in a deep window seat at the end of the hall vociferously shouting "Here's to good old Brown, drink her down," were amazed at seeing the orator, his night-shirt waving in the breeze, tumble headlong among his audience, that was seen

shirt waving in the breeze, tumble head-long among his audience, that was seen to be scattering in every direction.

The cause of this sudden stampede was disclosed as the crowd thinned out.

Mr. Elliott, the register of Brown, whom we knew only as "Pluto," had made his way with a lantern concealed under a long coat, into the crowd gathered about Duncan's pulpit and had suddenly held up his lantern in the speaker's face.

up his lantern in the speaker's face.

In the end no one was made to feel
the weight of the faculty's displeasure
for the pight's percent for that night's uproar.

# FRECKLED TOMMY'S **JOKE** ROSS

and Edith came from a far ACK and Edith came from a far eastern city to spend a few weeks with relatives at the ranch. Jack was ten and Edith seven, and bright children they were, but inclined to playing pranks upon their country cousins who knew a great deal about the mountains, but very little of the bustling city. For several days the visitors succeeded one way or another in creating cereded one way or another in creating. mountains, but very little of the bustling city. For several days the visitors succeeded, one way or another, in creating merriment at the expense of the country folk and especially Freckled Tommy, as everybody called the little boy who brought home the cows and goats at eventide. Even Freckled Tommy's dog, Old Nick, a very wise and kind animal, came in for his share of torment, which he bore good naturedly enough for a dog until, one day, unsuspectingly he took from Jack's hand a red pepper bonbon. With an angry yelp Old Nick ran for water and lay hidden in the thicket during the remainder of the day, reappearing only at call of his master at herding time.

That evening Freckled Tommy hit upon

That evening Freckled Tommy hit upon a scheme. Hie would get even and Old Nick should help and be in at the fun.
"I saw a lot of mountain ground hops "I saw a lot of mountain ground nogs down the canon, a ways," he said, as he put up the corral bars. "Hain't been very many of 'em 'round here fer two year, but I reckon as they's comin' back to these parts ag'in, now."

"Mountain ground hogs!" cried Jack and Edith together. "What are they?"

"Why, don't ye know?" replied the youthful shepherd. "They be little fellers about a foot 'n' a half long with fine fur

hout a foot 'n' a half long with fine fur

on em.
"Good to eat?"

on 'em."

"Good to eat?"

"Nope; not good to eat, but reckon their fur could be sold at a good price."

"Why don't you snare some of them, then?" asked Jack.

"Guess I will go out in th' mornin' in bag a few." replied Freckled Tommy, scratching his head thoughtfully and pulling his hat down over his eyes to hide a smile. Then he waited for the children to open the subject again. Nothing, however, was said for several moments. Jack was waiting to be asked along on the hunt.

"Are you not going to take Edith and me along?" he finally inquired anxiously. This was Freckled Tommy's opening.

"If ye want to go, yes."

"The children clapped their hands in glee. Old Nick wagged his tall as if he understood when his master whispered: "We'll git even with 'em in th' mornin', old felier!"

It was a glorious summer morning. The limpid streams of the canons

It was a glorious summer morning. The limpid streams of the canons boasted merrily of their refreshing waters, which ran unheeding in the narrow ways through sunlight and shadow on the long journey to the sea. The ginnt trees were alive with birds of song and the chinook winds scattered broadcast the incense of myriads of flowers. Over rugged rocks and fallen trees, through labyrinths of vines and pigmy forests of scrub oak and gnarled pines, the

through labyrinths of vines and pigmy forests of scrub oak and gnarled pines, the children made their way far up on the mountain side to the open. There Freckled Tommy halted. Mysteriously he raised a finger to command silence; tiptoed to a convenient boulder, beckoning Jack and Edith to do likewise; and when all were seated, the designing youth gave instructions for the hunt.

"Now," said he, "these here mountain ground hogs are pee-culiar fellers. They have two long legs on one side of th' body 'n' two short legs on th' other side. When they travel they have to walk in only one direction and only on the mountain side with th' short legs on th' down-hill side; see! 'N', if they turn around they fall over; cause why? Th' short legs git on th' low side of the slope 'n' th' long legs on th' high side. Now," handing Jack and Edith each a stout stick, "you two set here 'n' watch. Me 'n' Old Nick'll go 'n' drive th' animals around th' mountain. When they git here you holler quick-like; they git scart 'n' try to turn around to run away; the short legs git down-hill 'n' the long legs up-hill; they tumble over. All ye have to do is kill 'em as they roll. Can ye remember? 'N' say, keep quiet!"

Of course they could remember.

"Now, watch till they come." was Freckled Tommy's last hit of advice as he disappeared with Old Nick, who ran on ahead, nosing here and there for all the world as if he was already on the scent of prey.

"Wonder how many of them will come at once" mused Edith after a few mo-

scent of prey.
"Wonder how many of them will come at once," mused Edith, after a few moat once," mused Edith, after a few moments waiting.
"What do we care? They don't bite-

and whew, you just watch me get them, sis," replied Jack, making vicious jabs with his stick at imaginary game.

with his stick at imaginary game.
"I'm going to have enough skins to make mamma a fur cape for winter," the little girl added decisively.
"Course! Freckled Tommy won't want any, I guess. Maybe we'll get a hundred."

Half an hour passed—an hour; yet no long-short-legged animals appeared. Jack and Edith began to grow impatient. They had not spoken aloud during the wait, sitting behind the boulder with drawn clubs, ready for the fray. Would Freckled Tommy and Old Nick never some?

never come?
"But it's a long way around the mountain," whispered Edith. "You know he said it might take quite awhile."

watchers heard Old Nick's bark. Surely the dog was not driving ground hogs way down there! And his bark sounded as far away as the ranch house. Then the dinner bell was heard. The children were reminded that they had empty stomachs and concluded to give up the hunt for that time. Freckled Tommy couldn't possibly be angry when they had watched throughout the whole forencon

Arriving at the house, Jack and Edith saw Old Nick gnawing a bone at the door, and seated at the table with the others was Freckled Tommy.
"Why, how long have you been back?" inquired Edith in amazement.

"Oh, 'bout two hours!"
"Two hours!" Everybody was laugh-

"Yes, Old Nick 'n' me thought as how we had to git even with ye. Have ye got enough skins fer to make yer mother a winter's cape? Ha, ha, ha! Why don't ye laugh? City folks is smart. I reckon; but they laugh? ye laugh: City folks is smart, I reckon; but they ain't so smart but what they'll set fer half a day watchin' fer mountain ground hogs with short 'n' long legs—jist as if there was sich things! 'n' let me 'n' Old Nick watch 'em from th' brush!"

Edith cried, of course; and Jack ran Edith cried, of course; and Jack ran from the house, shamefaced, intending to "hide out" until bedtime. But as he ran, Freckled Tommy's dog barked at him, rolled over and over on the grass and carried on so that Jack could not keep back a laugh. He made up with Old Nick, then returned to the house, faced the matter, ate his dinner and resolved to give up tormenting the ranch solved to give up tormenting the ranch folk in the future.

### CATCHING A SEA SERPENT

By CAPTAIN A. J. KENEALY

T WAS DESCRIBED as a veritable sea

T WAS DESCRIBED as a veritable sea serpent with the girth of a flour barrel. Its haunt was a ledge of rocks off the Sussex coast in the English channel. This rocky ledge attracted many fishermen, who were rewarded by generous catches. One party had hauled in half a boatload. Just as they were about to hoist anchor one of the fishers felt a mighty tug at his line that made him think a whale was fast. All hands clapped on to the line, and inch by inch hauled it in. There were six strong men pulling, but it seemed as though they were never going to get their prey to the surface.

At last they dragged it to the surface.

prey to the surface.

At last they dragged it to the surface, and its appearance scared them so that they slacked the line and the fish gave a great shake of its head and got clear of the head.

the hook.

Their exciting narrative was heard by Billy Page, the pilot's son. The most trusty and beloved of his playmates was Jack Woolgar, the coastguard's son, and broached to Jack the project Jack Woolgar, the coastguard's son, and when Billy broached to Jack the project of catching the sea serpent and selling him to a Brighton showman, Jack was with him heart and soul.

Among the treasures in Billy's locker was a mighty hook fastened to a fathom of chain. To the chain was spliced a length of strong line measuring about eight fathoms.

oms.

The next question was the all important one of bait. The fishing sages of the neighborhood were cross-examined as to the lure likely to be most fatal to a sea serpent, but were shy to advise, never having had the luck to capture that kind of a

Teacher: "Johnnie, what are the four seasons?" Johnnie: Mustard, salt, vinegar and pepper, sir." A Young Cartoonist

tain," whispered Edith. "You know he said it might take quite awhile."

Another hour passed—another. Jack stood up to stretch his legs, which had grown cramped. He stole carefully ahead a dozen steps and scanned the mountain side, but saw nothing except a few birds. Returning, with a sigh, he had just taken his place at Edith's side when, far below them in the canon, the

fish. But the cook of the brig "Gertrude." it is needed, which generally means the just home from the West Indies, gave them the advice: "The best kind of bait for mermalds and sea serpents and sharks home plate the ball should strike the is a two-pound chunk of salt pork. Nothing that swims can resist pork. It's lucky ing that swims can resist pork. It's lucky you asked me, for I caught with the same chunk of pork a mermaid, a sea sarpint, and a shark my very last v'yage aboard this hooker, the time being March 17 last and the place Barbadoes. I've got the lucky piece of sait pork I hooked the three of 'em with, and I'll give it to you boys for luck."

The cook was as good as his word. He handed out a piece of fat sait pork and called attention to certain marks in it which he declared were made by the mer-

which he declared were made by the mermaid's teeth.

An hour afterward they cast anchor, and baiting the shark hook with the salt pork threw it overboard. They made fast the end of their fishing line to the heel of the mast, having a due respect for the ability of a sea serpent.

of a sea serpent.

Not a bite did they get. The sea serpent gave no sign of his presence. The boys regretted that they had brought no other fishing lines with them and that they were like the boy who was loaded for bear only, inasmuch as they were balted for sea serpent and for no other fish.

Waiting for the sea serpent was tedious work, so to change the luck they fell to on beef and biscuit. Their appetites were in excellent shape and the hearty meal was much enjoyed. But their hopes of catching the sea serpent grew fainter as the hours passed on.

the sea serpent grew fainter as the hours passed on.

They hauled the baited hook aboard every little while to examine the bait, and found that crabs and lobsters had been nibbling at it, so they hoisted the bait clear of the bottom in order to prevent its total disappearance.

It was nearly dusk when the boys determined to make goil and story homographed.

It was nearly dusk when the boys determined to make sail and steer homeward in despair. They were just about to hoist the lugsail when the fishing line flew over the side until it was stopped in a hurry by the turn round the mast.

"Hurrah, Bill, we've hooked him!" shouted Jack. Bill executed a triumphant war dance in the boat. Then the two tried

THEY DISPATCHED IT WITH THE TILLER

their hardest to pull the fish in. It was slow work and hard. It seemed as if a heavy anchor was at the end of the line, judging from the slowness with which the judging from the slowness with which the rope came inboard. Both boys threw off their coats and were soon bathed with perspiration, puffing and panting like porpoises. It was hard heaving and no mistake, the fish at the other end showing a marked disinclination to come up to the surface.

surface. The boys were wire and strong and full of pluck or they would have given up in despair. When about three fathoms of the

despuir. When about three fathoms of the line was inboard they made fast all they had got and refreshed themselves with a biscuit and a drink of water. Then they tackled the job again with renewed vigor, heaving away cheerlly.

The exertions of the fish grew feebler. The two hoys were encouraged. They hauled in hand over fist. Soon the head of the monster appeared at the surface of the water. It was that of a sea serpent, without doubt!

They dragged the head in till it rested

without doubt!

They dragged the head in till it rested against the gunwale of the boat, and, with the oak tiller, dispatched it. It was too big to haul into the boat, so they made fast a line to it and towed it to port.

The fish turned out to be a big congereel—the largest ever caught on the south coast. It was not of the circumference of a flour harrel nor as long as a French

coast. It was not of the circumference of a flour barrel nor as long as a French lugger, nor did the showman at Brighton buy it for a sea serpent; but it was a remarkable specimen of a conger eel, and the boys were elated at its capture. So was the cook of the West India trader "Gertrude"

### BASEBALL HELPS By WALTER B. NORRIS

ERE ARE a few hints for the boy

ERE ARE a few hints for the boy who wishes to perfect himself as a haseball player.

When not more than one man is out, and there are base-runners on first and third, do not let the man on first steal second at his pleasure. Let the catcher throw low to second, and then, if the man on third starts for home, let the second haseman, who should be playing in a little for this purpose, run in behind the pitcher, catch the throw and return it to the home plate. If the man on third does not try to reach home, let the ball go to second, where the shortthe ball go to second, where the short-stop makes the put-out. With a left-handed batter the shortstop and second baseman exchange duties. The first baseman's chief business is to

The first baseman's chief business is to catch throws, not keep his foot on the base. He should go out for all throws beyond his reach, as a passed ball will mean many a base for the opposing team. A good infielder should be able to throw underhand, as it saves time and enables him to cut off many a man who would otherwise be safe.

Outfielders should never throw to first base to catch a man who has just hit the ball. Throw one base ahead of the place you know he will reach safely.

When a hit goes far into the outfield, one man should go after it, and the outfielder nearest him should stand halfway in to receive the ball and throw it where

home plate.

In all throws from the outfield to the home plate the ball should strike the ground between the pitcher and catcher and bound into the latter's hands. This prevents an overthrow, and does not slacken the speed of the ball at all. On all such plays the first baseman should back up the catcher.

When the score is tied at the end of

the ninth inning and a man is on third, with less than two men out, do not catch a foul knocked to the outfield, as the man on third will score after you have caught the ball and before you can throw it home, thus winning the game.

A batter should tell the man who bats after him on what ball he intends to

steal second.

If the base-runner cannot steal second unassisted, and the batter knows when he is to steal, the batter should impede the catcher's throw by striking at the

When the base-runner on second needs When the base-runner on second needs help in stealing he signals to the batter by shouting, or in some other way, and then steals on the second ball. The batter makes a bluff at bunting the first ball, in order to draw the third baseman in, and then hits the second ball toward the third baseman as hard as he can.

When a hit seems good for more than one base the runner curves around be-

one base, the runner curves around be-fore reaching the first base, and then starts straight for the second base. When he has gone ten or twelve feet, un-less he is now sure he can reach the next base, he stops and slides back to the first one.

The coacher and base-runner should

watch separate men and not both try to watch pitcher and first baseman at the same time

same time.

In making up the batting list, place first the good hitter who is fastest in running and stealing bases, second and third good hitters who also run well, fourth the best hitter on the team, and the other men in order, judging by their ability to hit the ball.

In batting do not swing the arms or body too far back, but let the swing come at the wrist. Aim to meet the ball rather than to smash it. If the batter steps forward with the left foot, as the ball leaves the pitcher, there will be

ball leaves the pitcher, there will be swing enough to the bat.

When the batter has two strikes and three balls, the base-runners should start for the next base as soon as the pitcher

throws back his arm.
Only when a man is on first, or men on first and second, and none are out, should a batter bunt. Then it is the safest play.

A base-runner on third should hold his base on all flies to the outfield. When they are caught or missed, he should run

In sliding to a base, slide toward the back of it, and stretch out your hand to touch it. This keeps you beyond the baseman's reach.

When the bases are full, and a hit is made, the man on third is forced to run, and can be put out by touching home

plate.
When the ball is knocked to the first When the ball is knocked to the first baseman, the pitcher covers first base. When two men are out, play for the easiest man to put out. This is generally the batter, but sometimes when a hit is made, and men are forced to run, the man who fields the ball may be able to touch a base and avoid the risk of a throw across the diamond.

On a hit to the third baseman, the shortstop covers third base if necessary.

THE STUDY OF ELECTRICITY FOR BE-

Boys' Books Reviewed

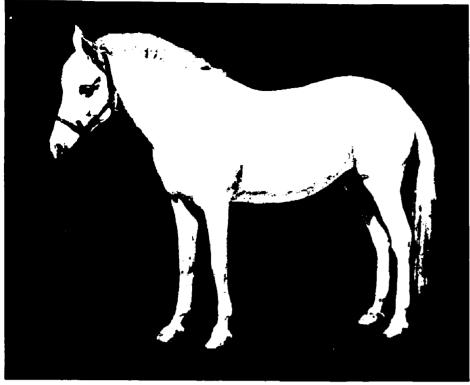

THE STUDY OF ELECTRICITY FOR BEGINNERS. Boys of a mechanical turn of
mind interested in electricity will find this
little book of considerable practical value
in laying a good foundation for further
study of this most important subject. It
is written in a way that will be easily
understood by the young reader. There are
64 original illustrations and 6 tables. 88
pages. Paper cover. Price 25 cents. Spon
& Chamberlain.

CAPTIVES THREE, by James A. Braden.
This is a story of the time immediately
preceding the Revolutionary war, when the
ploneers in their efforts to establish homes
in the wilderness had to contend with not
alone the savage beasts, but the savage
red men. In a little clearing Jonathan
Castle with his wife and children. Clay and
Nelle, had erected his home. Trouble with
the Indians had arisen and the father departed for Fort Pitt to learn what the settlers should do. In his absence his cablin
is attacked and burned by the Indians,
Clay and Nellie escaping. They meet with
another boy, Fred Fravel of Philadelphia,
who had also escaped from the Indians, but
whose father had been made captive. They
have 'many exciting adventures, but are
eventually taken by the Indians who treat
the boys cruelly but refrain from molesting
Nelle. The battle of Point Pleasant is
fought, the Virginians are victorious, peace
is made with the Indians and the captives
are released. Clay and Nellie find their
father and mother and Fred Fravel finds
his father. Many historical personages are
introduced, and it is a book which the boys
will find worth reading. Fred A. Elliott is
responsible for the illustrations 353 pages.
Price \$1.00. The Saaifield Publishing Co.

# Some Four-Footed Heroes

By W. FRANK McCLURE

CECIL MAY REX AND THE BIRD DOG THAT RES-

Samuel Rex, of Zion Station, Ky., would not have been living today had it not been for the heroism of her pet dog. She was playing one day upon the railroad track near her home, when a fast train came dashing down upon her. The dog grasped the situation just in time, and, rushing to the side of his little mistress, directly in front of the approaching train, seized her in his teeth and dragged her from the track.

This dog was nine years old and was a watch dog. When Mr. Rex heard of the rescue he went to Williamstown and had the dog listed as property at a value of \$500. Money could not buy this intelligent and heroic canine.

"Pat McGinty" is the name of another faithful dog. Pat saved the life of Mr. D. W. Winchester of Buffalo. In the old volunteer days of the fire department, when Mr. Winchester ran with the engine, Pat McGinty was always on hand. The slightest tap of the firebell was sure to bring him to his feet, and he was as anxious to go as the well-trained horses of a city fire department. On the occasion of Pat McGinty's heroism, Mr. Winchester had climbed three flights of stairs in the burning building in the midst of a dense smoke, and for the time being was not thinking of Pat. Having located the flames, Mr. Winchester was in the act of putting the chemical apparatus upon his back preparatory to ascending to the attic, when suddenly he heard the howls of his dog, which by

HESTER OF BUFFALO AND HIS DOGS. IS ON THE LEFT PAT MCGINTY OF THE PICTURE

THE SPIRIT of heroism in animals has been recently demonstrated by some most remarkable instances. That animals have been the means of saving lives and property is well known. Faithful dogs have sacrificed their own lives in the effort to rescue their masters; horses have acted like human beings in protecting their riders, and even cats have been credited with some notable performances in times of danger.

Cecil May Rex, the little daughter of Ce

one. This done, the little dog himself ran out into the fresh air in an almost suffocated condition.

An Irish setter named "Prince" saved the finest business block in the city of Lorain, O., from destruction some time ago. About 1 o'clock in the morning the fire started from a defective electric light wire over the offices occupied by the National Bank of Commerce. On the second floor were the living apartments and the office of Dr. J. E. Trombley, the owner of Prince. The fire had just started when Prince smelled the smoke. Running to his master's room he began a vigorous pawing at the door, while at the same time he made several desperate attempts to rattle the doorknob. A fierce racket was kept up until Dr. Trombley arose and opened the door. The dog then led him to the front door. The dog then led him to the front

"NIGGIE" AND HIS MASTER

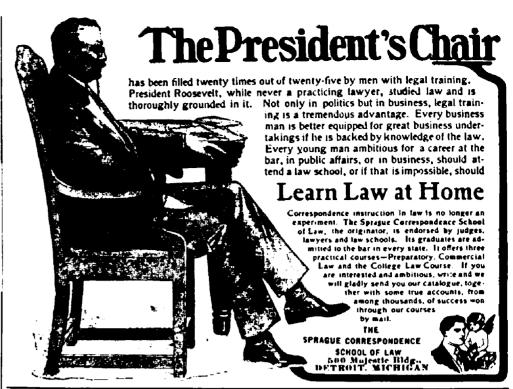

part of the building, from whence the smoke was proceeding. Dr. Trombley quickly turned in an alarm of fire and the fire companies responded, with the result that the damage amounted to only

result that the damage amounted to only about \$500.

Clayton Walker, aged five years, got too near the edge of the Scioto river at Marion, Ohio, one day last year and fell in. A large shepherd dog witnessed the accident and went at once to the rescue. Jumping into the river the dog grasped the little boy tightly with his teeth and brought him safely to the shore. In connection with this incident it is alleged that the dog, after landing the child in a safe place, ran for assistance and led the child's older brother down to the river bank to the scene of the rescue. The brother succeeded in reviving the child.

child.

No one could help admiring the beautiful white pony shown in one of our pictures. But even more beautiful than her appearance are her deeds. To her belongs the credit for saving a man's life in a western blizzard. She is an Indian pony and her name is Ribbon. Her original owner was F. O. Stone of Emporia,

# The GREATEST Little Gun in the World

For a limited time we offer to the sport loving boys of America this splendid rifle, regular factory price of which is \$3.50. You can't afford to miss this opportunity of securing a fine gun for so little money. It is a perfect shooter-of great accuracy and has the fine hang and balance and ease of shooting of more expensive guns; safe and reliable.

It is the only take-down rifle on the market for anything near the price. Takes long or short rim fire cartridges and weighs only \$\mathbb{E}\_{\mathbb{e}}\$ pounds.

It is a fine target gun and will run you up big scores-just the thing for small game, squirrels, rabbits, etc.

rabbits, etc.

Vacation is coming, and the boy with this little gun will have lots of sport wherever he goes. You had better write today.

MONTGOMERY, WARD & COMPANY.

Dept. D, 103 Chicago, III.

Kansas. At the opening of the Cherokee Strip, in Indian Territory, Mr. Stone went into the new country to purchase an Indian pony. It was a rugged journey and only a part of it could be made by train. On reaching his destination

"PRINCE"

he found Ribbon, a pony which beautifully matched one he had previously purchased. Closing the bargain for Ribbon, he started on the homeward journey. When about ten miles on the way a furious blizzard came on. Both pony and rider were soon covered with ice. The man was unable to raise his eyes to look ahead on account of the sleet and snow, and it seemed to him that Ribbon was traveling in a circle. With the expectation of finding the way to a possible shelter somewhere, Mr. Stone dismounted, intending to lead the horse, but he was by this time so numb and fatigued that he fell and was unable to rise. It was at this point that Ribbon showed her remarkable intelligence and heroism. Seeing that her rider had fallen, she bent over him and at times nearly lay down on him. The warm breath from her nostrils and the heat from her body finally served to revive him. By getting Ribbon down upon her knees he succeeded in again mounting her. Again they started, this time the pony choosing her own course, at length arriving at a small hut, where lived a man and his son, who were glad to extend a friendly hand.

An interesting incident of equine heroism was recently recorded.

inciden ism was recently recorded at Omaha, dance

Neb., where little five-year-old Ruth O'Hara fell off a curbstone and rolled directly under the feet of a horse. Everyone who saw the accident feared lest she would be trampled to death, but instead, it is alleged, the noble animal moved gently backward, raising his feet cautiously, and then, reaching down, lifted the child with his teeth and placed her on the curb again.

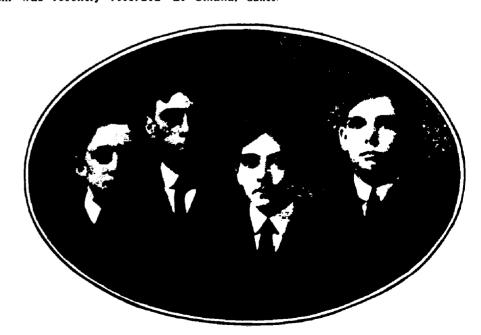

At the home of N. C. Bishop in Marshall, Missouri, Mr. Bishop was testing a double draft on a soft coal stove one day. As the stove was near the wall he stood a paper-lined zinc board on end between the stove and the wall. Mr. and Mrs. Bishop were eating dinner while the fire was heating up to make the test. Before they had finished eating, the cat, which had been left in the room where the test was being made, came

A MARSHALL (MO.) CAT THAT BAVED A HOUSE FROM BURNING

to the closed dining room door and began mewing and scratching. On opening the door Mr. Bishop discovered that the zinc board had fallen against the stove and was all ablaze.

A subscriber at Nova Scotia writes that he earned the money for his AMERICAN BOY subscription by picking about seven bushels of mushrooms. A large tract of marsh land near his home is washed in the spring of the year by the high tides of the Bay of Fundy and after the hay is cut from the marshlands the mushrooms may be picked in great abundance.

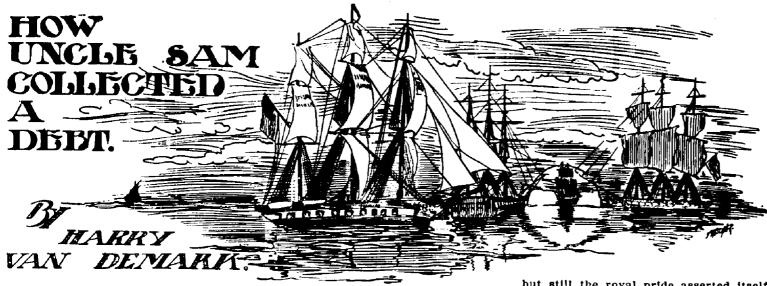

Above are portraits of the four Caro (Mich.) hoys who stood highest in the examinations at the close of last winter's term of school in the eighth grade. They are, reading from left to right, Freddie Weupper, George Kinney, Howard James, William Slocum. They were rewarded by a trip to Lansing, where Representative McKay received them and showed them all the interesting sights at the Capital, including the law-makers at work, and the state institutions located in and near Lansing. They spent two days there, and it was a wonderfully interesting experience for the boys, who will always gratefully remember the generosity of Postmaster Fred Slocum of Caro, who arranged and stood the expense of the entire trip.

THE CORRESPONDENCE SCHOOL OF TAXIDERMY HARGOR, MAINE

URING the years from 1809 to 1812 the Neapolitan government, then under the tyrannical rule of Murat and Joseph Bonaparte, confiscated, under one pretext or another, numerous merchant vessels flying the American flag, disposing of them and their—in many cases valuable—cargoes in various ways beneficial to themselves.

Coming just previous to and during the early part of our war with England, little or no attention was paid to these outrages except by the parties directly interested. These parties tried by differ-

outrages except by the parties directly interested. These parties tried by different means to secure suitable redress, but the government had troubles of its own and the appeals fell upon deaf ears.

With the two ambitious Frenchmen at the helm of the Neapolitan government, it was a case of "might makes right." These gentlemen, with a foresight that would have done them credit had their motives been honorable, saw that the young Republic across the western ocean had little or no means of protection to give defenseless merchant vessels sailing under its flag. under its flag.

Thus, the claims were allowed to rest for many years. But with the advent of brave old Andrew Jackson to the presidency, in 1829, they were revived, The claims which the kingdom of Naples ignored with such undisguised contempt amounted to \$1,734,000.

Matters soon reached a crisis. A deputation of prominent merchants, whose losses amounted to considerable sums, waited upon Old Hickory one day and laid before him a concise statement covering their grievances against Naples. In a few well-chosen words the spokesman informed the President that they felt this contemptuous disregard of law and justice had gone far enough, and that with the increased naval power of the United States the matter ought to

be brought to a speedy conclusion.

Jackson was favorably impressed by this appeal, and with a characteristic snap of his gray eyes that boded ill for somebody, he swept the papers into a drawer and assured his callers that their claims would be prosecuted with the utmost dispatch and the result mode. dispatch, and the result made

By this time the navy of the United By this time the navy of the United States had been so increased in strength that it was recognized as a formidable sea power, the war of 1812 having gained for it a new prestige. A squadron of considerable force was patrolling the waters of the Mediterranean under the command of Commodore William H.

Crane.

It so happened that Commodore Crane's term of service expired just as the President was ready to press the claims against Naples, and in his stead Jackson sent Commodore D. T. Patterson, a brave and efficient officer, with whom he had co-operated in the famous battle of New Orleans. On this occasion Patterson, from his flagship, the Louislana, had sustained a fierce cannonade of seven hours' duration, expending over eight hundred rounds of ammunition from his sixteen guns.

Jackson well knew the caliber of the man, which was the cause of his selecting him for this especial mission. Patterson was given his full instructions

terson was given his full instructions before leaving the United States. Just what passed between the President and his veteran friend will probably never be known, but the latter was instructed in no uncertain terms to see that the long-delayed claims were speedily ad-justed to the complete satisfaction of the Americans. In this he was to act in concert with the newly-appointed minister to Naples, the Honorable John

Nelson.

The force under Patterson's command consisted of the flagship Delaware, 74 guns; the frigates United States and Brandywine, 44 guns each, and the John Adams and Concord, sloops of war. Every vessel was manned effectively by American blue jackets, who were thred of the long period of inactivity which had been their lot, and glad at the prospect of a fight.

had been their lot, and glad at the prospect of a fight.

In order not to precipitate matters, Patterson instructed the commanders of the vessels to appear off Naples one at a time, with an interval of one or two days between each arrival. This, he felt, would give the Neapolitan government ample opportunity to settle the claims with as little trouble as possible. He concluded that the appearance off the city of one vessel of the squadron would do more to induce the king to settle do more to induce the king to settle the claims than all the previous efforts combined; for in many instances a manof-war has a far more salutary effect upon the solution of a diplomatic prob-lem than volumes of subtle diplomatic

The big Delaware, having on board, The oig Delaware, naving on board, besides the commodore, our new minister to Naples, was the first vessel to appear in Neapolitan waters. She created quite a furore as she moved majestically up the harbor and came to anchor off the city. Minister Nelson was put ashore as soon as it was considered expedient, and lost no time in pressing the claims of his followed transming the claims of his fellow-citizens. The king, how-ever, did not seem very vividly impress-ed with the appearance of a lone war vessel in the harbor, and the demand met with an emphatic refusal.

The minister retired on board the Delaware and he and Patterson awaited eagerly the coming of vessel No. 2. A sail was sighted within forty-eight hours, and a short time later the United States came up the harbor under shortened sail, the stars and stripes floating proudly from her masthead. She anchored near the flagship.

Her arrival was the signal for another interview with the gold-laced functionaries at the palace, and Minister Nelson accordingly presented himself and renewed his demands on behalf of his countrymen. But the officials smiled suavely and put him off, and again he was forced to retire discomfited to the flagship.

At dinner he imparted to the commodore the result of the interview. Patterson smiled grimly and made a remark to the effect that the Brandywine would soon be in if the wind held fair, and that with three formidable war vessels in front of the city there would surely be a bowsing and hauling of diplomatic land-tacks that would soon decide the game in the minister's favor.

ame in the minister's favor.

At sunset on the following day, just as the report of the evening gun in the castle was reverberating over the water, the Brandywine floated silently into the harbor and anchored by her consorts. This made a squadron of 162 guns, and unmistakable signs of alarm and uneasions. ness were soon apparent shoreward. Additional guns were hurried into position, and swarms of men, rushing hither and thither, appeared in the vicinity of the forts and on the dilapidated battlements.

But quiet and good order prevailed upon the decks of the American vessels. upon the decks of the American vessels, broken only by the exercise of the men at general quarters. Occasionally during the day the broadside guns were run in and out. The sun's rays, glinting brightly on the rays of polished steel, were a forceful reminder to the Neapolitan authorities that the Americans were not assem

After the Brandywine's arrival the commodore's barge again set Minister Nelson ashore. With a dignity becoming his station he again presented himself in the audience chamber of the King of seison ashore. With a dignity becoming his station he again presented himself in the audience chamber of the King of Naples. That worthy met him with palied face and greatly perturbed in spirit; seion arranged the affair to the latter's entire satisfaction.

A few days later the American ships, with flags flying and drums beating, raised face and greatly perturbed in spirit; harbor.

of Navajoes, and has been as often rebuilt by the surveying parties. There is no white habitation near-by except at the Scott trading post which is across the river and outside the reservation in little command of will, the American fill dwell in order that they may barter the minister was again dismissed.

A The war-like aspect about the harbor continued during the interval between es the minister's third visit to the king and and the arrival of the John Adams. It has soop of war came up the harbor of before a sprightly breeze, and when she had taken her position in line with the other vessels of the squadron the guns of the men-of-war were brought to bear upon the city and the forts. Through the rows of open ports the crews could be seen mustered at quarters, awaiting the word from the commodore that would send them action. T IS A long, hard ride and a long distance from any railroad and for that reason is seldom visited, but our exploration party felt that the extra variation of the "four corners" in the world. When we told our friends that we expected to visit this spot and that it was the only one of its kind in the world there were many who doubted the correctness of such a statement, and it did seem strange that the only place in the world where four states, territories, kingdoms or provinces should meet at a common point should be at the junction of Colorado, Utah, Arizona and New Mexico, but such is a fact. A careful search of your atlas or geography will show that this is correct and will also be an interesting study.

The "four corners" were reached by a long journey on horseback through a dry and rocky section of country, the trip taking one through the Ute Indian reservation and into the country allotted and territories: Alfred Wetherill, the to the Navajoes. Fresh water has to be carried in canteens as little is found that is suitable for drinking purposes until the San Juan River is reached. The country is quite desolate and during the last half day's ride, the journey when last half day's ride, the journey when when thas been destroyed on several occasions by wandering bands

"OH DON'T he discouraged, brother, Though Fortune seems to mock, Often the last key on the bunch Is that which turns the lock; Often the last key on the bunch Is that which turns the lock."

ET UP, boy, will you? you've always got a song on, always."
"Why not, Andy? Why not?"
the boy asked good-naturedly.
"Isn't a song better than a grow!? and isn't the sentiment all right? Hang on, just hang on, and maybe things will come your way."
"H'm!" grunted the old man. "It's about time something came our way."

come your way."

"H'm!" grunted the old man. "It's about time something came our way. I'm thinking. We're out five weeks, and have got but three sets; and mind the gales we've run on to! Three anchors gone and some cable, and not a sail but is either torn or chafed; and just look at her now! Look at her, will you—fairly coated with ice—fairly coated!"

The boy looked up from his work, and his clear eyes took on a new light, and his face fairly glowed as he exclaimed:

claimed:

and his face fairly glowed as he exclaimed:

"For a picture, that's the real thing, isn't it, Andy? Oh, this is living, all right—this is living! Grand, isn't it—simply grand!"

Grand indeed was the scene, and impressive. At anchor, more than a mile to windward, to the eastward of Sable Island, under double reefed foresail and riding sail, rode the fishing schooner, Ednah D. Like a seagull with its head under its wing, the little sea boat plunged up and down with the rise and fall of every sea, breasting safely the foam crested waves that were sending over her the spray which quickly congealed into ice on ligging and deck, and such portions of her hull as were not under water. The early morning sun was streaking the eastern sky, and as it flashed and gleamed on the ice-clad craft, the boy burst forth in rapture.

"Beautiful! beautiful! Why, Andy, to me she looks just as I'd expect to see a phantom ship!"

"H'm!" the old man grunted.
"Phantom, maybe, will be the right word for her before long and phantoms for

phantom ship!"

"H'm!" the old man grunted.
"Phantom, maybe, will be the right word
for her before long, and phantoms for
the rest of us. To me, boy, and to any
one who's got a sober thought in his
head, that's a mighty dreary looking
sight out there—mighty dreary! Just
look how her lee yardarm comes over—
almost touching the water. But, pshaw!
you're only a boy, so've got no interest
in anything."

"Say, Andy, I don't like that even a
little bit," Ben Cleveland blurted out
manfully. "I am only a boy, of course—
only sixteen years old, but when you say
I have no interest in anything, you're

only sixteen years old, but when you say I have no interest in anything, you're away off! You've been my bunk mate, my watch mate, and dory mate, for nigh six weeks, but because I've kept my affairs to myself, don't think I've no sober thoughts. What do you think I'm thinking of nights when I'm on watch walking the deck with only the black heavens above, and black waters all about? What am I thinking of when I lie there in my bunk, while the rest of about? What am I thinking of when I lie there in my bunk, while the rest of the gang forward are playing cards, or just killing time? I will tell you, Andy, because I don't want to quarrel with you. I like you, and I don't want you to keep on thinking me a good-fornothing, for I always try to do my best in everything, and to put the best there is in me into all I do.

"There are three helpless tots at home. Andy, and an invalid mother. My father died last September, after a long and costly illness, during which time I tried to earn enough ashore to keep things going, but I couldn't. I loved the sea, but marm was opposed to my going until it came almost to that or starving, and then she stood for it, and this hallbut catcher was my first chance. "I like you. Andy, first rate, but I

this halibut catcher was my first chance. "I like you, Andy, first rate, but I can't see why you should worry half so much as I, because things aren't going our way. You've got no family to think of, and the men say you've always had a good eye for the dollars. A

to think of, and the men say you've always had a good cyc for the dollars. A poor trip means a lot more to me than it possibly could mean to you, but I'm not worrying about it—no, siree! Hang on, Benny, I say to myself. Keep doing something, and by and bye things will come your way.

"Often the last key on the bunch is that which turns the lock—that's my lifebuoy, and I'm hanging right on to it, too. Now you won't be cross any more, will you, Asdy?"

"H'm, you're a queer boy, Benny—a mighty queer boy," the old fisherman said slowly, as he gripped the trawl and pulled in hard and strong. "H'm! another 'gray,'" he continued, as the catch came into the dory. "I would like one 'white' for a change. All we pull this morning are either 'grays,' or, worse yet, 'seconds." But, I say, Benny, that tongue of yours swings as nat'ral as a foreboom. Why don't you take to the law, or something of that kind? 'twould pay better'n fishing, in the long run. Why don't you?"

"I've talked enough already, Andy," Ben answered cheerfully. "Sometime,

pay better'n naning, in the long luit. Why don't you?"

"I've talked enough already, Andy," Ben answered cheerfully. "Sometime, however—sometime, when marm gets well, and the tots get grown up, I'll finish my schooling sure, and then—ha—ha—ha—the rest, Andy, is what you may call a pipe dream. But no matter what I do, I shall ever love old ocean!"

"My but you said that well!" the old sailor exclaimed heartily. "Always love old ocean, eh? Good! But say, boy, there's never any smoke to your pipe dream, I notice."

"That's right, too," Ben answered with fervor. "No tobacco—no liquor, in mine, either now or ever!"

"It's just as well, boy, just as well exactly: and, anyway, it's only habit—both of 'em. Move along a little. There! At last a 'white!' H'm but that puff wasn't so very gentle, was it, now?"

"Hullo, there, Andy!" called a fisherman from a dory to windward. But Andy was busy taking his halibut from the hook, and with the waves lapping against the side of the dory, and the fish flapping in the bottom, he did not hear the call.

"Ahoy, there, Andy! Aho—o—oy!"
Andy looked up—his fish had been unhooked and killed.

"Aye—aye!" he answered.

"Wind's comin' up, ain't it?"

"Aye, right; but we've got this trawl to finish. Any luck"

"Looks like it came the answer."

"Looks like it came the answer."

"We're piled high fore an' aft. We're off now. Good luck!"

"H'm! that beats all tarnation!" Andy exclaimed as his shipmates rowed away.

now. Good luck!"

"H'm! that beats all tarnation!" Andy fortune favored him.

The slacking of the "Him! that beats all tarnation!" Andy exclaimed as his shipmates rowed away. "Here we've both worked like blazes, but ain't much more'n half done. But it's always so with Sam. He's always the first one home, and despite us all striving hard for the honor, he generally beats us all with the largest fare. Him! there's no use trying to second. ally beats us all with the largest fare. H'm! there's no use trying to account for it. Maybe it's his knack in setting trawls; maybe it's the way he places the bait, or the spot he chooses; maybe it's just luck—I don't know, but anyway it's something I ain't got, that's sure, and f did think I had about the whole of it. H'm! that puff was the real thing, now, wasn't it? and there's a good sea on, sure. Howsomever, we'll finish our trawl," the old man said grimly, as he continued to ply his task, pulling up the long line that passed over the dory amidships, removing and killing the fish, amidships, removing and killing the fish, rebaiting the hook, and paying out the line again to sink to the bottom, Ben assisting in the pulling up and paying

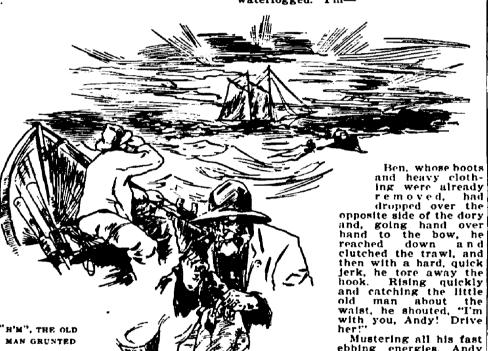

again down went Andy. But just then

man to windward.

A drowning man will catch at a straw, and as Andy sank beneath the surface, as he believed for the last time, an uplifted hand came in contact with the trawl, and eagerly he gripped it.

Although somewhat exhausted by his efforts, he still retained his wits and the indomitable courage of the true fisherman, and hand over hand he at once began to haul himself up the stout line to the surface. But just as he got his head above water and caught his breath, just at the very last moment of endurance, with his hand clutching the gunwale of the boat, one of the stout hooks on the line caught securely in his leg, holding him fast.

"I'm gone—after all!" he panted. "There's a hook—in my left leg! No—don't—move, boy. She'll—founder. She's waterlogged. I'm—"

And one by one, into the air, and down, went the dories, until all were over. Andy and Benny being the last away, and as they slipped by the quarter, in stentorian tones again the skipper's voice rang out, "Set to the west-ard, boys, an' drive her—drive her!" Twill blow like all git out by noon, I reckon. But the tide runs strong to wind'ard, an'll help you home all right; but drive her!"

With the dory hawsed up in such a

Without the slightest warning, over-hoard went Andy and his mate.
Fortunately for him, when Ben emerged from his plunge, he was so near to the side of the boat that he was able to group the gunwale and he outled. able to grasp the gunwale, and he quickly climbed in, although she was in almost a sinking condition, being nearly
filled with water. He at once sprang to
the trawl, and after he had fastened it
to the bow of the boat in such a way as to keep her as nearly as possible head to the sea, he caught up the dipper and began balling for dear life.

began balling for dear life.
Andy was far from being so fortunate.
The sea had broken over the boat with such force as to throw him quite three fathoms away, and so greatly was he encumbered with his oilskins and jackboots that he could not keep himself from sinking. Down—down—he went!
Then up he came from sinking. Dow . Then up he came.

"I'll get you!" shouted Ben, and grasp-ing an oar, he thrust it toward his ship-It was in vain, however, and

Ben, whose boots

Mustering all his fast

Man grunted

Man grunted

Mustering all his fast ebbing energies, Andy responded to Ben's boost by one last effort. Over the side of the boat he went, then fell sense-less on the thwarts.

It was a breezy day. In the early morning, although it was rough, with the waves breaking frequently and the wind blowing in gusty puffs, it was not considered exceptionally dangerous to venture out, and the eager fishermen had jumped to obey their skipper's order:

"Dories to the rail!"

Then, loud and clear, in quick succession, came the orders:

"Over with the wind'ard dory!"

"Wind'ard dory to the rail!"

"Looard dory to the rail!"

"Looard dory to the rail!"

And one by one, into the air, and down, went the dories, until all were over, Andy and Benny being the last away, and as they slipped by the quarter in steptician to reason and the skip.

Ben Cleveland was all nerve!"

wind ard, an'll help you home all right; but drive her!"

With the dory hawsed up in such a manner that her side was somewhat exposed to the sea, Andy and Ben had safely hawled the greater part of their trawl, and had a number of halibut on board, when suddenly a huge, curling wave came tearing along, striking with full force the fishermen and their boat. Without the slightest warning, overheard to the merged from his near to the sea for the sea to the sea warning overheard to the sightest warning, overheard to the sight warning the trawl, and he had just reached the farthest buoy, and his bait was nearly to siff the trawl, and he had just reached the farthest buoy, and his bait was nearly to siff the trawl, and he had just reached the farthest buoy, and his bait was nearly to siff the trawl, and he had just reached the farthest buoy, and his bait was nearly to siff the trawl, and he had just reached the farthest buoy, and his bait was nearly to siff the trawl, and he had just reached the farthest buoy, and his bait was nearly the trawl, and he had just reached the farthest buoy, and his bait was nearly the at once took up the work of tending the trawl, and he had just reached the farthest buoy, and his bait was nearly the trawl, and he had just reached the farthest buoy, and his bai

"That's right. My! but you're a dog!
And you're one of the lucky ones, too,
for I believe they're about all white,
and that means better money than the
grays bring. When did you gash that
hand?" Andy asked suddenly.

"Just after you came aboard headfirst," Ben answered easily.

"H'm! What did you toss off your
duds for?"

Ben laughed bootily. "A mild idea of

Ben laughed heartily. "A wild idea of mine, that's all, Andy. I was so scared when I saw you sink the second time, I thought I could dive and bring you up again, that's all. I got rattled, you know."

"H'm!" muttered the old fisherman as he straightened himself up, and reaching over he took the oars Ben was placing in the thole pins.

"With such a hand as that, you can't pull an oar, boy," he said decisively. "I'm coming round fast. I'll row home.

(Continued on page 291.)

Uncle Jack—"It is very good lemonade, I'm sure; but tell me, 'Robert,' why do you sell yours for three cents a glass, when Charlie gets five for his?"

Robert—"Well, you mustn't tell anybody, Uncle Judd, but the puppy fell in mine and I thought it ought to be cheaper."

### The Boy Who Stole Birds' Eggs

The hoot-owl sat on the bough of a tree, Crying, "Hoot, hoot! And with two solemn eyes she looked down

at me,
Crying, Hoot, hoot!
"Now, are you, or are you not," said she,
"The boy who stole my young owlets from
me?
"Hoot, hoot!" "Hoot, hoot!"

The blue jay flew down and perched by her side,

Screaming, "Jay, jay!"
And I trembled with fright as she scolded

and cried,
"Jay, jay!
"I had four pretty eggs in the nest in the

tree;
pretty blue eggs you have stolen,"
cried she,
"Jay, jay!"

The robin hopped up on the bough by the jay,

Chirping, "Chee, chee? Suc "My nest it is gone, where I sat all the tank.

day, "Singling, Chee, cheel
"Oh, you great naughty boy, bring my
home back to me."
She sobbed as she sat on the bough of the

tree.

Moaning, "Chee, chee!"

Down flew the crow from her nest in the Crying, "Caw, caw!"

And she said to the birds, "Now just listen to me;
"Caw, caw!"
And I heard all their plans as they talked in the tree,
And, oh, children, they said they would surely steal me;
Oh, oh!

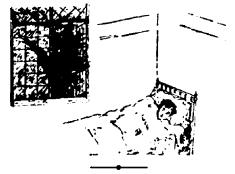

And now, when the trees tap my window

at night,
Oh, oh!
Way down in my bed I am trembling with

fright.
Crying. "Oh. oh!"
For I'm sure that some night when nobody can see.
The owl and the crow and the robin, all

three,
Will carry me off to their nest in the tree!
Oh, oh!

# STANDING HIGH JUMP

B y R A  $\Upsilon$  C E R  $\Upsilon$ 

American Champion and Holder of World's Record

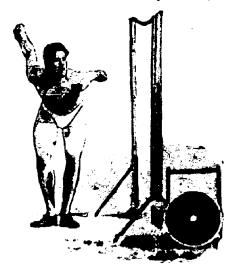

RAY C. ERY American Champion and Holder of World's Becord for High Jumping.

In MANY standing high jump contests in which I have entered since I first took up this form of athletics, I have been surprised at the few entries. Possibly it may be on account of the limited number of opportunities offered to the standing jumper compared with those held open to the athlete who aspires to honors in running jumps.

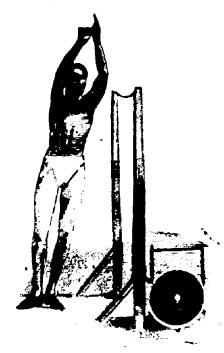

These discrepancies, like water, will find their level, and if the boys in the public schools and the young men of our

public schools and the young men of our universities would take up and train for these neglected events, the increase in entries would be an inducement for an additional number of competitions, till

in time the standing jumps would be found in the games of every club.
Unlike the running high jump, the standing event needs great power in the legs and shoulders to raise and later to legs and shoulders to raise and later to lift the body over the bar. Height of the athlete does not mean ability to succeed, athlete does not mean ability to succeed, but rather is it a matter of conformation, either natural or acquired, combined with regular practice and judgment.

In my own case, while at school I had tried every kind of sport, with but meager success, till I took up the standing

high jump in order to help out my school

high jump in order to help out my school in this event.

When once I had decided that I would compete in that item I went right into it, using all my time out of study in either actually performing the jump or following athletic and gymnastic work calculated to improve the necessary muscles and give strength.

My jumping consisted of about ten to twelve jumps a day, the highest being about four feet seven inches, which was the best I could then do. Combined with this, I played baseball and other outdoor games.

games.

My gymnasium work was of a nature to develop the thighs, abdominal muscles and included all exercises which would aid in the lifting and perfect control of the legs. I also paid particular attention to the shoulder muscles used in the arm lift.

the arm lift.

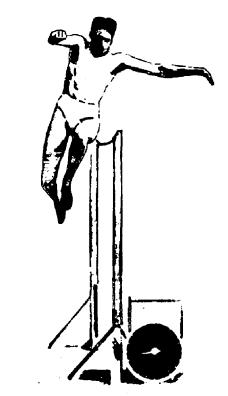

The squats and skipping a rope with stiff knees were two of the exercises which I used, and are of great value, while very simple.

while very simple.

After I once got my muscles into shape a very little practice sufficed to keep them right. About six weeks previous to jumping in a contest, however, I jumped in practice every day till within four days of the event, when I allowed myself complete rest from any such exertion. During this six weeks' work I only placed the bar at a medium height, extending myself about once a week.

In jumping I stand from twelve to seventeen inches away from the bar, according to the height; for four feet the shorter distance, while in doing my record of five feet five and one-quarter inches, there was about seventeen inches of space between the center of my feet

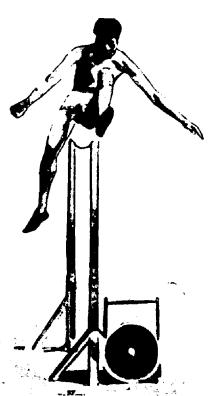

of space between the center of my feet

and the computed position of the bar.

Don't get too near, it means jumping higher to clear the bar.

Having got the correct position, crouch down as low as possible, with arms extended hackward. As the body is gradually straightened out in preparation for the final spring from the feet, the arms should be brought forward and upward. At the time of leaving the ground the

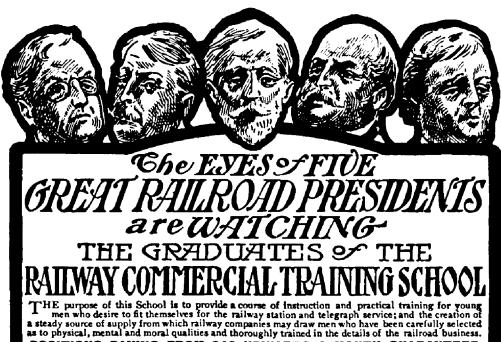

arms should be almost over the head and they should be fully extended when the body is above the bar. The most having been gotten out of

the spring and the arm and shoulder lift, the inside leg should be raised over the bar, the knee drawn up as high as pos-

When well over the bar curl up the other leg and the impetus from the original spring should then carry the jumper

In practice attention requires to be paid two things particularly, the correct

### Robert's Idea of Business

"What are you going to do when you

grow up, Robert?" asked the visitor.
"I'm going to be a bisness man," said

Dissolve ordinary soda in a glass of water, putting in as much soda as the water will take up. Then tie a common bean to a string and let it hang in the water so that it will be entirely submerged. The best way to do this is to tie the other end of the string to a piece of wire or something similar that can be laid across the top of the tumbler.

Before long a curious thing will happen to the bean. It begins to cover itself with tiny spines, until at last it looks like a tiny porcupine.

The explanation is simple. The bean is very porous and soaks up a lot of water, but the soda in the water cannot enter the bean and stays outside.

A funny thing can be shown by hanging some object that is not porous alonging side of the bean, such as a piece of glass. Long after the bean has disappeared under its accumulation of soda crystals the hit of glass will remain the same as it was.

"I'm going to be a bisness man," said Robert. "Pop tooked me down to his bisness last week, and I'm going to be bisness nand. I'm going to catch the car every morning going to catch the car every morning to light a great big cigar and sit down at my desk and say that there's so much work to do it ain't hardly any use beginning till after lunch. And then I'll go out with another big man and we'll eat and eat until we can't eat any more, and then we'll go back to the bisness and I'll ask everybody else why the work and ell i'll ask everybody else why the work and ell i'll ask ev

# My Four Years at West Point American Boy (BEGUN IN SEPTEMBER)

XIX.

MY FIRST WINTER AT THE POINT.

HE MONTH of September was devoted entirely to battalion infantry drill, that is so far as my class was concerned. With the first of October, however, a new schedule was substituted. We had another month of foot battery drill. The Seps constituted a battery by themselves, as they needed much more enlightenment than we. As during this month it grew dark quite early in the afternoon, dress parades were dispensed with, except on Saturdays and Sundays, when we had it at 4:40.

Saturday parade became a bore, especially when one had been shouldering his gun on the area the preceding part of the afternoon, but it was different on Sundays. Then we did not have to double-time back to barracks after parade had been dismissed. HE MONTH of September was de-

missed.

missed.

The band discoursed sweet music, and upon resuming its place on the right after "sounding off," played some grand old hymn. The seats in front of camp were well filled with visitors. The noble trees skirting Officers' Row and the forest surrounding the ruins of "Fort Put" were one mass of red and gold. When the battallon was brought to a "rear open order," and the eyes of all were cast to the right, mine would wander from the buttons of the files on my right to the grand scene to the on my right to the grand scene to the north, where Cro' Nest was frowning at his rival on the other shore of the Hudson, and where tiny sails dotted the surface of

the water as far as the eye could reach.

The early part of November brought the last change in the schedule for the term.

Parade was to take place at 4:10 until furthers. ther orders and no other afternoon drill was prescribed, but, at different hours in the morning, we were required to attend gymnastic exercises and fencing. Two math, sections attended at the same

time, and the drill lasted thirty-five mintime, and the drill lasted thirty-five minutes. Gymnastics and fencing took place on alternate days. The "gym fiend" (the same teacher that we had at swimming) instructed us in both arts. An army officer was also present to see that everything went along smoothly.

The course in gymnastics included exercises with dumb bells, Indian clubs, and on the horizontal and parallel bars. The gymnasium contained several horses made

eyes by hammering one another, amid greater or less applause according to the science displayed.

Those cadets who were of a literary turn had access to the post library during release from quarters. It is one of the finest lease from quarters. It is one of the finest libraries in the United States. All the standard writers in science, art and literature are represented, and there were shelves upon shelves devoted to military science. The cadets were allowed to take books from the library only on Saturday, and they were returnable on the following Monday. If not returned at the proper time, the infallible reminder was resorted to—a "skin."

These were about the only diversions for plebs. True, there were lots of gossip, and much speculation as to who the future "corps" would be. Gradually the true

"corps" would be. Gradually the true men drew to the front, as they always do. The cadet who had told his friends confidentially that he had excellent prospects of standing "I" in the class, was drudging along in the "immortals," and piling up the demerits day by day. He who had secret hopes of becoming the future class president, because of his inexplicable popularity in camp, now occupied a back seat. The youth who had aspired to be a ladies' man and the ranking hop manager for yearling camp, not to speak of being for yearling camp, not to speak of being first corp, because of receiving first color, had fallen from his lofty pedestal, for the

first corp. because of receiving first color, had fallen from his lofty pedestal, for the reason that he had attempted to economize by wearing high-water, flannel pleb trousers in lieu of the gray cloth trousers worn by the cadets in barracks. Moreover the future "spoonoid" had discovered, like many of his classmates, that his low standing, and his inability to "catch on" to logarithms, must inevitably end in disaster at the January examination, and had sent in his resignation.

Now, can you guess what the particular cadet I am describing will do when he gets home? He will tell his friends that he is heartly sick of the whole business, "Oh, the course was easy enough; I could have stood in the first section, if I had cared to devote myself to study; but my instructor was down on me, and I had no show. Anyway, the accommodations are poor, and the cadets are treated as meanly as they treat the poor plebs—in fact, West Point is no place for a gentleman of my style!" (True indeed.) Then our "resignee" would be the means, direct or indirect, of inspiring the article in the Daily Howler, setting forth the glaring defects of the West Point Military Academy, and calling upon Congress to abolish the hot-bed of an army aristocracy.

an army aristocracy.

This cadet is no fiction. Unfortunately he is present in every class that enters the

By A GRADUATE

Point, and his existence is largely responsible for the false impression that exists in many quarters regarding West Point.

I met an old friend the other day, who attended the same military school with me, the year before I entered the Point. It was the first time I had seen him since those days. After a short conversation, he asked me whether I graduated at the Point. "Yes," I replied. Seeing my uniform and shoulder-knots, he asked me if I had graduated into the Maryland—th.

form and shoulder-knots, he asked me if I had graduated into the Maryland—th.

A few days after this occurrence I ran across an old townsman who asked me what I was doing. "I am in the army," i answered. "Commissioned or non-commissioned?" he inquired.

We had not been in barracks a month before members of our class began dropping out. By the latter part of December a dozen had sent in their resignations, to avoid being "found" by the Academic Board. These men left the Point voluntarily, and found much consolation in the fact.

proceedings, may commute the sentence, as he frequently does.

as he irequently does.

The most helinous offense a cadet can be guilty of is lying. The authorities know no mercy in such cases. The liar, although his superiors may not find him out, is soon

his superiors may not find him out, is soon recognized by his mates, and is utterly detested. Truth is the foundation of all intercourse among gentlemen, and of all official communication, and no man is fit to become an officer whose word is not as binding as his oath.

A cadet's word is invariably accepted as final. If in any investigation an officer asks a cadet whether he is guilty of a certain offense and receives "No" for a reply, it is accepted unquestioningly, no matter what the circumstantial proof may be. The officer would require the evidence of his own senses, before doubting the cadet's word.

valuable one. Although, I fear, it is not fully appreciated by all the cadets, still it assists materially in keeping up the high moral and religious standard that exists in

the corps.

We had two holidays before January,

These were

We had two holidays before January. Thanksgiving and Christmas. These were observed by a suspension of academic an military duty. Call to quarters were sounded as usual after supper on each of these days, and studying was resumed.

At Christmas, some of the upper classmen who had been fortunate enough to escape all demerits from the previous June were allowed a Christmas lease of three days. Santa Claus evidently overlooked West Point altogether. It was too mild for any skating, and I devoted the day to lounging and comparing former Christmases with the present. We had an excellent dinner, which was fully appreciated by the entire corps. Christmas night was given up to the study of equations of the sixth degree.

sixth degree.

Cold weather set in immediately after, and on the following Saturday we were allowed to skate on the Hudson. The limits were strictly defined but the distances fact.

The court-martial had been resorted to in the case of three of my classmates for various offenses. One of the number was caught interfering with Seps and received a dose of light prison. The other two were unfortunate enough to be charged with "conduct unbecoming a cadet and a gentleman." And this, if proven, always means dismissal. The President who reviews the proceedings. may commute the sentence,

An amusing skating incident occurred on the Saturday to which I refer. The details gradually leaked out until even the plebs knew them all. I suspect that the authorities learned the truth too, in an unofficial way, when it was too late to mend matters. A cadet lieutenant and a private of the first class conceived the idea of skating off limits, for the purpose of visiting Cold Spring on the other side of the river. They had some fun in view, the nature of which they kept to themselves.

They arrived in town, spent an hour or so there, and started to return about half an hour before parade. The lieutenant, who evidently prized his chevrons highly became somewhat nervous after they had put on their skates, and suggested that they return separately, so as to avoid as much as possible the risk of detection. The private said that he did not like to lose the company of his friend but at his re-

what the curronstantial proof may be the first grown as the every thing went along smoothly.

The editor of The American Boy will attend all of these celebrations, excepting the one at Bedford, Pa.; at each of the places he visits he hopes to greet hundreds of readers of The American Boy and make their personal acquaintance.

### XX. "PLEB" JANUARY.

New Year's was a holiday,—at least the order published the day before stated that all duty, except the necessary guard and police duty, would be suspended, and the Commandant would authorize such recreation as he deemed fit. There was a large hop New Year's eve, but that did not interest us. Quite a number of girls were at the hotel, some of whom were those "that came up in June." Not a few upper classmen took the opportunity (from all appearances) to resume the thread of the previous summer's romance.

Notwithstanding the cold weather, Flirtation Walk was patronized at intervals by solitary couples in all of which the cadet gray was prominent. The wintry wind sighed dismally through the leafless branches, the favorite nooks among the branches, the layorite nooks among the rocks were hidden under ice and snow—but the cadet overcoat and heavy gray gloves are warm, and there are such things in the world as muffs, boas, and sealskin

sacques.

But I am anticipating again; there was none of this for the plebs and the "nonspoonoids." If it had not been for the skating on the Hudson, I fear New Year's would have been for us the same as any other holiday, a mere breathing spell in which one could take a retrospective glance and resolve to "bone" lessons and demerits more faithfully in the future.

and resolve to bone lessons and deficits more faithfully in the future.

January the second was the day on which the examinations were to begin. As it is customary to call up the sections in reverse order for examination, it can easily be imagined in what a perturbed state our immortals were. Poor fellows! They were too excited to do their New Year's dinner too excited to do their New Year's dinner menu justice, and they spent the greater part of the day in desperate attempts to unravel the mysteries of logarithms and quadratic equations. In fact, this panic of nervousness was not confined to the "goats," but extended, more or less, throughout the entire class. The fear of being "found" by that awe-inspiring Academic Board pervaded in some cases as high as the fourth section. The men in and above that, while confident of "pulling through," were all concerned about their January standing.

Call to quarters on New Year's night

Call to quarters on New Year's night brought us to our studies again, and by

prought us to our studies again, and by the time the sentinel of the first relief had inspected. I had almost forgotten that the day was a holiday at all. Being in one of the upper sections in each study, and feeling confident of getting though in the and feeling conndent of getting through in the "exams," I had no immediate fears. My roommate, however, studied like a Trojan. He was in the third section in math, and felt safe in that study, but he was an immertal but he was an immortal in English and occupied the whole evening in toiling over his green B. S. I giving what help I could.

The orders relative to examinations had been published some time before. They prescribed that the Academic Board should be divided into two committees, one to sit

division the old call of "turn out promptly" dued manner the one funeral march that or at such an hour, specifying the study and the class. At almost every meal, the O. D. published some order in the mess-hall correspond to the main time. The library presented a different appearance to the men turned out. They spent the correspond to the main in the mess-hall correspond to the main in the mess-hall correspond to the main in the mess-hall correspond to the men turned out. They spent the correspond to the men turned out.

concerning the examinations.

The "goats" in mathematics were the first to come under fire, and judging from the long time they were under examination, and the excited tales that they told of "fessing" or "tying it up cold," it looked as if the immortals were soon to put on

mortality. At dinner that day, every "goat" was besieged with questions of all kinds, "What with the state of the state subjects did you have?" "What subject did they give to Smith?" "Did the Prof. ask you any questions?" Who had probs?" and kindred queries poured in On the hap-

less immortal from all sides.

More than one immortal told a mournful story of having boned every subject except the one that had been given to him, and that particular branch was the one that he didn't know anything about. It was the same old story—men boning for examination without knowing how to do it; but, unfortunately, the experience acquired was likely to be of no avail to them at West Point. They felt that they must "get over" Point. They felt that they must "get over" it all, and so they waded through page after page, forgetting that the time they were devoting to the whole course was not more than they had previously given to two day's lessons before examination, and that, if they did not know it already, it was too late to learn it now. Hour after hour was devoted to poring over subjects that they already knew, while those old knotty points, here and there, were glanced over in the same hurried manner of other days. The Professor and the instructor had a him through.

—all in due time for the great ever peculiar way of giving out these hazy subpeculiar way of giving out the subpeculiar way of giving out the hazy subpeculiar way of giving out the hazy subpeculiar way of giving out the ha

divisor, or the ignorance of the nature of equations of the "mth" degree may caunge the whole course of an earthly existence.

I ought to have taken warning from the experience of these unfortunate immortals,

but I did not. I counted on being called up for examination on the afternoon of January 3d, so I started in after dinner on the 2d to plough through the whole of my Davies Bourdon, and I actually did it, with the exception of the last ten pages

Our January examinations were to be entirely oral, which for the cadet has its entirely oral, which for the cadet has its advantages as well as its disadvantages. If in an oral "exam" you get a subject with which you are well acquainted, and you are proficient for the term in marks (68) you are proficient for the term in marks (18) per cent, or more) you are in all probability safe. If, however, you are awarded a subject that you do not know very well (and even the best men are hazy on a few points), you are liable to be turned out for a written examination, unless you stand quite high in the particular branch. If you "fess" very badly, even if you escape a written "exam" you will have a loss in class standing.

Photo by M. A. Yauch, Rochester, N. Y.

should be divided into two committees, one to sit in No. 1, Academic Building (the room on the second floor over the Dancing Academy), and the other to sit in the Library. The work of examining the cadets was divided between these two committees. The senior member of the Academic Board was to act as president, although the Superintendent presided when present.

The Board was composed entirely of Professors, with the exception of the Superintendent and the Commandant, who were also members. One of the instructors was detailed as secretary for each board and his diffes were to keep the record and from time to time report to the adjutant the progress of the examinations.

The professor at the head of each department presided when his particular study was in order, the instructor being present during the examination of his section. He gave out the subjects, and conducted the examination, although the professor often had something to say, and occasionally some one of the members asked a question. The sections were turned out by the marks for the term are considered together in determining his standing and fate.

At about 2:30 p. m. of January 3d, the officer of the day came into my division and shouted, "—th section, fourth class mathematics, turn out at 2:45!"

I was in a pretty rattled condition, and divided the time from 2:30 till 2:45 between making my toilet and taking hurried glances at subjects that I already knew.

We formed promptly on the hour, and by the command of the O. D., who had charge of the formation, were marched over to the Library by our section marcher.

As soon as we were outside of the area and saw that the coast was clear, each man of well examination, although the professor often had something to say, and occasionally some one of the members asked a question or two.

The sections were turned out by the officer of the day as the board was ready for them. Notice was sent to the O. D. by an orderly, and the officer went through barracks shouting on the first floor of each division the old call of "turn out promptly" or at such an hour, specifying the study and the class. At almost every meal, the old calls of the section was and the class. At almost every meal, the class is a promptly on the hour, and the hour, and the command of the O. D., who had charge of the formation, were marched over to the Library by our section marcher. As soon as we were outside of the area and saw that the coast was clear, each man of the section began putting questions of a math, nature to his nearest file. There was one exception and that was Corp, who asked no information nor gave any, but contented himself with whistling in a sub-division the old call of "turn out promptly" or at such an hour, specifying the study and the class. At almost every meal, the old calls of "turn out promptly" or at such an hour, specifying the study and the class. At almost every meal, the old calls of "turn out promptly" or a such an hour, specifying the study and the class. At almost every meal, the officer of the formation, were marched on the formation. I might just as soon as we were outside of the area and saw that the coast was clear, each man of the whole matter over, and found only one that the whole matter over, and found only one that the whole matter over, and found only one that the whole matter over, and found only one that the whole matter over, and found only one that the whole matter over, and found only one that the whole matter over, and found only one that the whole matter over, and found only one that the class of the area and saw that the coast was clear, each man of the whole

notary presented a different appearance from the ordinary. There was a complete semi-circle of blackboards, opposite the center of which sat the Academic Board. We had to wait outside the inner door until the orderly notified us that we were wanted inside. We opened the door occasionally to see how things were progressing within. There were several cadets at the boards, but only the lower halves of their bodies were visible. One of my classiticate subject to the ment turned out. They spent the few hours remaining to them in wain endeavors to "get over it" all again, and disappeared in the hall of the Academic Building asking fifteen questions of each other, for which, as usual, there were not fifteen answers.

(To be continued.)

American Roard R tricate subject to the Academic Board the professor interrupted now and then with

report to the President of the Board, and we took seats on the benches provided for that purpose. As there were three hoards vacant, the instructor of our section called up the last three men in reverse order and gave them their subjects. As it was customers. tomary to give but three men in a section problems, and as two had already been provided with "probs." I concluded I had little chance of being furnished with that material.

I took a survey of the boards, and seeing several subjects already given out that I did not particularly fancy, felt somewhat relieved. The man in the section below me, now called on to write, had one of my pet subjects, and it made my blood run cold to hear him massecre it. I wondered how the Board had the patience to hear

BUILD-YOUR-OWN-BOAT Any boy can build a row-boat—cance—sail load or even a lannch—if he has the Brooks system. It can be done at home—will teach him practical mechanics and the use of tools—and the building will be great fun. The boat will be as good as a best builder can build—and the boy will have built to himself—at a very small cost.

The Brooks system consists of exact size Printed Patterns of every piece, detailed instructions and half toons working illustrations which cover every step of the work—an itemized bill of material required and how to secure it.

Wetellyou how to lay a particular pattern on a certain piece—how to cut it out—how to nail it into place and the kind of nails to use. Then we show a picture of the work properly done. Patterns of all kinds and sizes from 13 to 55 feet. Catalog and particulars free. For 25c, 100-page catalog containing valuable information for the anution yacthinans howing several working illustrations of each boat—and a full set for one beat. Full line kneck-shown and completed boats. When soordered, justerns are expressed? O. D. Alexges prepaid to allow examination.

in his math. I determined to dispel my nervous feelings by driving all thoughts of algebra from my head. I tried to imagine those self-possessed, dignified professors as cadets. The best I could do was to picture them as mighty first captains "driving" battalions to meals—it was utterly impossible to fancy that they had all been niebs ble to fancy that they had all been plebs the same as we and had shaken in their shoes before an Academic Board just as solemn and just as awe-inspiring as they

were now.

Behind the Board were several benches.

A few girls visiting on the post at the time and chaperoned by officers' wives had taken possession of these seats. They looked very knowing and wise. Although I couldn't be certain of it, I was willing to wager that while they might know the difference between a corporal's ch vron and a captain's, not one of them could tell a logarithm from an unknown quantity.

I returned from all these absurd fancies

stood fully twenty min-utes before I could even place the subject in the book. At last, by a long process of reasoning. I remembered that it was on the left-hand page. This was a clue at least, but strive as hard as I might, I could not recall the author's words or his method of demonstration. I stared at the board in a va-cant manner, but it

at the board in a vacant manner, but it stared back at me just as vacantly.

My subject was not a "B.S'g" one (that is one of a mere matter of hook go and work in my own way. The minutes sped swiftly. I became so engrossed that the hum of voices almost died away in my ears. Then I paused a moment to glance around, I saw that there was but one cadet between me and my recitation, but I had gone far enough in my work to see my way clear. I had solved the difficulty according to my own methods, but was confident of the start of the star

I had solved the difficulty according to my own methods, but was confident of every step in the demonstration.

As I faced about and gave my enunciation, I was perfectly cool. When I started on my demonstration, my instructor frowned a little as he saw that I had completely abandoned the book; but the professor took me in hand, and I came off with flying colors,—in fact, the professor said, "Very well."

On my way back to barracks, I thought

### Some Philatelic Portraits

We have told the story of many a South and Central American "Stamp head." Nearer home there are philatelic portraits with stories equally interesting and romantic. The aged Emperor Francis Joseph of Austria, who came into the heritage of the Hapsburgs when a boy of eighteen, is still occupying what has been described as "the most difficult throne in the world;" and during the past fifty years stamps his head has figured on many millions of Austrian postage stamps.

When adhesive postage stamps were first issued in Austria, just fifty-five years ago, the design selected was one commonly chosen for European empires—viz., the arms of the country. The head of the Emperor was not employed until the issue of 1858, when an embossed profile portrait formed the principal feature of the design. Another embossed head—but turned to the right instead of to the left—appeared on the oval stamps of the left-appeared on the oval stamps of

1861, but in 1867 the best known and longest lived Austrian issue was produced, the well-known series of 1867-1882, bearing the Emperor's head to right in a central circle. Many of us who have collected stamps for a many of us who have considerable period of time can recollect these stamps as being current in our schooldays. Common enough then—almost despicably common; but nowadays, one or two of the higher values are anything but easy to pick

higher values are anything but easy to pick up in first-class condition.

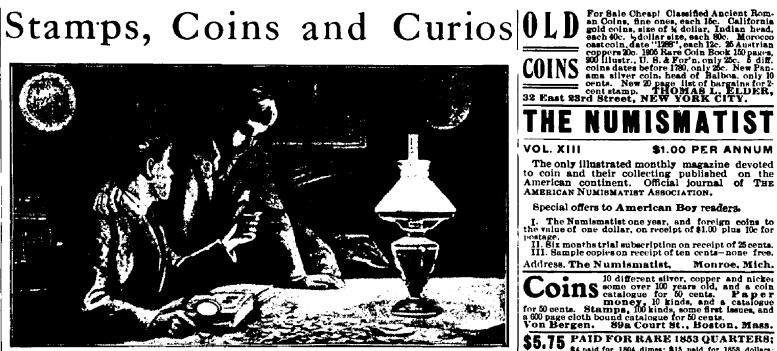

These various portraits of the Emperor Francis Joseph on successive issues of the postage stamps of Austria form a most interesting portrait gallery of the ruler of the Dual Empire. The stamps are not mere repetitions of a stereotyped profile as was the case with the English issues of the Victorian era. On each issue of the series, Francis Joseph grows a little older, though it may be doubted whether the portrait on the issue now current faithfully depicts the head of the House of Hapsburg in the winter of his days, after a long life of public trial of his days, after a long life of and private bereavement unequalled in the career of any other reigning sovereign.

career or any other reigning sovereign.

Italian stamps show us some interesting heads, too—especially if we include under the heading of Italy, the stamps bearing the head of King Ferdinand of Sicily. It was this

king, known by the contemptuous nickname of "King Bomba," whose precious head (on his postage stamps) was shielded from the contaminating touch of the postal obliterating stamp by the sycophantic ingenuity of one of his courtiers, who devised a special postmark, which, while cancelling the outer portions of the stamp, would leave the kingly effigy untouched! The stamps of Italy proper—the "United Italy" of the past forty-five years—show us portraits of the gallant House of Savoy, from the first Victor Emmanue' down to his namesake and descendant of today. The head of Victor Emmanuel ("the Gallant") gave place in 1879 to that of his successor on the throne, Umberto, or as we render it, Humbert, the illustrious but lifted monarch who fell a victim to the murderous hand of an anarchist. The King Humbert, fated monarch who fell a victim to the mur-derous hand of an anarchist. The King Hum-hert series of stamps lasted from 1879 to 1901, in which latter years the new labels bearing the head of the present King Victor Emmanuel II. made their appearance. The most recnt issue of the current type is the oblong "Expresso" label for the express de-ligant department of the Italian postal serlivery department of the Italian postal ser-

THE RUBBIAN WAR STAMPS, ISSUED IN AID OF SOLDIERS' WILOWS AND ORPHANS

# The Boy Photographer by the use of ammonia. The solution should be about one drachm to a pint of water. The prints should be washed in several changes of water, then immersed in the ammonia solution, finally toned as usual. It is necessary to wash the prints carefully when they are in the ammonia, as the action is very rapid.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

### Honorable Mention

The list of those entitled to this distinction this month includes the names of: Ed. C. Steuber, F. Smith, Frank Gerlach, E. E. Trumbull, Kerr Forman, Paul G. Shippee, J. L. Kadgihn, Albert E. Sindt and M. C. Shoemaker.

### For Amateurs

The May issue of the Camera Amateur Magazine, of Boston, contains a number of in-cut ro-teresting articles and numerous artistic il-lustrations that are printed on calendared pa-per. The magazine requires no commenda-tion; it commends itself.

### Broken Negatives

To repair broken negatives so they may be printed from without notice of the break, place the broken negative upon a sheet of glass and fasten the two together round the edges with narrow strips of paper. Print in a very deep frame so that the light may fall vertically upon the negative and keep the frame in motion.—Ex,

Lantern Slides From Newspaper Cuts

Newspaper cuts (or printed matter) are sometimes used as iantern slides but cannot be mounted so as to be very satisfactory. The best way to prepare them is probably to coat the printed matter with a fine spirit varnish, or a negative varnish might answer. Rub tho print face down on the glass until all air bubbles are expelled. When dry, soak the paper with water, and rub the paper off the glass very carefully with the finger, so as not to remove the varnish and ink of the picture. If successful, the picture will remain on the glass when the paper has been removed.—Photo Straws.

### To Enamel Bromide Paper

To Enamel Bromide Paper

This may be satisfactorily done by the following method. Take a clean sheet of glass and warm it before the fire, then thoroughly clean and rub it with a little vaseline, finally polishing with a clean cloth. Coat this thickly with enamel collodion (made up of castor oil 2½ minims, pyroxyline 3½ grains, alcohol ¼ ounce, ether ¼ ounce). Allow this to set. Then make a solution of gelatine—20 grains in 1 ounce of water. Put the collodion-coated glass face upward in this solution while it is still warm. Next immerse the print face downward and bring print and glass into contact. Remove and squeegee together till all air-bubbles are removed. Leave till dry, then cut round the edges with a sharp knife, lift up one corner, and strip off the enameled print.

### Copying Cracked Prints

Prints which have become cracked and discolored by age are somewhat difficult to photograph. The best way is to fill up the cracks in the surface by some means before attempting exposure. A good plan is to soak the print in good glycerine and squeegee it to a glass plate. This, of course, makes the copying somewhat difficult. Either the glass and its attached print should be placed in a sloping position in the open air, and the

APPLE8 First Prize, by Nick Bruchl, Sherwood, Wis.

### Prize Winners

Nick Bruehl, who takes first prize with his Nick Bruehl, who takes first prize with his fine photograph of apples, requires no introduction to our readers as reproductions of some of his pictures have appeared in these columns before, but Chas. L. Wallace, the winner of the second prize, is a newcomer. He is a Chicago boy, 13 years of age. The photogroph represents his brother. It was taken on a Cramer plate, developed with tolidol and printed on solio.

HIS FIRST PANTS Second Prize Photo by Chas. L. Wallace, Chicago. Ill.

camera pointed down upon it, or the print may be surrounded by sheets of tissue paper. These should be arranged so as to form a kind of open-ended box some ten or twelve inches jeep. A rapid plate should be used and a moderately long exposure given. If the print cannot be treated with glycerine, the only thing to do is to take a photograph of it upon an isochromatic plate, employing a yellow screen.

### Mistakes to be Guarded Against

Never take a view with the sun directly behind you, says a correspondent of the Photographic News, and reference to Figs. 1 and 2 herewith given will show the worth of the ad-

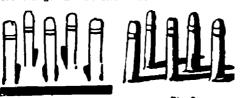

Fig. 1 shows the result with the sun be vice. Fig. 1 shows the result with the sun behind the photographer; the shape of the objects, shadows, and even perspective are lost. Fig. 2 shows the effect with the light coming from the side, and how great an improvement!

Another error to be guarded against is lack of foreground. Note the contrast between Fig.

3 and Fig. 4. In the former the object has been to get as much of the tree as possible, and consequently foreground has been sacrificed and the tree looks as though it were anchored in the air, rather than firmly rooted in the earth. In Fig. 4 the top of the tree has been sacrificed to gain more foreground and the top-heavy and unsymmetrical effect thus eliminated.

### Too Deep Prints

It frequently happens that prints are made more deeply than is intended. Usually such prints are regarded as useless and thrown away. They may, however, be easily reduced

### A Developing Hint

One very fertile source of pinholes in negatives is the formation of minute air bubbles during the flyoding of the plate with the developer. This may happen even if the solution is poured on quickly and carefully. A very simple method of doing away with any difficulty from this source is to breathe upon the film surface of the negative. By this means a very slight moistening of the gelatine is caused, and this enables the developer to come into contact with the film at once without any formation of bubbles. The plan is a very simple one, but is nevertheless perfectly effective.

### Current Coraments

Current Comments

Geo. D. Shelton: The proper tone of solio is a warm brown; the reddish tint should be entirely eliminated. Howard Dietrich: If you should wonder why your "Fishing" received no consideration in our prize contest, note the size of the boy's leg, on which the dog is resting. Evidently it was too near the camera and, therefore, appears much larger than the limbs of the remainder of the party. In every other respect the photograph is very good. Richard H. Valentine: Blue prints are excluded from our competitions. F. C. Leurs: Your photograph of "The High Jump" is a very creditable one. Vernon Householder: For a first effort two of your prints are pretty good. By looking at the photograph of the horse, however, you will find that the fore-part appears larger than the hind-part, because the animal was not taken on the same plane. Cecil E. Grambs: Subject too large for so small a camera; otherwise commendable. R. Lee Goulding, Matthews H. Tardy and Robert H. Fowler: Prints show lack of contrast; probably your negatives lack density and were either under-exposed or taken out of the developer too soon. In the case of Goulding, this remark refers to his print of the U. S. Kearsarge. Geo. Ringrose: From a pictorial point of view, your photograph is excellent. Technically it is defective and appears flat. Perhaps the negative is not to blame, in which case you may be able to send us a print that will show more contrast; otherwise, try intensification.

### The Letter-Box

The Letter-Box

Geo. A. Miller: In a general way I should say that a folding camera would be preferable, although you would have less trouble with a box or fixed focus camera when making snap-shots; the camera you mention is a good one; a good 3½ x 4½ camera may be purchased for 35 up. H. D. Lippincott: By selecting a suitable mount, that is to say one that is thick enough, the annoyance of curling may be avoided. Edwin Peterson: In my opinion the film cameras you mention are much inferior to the Kodaks. Request the Eastman Co. to send you a catalogue and investigate the matter for yourself. Harry Wilton: Titles on prints are produced by writing backwards on the negative, employing type, carbon tissue, etc. The most practical methods are either to write the title first of all on the paper before printing with India Ink, the same being washed off prior to toning; or the following may be used after toning:

 Water
 30 parts

 Iodine
 1 part

 Gum
 1 part

Gum

You can get the materials for the foregoing at any drug store. R. Lee Goulding: For information concerning the No. 2 Brownie, please address the manufacturers, the Eastman Co., Rochester, N. Y. To take a photograph of the picture of your great grandfather, you will require a copying lens. If the picture is covered by glass, you will have to take it out of the frame. The length of time exposure cannot be given, as that depends upon the light.

# The Boy Mechanic and Electricity will, so far as space permits and where saked by boys, be sawered in these columns. A Permanent Department Consistence of certain chemicals which have a depolarizing action and prevent this collection of bubbles. If it is not possible for you to get sulphuric acid, you may use strong vinegar or brine instead, but the action is not as violent. Experimental Lessons In Electricity I.esson III. Current Electricity Lesson III. Current Electricity. Lesson III. Lesson III.

HILE our studies in magnetism are necessarily brought to an abrupt close by reason of a desire to get into a new field with each lesson, when possible, we shall have frequent occasion to refer to the subject again throughout this series. Under the head of Current Electricity and its applications there will be many experiments where the magnetizing effect of the voltaic current will be studied at great length. This past lesson will serve to show some of the wonderful effects produced by magnetism and introduce to many a new force, upon which all of our electrical machines depend for motion or action. HILE our studies in magnetism are

our electrical machines depend for motion or action.

Many of these experiments in magnetism require a knowledge of galvanic, voltale or current electricity, and for that reason we will treat of its generation in this lesson. We will make a few simple cells that will show the principles, and those who desire to do so may make batteries as large as they wish.

We learned in the first lesson that a charge of frictional electricity would flow from a charged body to the earth immediately upon the body coming in contact with some conductor. And in the case of the electrified sealing wax, if we were able to keep up a continuous electrification a current of electricity would flow from the wax to any conductor connected with the earth. This may be accomplished to a great extent with what are known as frictional or static machines, but the discharge takes place with such rapidity that these machines can be not to no years great pracplace with such rapidity that these machines can be put to no very great practical use other than in an experimental

chines can be put to no very great plactical use other than in an experimental or medical field.

But before going further, let us form a clear conception of just what a current of electricity really means. While we have no positive evidence as to a definite direction in which a current of electricity is supposed to flow in passing from one body to another, it is very convenient to speak of it as flowing from a body charged with it to one that is not so charged, or from a body that is positively electrified to one that is negatively electrified, in exactly the same manner as water flows from a basin on a high level to one on a lower level. In fact, the action of a current of water flowing in a pipe is so nearly like that of a current of electricity flowing through a conductor, that the former is often made use of in evoluting

like that of a current of electricity ilowing through a conductor, that the former is often made use of in explaining the different terms used in electrical science, and we shall also make use of the illustration in these lessons.

In order, however, to assume that the electrical current flows at all, we must imagine it as a mass or something that can move, and in this assumption we are in error, because we have no proof that electricity has any mass, weight or dimensions, but the assumed character will do very well in speaking of it and will make the facts easier to understand.

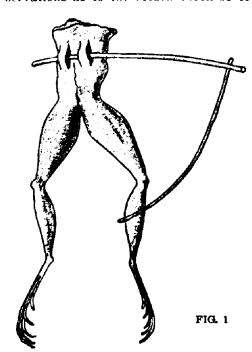

Now, the word current is still further

will make the facts easier to understand.

Now, the word current is still further divided, or classified, into two distinct kinds—a continuous or direct current—one that flows continuously in one direction only—and an alternating current, or one that changes its direction at equal intervals, flowing first in one direction and then in the opposite direction. These changes, or alternations, in the flow of the current often reach the rate of several hundreds per second. It is the direct or continuous current that interests us most and the one of which we will speak in this lesson, taking up alternating currents later.

Direct currents are generated by voltaic cells, or batteries of such cells, and machines called dynamos. There are other sources of this current, but they are of interest in an experimental way only, and of no practical use.

The discovery of electric currents was made by Galvani, a physician in Bologna, in the year 1786. The story of his discovery is this. While experimenting with various animal tissues, making observations as to the return shock so of-

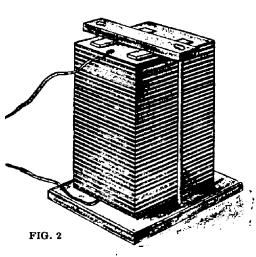

ten noticeable in dead animals shortly after houseante in dead animals shortly after being killed, he hung several pairs of frogs' legs on hooks attached to the veranda railing outside his window. To his great surprise, they immediately hegan to kick as if alive, and the convulsions were at times very violent. In-

vestigation proved that the hooks were made of zinc, while the railing was of iron. He then removed the legs and repeated the experiment with wires of zinc and copper, touching one of the nerves along the backbone and a muscle of the thigh simultaneously, the two wires being in contact. He at first thought this due to a current generated by the contact between the metals and the moist flesh, but Volta, a professor in the University of Pavia, proved that it was due to the electricity generated by the contact of two dissimilar metals.

Experiment 1. While we do not advocate the wanton killing of a frog, or any other animal, for that matter, those of you who are sufficiently interested may purchase a pair of frog's legs at some market, since they form an article of diet for some, and try the experiment. Hang the legs from a hook made of copper wire, passing the end under-

of copper wire, passing the end under-

neath the nerves running along the backbone. These nerves may be exposed by making an incision with a knife on either side of the backbone, lifting them up and passing the wire beneath them. Then, while holding the copper wire in contact with a small strip of the contact with a

beneath them. Then, while holding the copper wire in contact with a small strip of zinc (cut from the edge of a sheet of the metal), touch one of the thigh muscles. If the legs are reasonably fresh there should be a convulsive shudder and kick. If you perform this experiment you can readily appreciate the impressions that came over Galvani when he saw the legs kicking and writhing as the wind blew them against the railing, over 119 years ago.

It is true that this current is extremely feeble, but it is a current nevertheless. Volta, in whose honor the words voltaic and volt are assigned to certain electric terms, took up this experiment and went further in proving his theory that the contact of dissimilar metals generated electricity, and constructed the apparatus that bears his name, the Voltaic Pile, shown in Fig. 2. It is simply a pile of metal and paper disks, two disks of dissimilar metals, separated by a layer of moistened paper.

two disks of dissimilar metals, separated by a layer of moistened paper.

Experiment 2. You can readily make one of these piles by cutting out of sheets of copper and zinc fifty squares, 1½ inches by 1½ inches, of each metal, and twenty-four squares of blotting paper of the same size. Soak the blotting paper in strong brine made by dissolving two tablespoonfuls of salt in a glass of water. Now pile up the pieces, placing two disks of copper and zinc together, then a layer of paper, then two more disks and so on, being sure to have the sequence of the disks as follows:

Copper,

Blotting paper, Copper, Zinc, Blotting paper,

Copper, Zinc, Solder a copper wire to the upper cop-Solder a copper wire to the upper copper disk and the lower zinc disk. Make a small wooden base. Drive into this two stout wires, on the top of which is placed a yoke, into the ends of which the wires are driven. Then place the pile beneath the yoke and compress slightly by inserting a wedge between the top disk and the yoke. The presure should be sufficient to make good sure should be sufficient to make good contact between the metal disks, but not sufficient to cause the water to coze

out of the paper.

Quite a perceptible shock may be obtained from such a pile if both terminal wires are touched at once to the tongue maistened fingers. The quantity mate of or the moistened fingers. The quantity of electricity generated by each pair of disks is extremely small, but, owing to the method of connecting each pair in series with the next, the output is mul-

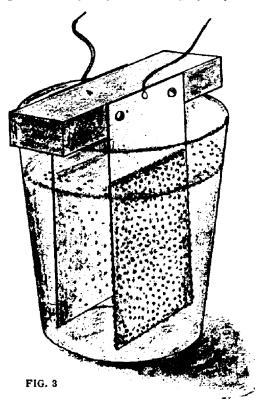

the method of connecting each pair in scries with the next, the output is multiplied so that the pressure (voltage) of the entire combination may become quite appreciable.

In speaking of bodies charged with electricity, we say that there is a certain potential existing between the two terminals, or points of connection, meaning that there is a certain pressure existing between the points causing the current of electricity to flow. This term "potential" means exactly the same as the word pressure does when applied to steam or water. When steam is generated in a boiler, it creates a pressure of so many pounds per square inch, and we all know what a pressure water has when drawn from a faucet, or, speaking we all know what a pressure water has when drawn from a faucet, or, speaking more correctly, the pressure or force with which the water is forced out of the faucet. It is this pressure that causes either the steam or water to flow from one point to another through the

And for the same reason it requires And for the same reason it requires electrical pressure to force electricity through a conductor, such as a wire. It is this pressure to which we refer when we speak of potential, and instead of saying that we have so many pounds pressure, we call the units of electrical pressure volts, and say that the pressure, or potential, between two points,

such as the binding posts of a battery, is one and a half volts.

The pile you have made is, in reality, a very simple cell. And at this place it will be well for us to learn the correct meaning of the words cell and battery, because they are so often incorrectly used. In electrical science a cell is a single piece of apparatus used for the generation of electricity by chemical means. It is a unit. A battery is a col-

ent upon the amount of zinc consumed in a given time. In order that we may refer to the dif-

to be made over several times before he succeeded in getting them just right. The engine stands 16 inches high and develops ½-h. p., and runs smoothly and without noise. He frequently belts it to his mother's sewing machine. The supporting part of the engine is made of babbitt, the cylinder of brass, and the rods and other parts of steel or iron.—Popular Mechanics.

### Query Box

Kindly give the cost of an induction coil as described in your January and February numbers.

12. G., San Francisco, Cal.

described in your January and February numbers.

Answer.—The cost of these coils depends largely upon the price you are compelled to pay for the wire used. This will vary in different places, depending upon the various costs that the retailer has to pay for the stock, and for this reason it is almost impossible to give a very close approximation. The bare wire for the secondary would probably cost in the neighborhood of \$2.00, and perhaps \$4.00 would cover the cost if cotton insulated wire is used. The primary has so little wire in it that the cost is a mere trifle.

In quoting costs of various articles in this column for the information of its readers, it is to be distinctly understood that the prices are not absolute, as this would be impossible. Every section of the country will have different transportation rates, which affect the cost of all commodities, and for this reason it would be unfair to quote a very low figure, or one that a manufacturer would pay for materials in bulk. The instruments above mentioned were designed to be built by boys at home, out of

pay for materials in bulk. The instru-ments above mentioned were designed to be built by boys at home, out of materials that they could readily secure, and, outside of the wire, silver and nickel for filings, there should be little or no expense.

and nickel for filings, there should be little or no expense.

In order that we may refer to the different elements of a cell in writing of them, without mentioning their composition each time, we have given to the zinc the name of the negative element and to the copper plate that of the positive element and to the copper plate that of the positive element is, however, the element attacked by the solution, no mater whether it be zinc, lead or iron, and the positive element is that which collects the electricity thus generated and carries it outside the cell.

The solution is called the "electrolyte." Scientists tell us that in all probablisity the electricity is generated at the surface of the zinc, passes across and through the electrolyte, and thence up the copper to the wire attached thereto; from this terminal the current may be led anywhere, provided a return metalic path is provided for its return to the zinc. A complete metallic, or other conducting circuit is absolutely necessary before we can have a flow of current from the cell.

The small bubbles arising from the surface of the zinc pates of the line as thickly that the acid cannot get at the metal, when the aufdecannot get at the metal, when the aufdecannot get at the metal, when the acid cannot get at the metal, when the aufdecannot get at the metal, when the aufdecannot get at the metal, when the acid cannot get at the metal, when the acid cannot get at the metal, when the acid cannot get at the metal, when the aufdec of the zinc pates of the liquid, or a shaking of the plates will dislodge the bubbles when the action will again take place as before. Later on we will learn the following questions?

Ans. Our space is too limited for this description, but they will be described in a later issue of the magazine.

Will you please tell how to make small escription cannot be given in this column, have the paper.

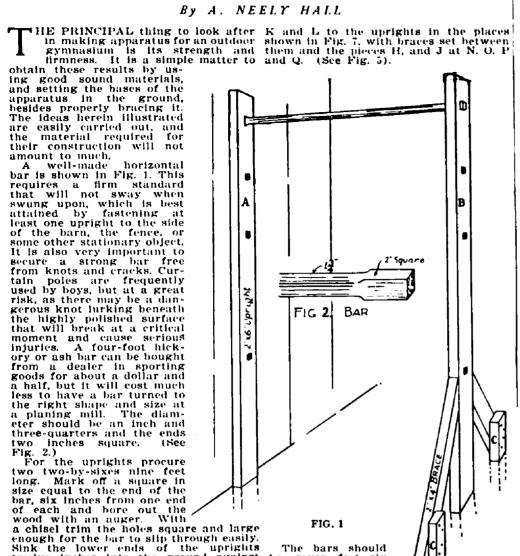

Will you please tell how to make scription cannot be given in this column, have the paper.

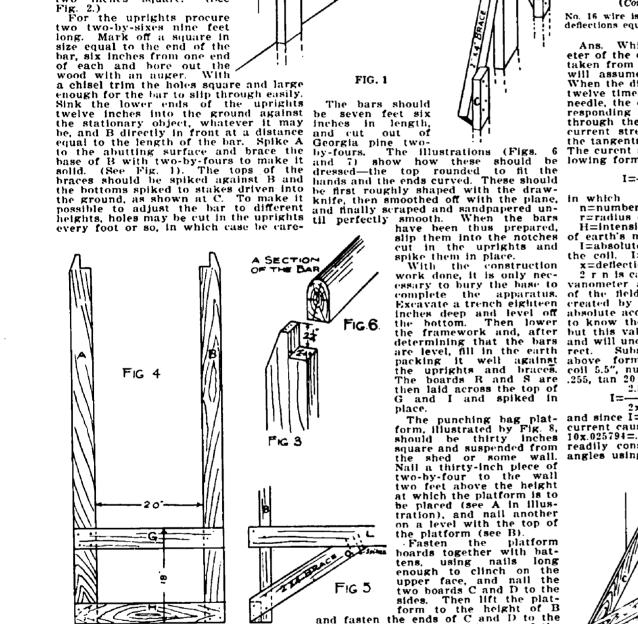

Ans. Our space is too limited for this description

# SOME APPARATUS FOR ANIX OUTDOOR GYMNASIUM

ory or ash bar can be bought from a dealer in sporting goods for about a dollar and a half, but it will cost much less to have a bar turned to the right shape and size at a planing mill. The diam-eter should be an inch and three-quarters and the ends two inches square. (See Fig. 2.)

two inches square. (See Fig. 2.)
For the uprights procure two two-by-sixes nine feet long. Mark off a square in

ful to locate the holes exactly opposite

each other.

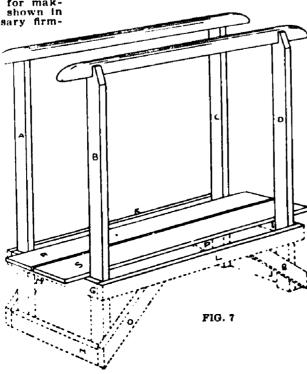

Having finished the construction of this piece of apparatus, oil the bar with hot boiled linseed oil, and paint the up-

hot boiled linseed oil, and paint the uprights and braces.

A most satisfactory scheme for making a pair of parallel bars is shown in Fig. 7. To acquire the necessary firmness without putting in bracing that would interfere with the performer, the base of the apparatus must be set below the surface as indicated by the dotted lines in Fig. 7.

in Fig. 7.

In height the parallel-bars should be about four feet six inches, in length seven feet six inches, in length seven feet six inches, and in width twenty inches between the bars. This makes the uprights A, B, C and D, six feet long, allowing eighteen inches to project into the ground. Prepare one end of each as shown in Fig. 3, notching it for the bar to fit in and cutting off the corner. When this has been done, cut four two-by-fours twenty-eight inches long. Then lay the uprights A and B on the ground twenty inches apart and spike two of the two-by-fours to them at G and H. (See Fig. 4). Uprights C and D should be similarly fastened together with the other two-by-fours at I and J. (See Fig. 7). When these frames have been made, set them upon their bases six feet apart and spike the two-by-fours In height the parallel-bars

### Query Box

(Continued from page 288.)

No. 16 wire is used, what would the following deflections equal; 20, 30, 40, 50, 60, 70, 80, 90?

C. L. Kelseyville, Cal.

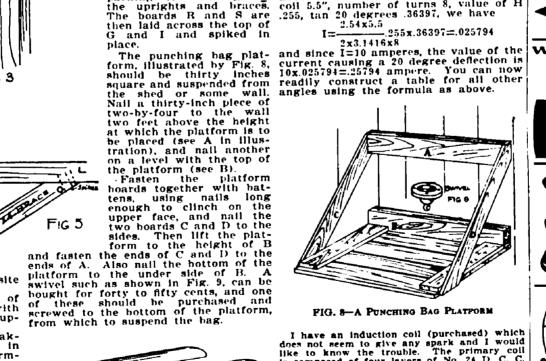

I =-−H tan x

2 r n

in which
n=number of turns in coil of wire.
r=radius of coil in inches.
H=intensity of horizontal component of earth's magnetism.
I=absolute units of current flowing in the coil. I=10 amperes.
x=deflection of the needle in degrees.
2 r n is called the constant of the galvanometer and represents the strength of the field at the center of the coil created by one unit of current I. For absolute accuracy it would be necessary to know the value of H at Kelseyville, but this value for San Francisco is .255 and will undoubtedly be very nearly correct. Substituting the values in the above formula, which are—radius of coil 5.5°, number of turns 8, value of H .255, tan 20 degrees .36397, we have

1=-254x5.5

1=-255x.36397=.025794

I have an induction coil (purchased) which does not seem to give any spark and I would like to know the trouble. The primary coil is composed of four layers of No. 24 D. C. C. wire, and the secondary coil or ten layers of No. 35 D. S. C. wire. It has a good vibrator and gives a shock that a person cannot endure I used five wet batteries and for spark electrodes I used stout copper wire with a ring at the end as described in the January issue. What is the matter?

L. F. C., Los Angeles, Cal.

Ans. From your description of this

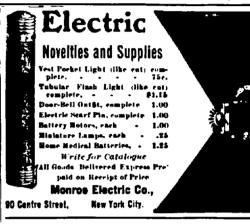

I. F. C., Los Angeles, Cal.

Ans. From your description of this coil it is evidently designed only for medical purposes and is not capable of generating sufficient electro-motive force to make a spark, although it will give a perceptible shock to a person holding the terminal wires. I doubt if it will be worth your while attempting any remedy, as the only one that could be suggested would be a larger secondary winding and the use of a condenser. winding and the use of a condenser.

In the February issue there is one screw on In the February issue there is one screw on the right hand side of the board that has no name written beside it. What is this for (?) and on the left hand side there is a wire running along beneath the face which stops without going to anything. L. M., Dallas, Texas.

out going to anything. L. M., Dallas, Texas.

Ans. The screw on the right hand side to which you refer is for one of the wires from the battery operating the tapper and sounder. The name written beneath the two right-hand screws was intended to refer to both. The wire on the left-hand end referred to is plainly marked "to vibrator screw" and the other wire running parallel to it is marked "to primary coil."

# American Boy

Copyright, 1905, by The Sprague Publishing Company

### THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is \$1.00 a year, payable in advance. Foreign subscriptions, \$1.50. New Subscriptions can commence at any

time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registers tered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper or wrapper shows to what time your subscription is paid.

Important-All subscriptions are discon mportant—All subscriptions are discon tinued as they expire. Renewal slips are inserted in the last number to that which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed. Subscribers can, by watching the expiration date on their address label, renew early and thus be sure of getting all the numbers as issued.

Subscribers can, by watching tain, the expiration date on their address label, renew early and thus be sure of getting all the numbers as issued.

Letters should be addressed and drafts made payable to The Sprague Publishing Co., Majestic Building, Detroit, Mich.

President and Editor. Vice-President and Ass't Editor. GRIPPITH OGDEN ELLIS, J. COTNER, Jr., Secretary and Treasurer.

### OFF, SABLE ISLAND

(Continued from page 281.)

Change goes!" That's right—here places. Arms, shoulders, back and legs-all

Arms, shoulders, back and legs—all went into that stroke.

"It's a pretty good lot, after all," he continued, as he drove the dory along—"a pretty good lot, and I like your perseverance in hanging on till you'd done what you started out to do. You put your soul into everything, Benny. I like that in you. And I like the efforts you made in my behalf back there. So the gang say I've an eye for the dollars, do they?"

"I'm sorry I said that, Mr. Elwell. Please don't mind it, will you?" pleaded Ben earnestly.

Ben earnestly.
"I'll not mind it, no, Benny," the old

Ben earnestly.

"I'll not mind it, no, Benny," the old sailor answered good-naturedly. "Howsomever, for a wonder with them telling it, it's straight. Yes, old Andy always had a good eye for the dollars! They don't know it, Benny, but I own one-half interest in the Ednah D. That's why I worry some, and growl a little, perhaps, at a poor trip.

"You know the best of the seiners, the Rolling Wave? I own a half interest in her, too, and it don't end there, either. In other days, I've been captain off and on, and for years I've been laying away briny harvests. Most of 'em never look for any record for prudence. But, boy, when, like me, they're nearing the seventieth shackle in the windlass of life, they'll wish they had, I'm thinking.

"A spell ago you said I'd no family to think of. That's right, too, and you shall profit by it, no mistake, for I realize how badly scared you were when you jumped out of your boots, and I appreciate it, too. I'll never forget how you grabbed me and tumbled me in at the last moment; and you, boy—you'll get your schooling all right, beginning the next day after we get hack to Boston. The tots and the marm will be all right, too, I'm thinking, for you'll provide for them from your own bank account.

"Heave ahead, Benny, boy, hard and feet."

count.

"Heave ahead, Benny, boy, hard and strong, now. Just pitch into that 'last key' song of yours. Sing, boy, sing—together now!"

Ben Cleveland's face was glowing with joy and enthusiasm, and clear and strong over the waters his rich young voice rang out even above the whistling of the winds.

voice rang out even above the whistling of the winds:
"Oh, don't be discouraged, brother,
Though fortune seems to mock—"
"Hooroo!" broke off Andy. "Hooroo!
That's the song to stir one's blood! I've got the idea, I'm thinking—hang on—fight on! Fight on just so long as a breath remains! Hooroo!"

### A FRENCH FROG AND AN AMERICAN EAGLE

(Continued from page 269.)

and had a few of my more serious hurts attended to, I was invited to the officers' mess and placed at the captain's right hand. There, I held that gallant company spell-bound by the recital of my surprising adventures. Ere I had finished more than one manly breast was heaving with emotion, and when in broken accents I told the story of my heautiful Zuleika's devotion and death many a pearly tear stole unheeded down the hronzed cheeks of my rescuers. In the days that ensued I was at once the hero and the darling of the ship. Prominent among the brave tars, who from a reverential distance regarded me with admiring enthusiasm, was the sturdy boatswain, William Bobstay, who had taken so prominent a part in my rescue. His devotion to me was absolutely canine. My influence with the captain enabled me several times to save him from impending punishment for some slight errors of conduct into which he was betrayed by his too great devotion to grog. I was more than repaid by the touching phrases in which the honest fellow expressed his gratitude.

"The Swasher was bound for Alexandria, and as soon as we arrived at that port, I went ashore, with the faithful Bobstay in attendance, to gratify a long-cherished desire to see the Pyramids. Together we explored those marvelous monuments of the Pharaohs, and I formed an entirely new theory respect-

mids. Together we explored those marvelous monuments of the Pharaohs, and beautiful swings
I formed an entirely new theory respecting them, which I hope some day to
yard. The deligive to the world, if I survive the fourth within the reach
book of Euclid. It was on our return to

Cairo that an incident occurred which changed the whole current of my existence. As we were passing through the streets of that wondrous Eastern Fairyland

land • • "
"Pharaohland!" suggested Baines, with his face in his pillow.

Amid a crowd

of donkey-boys, buffoons, and loathsome beggars, amongst whom the silly goat who has just interrupted me would have been perfectly at home, my wandering eyes were caught by the flutter of a handkerchief from the lattice of a house which seemed barred and fortified like a prison. I stopped and considered the place more closely, and fancied I perceived a fair face behind that jealous screen. Again the little silken flag was waved, and this time I felt certain that it was a signal, and addressed to me Immediately bringing Bill Bobstay to a halt, I drew his attention to the circumstance and announced my intention of it was a signal, and addressed to me Immediately bringing Bill Bobstay to a halt, I drew his attention to the circumstance and announced my intention of pursuing the adventure, calling upon him, on his allegiance to assist me. A true British buildog, he professed himself ready for anything, but pointed out to me that his shore leave was up and that England expected him to do his duty. I commended his conscientious scruples, and pressed five shillings into his horny hand, promising at the same time to make his peace with the captain. He yielded, and we cautiously approached the house and knocked upon the heavy oaken door. After an interval of breathless waiting, slow footsteps were heard moving along the passage within, and a light shone through the keyhole " "Cave!" suddenly whispered Carclough, as the storyteller paused for breath.

There was a light shining under the dormitory door; and it wasn't moonshine either. There were the slow footsteps, too, just as Crikey had described them, as soft as could fairly be expected from a pair of stockinged feet, number tens, out size. McCloskie, of course!

We heard him stop outside and try to listen noiselessly; which he can't do; for he blows like a grampus. Then he felt for the handle and stealthily opened the door, upon a touching sight. Two dozen fair boys lay there, wrapt in the unconscious sleep of infancy and innocence, while the moonlight softly brooded over that peaceful scene. Through my own half-closed eyelids I could see the expression of his countenance change, as he gradually grew ashamed of his unworthy suspicions; and presently he softly withdrew, muttering as he shut the door, in his native dialect:

"Puir bairns!"

And a moment later we heard his own door, at the end of the gallery, close behind him and knew that we were saved.

And a moment later we heard his own door, at the end of the gallery, close behind him, and knew that we were saved.

(To be continued.)

### The Pleasures of the Swing

One form of outdoor exercise and amusement holds its attractiveness with most of us from childhood to old age,—and that is swinging.

One old apple tree in my father's yard was known as the children's tree, largely because about eight feet from the ground that tree sent out a limb straight from its trunk at a perfect right angle for a distance of three feet and the ground that tree sent out a limb straight from its trunk at a perfect right angle for a distance of three feet and then, as if having determined it had gone far enough to allow of the tying of swing ropes, it turned its course again straight into the air. Here from my earliest days hung a swing—one of the home-made sort, made of clothesline rope with a board for a seat, notched at either end. I know of at least three generations of children who have swung to and fro, supported by the strong arm of that benevolent old tree. Nor were the children the only ones who sought the exhilaration of swinging in that old apple orchard, for the older people often came and, after testing the strength of the ropes by sitting down on the seat very carefully and pushing themselves gently with their feet. They were soon urging the swing to its utmost. Regardless of consequences, they gave themselves up to the fun of flying backward and forward through the air, hair flying, clothes disheveled, faces red with the glow of exercise. Thus just like children they sat until from sheer fullness of pleasure or from senses numb under the rhythmic motion of "letting the old cat die" they

swing board.

I feel sorry for city boys for many reasons, and one of them is that in so many cases they never have the fun of swinging from trees in the open.

Perhaps you may be one who thinks swinging only fit amusement for girls—that it is not a "game" worthy of a boy, or a grown-up. If so, I would like to see you get into one of the big grape-vine swings that hang some twenty. vine swings that hang some twenty, thirty or forty feet from the ground and swing as I have swung, away out in the air till you think you may never come back, and away out on the edge of things there is a little pause during which you hold yourself tight, and then you come sweeping back, only to go farther the other wav

Swinging sometimes takes courage of

Swinging sometimes takes courage of a high order, and unless you have a cool head I would not advise you to go into this "girl's game" too far. If you are ever going to cross the ocean, it might be well for you to get your stomach used to the rocking motion of the waves. I fear city boys are often without the opportunity of using the swing, yet nowadays, in city or country, there is really no necessity of anyone missing this kind of fun. Shrewd manufacturers have met the demands and are offering most beautiful swings at small cost, which may be set up on lawn or porch or backyard. The delights of swinging are within the reach of everyone and should not go untasted.

zies nor to reply personally to let-

through the air, hair flying, clothes disheveled, faces red with the glow of exercise. Thus just like children they sat until from sheer fullness of pleasure or from senses numb under the rhythmic motion of "letting the old cat die" they came to a gentle stop, with head against the rope and eyes closed—a tired brain or body relaxed and gone to sleep.

How natural it is for children and for persons older grown to crave the delights of the swing! Did you ever notice what first happens when the boy and the girl visit or go to make a home in the country? It is first a swing. The trees seem to beckon and call, saying: "Come swing upon our strong arms. We love the children and will not harm them."
You will see the children answering the call pell-mell, helter-skelter, Jennie to find a rope and Johnnie to cut out a swing board.

I feel sorry for city boys for many reasons, and one of them is that in so many cases they never have the fun of swinging from trees in the open.

Perhaps you may be one who thinks swinging only fit amusement for girls—

ceived by July 20. A prize of a new book will be given for the best lot of original puzzles, suitable for Sep-tember Tangles, received by July 20.

SIXTH LESSON.

We will now learn to play in one sharp, or scale of G. Notice the double cross on the F line. This means that every F in the music is to be played one fret higher. There are two F's on the mandolin; one on the D string, second finger. To make it sharp, you place the finger one fret higher. There is another F on the E string; the first finger. To make it sharp, place the finger one fret higher. Trill each note in practicing the following scale:

B, with the fourth finger, on the E string, is the highest note in the first position. But this scale runs one note higher to C; it is called an extension of the first position. You play it with the fourth finger, the same as B. It is played two frets higher than B. If you have to stretch your hand to make it, be sure and get the hand back in position again.

In the foregoing trill the whole notes, half notes and dotted quarter notes.

"Nearer my God to thee

This is the scale of D, with two sharps, F and C. You make all of your F's effect higher, and all of your C's one fret higher, to make them sharp. Trill

stuffed with
hair. Elastic Wrist.
Four gloves
to full set.

"Ameri e a n Boy" sub-scribers for tions; or for 2 new year-ly subscriptions and 35c; or for 1 new yearly subscripion and Oc. Price \$1.40

plete with bladder, etc. Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 35c; or for 1 new yearly subscription and 70c. Price \$1.25

postpaid.

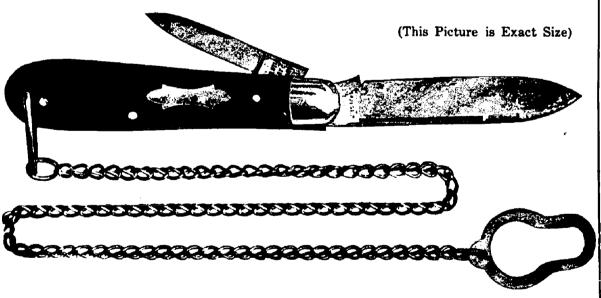

lve Tan Leather, The Reach Imitation Pig-skin

Football

Made of fine Pebble Leather, Canvas Lined and warranted to hold their shape. Complete with bladder. Regulation size.

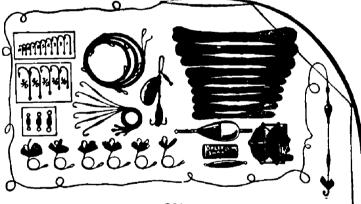

Given to "American Boy" aubscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price \$1.00 postpaid.

# The "American Boy" Chain Pocket Knife

A splendid knife. Everybody wants it. Ebony handle 3½ x ¾ inch. Steel bolster, two best steel blades, steel chain about seventeen inches long, with loop to fasten to button on pants or coat. Neat and handy, You always know where your knife is.

Given to "American Boy" subscribers for 1 new yearly subscription. Price 50c postpaid.

It consists of everything herewith described and illustrated. In this Fishing Outfit we felt sure of immediate success, and we have not been disappointed.

The articles in this outfit were selected with great care and are good for regular fresh water fishing. This is what we supply: A three-piece Bamboo Rod; 1 All-Brass Reel, strongly riveted; 9 Fishing Lines of assorted sizes; 6 Trout and Bass Flies, popular styles; ½ doz. Snelled Hooks; 2 doz. Kirby Hooks, assorted sizes; 1 Kidney Bait; 3 three-foot Leaders; 1 Float, 11/4 inches; 1 Patent Adjustable Sinker; 2 doz. Split Shot and 3 Swivels.

We send everything herewith set forth. Sent securely packed by mail.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 45c; or for 1 new yearly subscription and 90c. (This does not apply on one's own subscription or on a renewal subscription.)

Price \$1.50. We pay delivery charges

# 14k Solid Gold Fountain Pen

These pens are made of the very best quality hard rubber fitted with 14k guaranteed gold "Diamond Point" Pens. They are of the simplest construction and cannot get out of order, overflow or fail to write, as the feeds are made exactly the same as now used by all the standard Fountain Pen Manufacturers, having a deep ink channel, reinforced by two lateral slots, thereby keeping the ink always in contact with the point of the pen, and always wet and ready to write. This Fountain Pen is fully guaranteed, and in the event of its proving unsatisfactory in any particular, can be returned to the manufacturers and a new one will be sent. A printed guaranteed slip will be found in every box. We firmly believe that this pen will give better satisfaction than most \$1.00 and \$1.50 Pens now on the market,

Given to "American Boy" subscribers for 1 new yearly subscription. Price 75 cents, postpaid.

ANY PREMIUMS CAN BE PURCHASED AT PRICES NAMED.

NUMBER 10

S DUNSTER BROWNLEIGH and the new commander of the Naisha regained their feet they confronted one another with anxious faces.

"We have reached the surface," said the former with a glance at the depth indicator.

At the moment of speaking, Takahaki sprung up the conning-tower ladder and attempted to raise the hatch; but it was immovable.

"Dun Brown," he said, "we are under the ice!" "I know it," replied the other, "and the worst of it is that we haven't an idea to which side of the channel we have drifted. Nor do we know how far we are from it. There may be open water within a few yards of us, or it may be a mile away. Even if our auxiliary were in shape so that we could go ahead, which it isn't we wouldn't know in which direction to steer, nor can we learn without an observation. Of course we could use the gasoline or compressed air for a few miles, but our air is too precious to be wasted on uncertainties."

"So that observation we may not take," mused Takahaki.

"It doesn't look like it; but I'll tell you what we can do. We can make ready to take an observation if we have the chance, by putting our electric into working order. It's one bit of luck that we've enough insulated wire on board to rewind it. What do you say, Mr. Comander, shall we tackle the job?'

"Yes, Dun Brown, we will rewind; for it can do no harm to work but perhaps good; and it will keep us from always thinking," replied Takahaki, promptly, at the same time starting forward to get the coil of wire from its place of storage.

In spite of his brave words it was evident from the young commander's furrowed brow, and long periods of silence, as he worked, that he was thinking, and thinking profoundly, of the desperate plight into which his little craft had fallen. Besides being imprisoned beneath unyielding ice, and without sense of the direction in which lay safety the limited interior space at his disposal was encumbered by one dead man, and by two living enemies who must constantly be watched to see that they did not loosen their bonds and seek an opportunity for murdering their captors.

There was plenty to do besides rewinding the motor. Suwarrow's errors had to be corrected, while exhausted nature demanded a certain amount of food and sleep. Thus many hours were passed before the work in hand was so far completed that if they had known in which direction to go they could have navigated their craft without wasting precious air the outside blackness remained impenetrable and they had no guide.

'Look here, Taki," said Dunster finally, "We can't be more than half a mile from that blessed channel, and I propose that we run half mile traverses, north, east, south and west, or until we find it, keeping as close to the surface as we dare, and coming back as nearly as possible to this point each time.'

As no better plan suggested itself, this one was adopted, and the Naisha began to make her way blindly through the darkness, submerged to a one fathom depth, and impelled by her reconstructed auxiliary. Her commander had doffed his uniform and returned to the post of electrician; while Dunster, in the conning tower, steered and stared at the thick deadeyes to detect the faintest glimmer of light that should denote open water above them. The third member of the crew watched the prisoners, as well as the dials indicating speed and depth.

So they went one half mile north and back, one half mile east and back, one half mile south and back, and one half mile west and back, without a single gleam to indicate that their movements had led them to open water.. While they were on their last course the sharp tinkle of the bell connected with their sounding apparatus, suddenly warned them of water so shoal that they were in imminent danger of being wedged between ice and bottom. As with reversed motor the Naisha hurriedly backed away from this danger, Dunster conceived an idea for obtaining access to the air.

"Hold on, Taki!" he cried, "Stop her for a moment while we consider a scheme. Can't we manage to place a mine so as to blow a hole through that confounded ice? A few pounds of gun cotton would do the trick, if we could get it into position."

Copyright, 1904, by Harper & Brothers,

by KIRK MUNROE:

"But how could we get it into that position?" asked the young commander.

'A can, half filled with explosive and provided with a time fuse, might be ejected from the torpedo tube

and allowed to float up to the point of contact."

Takahaki shook his head. "It is of too much danger in water so little," he said. "Also we have no time fuse but only the electric, and now not the wire to get away far enough. No, Dun Brown, such plan may not do; but maybe another thing may do in deep water when we get back to that place from which we make start. So, if you please, we will again head to the east and at one-half mile we will go to the bottom. Then if the water is enough deep perhaps we will blow the ice."

"All right, Taki, you are the boss," muttered Dun-"Only if we haven't wire enough for safety in one place. I don't se how we are going to be any better off in another.'

While Dunster grumbled like a true sailor he also obeyed orders like one, and in a few minutes the Naisha was as nearly as might be in the position she had occupied when her crew made the startling discovery that they were imprisoned beneath thick ice. Here she was stopped and sunk to the bottom at an indicated depth of thirty feet.

Now, Dun Brown," said Takahaki, who had carefully thought out his plan, "we will screw detonator to torpedo, insert in tube, pump out forward tanks till bow elevates ten degrees, and discharge. Total distance to point of contact about fifty-eight yards. Concussion very great, but margin of safety is, I think, sufficient. After explosion we follow course of torpedo and come to hole in ice, open water, and fresh air in plenty. There we take observation and lay course for channel. Is it good?

"It is a fine scheme, Taki, and shows you to have a great head. I suppose responsibility develops heads, and if I were commander in your place, I might have worked out that proposition myself-perhaps. The only thing I have against you is that you didn't think of it hours ago so that we might have been breathing instead of simply stifling all this time.

Dun Brown, but for you speak of mine I might never think of such plan. Even now that concussion may break this boat. I am not know; but can hope not, for she is so strong as to resist sea pressure at fifty fathom. I think sure, though it will give us great headache."

"I don't believe it can give me a greater one than I already have," replied Dunster, with an attempt at a smile; "but if it don't give us something to breathe besides this poison then I hope it will smash us to bits and have done; for I don't care to try and live without air any longer."

By strenuous effort one of the five torpedoes forming the submarine's offensive weapons was made ready for service and inserted in the tube. Then the breech block was closed and locked, sea water was admitted, and the bow part was opened. A forward trimming tank was blown empty and the boat's nose gradually lifted to the required angle. The young commander turned on a quick rush of compressed air; there was a cough, a thud, an intake of water, and

enough gun cotton to put a battleship out of business, had been started on its upward slanting course.

A submarine does not hurl its terrible weapon at the foe: but merely starts it, and a little motor. working inside the torpedo itself, speeds the whole affair, without deflection from a given course, to a distance of something over a mile. Then, if no obstacle has been encountered, the torpedo stops and rises to the surface, where it floats ready to be picked up and given another chance at destruction.

In the present case the crew of the Naisha knew just how far their torpedo must travel before striking the overhead ice, just how many seconds would be occupied in covering the distance, and that a tremendous explosion was certain to occur at the instant of contact. What they did not know was the possible effect of the explosion under existing conditions, upon their boat and themselves. Therefore, as the torpedo was ejected, all three threw themselves flat on the floor and waited, in breathless suspense, for the expected shock.

Dunster Brownleigh found himself trying to dig his fingers into the iron plates beneath him and was absolutely unconscious of the passage of time when, it might have been a second, a minute, or an hour, later, he heard Takahaki's voice and glanced up. young commander was standing erect and was say-

That time limit is passed, by many seconds, and there has been no explosion. Let us then follow that torpedo and see what has happened.'

Heaving great sighs of relief at the passing of their threatened peril, and filled with curiosity as to what could have averted the explosion, the Naisha's crew sprang to their appointed posts, and in another minute their boat was following the course of the torpedo. As before, Dunster stood in the conning tower striving to pierce the outer blackness. Suddenly it seemed to him that a film of light was paling the glass at which he stared. He rubbed his eyes and looked again. Yes, it was the blessed daylight, that he had almost despaired of ever again seeing, dimly filtering through the thick glass, but growing brighter with each instant.

The lad's voice choked as he tried to shout the glad news to those below, and before he could control it they had stopped the motor; for the closely-watched depth indicator showed them to be within a few feet of the surface.

Takahaki squeezed up beside his friend, and together they looked out over a leaden sea of tossing waters dotted with jagged cakes of floating ice that bumped viciously against the Naisha's rounded deck.
"I don't understand why we didn't feel or hear that

explosion," said Dunster. "It must have been tremendous to have shattered such a body of ice. There

seems to be no end to the opening."
"That end is far away," replied the other quietly; "for this is the channel that we must have been close beside many time, and two time at least must have

passed under." 'Oh, Taki! kick me, or knock me on the head, or set me ashore, or do something with me, for I am too stupid to live. It must be the effect of this vile air. Let's get the hatch open and feel how it seems to be alive and breathing once more."

"Yes, and for that observation," agreed the Jap-

So they tried to uplift the steel cover above their heads, but could not. That first, crashing contact with the ice had jammed it fast; but an air pipe, leading to the engine-room, proved to be in working order and through it the exhausted crew inhaled long draughts of the vital element from which they so nearly had been cut off.

Although they could not get outside for an observation, they found their alliscope to be uninjured; and by uplifting its telescopic length Dunster, who alone of the crew was familiar with its use, obtained a fairly far-reaching view of their surroundings. He could see that they were in the channel kept open by ice-breakers, that sky and water alike were of a dull gray, and then suddenly there came within his range of vision a trail of smoke moving towards them. When this fact was reported to the young commander the latter promptly took measures for again disappearing beneath the waves with only the slender shaft of his alliscope reaching to the surface.

"It is very good," said Takahaki when this had been done; "and now will we get rid of that Suwarrow without killing him."

"But how?" asked Dunster, "with the hatch cover hopelessly jammed I don't see how you are going to get him out."

"Dun Brown, maybe we can make of that Rus-si-an Korea. How far is Wonsan?" a torpedo," was the answer.

### CHAPTER XXII.

### TORPEDOES OF SEVERAL KINDS.

For a moment Dunster looked dubiously into Takahaki's smiling face.

"Make a torpedo of a Russian!" he repeated slowly, as though striving to grasp the other's meaning. 'You don't mean to eject him through the tube?"

"Hei. That is what I mean."

"But he will drown as soon as we open the port." "Maybe so, but I think maybe perhaps not. Anyhow, it must be tried. There is no other way, and for our own safety we may not longer keep him on

Takahaki was commander of the submarine, and Dunster was sworn to obey his orders; so, though with great reluctance, he helped to thrust the unresisting Suwarrow into the torpedo tube. As the inert form was slid into the narrow chamber its bonds were severed. Then the breech was closed, the bow port was opened, and almost at the same instant, an irresistible blast of compressed air emptied the tube.

"Close port! Clear tube! Make ready for number two shot!" commanded Takahaki crisply; and a few minutes later a second victim was enclosed within the steel cylinder.

He too was ejected, and then came the turn of the Japanese who, in that place, had died that his country might live. As the rigid body took its turn to enter the chamber from which its living predecessors had passed to an unknown fate. Takahaki bent low over it and muttered a few words of commendation in his own tongue. Then the now familiar orders were again given and the submarine was emptied of its dead as well as of those who had so imperilled the safety of its remaining living.

A minute later, a quick glance through the alliscope having shown that the approaching steamer, which proved to be a tug bound up the channel, was close at hand, the auxiliary motor was started, the horizontal rudder was slightly deflected, and the last visible vestige of the submarine disappeared from view beneath the leaden sea.

Takahaki kept his boat below as long as her nearly exhausted air supply would allow, and then cautiously regained the surface. Within the limited range of the alliscope no tug was visible, and with deck awash the Naisha was headed down channel for the With an hour's run, and as the short open sea. northern day was drawing to its close, she gained a sheltered position in the lee of a low-lying rock off the harbor entrance and beyond the ice, where it was decided to spend the night.

In the meantime the conning-tower hatch had been pried open, and the long imprisoned crew once more breathed unlimited quantities of untainted air. Having anchored his little ship and retreated before the bitter cold to its snug interior, the young commander's first move was to rip a hole in the lining of his uniform coat and draw forth a diminutive Japanese naval flag. At sight of it his fellow countryman dropped to his knees, and repeatedly touched his head to the floor with audible inhalings of breath. Then he was permitted to hold aloft the treasure, while Takahaki in turn prostrated himself before the flag of his adored Mikado. Dunster did not bow down to it because it was not his flag, and because that was not the American way of showing respect. Besides, he was too importantly busy just then, with a kettle of water that he was trying to boil over a little electric stove. At the same time he was so filled with joy at finding himself enlisted under the sun-rayed banner of Russia's chiefest enemy that he "Nip pon Banzai! Banzai!" (Ten thousand years of life to Japan), a compliment that was acknowledged by his companions with pleased smiles and profound bows.

There was not much conversation until they had satisfied their hunger and warmed their chilled blood with copious draughts of hot tea; but after that came a council of war. Dunster, comfortably outstretched on the smooth, steel back of one of the remaining marking: "Well, Captain, here we are! What happens next?"

Takahaki sat awkwardly on another torpedo made fast to the opposite side of the boat, while the third member of the crew squatted on the floor at a respectful distance, but within easy hearing of all that

"Dun Brown, I may not say what thing is next come, till I get the bearings of the mind," replied Takahaki.

"Good enough! Mental bearings are exactly what we need. To begin with then, we have got safely away from the 'Rosskys,' as you call them, though they may be prowling somewhere around here looking for us at this very moment, for all we know.'

"Ah! that Rus-si-an!" interrupted Takahaki in a tone of intense satisfaction.

"Yes, it isn't likely that friend Suwarrow will bother us any more, but there are others who are liable to jump us just so long as we remain in this vicinity.'

'Then must we quick get away," agreed Takahaki.

"So I think: but where to is the question: How

far is it to Tsushima? "Seven hundred and fifty mile," was the ready ans-

"Too far for us, though our normal radius is eight hundred. We are too shorthanded though for so long a run, and we have on board only about one-half our full supply of gasoline. What comes next? Oh! Hakodate, of course; but if I remember rightly that is some five hundred miles from here."

"Four hundred ninety-two," corrected Takahaki. "Still too far for us even though you should knock off those last two miles. What other place is there? "Perhaps Wonsan," suggested the young com-

"Of course, Japanese colony on the east coast of

"Three fifty, about."

mander.

"Thirty-six hours' run under normal conditions, forty-eight or more in heavy weather, and Eternity for us if anything goes wrong, as it is pretty certain to do with our Suwarrowized equipment. Can't you think of some nearer place or of something more hopeful?"

"No, Dun Brown, unless it is that we might meet some warship of my country."

"That would help us out of a pretty nasty fix, I'll admit, but I don't believe there is the slightest chance of any such luck.'

"Then, Dun Brown, we will, at the first of daylight, start for Wonsan," replied the young commander, with a tone of decision.

"Very good, sir." answered Dunster, "I am glad to have the question settled. At the same time I must confess that I consider the chance of this craft, unprovided with charts-thanks to the late lamented Suwarrow,-shorthanded, and on half supply of fuel, thanks to the same gentleman, making a winter voyage of nearly four hundred miles and gaining an unknown port, to be about as slim as though it did not exist at all."

"Yes, very slim chance, but perhaps better than if we return to Vladivostok."

"A thousand times better!" cried Dunster energeti-"And now, sir, since we are to start at daybreak, with your permission, I will turn in."

"Yes," agreed the young commander, "it is good if all of us turn in this night, for on some other night it may not be so possible.'

entire crew of the Naisha, outstretched on whatever of clothing or oilskins or waste they had been able to place between their bodies and the unyielding iron of the floor, were buried in the utter oblivion of dreamless sleep. As they slept, almost without moving, their uncanny craft, the only one of its kind in eastern seas, tugged at its cable, wallowed beneath the rush of overflowing waves, or slid down the smooth slopes of long rollers that every now and then found their way behind the sheltering rocks.

So the hours wore on until, towards morning, a great ship, black and deep laden, showing no lights, a formless smudge in a void of darkness, came up from the southward, cautiously feeling her way through the night. At length she was on soundings; and, as they gradually shoaled, her speed lessened until, in ten fathoms, her engines were stopped. By this time daylight was close at hand, and until then it was safer to wait. So the ponderous anchor was let go with a rush and a roar of chain. As it struck the water there came a blinding flash of light, and an explosion as terrific as the crash of a thunderbolt.

The ship quivered in every joint, groaned as though

### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 12-From the Governor of Rhode Island

LUCIUS P. C. GARVIN, GOVERNOR OF RHODE ISLAND

Office of the Covernor

buton of the Apalar, Iwould kay: which you are enwelling to relater some & your mother at older scioler Lucius F. la l'avoir

in mortal pain, and rolled rails under, while yells of terror sounded from deck and hold. A few minutes later, rockets began to leap hissing through the upper darkness spreading far and wide their messages of distress, while the whole fabric glowed with electric lights.

On the Naisha, miles away, the effect of the shock was such that her crew instantly were wide-awake and asking one another what had happened.

"It was a heavy report of some kind," said Dunster, "for the jar made my teeth rattle; but I've no idea whether it came from land or sea. What time is it anyway?" Here the speaker switched on an electric light and glanced at the ship's clock that marked the hour of seven.

"Most near day!" exclaimed Takahaki, "put out light quick till we something know."

Thus saying the young commander entered the

conning tower and opened the hatch that had been closed against the egress of breaking seas. For a minute he saw nothing. Then, in the distance, against the paling eastern sky, a rocket soared aloft and burst into a fiery shower.

"Ship in trouble!" he reported as withdrawing his head he again closed the hatch against the bitter cold. Rockets out at sea. With daylight we will go and find the matter. Without light we may not get away from these rocks; but in a half hour we can plenty

"Just time enough to make coffee," said Dunster, who was a firm believer in being well fortified with food and drink before seeking trouble.

"Or perhaps tea," suggested Takahaki.

"Oh, yes! Of course. I might have remembered that there isn't such a thing as a cup of coffee in this whole benighted region, but I do so hate tea. The stuff is only an excuse for drinking hot water anyway.

So Dunster grumbled while he attended to the ket-Thus it happened that, a few minutes later, the tle, and the others examined the Naisha's engines to see that everything was in working order.

An hour later the submarine, showing only her conning tower and a tiny Japanese naval flag fluttering bravely just above the sullen waters, had left her rock-screened shelter, and was headed towards an anchored steamer that had been discovered by the growing daylight.

### CHAPTER XXIII.

### A MONSTER OF THE DEEP.

There was no chance for conversation as the Naisha sped on her voyage of discovery that would mean so much, one way or another, to our lads, for each member of her crew was too intent upon the manifold duties allotted to him, but each was in a fever of excitement. If the steamer should prove Japanese all would be well; if Russian it would be their duty to try and destroy her; while if she were a neutral their course must be governed by circumstances. As they approached near enough for observations Dunster, who steered from the conning tower, shouted down brief reports to his companions:

"Merchant ship," he called, and a little later, "At anchor, and seems down by the head." In another minute he announced: "I can see her ensign, and it is British.'

At this report Takahaki stopped his engine and the Naisha floated motionless, well nigh invisible, and not yet detected from the ship. The wind of the night had subsided and was succeeded by a calm beneath which the sea heaved in long, oily swells.

"Yes," said the young commander, after a long look at the anchored steamer, "she is a neutral and so perhaps of no use to us. But maybe," he added, brightening, "she has something contraband on board

for which we may capture her."
"Capture her?" repeated Dunster incredulously. "Three of us capture a ship of that size! Why, she must have forty or fifty men on board."

"Perhaps yes, but same time I think it will be a very easy thing. Now let us go a little more under the water and move slowly around her for see what has happen.

So the Naisha sank from sight leaving only the cowl of her alliscope above the surface, and in this condition she circumnavigated the anchored ship,

within observing distance, without being detected.

"There is a hole in her starboard bow," announced Dunster, who, as usual, handled the alliscope. looks as though she had been in collision, and yet it doesn't, for while the hole is just above the water line it doesn't extend far enough up to have been caused by another ship, nor is it of the right shape. If it were lower down I should say that it had been caused by contact with a floating mine. That would account for the explosion we heard, too, but surely even Russians couldn't be such fools as to set mines, adrift in track of the coal-laden ships they are so anxiously expecting."

"Perhaps maybe it was our torpedo," suggested Takahaki, quietly.

"By Jove! old man, that's the very thing!" cried Dunster. "What a chucklehead I am, not to have thought of it. The tide was running out and easily might have drifted it as far as this. Of course it was our torpedo, and it's lucky for them that they struck it on the surface, instead of having it strike them a fathom or so lower down."

'Perhaps for us, too," said the other. "But tell

me, Dun Brown, are they mending that hole?"
"Trying to," was the answer. "They've launched a staging over the side and there's a gang at work on it."

"Then will we give them a little amazement," announced the Naisha's commander.

The British ship Honan, coal laden from Cardiff, had been in hard luck from the very beginning of her voyage. Storms, breakdowns of her machinery, and sickness among her crew, had attended her all the way to Shanghai, her original port of consignment. There she lay for two months in muddy Woo Sung creek before receiving rush orders, by cipher cable, to proceed to Vladivostok. In the meantime her crew had died or deserted until her captain and the chief

# The Boy Who Shirks and The Boy Who Works

HERE ARE BOYS of both kinds in the world, but, happily, the boy who shirks is very much in the minority. This is true because the average American boy has too much pluck, too much pride, too much ambition to be classed with the shirks. He may not be able to say in his very heart of hearts that he likes to work, but he can say that he does not propose to be classed with those who "stand around all the day idle," thereby bringing upon himself the deserved contempt of the better class of people in the community.

Every high-spirited boy detests a downright shirk, and admires the boy or the man who does thingswho brings things to pass, and who counts for something because of his own achievements. Every boy of spirit admires the hustler and has contempt for the dawdler. I once went to the funeral of a man seventyfive years of age and on the way home a man who had known the dead man nearly all of his life said of

"There was a man who dawdled away a life that might have been one of splendid achievements, for he was naturally an extremely gifted man, but work he would not and he shirked everything that he could. His wife supported him by going out as a dressmaker up to the time of her death, and he nearly starved after that. A few of his old friends have to pay his funeral expenses to keep him from being carried to a pauper's grave. A man of good family, respectable enough in mcrals and of more natural talent than most men, his life has been a flat failure because of his own slothfulness.

I know several boys whose end may be like this if they do not "look a little out." They have good natural ability and good health, but work they will not. Boys with not half their talents but who are working hard have far greater chances of success in life than they. Once let a boy achieve the reputation of being downright lazy, and it is "all day" with him in the estimation of other boys-of the boys who would be lazy, too, if they yielded weakly to their own inclinations, but who are wise enough to know that if they would succeed in life they must pay tho price of success, and that is-work.

Never in the history of our country was there a time when there were better opportunities for the boy who is willing to work, and never was competition for the high places sharper. The shirk and the boy who is looking for a "soft snap" are "dead sure" to be left far behind the eager, alert boy who is so little afraid of hard work that he is not at all anxious to find a "soft snap." The bcy who is looking for a "snap" of this kind has in him al! the elements of the shirk. I one day overheard two boys speaking about

Copyright, 1904, by Waldon Fawcest.

SONS OF SENOR BAEZ, MINISTER TO THE UNITED STATES FROM PARAGUAY

a third boy not long ago, and one said to the other: "He! Bah! he's a regular jellyfish! Lazv? A snail has more hustle and more muscle than he has or ever will have if he doesn't bestir himself soon!"

Pretty scathing, wasn't it? But people are apt to be scathing when expressing their opinion of the shirk, just as they are apt to be highly laudatory when speaking of the manly boy who is known to be a hustler. Mere inclination has nothing to do with it, boys. Whether you want to or not you must be workers if you ever expect to "amount to anything" in this life. That's the gospel truth.

### WHAT BISHOP VINCENT WOULD TRY TO BE

If I were a boy, says Bishop Vincent in an exchange, I should put no unclean thoughts, pictures, sights or stories in my imagination, and no foul words on my tongue. I should treat little folks kindly, and not tease them; show respect to servants; be tender toward the unfortunate-all this I should strive to do for the sake of being a comfort to people, a joy to my parents, and a help to the next century.

If I were a boy I should play and romp, sing and shout, climb trees, explore caves, swim rivers and he able to do all the manly things that belong to the manly sports; love and study nature; travel as widely and observe as wisely as I could; study hard and with a will when the time came for study; read the best literature-works of the imagination, history, science and art according to my taste and need; get a good knowledge of English; try to speak accurately and distinctly; go to college, even if I expected to be a clerk, a farmer or a mechanic; spend my Sabbaths reverently; try to be a practical. every-day Christian; help on every good cause; never make sport of sacred things; be "about my Father's business," like the boy of Nazareth; "use the world and not abuse it;" treat old men as fathers, "the younger men as brethren, the elder women as mothers, the younger as sisters, with all purity," and thus I would try to be a Christian gentleman, wholesome, sensible, cheerful, independent. courteous.

### EDWARD EVERETT HALE

Like so many other men destined to a literary career, Edward Everett Hale learned to set type almost as soon as he had learned to read. The offices of the Boston Advertiser, of which his father was editor, were likewise his nursery. Here, while a small boy, he learned the mechanism of newspapers, and wrote articles for the paper, which he set up in type with his own hands.

Before he was eleven he had translated an article from the French, which was published in the Advertiser, and his serious literary career may be said to have dated from that time. Unlike most literary persons, Dr. Hale was extraordinarily fond of mathematics. Though he was not prodigiously fond of school, yet he distinguished himself at the Boston Latin School, as he was to do later at Harvard University.-New York Herald.

# FOR THE MIKADO

(Continued from page 296.)

engineer, an American named Bunker, were the only "Europeans"\* left on board. To obey orders the former was obliged to ship a job lot of Lascars and Chinese. Then he cleared for Che Foo and put to sea, with winter already upon him, for a run to the northward so hazardous that only a handsome bonus promised by his owners to be paid even if he failed to reach Vladivostok, and doubled if he got there safely with his precious cargo, nerved him to undertake it.

Once clear of the coast Captain Crosscut made no pretense of steering towards Che Foo, but bore directly away for the Straits of Korea which the Japanese were blockading and in which they already had captured many valuable prizes. Aided by a dense fog during which she was ordered to halt by one shot fired across her bow from an unseen blockader, and had three men killed by another that raked her deck, the Honan made good her entrance into the Japan sea. There, again in a fog, she struck on the Liancourt Rocks from which she escaped only by sacrificing half of her cargo and aided by an extra high tide. Then her crew mutinied, and if Captain Crosscut had not ostentatiously thrown overboard every firearm that the ship contained, excepting two pairs of revolvers worn by himself and his engineer, the sorrowful voyage would have ended then and there. As it was the mutiny was quelled, the cowed Lascars returned, half heartedly, to their work, and the Honan, showing no lights at night, crept a couple of hundred miles farther northward.

As she neared her destination her exhausted officers, cheered by visions of wealth almost within reach, congratulated one another that their ill-omened undertaking was about to terminate successfully after all. Gaining soundings on what they fondly hoped was the last night of the voyage, they determiend to avoid further risks by anchoring where they were until daylight, and the engines were stopped. Five minutes later the letting go of a ponderous anchor was instantly followed by an explosion so tremendous that for a short space every soul on board imagined their ship to be totally wrecked, and a mad rush was made for the boats. Several of these were launched, and three-fourths of the crew tumbling into them. pulled to a safe distance where they lay to and awaited developments.

Those who remained on board set off rockets with the hope of attracting assistance; while the chief engineer made a hurried examination into the condition of the ship. A little later he reported:

"Number one forward compartment is full of water, sir, but the bulkhead still holds and there is no present danger of sinking.

"Very good, Mr. Bunker," replied the captain, "You may let go another anchor and we will wait till day-

\*In Asia all white persons are called "Europeans."

light before deciding what is best to be done. For heaven's sake though slack away gently on your cable, for anchoring in these waters seems to be about the most dangerous thing a man can do.'

What do you suppose it was, Cap?" asked the engineer after the second anchor had been got overboard without mishap.

"Must have been a floating mine, though I can't understand why the confounded Russians should place any without notifying us, when they are offering every inducement for coal ships to run the block-

"Perhaps it was the work of Japs."

"Nonsense! There aren't any Japs in this vicinity yet. They've got all they can attend to at Port Ar-

'Maybe so, but you never can tell what Japs are going to do, or where they are going to turn up. I myself didn't think much of 'em until their war with China. Then I served on the Chinese battleship Ting-Yuen in the Yalu fight where a little Jap cruiser had us knocked out in such short order that I've felt ever since there's nothing too big or too desperate for those fellows to tackle."

By this time the occupants of the boats, nearly perished by the bitter cold of the night, and seeing that the ship was not sinking, returned to her and sheepishly climbed on board. By daylight the extent of the damage, caused by the still mysterious explosion, being found much less than had been feared. Captain Crosscut decided that, with a temporary patch over the hole, he still might limp into Vladivostok, and he soon had a gang of men at work from a staging launched over the side. Leaning far over the forecastle rail he personally superintended the job, upon which the attention of every person on board was focused.

Of a sudden the captain found himself gazing in fascinated horror at a vague, black form, unlike anything he had ever run across in all his seafaring experience. It was silently and slowly, rising from the ocean depths not fifty feet away, and at first sight he thought it was a whale. In another moment, as it lay with a small portion of its glistening iron back exposed, he knew that the mysterious object was of human origin.

In the meantime, the workers on the staging, catching sight of the silent monster, were swarming up the tackle ropes to the deck with yells of terror. Shooting out a long, jointed arm or feeler, the creature seemed to reach after them, at the same time glaring balefully in their direction from a single, unwinking eye, set at the end of the tentacle. All at once, as suddenly as it had shot up, this uncanny member was withdrawn. At the same moment the terrifying form sank beneath the waves and disappeared without rippling the surface or giving other evidence of

Although it was a cold day, Captain Crosscut lifted his cap and mechanically wiped away the beads of it to the utmost during the few seconds left him. sweat that glistened on his forehead.

"I never in my life saw a submarine," he said to the engineer, who stood beside him staring at the water where the monster had floated, but I've read of 'em, and I'll be hanged if I don't think that was

"Then it must belong to the Japs, 'cause if it was Russian it would at least have hailed us. Now I suppose, having taken an observation, they have gone below to finish blowing us up."

"Man, dear! don't say that," ejaculated the captain. "Why should they blow us up, when we'd surrender in a minute if they'd give us the chance? "Here, you!" he cried to a Chinese quartermaster, "Scuttle aft and haul down that ensign. Bend on a Jap flag above it and hoist 'em both together. Sabe?"

"Yep, me sabe," responded the man as he made a dive for the flag locker.

The remainder of the crew huddled together, excitedly jabbering in half a dozen dialects, with straining eyes fixed on the place where the terror had disappeared. Nothing could have induced them to resume work on the staging within reach of that awful tentacle; nor did the ship's commander, nervously waiting to be blown into Eternity, make any effort to move them.

This state of affairs remained unchanged for some minutes during which the strain of suspense was so unnerving, that Captain Crosscut jumped as though a bomb had exploded beside him, at a sudden sharp cry from Mr. Bunker who had ascended to the bridge.

While all others, including the captain, were so paralyzed by fright that they had no thought save to stare at the place where the submarine had made its appearance, the engineer, calmly lighting a big Manila cigar, which he smoked with evident enjoyment, allowed his gaze to traverse all sides as far as the encircling horizon. Finally, in the opposite direction from that in which the others were looking, his eyes encountered an object so extraordinary that for a moment he too was rendered speechless by amazement. Then he uttered his warning cry, at the same time pointing to a spot of commotion on the surface of the heaving waters.

All hands rushed to that side of the ship and from it gazed upon an apparition very nearly, if not quite as terrifying as that of a few minutes earlier. What they now saw was a small black cylinder, its upper rim apparently but a few inches above the surface. rushing towards them in a smother of white water raised by its own rapid motion. From it projected a man's head; and, following at a short distance behind this marvel, unsupported by visible staff or halliard fluttered the sun-rayed naval flag of Japan.

At this sight many of the superstitious crew fell

on their knees with cries of terror.

"Another of 'em," muttered the captain. "We are surely done for now.

"Looks that way," agreed the engineer, puffing vigorously at his cigar as though determined to enjoy

(To be continued.)

# American Boy Day at the Lewis and Clark Exposition, Portland, Ore., July 5

HE CELEBRATION of American Boy Day at the Portland Exposition, July 5th, was a success from every standpoint. The audience was large, looking to the total attendance at the Exposition for the day, and the attention given the program was remarkable, considering that it consumed nearly three hours, and that a short distance away Liberatti's splendid band was rendering an open-air concert, and all the regular features of the exhibition

were in full operation.

The auditorium of the Portland Exposition, corresponding to Festival Hall of the St. Louis Exposition, is a large, light, airy structure, with a seating capacity of some 2,000 and a stage capable of seating one hundred and fifty people.

At the beginning of the American Boy Day exercises there were over one hundred on the stage, including De Caprio's exposition band of forty pieces, and some sixty boys, all prepared to take their part in the program. In the body of the auditorium were about 1,000 persons, including many boys and a fair proportion of fathers, mothers and friends of boys. Few left during the long program, testifying to the interesting character of the proceedings, while many came in from time to time to swell the company of

Promptly at two o'clock the band struck up a stirring selection, and President H. W. Goode, of the Exposition, Theodore Hardee, assistant to the President, and Wm. C. Sprague, editor of THE AMERICAN Boy and President of the day, entered and took seats at the front of the platform, the others who were to take part in the program being already seated.

The invocation, which was to follow the band selection, was omitted on account of the non-arrival of Secretary Stone of the Portland Y. M. C. A., he having misunderstood the hour of beginning.

PROF. FREDERICK W. GOODRICH

Professor Frederick W. Goodrich, organist of St. David's Church, of Portland, rendered "Athalia" on the pipe organ, after which Mr. Sprague introduced President Goode with a few words of compliment and congratulation on the artistic success of the Exposition, to which the President responded.

"I feel a peculiar pleasure in welcoming the youth "I feel a peculiar pleasure in welcoming the youth who are here to participate in the celebration of American Boy Day. For Mr. Sprague's earnest efforts in promoting the interests of our American boys and, above all, his work in arranging for this special occasion much credit is due. I desire to congratulate Mr. Sprague, and each of you, upon the success of this splendid gathering and upon your good fortune in health appears.

splendid gathering and upon your good subsing present.

"This Exposition is a great open training school for the old as well as the young, and you will, I have no doubt, carry away impressions of your visit here which will be ever a delight to remember. Your grandfathers and grandmothers were never so fortunate in the opportunity of studying the wonders of the world, the accomplishments of science and invention and the products of the skill of mankind in various remote portions of the world, as you shall behold here.

"Now, you have heard a good deal of the axiom that it is better to be right than to be President. When you pause to think about it there is no reason why a man cannot be both, as exemplified by the first citizen

The lives of some of the foremost men in national

"The lives of some of the foremost men in national life are the best illustrations of the fact that all of you have a first-class chance to get ahead in the world, and that by perseverance and a little 'luck' success will come to you. Nothing, howover, is gained without hard work and persistency of purpose.

"The best I can think of to say to you in the way of encouragement is always to retain your ideals of good American citizenship. You have a proud heritage as young Americans—a glowing future—and the best time to live is the present. There was never a time when the chances for boys were more promising, or rewards better, than now.

"It occurs to me that a national American Boy Day may be among the future possibilities, and, indeed, I may add that I think such a national holiday would become one of the most popular of special events on the national red-letter calendar. I am safe in saying that every one of the young men who are visitors here would endorse and support the demand for this.

PRESIDENT H. W. GOODE WHO DELIVERED AN ADDRESS OF WELCOME

"Again, I assure you of the pleasure it affords me to bid you welcome to the Lewis and Clark Centennial Exposition, and I hope you will have occasion to cher-ish pleasant recollections of this day the rest of your

Henry Masten, a fine-looking Portland boy, then stepped to the front, and in a clear, ringing voice, in behalf of Portland boys, bade the company welcome.

Mr. President and Boys of America:-Upon me today devolves a most agreeable duty—that of extending to you, in behalf of the boys of Portland, a hearty welcome on this significant oc-

that of extending to you, in behalf of the boys of Portland, a hearty welcome on this significant occasion.

I have said a significant occasion. Why? In you, Boys of America, we behold the sturdy timber which will form a glorious superstructure to the magnificently solid foundation of our republic,—that foundation of lindependence, the anniversary of which we celebrated yesterday. Behold this fair city, an ever increasing testimonial to the sagacity of Jefferson, to the daring of Clark and Lewis. But your efforts, if they be worthy, will be rewarded not by the upbuilding of city, or section, or state alone, but by the welding of Republican America into one strong, everlasting nation, superb in war, powerful in peace, enlightened and cultured, first on land, first on sea. These achievements we precommemorate today.

Welcome, then, Boys of America! A thrice hearty welcome to each, to all of you! Partake of our luscious fruits; climb our lofty pines; inhale our lifeying ozone; bask in our mild Oregon sun; angle for the festive trout, and hunt the woolly bear. Enjoy to the utmost your stay, and, if you must leave, before you go acknowledge, secretly, if loyalty to your home state will not permit you to do so openly, that ours is one of the greatest states of our great Union.

To our puny welcomings, Nature adds her glorious voice. From whispering cascades and babbling brooks, from laughing waterfalls and deep-volced rivers arises in unison a cry of welcome, which, borne up by the winds, carried over our valleys, resplendent in Summer's full bloom, hurled from one ermine robed sentinel to another, finally blends with the reverberating roar of the glant ocean, "Welcome!"

And in these lavish greetings of Nature, all is not empty show. Utility is joined with beauty. Those forests contain one-tenth of the world's timber supply. Those rivers will respond to the touch of a master hand with the strength of ten thousand million horse. Those mountains hide riches such as the eyes of man have never beheld. Those fields conta

HENRY MASTEN WHO DELIVERED AN ADDRESS OF WELCOME

their bosoms, untold fortunes, awaiting the indus-trious, intelligent worker. This is Opportunity. Hither she beckons. Rivers, trees, mountains, fields await but master-spirits—enthusiastic men. This is Oregon's

welcome.
"There is a tide in the affairs of men, which, taken at the flood, leads to fortune." The magnificent but yet undeveloped resources of our great state offer

pregnant illustration of that oft-repeated aphorism. The opportunity lies before you, Boys of America. "Men, give us men!" is Oregon's cry—"Men of brain and brawn, grit and integrity." To those who respond, Nature will unfold a more glorious welcome each day. Remember, once again—

This is the tide in the affairs of men which leads on Westward, where the star of empire takes its way.

Now, a word to you, Mr. Sprague. The need of our Nation, a need I have touched on before, is—men. Good men, pure, clean, ambitious, intelligent, gritty men. And of all influences outside home and school your work, through the columns of THE AMERICAN BOY, has been next only to the example of our beloved Roosevelt, the most potent factor in shaping the character of the coming generation. You have builded better even than you know. And to crown your achievement, you have established this day, as an everlasting testimonial to the greatness of the American boy. All honor to you. Portland's boys feel privileged in being allowed to bid you welcome to our city.

Boys of America! Let me reiterate the hearty greeting extended to you by the boys of Portland, who stand prepared to show you that Oregon hospitality is justly famed for generosity and geniality.

Once again, Welcome!

The response to the addresses of welcome came from a fourteen-year-old Colorado boy, Joseph B. Hosmer, of Ft. Morgan. With a voice somewhat lacking in spirit, but with a particularly clear enunciation and clear-cut sentences, the Colorado boy won his spurs and his share of the applause, which was liberally bestowed on the performers throughout the program. His address was as follows:

Mr. President and Boys of Portland, Ladies and Gen-

tlemen:—
Permit me in behalf of the Boys of America to gratefully acknowledge the eloquent and cordial greeting that has been extended to us.
With true western hospitality everything within the gates of the city, as well as within the boundaries of this twentieth century Wonderland has been thrown open to us.

Strange indeed would be the boy who could find in his heart no response to the sincere and cheery welcome we have received.

This is our day and we are here from every nook and corner of this vast land, we are fresh from the celebration of our country's natal day, and we are feeling unusually patriotic. For us there is but one toast, and that is:

DWINELL CLAPP

My country, 'tis of thee, Sweet land of liberty, Of thee I sing; Land where my fathers died, Land of the Pilgrims' pride, From every mountain side Let freedom ring! Let freedom ring

The constitution and our beautiful flag of red, white and blue are the biggest things in the world, but the Lewis and Clark Exposition comes in as a close

We are all glad that President Jefferson away back in our great-great-grandfathers' days laid the foundation for this celebration in which you have honored us by allowing us to participate. President Jefferson builded better than he knew when he took the initial steps toward making this rich and resourceful section a part of the Union

steps toward making this rich and resourceful section a part of the Union.

When I first heard of the Lewis and Clark Exposition I was quite a small boy. I knew nothing of the achievements of Lewis and Clark, and my knowledge of Portland was meager. I could locate it on the map, knew that it was a city corresponding in size with the city of Denver, and had been obliged to commit to memory from my geography: "Portland on the Williamette branch of the Columbia river is the commercial center of Oregon."

But soon the newspapers began to devote much

Millamette branch of the Columbia river is the commercial center of Oregon."

But soon the newspapers began to devote much space to write-ups of the whys and wherefores of this exposition, and I began to feel interested. Then a little more than a year ago, while in attendance with my father upon a meeting of the National Editorial Association at St. Louis. I was introduced to Mr. Albert Tozier, one of Portland's most enthusiastic citizens and ex-president of the National Editorial Association. At that time I heard such wonderful tales of the attractions of this peerless portion of the great west—such artistically painted word pictures of this exposition, that I resolved to attend and repeat the grand good time I was then having.

Little did I then dream of the honor which would be mine on this occasion. I shall always count among the happiest moments of my happy life the moment when I was told that mine would be the privilege of responding to the gracious welcome which has been accorded us.

accorded us

For all the American boys who are here from what-ever part of our beloved land, and for myself, who have come from our country's Switzerland (Colorado), where for 365 days in the year the sun vainly attempts to melt the snow from her lofty peaks, I heartily thank you.

The violin solo by Dwinell Clapp, of Forest Grove, Oregon, "Fantasie Pastorale," by Singelee, was played with great skill, especially the closing part, when, having gained complete command of himself, the youthful performer handled the bow like a master. His accompanist was his teacher, Prof. F. T. Chapman, of the Conservatory of Music of Pacific University.

The prize American Boy Day poem was then recited by its author, Angus M. Berry, of Logan, Ia. In introducing the young poet Mr. Sprague announced that the prize (\$25.00) had been competed for this year by many boys, but that the verses by Angus M. Berry had easily won. Interest was added by the fact that young Berry had won in the 1904 contest, and had recited his prize-winning poem of that year on American Boy Day at the St. Louis Exposition, just one year before to a day. This announcement and the placing by Mr. Sprague of the prize money in the winner's hand brought hearty applause, which was redoubled in volume and intensity at the conclusion of his recitation of the poem.

ANGUS M. BERRY
AUTHOR OF THE AMERICAN BOY PRIZE POEM

"Love the Pedlar" was the title of Thomas Dobson's vocal solo that followed the poem. Thomas, or Tommy Dobson, as he is known in Portland, is a boy soloist in St. David's church choir of Portland, and one of the best boy choir singers on the coast. He sings a remarkably pure and flexible soprano. Cultivation has added to its natural charm. These elements of strength, added to perfect self-command, make a fine singer—and all of that Tommy Dobson is. The applause following his number was spontaneous and hearty.

Then came little Frank D'Arcy in Scotch Highland costume and his sword dance. Always spectacular and charming, the Scotch sword dance is particularly fetching when the dancer is a handsome, well-proportioned little lad, kilted and bonneted in the fashion of the braw Highland laddies of old Scotia. It was a pretty performance and deserved the tremendous applause that greeted its close.

THOMAS DOBSON

Five Indian boys from the Government Indian School at Salem, Ore., then occupied the front of the stage, rendering a vocal quintet that lacked somewhat in spirit and vigor, but was remarkably good music, harmonious and evenly balanced. This number enlisted the closest attention, as here were performers who could rightly claim to be of the original "American Boys." The rule of "no encores," laid down by Mr. Sprague at the outset, came nearly being broken in this instance.

Mr. Sprague now rose to his feet and beckoning to a little fellow in a white suit, Harold Wells, of Eugene, Oregon, came forward. "I always like to introduce boys of this boy's age, for they remind me of my own boy," said Mr. Sprague. The words met with applause, not so much from the sentiment underneath as from the pretty picture the boy presented. A beautiful, yet boyish face, a complexion and a figure to tempt a painter, a voice clear, sweet, sympathetic, and you have Harold Wells, the boy who won the biggest applause accorded to any per-

RAYMOND COURSEN

former on the stage that day. He recited "As the Moon Rose," a composition requiring dramatic talent of a high order.

Second in interest to Harold Wells came, perhaps, J. Lawrence White, boy soprano of St. Stephens' Church, Baker City, Oregon. Mr. Sprague confessed to some friends in advance of the exercises that he had some fear of young White, as the boy had told him in a conversation the morning of the fifth that he had never taken a yoral lesson in his life. "For

HAROLD WELLS

All Eternity" was the boy's selection, and with the first note sounded by the young singer, clear and resonant, all question of the boy's triumph was set at rest. At the close, when his voice soared into a high key, accurately and firmly sounded, he was given a perfect ovation, in which no one more heartily joined than the President of the day. It was a splendid song splendid song spendid young.

Melvin Scott Ogden, a Portland boy with full, clear voice and good delivery, won applause with his recitation, "Marshal Ney's Last Charge at Waterloo."

NORMAN ESPEY

Norman Espey, a St. David's (Portland) choir boy, assisted by the St. David's boy choir of twenty-four voices, then rendered that spirited composition, "My Own United States." The rendition of the song was somewhat marred by the evident unfamiliarity of the singers with the words and music. Dash and spirit was lacking more from this cause than any other. Young Espey's voice was of excellent quality, but did not show its real worth for the reason stated. The audience, however, enjoyed the number and applied it heartily.

Following came letters to the boys written by Admiral Dewey, Secretary of Agriculture Wilson and many Governors of States. These were read by Mr. Sprague, his reading being frequently interrupted by applause.

After the splendid sentiments contained in these letters the audience was in fine mood to rise, and accompanied by the band, sing "America." Few voices were silent as the opening notes of the grand old song struck the air. Above all rose the voices of the boys.

The next number was a violin chorus composed of

GRANT M. GIBSON

eight boys, all pupils of Professor E. O. Spitzner, of Portland. Their selection was "The Holy City," arranged for eight violins by Professor Spitzner. The playing of the boys was remarkably even and harmonious, awakening great enthusiasm on the part of the audience. The players were Victor Jorgensen, Earl Sharp, Philip Kamm, Charley Duhrkoop, Milton Marx, James Woodcock, Max Smith, Leon Shaperer, Hans Niclas.

"Custer's Last Charge" was the subject of the fine recitation by Grant M. Gibson, of Issaquah, Wash. Then came Raymond Coursen, of Portland, with a pretty soprano solo, "Sleep, Little Tulip." It would be strange if in a company of sixty boys—ordinary American boys such as appeared on the stage—one at least did not have his eye bandaged from his having come in contact with a ball or a bat or some other boy's good right arm, and Raymond supplied the needful. Mr. Sprague introduced the young singer with the bandaged head as a typical American boy, too plucky to fail to do his duty just because something had hit him in the eye.

Arthur Winstock, a little Portland boy, was the first to deliver a speech of his own composition after

MELVIN SCOTT OGDEN

the opening addresses. His subject was "Abraham Lincoln," an ever popular one with boys. Arthur had a good, clear voice and a natural delivery. His oration was simple, clear, orderly in arrangement and was handled easily and naturally.

Following came "The Stars and Stripes Forever," by St. David's boy choir of twenty-four voices, with Professor Goodrich at the piano. Notwithstanding the little fellows were tired after a two hours' performance, they handled the stirring song with enthusiasm and spirit.

Chas. W. Robison, of Oregon City, was the last to speak, his subject being "The Ideal American." In voice, delivery, composition, his address took rank as easily first among all the speeches and recitations. This young man showed himself possessed of a very high order of oratorical talent. Every word rang out clear, sympathetic and true. He won the audience with his first sentence and held it to the end.

At the request of Mr. Sprague the performers, excepting the band, now left the stage to give room to

PATRIOTISM AND A COUNTRY WALK.

B EFORE the term was many days old we heard of still greater benefactions to the school on the part of Mr. Pickens. The first announcement was made by Mr. Henderson to Carclough, but the Head himself informed the whole school a few days later. Mr. Pickens designed to institute two valuable scholarships tenable at Crosscombe, open to all candidates between the ages of fourteen and seventeen. It was great news for the school which had but a very few exhibitions, all given to classics and

few exhibitions, all given to classics and mathematics.

Now the Silas Q. Pickens' Scholarships, as they were to be called, were to be for Natural Science and the holders, if of good conduct, and at the discretion, of the Headmaster, were to be allowed to finish their scientific education at Leipsic or some other approved foreign centre. The examination would be held at the beginning of the autumn term, and was to be superintended only by Mr. Henderson, the papers being set by the lecturer at Owens' College who had already been appointed our senior scientific master, but was not to take up his duties till after Christmas.

Speculation was immediately rife concerning the chances of the various prob-

cerning the chances of the various prob-able competitors; that is to say for the scholarship allotted to chemistry. As for the one which was to be given for Physics, everybody knew it would be a gift for Mainwaring, who was miles ahead of the rest of his form in that But in chemistry there were at least three candidates who might fairly expect to have a chance of success. Postlethwaite, a boy who was always employing his leisure in concocting some unearthly mess or other, and who had seriously singed his eyebrows in the course of these experiments, was considered to have on the whole the best chance; out Briant with his marvelously part Franch hands would be somewhat chance; out Briant with his marvelously neat French hands, would be somewhat his superior in the practical work and was also in the running, though a year younger than Postlethwaite. Ascott also announced his intention of competing He would be the eldest competitor, being only just within the prescribed limits of age. One point which might weigh with the examiners in awarding the scholarship was the fact that Postlethwaite's father was a fairly wealthy man, while both Briant and Ascott were seriously in need of assistance to enable them to continue their studies at the school.

"It's a rotten shame that that French

"It's a rotten shame that that French chap should be allowed to compete at all," declared Anstruther who was par-

ticularly chummy with Ascott, and strongly supported his claims. "We're being positively eaten up by these forgetings. Now if only the frog were out of the way poor old Ascott would be a made man, for Postlethwaite told me that he would be quite content with the honor and glory of winning the school, and would get his pater to let him hand over the coin to Ascott."

"Stuff!" said Carclough, before whom he expressed his opinion. "Let young Postlethwaite win the thing before hy makes so free with it. He'd better get a pair of false eyebrows for the exam, or he'll frighten the show from Manchester into fits. As for Briant being French, you seem to forget that if it were not for a foreigner there would be no scholarships at all. You're a good honest man, Anstruther, but not clever; now are you?"

Anstruther disdained to notice the personal question "I don't care"

Anstruther disdained to notice the personal question. "I don't care!" he said. "It's going to be my business to fight the French, and I am glad of it. They don't seem to me to be straight. As for Briant, he's clever enough to please you, I suppose; I know he makes me long to punch his head, though he never says anything one can take hold of. The French are like that in the history books. No matter how soundly we thrash them, they always get the better of us when it comes to the treaty of peace."

Carclough refrained from arguing the matter: "Perhaps there are more ways than one of being straight," he remarked sagaclously, "and you know you admire Bayard and Jeanne d'Arc and what's his name, that old Bontemps was telling us about,—Lamartine. There's ro sense in running on against a whole people!" he added, unconsciously plagiarising from the great Burke. "Come and box for a bit in the gym! It will do you good."

Although Briant had been unfortunate enough to arouse Anstruther's animosity there were others who regarded the French boy with far different feelings. George Washington Pizarro Pickens took to him from the first, apparently because Rene was a complete contrast to him in nearly every particular. A special

cause Rene was a complete contrast to him in nearly every particular. A special hond between them was their common hatred of games. Together they evaded compulsory cricket until Carclough and Mr. Villiers Brown, the terror of ordinary shirkers, nearly gave them up as hopeless cases. The pair found a kindred spirit in Postlethwaite who was as fond of rambling over the downs in search of specimens for his many collections, as he was of making loathsome chemical mixtures to poison the air of the laboratory. This triple alliance was at first of the closest and most cordial character, but an incident which occurred early in term caused a certain coolness to arise between two of its members. its members.

which occurred early in term caused a certain coolness to arise between two of its members.

A had headache, an affliction to which Briant was occasionally liable, had kept thim at home one sunny half holiday; so that Postlethwaite and Pickens started to their ramble without their usual companion. With great care and circumspection they skirted the avenue where ranged the terrible Villiers Brown seeking whom he might devour; broke into a trot as they passed Best Pitch and simulated sudden deafness when carclough descried them from afar and loudy commanded them to return. He would lick them thoroughly on the morrow, but "It is worth it." observed and profitable afternoon, and never had they found the woods and hedges so populous and interesting. They discovered a dozen birds' nesting. They discovered a dozen birds' nests, and those of the rarest kind, before they had been hunting for an hour, saw an otter with its young enjoying aquatic sports in a mile by an lrate, red-faced gamewellers of the while Pizarro entertained a fire with sum and adventure in America which rivalled Postlethwaite with stories of hunting for least the Western United States were rather more thickly populated with carnivorous beasts than an any or "road-agent," as Pickens called him, was as the case of timber of datast the command or "coda-agent," as Pickens called him, was as the case and kept him the spot and the red case and circumstant of the spot and the provided him, was as the common or garden po-

an average zoo, and that the highway-nan, or "road-agent," as Pickens called man, or was as the common or garden po-

"Alligators!" cried Pizarro in answer to an enquiry by Postlethwalte concerning those reptiles: "You bet! Thousands of them! We used to sit out on the river side after breakfast and feed them with buttered muffins. I had one that was a great pet of mine, thirty feet long she was, and I called her Hail Columbia When she made a little camp stool of her tail and sat up and begged, her jawk just reached the verandah, and I tell you she would have been a dandy sign for a dentist! So well meaning, too! Not a spark of malice in her. I believe," Pickens assumed an air of consideration, "I believe she had chopped a baby tion, "I believe she had chopped a baby or two, but it was never proved against her, and perhaps they tumbled in. She got to know me well and followed me round like a dog. Well, one morning, dad's shaving water didn't come at the regular time, and Pomp, the nigger that usually valeted him. Pomp was missing We went to breakfast and by and by We went to breakfast and by and by Hail Columbia and the rest came for their usual collation. I thought my little favorite was sick, she seemed so languid and her appetite was so poor. She was suffering from hiccoughs, too, though a joined member of the Mississippi Rechabite Association. Then Aunt Columbia and the house and Clytemnestra came up to the house, and made a fuss, wanted her husband, Pomp, would have him, though a more trifling old nigger you never saw. I pointed that out to dad and also what a loss Hail Columbia would be, but he said Pomp was valuable and that the sanctity of human life must be respected. So

my pet had to go, and we opened the poor creature that afternoon. I shall never forget the look she gave me." "I suppose there was not much left of Pompey?" inquired Postlethwaite with

AN ENGLISH SCHOOL STORY—By E. S TYLEE

"Sho! You make me tired!" said Pickens scornfully. "There was all of him left, sir; and very little damaged on the whole. Auntie Clytemnestra took him

home and nursed him and he was as drunk as ever a week after. You see he drunk as ever a week after. You see he had been teasing Hall Columbia with a German sausage tied to a string, till she got mad and took him in before she thought. He still valets my dad when we're at St. Louis; but we call him Jonah now!"

now!"

Pizarro was thoughtful for a few seconds; then he took from his breast pocket a small pocket-book: "This is my 'gaterskin wallet!" he said, "made from the hide of that faithful creature. Dad gave it to me. I shall never part with it. The gentlest, playfullest pet a fellow ever had, sacrificed for the sake of a trifling no-count nigger like that. It's a queer world."

They had left the river meadows now and were climbing the slopes of the high

They had left the river meadows now and were climbing the slopes of the high downs. Here the sport was of a different character. Few nests, though they were lucky enough to find that of a plover; but they saw rabbits by the hundred and presently picked up the body of one slain by a stoat, the back of its neck bitten clean out by its tiny enemy. Then they made a more interesting discovery: a live adder which they killed in great excitement with the enemy. Then call the state of the strength of

red.

Pickens claimed it as having been the first to perceive it basking loathsomely in the sun on a moss-grown rock. Postlethwaite on the other hand, who had done most of the killing, declared that it had thereby become his rightful property. Moreover, taking an unfair advantage of his superior age and strength, he defied the American to personal combat, and Pickens, in view of the great disparity between them, was fain to yield the point with as good a grace as he could, and the triumphant Postlethwaite laid the slimy prize in his own bundle of plunder.

They were good friends again in a

They were good friends again in a few minutes and Pizarro appeared to have forgotten the affair, as they left the downs on their southern side and set their faces towards home. He suggested that their faces towards home. the downs on their southern side and set their faces towards home. He suggested that they should return to the school by the river, saying that he had something to show Postlethwaite. The latter consented and they went on until at a bend in the road, Pizarro drew Postlethwaite's attention to a sort of high old-fashioned barn straddling on four stilts of legs, much in the same manner as the Lake dwellers of old time built their strange houses. The only entrance was by a long ladder leading to a trap-door in the floor. Pickens led the way to the foot of this and prepared to ascend.

"What is it? Owis?" asked his companion with moderate interest.

"Hush, no:" answered the American.

"I've been here before. There's a gull's nest up there! The only one in the British Isles, sir, in such a place. Most extraordinary curiosity! Barnum would give his head for it!"

Now Crosscombe, of course, is not very far from the sea, and the thing was just possible. Still it did not seem like-

stirred it and caused a violent fit of sneezing. When he recovered, he noticed that the American had left the loft, and running to the window saw him strolling leisurely away with a bundle under his arm.

"Come hack, you Rotter!" shouted the angry Postlethwaite. "There's not a sign of a gull's nest here!"

Pizarro already at a considerable distance neither stopped nor turned, but in his usual high nasal tones, replied:

"That so? Then William B. Postlethwaite, I guess you'll have to build!"

Something in his voice disclosed the truth to his unfortunate victim, who hurrying to the trap-door, found his worst suspicions confirmed. The ladder had been removed, and all means of egress cut off. Furthermore, when Postelthwaite proceeded to examine his bundle of plunder he found that all the most desirable articles had disappeared with the elusive Yankee, and he was left to face the pleasing prospect of an afternoon in the close and stifling loft, with the certainty of heing late for calling noon in the close and stifling loft, with the certainty of being late for calling over. For unfortunately the window was at such a height from the ground that escape in that direction was mani-

festly impossible.

For three mortal hours Postlethwaite For three mortal hours Postlethwaite remained in his prison, revolving the most elaborate and impossible schemes of vengeance. At the end of that time an ambassador appeared in the person of a very small boy, who declared his message from afar, declining all Postlethwaite's courteous invitations to approach within throwing distance. A treaty of peace was soon concluded, for the captive was suffering for his tea. The terms were extremely one-sided Pizarro was to be left in quiet possession of his illgotten gains, and the events of the day were to be buried in oblivion of the day were to be buried in oblivion

ROCK RIDGE HALL for Fifty Older Boys The HAWTHORNE HOUSE for Younger Boys

The many considerations of a boy's life at school form the text of a paniphlet that has been written about this school. Though it may not influence a selection in favor of this school, it will be read with interest by all who are impressed with the equipment and methods that are essential for a thoroughly modern preparatory school.

This paniphlet which has been prepared with care and illustrated with numerous photographic reproductions, describes both by word and picture many details of the school-life as well as the advantages, natural beauty and historic interest of the school surroundings. Sent without charge on request by postal card, or other wise.

BOSTON LATIN SCHOOL BOYS PARADING ON BOSTON COMMON

OW MANY readers of THE AMERICAN BOY know that there is in
existence in America a school for
boys that has been in existence
ever since the year 1633? This is the
oldest school in the United States. No
other school organization can trace its
history back, year by year, to so remote
a period. There was a school in Albany
and there were no doult schools in Virgrinia and in old Plymouth, in Massachusetts, previous to the year 1635, but no
other school in America can compare to
the famous old Boston Latin School in
continuous existence. And no other
school in America can present a list of
more distinguished graduates. The Hall
of Fame in New York contains the names
of several men who graduated from this
old Boston school. Among them are
Benjamin Franklin, Ralph Waldo Emerson and Samuel Breese Morse, who invented the telegraph. Every June the
seven boys who stand highest in the
graduating class of the Boston Latin
School receive each a beautiful silver
medal, purchased with the income of a
fund left for this purpose by Benjamin
Franklin, one of the early graduates of
the school.

Thwack! Thwack! In those good old

aid on. See: the birch rod has lost
the Franklin, one of the early graduates of the school.

Phillips Brooks was a graduate of the school, and one must agree with him when he said of it on the occasion of its two hundred and fiftieth anniversary:

its two hundred and fiftieth anniversary:

"A great public school, which has lived to celebrate its two hundredth anniversary, must surely have a story of which it need not be ashamed. It may well fling wide its doors and invite the congratulations of the world, for it has entered for an appreciable period into the world's history. Its arc on the great circle is long enough for the eye to see. It evidently has possessed a true vitality, and had to do with perpetual principles and the continual necessities of man. For, lo! it has lived through the changing seasons. There is nothing which the world has to show which is two hundred and fifty years old that more deserves the thankful congratulations of its friends and children than an old school, all the more strong and alive for its venerable age."

its riends and children than an old school, all the more strong and alive for its venerable age."

At a town meeting held in Boston on the 13th of February, in the year 1633, it was voted that "our i rother, Philemon Pormort, shall be entrated to become scholemaster, for the teaching and nourtering of children among us." One will find in the different histories of this old school that the name of list first master is spelled in no less than six different ways, and there is no information that can be relied upon in regard to ids actual connection with the school. His successor was a man named Donalel Maude, who had come to the new land of America from Cambridge, in Lingland. We are told of him that he wrs "a good man, of a serious spirit, and of a peaceable and quiet disposition." He gave up the school to become a minister in New Hampshire, and a man named Woodbridge was his successor. The list of masters who have had charge of this famous old school is a long one. Some contained the school is a long one. S nouse for the Boston Latin School stood on a lot directly across; the street from where the Parker House stands today, and it was because of this school house that the street to-day bears the name of School street.

of School street.

Schoolhoys of to-day who feel that we have "awfully long hours" in our school house should draw of the Boston Latin School house was the hours were from seven in the morning in the summer that to five in the fetranon, with two hours' intermission at non. In the winter time to five in the attention, with two hours' intermission at non. In the winter time to five in the attention was put lastly pounds a year for his services, and he lived in the school house many and many, and Master was put lastly pounds a year for his services, and he lived in the school house must go. One of the most hours with a standed floor, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days when the chimney here are freeze at one end of the room, and there were days w

Tell what they owe to Him, and tell the Truth;

All the Eight parts of Speech he taught to them
They now employ to Trumpet his Esteem."

This famous old schoolmaster lies buried near the spot on which he taught school for nearly forty years, and around

their mark in the world in the after

Years.

The school was in session on that famous nineteenth of April, when the bat-tle of Lexington was fought, and Harri-son Gray Otis, then nine years old, said in after years that he entered the school house that memorable morning just in time to hear Master Lovell speak his fa-

house that memorable morning just in time to hear Master Lovell speak his famous words:

"War's begun and school's done—deponite, libros!"

From the time of its founding down to the present day this has been a school for boys, and its pupils to-day number about seven hundred. The old school houses have all passed out of existence, and the present home of the school was built within very recent years. If you were to be in Boston some day in May or June you would see an interesting sight on the famous old Common. It would be that of the boys of the Latin School drilling on the Common. They make a very fine appearance in their snowy white trousers, blue coats and natty little dark blue caps. There is no free school in Boston, nor in America, in which boys are better taught than in this famous old school, whose entire history is one well worth reading. The this famous old school, whose entire history is one well worth reading. The school has had several historians, and the library in your town or city may contain some account of it. No other school has played a more honorable part in the educational history of our country.

### Sheep and Boys

A sheep raiser said: "No animal that walks on four legs is as big a fool as a sheep. We have to watch them every minute, and if vigilance is relaxed for an instant the entire flock is likely practically to commit suicide. In handling most animals, some degree of intelligence can be relied on to aid the owner in saving their lives, but sheep seem to set deliberately to work to kill themselves. If caught in a storm on the plains they will drift before the wind and die of cold and exposure, rather than move a hundred yards to windward to obtain shelter in their corral. I once lost 1,000 head beyards to windward to obtain shelter in their corral. I once lost 1,000 head because I could not drive them to a corral not 200 feet away. In the corral they are still more foolish. If a storm comes up they will all move "down wind" until stopped by the fence. Then begins the proceding so much dreaded by sheepmen, known as "piling." The sheep will climb over each other's backs until they are heaped up ten feet high. Of course, all those at the bottom are smothered."

THE BOSTON LATIN SCHOOL

pendence in the later years of their lives. The boys of this famous old school were the boys who went to the British head-

quarters to complain because the British soldiers had spoiled their coasting place in Boston.

him are the graves of some of those who were his pupils.

John Lovell was the second master of unusual ability who taught the school, and his name will be found in any complete history of education in America. It is amusing to read that one of his rewards bestowed on a hoy for good conduct was the privilege of going out and working in the master's garden near the school house. Other good boys were allowed the delightful privilege of sawing his wood and bottling his cider, with the additional privilege of laughing all victory will prove a rich reward. victory will prove a rich reward.

### What Our Military **School** Will do for Your Boy

Make a Man of Him

A strong, healthy, clean, honest, intelligent manly man-full of the snap and vigor and joy of life-able to do things-competent to control others through having first learned to control himself.

The Michigan Military Academy

can develop all that is best in your boy. Splendid academic work, exceptionally able faculty, high moral tone, and a military discipline which cre ates ideal conditions for study. There is absence of vice, bad associations, social and other distractions which retard mental and physical growth.

The Discipline is Strict, But Just

The military features are so fascinating that he cheerfully accepts the strict regulations. He learns obedience, industry, self respect, cleanliness, orderly methods, promptness, regularity Heenjoysdoing what he ought to do. He is glad to retire at "taps," healthfully tired. He is up at "reveille," refreshed and wide awake, ready for the new day's work with a clear brain and active

### 95% of Our Graduates

are today filling enviable positions in the business and professional world. Military training does not signify a military career. The 5% who elect the military career, follow it successfully, several now holding important positions in the Uni-ted States army. We have more graduates at West Point than any other military school. Ours Sest roins than any other minitary sensor. Ours is a military school conducted by military men. Captain Cress, 4th U. S. Cavalry, our Superintendent and Military Instructor, graduated from West Point in 1884, has had over twenty years' service, and is on the active list. Our military training system is admittedly the finest in the country outside of West Point.

### The Academic Courses

cover 8th Grammar Grade and High School work. Our diplomas admit to any college or uniwork. Our apiomas admit to any college or un-versity where certificates are accepted. Our in-structors are live, up-to-day men, in the prime of life, seasoned by experience in leading colleges, and universities. Mr. Hull, the Head Master, is eminently fitted by education and varied exper-iences to direct our academic work. The four persons prominent in the management of the school have any a son in attendance. school have each a son in attendance

### Our Location at Orchard Lake

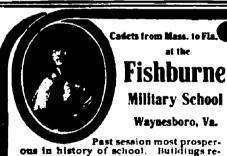

is ideal. The college, campus, farm, etc. are situated high and dry with perfect draipage, pure water, healthiest of climates. The site overlooks three of Michigan's most beautiful inland lakes. three of hichigan s most beautifu inland lakes. Bracing air, wholesome food, regular exercise and recreation, quickly develop hearty appetites and vigorous constitutions. The services of our staff physician have not been necessary during present school year.

A Boy's Mental Capacity Improves with his physical development. Military trainand a perfect control of himself mentally and physically that will last to the end of his days. Parents and Guardians Are Invited

to write us for literature giving full description views, courses of study, terms, etc.

Address General Harris A.Wheeler, President, at Orchard Lake, or at the Chicago office in the Old Colony Building.

Michigan Military Academy, Orchard Lake, Mich., U. S. A.

IMMY and the GOA JONAS JUTITO No the state of th

OME ON, Jimmy let's play hookey.
The fishing is fine down by the mill, and Bill and I are going."
"Like to," was the reply, "but I never play hookey; besides, to-morrow is Saturday, and I can get to go then."
"Well, don't 'bleat,' " requested Jack Lawton, as he turned towards his companion, who was waiting on a lower corner.

You know I'm no tell-tale," retorted Jimmy, spiritedly, and he continued on his way to the grocery after some sugar

his way to the grocery after some sugar for his mother.

While Jimmy was noted for his pranks and mischief, he was known as an honorable boy, and though delighting in a jeke, was very obedient to his mother's wishes. And that was whe' puzzled his playmates. They knew that he would run great risks of a severe whipping to have a hearty laugh, but if the act was dishonorable it mattered not how much fun there was in it, Jimmy could never be enlisted. be enlisted.
"By George! I know them fellows will

"By George! I know them fellows will have a good time—but I'll get to go tomorrow," and thus comforting himself, Jimmy, with bowed head, lost in thought, ran into Mr. Poston and Mr. Fentress, saying as he did so, "Excuse me, please, I was not watching."

"That's all right, Jimmy," replied Mr. Poston; "but you are always butting into something," then, laughingly, "you rode the trick mule at the circus all right, but I'll het you couldn't ride that big goat of mine."

"Pshaw!" grunted the lad. "It's a heap easier to ride a goat than it is to ride

"Pshaw!" grunted the lad. "It's a heap easier to ride a goat than it is to ride that mule, for he was a sure enough bucker.

"Yes, I know; if you could get on him; but that's it. I'll tell you what I will do. If you will go into that lot, it isn't more than an acre, and ride that goat out, I will make you a present of a five-dollar bill."
"You are toking?"

"You are joking?"
"Indeed, I'm not. If you come out of that lot on the goat's back the money is

Give me till to-morrow to think of

"Yes, a week, if you wish it. You are not to take a stick or anything else to hurt the goat, mind you, but go in empty-handed."

to hurt the goat, mind you, but go in empty-handed."

"Very well, Mr. Poston, I'll study over the matter, and believe I'll get that five easier than I did my monkey for riding that circus mule," and he laughed at the idea, then hurried on, while Fentress remarked jocosely to his companion:

"You had just as well give that boy the money now, for he is as sure to devise some way of riding that goat as the goat is a reality."

"I don't know how he will go about it," smiled Poston. "Billy is a big fellow, and I don't even dare to go into the lot when he is in an ugly humor. I've tried holding him by the horns, and I can't do it, man as I am."

"And you couldn't have ridden that mule, either," laughed Fentress, "yet Jimmy did," and they fell to discussing the boy, who had produced more laughs and trouble than had any boy in the village.

Jimmy didn't know his lessons as well.

Jimmy didn't know his lessons as wellthat day as he usually did, his mind being so filled with the goat and the reward that was offered if he could ride him out of the lot. "The trouble is," he said to himself, "I am not to take anything in the lot with me. Now, if he would let me carry a stick, I might hit him a few biffs over the head and bluff him. But I must think it out some way, for I want some fishing tackle and other for I want some fishing tackle and other things, and mother can't give me the money to get them. I know old Bill; he's a daisy! I remember last spring when I got him to butt our wash-woman," and the mischlevous little rascal laughed heartily as, in his imagination, he saw the victim of his prank going head over heels, and then scrambling up and running for dear life, while Billy stood and shook his head at her as long as he could see her. see her.

That night Jimmy went to bed early. It seemed to him that he could always think better after he had gotten in bed, with his head covered up, and everything quiet. He lay awake a long time,
his mind filled with the goat and the
five dollars, but at last, unrewarded by
his thoughts, fell into a sound slumber.
The next morning he met with the owner of the goat, and after saluting him
courteously, said with his usual chuckle:
"Well, Mr. Poston, I went to sleep last
night thinking of how I was going to

"Well, Mr. Poston, I went to sleep last night thinking of how I was going to ride Billy, and—"
"And you couldn't think it out?"
"No, sir, but I dreamed of a plan, and am ready to ride that goat any time you

say so."
"You are?" inquired Poston, in sur-

"Yes, sir. I believe I could do it eas-

"Yes, sir. I believe I could do it easily, if I could only carry a stick and bluff him; but I will go into the lot empty-handed and do it anyway."

"All right, Jimmy; I won't go back on my word. Ride the goat out of the lot, and you have made five dollars."

"But how long am I to have to do it?" queried the boy.

blufted either, and allowed Jimmy to get within about ten steps of him when he lowered his head and made a charge. The boy ran a short distance, and then fell on his knees, with his head from the goat, while the crowd yelled:

"Get up from there, you little fool!" "That goat will kill you!" and other such advice was fired at him; but the boy only braced himself with his hands, and the goat took him from the rear with such a blow that the concussion sounded like a section both walk and run, but how few men and boys can jump a rail waist high!

The reason of this would appear to be that outside of a few cases where an individual is possessed of phenomenal spring, success is a matter of practice and cultivation of the muscles and nerves which control the upward propelling motion of the body.

Up to the time I was sixteen years of age I could not do four feet. After six months' assiduous practice I was sure of clearing this height, and had improved six inches in another six months.

Within a year and a half I could jump five feet, but it took constant practice for another eighteen months before I at last succeeded in getting over a bar six his face, but quickly rolling over, jumped to his feet and on to the back of the goat, which appeared dazed from what his head had come in contact with

Though Jimmy was on the back of the goat all right, the animal went the wrong way, all the time throwing his head around and trying to butt his tormentor off. Seeing this wouldn't do, Jimmy slid to the ground and headed for the gate, the goat after him, and after running about twenty yards, and seeing the goat close behind, Jimmy again went to his knees and the goat's head came in contact with the lad's coat-tall with

extent, and on one side was a big double gate for the entrance and exit of a wagon or other vehicle.

Half-past one rolled around, but Jimmy had not put in an appearance, and one of the would-be sightseers began laughing at Poston, telling him that the joke was on him, as Jimmy had no idea of coming, and just wished the crowd to assemble for nothing. But the prophetic gentleman was wrong, for about that time the boy was seen coming merrily up, and arriving at the gate, said laughingly:

"I am sorry if I have kept the audi-

"I am sorry if I have kept the audience waiting, but the actors, you know, are the last ones to show up," then, after looking over the situation a minute or more, asked politely: "Will you all please get away from that gate. I don't the goat to get scand and not go

ter looking over the situation a minute or more, asked politely: "Will you all please get away from that gate. I don't want the goat to get scared and not go through when the time comes."

Several made jesting remarks, but all did as requested, and Jimmy threw both gates wide open. "Now, me and Billy will come through there flying, at some stage of the game." he asserted, as he glanced around for Billy, who was on the opposite side of the lot. Then the hovemers and going towards the goat. boy entered, and going towards the goat,

"Hello, old fellow! I've got to ride you out of here some way, so you had just as well come and begin learning

how to be horse."

The crowd laughed, and Billy, who was in an ugly mood, stood on his hind legs and shook his head victously.
"Oh, come on; you can't bluff me, you can't, you long-whiskered old rascal!" shouted the lad.

The goat seemed like he couldn't be

"I hadn't thought of that, Jimmy. Say two hours; that long enough?"

"Plenty," agreed the lad. "When does the riding take place?"

"How would half-past one this afternoon do?" was the suggestion.

"Suits me to a T," agreed Jimmy, "and you may expect me at that time. Goodbye," and as he walked off he commented, "That knocks my fishing in the head; but a five-dollar bill beats a few fish any old time."

"The joke will certainly be on me, if "I hadn't thought of that, Jimmy. Say two hours; that long enough?"

"Plenty," agreed the lad. "When does the riding take place?"

"How would half-past one this afternoon do?" was the suggestion.

"Suits me to a T," agreed Jimmy, "and you may expect me at that time. Goodbye," and as he walked off he commented, "That knocks my fishing in the head; but a five-dollar bill beats a few fish any old time."

"The joke will certainly be on me, if I have to give him that V," thought Poston, who, though not a penurious man, did not believe in throwing money away. Billy's owner wished to have as much fun out of the incident as possible, so informed his friend Fentress and others of the time for the attempted equestrian feat; and when one o'clock came there were at least a hundred men and boys surrounding the fence which enclosed his goatship. The lot was about an acre in extent, and on one side was a big double gate for the entrance and exit of a wag-on or other vehicle.

such a whack that, "Gee! what a lick!" and other such excitamations came from the excited spectators. As before, Jimmy rolled over and up before Billy could decide what to do, and started for the renewing the attack, but decided to do so on Jimmy filrting his handkerchief at him and exclaiming, "Come on, you old the lad, as he fell on his knees within ten feet of the gates. Jimmy that the goat, seeming to wish to bring the matter to a close, reared up on his hind the goat, seeming to wish to bring the matter to a close, reared up on his hind the goat, seeming to wish to bring the matter to a close, reared up on his hind the goat, gave him a slap with his hand, and out the opening went goat their merriment as Billy, who had disgoatship. The lot was about an acre in extent, and on one side was a big double gate for the entrance and exit of a wag-on or other vehicle.

The plucky, victorious little chap got Billy back into the lot, and shut the gates, and as he did so pulled a piece of iron about an inch thick and eight inches square from the seat of his trousers, then fishing out a piece of quilt, turned and said.

"Mr. Poston, I never had a thing in

my hand."
"No, you did not," laughed the maker of the proposition, "and here's your five dollars." The others cheered lustily, while one

The others cheered lustily, while one of them remarked, good-naturedly:
"Well, I've had a dollar's worth of fun, and here's another quarter, Jimmy," and others following his example, the goat and mule rider went happily home with six dollars and fifty cents in his pocket, while Fentress remarked to Poston:
"I told you you had just as well give that boy the money on the start, for I knew he would get it."

# Running High Jump

By S. S. Jones, American and Metropolitan Champion, 1903. English Champion, 1902.

N GIVING careful consideration to the ow to be horse."

The crowd laughed, and Billy, who as in an ugly mood, stood on his hind gs and shook his head viciously.

"Oh, come on; you can't bluff me, you an't, you long-whiskered old rascal!" alysis of the muscles below the waist show that they are arranged principally for three movements which have a simi-

last succeeded in getting over a bar six feet in height.

In starting I would point to the time I took before my efforts were rewarded, and say, don't get discouraged early in the game.

the game.

Every boy, if he will be patient and stick to it, can meet with some success in the high jump; but for those boys who desire to get into athletics but are not strong enough to train for long distance running, this is the event which they can possibly succeed in, comparing favorably with their stronger constituted schoolmates.

In commencing practice for the high

In commencing practice for the high jump, the legs must be first got into con-

The best way to accomplish this is to take constant sprints from twenty to fifty yards; this strengthens and gives snap. For the first week also take a daily jog on the toes of two or three hundred yards.

hundred yards.

The actual jumping can then be commenced, alternating each day with sprinting. In starting place the bar at a height easily cleared, about four feet or less, if this appears to be a strain.

The proper run, take-off and style of turning when going over the bar must then be studied and practiced, rather than increasing the height.

The take-off can be gauged in the following way: Stand under the bar and raise the foot till it can just touch the bar. The spot on which you stand is about the best from which to make your spring. Having found the take-off, take four strides similar to those you take in your

strides similar to those you take in your run and make a mark.

The object of this is plain. By striking the mark with the jumping foot each time the four following strides will bring you to the correct "take-off."

After practicing in this way you will soon find if you are reaching the best place in which to make your jump from, and can regulate it in the above method. Personally I take off between thirty-seven to forty inches away from the bar for the highest jumps.

Personally I take off between thirtyseven to forty inches away from the bar
for the highest jumps.

The object in acquiring the accurate
"take-off" is so that the parabola described by the body in flight will reach
its apex directly over the bar.

The parabola described by the body—
a high jump should have as much height
and as little width at the base as possible. In order to accomplish this when
running for the take-off make a momentary halt when springing. This will
prevent the body shooting horizontally
against the bar and will cause the lift to
be more vertical. Such a spring, supplemented by a lift from the arms, embraces
the acme of economy of power.

The arm motion here spoken of is all
important and must receive close attention. Perhaps most jumpers use a style
which they think best, but after seeing
a number I think the one I use the most
logical. The motion should be made at
the time that the legs are drawn up to
go over the bar, and is as follows: Raise
the right arm well up, extended, and at
the same time bring the left arm bent
across the chest and up past the chin.
This action must be made very fast and
with the utmost snap.

It will be found to bring the body

This action must be made very fast and with the utmost snap.

It will be found to bring the body around so that the hip will escape the bar, while it also both lifts and propels the body over the bar.

In learning to jump always use a straight run, the oblique run and scissor motion is a waste of energy, as the body has to be lifted higher each jump, as you cannot turn on the side as in a jump. cannot turn on the side as in a jump made in a direct line at right angles. At least five inches is saved by using the methods described herein.

s. s. JONES

When landing, always try to come down on both feet together, and let, the body sag off to prevent a jar. Do this at all low heights, so that it will be natural when the real strain comes as the bar is raised.

Practice is necessary to success, and jumping at a low height should be done every alternate day, but not for over fifteen minutes at a time.

This will be found sufficient to bring

(Continued on page 303.)

arm and shoulder. A telling blow of the rife brought a yelp of pain from the beast; then as she gave way for a moment Long Jim began to reload, but only

to find to his utter dismay that the barrel

Panting and in despair, the man again faced the wolf as she moved about her victim in narrowing circles. If he could only get rid of the trap! But that was impossible; to take his eyes for a moment from the wolf would mean instant death. Cautiously he lifted the imprisoned foot till his hand grasped the chain; then he pulled with might and main till the loosened stake gave way and he

Panting and in despair, the man again

IT WAS LATE fall in the timber-land of the Upper Maquaw. The forest trees stood bare and shivering in the north wind which swept fitfully through their creaking branches, whirling the withered leaves high in air. Long Jim was tramping his homeward trail, twitching with impatient jerks at his moose-skin jacket and clumsy fur cap, rattling the chains of the traps dangling over his shoulder, his footsteps directed to a solitary log cabin among the trees.

Darkness was settling as the trapper

Darkness was settling as the trapper reached the hut, and snow-flakes were sifting down through the bitter cold air with a steady intensity which to a practiced eye promised a storm of long

duration.

Long Jim was collecting his traps be-Long Jim was collecting his traps before the coming of the snow which would bury them too deep for recovery. Pausing only long enough to fling his jingling load under shelter, he tramped on up the rising ground back of the camp and, descending the farther side of the ridge with long strides, approached with some eagerness the thicket surrounding a little open glade where was set a heavy-jawed wolf trap which had been placed in many different game haunts during the fall, baited with the hunter's utmost skill for a wary enemy.

This enemy was a solitary old shewolf which, contrary to all precedent shunned her kind. Gaunt, fierce and cunning as the generality of her race is cowardly and timid, she was as formid-able a creature as the savage forest held.

able a creature as the savage forest held. War between the man and the beast was declared at an early stage of their acquaintance. In the spring Jim had discovered the lair and knocked the snarling cubs on the head, and since then all the animosity of the old wolf's nature had set in towards the trapper. Thereafter a sharp watch was set on his movements; she knew his goings out and his comings in; night after night she sat on the ridge back of the camp and howled forth her maledictions at the sleeper below, and as often the man had left his warm bunk and stolen forth into the night to catch her. But the

the sleeper below, and as often the man had left his warm bunk and stolen forth into the night to catch her. But the wolf was vigilant and many a time she had lain flattened to the earth while the hunter crept past and then betaken herself like a shadow in the opposite direction, sending back a howl of derision to signify to the hunter that he had again been folled.

Not a glimpse of the enemy did Jim get till one day in the fall when on his rounds several mink traps were found robbed, and farther on he descried the lean gray shape of the thief stealing away from her unfinished repast. A long raking shot and a snarl of hate were exchanged, indicative of the hostilities which were to wax fiercer and more absorbing as time went on.

Jim's hopes ran high as he approached the trap in the thicket, for this was a favorite lurking place of the wolf; but a dull red mounted to his hair as he caught sight of the spot. The animal had been there and, to show her defiance of the trapper's skill, had kicked dirt over the bait till it was covered from sight. This was a direct insult, and, full of plans for future vengeance. Long Jim threw down his gun and attacked the stake driven through the chain ring as though it were the offender herself.

It was no easy matter to pull the stake from the frozen ground and, bending

It was no easy matter to pull the stake

herself.

It was no easy matter to pull the stake from the frozen ground and, bending over, the hunter worked it back and forth with both hands till suddenly, without a sound of warning, a heavy body shot out of the thicket and, striking the man's shoulders from behind, knocked him sprawling on the ground "The wolf!" flashed like lightning through his mind as the great body shot over him; then, springing up and backward with a single bound, he landed with one foot square in the open trap, which closed with a sickening crunch around his ankle.

Faint and giddy with the shock, the hunter swayed and would have fallen, but there, not ten feet away, crouched the great wolf for another leap, her eyes glaring with hate, and her lips drawn up showing rows of gleaming fangs. For one instant the hunter glared at her eye to eye and the sight braced him for fight. Forgetful for the moment of the trap, he leaped for his rifle and was thrown headlong his fingers barely grasping the stock of the weapon as it lay in the grass.

Instantly the great beast was upon

grasping the stock of the weapon as it lay in the grass.

Instantly the great beast was upon him and had his shoulder in her terrible jaws before he could stir. With the strength of desperation the hunter tore himself free, and rolling, thrashing, fighting like a demon for his life, he struggled to his knees, sending blows crashing right into the face of the brute, which leaped upon him, tearing and hiting with teeth and claws and striving with all her might to gain his throat.

A sledge-hammer blow from the trapper's fist caught her straight between the eyes, dazing her for a moment. With lighting rapidity the hunter was on his feet and with clubbed gun swept a blow at the crouching animal which she dodged, the rifle whacking heavily against a tree.

Backing off, Jim hastily took aim and fred but missed the wolf, and she, mad-

against a tree.

Backing off, Jim hastily took aim and fired, but missed the wolf, and she, maddened by the report, sprang forward with redoubled fury. It seemed to the hunter as though he must go down before her terrible onslaught. The frenzy of despair kept him fighting, although the iron teeth of the trap cut deeper into his lacerated fiesh with every movement and blood was dripping from his torn

### The Wrong Book for a Boy

B, C. A. VOTEY

When the writer was a boy of fifteen he was taking books out of the Apprentices' Library, New York, and was eager to read every book in it, for he read everything that came in his way, from a dictionary to an almanac. As he couldn't read the Library through, he undertook the task of reading Sparks' "Life and Writings of George Washington," in twelve octavo volumes of about 500 pages each. He found it dry reading, and it took him six months to drag his mind through it. About all he remembers of the contents now is a letter of Wash. of the contents now is a letter of Wash-ington, then in New Jersey, returning to Lord Howe in New York a little dog of his, that, somehow, had strayed into the

Lord Howe in New York a little dog of his, that, somehow, had strayed into the American camp.

But it was a foolish task for a boy of fifteen and a waste of time. And if that librarian had kindly given him a word of advice he wouldn't have tried it. Suppose he had said: "My boy, do you mean to read that book through?" "Yes, sir." "Well, don't; it was not made for boys to read, but for scholars to consult. You will waste your time on it. I can lend you a book that you will like much better, and can read in one-tenth of the time." "A book about Washington?" "Yes." "Well, let me have it."

The fact is, a boy—yes, even an American boy—needs a guide through the wilderness of modern literature. Father, or mother, or teacher, or friend, should stand ready to choose his books for him; to warn him off the miry, malarious ground of "dime novels" and "boys' papers:" keep him from chasing will o' the wisps, and lead him into sweet, green, clean pastures, that will help to build up the boy into the man.

### Something About a Smart Horse

George Kilpatrick, R. F. D. No. 33 Memphis, Tennessee, wants us to tell about his smart horse. Without training, this horse has learned by long practice, in going after the cows, to know the cows by name, and when told to fetch any particular one will never go after another until he has brought the one designated. George is an amateur printer. He and his brother own an outfit valued by them at \$30.00. The press is 3 in. x 5 in.; but they hope soon to have a larger one, and then print a small paper. We would suggest that this young man join THE AMERCAN BOY AMATEUR JOURNALISTS' CORRESPONDENCE CLUB. Memphis, Tennessee, wants us to tell

NE EVENING when I went home from school I found the house cold and silent. My supper was set out on a table in the kitchen, with a cloth thrown over it, and the following note was pinned to the cloth:

"Your grandmother is very sick again."

"Your grandmother is very sick again and your Uncle Henry has come for me. I shall not be at home before to-morrow, and may stay longer if your grandmother needs me. Be a good boy and
take care of everything. You may ask
Billy Baxter to come and stay all night
with you, but please do not quite tear
down the house.

MOTHER."

It was not the first time I had come home and found my mother gone. My grandmother, who lived in a little village about eight miles from our farm, was in feeble health and had sent for mother several times that winter. My father, who combined carpentering with farming was at work in a town ten farming, was at work in a town ten miles distant and did not come home except on Saturday nights. I did not have any brothers or sisters; and was thus left alone when my parents were

I ate my supper hastily. Then I fed and milked our two cows, strained the milk and put it away, and cared for the horses and other stock. When the work was done I hurried down to the Baxter

horses and other stock. When the work was done I hurried down to the Baxter farm to get Billy to come and stay all night with me.

There was reason for the last clause in my mother's note, for Billy was a boy who was "up to everything." He was a merry-hearted fellow, rich in the possession of perfect health and a generous and kindly spirit. With his good humor Billy was a general favorite, and I liked him better than any other boy I knew. He was a noisy young harum-scarum, and rather wearing on those with weak nerves, but his wildest pranks never did real harm to any one, and he was one of the kindest of boys.

Billy liked nothing better than to "rigum." as he called it, as a tramp or an old

and he was one of the kindest of boys.

Billy liked nothing better than to "rig up," as he called it, as a tramp or an old lady or a peddler. He was an excellent mimic and could nearly always "fool" the neighbors when he set out to do so. He always stayed with me when I was left alone in the house at night. We would pop corn and crack nuts or make molasses candy, and we usually went to bed at nine o'clock. But this was not to be our program on the night of which I am writing. On our way up from the Baxter farm to my home Billy said:

"Say, Joe, let's have a lot of fun tonight."

night. 'How?" I asked.

"How?" I asked.

"Let's rig up and go out somewhere. It is a glorious night. S'posing we go away over to the spelling-school in the Butternut District."

"Go over there 'rigged up.'"

"Yes, of course, It would be great fun. I could rig up as a young lady and you could be my beau. We don't know any one over there, and it would be great fun."

I did not have Billy's forders forders.

great fun."

I did not have Billy's fondness for masquerading, but it always amused me to see how well he did it, and I said:
"I don't want to dress up. for I can't do it as cleverly as you can, but it is a fine night to go somewhere and I'll go any place you choose, but you must do the dressing up."

"You're not much good at that sort of thing, that's a fact," said Billy with his usual frankness. "But you get the things for me, and we'll have some fun out of it, see if we don't."

He began to dress up as soon as we reached my home. He went into mother's

with very thick and curly brown hair. When he had put on some skirts and a wine-colored dress of my mother's, and a gray felt hat with wine-colored feathers, and flowers, he looked exactly like a very pretty young lady. A black jacket and a small black veil over the upper part of his face completed his costume. His black eyes sparkled with fun as he took a last look at himself in the glass and tied a white lawn scarf in a graceful bow under his chin.

I had been hitching one of our horses

"Let's ride over to Preston. It is a fine night and the sleighing never was better. It is only eight miles, and I propose that we go over there and call at the Harvey's. They'd be glad to see

at the Harvey's. They'd be giad to see us, and we should be sure to have a good time. What do you say?"

I fell in with the plan at once. The Harveys were a family who had once lived in our neighborhood. The two hoys, Dan and Rob, had been warm friends of Billy's and mine, and we had not seen them for several months. So I headed my horse in the direction of Preston, and away we went at a lively

when we drew rein before the house in which the Harveys lived, there was not a light to be seen, and when repeated ringing of the bell met with no response Billy returned to the sleigh and said regretfully:

Billy returned to the sleigh and said regretfully:

"There is no one at home. Too bad, isn't it? What shall we do now?"

"Let's ride around a little." I said.

"No, I'll tell you what let's do," said Billy. "Let's hitch the horse here in this quiet street while we go to the restaurant over in K street and have some hot oysters. I have a dollar in my pocket."

"Aren't you afraid to go into a restaurant looking like that?"

"Pooh! Of course, I'm not."

We hitched and blanketed the horse and began to stroll around the well-lighted streets of the town. Billy was entirely unconcerned regarding the danger of detection. He nudged me in the side and tittered when a gentleman who ran aginst him while hurrying around a corner lifted his hat and said with profuse apologies:

"I beg your pardon for my awkward-

"I don't know that I would have rigged up like this had I known we were going over to Preston," said Billy as we much inclined to encourage the attenglided along over the snow. "But it always used to amuse the Harveys to have little. But she is at the same time a young tay outside at first when we get there and I'll go in and fool them in some way that will set jolly Mrs. Harvey to laughing so that you can hear her half a mile away."

But this plan was not carried out, for when we drew rein before the house in housekeeper, and one who will understand the art of entertaining to perfection. She is of a frank and open nature and it would be impossible for her to deceive any one. She is—"

The sentence was never finished, for at that moment the loud voice of Rob Harvey called out:

at that moment the loud voice of Rob Harvey called out:

"That's a good one on you, Mister Professor! She ain't no 'she' at all! She is a fellow named Billy Baxter—that's just who she is! I know him!"

This was unkind and unwise of Rob, and he said afterward that he did it for the purpose of exposing Professor Teffario, without thinking of the position in which it would place Billy.

Billy started to run when the hotly indignant professor caught him by the arm and called out:

"Is there an officer in the hall? If

"IS THERE AN OPPICER IN THE HALL?"

his elbow, and followed the usher down the aisle, while I remained in the rear of the room. A few minutes later the professor came forward and said:
"I would like to illustrate what I have

"I would like to illustrate what I have been saying about palmistry by having some young lady come forward and allow me to read her hand. I will undertake to indicate her most prominent traits of character, and will forecast her future with a degree of accuracy that will amaze her in later years when all of my predictions shall have been verified. Now what young lady will volunteer to come forward?"

No one stirred for a moment and then, to my amazement, Billy had the audacity to leave his chair and march forward toward the platform. the glass and tied a white lawn scarf in a graceful bow under his chin.

I had been hitching one of our horses to a sleigh while Billy dressed, and I drove out of the barnyard just as Billy appeared at the door.

"Come on," I said.

"Come on," he replied, mimicking me.
"Is that the way you address a young lady? You would hitch that horse and come and escort me to the sleigh if you had any manners. I am ashamed to go out with such an ill-bred beau."

He came out to the sleigh with his skirts held up to escape the deep snow, and as soon as he had climbed into the sleigh beside me he said:

"Say, Joe, I have been thinking of something. Let's not go over to the Butternut spelling-school, after all; I have another plan."

"What is it?"

"Let's ride over to Preston. It is a fine night and the sleighing never was and the company than the sleighing never was a sleigh traits of character, and will forecast her future with a degree of accuracy that traits of character, and will forecast her future with a degree of accuracy that traits of character, and will forecast her future with a degree of accuracy that will amaze her in later years when all of my predictions shall have been verified. Now what young lady will volunteer to come forward?"

No one stirred for a moment and then, to my amazement, Billy had the audacity to leave his chair and march for ward toward the platform.

"Ah, thank you," you' said the professor, effusively, as he rubbed his hands together and bowed low. "Will you take this chair in the center of the stage? Thank you."

Billy sat boldly erect facing the audience with the utmost coolness. The professor looked at Billy's hand for a moment or two and then said:

"I find this to be a remarkably strong that the glaghing never was a strong the same of the stage."

"The strong the form of the stage of accuracy that traits of character, and will forecast her future with a degree of accuracy that will amaze her in later years when all of my predictions shall have been verified. Now what young lady will volun

ment or two and then said:
"I find this to be a remarkably strong hand, with the chief traits of character hand, with the chief traits of character very clearly and definitely outlined. The artistic temperament is very pronounced in this young lady. She would attain a very high degree of success along any line requiring an eye for color, and she would be a great success as a milliner or dressmaker, although I see clearly that she is not to engage in either of those occupations, for she will be married within five years to a gentleman of large wealth and will live much abroad. I see indications of early widowhood and a second marriage less fortunate and happy than the first. She

things for me, and we'll have some fun out of it, see if we don't."

He began to dress up as soon as we reached my home. He went into mother's room with me and I got him the things he wanted for his costume. He was a slender, good-looking boy of fifteen, with very thick and curly brown hair. When he had pur on some skirts and ticket office and had purchased two ticked to the day of the found the hall so crowded that there was not a seat left, and we were standing in the rear of the room when an usher came up to us and said:

"I can get the young lady a chair up with very thick and curly brown hair.

When he had purchased two ticked office and had left the hall and went to where I had left my horse and subject the purchased two ticked office and had left the hall and went to where I had left the hall and went to where I had left my horse and subje

when I heard some one call out:
"That you, Joe?"
"Yes, it is," I replied, rather surlily;
but Billy laughed his usual merry laugh
and said:

"Oh, come now, Joe, don't be cross, and when I am the rich widow you have heard about, I will load you down with presents. Jump into the sleigh and let us light out for home before the professor gets on our trail."

His jokes seemed rather forced and we did not talk much. The prank had been a foolish and not altogether unquestionable one, and Billy was evidently a good deal ashamed of it. I felt pretty sober, too, and we both did some good, solid thinking as we rode along. When we finally reached home Billy said:

"That was a pretty narrow escape, now wasn't it, Joe? I guess it is about time I stopped playing such tricks as that, and this shall be the last one. In the meantime, you put up the horse

the meantime, you put up the horse while I go into the house and start up the fire and we'll warm up one of your mother's mince pies and eat it before we go to be d' go to bed.

### Boys, Think These Over

One of our great American leaders says a boy should learn:

To let cigarettes alone.

To be kind to all animals.

To be manly and courageous.

To ride, row, shoot and swim.

To build a fence scientifically To fill the woodbox every night,

To be gentle to his sisters. To shut a door without slamming.

To sew on a button.—Philadelphia Rec-

### HOW ERNEST SAVED THE HERD and ROUT-ED BOLTER'S GANG

ED BOLTER'S GANG

IT WASN'T very pleasant to be left outside the stockade to guard the corral gates, with no companion but a pony and the three thousand six hundred half-wild and restless cattle. Most boys of fourteen would not have relished the position even in a time of peace. And now a band of desperadoes of the worst type was known to be approaching White savages who have no fear of the law are worse than savage Indians. A scout had brought word that the terrible "Bolter gang" were on their way to raid the cattlemen of the valley and all hands had since been busy gathering the scattered settlers into the central stockade for protection against this marauding band of "rustlers," or cattle thieves.

Whatever may be said against the cowboy, laziness and cowardice are not among his failings; so it is not surprising that the ranchmen began to prepare most actively to give their unwelcome visitors a warm reception.

Up on the mountain lay the scout, waiting to send the signal of warning when the foe should enter the pass. Below fearless riders dashed over the plains bringing in the scattered cattle and preparing for a long and vigorous defense. Until the signal came there was no danger, and, as all hands were needed in stockade was, for the time, left comparatively undefended. That was how it fastenings safely secured. There was if it came to pass that Ernest was left alone to guard the corral gates till the remaining cattle were driven in and the heavy trastenings safely secured. There was little for him to do but watch till the other herds arrived. Then he would have to swing the big gates open and help turn the leaders in. This might take some hard riding and not a little danger. Often the least unusual thing is enough to start those herds of half-wild cattle on a mad stampede before which there is no safety but in flight. A single missep, and horse and rider would be trampled to pieces by a thousand hoofs. The cattle were restless that day—ready for a stampede on the slightest provocation. As though they scen

would attempt to break from the inclosure.

Within the stockade the women were doing what they could in preparation for the coming fight. Guns were being cleaned and examined, ammunition boxes dragged into more convenient places, and the little fortress strengthened in every possible manner. In fact, every one was husy at some active work except the scout, away up on the mountain, and Ernest. No wonder the lad felt almost alone in the world.

Would the men be ready to return before the signal came? Of course they would be all right anyhow, for they would have time to get back after Bolter came in sight of the scout. They could leave the rest of the herds, if necessary. But the excitement of the cattle he was guarding seemed to be contagious, and Ernest's restlessness, like theirs, increased. He galloped up to a little plateau, and, dismounting, looked anxiously toward the spot where the scout was stationed, as if expecting his signal. His attention was about equally divided between the trail by which the men would come and the lookout on the mountain. The lad was not by any means a coward. Accustomed as he was to the dangers and hardships of frontier life, even the cowboys admired his daring. Still, it was with a keen sense of relief that he saw an approaching cloud of dust that told him the men? The cattle never came like that uplear

relief that he saw an approaching cloud of dust that told him the men were coming.

But was it really the men? The cattle never came like that unless they were stampeding. Surely that couldn't be Bolter! The scout would have been sure to see him and give warning—unless he had been surprised and captured.

Older heads than Ernest's would have been anxious at that moment. Furiously the cloud of dust approached, drew near, then parted, and out of it there came, not horns, but horses ridden as if the evil one possessed the reins. There was —there could be—no more doubt. It was Bolter and his gang!

Ernest's first thought was of the men scattered hopelessly over the valley; then of the women and children in the stockade, defenseless and as yet unconscious of their danger; then of the cattle. Ah, the cattle! Putting spurs to his horse, he dashed to the corral gates, tore them wide open, and then flew to the rear of the inclosure, and, shouting like a maniac, swung his coat in the air above his head. For one instant three thousand six hundred heads were in the air. The next, four times as many hoofs went thundering down the valley in a thousand six hundred heads were in the air. The next, four times as many hoofs went thundering down the valley in a hopeless stampede. A railroad train would not have stopped that rush. Nothing could withstand or check it.

The advancing horsemen drew rein for a moment, astonished at the commotion. Then, as the full sense of their danger thurst upon them, they turned about and

burst upon them, they turned about and fled helter-skelter for their lives. Desperate men they were, and only desperate riding could save them.

When the cowboys returned the noise

When the cowboys returned the noise and dust had died away, and the desperadoes were disorganized and scattered. Here was the ranchmen's chance, and so well did they improve it thanks to their habit of quick thinking and acting in an emergency, that Bolter left nearly half his gang prisoners in the hands of their intended victims.

Cowboy skill soon rounded up the scared and scattered cattle. The scout? Poor fellow, he had kept his last watch. Bolter's sharpshooters had surprised him

Poor fellow, he had kept his last watch. Bolter's sharpshooters had surprised him at the post of duty. And Ernest? Well, a week later a half dozen of the ranch owners came up from Denver and held a meeting in the main ranch house. As they sat around the fire they were told the story of Ernest's exploit, and immediately they clubbed together to send him east to school. He graduated with high honors, and not many years later became the prosperous owner of the very became the prosperous owner of the very ranch which his pluck and cool-headed-ness had saved from Bolter and his des-peradoes.—Wilder Graham, in April St. Nicholas.

### AS MONEY MAKERS BOYS

### The Value of Persistency

Gillott at once turned his inventive genius towards devising a more rapid process of manufacturing pens. He succeeded in inventing a machine that turned out pens by the thousand in the time required to make one by hand. He set up in the business of making pens, and married Miss Mitchell.

On the morning of his marriage the young machinist arose early and made a gross of pens. He sold these for thirty-six dollars, and with this money paid the wedding fees. It was an unusual pro-

wedding fees. It was an unusual pro-ceeding, but it was like Gillott, who was conscientious and who paid as he went

along.

He continued the manufacture of pens He continued the manufacture of pens for many years, and, by industry, economy and honest dealing amassed a large fortune. His pens were famous the world over for their excellence, and the price at which he sold them enabled the poorest family to use a steel pen. In his old age Gillott again visited the old inn where he had lodged in that former time and purchased the rickety settee upon which he had sat during the time of his brief despondency. From it ne had a chair constructed, which he left as an heirloom to his son, to remind him of the foundation of his success in life.

Joseph Gillott was indebted to persistency for his success in life. If he had given up to despondency in his hour of trial we should never have heard of him, and another would have reaped the reward. But he persevered, even when effort appeared to be futile, and he reaped a fortune thereby.

Thomas resides in a modest two-story brick dwelling at 1425 W. Hagert street Philadelphia, Pa., and he is rather young to cause a disturbance in the diplomatic world, but that is just what he has done. If he were a soldier his offense would be a serious one, as he has ignored all his immediate superiors in making an appeal direct to the head of the nation. Although but fourteen years old, I homas has learned to distrust councilmen and mayors, but he still has faith in the President, and this faith has caused his inident, and this faith has caused his introduction into the world of politics.

Mayor Weaver, of Philadelphia, was the recipient of a letter from President

Roosevelt two weeks ago in regard to Thomas. A letter from the boy was en-closed. It read as follows:

Mister President:

I would like to get a permit to put a double wire a short disents across the street for telegraphy, would you get this for me and oblige

T. HOUGHTON,

1425 W. Hagert street.

Philadelphia, March 20.

The President made no comment upon this message, and Thomas' hore now rests upon the mayor. As usual, there is a woman at the bottom of the boy's trouble. Thomas wants to connect his house with that of his chum, George Gratz, but George has a big sister who vetoed the project. She told the boys that no wires would be allowed to enter the house. Thomas frowned when told the house. Thomas frowned when told this and then declared that he would ap-peal to the President. "Nohody told me to write," said Thomas in discussing the matter. "I just thought I'd do it, for this and then declared that he would apport four-track scale."

The peal to the President. "Nobody told me in recent years, Mr. Wanamaker said, gleaned from historic incide to write," said Thomas in discussing the mill had been enlarged and four more important truths—for the matter. "I just thought I'd do it, for more S's entered into its construction, are entering business life—th I've read that many men have been successful because they haven't been afraid to deal direct with big people. If the wasteful, and apply all your talents, various parts of the country.

President has the power to grant favors and the like, and I want one from him why should I hesitate to ask him? He's a great man, but he's only a man like my father, and I'm not afraid to ask father for anything."

The Value of Persistency

Advancement does not come by chance, but is the result of earnest endeavor. He who is devoid of application rarely meets with any success worthy of mention. Success is in general secured by those who are willing to work for it, and ew who do not pesses reliable characters gain it in the early part of the last century, there was a serious depression in trade, such as sometimes affects all rinnufacturing communities, and hundress of operatives in Sheffield. England were was a young man of twenty-one, named Joseph Gillott. He was a native of Birmingham, and when the crash came he returned home, hoping to secure employment of some kind.

and hungry, and spent the day seeking work. Unsuccessful an idiscouraged, he spent the night at an old inn, paying its last penny for a lodgirg and breakfast. Seating hinsel hoon a dought succession was no work to be had. The prospect was dark indeed.

But he did roughes faced the future was dark indeed.

But he did roughes faced the future was dark indeed.

ency for his success in tife. If he had given up to despondency in his hour of trial we should never have heard of him, and another would have reaped the reward. But he persevered, even when effort appeared to be futile, and he reaped a fortune thereby.

Boys, do not be discouraged, however hard your lot. Keep on trying and doing, and advancement and ultimate success will come.

Sought President's Aid

There is always some weak point about a great gerlius. Thomas Houghton's trouble centers in the spelling took, but apart from that he is destined to make his mark in the world.

Thomas resides in a modest two-story brick dwalling at 1405. W. Horst stead of the despondency in the hadden and make and a recast gerlius and modest two-story brick dwalling at 1405. W. Horst stead of the despondency in the hadden and and the angency of the people and the respect of the people, and the respect of the people and the respect of the people, and the respect of the people and the respect of the people, and the respect of the people, and the respect of the people and the respect of the people, and the respect of the people and the respect of the people and the respect of the people, and the respect of the people and the resp given additional prominence by furnishing illustrations for a strong talk to boys by John Wanamaker at a recent Sunday afternoon service of the Young Men's Christian Association in Philadelphia. When a country boy, Mr. Wanamaker was often about the mill, and observed that the building was strengthened by rods fastened in the wall with a large clutch on the outside in the form of the letter S. Applying this to his illustrations, Mr. Wanamaker said: "God has forged four great governing rods to hold up the world, each beginning with S. "These I commend to you," he said. "The first S is the Sahbath. God wanted to spend one day of each week with man, and this is part of the structure of God's government of the world.

government of the world.

"The second S is the Sanctuary. This may he a meeting house, a church or a cathedral, or it may he man's heart. I have pity for the man who rolls on and on and never enters the sanctuary. If you go to criticise, or to see what women wear, it won't help you much.

"The third S is the Scriptures, in which God has revealed Himself to man, in order that man might be drawn by gratitude and love to worship Him.

"The last great S is the Son of God to be our help and pardon, to believe in, that every man be worked in the wheel of life, and he mada better, and make

that every man be worked in the wheel of life, and he made better, and make the world better."

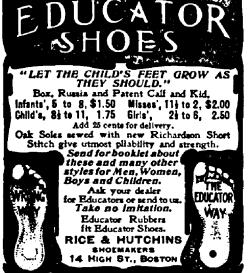

"I believe all can find their places in this world, just as did McKinley and Roosevelt, if your life is drawn to some scale—the scale of the Scriptures—this four-track scale."

In recent years, Mr. Wanamaker said.

man so greatly armed as by the vote of the American people only a few months ago. It was because the people thought and read. This wonderful decision of the people turns around the single thought that there is a man who has the confidence of the people, and the respect of every nation in the world, and why should we change? It was not the party but the every of the every second ty, but the exercise of common sense, that made the vote so great. I believe it was because Roosevelt gave his heart to God so early in his youth that made possible the great advancement, prog-

as and honor he has made."

The ancient grist mill (now known as the Cheltenham Flour Mills) and its surroundings form one of the most interesting spots on the York road. A spot filled with historic facts and quaint legends. It was built about the mi'dle of the eighteenth century—1744 to 1746—and an old record is still treasured in the Shoemaker family, containing the articles of agreement between Dorothy Shoemaker and Richard Mather—joint owners of the mill. In this old document, dated November 6th, 1746, the mill is styled a "Corn-Grist Mill," and further: "Ye s'd mill and for other conveniences abovt ye s'd mill (ye race and dam excepted) is to begin at Toxony Crick, opposite ye s'd Dorothy's garden at ye place of s'd crick commonly called and known by ye name of ye Sheeps-Washing Place, and from thence to extend down ye east side of ye s'd crick to the Cheltenham Flour Mills) and its sur-Washing Place, and from thence to extend down ye east side of ye s'd crick to ye fording place of s'd crick in ye York road." The quaint, old-time phrases, "Ye Sheeps-Washing place" and "ye fording place of s'd crick" recall vividly the ancient gala season known as "sheepwashing time," and the famous fords of Old York road, where stagecoacher were deleved in time of storm; but no lessons delayed in time of storm; but no lessons gleaned from historic incidents carry more important truths—for the boys who are entering business life—than the suggestive lessons silently preached by the "S clutches" of many ancient mills in

### July Company Letter

Letter From Headquarters of the Order of The American Boy, Read Before Each Company at its July Meeting

Detroit, July 11th, 1905. My Dear Captains and Brothers of Our Order:

Detroit, July 11th, 1905.

My Dear Captains and Brothers of Our Order:

The question has been asked me again and again in letters I have received from company officers: What plan can you suggest to keep the members of a company together during the warm months of summer? I confess it is a hard nut to crack. It is a question which older institutions and societies than our Order would be well pleased to have satisfactorily answered. Churches want to know why there is such a falling off in attendance at religious services during the hot weather; the young people's societies of the different churches want to know why the attendance at meetings is so small and the interest so slight, and Sunday school superintendents bewail the diminished number of both teachers and scholars. Even in the business world there is the same condition of affairs to be met with. The fact seems to be that there is in every department of life activities, religious no less than secular, a general letting go of things and an inclination to take matters easy during these warm summer days. Boys do not want to be cooped in hot rooms, nor do they want to be tied down by anything like rules! They want to be doing things different altogether from what they have been doing during the other months of the year; they want to be free, to do as few tasks as they must and to have as much fun as they can crowd into the hours of each day. So this question is a very difficult one to answer. However, it will readily be seen that to the boys themselves belongs the solution of the conundrum. I think if all the members of each company were to join together in an effort to interest and amuse one another, the question would soon be answered. Let each member of a company put on his thinking cap, notwithstanding the heat, and come to the meeting prepared with some plan, and I doubt not out of the many suggestions something will be done that mill enlist the interest of all, something in which every one will have a part. I believe suggestions whereby the beling out of

### CORRESPONDENCE CLUBS.

The number of boys who are joining these clubs is most gratifying, showing that they are desirous of galning a store of valuable knowledge and information which will be of the utmost value to them. These clubs have now passed the preliminary stage and are in first class shape. Of course I need not point out that the more boys who join these clubs the greater the benefits that the members will derive. Every boy interested in any line of work or hobby will find it of the greatest benefit to become a member of some one of these clubs.

### SPECIAL PRIZES.

The three companies who are entitled to the special prizes for largest increase in membership during April, May and June are: First prize, Honest Abe Company, No. 38, Freeport, L. I., N. Y.; second prize, Sangamon Bay Leaf Company, No. 45, Decatur, Ill.; third prize, Anthony Sunflower Company, No. 32, Anthony. Kansas. Yours for M. M. M. M., WM. C. SPRAGUE, President General.

# Of Special Importance

During the vacation season the majority of the members of companies are away from their homes visiting relatives and friends in other cities and towns and coming in contact with and making the acquaintance of other boys. In doing so there is great opportunity for them to make "The American Boy" and the advantages of belonging to the O. A. B. known among their new acquaintances and friends; also they can greatly increase their vacation money or get some of our fine premiums by obtaining subscriptions for "The Amer-ican Boy." The liberal cash commissions which we offer as well as the variety and excellence of the bats, baseballs, mitts, gloves, fishing equipments, books, motors, engines, watches and other articles which our boys want and the opportunity of making their favorite paper known should induce every member of the O. A. B. to get to work. Don't delay. Write at once to Subscription Department, The American Boy, Detroit, Mich.

# The Fight That Went Wrong

him that all the chickens hatched should

be his.
Richard took such a personal and constant interest in the process of hatch-ing that the brooding hen rather re-sented it as an unwarranted interfer-ence in her domestic affairs. Either be-cause he insisted on handling the eggs breathlessly upon the sides of the stall too often to see if they were hatching, to see the battle. sented it as an unwarranted interfer-ence in her domestic affairs. Either be-cause he insisted on handling the eggs too often to see if they were hatching, or for some other reason, when the hen finally came off the nest for good she brought with her only one solitary

He was not much of a chicken, either. He was an ungainly bird from his first appearance, and as he developed in awkwardnes his mother became so disgusted wardnes his mother became so disgusted that she would not scratch for him or shelter him under her feathery body. But Dick was immensely proud of the solitary little rooster, which he fed and coddled and actually "brought up by hand," as it were.

The chicken grew into an ungainly buff-cochin with a bad temper, which earned him the enmity of all the other fowls in the hen-yard.

Dick called his pet Punch, and since Punch was a solitary outcast among the

Punch was a solitary outcast among the other fowls. Dick made for him a little coop of his own, and from the roop the boy stretched a string leading to his bedroom window. This, he informed Punch in one of the many long talks the boy and the rooster used to have together, was to serve as a telegraph in case he should need help during the night

night.

"You see, Punch," explained Dick, "I will the my end of the string to one of my toes when I go to bed, and if you want me during the night just pull on your end and I will come out."

Punch stretched his neck, flapped his wings and said, "Cock-a-doodle-doo," in the most knowing manner.

Dick was always boasting about the beauty and other good qualities of his Punch to Bob Smith, who lived across the way and owned a flery little bantam which he valued beyond all other earthly possessions.

possessions.
"Pooh!" said Bob, one day, "your rooster may know more than mine, but mine can lick him!"

can lick him?"
Now, though Punch was about four times as big as Bob's bantam, Dick had some grave doubts as to his fighting qualities, because he had been obliged to rescue the bird many times from the flerce attacks of both hens and roosters, where the property of the property is the state of the property of the state of the sta

fierce attacks of both hens and roosters, who drove him about the yard and generally showed their contempt for him as a fighter. So Dick did not take up the challenge at once, but contented himself with saying, "Can't, neither!" Seeing this, Bob became more than ever abusive of Punch and boastful of the bantam's ability to "lick" him. Finally Dick could stand it no longer and said in desperation: "Well, bring over your old rooster and you'll see and said in desperation: "Well, bring over your old rooster, and you'll see how Punch will eat him up."

So one day Bob appeared with his bantam.
"Now, I know all about rooster fights,"

ICHARD entered into the poultry business with a great deal of enthusiasm. His father gave him a hen and a setting of eggs, and told that all the chickens hatched should his.

Ichard took such a personal and constitution of the process of hatched should his the process of hatched should he process of hatched he process of hatched should he process of he

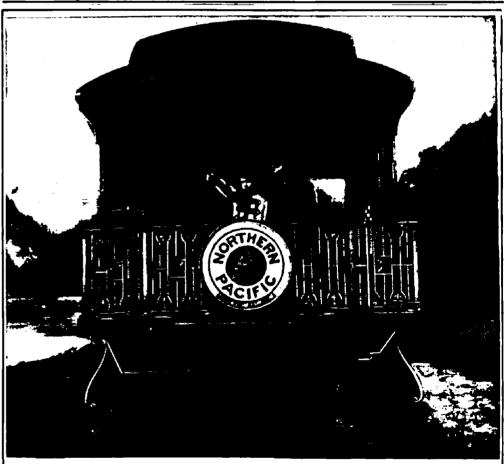

The two roosters looked at each other inquiringly. Both spread their wings and crowed valiantly. Then they both and crowed valiantly. Then they both hegan eating corn ravenously, each apparently indifferent to the presence of the other. They did not stop until they had eaten up every grain of corn on the floor; and when the hoys let them out they walked off side by side, scratching and crowing together in the most friendly and social maner. In fact, the bantam became Punch's only friend among the feathered tribe, and the friendship of the boys became warmer than ever when they saw the friendship of their pets.

WALKED OFF SIDE BY SIDE'

If they were ever tempted to quarrel and fight the peaceful example of Punch and the bantam restrained them.

It is amusing to see the earnestness and apparent sincerity with which they present this worn-out complaint.

In October, falling to induce the Government to remove them from the Indian Territory, the whole body of Cheyennes left their reservation and started for the north, killing many whites and spreading terror among the settlers in their course.

course.
Their route lay through Western Kansas, then sparsely settled, and they met with no resistance, but had escaped into sas, then sparsely settled, and they met with no resistance, but had escaped into Nebraska before the United States troops could be called out. Here they were captured by Captain Wessels on Cherry Creek, sixteen miles east of Red Cloud, in the latter part of October.

The Cheyennes are the most turbulent and fierce of all the Sioux tribes, and even after they had surrendered they boldly refused to return to their reservation in the Indian Territory, stoutly declaring that they would die first.

They were then taken to Fort Robinson and placed under guard with the hope that they would soon consent to return to their reservation.

Fort Robinson is situated 125 miles north of Sydney on the old Deadwood road, and about six miles from the Wyoming line.

As soon as the Cheyennes had been quartered at Fort Robinson, I, in company with a man by the name of Payne, was sent to that place from Red Cloud to look after them and to superint sup-

to look after them and to superintend the distribution of the government sup-plies of clothing and provisions among

the captives.
The Cheyennes numbered about 200, including squaws and children, and were accompanied by their chief, Dull Knife. We found them sullen and insolent, and We found them sullen and insolent, and saw at once that we were likely to have trouble with them if they were given the slightest chance. Every ten days I issued rations to them, and in performing this task I met with a serious difficulty. They were all huddled in a large building and it was almost impossible to ascertain their number. Although Captain Wessels had placed the number captured at 200, the Indians claimed rations for 250, and would be content with no less. When I ordered them counted again the number was found to be 234 and rations were issued for that number; but I did not learn till afterwards that I had been issuing rations to thirty four sticks of wood which the Indians had cunningly wrapped in blankets to appear as children.

Fort Robinson at that time consisted

as children.

Fort Robinson at that time consisted merely of seven or eight large buildings composed of heavy slabs and built around in a square with a parade ground of four stove, we extinguished the light and consequently the context of the con

in a square with a parade ground of four or five acres in the center.

On the east side of the square, in a building 100 by 30 were quartered Co's B and C of the 3d Cavalry. On the west, occupying similar quarters were Co's B andH of the 9th Infantry, making in all about 300 men. These were under the command of Captain Henry Wessels, of the 3d Cavalry, then Post Commander at that place. On the north side of the square the officers had their quarters, and in a large building 120 by 40 on the south were confined the entire body of Cheyennes with a guard of twelve men kept constantly before the door.

On the southeast corner of the square, just between the east end of the building containing the Cheyennes and the one occupied by Co's C and B, was a small building which had formerly been used as a post trader's store room. In this

as a post trader's store room. In this Payne and I had our quarters.
For three months we held the Cheyennes captive; but early in January, 1879, it was evident by their actions that they were meditating an attack upon the garrison.

The 9th of January was ration day. but it was so apparent that we were go-ing to have trouble with the savages that no rations were issued. This brought that no rations were issued. This brought matters to a crisis. About dark that evening Frank Guerard, the Government interpreter, left his office in the small building adjoining that occupied by the Indians, and hurrying to the officer's quarters, informed Captain Wessels that the Indians were planning an outbreak which might occur at any moment, But the Captain treated the matter lightly, expressing his opinion that there was no cause for alarm as there was

was no cause for alarm as there was little danger of 200 Indians making an attack upon 300 well armed soldiers.

However, to provide against an emerg-ency, he ordered the men to keep their

arms in the long gun rack at one end of their guarters while doing feed duty at the stables an eighth of a mile away. at the stables an eighth of a mile away. The Indians knowing this had planned to capture the arms while the soldiers were at the stables, and then butcher the defenseless garrison. It is probable that their plan would have succeeded had it not been for the timely warning of the interpreter.

It seems incredible that an army well trained in the science of warfare could have exposed itself to such danger, yet such was the case. No soldier had been allowed to carry arms unless on duty, and through the observance of this unwise rule a whole garrison narrowly es-

wise rule a whole garrison narrowly es-caped being butchered by a band of ignorant savages

ignorant savages.

It was generally supposed that the savages were unarmed save with a few knives which they had been allowed to retain, but this proved to be a mistake. They had been disarmed on being captured, but it was supposed that some of their pistols had been concealed about their children, and other arms had been brought to them by some half-breeds who were allowed to visit them from time to time. who were a time to time.

It was about 9 o'clock when Payne and I retired to our cabin. The ground was covered with snow and the weather was intensely cold.

Putting a fresh supply of fuel into the

threw ourselves on our bunk. But neither of us removed our clothes, and our rifles were placed by our sides.

It must have been pretty well on toward 11 o'clock; we had about come to the conclusion that we had been unnecessarily alarmed, when the sharp crack of a dozen rifles broke the stillness of the night. In a moment we had leaned of the night. In a moment we had leaped to the floor and grabbed our rifles. There was no need for us to ask the cause of the alarm. We knew in an instant that the dreaded outbreak had come. Scarcely had our feet touched the floor when the rattle of firearms came from across the parade ground, and we knew that the soldiers were rallying to the scene of the conflict. The clear notes of the bugle sounding the call of "boots and saddles" rang sharp and distinct through the frosty air, and the sound or hurrying feet could be heard on the snow without.

My first impulse was to rush out at the door and make my way to the buildof the night. In a moment we had leaped

the door and make my way to the build-ing occupied by Co's B and C; but be-fore I could cross the room the firing re-

fore I could cross the room the firing recommenced and the bullets rattled like hall against the door. I stopped and for a moment stood irresolute, hardly knowing which way to turn.

The moon was shining without, rendering it almost as light as day. There was a small window in the north side of the room, and as I turned toward this I saw Payne pause before the window. At that moment there was a crash of glass, and I saw him stoop down quickly. I threw myself upon the floor to avoid the bullets that were now crashing through the glass and spatting upon the opposite wall. As I did so I cast a swift glance wall. As I did so I cast a swift glance through the window and saw that the whole band of Cheyennes were swarming about the building, their guns and knives gleaming in the moonlight.

"For heaven's sake, George!" I cried in a low tone, "let us get out of here at once—we must fight our or nere at once—we must fight our way to the barracks or we'll be butchered!" As I spoke I hastily crept to his side where he sat leaning against the side of the window.

Lisewbee.

ing. I ran to the east, hoping in this way to make my escape.

In the excitement of the moment little notice had been taken of me, but now as I sprang swiftly away, a warrior suddenly leaped into my path with leveled gun. I was within ten feet of him before I saw him. There was no time to use my own gun, and my only chance lay in dodging. Stooping quickly I darted to the right, but in so doing I slipped on the smooth snow and fell. Before I could rise the savage wheeled quickly and the smooth snow and fell. Before I could rise the savage wheeled quickly and again leveled his gun at me; but at that moment a heavy rattling of musketry came from the direction of the barracks, and the bullets flew like hall about me. There was a blinding flash within ten feet of my face; a loud report, and for a moment the savage was enveloped in smoke.

one stupefied I staggered to my like one stupefied I staggered to my feet and stood for one moment filled with the horrible conviction that I had been shot through, then finding that I had not been harmed I leaped away. A single glance told me that the Indian who had attempted my life lay stricken dead upon the snow, killed by a bullet from a soldier's rifle, just as he had been in the act of firing upon me.

dier's riffe, just as he had been in the act of firing upon me.

Without waiting a moment I ran to the cast with all the speed I could command, passing within a rod of a squad of retreating Indians.

By a circuitous route I reached the barracks where I found everything in the wildest confusion.

The guards lay dead on the snow, and the soldiers, frantic with rage at sight of their murdered comrades, were pushing the savages to the south east and pouring a deadly fire into them as they went.

### AMATEUR JOURNAL-ISM DEPARTMENT # & Edited by W. R. MURPHY &

### The Reviewer

[Comment and Criticism.]

[Comment and Criticism.]

The zoology of the two hemispheres has been explored by amateur journalists in their endeavor to secure novel names for their publications. Until Don Otto Herold, a sixteen-year-old lad, of Bloomington, Indiana, happened along nobody had hit on that vivacious little domestic beast, the flea, to furnish a title for an amateur paper. THE FLEA was so named because it is, like its original, little but lively. Its publication is purely a labor of love with the editor. The first issue came out some months ago, four pages, four by five inches in size. The latest issue has the same page size, adapted to the chase of the editor's press, but in number of pages there has been a big increase. Along other lines there has been a big increase. Along other lines there has been a corresponding growth. The typography, both in composition and press-work of the last issue, shows a big stride forward in the "art preservative," while the literary quality is of a vastly higher character. This shows the truth of the old saw, Practice makes perfect. Most, if not all, of the contents of The Flea is written by the editor, and is humorous in style. Some of his epigrams and quaint turns of thought are very bright indeed.

The Flea is printed by its editor. He "set the first one loose" from some old type a local printer gave him, but is now the possessor of a better plant. Experienced in High School and other papers, he took at once to

the idea of amateur journalism, and despite his youth has graduated into the professional field as a reporter for a daily in his town. Among the High School papers with which this enterprising journalist has been connected are the Owl and The Bell. He is a member of the National, United and Indiana Amateur Press Associations.

"\$INCERE ENTWINED \$ERMONS" is a fourteen-page and cover booklet of diminutive page size, published by Rud Cook, of Rockport, Indiana. It represents the "third cookle" of the "first pan" to adopt the young editor's phraseology and is published quarterly "for our practice and friends pleasure." The youthful editor who writes the essays, epigrams and poems which comprise the contents, also prints his efforts. The typography is neat and errors are rare. The literary quality could be improved if more attention were given to revision. The editor's thoughts are bright enough, but he falls sometimes in expressing them. He should especially avoid the use of long words merely because they are long. This venture shows great promise. Success to it.

THE STORK, Issued monthly, by Berry H. Akers. of Richmond. Missourl, is a good at-

Success to it.

THE STORK, issued monthly, by Berry H. Akers, of Richmond, Missouri, is a good attempt toward the long-felt want of an amateur newspaper. It is published on the press of the Richmond Missourian, with which Berry is connected, and the printing is very good. The Stork is gotten up in conventional newspaper style with glaring headlines and all the other accompaniments. One defect which should be remedled is putting "editorial" utterances in the news articles, especially when they are partisan. Make the news storwhen they are partisan. Make the news stor-les "straight," and put the editorials on the proper page

DON OTTO HEROLD

The Bulletin Board [Current Doings of Amateurdom.]

By the time this reaches the press the annual conventions of the United and Amateur Press Associations, with all their pleasures and profits, will be over. THE AMERICAN BOY, as has been the custom in the past, will contain adequate reports of the various meet-

on their manages to the south east and pouring a deadly fire into them as they went.

In a few moments I heard the thunder of horses' feet in the snow, and then the cavalry swept by in hot pursuit.

The fight that followed was of short duration. A mile to the east on White Earth Creek the Indians made a stand, but again retreated after sixty nine of their number had been killed. The rest made their escape to the Hot Creek road, twelve miles west of the fort, where they intrenched themselves in a dry ravine. Here they were discovered by the soldiers a few days later. They were offered quarter if they would surrender, but this they refused to do and in the fight that followed thirty five of the Indians were killed. The others, in company with their chief, Dull Knife, escaped to the hills and subsequently made their way into the Sloux Reservation north of Red Cloud Agency.

The action of the troops in thus summarily dispatching the troublesome Cheyennes caused Captain Wessels to be convertion of the troops in relieving the circumstances, fully justify the prompt at and blood-thirsty savages that has ever and the country of a band of the most turbulent and blood-thirsty savages that has ever and the country of a band of the most turbulent and blood-thirsty savages that has ever and the country of a band of the most turbulent and blood-thirsty savages that has ever and the country of a band of the most particular for the blooken club road and the country of a band of

One more convention remains. The Interstate Amateur Fress Association will hold its third annual meeting on Labor Day in New York. Most of the delegates will arrive on Saturday. Tuesday will probably be given over to sight-seeing. The entertainment committee assures us that American Boy readers will be heartily welcomed, and the editor of this department will be on hand to greet them personally. Full information can be obtained from Bernard J. Goldstein, 71 E. 92d St., New York, N. Y.

Harold C. Whiteside graduated in June from the Philadelphia Northeast Manual Training

the Philadeiphia Northeast Manual Training School. During vacation he will dabble in professional journalism on The Ocean City Breeze, a seashore daily.

### Boyhood of a Great Man

The subject of this sketch was born in a village near Heidelberg, Germany, early in the latter half of the eighteenth

century. Even as a child he was noted for his thrift and for his investigating turn of

mind.

mind.

One day he killed a neighbor's cat that had been eating his young chickens. He skinned the cat, took the hide to a dealer, and sold it for a pfennig.

"Gee!" he exclaimed, "there is money in furs. Some day I am going to deal in them as a regular business."

Years afterward that boy, having grown to manhood and emigrated to America, became the John Jacob Astor of commerce and the founder of one of the wealthiest and most aristocratic the wealthiest and most aristocratic English families of the present day.—Chicago Tribune.

# Easier to Supply a Good Manager Than a Good Office Boy

the five I had been well impressed with were taken.
"Next day the manager called on me and said:
"What sort of boys were those you sent me? Do you know that one of them chewed tobacco and another smoked a cigaratte when

"The young reprobate called at my office about three months ago and I got him a good job," he said. "He is only thirteen. He held the job for a couple of weeks, and then got fired because the manager caught him holding up a smaller office boy for a dime. He actually had a big revolver in his pocket, and inquiry showed that he had acquired quite a reputation among the other boys as a desperado. He made them shell out nickels and dimes regularly, and he was sav-ing up the money, so he said, with the idea of going out west and becoming a

The superintendent of a bankers' and pose. brokers' messenger company, which op-erates only in New York's Wall street district, has control over some hundreds

or three numerical the money and has never since.

"There is no end to the dodges of the little crooks. I've known cases where they pretended to have lost negotiable paper and wept copious tears in my office—after their big brother or some other er relation had got the money. That game is getting played out; but do you know what they do now? One boy will pass a bond or coupon or other negotiable security to another boy, and then say that he has lost it. A reward is immediately offered. Soon afterwards the other hoy appears, hands me the lost paper, saying he picked it up in the street, and collects the reward. Then, I suppose, they share.

"There is hardly an ingenious trick of the wing news to his sorrow that he has a problem comparable with the servant girl problem of his wife—and that is, the office boy problem.

exposed in a mancial district of a large city must be a builty little fellow. The worst of it is that I feel morally compelled to get rid of my best boys. I have chances to place them in banks and brokers' offices, where they will have a career before them; and I can't stand in the boys' light.

work is beautifully done. I saw a model of a street car he had made, and it seemed almost impossible that a hoy who had never seen a street car in his life could have made such a perfect model of one.

Holland Morrant

He is extremely fond of the country and he can tell any tree he comes to by smelling of it, or by feeling of the leaves, he will tell you through his teacher of all the things he "saw" in the country the country.

leaves. He will tell you through his teacher of all the things he "saw" in the country.

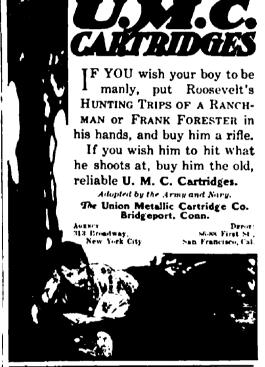

It will interest you to know that Tom did not know until within three or four years that he was different in any respect from other boys. He supposed that everybody talked to each other with their fingers, and that they "saw" with their fingers, and that they "saw" with them also. The knowledge of the fact that they saw with their eyes and heard with their ears did not depress him any. When he was first brought to the kindergarten, Tom Stringer was really nothing more than a little animal, so far as his ability to help himself or to understand things were concerned. It is doing him no injustice to say that he did not know "even a little bit." His mind was in total darkness.

It has taken infinite patience and real love for this afflicted boy on the part of his teachers to make Tom the alert, intelligent boy he is today. He might resent being called a boy, for he is now a tall, straight, manly looking young fellow of nearly twenty years. He is probably the most remarkable deaf, dumb and blind young fellow in America, and he is a fine illustration of what can be done in the way of teaching a person in his condition.

Time was when the blind and dumb were classed with idiots, and no attempt

person in his condition.

Time was when the blind and dumb were classed with idiots, and no attempt was made to teach them, but such greathearted men as Dr. Samuel Gridley Howe, husband of Julia Ward Howe, and men like Horace Mann were sure that the blind, the deaf and the dumb could be educated, and these men gave the best part of their lives to the work of perfecting a system of education for the unfortunates of the world. But perhaps even they were not sure that the deaf, dumb and blind could ever become what Helen Keller and Tom Stringer have become. have become.

RIFORMS FIREMEN, MILITARY and all others. Send

TOM STRINGER AND HIS TEACHER

went out to the kindergarten for the blind in the Jamaica Plain district of Boston. The children, more than a hun-dred of them, were out on the play-ground, and I am still wondering how they ran about with unseeing eyes with-out coming to grief. They were laugh-ing and shouting quite as if they had never known a misfortune of any kind in all their lives, and one would never

with his.

The name of this boy is Tom Stringer, and he is not only blind, but totally deaf and for years he was dumb. He has been taught to speak so that one can understand him, but it is a very strained, harsh and unpleasant kind of speech. He much prefers talking with his fingers, but his teachers want him to improve in his speech, and they compel him to ask vocally for some things before he can have them.

Tom Stringer was a little fellow of

before he can have them.

Tom Stringer was a little fellow of about four years of age when he was brought to Boston from his home in Pennsylvania. His parents were very poor, and he had been sent to a hospital, and it is possible that he would have been sent from there to the poorhouse had not Helen Keller heard of his condition and interested herself and his condition and interested herself and others in his behalf. Finally money was raised to bring him to the kindergarten

For the control of th uted money for his support, for the boy is entirely dependent upon others for his income, and it costs seven hundred dollars a year to keep him at the kindergarten and employ a teacher for him. Of course, he must have a special teacher, for it is impossible for a boy in his condition to sit in a class with others. He has for several years gone to the regular public schools. His teacher goes with him, sits by his side and "talks" into his hand with her fingers, translating in the deaf and dumb finger language everything the teacher says. Learning in this strange way, Tom is a better scholar today than a great many boys of his age.

This totally blind boy is never so happy as when he is at his work bench. He has the same lessons in sloyd in the schools that other boys have, and his facility with tools is wonderful. I remember that I was at the school for the blind where Tom is one afternoon when he was twelve years old. I asked the superintendent where Tom was.

"Oh," she replied, "he is putting new weight cords in some of the dining-room windows."

weight cords in some of the dining-room

weight cords in some of the dining-room windows."

Now, what do you think of a totally blind and deaf boy taking out large windows, putting in new cords and replacing the windows without the least assistance? I saw him at his work and it was wonderful how rapidly he did it. Then I saw him using planes and saws and hammers at his work bench. He was making a beautiful model of a house, and there were eight or nine kinds of wood in the house. How do you suppose he knew one kind of wood from another? Why, by smelling them! His sense of smell is left to him and he makes it do a good many things for him that your eyes do for you. All of his for the blind in Boston, one of the finest institutions for the blind in America.

His sense of smell is left to him and he for Catalog, mention kind wanted.

Helen Keller has called Boston the makes it do a good many things for him "City of Kind Hearts," because of all that your eyes do for you. All of his WESTERN UNIFORM CO., 234 CLARK ST., CHICAGO.

A VIEW OF THE PLATFORM AND THOSE WHO TOOK PART IN THE PROGRAM ON AMERICAN BOY DAY AT BEDFORD, PA., JULY 4TH, 1906

# American Boy Day at Bedford, Pa.

An Open Air Meeting Attended by Several Thousand People, Preceded by a Procession in Which the Boys of Bedford, Accompanied by a Fine Band, Held the Front of the Line-A Real Celebration of the Fourth of July in Which the Boys were Given the Chief Part

zette of July 7th tells the story of American Boy Day as celebrated at Bedford. It reads as

"Despite the threatening storm at the appointed hour for the American Boy program, the interest of the large crowd was unabated and the exercises were conducted in a most praiseworthy manner by the boys assembled, Prof. C. J. Potts acting as chairman.

"Following an introductory fantastic drill by nine young ladies under the direction of Miss Cogan, the program proper was opened by prayer by Rev. M. L. Culler, of the Lutheran church.

Mayor Jo W. Tate then welcomed the visitors on behalf of the citizens, which address was followed by a welcome to the boys by George Rush, of Bedford, whose manly address captivated the assembly and received hearty applause. A pleasing response to the welcome was given by Edgar G. Johnston, son of Dr. Johnston, principal of the Schellsburg Seminary,

HE FOLLOWING from the Bedford (Pa.) Ga- of which institution this promising youth is a student. A spirited chorus, entitled 'All Hail, Land of the Free,' was rendered by male voices, Miss L. D. Shuck, accompanist. A well-spoken recitation entitled 'Cheer, Cheer the Flag,' by Master Paul Cessna, of Rainsburg, was followed by the singing of the stirring Keller's American Hymn. The bow and arrow drill by five boys in typical Indian costume The bow and was spectacular in effect and suggestive of the real spirit of the aborigines. Letters from governors, Admiral Dewey and others were read by Hon. J. H. Longenecker, after which the first original oration entitled 'The American Boy of Yesterday' was deliv-Bell' was declaimed in a masterful way by Logan Gogley, of Everett, and was followed by a tribute to 'Old Glory' by Harold Shuck, of Central City, Col., who acquitted himself most creditably.

"A salute to the flag wherein all, with right hand raised, repeated the following pledge, 'I pledge al-

legiance to my flag, whose stars and stripes stand for bravery, purity, truth and union. I pledge my life, my heart and my sacred honor to love and protect it. I pledge allegiance to my country—one nation, indivisible, with liberty and justice for all,' was followed by the singing of 'The Star Spangled Banner.' 'The American Boy of Today' was ably discussed by Calvin Diehl, of Charlesville, who was followed in a short but interesting address by Charles R. Grissinger, D. D. S., of Philadelphia, whose subject was 'The American Boy of Tomorrow.' A platform scarf drill and song-'My Country, 'Tis of Thee' -by twelve bright boys in white costumes, concluded ered by Leslie Blackburn, of Fishertown, an excepthe first American Boy Day program given in Bedtionally bright youth of eighteen. Independence ford—which was conceded by all close listeners as one most worthy."

The editor of The American Boy regrets his inability at this writing to give a more extended account of this interesting celebration, the success of which is largely due to Miss L. D. Shuck, one of the teachers in Bedford's schools.

In a sunset land of glory
Where the flag of freedom flies,
And the snow-capped peaks are pointing To the tender purple skies, Stands a city gleaming, glowing, Pink-flushed with the hints of day, And around it hangs a glamour That can never pass away.

Portland! All the gods of science. Portland! All the gods of science,
They have marked you for their own;
Marbled verse and sculptured story
Shout along your walls of stone.
Fountains' crystal rills are streaming,
Templed groves have met to pray.
We are in a palaced city,
Fashioned from immortal clay.

Today the Portland breezes sweep Along the Portland hills, On many a spired height they greet A flag that throbs and thrills An hundred thousand hearts In this great land of ours—Gleaming bright it meets the light O'er Portland's flags and flowers.

The story of its field is told
In summer skies of blue,
That bend above the smiling land

# American Boy Day Prize Poem

By Angus M. Berry, Logan, Ia., Age Eighteen

All, all the glad day through.
And when the sun-god seeks the west—
That blue dome of the air—
The white stars of a new born hope
Break through and blossom there.

And stripes of white are purity,
They come from mountain snows
Up above the timber line,
Where winter's whirlwind blows.
And on a summer day at last
We look far up and see
The white caps of the mountain tops
That stand for purity.

But best of all are crimson stripes,
Those blood-stained bars that stand,
Telling of many a battle fought
For home and native land.
Ah, better than the gods of old,
Whose altars flamed for years,
Are this many strong in human blood. re triumphs won in human blood And vict'ries bought by tears.

But now no more do war's alarms
Ring with their doubts and fears, For peace, white robed in innocence, Shall reign a thousand years.
Our swords beat into plowshares
The prairies wide shall till,
And peace and joy and plenty
Shall be our portion still.

Far greater vict'ries will be ours-Than have been won before On many a blood-stained battlefield— In office, bank and store. By steamboat and by telephone
And by the pulling wire
The mighty forces of the earth
Shall hearken to desire.

man shall reap the harvest Of God-sent thought and skill; The heartbeat of the nation throb In factory and mill, A schoolhouse on each hilltop, A chapel by the way

Shall mould our thought to wisdom And teach us how to pray.

Today we come, a mighty throng
Of youthful hearts and brave,
From distant towns that dreaming rest Down by the ocean's wave From plains where long-horned cattle roam.

From happy hills afar—
Today we throng this festal hall,
Boys of the days that are.

Boys today—tomorrow men!
A year of time fleet-footed flies Its race around the golden dial.

Kaleidoscopic to the eyes.
Be good, be noble and be brave;
Boys will be boys, but can be men,
And will be if they try and trust, And failing, struggle on again.

Oh, God, guide us divinely.
Look down in mercy here
Where youthful hearts and faces
Have come from far and near.
Guide us, oh, heavenly Father.
Through all our way, and then
When night time comes bring thou
the day.
Amen! Amen! Amen! Amen!

the North river, where the long, black liners and freighters, and stuffy tramp steamers tie up to receive and discharge their cargoes, there lived until recently—for this is a true story—a boy whose name was Dopey. Possibly Dopey wasn't the name his parents had given him—if they had ever taken the trouble to give him any—but it served to distinguish him from the hundred or so other street gamins who made their homes in the same place, and no one, least of all the boy himself, had ever found fault with it. For one thing, he was too busy. He blacked shoes for his living, and it is necessary to black a considerable number of shoes every day at three cents per pair, in order to get enough to eat in New York City. But Dopey was enterprising, even if, as his friend, the fattest of the wharf policemen, remarked, he wasn't "Bigger'n a minute," and he managed to get along very well. He had little difficulty in finding fairly good sleeping accommodations among the boxes and barrels on the wharves in the summer time, and in the winter the engineers of the harbor tug boats allowed him to sleep in their engine rooms in return for divers trifling services.

Experience is a hard teacher, but she had taught Dopey many things in his fourteen years of existence. He knew the destina-

Experience is a hard teacher, but she had taught Dopey many things in his fourteen years of existence. He knew the destinations of the liners and freighters and tramps better than most boys of his age who have studied geography, and he could tell what line a ship belonged to merely by looking at the colors on her smokestacks. But the thing that interested Dopey most was smuggling. The fat wharf policeman was a special customer of his, and Dopey was often regaled in his leisure hours by stories of daring attempts to get dutiable goods through without paying the legal toil. The fattest policeman liked to talk, and Dopey was better than no audience at all, so the boy received the full benefit of the policeman's wide experience. He drank in all the stories engerly, and secretly resolved to be a wharf policeman himself, when he had grown up.

And there came a day, not so very long are when Dopey's store of information re-

wharf policeman himself, when he had grown up.

And there came a day, not so very long ago, when Dopey's store of information regarding smugglers stood him in good stead. He overheard the assistant collector of the port and his friend the policeman talking about it; the collector had said. "That ship certainly must have the stuff on her—there's been a regular flood of it on the market each time just after she docked. It's bulky stuff, too, and how in tarnation they can hide it or get it ashore is more than I can see. But it must be on her." Then the policeman had replied, "But we've searched her three times, and you know I've been watching the unloading every minute today. Nothing has come ashore, I'm certain, except wine. Every bottle has been in full sight—not a case left closed." Then they had moved off, still talking in low tones, leaving Dopey in a very perturbed state of mind.

Wine? thought the boy, yes it must be

mind.
Wine? thought the boy, yes it must be that white ship with the black banded funnels, which had come in that morning from Lyons, France. He had noticed the line of stevedores passing out the cases of bottles as he came from work that evening. They couldn't get very bulky stuff into those bottles—what sort of bulky stuff was it, anyway? He started slowly down the wharf to think it over. Almost unconsciously his feet led him toward the dock where lay the white ship with the two black bands around her smoke-stacks.

stacks.

It was eight o'clock in the evening, and the light from an electric arc lamp threw the high prow of the boat into sharp relief, but left the stern in a deep shadow. Dopey sat down on the edge of the dock, as near to the prow of the ship as he could get, and regarded it with deep attention. All the stories he had heard of darring smugglers filed through his brain in rapid review—and here, before his very eyes, perhaps was a case as mysterious as any of them. He blinked his eyes hard and tried to remember a similar case among any of them. He blinked his eyes hard and tried to remember a similar case among those the fattest policeman had told him about, but he couldn't think of one that would fit. It is true there had been a ship with a false bulkhead, but then there had been no wine on that ship, and it had not come from Lyons.

Suddenly a slight scraping sound from the steel bow of the ship not ten feet away from him startled him out of his revery. The sound stopped and there was

away from him startled him out of his revery. The sound stopped and there was silence for a moment, then it came again. Suppose this ship had a false bulkhead like the one in the story, although it did carry wine and was from Lyons? Suppose carry wine and was from Lyons? Suppose that creaking sound meant that someone inside was taking out the bulkhead to get at the smuggled stuff? He glanced up at the top of the high bow. There was a man standing there as there had been in the fattest policeman's story! The boy shrank back into the friendly shadow

shrank back into the friendly shadow near him, while his heart beat as if it would break.

But in spite of his excitement, he thought quickly and clearly. There was only one course of action to be followed under the circumstances—he must do exactly as the fat policeman had done. He remembered the details of the story perfectly. The policeman had taken off his clothes, swam out to the ship, climbed aboard by means of a hanging line, found his way to the bulkhead that was being removed, commanded the smugglers to give themselves up or be shot, and led them ashore in triumph, using his pocket knife in place of a revolver to terrify the desperate villains.

Dopey began resolutely to remove his

perate villains.

Dopey began resolutely to remove his clothes. He knew where a ladder led into the water in the next dock, and he started for it, carrying his pocket knife in his mouth. He could swim like a fish, and he let himself noiselessly into the black, chilly water and struck out for the ship, keeping well in the shadows. Twice he swam the

length of it, searching in vain for a rope by which he might pull himself up to the deck. On passing the stern the second time, however, he noticed that a small dark-colored launch was tied between the ship and the dock. A rope ladder led from the little boat to the deck of the steamer, and Dopey drew himself up noiselessly, and climbed to the deck of the big ship.

The customary lantern was not burning on the deck, and he stopped shivering in the shadow of the after companionway. All the boy in him rebelled at going forward into the black hole just before him. But he thought of the fattest policeman's daring, and as the man in the how began to walk slowly toward the stern, he set his teeth and felt his way down into the ship.

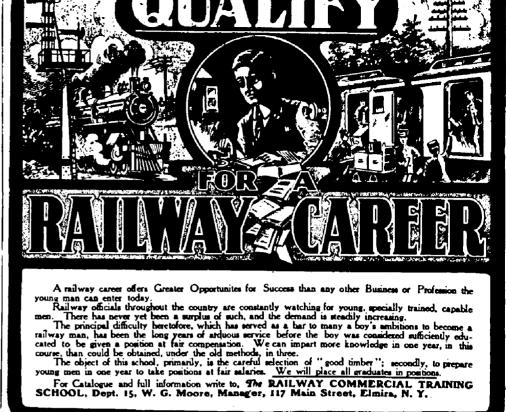

On the long, unlighted second deck, Dopey's experience at avoiding policemen and searching for sleeping accommodations on the wharf aided him not a little. He crept forward, half feeling, half gues-ing his way in the darkness, guided now and then by slight sounds which came from the black depths before him. Finally he noticed a subdued glow just around the corner of a pile of wine cases, and creeping up to this screen on his hands and knees, he had a good view of the smugglers—for smugglers they were. On the long, unlighted second deck, Do-

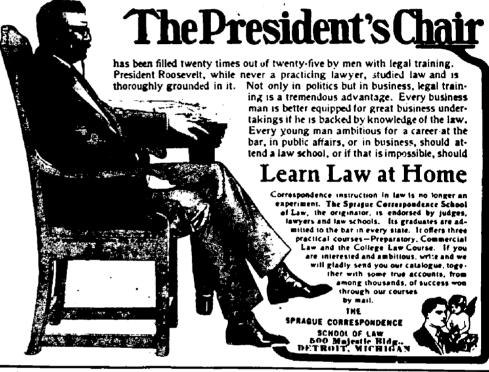

screen on his hands and knees, he had a good view of the smugglers—for smugglers they were.

There were two of them. They had taken away a part of the bulkhead and from the opening they were removing big rolls of many colored stuff that shimmered in the light of their dark lantern. There was white lacey stuff, too, and little statues, some of which glittered in the light as if set with tiny points af flame. One of the men was packing the plunder in a couple of steamer trunks, while the other was pulling it out from the opened bulkhead.

"Trow up yer hands, or ye're bot' dead men!" The boy's shrill treble pierced the stillness like a knife. The effect was startling. In place of the meek surrender which Dopey, holding his pocket knife straight in front of him, had expected, the light suddenly went out, there was a rushing sound on the other side of the pile of cases, a clatter of feet on the companionway, and Dopey was alone in the dark.

The unexpected outcome was too much for his strained nerves. With a cry of terror he dashed after the men, was knocked off his feet by the pile of cases, picked himself up and regained the deck just in time to hear the swish of the launch's propeller as it disappeared around the piles at the wharf's end. With teeth chattering from fright and cold, he dived straight from the high side of the steamer into the black water of the dock. He swam under water till he thought his lungs would burst

BOAT DECK COMPANDE DECK www.d Chail Amidalispa and Head Chairbert Aft ല

A view of how the "Baltic," the largest vessel ever built, would look if cut in two, is given in the illustration which is taken from the American Machinist. The "Baltic" is 735 feet long, 75 feet wide, and is 35 feet longer and has 1,500 tons greater tonnage than the "Great Eastern." Her displacement is 40,000 tons; tonnage, 24,000 tons; can accommodate 3,000 passengers, and carries a crew of 350 persons. When at sea the vessel burns 235 tons of coal every 24 hours. When in the water the great depth of the ship is not apparent. The "Baltic" is expected to earn 25 per cent on her cost.

9

before he finally came to the surface and struck out for the ladder which led to the roadway. He stumbled blindly up it, and fairly tumbled into the arms of his friend, the fattest policeman.

"Dopey, me b'y," remarked the policeann, as they stood surveying the smuggled plunder a few minutes later, "I have a proposition to make you. I move that you lets me take the glory for findin' this swag, and in return I'll take you an' give you an eddication. I will, by Saint Patherick—any kid as can do what you've done is too good to black the boots of me or any other man. I'll 'dopt ye—see? What d'ye say?"

ye say?"
So then and there Dopey and the fattest policeman entered into a solemn compact which both have kept faithfully, and it was the fattest policeman himself—sergeant now, by the way—who finally let the cat out of the bag and told the story substantially as it is set down here.

### Did Hannah Think?

Did Hannah Think?

The theorists who claim that animals do not think have to account for the wisdom of Hannah, the pet of the O'Connell family in New York. Hannah is a buildog and she slept under the crib of the O'Connell infant of a few months. The mother of the family rescued five of her older children from a fire in the house early in the morning, and then thought of the youngest. She rushed back into the flames and smoke to the crib, but the babe was not there. Hannah had dragged the child from the crib and to the door of the room, and was trying to get by the door with her charge to escape from the confusion. The intensity of the heat and the blinding smoke was of the degree from which all animals shrink with horror, but the faithful little buildog had stayed with the helpless infant till she found no one was coming to rescue her charge, and then she thought it was time to take the child out of danger, and she carried out her thoughts to the best of her ability. The fire started in the room in which the dog was with the baby, and both of them were singed before they were taken out. The dog had abundance of opportunity dog was with the baby, and both of them were singed before they were taken out. The dog had abundance of opportunity to escape alone, but stayed by the infant, and the doctor who dresed the burns of the child also rubbed a salve on the nose of the dog, which was burned while the faithful creature had her grip on the clothing of the infant. That doctor thinks animals have some form of thought, though it may differ from the of thought, though it may differ from the human way.—Worcester Telegram.

### American Boy Days

Our September number will give an account of the celebrations of American Boy Day at Cairo, Ill., and Chautauqua, N. Y.

# The Real Dog and the Other One Otherside Old

By SARAH NOBLE IVES

THE CHINA BULLDOG SAT PLACIDLY AGAINST THE PRONT DOOR

THE CHINA BULLDOG, with one blue eye and one black one, sat placidly against the front door, as he had sat many summer morness before, and Van, the fox terrier, which pityingly at him.

"What's the matter, Fido? Why don't use the matter of placidly against the front door, as he had sat many summer mornings before, and Van, the fox terrier, looked pityingly at him.
"What's the matter, Fido? Why don't you get up and run around and stir yourself?"

self?"
"My name's not Fido; it is Muggle Brothers, Limited. It is printed on the bottom of my left fore foot. I don't get up and run around because that is not my business."
"Well, Muggle Brothers, Limited, I can't see that you do anything of importance. I don't see why such a homely dog has any business living."
"My business is to mind this front door

"My business is to mind this front door so it won't blow shut. If it tries to shut in spite of me, it will do so over my broken pieces." Here he looked grand and virtuous, and tried to thump the ground with his China Tail, but it wouldn't thump. "Best of all, I mind my business. What's yours?"

"I—oh wall I—book and the china time work faithfully, and he minds his own business."

Tommy

other dogs, and—oh, yes, cats—cats especially."

"Does it do any good?"
"M-m, yes—that is, it does ME good."
Muggle Brothers, Limited, looked severe.
Is the world any better because you are

"I-don't know-I-think so." Van was growing nervous under this steady questioning.

broken pieces." Here he looked grand and virtuous, and tried to thump the ground with his China Tail, but it wouldn't thump. "Best of all, I mind my business. What's yours?"

"I—oh, well, I—I—bark—and chew the fringe on the rugs—and—in—fact—er—I'm just alive and have fun. That is, I used

"Van! Van!"
"It was his little mistress, just come back from her drive in the park. Van jumped to his feet and flew on the wings of love to meet her. He forgot Muggle Brothers, Limited, as he frolicked at her heels and leaped to meet her loving embraces. In through the front door they went, he leaping, barking and nibbling at her fingers, while she laughed and danced beside him. beside him.

beside him.

They passed the China Buildog with the one blue and the one black eye. He sat there, doing his duty, but nobody noticed him, and nobody cared.

"She's pretty," said Muggle Brothers, Limited, slowly and softly to himself. "She likes that good-for-nothing fox terrier, and she never looks at me, except when she wants to shut the door, and then she just shoves me one side with her foot. It may be nobler to be useful, but it certainly looks pleasanter to be loved—I wonder."

A Legend of the Hoopa Indians, Written by Charles Huntley, a Hoopa Indian Boy in the Eighth Grade of the Indian School at Riverside, California : : : ; : :

LONG TIME ago there lived a man by the name of Otherside Old. One day he came along the road on a visit to his friends.
Otherside Old was a well-honored man. The people in those days thought that he could do anything. Some thought he could perform miracles, and so he could. Well, he kept walking along the road very slowly, as if he were not going anywhere at all. After a while he saw some squirrels.

When the squirrels saw him they ran up a tree. Otherside Old took out his bow and arrow and shot the squirrels and killed two of them. He took them along with him on his way up the road.

At last he came to a house. He walked right in without knocking at the door. There he saw a young lady making a basket. He talked to her and told her she could have the squirrels.

She said that her tribe forbade the young ladies eating squirrels, that being the old custom of the whole tribe.

"Oh," said Otherside Old, "that is all foolishness. In my tribe the young ladies love to eat squirrels, believing that eating squirrels will make them look pretty."

She thought to herself, "I will try

retty.
She thought to herself, "I will try that." So she took the squirrels and roasted them. When the meat was all cooked she put it into a basket to cool

off.

Otherside Old was all the time scheming to get a good chance to fool her, so when the squirrels were all cooled off and ready to be eaten, he told her to get some water. She said the water was some distance away, but Otherside Old told her to go and he would wait for her till she came back. So she started out. She was hardly out of the door when Otherside Old began helping himself to the nuts that were stored in many baskets.

kets.

In those days people depended upon nuts for their food, and the more baskets of nuts they had, the more they were honored all through the country.

Otherside Old kept eating the nuts till he had finished the last basket and left it empty. He then made up his mind to start on his journey once more.

To give himself time for his feast he had wished that when the girl reached the creek her head would itch, and so it did, until she did not know what to do, so at last she jumped into the creek till the itching had stopped. After that she got the water and went back to the house.

When she arrived there she called, but

When she arrived there she called, but no answer came. She was so angry she threw the water into the house. She went in and looked at the squirrels that she had left, and there they were, but they had turned to mud and were all

they had turned to mud and were all cracked up.

"Oh, me!" she cried to herself; "I knew in my heart he must be the man I have heard of who does all kinds of tricks."

Otherside Old had turned the squirrels to mud and left them lying there, and he had placed everything in the house upside down.

The young lady was so angry that she thought of all kinds of plans by which she could get even with him. At last she wished that all the water would dry up in front of him. She said, "I wish he would get very thirsty."

up in front of him. She said, "I wish he would get very thirsty."

Otherside Old went slowly along, and suddenly became very thirsty. He waiked faster, and as he went he heard the roaring of a stream, but when he reached the place the stream was not there.

The same thing was repeated many times, till he could stand it no longer. He said, "I must drink or die," so he tried to sneak in upon the stream, but just as he peeped his head out of the brush the water was dried up before his eyes.

eyes.

He ran as fast as his feet would carry him to a wet spot, and put the wet grass in his mouth, but it did no good at all.

After trying everything he could think of to get water, he decided to shoot the next water he should hear roaring, so he went trotting up the road.

Pretty soon he heard the sound he wished for and creeping up very carefully he took a shot at the water. This time he succeeded; there was the water. It was a pond, and was full of frogs and fishes and floating logs, and everything that is always lying in still water.

fishes and floating logs, and everything that is always lying in still water. He ran straight to the water and jumped in with his mouth wide open. While he was drinking he felt something going down his throat with the water. Still he kept drinking away, till he drank up the whole pond, and all he could do was to roll over, and there he lay with his body swelled up till he was larger than the largest tree.

He lay there about one day, and the next day while he was lying there he happened to look up into the sky. There he saw some birds flying around and around in a circle, appearing and disappearing.

he saw some birds flying around and around in a circle, appearing and disappearing.

In a little while he saw more and more, and then a whole flock of birds. They came closer and closer to him, finally alighting by his side.

Otherside Old did not move, but lay as if he were dead.

Each bird seemed to carry a basket with him in which was some instrument for cutting different parts of the body. They took the instruments out of the baskets and laid them aside till they took out the one to remove his eyes with. At first they were undecided as to which should do the work, but finally decided that it should be the largest bird in the flock, which was the condor.

The condor made a good swing in order to take the eye out at the first stroke. As he made his last swing, just as he dashed for the eye, Otherside Old grabbed the knife and quickly ripped fopen his own stomach. Out went the water, with the frogs and fishes, logs and everything that was in the pond, and there was the pond again, for he had swallowed everything that was in it without noticing it.

After that he went to his own home and was not molested again on his journey.

### Benham's Lesson By R. K. MUNKITTRICK

"I would ask the name of the State," replied Tommy.
"So, then you are heartly sick of school?" said Mr. Benham.
"I am," replied Tommy, frankly.
"Then how would you like to try business during your vacation?"
"First rate," replied Tommy.
"Have you thought of any particular pursuit that you would like to follow?"
"I have not. One thing will suit me as well as another," replied Tommy.
"That is the only way to get along if you want to win," said Mr. Benham, "and I will begin tomorrow to try to find something for you."
On the following day Tommy told all

On the following day Tommy told all his schoolmates of his good fortune, and that evening he asked his father if he had found anything for him.

"Yes," said his father. "It is a store kept by Henophen Koppel, the dealer in animals."

on the next day during luncheon hour Mr. Benham took Tommy to the store and he was never before so completely bewildered as when he entered this maste place and saw the gorgeous birds from all parts of the world. Then there were monkeys, some with smooth, cleancut faces, and others with white whiskers. Some were swinging by their tails from rings, others were sitting on perches serenely contemplating the fresh roasted peanut.

"So you are the little boy who wants to learn the wild animal business, eh?" inquired Mr. Koppel.

inquired Mr. Koppel.

"Yes," replied Tommy, meekly.

"All right, you may come around a week from Monday morning."

When Monday morning came, Tommy started for business. In his hand he carried a couple of sandwiches tied in a piece of newspaper. When he stepped into the store his employer said:

"To this business like any other, you

into the store his employer said:

"In this business, like any other, you must begin at the bottom of the ladder."

It then put a feather duster into Tommy's hand and commanded him to dust the cages. While he was doing this the birds made an awful clatter. An Australian emu reached into his pocket and took therefrom his luncheon with neatness and dispatch. The emu devoured newspaper, twine and all, and seemed to enjoy it hugely, although he was entirely ignorant of its contents.

Mr. Koppel then led Tommy to an upstairs room, where he had sick monkeys in various stages of convalescence. One old fellow, with an owl face, was barely able to sit up and eat a peanut. He was put in Tommy's charge and Tommy was commanded to give him his medicine every hour.

every hour.

In this hospital the ailing pets of Mr. Koppel's customers were cared for. The invalid monkey in Tommy's charge belonged to one of his best patrons, conse-

TOMMY BENHAM was a little boy, whose greatest aversion was study. One evening he said:

"Here I am trying to learn and remember the capitals of the United States. I suppose it is very necessary to know them to get along in life."

"If you should happen to be shipping to learn, and had to mark a box Ashtabula, where would you he if you should trust to your imagination and sent it to Oregon?"

"I would ask the name of the State," "I would ask the name of the State," "So, then you are heartily sick of school?" said Mr. Benham.

"So, then you are heartily sick of "Tam," replied Tommy.

"So, then you are heartily sick of "Tam," replied Tommy, frankly.

"Then how would you like to try business during your vacation?"

"First rate." replied Tommy.

"First rate." replied Tommy.

"First rate." replied Tommy.

"Have you thought of any particular pursuit that you would like to follow?"

"I have not. One thing will suit me

of the combination.

Mr. Koppel put the package in the safe and then sent Tommy to the hospital to give Jerry his hourly medicine. Jerry was at this time in a very uneasy frame of mind and had to be amused.

"How soon do you think the monkey will be well?" asked Tommy.

"In a few days," replied Mr. Koppel.

blew.
Tommy went downstairs to get his luncheon from the safe.
"How did your luncheon come to get in there?" asked a clerk.
"I asked Mr. Koppel to put it in there this morning." replied Tommy, very meckly, "that the emu couldn't steal it. You know, yesterday he took it out of my pocket while I was dusting the cages."

and all!"

"They are great eaters, I believe," replied Mr. Benham.

"This one." said Tommy. "will ent safety pins or cloth and get as much satisfaction out of such food as I could out of cocoanut pie. The other day they told me some one broke a pane of glass in the store and the emu ate the pieces like ginger snaps."

On the following morning Tommy entered the store and told his employer that he would like to put his luncheon in the safe if the emu had no knowledge of the combination.

Mr. Koppel put the package in the luncheon from the safe.

"How did your luncheon come to get in there?" asked a clerk.

"I asked Mr. Koppel to put it in there this morning." replied Tommy, very meekly, "that the emu couldn't steal it. You know, yesterday he took it out of my pocket while I was dusting the cages."

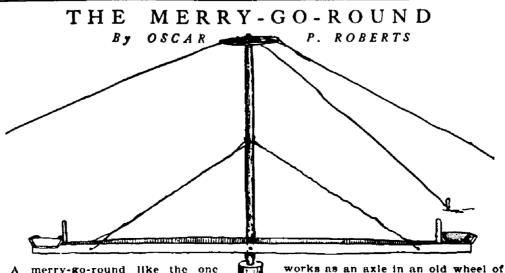

"Mr. Koppel will not be back until three o'clock." said the clerk. "and he is the only one who has the combination."

There was nothing to do except wait, hungry as he was. And there was little sympathy for his plight. He had scarcely finished devouring the belated meal when finished devouring the belated meal when he was called.

now. Tommy, be lively," said k. "Jerry has just been weep-"Come the clerk.

"What is the matter?" asked Tommy.
"Some one, for a joke, gave him a horse (Continued on page 314.)

any kind, which is anchored out by three or four guy wires. The other

A merry-go-round like the one pictured is easy of construction, and no explanations further than a few

hints need be given to the prospective builder.

The center post stands ten feet high, and rests in a shallow auger hole, bored in the top of an old stump the motorman in the middle, the swing or post set for the purpose. The top takes on quite a country fair aspect.

Cornwallis HEN surrendered, in 1781, the Revolu-1781, the Revolution was at its
height beyond
the Alleghenies.
Pioneers swarmed over the ridges into Pennsylvania and Kentucky, driving
ne from the for-

the game from the for-est. Indians, urged on by British officers, fought est. Indians, urged on by British officers, fought back the settlers with fire and tomahawk and British powder. Ohio was one dense wood, the home and fortress of a dozen tribes, all hostile to the colonists—all, save a few outcasts of one tribe. A part of the Delawares, the famous "Grandfathers of the tribes," taught by white missionaries, had become the "Moravian Indians." Their creed was peace, submission: and through the first five years of sion; and through the first five years of the war the little Moravian villages on

sion; and through the first five years of the war the little Moravian villages on the Tuscarawas, directly between the clashing foes, had been unharmed.

In the fall of 1781, however, before the corn harvest, the Moravians were exiled by the Wyandots to the bleak Sandusky plains. Early in '82 they were allowed to return through the snowdrifts, feeble from the bitter, famine-stricken winter, and seeking what corn the starving deer had left. Yet not all came humbly, thanking God for their speedy deliverance. In the impatience of boyhood, Gray Wolf, son of the chief, Fire Cloud, grew bitter at the injustice which peace had brought him. As spring broke early and the war-trail opened again, he felt the first longing of savage manhood for the tomahawk and the fight—the call of the great chiefs who had been his fathers. His whole nature rose, ready at a word to throw aside the new creed of peace and suffering for the old, revenge.

And then, in those mild days of Febru-And then, in those mild days of February, 1782, a war party, including a few renegade Delawares, fell upon a lonely cabin along the upper Ohio, and, to divert suspicion, returned through the Moravian village, torturing their captives. Ninety mounted settlers followed the band across the river and half deceived, half careless, attacked the guiltless Moravians. less Moravians.

Treacherously they invited men, wo-men and children to council; a merciless slaughter followed. There were no cap-tives and but two survivors, of whom one was shot soon after.

So the Moravians died, as they had lived. But Gray Wolf, staggering on through the snows of the forest, thought only of his dead mother and of revenge. The faith that called him back to the The faith that called him back to the desolate river was gone. One night he came upon the campfire of a Wyandot war party from the north. They went to gain scalps among the settlements of southern Virginia, where the snow, in which no track is hid, first gives way to spring; and Gray Wolf, Moravian, went with them.

Amid floating ice the canoes came down the Ohio, then pressed up the Big Sandy into Kentucky. Spring was hastening and speed became easier as they went. Now the band crossed the great

went. Now the band crossed the great war trace which led through Cumberland Gap into Virginia; but the pioneers, too, were early astir, and the painted warriors, stealthly gaining a scalp here and there, always kept within the shadow of the trees. Now a few braves turned aside, but the main party, includmain na rtv. includ-

shadow of the trees. Now a few braves turned aside, but the main party, including the Wyandots and the young Delaware, led by their war chief, Red Eagle, struck straight into the heart of the Great Valley of the Appalachians. One afternoon, as the shadows were lengthening fast and the air grew chilly, Red Eagle crept up a tangled hillside and stopped at its crest, gazing intently into the valley below.

On the slopes the first tender tints of spring shone among the somber evergreens. A brook swollen with snow from the heights hurried across the bottomlands, down to the winding Tennessee. But Red Eagle's eyes centered their flerce gaze upon a little stockade where four tiny cabins stood, facing inward and connected by a high fence of split logs. Soon his scouts were watching the fort from every side; silently they gathered closer with the shadows. A cold rain began at night-fall, and the chief. circling the palisades with noiseless steps, his ear against the wall of one doomed cabin after another, smiled at the black darkness—a smile it was not good to see.

That morning Joseph Kinnard had good to see.

That morning Joseph Kinnard had mounted his pony and set off up the valley to Harter's Mill, sixty miles away, for salt and powder. The winter had

for salt and powder. The winter had fallen early, and spring was sure to bring its Indian sieges, with destruction for the unprepared. Salt to cure deer meat, powder for deer and Indian, were necessities. Mr. Kinnard had left his wife with a laughing assurance:

"If the varmints were out already, we'd have heard of them farther up the trace." She had nodded with the quiet courage of those who grapple and conquer the Spirit of the Wilderness. Yet the rough settler held his little daughter, Rose, a moment longer than usual ter. Rose, a moment longer than usual and ran his fingers half-caressingly,

half-shudderingly through her hair, be-

fore he rode into the forest that yawned black about the palisades.

The garrison to which Kinnard had entrusted his family was composed mainly of women and "fort soldiers," too entrusted his family was composed mainly of women and "fort soldiers," too old or too young for the march. Yet, relying upon news from the outer settlements, all felt secure. At sunset Jacob Brown, an old Indian rhider and captain of the garrison, scanned the hills in confidence, ignorant that Red Eagle lay hidden in the forest. The chief scowled as he watched the weathered face of the hunter—the same hard face which long before had thrust itself into his unprotected wigwam beyond the Ohio. Red Eagle had come all the way from the Sandusky marshes seeking that face; and he had come early, swiftly, for the very purpose that no massacre in Kentucky might forewarn his enemy.

The wind sang dirges in the piney slopes of the valley. The rain fell rustling in the foliage and plashing on clearing and split-oak shingles. The wild world was awake and prowling in the

ling in the foliage and plashing on clearing and split-oak shingles. The wild world was awake and prowling in the darkness. The doe, hastening towards the salt-lick, quivered at the panther's voice—at Nature's universal cry for prey. Behind the darkness the stars measured the hours; and about the stockade Red Eagle, among his warriors, awaited the dead of night. At last the chief mounted the shoulders of two braves and dropped lightly over the palisades. The beat of the rain hiding the sound, he swung open the gate. The families in the cabins slept on, secure behind their oaken doors.

Red Eagle had planned a bold ruse,

families in the cabins slept on, secure behind their oaken doors.

Red Eagle had planned a bold ruse, depending for its success upon Gray Wolf. All things—the storm, the excitement, the carelessness which constant danger taught the settlers, the very boldness and originality of the plan—were in its favor. Yet if it failed, Red Eagle meant to have his foe's scalp, even though it required that stern fighting which only his tribe would endure. His warriors, crouching among the cabins, knew that this was no ordinary raid, where even the Wyandots, mindful of their small numbers, fought warily, Gray Wolf, too, knew this, as he waited eagerly for the signal to begin his revenge. He thanked the palefaces for one thing only—that through his boyhood among their soldiers, traders and missionaries, he could speak their tongue.

Suddenly a rifle shot sounded from the

missionaries, he could speak their as they clubbed the capitives and thrust tongue.

Suddenly a rifle shot sounded from the Suddenly a rifle shot sounded from the Cabin shadows. Then a Wyandot deathshick answered from beyond the page state of the Suddenly a rifle shot sounded from the shots, with the sades. Begered from beyond the page state of the shots and the state of the shots and the sades. The sattle state of the shots, with the threatening undertones of a log battering at the gate. A form darted from cabin to cabin, shouting:

"Help: Injuns: To the gate."

The settlers awoke at the first shot. On the frontier, however, the latchstring is in, and night visitors are unwelcome. Yet here the need seemed so urgent, the idea of the whole alarm beging a ruse, so absurd, that every cabin opened. In a second the innate seemed so urgent, the idea of the whole alarm better mistakes, but they make the state of whom the little girl pratited and he was a Moravian no longer.

One afternoon in the midst of these strange thoughts, Gray Wolf, glancing the strange thoughts, Gray Wolf, crying the alarm in boyish, frontier English, reached Joseph Kinnard's cabin last. The door opened an inch, and a rifle-barrel appeared, with a woman's resolute face behind it. Gray Wolf struck up the gun with the first blow of his hatchet. In his fury he forgot the chief's command to replensish with captives the Wyandot tepees made desolate by Jucob Brown. As the first blow of his hatchet. In his fury he forgot the chief's command to replensish with captives the Wyandot tepees made desolate by Jucob Brown. As the first blow of his hatchet. In his fury he forgot the chief's command to replensish with captives the Wyandot tepees made desolate by Jucob Brown. As the first blow of his hatchet. In his fury he forgot the chief's command to replensish with captives the Wyandot tepees made desolate by Jucob Brown. As the firs

It was a faith child-like and undoubting, like that of the Moravians. The English words brought memories of Gray Wolf's boyhood surging back to him. The child's trust (a faith that had been his also), the inborn awe of the savage before the dim might of the Great Spirit, took the strength from the young brave's arm and recalled the chief's command. His hatchet sank, unstained. The next instant, as he disarmed the woman, a Wyandot burst past him, struck down a boy who was trying to reach the falling gun, and seizing Rose in his arms, strode away into the night. The mother snatched a heavy cloak and darted after her child, while Gray Wolf, angry at his soft heart, ran to the next cabin.

Brown alone had detected Red Eagle's trick in time. He had blown off one Indian's head shut the door in the same of cloth, to use them in leading the pursuers along a false trail southward into the Great Cherokee Trace. Red Eagle quickly gave his commands. The party hurried on, and Gray Wolf, turning about, took the back trail, alone.

Two evenings later Joseph Kinnard rode into his home valley and found his cabin in ashes. Near-by lay a torn Wy-andot moccasin, but days had passed (Continued on page 522.)

trick in time. He had blown off one Indian's head, shut the door in the chief's face, and was fighting for his life, in his strong and well-garrisoned

cabin. But the east was growing lighter. The Wyandots had pierced the border! Ine too far; they must be gone. The chief commanded an assault. With a pine trunk four braves broke in the cabin door, and Gray Wolf followed the chief through the breach. The defenders had run out of powder. First of all Brown fell, before Red Eagle's rifle. Then the chief, eagerly stooping to scalp his foe, sank, stunned by a clubbed gun. It was Gray Wolf who warded off the death-blow and brought away two scalps—his first war trophies.

Red Eagle was avenged. Yet four of his braves were missing that March morning from the band which hurried through the dripping undergrowth, over the western heights, and safety lay only beyond the Ohlo.

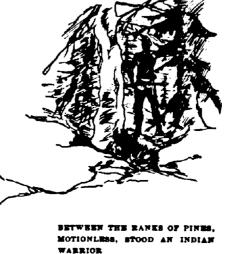

The captives—three women, little Rose and two smaller children—were urged to the limit of their strength, but their suffering never softened one harsh line of their captors' faces. The first day a child, too tired to endure being carried, farther, began to cry noisily; its mother strove in vain to comfort it. Instantly a warrior snatched it and dashed its head against a tree. Little Rose grew pale at the death of her playmate. She hesitated a moment, not daring to call to her mother, who was separated from her by three warriors; then, with the sure instinct of a child, she leaped into Gray Wolf's arms and hid her face in his blanket.

The act touched the young brave. It roused in him a fierce struggle in the days that followed. All the Indian within him, the memory of wrongs endured, and the call for revenge, flamed out. But beneath this was the voice of the old life of kindness and the memory of the palefaces' regard for their women. He imitated his brother warfiors and cursed the years which had made him different from them; yet there was one picture which haunted his brain during every monotonous hour of the march. It was of the gauntlet and the stake, the red of blood and fire. The

made him different from them; yet there was one picture which haunted his brain during every monotonous hour of the march. It was of the gauntlet and the stake, the red of blood and fire. The Wyandot squaws snarled with delight as they clubbed the captives and thrust burning pine-splinters into their blistered flesh. And behind one of those squaws stood, shadow-like, a goldenhaired child. Into this horror little Rose, was going, to become the brutal squaw of some savage brave, unless— To betray Red Eagle's destination now could do no harm. Well, the palefaces knew of King Dunquat's town on the Sandusky, sheltered by its strong position from surprise and assault. Yet if the father of whom the little giri prattled came with rich presents for the chiefs, and if Gray Wolf spoke for a ransom with the voice to which his prowess gave him right, even Red Eagle might yield. Now, however, he told himself, it was too late. The trail was lost—and he was a Moravian no longer.

One afternoon in the midst of these strange thoughts, Gray Wolf, glancing backward, saw Mrs. Kinnard drop a bit of colored cloth. Instantly alive to the danger, he told the chief of the trick. Day after day Rose's mother had marked every turn in the trail with pieces of quilting cloth from the great pocket of her cloak. Over all the trackless miles those bits of color would wait, a message and a guide to her husband. Perhaps the frontiersmen were at their it very heels and revenge hovered over the little party, encumbered as it was.

There was but one thing to do. While the perty nessed on skillfully hiding the perty nessed on skillfully hiding the perty nessed on skillfully hiding the perty nessed on skillfully hiding

# The Start Better Salary

Half of getting anywhere is in making the start.

If you want to be successfulif you want to better your posi-tion—make the start. We have made the start easy, and we have made the whole way to success easy. So easy, in fact, that you will be surprised at the insignificance of the barrier that has kept you back. The start to success is to simply fill in and mail to us the coupon below.

Read over the list of occupations in the coupon, mark X before the one you want to enter, fill in and mail the coupon to us. By return mail we will tell you how you can easily, inexpensively, and in your spare time qualify yourself for the position you want and we'll send proof of it in the form of facts as to what we have done for others.

Mention The American Boy When Writing Advertisers

### TOMMY BENHAM'S Tommy, "In some way. Oh, how I wish i could run half a dozen of Mr. Koppel's LESSON

(Continued from page 312.)

chestnut, and after he had eaten about half of it he went almost crazy."

So Tommy climbed upstairs and played on the music box and fanned the perturbed Simian until the latter began to act like his old self.

"You must now take him out on the walk for an hour or two and give him a breath of fresh air." said Mr. Koppel.

"What! before all the crowd?" asked Tommy.

Tommy.

Tommy.

"Certainly," replied Mr. Koppel, "that is one thing you must be willing to do if you want to succeed in this business."

Tommy carried Jerry forth, because he refused to walk, and proceeded down a quiet street, where he thought that he would not be molested. But, strange as it may seem, he not only met some boys on this street, but boys from the very suburban village in which he him. very suburban village in which he him-

"Hello! Tommy." shouted one of them.
"Hello!" replied Tommy, blushing at
being caught in such a position.
"What are you, anyhow?" inquired one
of them, with a smile, "a monkey nurse?"
"No, not exactly," replied Tommy; "I
am just airing this fellow a bit."
"Well, how do you like business, anyhow?" they asked.
"First rate," he replied. "When you've
got to begin some time what difference

got to begin some time what difference does it make how soon you start?"
"Don't suppose it makes any, but do you ever have to put camphor on the monkey to keep the moths out of his

"I suppose you think that's smart, don't you?" said Tommy.

"Well, it may not be very smart, but it is about as smart as giving up a nice summer vacation to go to work in a monkey store. Now we are going uptown to a champlonship baseball match. Don't you want to come along?"

Tommy turned a corner, burning with mortification when he thought of the way in which all the boys of his native town would tease and torment him as soon as these wicked companions from whom he had just parted should tell of what they had seen.

"I must get out of this scrape," mused

AIROUSIED.

I could run half a dozen of Mr. Koppel's imported snakes through a clothes wringer, one after the other, and get myself discharged; but there is no clothes wringer in the place."

While Tommy mused he wandered on in an almless sort of way until he reached the river. It struck him that the cooling breezes from the water might uo Jerry good. So he lost no time in taking a seat upon the string plece of the wharf. No sooner had he done so than an organ grinder happened along and filled the air with music.

The monkey frisked and danced at a great rate, jumping from Tommy's lap to his head and down again, as if working on springs. This did not please Tommy half as much as it did some small boys who were looking on. They laughed until one of them asked sarcastically:

"What is the matter with your little

"What is the matter with your little brother, anyway?"

"What is the matter with your little brother, anyway?"

"He is glad at seeing you, for he never dreamed of meeting any one more homely than himself."

This didn't please the little strangers as much as it did the people who had just been laughing at Tommy's expense.

As the organ grinder continued to grind, the monkey continued to frisk. Suddenly Jerry's collar slipped over his head and he jumped upon a barrel. The boy who had pretended to discover a fraternal relationship between Jerry and his chaperon dealt the former a light blow with a stick. In an instant the frightened monkey was flying up the rigging of a ship, with Tommy following as well as he could.

As the boys on the pier began to chaff Tommy their cries frightened the poor fugitive, who jumped to the rigging of another ship and then to the roof of the next wharf, where he disappeared entirely from view.

Tommy was quite beside himself with chagrin. He would never dare to return to Mr. Koppel's store without Jerry, for he well knew that that fastidious person would not accept any explanation he could offer. With Mr. Koppel it must be monkey or nothing.

"Now what will your boss say when you go back without the monkey?" asked the boy who had previously chaffed Tommy.

There was something so exasperating in the hove to the tother that Tommy and the hould be the how that the town and the hour that the hour that the town and the hour that the hour that the town and the hour that the hour that Tommy and the hour that the hour that Tommy and the hour that Tommy and the hour that Tommy and the hour that the hour that Tommy and the hour that the that Tommy and the hour that Tommy

There was something so exasperating in the boy's tone that Tommy could not

fallen air.

"That isn't the way to get along in business," replied Mr. Benham, with a serious look. "You should have gone back and told Mr. Koppel all about it. What do you think?"

"What do I think?" repeated Tommy, with a great effort at being brave and making an honest confession without sacrificing his pride. "I think I have had enough of the monkey business."

"What, in two days?" his father asked, in surprise.

"Yes, and if you will only go and

"Yes, and if you will only go and explain the monkey's escape to Mr. Koppel I will wait until you can get me employed in some other place where the

employed in some other place where the goods are not alive."
"It will not be necessary for me to see Mr. Koppel. I can simply write him a note, for he has the monkey back. There is a long comic account of his escape in the evening paper, which also tells how the monkey was returned to his owner."

Tommy played ball all through that vacation, and when the days of school again returned he said nothing about going into business, but went at his lessons with heroic vigor.

It was very evident to his parents, especially his father, that Tommy didn't care how long they kept him at school and that calculus was far more picturesque, profitable and entertaining to him than the business of attending and reciting upon a convalence monkey. waiting upon a convalescent monkey.
And never after did his father hear him complain of school, for he had learned a wholesome lesson during his experience of two days in the great School of Business.

for every down-beat. Sometimes a note would have to be prolonged, sometimes it was shortened, but work and song went on together. Adam husked up till his horses were even with the rear of his father's wagon. Then the singing

"Hello, there, Adam," called Adam, Sr., looking back, "Oughtn't to crowd yer pap this way."

But never an ear missed the elder Adam's wagon. The one-time champion of Otoe county had thrown off the weight

of fifty years and was swooping along the rows in a whirlwind of husks. Bent stalk or standing, it was all one. There

"He will say nothing if you will let me take you back to the store, because he could never see any difference."

The boy then retired for good, and Tommy concluded that as it would be impossible for him to capture the monkey, he would go home and escape the fury of his employer.

That night when they had congregated about the dinner table, Mr. Benham asked Tommy:

"How are you getting along at the store?"

"I had bad luck today; a valuable monkey escaped from me."

"And how did Mr. Koppel take it?"

"I was afraid to go back to the store to tell him," said Tommy, with a crestfallen air.

"The will say nothing if you will let me take you because he away to the wagon.

Adam, Jr. soon proved himself no deseave the wagon.

Adam, Jr. soon proved himself no deseave the massage. He recovered from his flurry and settled down to grim, determined corn-husking, with the result the horses were once more browsing at the elder Adam's heels. Adam, Sr. wasted no time in loking around; neither did he expend breath in useless remarks. The thump of ears and the snap and rustle of dry blades, with the occasional sputtering blow of a feeding horse, were the only sounds that arose from the contest.

At the end of the first elghty rods alone in loking around; neither did he expend breath in useless remarks. The thump of ears and the snap and rustle of dry blades, with the occasional sputtering blow of a feeding horse, were the only sounds that arose from the contest.

At the end of the first elghty rods and mopped his face. Adam, Jr. was also perspiring, but happy. He had his place in spite of his father's

was also perspiring, but happy. He had held his place in spite of his father's efforts to draw away from him. "Want to call it quits, dad?" he called.

Adam, Sr. shook a lean forefinger at his son. "This here race hain't over ylt, Adam," he called back, "an' lemme tell ye that."

Adam," he called back, "an' lemme tell ye that."

When he turned his team in on the return rows the elder Adam let down the suspender from his right shoulder. Adam, Jr. noted this with a sigh. "When pa lets his 'spender down, look out," he said. The sweat was dripping from Adam's face, and the November sun felt like August, but he tossed his cap into the wagon and started in for the finish. For a while the position of the two wagons remained unchanged. But if Adam hoped his father would set a slower pace on the return he was doomed to disappointment. The prophetic suspender seemed to mark the release of a fresh store of energy. The old grays moved steadily forward, and the regular beat of ears was unbroken. Such uncompromising, relentless power was incomprehensible to a boy of sixteen. Besides, Adam was getting tired. It was forty rods to the end and the bombardment at the front wagon gave no sign of abating. Once, turning and loking ment at the front wagon gave no sign of abating. Once, turning and loking back, Adam saw dancing in the sunlight thirty yards up the hill, a big ear on an unusually tall stalk. There was but one thing to do; Adam stopped and bolted for the ear. the ear.

Adam, Sr. was nearly through unloading when his son drove up to the crib.
"Hello, young feller," he called, "where you been all this time?"
"You knowed mighty well where I was

part o' the time," said Adam. "I don't call that no race, though. The corn was too tough."

was too tough."

"I don't call that no race, either," quoth Adam, Sr. "You wasn't racin', was ye, Adam?"

Adam turned his back and bent lustily to the shoveling.

The next day Adam, Sr. made a trip to town. Before going he went the length of the field and back that had been husked over in the free-for-all of the day before. Adam, Jr. watched this operation from afar with darkening brow. "He thinks I'd leave corn," he muttered, shaking his fist in the direction of Adam, Sr. Huh!" of Adam, Sr. Huh!" Mrs. Garth followed her husband to

the gate as he was leaving. "Do you really think you can afford it?" she

"Afford it!" Adam, Sr. stopped with one foot on the wagon-hub. "I tell ye, ma, he didn't leave an ear in the hull half mile, an the corn was shucked, too."

When Adam came in that evening with when Adam came in that evening with his load, he saw the road-cart standing out with the shafts thrown carelessly up on the fence. Under the shed was a shining new buggy. "Whoa!" shouted Adam and leaped from the wagon. He ran to the buggy and rubbed his hands over the glistening how and natted the over the glistening box and patted the polished wheels. He got into the scat and leaned luxuriously back against the soft cushions. "Dad, dad, I knowed you'd git it!" he exulted. "Good old dad."

'Eh, what's that?" asked that gentleman, looking in at the door. "That buggy hain't yourn, no such stuff. I brought it out fer—a feller."

"Seems to me ye're mighty keerful of it," said Adam, Jr. "Better take it out and put the cart back in. Might rain to-night."

"You go 'long 'bout yer chores an' leave things alone," retorted Adam, Sr., in high dudgeon.

pap this way."

His long, bony arms began to swing around like flails and the ears seemed to take wings and fly into the wagon. Bumpity, thump, bump, they rattled against the "knock-board," and an answering thump, bump, came from Adam's wagon. Slowly the red end-gate on the front wagon drew clear of the horses behind it, and space began to creep between the teams. Adam, Sr. was gaining. Adam, Jr. grew excited and yelled at his horses, and made wild grabs for the corn. He raced back and forth, in and out, ran panting back after ears that "Yep, chores all done." Adam was sales him water in the washin high dudgeon.

Adam flew about his work that evenfront wagon drew clear of the horses behind it, and space began to creep between the teams. Adam, Sr. was gaining. Adam, Jr. grew excited and yelled at his horses, and made wild grabs for the corn. He raced back and forth, in and out, ran panting back after ears that had been overlooked, and chased around the wagon for vile ears that bounced wildly over. For Adam had been well brought up and knew that leaving corn in the fields was one of the sins he must not commit.

rushed around the room with tower and comb, and while he stood before the glass vainly endeavoring to part his wet hair in a straight line. "Where are you going, Addle?" she asked.
"Party at Lawson's." Adam dropped

(Continued on page 317.)

IN THE DUSK of an autumn day a tall, strongly built youth of about sixteen was unloading corn from a wagon drawn up corn from a wagon drawn up to a long crib. The shovel moved with a regular stroke that showed both vigor and skill in the wielder, dashing beneath the corn with a sharp whish! and giving out a trem ulous tinkle of joy as the corn shot upward into the already overflowing crib. For fifty feet on either side the crib extended, and all along it was heaped to the last ear; for this was the season of plenty in Nebraska, and Egypt might have been repaid from a thousand of such cribs without material loss to the owners. The supper-bell quickened the ers. The supper-bell quickened the movements of the laborer toward the end movements of the laborer toward the end of his task, and with a sigh of relief he raised the last of the corn and tossed the shovel up after it. Then he started to the house on the run, making the walks clatter under his cowhide boots. A woman was standing in the kitchen door, peering out into the twilight.

"Hain't pa come in yet, Adam?" she asked when the boy came up.

"Yes. He was in 'fore me to-day. Don't know what he's doin' now."

A delicious odor of cooking came through the open door, and within the table was spread, and white dishes steamed from the back of the stove. A gate clicked in the rear of the house and

gate clicked in the rear of the house and a man came into the kitchen. Adam Garth, Sr., was a tall, gray-haired man, with the stoop in his shoulders that farmers get from long service behind the plow.

"Well, Adam, Joonyer," he said, "how-dy feel tonight? Tired?"

fall."

"Well, now, what'll ye bet?"

"Now, pa," interposed Mrs. Garth.

Adam, Jr., backed out of the engagement at this point and disappeared in the wash-room. Presently he came out, making random passes at the back of his neck with the towel. "Will ye bet me that new buggy ye're goin' to git me that I can't beat ye?" he asked.

"Buggy!" sniffed the old Adam. "I'll be mighty likely to buy buggies when ye're gallivantin' round haif the nights now."

Adam, Jr., smiled complacently. "Well, ye're so mighty sure ye can beat me."

"I reckon that road-cart hain't good enuf fer ye to sky-lark round in?"

Adam, Jr., sat down, and proceeded to mash a big potato with his knife.
"Well," he argued, "ye said ye could beat me.

"Beat ye? Course I cud beat ye. But She was as gaint as a board fence Monday mornin' when I went out to feed."

Adam, Jr., stubbornly continued the attack. "Will ye buy me that buggy if I foller ye round the field tomorrer mornin'?"

mornin'?"

Adam, Sr., pointed his fork menacingly at his son. "If I pull off an' leave ye will ye shut up 'bout that buggy, now an' f'r evermore?" he asked.

"Yes, I will."

There was a flash in young Adam's eyes that stirred the elder man's blood.

"Shake, young feller." he said, holding out his hand. "That's a go."

"Now na" said Mrs. Garth. "you know

out his hand. "That's a go."
"Now, pa," said Mrs. Garth, "you know you've had a crick in yer back all week."
"Crick in my back!" snorted Adam the elder. "I cud shuck more corn than that young feller without no back."

dy feel tonight? Tired?"

The boy was examining his hands by the lamp. "I got a mighty sore thumb, he said. "Glad we're so near done."

"Next week'll finish it, I reckon," said his father, settling down at the table.

Mrs. Garth was heaping a pyramid of smoking biscuits on a plate in the center of the table. "Them look good enough to eat, ma," said Adam, Sr., thrusting his fork into the apex.

"How big a load did you have tonight, Addie?" asked Mrs. Garth.

"Thirty-six bushels," replied the boy triumphantly, "lackin' ten pounds. I cud a made that easy if I had a knowed. I tell you what, dad, by another fall you won't be able to hold a candle to me when it comes to slingin' nubbins."

"Huh!" grunted Adam, Sr., winking slyly at his wife. "When ye git to shuckin' corn with yer pap ye'll be ready to quit the business."

"Pooh!" the vounger Adam scoffed.

ter of a mile.

Adam balanced reflectively on the edge of the wagon-box and began to draw on "finger-stalls." The teams could be heard rattling to the field all about, and through the frosty air came the bump, thump, of ears of corn falling into some distant husker's wagon, this father drove up just as the last finshuckin' corn with yer pap ye'll be ready to quit the business."

"Pooh!" the younger Adam scoffed, "bet I cud beat ye now."
"Beat me!" Adam, Sr., took a mighty into some distant husker's wagon, hitch at his chair, as if stirred with old memories. "Well, ye better git ready for supper 'fore it's all et up."

"Bet I cud beat ye." persisted young Madam. "You hain't seen me shuck this fall."

"The teams on "Inger-stalis." The teams could be heard rattling to the field all about, and through the frosty air came the bump, thump, of ears of corn fall-into some distant husker's wagon, life father drove up just as the last finger was arrayed in armor.

"Well, young feller, want to try yer muscle this mornin'?" questioned that worthy.

"Yep," said Adam, Jr.

worthy.
"Yep," said Adam, Jr.

"Yep," said Adam, Jr.

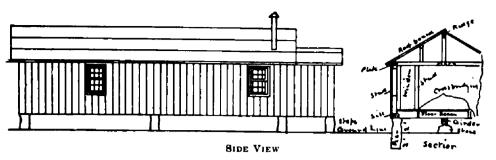

Adam, Sr., blew a trumpet blast on his lean nose, and began to shift his sideboards to make a high "knockboard," chuckling all the while in high glee. "When shall I tell yer ma to look fer ye, Adam?" he asked.

Adam, stripped to the shirt sleeves, was dangling nervously over the edge of the box. "Ye might tell her to look out to the crib to see if I was unloaded, when you git in," he retorted.

Adam, Sr. hung his coat and vest on the dashboard and began to tear open a husk. His team glided slowly into the sea of cracking, crunching, yellow stalks,

"IP I PULL OFF AR' LEAVE YE, WILL YE SHUT UP?"

### HOW THE CLUB-HOUSE WAS BUILT By WILLIAM 300 EARLE CASS

a lot of boys with dirty shoes coming into their houses, and I for one feel determined to make a grand push for K., K. and K. K. (Cheers.) Now all those in favor of building a club-house will answer Aye, the contrary, No." One yell declared the universal desire to have a house of their own.

Wait continued his remarks: "Two ways I think of for us to raise what is needed for our club-house; and the first way, which I hope you will agree is the best way, is this: During the coming week let every fellow scour the country, scour his friends, scour his father, and scour himself, to see just how much material or money he can collect together, or have the promise of; boards, timber, sash, window frames, hardware, paint, anything that is needed for the house. Let each one report on paper, next meeting night; then we will look it all over, and see how much more is needed, if anything; then after that scheme to get the balance. There is a way to get money for the whole amount, but then we would be in debt; that is not a good

were placed on top of the foundation posts, after the posts had been leveled and spiked fast; the outside of these two sills being exactly thirten feet apart. Then a girder, 6x8 in., was laid halfway between the side sills, just high enough above the ground for the floor beams to rest on it; under this girder four or five large stones were set. The floor beams were then set on top of the side sills; they were 2x8 in. and thirteen feet long, placed sixten inches from center to center; the ends of these beams had been to the posts and the president's chair, and knocking with his they were 2x8 in. and thirteen feet long, placed sixten inches from center to center; the ends of these beams had been to the posts and the president's chair, and knocking with his they were 2x8 in. and thirteen feet long, placed sixten inches from center to center to center the posts and the president's chair, and knocking with his they were 2x8 in. and there apart.

About 7 o'clock Walt stood up at the president's chair, and knocking with his title speech:

"Ladies. Gentlemen and Fellows." It they were 2x8 in. and thirteen rections, placed sixten inches from center to center; the ends of these beams had been made exactly one size. The beams were well spiked to the sills, and two rows of cross bridging nailed in between each pair of beams, to make all firm and secure. (See drawing.) When the beams had been spiked it was time to stop work for the day, and Walt said:

"It is now time to knock off; I don't believe in working at anything so long at a time that I am disgusted. It will be best to leave a little vim for next Saturday."

When they had all got to work again the following Saturday, Walt said:

"There has been no place in Komo for the boys to spend their evenings, except at home. Home is the best of places, and I am the last boy to say a word derogatory of that holly shrine, but as the doctors will tell you, human beings need change for their welfare, so it is that altho' home is such a hallowed spot, the ordinary mortal wanders occasion-

all the lights, and causing the greatest consternation.

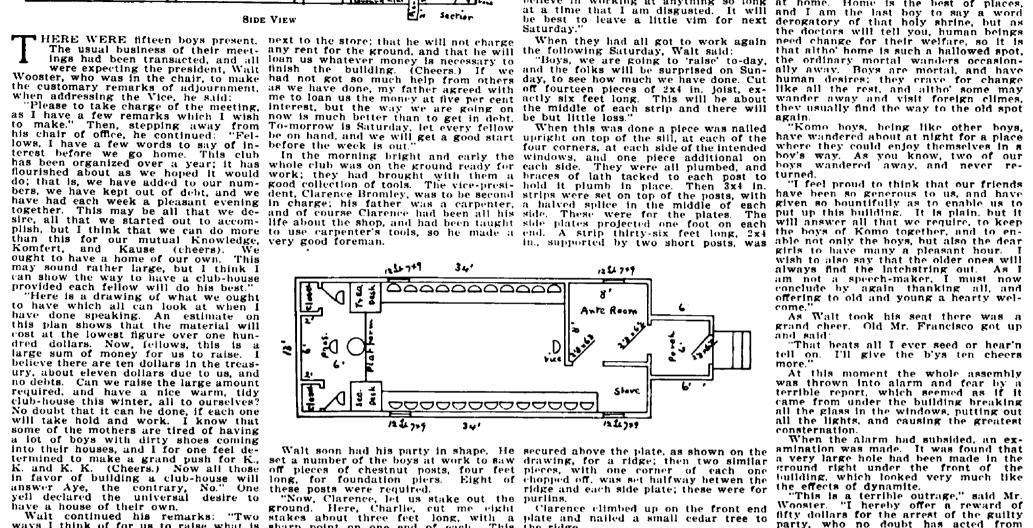

When the alarm had subsided, an examination was made. It was found that a very large hole had been made in the ground right under the front of the building, which looked very much like the effects of dynamite.

"This is a terrible outrage," said Mr. Wooster. "I hereby offer a reward of fifty dollars for the arrest of the guilty party, who no doubt has acted from feelings of envy. I will put this matter in the hands of the county police to ferret out." ret out."
The constable soon found that the

plosion had been caused by a foolish idiot, named Barnes Looking. When Barnes was brought into court he was simply remanded to the county insane asylum.

asylum.

"To make up for all this terrible alarm, etc., I will give one hundred dollars to build a wing to the club-house, for the young ladies," said Mr. Watson, at which the boys cheered, and cheered, and cheered Koffee Klub. again, Komo Kake and

purlins.
Clarence climbed up on the front end plate and nailed a small cedar tree to the ridge.
"Now, boys, three cheers, for the frame of our club-house is up." The boys gave about a dozen cheers before they stopped, the excitement was so great. Little Willie Jones wanted to know why they nailed that old cedar in know why they nailed that old cedar up there.

said Clarence, "that is a sign to everybody that the frame is up, and the first payment on the building is due, and that the owner is expected to treat; and there the treat comes." Sure enough, a lot of pretty girls were seen approaching with baskets, that afterwards turned out lots of grub. All hands took a rest for an hour, eating the lunch, and explaining to the visitors all about the new building. building.

Four old window frames and sash had been given them; these were fastened at the right height between the wall strips, previously set. Then boys were put at work to creet the corner posts, etc., for the porch, while others sawed off the dressed boards for the sides, into six feet six inch lengths. These lengths were then nailed to the sills and to the plates, on each side, commencing with a corner; and inside of two hours the whole was enclosed. This ended the second day's work. When old Mr. Francisco saw the new building next day, he exclaimed: Four old window frames and sash had

Them b've is agoin' to do it. Wall, I

"Them bys is agoin' to do it. Wall, I allus thout we hed sum smart uns here in Komo, but I didn't calkerlate thet they'd do as good as thet. I'll give em some cheers to set on."

It is unnecessary to follow the boys, day by day, in their work. The roof boards, eight feet long, were nailed on; the flooring was put down; tar paper the flooring was put down; tar paper belied on the roofs; strips fastened over the side joints; the partitions put up; the doors made and hung; the outside painted with two coats of paint; and then came the furnishing. The girls helped to do this, shades for the windows, a few turns made out of carnet a little stand. then we must move one of the lines until to do this, shades for the windows, a few we get our five-foot measure exact."

They then measured off the other corners, and for the porch.

"Now, boys, we have our building staked out, get your picks and shovels, and dig eight holes, two feet deep, at these for the second to do this, shades for the windows, a few rugs made out of carpet, a little stand out of pine for the secretary and the treasurer. A few pictures were hung up. When all this had been accomplished the Komo club-house was ready

STAKING OUT

way. Let us keep out of debt by all a pencil exactly the right place; measmeans. Don't forget, every boy do his ure on the side line four feet from wherebest; get a plank from this friend, a pound of nails from that one, whatever they will give, but every boy in earnest, and then we shall. I know, make a big report next week. We will now adjourn with the other, but if there is the least works of the proposition of one sixteenth of an inch-

to K. and K.

On the following meeting night every member of the K. K. and K. K. was on hand, eager to know all about the clubhouse. The meeting was called to order, and after the usual business was done,

and after the usual business was done, the president asked:

"Is there any new business to come before this meeting, or reports to be made? It is unnecessary for me to remark that we are all full of business, and that it is expected each fellow will make a report on the club-house. The secretary will please to read off the roll, and as each one's name is called that fellow will rise, and make the best, very best report that he can."

With lots of fun and enthusiasm, each boy answered as his name was called, and made a report. Not one member was missing; not one boy had failed to make a raise of something, either prom-

make a raise of something, either promise of money or material, for the club-house. From what was said it seemed as

tho' the whole town was in earnest to help the K. K. and K. K. get a building.
Walt Wooster, who was studying to be an architect, looked over the reports, which had all of them been put down in writing, and in a short time declared that nearly all the necessary stuff was donated, or money was promised to pur-

chase it with.

"Now, fellows," said Walt, "we shall have a good time putting up the building. Each one must bring along with him all the carpenter tools he has. I will get our horse and wagon to collect all these things and when they are on will get our norse and wagon to collect all these things, and when they are on the ground we will all go to work. By the by, I almost forgot, my father says we can put up our building on the lot

then the lines are at right angles one with the other, but if there is the least variation of one-sixteenth of an inch.

ney then measured off the other corners, and for the porch.
"Now, boys, we have our building treasurer. A staked out, get your picks and shovels, and dig eight holes, two feet deep, at these stakes, for those foundation posts to go into."

It was det

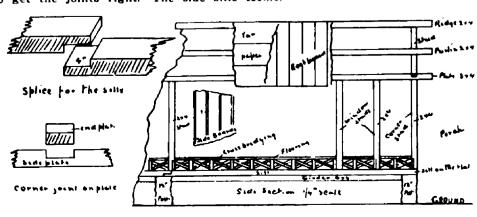

these stakes, for those foundation posts to go into."

It was determined to have a public reception at the opening, and the whole holes dug, and the posts set in place. In the meantime Walt was busy, marking out the sills, studding, etc. As the huilding was to be longer than any timber on hand, two pieces of 4x6 in. hemilock had to be spliced for each side sill. Walt and Clarence having marked out the cuts, the boys all worked with a will to get the joints right. The side sills for business.

It was determined to have a public reception at the opening, and the whole dent to many of the older heads that the hoys had built much more than they had thought to do, for now this building could be used for many public purposes, well as for the club, and as an old gentleman said:

"It is the opening and the whole town was invited. It was quite evitable to many of the older heads that the hoys had built much more than they had thought to do, for now this building to could be used for many public purposes.

CHILDREN FARTHE 5 SOUTH:

WHILE OUR American boys and girls are getting pleasures from the seasons as they come, the children of the farthest South, little native Indians of Tierra del Fuego, away at the very end of South America, are finding pleasures in their own odd ways. I think our very young ladies and gentlemen here in North America would like to know of these young, faraway savages and how they live, for it is not likely that all of us will visit them in their home country. Some of us may, by and by, for nowadays it is part of our education to see the world and its people, but, while we are at home, we can read of interesting, distant lands, and this is next best to going there.

lands, and this is next best to going there.

There are about fifteen hundred Fucgian Indians, divided into three different tribes—the Alaculoofs, the Yahgans and the Onas. These tribes inhabit different parts of the country, each having their own characteristic customs and homes, but we are going to speak mostly about the tribe called Onas (oo-naz), who are the least civilized and the most interesting tribe of the three. The Ona Indians are known as a giant race, the fathers measuring six feet and over, in height, with broad shoulders, strong limbs and good health.

This tribe lives on the main island of This tribe lives on the main island of This tribe lives on the main island of The tribe could be more cheerless or less homelike, lonely, uncomfortable and desolate than an Ona home, if we may called than an Ona home, it we may called than an Ona home, it we may called than an

Tierra del Fuego, a spread of barren, Tierra del Fuego, a spread of barren, wind-swept country, cold and desolate, where it rains most of the time. Here it is that the Ona boys and girls find their school and pleasures, not with books and slates and pencils and maps, but with studies of the fish and birds, and the animals of the forest, their habits, their peculiarities, and their places of abode. The Fuegian children soon become acquainted with all wild life of abode. The Fuegian children soon become acquainted with all wild life— so well acquainted that the wild creat-ures fill a large place in their care-free lives. It is something of what we should lives. It is something of what we should seek for ourselves in our own country—to know some of the wonderful secrets of God's glorious out-of-doors. This eager country-learning comes early to the Indian children, because they are a part of it, because they live in the very heart of nature all the time; but their horizon of learning is not very broad, outside of what they know of the fields and animals, for there are no schools for them and they have not the keen intelligence or the thirst for knowledge like their North American brothers and sisters.

These lonely children do not even know that there are boys and girls such

These lonely children do not even know that there are boys and girls such as we. They think that their mountains and plains are the center of the world, and when they leave them to journey away, they believe that they are going out of the world, toward the end of it; that if they go far enough, they can step off. They believe other foolish things, too—that the snow and the rain, the wind and the sun are spirits of departed Indians. When the sun is bright, everything is well and the spirits are pleased with them; but when it storms, the spirits are angry and something is sure to happen. All bad luck is said to be directed by evil spirits and not by their own mistakes. Poor, silly Indian people, with so many nonsensical superstitions!

Like their fathers, the young Ona boys are great cross-country runners, with

are great cross-country runners, with strong legs. They have no gymnasiums as we have to develop strength and mus-cle. Their strength and muscular de-velopment comes from healthy, vigorous

velopment comes from healthy, vigorous exercise in the open air.

The boys are early taught to follow their fathers' pursuits, soon becoming skillful with the bow and arrow and the sling-shot. The main hunt is for a kind of small mountain camel, called the guanaco (gu-knock-o), which furnishes the Ona Indian with about all his needs;

BY, ADELAIDE 600K

pany the men on the hunt. Then they go to assist in dragging home the game, which is afterwards roasted over a fire, for a feast. The Ona is a glutton. He eats and then lies down to sleep until he is hungry again.

### HOW GORDON LOST HIS POPULARITY

ORDON HAD not been in college a month when it became mysteriously noised about that it was Gordon's father who kept the leading clothing store in the city most convenient to the college, and that a note from the freshman would insure its bearer unlimited credit till the end of the year at the store.

When the rumor reached their ears, two or three of the more reckless spirits among the spendthrifts of the college straightway sought Gordon to find out whether the good news was true. They put the question to the little fellow. He rubbed his hands unctuously together. He grinned. He endeavored to look the innocent.

BULLY FOR YOU GOMEN OLD BOY'S SHOUTED THE SPENOTHRUTS.

Such queer ornaments are to the little Ona girl what a string of pearls or a gold chain might be to our American girls.

The Ona seems to make no distinction between right and wrong. He does not think it wrong to sweep down upon a dick of sheep and steal great numbers of them belonging to neighboring farmers, who have come from Europe and other countries, and who own miles and miles of pasture lands and thousands of grazing sheep. The Indians call the thouse they think they have as much right to these sheep as they have to their own wild mountain camel, the guanaco.

Fungus, a hard, tree growth, and ground rats, form a part of the Ona's food. These are not so fine as chocollates and other things we think are good to eat, still they are good to the Indian.

There is not much to be said about the little Ona Indian girl. She imitates her mother in building the brush house, and helps to care for her brothers and sisters, making funny noises to quiet them when they cry. The girl children is lend an idle camp life like their mothers, and when they grow up they accom-

But these were the words of collegians who had not profited by his notes, and, naturally, would be expected to be filled with rancor and envy.

For three years it had been the habit of the patrons of the Gordon clothing emporium to settle with its accommodating proprietor some time during the last week of each college year. From the time they bought their apparel until settlement day never a word was said about paying up by the father—he was as popular, in his way, as his son was in his.

The fourth year of his sojourn within the classic halls Gordon smillingly distributed his notes with even more than his customary liberality, the recipients

tributed his notes with even more than his customary liberality, the recipients taking them to the father and entering into the usual tacit arrangement with the accommodating clothier. And it appeared to close observers of other people's garb that Gordon the younger and Gordon the elder waxed more popular day by day.

Such was the status of affairs to within a month of the younger's graduation. Then one morning he knocked at the door of the room sheltering two of his particular friends—two of the boys who had gone to him four years before to find out whether the good news was true. Bade to come in, he seated himself near the door upon the couch. He rubbed his hands together, grinned, and began:

began: "I got a letter from my father this morning."

"I got a letter from my father this morning."

"Three cheers and a tiger for the governor," shouted the spendthrift," "Here's hoping he's well!"

"Yes," went on the son. "I got a letter from my father this morning, and he has asked me to do something for him. It's just a little matter, and I've come to you to help me do what my father wants."

"Sure we'll help you, old man!" cried the room mates, in hearty unison. "We'll do anything for such popular fellows as you and your governor. Hurrah for the Gordons, father and son!"

"Thank you," said Gordon, with snug delight. "Now, I'll tell you what my father would like me to do. He says that as this is my last year in college, and as I'll have a lot of graduation expenses, and as money is pretty tight just now, did I think the boys would mind calling in to see him this week instead of waiting until the last week of college?"

Gordon arose to take his leave. "That was all—just a little matter." he said:

lege?"
Gordon arose to take his leave. "That was all—just a little matter," he said; "and I thought you would help me out if I told you. We've been chums so long, you know." And, grinning and rubbing his hands softly together, he was gone.

That day there was a mighty stirring shout of the spendthrifts among their

"Why, fellows," he said, "how did such a rumor ever get abroad? I am astonished."
"But is it true?" persisted the advance guard of the spendthrifts. "Say, Gordon, old boy, tell us, tell us, is it true?" Gordon continued rubbing his hands together.
"Fellows," he said, "on my honor I don't know how such a rumor could have got about. But I will not disappoint you. I will give each of you a note to my father, if you want it, and you can see what he will do about it. Will that do?"
"Bully for you, Gordie, old boy!" shouted the spendthrifts; and Gordon then and there wrote a note for each of them to his parent, and the purport of each note was that the hearer was a particular friend of the son's, and if the firther could do the friend of the firther around the purport of the store could do the firther around do the firther around do the firther around the purport of the firther around the purport of the spendthrifts; and if the firther around the purport of the spendthrifts among their about of the spendthrifts among their about of the spendthrifts among their more conservative fellows, and the next morning there was an exodus of them, to a man, from the college in the direction of the city in which the Gordon clothing emporium lifted up its golden-lettered signs.

On the evening of the third day following his calls on his friends Gordon was lost in perplexity—no one had sapped him on the back or called him a jolly good fellow the whole day long. The rest of the year he walked, won-dering, about the campus—alone; and, for aught I know, he is still trying to ferret out between sales in his father's store how it happened that his popularity at college unexpectedly vanished in the twinkling of an eye on the evening of the third day following his calls on his friends Gordon them, to wis a man, from the college in the direction of the city in which the gondon them, to a man, from the college in the direction of the evening of the evening of the third day following his calls on his friends of the spend him on the back or c

### The Pea Trick

The following is one of the best tricks that the writer has ever met with, and at the same time one that is easily per-

formed.
Select five peas (or beans) as nearly Select five peas (or beans) as nearly alike in size and shape as possible. Secretly slip one of these into your mouth and work it to one side so that it lies snugly between the cheek and upper gums. Be sure that it is firm and comfortable before you allow anyone to know that you intend to do a trick at all. Now show your four peas and tell your audience that you intend to eat them, and a little later on to bring them back again. Eat them, one at a time, in full view of your friends, masticating the peas thoroughly and finally "swilling" them down with a drink of water.

water. water.

Now, pressing both hands against the lower chest, close your mouth and pretend to be working the peas back again; at the same time lower the head and,

tend to be working the peas back again; at the same time lower the head and, with your tongue, release the pea from its snug position and press it forward between the teeth.

Show it thus, then pretend to remove it with the thumb and first finger of the right hand, and further pretend to place it in the left hand, which must be kept tightly closed. But instead, press the pea back into the mouth again, and slip it to one side, then if necessary you can chatter and show your mouth is empty. Proceed in like manner with the second, third and fourth pea, finally slipping the all important pea back to its original position.

Your audience believe that you hold all four in your left hand, and it makes an excellent finish to the trick to get some one to blow upon that hand, and then to open it and show it empty. Should they give you four more peas and ask you to do it again, it is as easy the second time as the first, since the fifth pea is still tucked away in your mouth.

The writer has done this trick scores of times before scores of different people and never failed to create the greatest curiosity as to how the trick was done.

### THE O P O S S U M

By SILAS A. LOTTRIDGE

THE OPOSSUM is certainly the most distinctive of the North American mammals, inasmuch as it is a marsupial. It seems rather strange that among so many mammals, the opossum has neither kith nor kin. There was a time when the whole world was inhabited by marsupials, so those living today are the separated remnants of that once universal race.

The range of the Virginia opossum is

a very stupid animal, has one very clever habit; when it is attacked it simulates death most successfully. At such times the eyes are closed, the muscles are limp, and no amount of rough handling limp, and no amount of rough handling will cause it to show any signs of life until an opportunity for escaping presents itself, when it will make all the haste of which a slow moving opossum is capable. The most effectual method of reviving the seemingly lifeless animal is to drop it into a pool of water. This is apparently too much for it, and the speedily seeks the shore. The immer-This is apparently too much for it, and it speedily seeks the shore. The immersion usually ends the "playing possum," for it will not readily try the stratagem again. This art has probably saved many opossums from destruction by other animals, but the "coon" is fully up to the trick and few escape him. I have found the ruse of "playing possum" to be specific, rather than general among the species. Those that are partly tamed seem never to practice it.

cific, rather than general among the species. Those that are partly tamed seem never to practice it.

The home of the opossum may be in a hollow tree, a crevice in the rocks, or under a building. The hollow tree seems to be preferred, when convenient. The nest itself is composed of dried grass and leaves. The opossum usually comes forth from his retreat at the close of day, and wanders about in search of food; he is not strictly nocturnal, however, for cloudy days will often find him abroad, and I have seen him in the bright sunshine.

His menu is varied, but you may be sure it is a full one when it can be obtained. It consists chiefly of insects, small reptiles, young birds, and birds' eggs. Occasionally he dines from the poultry yard, and here he shows a decided preference for young chickens. Vegetable food enters but little into his

The range of the Virginia opossum is from the latitude of the southern part of New York State and Michigan, southward to Central America. It is very common in the South, and probably there is an great diversity among the individuals.

The opossum is about the size of a fur. Sometimes the mother arches her tail over her back, very much after the fashion of a squirrel, and the little ones cling to it by their prehensile tails, heads down and feet just touching her back, presenting a curious sight indeed. For a few weeks after they climb out of the pouch the young do not venture upon the ground, but return to the pouch for food and protection.

I have not been able to photograph any of these young opossums, but a far-

Individuals.

The opossum is about the size of a large cat; its legs are short and its tail is long, scaly, and prehensile; its snout is long and somewhat pig-like, which accounts for the tremendous width it can open its jaws. The fur is of a general yellowish color, but on the back and sildes most of the hairs are tipped with brown or black; intermingled is a liberal amount of pure white hairs. The opossum, all hough upon the whole and silght and smell are well developed.

The opossum all but the senses of sight and smell are well developed.

The opossum allowed the wholes dath most successfully. At such times the eyes are closed, the muscless are limp, and no amount of rough handling will cause it to show any signs of ilfe

Young Tame Parrot, \$3.90

by the farmer and this time I photographed an opossum while he was feasting upon a nest of hens' eggs.

The opossums in the South are much larger than are those Northern ones. This is probably due to the food which nature has so bountifully supplied them—persimmons. The November frosts develop a most delicious flavor in the persimmons, and the opossums feed upon them from early evening till the gray in the east warns them of approaching day.

A few weeks of feasting and the opossums have grown wonderfully plump

sums have grown wonderfully plump and fat. Tis persimmon time and opos-sum time! From many cabins the merry song is heard:

"Coon he up a gumo-tree, Possum in de holla; Coon he roll hi'self in ha'r Possum roll in talla."

The hunting of the opossum in the South is usually done at night. The one important feature of the hunt is a good opossum dog. The opossum will take to a tree at the approach of the dog, and the dog should remain barking until the arrival of the hunting party. If the tree is not difficult to climb the opossum is soon captured, otherwise the tree must be felled or the game shot. The colored people enter into the sport with the greatest zest and these hunting parties have merry times.

people enter into the sport with the greatest zest and these hunting parties have merry times.

The hunting of the opossum in the North is more frequently done in the day time. The hunt is usually confined to the edge of a forest, or large timber along streams, and the more numerous the hollow trees the better. I remember a hunt of this kind; I had been tramping with my camera, and as I was passing through some large timber near a clearing on the Orange mountains, I came upon an old colored man and a boy. They were carefully examining the bole of a tree. I asked them what they were hunting for.

"Possum," was the short answer.

"Possum," was the short answer.

The colored man, who, I learned, was familiarly known as "Uncle Robert," when he found that I was out after animal photographs, granted me the privilege of joining the party.

Uncle Robert's method of hunting the opossum was very simple; he knew of several trees that were hollow, and from time to time visited them, and occasionally found an opossum. He was not very talkative at first, but gradually warmed up to the subject of opossum hunting, and told me that when he was a hoy and lived in "Ole Virginia," they hunted "de possum and de coon, for dey bofe is good to eat."

While we were talking we were gradually making our way through the tim-

### WHEN THE OLD ADAM WAS AROUSED

the comb and went upstairs two steps at

a time.

Out of the bureau drawer were drag-Out of the bureau drawer were dragged his Sunday clothes. Then he must make a choice of necktles. He had two, a pink one and a green with black dots. The pink to-night. His feet commenced a double-shuffle while he labored to tie a becoming how under his chin, and his mother called up the stairs that he was shaking off the plaster. He came down to supper singing "Beulah Land' in a voice hoarse with the dust of the cornfields, not because it was appropriate, but because it was the only song he had ever tried to sing, and he had learned it when a little boy in school from a teacher he was in love with.

Adam, Sr. was just cooling his first saucer of coffee when his son pushed back from the table and reached for his hat.

"Better greese that huggy fore ye use

"Better grease that buggy 'fore ye use it," said the sire without looking up. Adam was standing in the doorway, buttoning his coat. "Kin I drive Ribbon?" he asked.
"I don't heer," said Adam, Sr.

## The New Boy

By Sarah Noble Ives

There's a new boy on our block," said Teddy.
"Huh! I seen him," sald Dick. "He wears

curls."
"What's he living over at Mrs. Connor's for, I wonder?"
"Mebbe he's Milly's cousin or some-

belonging to Mrs. Connor.
"Ht. there, Bubby, what's your name?"
called Teddy from his safe perch.
The New Boy did not look up Hedropped his hoe and took up a trowel and began d'aging a hole.
"Where's Milly, I wonder?" said Dick.
"Say, little boy, what you doin' in that garden?"
The New Boy three up a trownight.

The New Boy threw up a trowelful of earth, and some of it just missed Dick.

who was nearest.

"Say, there. Don't you be sassy or I'll come over and pull your nice, pretty curls."

The New Boy set a bulb in the hole he had made and began shoveling in the earth

around it.

"You think you know how to garden, don't you? Well, you can't do it for a cent. You're nothing but a girl-boy. Tell us your name, Girl-boy, or I'll come over and lick you."

The New Boy finished a nice little mound over the bulb and poured some water on it from a watering put.

"Hey! Girl-boy! Girl-boy! We're comin' to lick you, and you dassent touch us!" Both the boys dropped to the ground and started toward the flower bed.

The New Boy picked up his hoe, stood up and turned to face the two other boys. And those two boys just grinned and looked silly—for it was Milly, in her new play-overalls.

### Local Stamps

No local stamp can be used for the payment of postage on a letter or package going between countries, but only franks a letter between a certain area. The government local stamps are very limited in number but private companies, such as express, etc., have issued a number of different kinds.

### Reprints

Re-impressions taken from the original lates of stamps which are obsolete are plates of stamps whusually called reprints.

### Forgeries .

There are two causes for the existence of forgeries. One of them being to deceive and cheat the government, the other to deceive and cheat the stamp collector.

Some of the important ways the governments of all nations use to prevent the making of forgeries are as follows: The using of paper with silk threads, as used in our paper money, the use of grills on the stamps. Watermarked paper is another method used. There are a number of countries that do not denote by means of inscriptions on the stamps, the name of the country from which they were issued. Greece is one of these countries. It has the design of Mercury, and Austria newspaper stamps are another set belonging to this class which are sometimes confused with the stamps of Greece owing to the head design on them. The Austria unpaid letter stamps contain the value only and have caused a good deal of trouble for the heginner.

### A Few Aids in Classification of Stamps

Anatoaikh Pomayia—Eastern Roumelia. The design being similar to the stamps of Tur-Chiffre Taxe-On the French postage due

stamps. Cross—On most all Swiss stamps. Eagle—Bosnia stamps bear a design with an

Eagle—Bosnia stamps bear a design with an Eagle.
A and T—Surcharged on French Colonial stamps signifies that they belong to Annam and Tonquin.
Greek Inscriptions—The stamps of Greece and Crete bear Greek letters.
Kais. Koenigl. Post—On some of the Austrian stamps.
Losen—On stamps of Sweden.
Mejico—On some of the stamps of Mexico.
Rayon—Switzerland.
Recargo—On some Spanish stamps.
Sachsen—Saxony.
Uitamar—On stamps of Cuba issued by the Spanish.

### The Prices a Few Great Collections Have Brought

The Ayer collection, sold in 1897, brought the moderate sum of about \$200,000. Another collection belonging to Castle was sold for about \$137,500. One of the first large collections sold was the one belonging to Ehrenbach containing stamps of the German Empire. In 1876 this collection was sold for \$30,000. In 1897 the Legrand collection sold for \$60,000.00.

### Inquiries

W. S. The stamped envelope you mentioned in worth about 5 or 10c. E. E. A good book on stamps is the book entitled the A. B. C. of Stamp Collecting, which retails for \$.50. This book can be gotten from most any large stamp dealer. Direct all inquiries to The Stamp Editor of THE AMERICAN BOY.

J. R. H. Your stamps are catalogued at the following prices—No. 1, 1c; No. 2, 10c; No. 3, 1c; No. 4, 1c; No. 5, 1c; No. 6, 2c; No. 7, 2c. Approval sheets are pieces of paper ruled so as to contain a number of squares a little larger than the size of a common two-cent stamp. These sheets usually contain 25 such squares, the stamps are mounted in the squares and the prices marked underneath each. T. S. The first stamp you mentioned in your letter catalogues 4c, the second 2c. C. B. P. Send your stamp to any dealer that advertises in THE AMERICAN BOY.

### A Numismatic Curiosity

The Museum of Medals in Athens has received from an Italian antiquary in Cairo an interesting and important con-tribution to its treasures in the shape of one hundred tetradrachms, together with a bronze die, such as was used for coin-ing money at Athens in the third cen-

M. Svoronos, director of the museum, is of opinion that the die was stolen by a Greek, and used in Egypt for coining tetradrachms with false metal. As the tetradrachm was worth about 3s 3d, a

tetradrachm was worth about 3s 3d, a handsome income might be earned in this way. In Greece the punishment for false coining was death, but bad money seems to have been by no means rare.

Very few of these ancient Greek dies are in existence, as it seems to have been the practice to break them up when a series of coins had been minted. The tetradrachms sent with the die are all marked with the stamp by which the bankers in Egypt checked all pieces of silver passing through their hands.—Hobbies.

### Some "Inverts" From French Somaliland

Most of the stamps of the French Somali torial series (September, 1903) have made their appearance in the stamp market with the central portion of their design printed up-side down. The event has caused no small commotion in the philatelic world.

commotion in the philatelic world.

There are two distinct sets of the French Somaliliand "pictorials" of 1902-1903. The same designs were used for the two issues, but in the second series—that of September, 1903—the center portion of the design was printed in black in all cases, while in the earlier issue (1902) the central, as well as the outer, portion of the design was printed in color.

of "inverts" refers.

It may be added that nearly the whole of the 1903 series of French Somaliland—the stamps with black centers—are now known with centers inverted. The only exceptions are the 1, 2, 4 and 10 centimes, and possibly these also may make their appearance before one is able to write "Finis" to this chapter of philatelic history. Of the earlier series, 1902 (colored centers) the values known to exist with centers inverted are the 4, 5, 15, 20, 25, 30, 40 and 50 centimes, and the 1, 2 and 5 francs. The 2 centimes and 75 centimes have also been chronicled in this condition, but we think on inadequate informa-Belgium.—A new set of two designs with the portrait of King Leopoid has appeared, the values being the 20c olive, 25c blue and 35c purple-brown.

Ecuador.—Surcharged on the stamps of diton, but we think on inadequate informa-

### The Issues of 1904

The Issues of 1904

How rapidly the world's postal issues grow in volume is best seen by adding up the new emissions of a single year. We do not propose to do the counting ourselves, for Mons. Rene Adam, a contributor to the Revue Philistelique Francaise, has saved us all this mental labor by preparing a complete and most interesting statistical statement of the issues of 1804. The figures Mons. Adam quotes are the total issues, during the year 1904, of postage and telegraph stamps, for in France the collector of postage stamps also collects telegraph stamps as a matter of course. In our own country the two things do not always go together. To get at the "true inwardness" of the figures quoted below from a postage stamp collector's point of view, it should suffice, we think, to set down about four-fifths of the totals as postage stamps and the remaining one-fifth as stamps should for telegraphic use.

The total issues for 1904, not counting postal stationery or minor varieties, were as follows:

ticular country, then probably the head of George Washington may come near the top of the list. Since the first issue of federal postage stamps for the United States in 1847 there has been no American issue in which the familiar head of the "Father of his Country" has not figured on one or another of the denominations most in demand. It is doubtful whether America could pay greater homage to the memory of its foremost patriot than this. During recent years the 2-cent stamp, the value in most constant use, has been chosen for the portrayal of George Washington's head, with its powdered wig of the days of the Declaration of Independence but in earlier issues the portrait has appeared on the 10 cents (1847), the 3 cents (1851 to

1868), the 6 cents (1869), and again on the 3 cents (1870). From the issue of 1875 onwards Washington and the 2-cent stamp have been in separatile, as have Benjamin Franklin and the 1-cent stamp. We get more heads of George Washington on the picturesque "Departmental" issues of 1873-79, while the American envelopes and post-cards—a wonderfully interesting series—also present their quota of portraits of the American patriot.

What a collection could be made of George Washington issues slone! Taking into account all varieties of die, shade, perforation grille, paper, and so on, such a collection would embrace a very large number of varieties of adhesive stamps and "entires."

Possibly a good third to Queen Victoria and George Washington as a subject of postagestamp portraiture would be the aged Emperor of Austria, but if we are to take the issues of a whole empire into account, there is only one possible successor to our late lamented Queen, and that is her son, King Edward VII., whose head now appears on Colonial postal issues in all quarters of the globe.—

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

### The Brownie Contest

We are pleased to say that a great deal or interest is being manifested in our Brownie contest, which was announced in our June issue. The entries close September 1.

### The Roll of Honor

This month, the distinction of honorable mention is conferred upon Allan Hovey, H. E. Fry, Perry N. Trask, Walter R. Hoe, H. R. Goodwin, Tom S. Schilbert, Charles W. Bartlett, H. L. Goodson, Felix Stachowske, William V. Hill, T. Rose, Floyd Tiemann, L. Culver, Vincent Ivey, Howard Carty, James I. Finnie, Clinton S. Bailey, J. H. Paine and M. A. Gorton.

### Stained Negatives

According to the Junior Photographer the yellow stain resulting from insufficient fixing may be removed by the following method:

### Landscapes With Clouds

When one has a negative with a good cloudy sky it is frequently found that much of the value of the print upon velox or other gaslight paper is lost on account of the under development of the clouds. To avoid this the hest plan is to apply the solution to the upper part of the print till the sky begins to appear and then immerse the print as usual. No fear need be held of any line of junction showing in the finished print, for the paper soaks up in the finished print, for the paper soaks up the solution slowly and thus prevents an fixed limit being marked.

"THE YOUNG CHEMIST Photo by Carl C. Roper, Pawtucket, R. 1.

mitted lacks density and was probably taken out of the developer too soon. Brownie cameras are not only esteemed by novices; a great many adults use them. Developing papers are mostly bromide papers, and have to be developed after being exposed under the negative. I have entered your photographs in our Brownie contest.

### Removing Yellow Stains

The removal of the color from negatives which were developed with pyrogallic acid, and may have obtained a yellow coloration by too long development in consequence of under-exposure, should be done before fixing. But as this coloration can not be seen in red light, and the negative has to be excluded from daylight, it is, after development and washing, put for a few minutes into the following solution:

Chrome alum 8 grams.
Citric acid 5 grams.
Water 500 ccm

After this the negative is washed again and treated with the ordinary fixing bath. Any druggist can prepare the above solution.—Ex.

### Indelible Black Ink

A good black ink which cannot be readily removed, and which is not soluble in water, is useful for writing the names of solutions on bottles, and for blackening the interior of

"A LITTLE QUAKER"

### First Prize Photo, by R. D. Von Nieda, Ephrata, Pa.

### Portraiture 1 4 1

When photographing stout people, it is always well to take them in profile, employing a fairly strong light, so that the shadows are well marked. On the other hand, people whose faces are long and thin are best taken nearly or quite full face. For such studies the light should be soft and well diffused, taking care to have no strong shadows, which would only accentuate the sharpness of the features. When photographing people in a sitting position, any position of folling back or leaning forward should be avoided, as it will tend to cause a very false appearance of size in the portions of the sitter's body which are nearer to the camera.

### Our Prize Pictures

R. D. Von Nieda's "A Little Quaker" is excellent, both from a pictorial as well as photographic standpoint and richly deserves the first prize herewith awarded to it. It was taken on a Standard plate, exposure one-half second, stop F. 16, developed with Pyro. and printed on Rotox paper. Chas. F. Soehner, of Armel, Colo., the winner of the second prize, makes his first how to us with a photograph taken on a Sears-Roebuck plate, stop 16, 1-5 second exposure, hydro-metol developer, Seroco paper print. The picture represents a Western school-house, made of sods, with the level prairie for a background. Another picture of the same group submitted was also decidedly above the average.

### Current Comments

Geo. Ringrose: Your "First Snow-fail" is praiseworthy and does not require the criticism you ask for. R. Ashley, Pitkin: Your photograph of a burro would have been perfect, if you had taken the animal on a plane. As it is, the forepart is larger than the hindpart. A L. Mayhorn: Your photographs are quite creditable to a beginner. The film sub-

cameras. This may be made by dissolving 60 parts of shellac in a solution of 30 parts of borax to 360 parts of water. Filter the solution and add enough gas-black to make an opaque ink. The best way is to pour a little of the solution into the black, making it first into a paste and afterwards thinning it out gradually with the remainder of the liquid. Once the ink is dried it is practically insoluble. If enough lamp black is added the ink will dry with a dull surface, and in that state is suitable for painting the insides of cameras and other photographic apparatus.—Bazaar. and other photographic apparatus.-Bazaar

### Safe Light for Ortho Films

Glass coated with the following mixture will give a perfectly safe light for the devel-opment of crtho films. The best way is to obtain two sheets of glass and coat them with an emulsion consisting of one ounce of emulsion gelatine in five of water. One ounce of this solution is sufficient to coat 48 square inches of glass. Having coated the glasses soak the first in:

### Metol Poisoning

Those who suffer at all from the bad effects which metol, hydroquinone with potassium hydroxide, etc., produce upon the skin, will be interested to hear of the recommendation of Dr. Krugener in the Photografia Practica. He states there that naphthaline gives the heat and most soothing results, as it does also with burns; but the following is of more general use for metol poisoning (eczema): Take equal weights of laboratory tar, oil of wild myrtle and oil of juniper. Mix the bulk well

### Pen and Ink Pictures

Pen and Ink Pictures

The following is a good way to utilize spoiled films. After soaking the film in a hot solution of sal soda, the emulsion is easily removed by a scraper or the back of a knife, and, if wrinkled, is easily made smooth by a warm, not hot, iron. The cleaned and smooth film I lay over a photograph and with a fine pen and black ink, preferably an ink made for drawing purposes, go over as much of the outline and shading as I want. After a little practice, aithough I know nothing about drawing. I find it quite easy to make copies that are really for many purposes much better than the photographs from which they were made. The drawings, of course, print white on a lantern slide plate, if small, or a slow, ordinary plate if large, and get black prints on a white ground.—Georgiana Miller in Am. Amateur Photographer.

### The Letter-Box

The Letter-Box

C. H. Moore: The Rochester Optical Co., of Rochester, N. Y., manufactures a 3½x4½ Premo camera that may be used in connection with a film-pack or plates. Geo. Kump and Walter L. Prehn: For further details concerning the enlarging camera mentioned in our March issue, you are respectfully referred to the Photo-Era (Boston), from the columns of which the article was taken. Allan Hovey: Enlargements are made on bromide paper. W. W. Kimmell: Yes, your trouble is undoubtedly due to under-exposure. I should have taken the snap-shot, to which you refer, with a full opening. Falls are very unsatisfactory subjects, from a photographic point of view; if you get the details of the rocks, you are sure to lose those of the water and vice-versa. The plates you mention proved very satisfactory in my hands; I use them continually.

### Hot Weather Troubles

Good ventilation is absolutely necessary if the dark-room is to be kept cool. Heduce the temperature of your developing-bath with ice, if you want good negatives. It may retard development somewhat, but don't be in a hurry; unnecessary haste spoils many a wood plate.

a good plate.

Frilling can be prevented by rubbing the edges of the plate with a small piece of wax candle. The wax forms a waterproof coating to the edges of the plate, which prevents the developer from working its way under the the garden are the edges of the plate of the garden are the edges of the plate of the garden are the edges of the plate of the garden are the edges of the plate of the garden are the edges of the plate of the garden are the edges of the plate of the garden are the edges of the plate of the garden are the garden ar

To avoid air-bells, use pienty of preserva-tive in the developer and pour the mixed de-veloper over the plate at once.

Don't make your hypo bath for fixing quite so strong in the summer, a more diluted solu-tion will yield better results.—The Editor.

### Titling Negatives

La Nature says the following method answers the purpose admirably:

	110. 1.	
Sugar		parts.
Glycerine .		parts.
Water	60	parts.
	No. 2.	
Bichloride	of mercury 5	parts.
Nitrate of	mercury10	parts.
Machal	60	Darty

Equal parts of each solution are taken and Equal parts of each solution are taken and mixed together, and used as an ink on ordinary writing paper. The writing is then transferred to the gelatine surface by simple pressure of the paper by means of the fingers. Upon removing the paper, the writing will appear on the negative in the reverse direction and, consequently, in the correct manner on the print. the print.

### Photographing on Apples

A firm of fruit auctioneers at Covent Garden recently received from France a remarkable consignment of apples. On each apple was a portrait of King Edward VII. of England. The fruit created a great sensation in the market and brought big prices. The apples were of the Peabody Nonesuch variety.

"A WESTERN SCHOOL Second Prize, by Chas. F. Soehner, Armel, Colo.

### Solgram Sensitized Paper and Chemicals

Are Now on the Market No process has ever been devised that so clearly and permanently reproduces the colors and shades of the object photographed. The directions are simple and the results most pleasing. Any one with a slight idea of ordinary photography can do it readily. Either plate or film can be used.

Solgram Paper and Chemicals will be sold by supply dealers generally, or will be mailed postpaid on receipt of price.

Each package of one dozen sheets of paper will contain the two powders for developing same with-out additional cost. This makes The Solgram the most economical, as it is the most beautiful and most economical, as it is the most beautiful mind-fascinating process in photography. Equally good for Portrait, Landscape or Still Life. Every pack-age of paper and chemicals has signature of W. C. South. Orders will be filled in the order they are received. Price List Mailed on Request. SOLGRAM CCLOR PHCTO CO., 10 Joseph's Alley, Downington, Pa.

### A Plate Camera for 50c

Takes a picture 2\sum x2\sigma inches, will do as good work as the more expensive ones. By mail 50c, postpaid. Sample print sent upon application. Send money by P. O. Order. Address II. H. Snell, Fort Plain, N. Y.

The process of printing the photo on the apples was very simple. While the fruit was green the film with the photo of King Edward was attached, and as the apples ripened the effect was much the same as a solio print. The foliage having been fastened to one side to allow of the full exposure to the apple and film. The reason that King Edward VII's photo appeared on these first fruits was because the French peasants consider the entente cordiale greatly due to the king. Doubtless in future years many will emulate the example of the ingenious French cultivator and produce portrait fruits as advertisements. They would be a very valuable feature.—London Tidbits.

### Removing Fixing Soda

Removing Fixing Soda

It is a well-known fact, that the complete removal of fixing soda from the gelatine films of dry plates by water is very difficult, and the natural consequence thereof is that many negatives will become spotty or be spoiled entirely. It will, therefore, be interesting to many beginners in the photographic art, to hear of the process by which the fixing soda can be almost entirely removed and completely faultiess plates be obtained.

Prepare a solution of permanganate of potassium, about 1:100. This, well corked, will keep for an unlimited time in a dark place Wash the fixed plates for 20 minutes in running water. Now fill a tray with water, and add a few drops of the permanganate solution, just about enough until a faint red coloration shows itself. This solution has to serve two purposes: First, as indicator for the fixing soda that is present, and then as destroyer and remover of the same. Into this solution put the washed negative, and you will find that the red coloration of the same will soon change to a yellow wine color or light yellow. If this has taken place, pour out the solution, and repeat the manipulation until no more discoloration takes place Wash now for about 10 minutes in running water.

The above method is particularly of service when large quantities of negatives have to be finished in a short time.—W. Reche in German Ex.

### Groups

Most amateurs attempt group photography at a very early stage in their photographic career—usually with disastrous results. This is not to be wondered at, for this branch of photography is one of the most difficult. Those who are a little experienced know the difficulty of obtaining a good portrait of a single person. In a group this difficulty is increased many times, first on account of the number of tigures, and secondly because of the need for a general balance in the composition.

position.

It is necessary to recognize, moreover, that the average lens has not by any means a flat field at full aperture, and that it is therefore necessary for the people on the sides of the group to approach nearer to the camera than trose in the centre. Then there is the necessity of avoiding straight lines and awkward paps. The heads of the sitters must not be too close towether or too for susert. Care too close together or too far apart. Care again must be taken not to get anyone's limbs too close to the camera, with consequent evaggeration of their size. Finally, it is absolutely necessary to make the people compoint the groups appear as far os possible at their ease—avoiding all stiffness and arti-ficiality. Bearing in mind even these few of the many points which have to be considered in taking a group, it becomes clearly apparent that it is unwise for any who are not fairly experienced to attempt such work.

### Enlarging at Home

Enlarging at Home

The amateur using a small camera for his photography accumulates a number of good pictures, which, to do them justice, require enlarging and, although the photographer may be desirous of seeing his work enlarged, he may not feel justified in expending the necessary amount of cash to get the enlarging done for him, being unaware, perhaps, that he can carry out with his small camera tif it be not box-form; enlarging by daylight, with very little trouble. Having chosen a room with few windows, proceed to cover the panes with brown paper. Now cut away a portion of the paper, in size and shape of the focusing screen, back the camera up close against the cut-away portion of the window, so that the light coming in will pass through the negative and out of the lens. Having placed a sheet of white paper up in front of lens, proceed to focus in the ordinary way, racking the bellows out until the image appears sharp. Now cap the lens, and having substituted the sheet of paper with a piece of bromide paper, the exposure is made. A trial strip should be used to first gauge the exposure. Cover the strip with a piece of cardboard, open the lens and draw cardboard down, so that about one-sixth of the paper is exposed for ten seconds; then move the card down a little lower for ten seconds, and so on, until each of the six divisions has been exposed. The top part will have received 60 seconds, the bottom 10. When developed, the slip should show what exposure to give. Outside the window should be placed at an angle of 45 degrees, a piece of white card or looking-glass, to reflect the light into the camera.—Photographic Times.

By means of the Amateur Photographers' Correspondence Club, beginners can receive information of greatest value from their fellow-amateurs. Only 50 cents to join. Write Correspondence Clubs, care The American Boy, Detroit, Mich.

# The Boy Mechanic and Electrician

A Permanent Department

Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns.

### Query Box

Please tell me what to do when a "dead center" occurs in the armature of my motor? center" occurs in the armature of my motor?

Ans. It is difficult to understand just what causes this "dead center," since you have given no details as to the design of the motor. In the absence of such details I should advise you to look over the connections thoroughly and see that there has been no short circuit at any place. Then see if all connections with the commutator bars are in good condition and that the commutator is a true cylinder. It might be possible that one or two of the bars are low and thus short circuit the armature at this parshort circuit the armature at this par-ticular point.

I have constructed the hectograph described in the May issue of "THE AMERICAN BOY," but I find that after having made an original on the pad the ink will not wash off. I used "hectograph ink." The paper will often pull up pieces of the pad, making it rough. Can you suggest any remedies for these defects?

C. A. B., St. Louis, Mo.

Ans. It is not possible to wash off the ink immediately after the impression has been made. It is necessary to allow time enough for it to sink into the composition. Then it will not appear on subsequent copies. The cause of the composition sticking to the paper may be that it is too soft. You might try a greater proportion of glue.

In regard to the wireless telegraph instruments recently described can different sizes of wire be used for the coherer, sounder and relay? I have No. 24 for the sounder, No. 31 for the coherer and No. 27 for the relay. E. V. H., Topeka, Kansas.

E. V. H., Topeka, Kansas.

Ans. These different sizes may be used, but it would be better to use No. 31 on the relay magnets and the No. 24 for the sounder. It is advisable, however, to use the same size wire for both the sounder and coherer magnets in order that their resistance may be practically the same, but should you use wires of the above sizes it will be necessary for the magnets to be so wound that their resistance will be practically equal.

Will you please answer the following questions in the "Query Column"? How far will the telephone described in the May issue operate? Could not a receiver be made like the transmitter and connected to the hemp shoestring? What is the gage of the wire enclosed and is it all right for telephone line wire? Can tin cans be melted? If so, how? Could the hearings for the motor described in the March issue be made out of a brass cartridge shell?

Ans. The telephone described is not in-

Ans. The telephone described is not intended for operation over long distances, but if well put up would perhaps work well for several hundred feet. Your second question is rather ambiguous. If you mean to simply connect a receiver to the hemp shoe-string by another which would not be taut, it would not work. This telephone depends upon the tension of the string for its operation, and were you to place two instruments side by side, one to act as receiver, and one as transmitter you might find some difficulty in preventing the first acting upon the other as a damper. The gage of the wire enclosed is No. 27. If your question refers to the use of this wire for an electrical telephone, it would hardly be large enough, but it would do very nicely for the telephone described in the May issue. A cartridge shell would make a very good bearing. Ans. The telephone described is not in-

What is a wheatstone bridge? Could a current from an ordinary dry battery or a Grenet cell decompose water? Will heating a magnet destroy its magnetic properties?

G. A. B., Toledo, Ohio.

Ans. A wheatstone bridge is an instrument used for determining comparative resistances in electrical work. The current from a dry battery is hardly sufficient to decompose water, but that from a Grenet cell might do so slightly, provided the water was strongly acidulated. Heating a magnet will destroy the magnetic properties.

Why could not the receiving apparatus for the wireless telegram consist of the coherer and tapper alone if the connections were like those shown in my sketch?

M. F., Suffern, N. Y.

It is doubtful if this scheme Ans. would work owing to the very high resistance of the filings in the tube, which would not carry sufficient current to operate the tapper magnets.

I have had difficulty in connecting several instruments, as shown in the enclosed diagram, to a single key so that any one may be operated by turning this key. Will you please answer it in the next issue of THE AMERICAN BOY?

P. C., Birmingham.

Ans. Below is given a sketch showing the proper method of connecting the several instruments which you have shown, to one key.

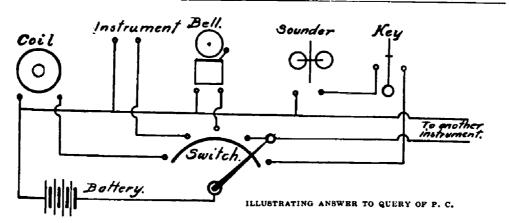

Will the telephone described in the May issue operate on a line one-half a mile in length? If not, could it be made, by further improvement, to work over the required distance, and what would such improvement be? What size line wire should be used?

W. K. K., Butler, Ind.

W. K. K., Butler, Ind.

Ans. It is doubtful if this instrument would work well over a line of the length you mention as the vibrations imported by the diaphragm would be very feeble by the time they had reached the other end. We can suggest no improvement that could make this line successful. In using it for a short line we would suggest the use of No. 20 iron wire.

Can a regular telegraph relay be used in the Can a regular telegraph relay be used in the wireless telegraph outfit described in the January and February issues? What resistance in ohms should its magnets have? Could I use the magnets and tapper of an electric bell for the tapper of the coherer? Can the magnets of a bell be used as a sounder if they were made to click? In large apparatus used in practical installations, does not a telephone receiver take the place of the sounder? What

number wire is used on an ordinary bell magnet?

A. S. T., E. Orange, N. J.

A. S. T., E. Orange, N. J.

Ans. A telegraph relay may be used, and its magnets should be wound for a resistance of two or three hundred ohms. The electric bell magnets may be used for the coherer tapper, and they can also be used for a sounder. The telephone receiver is often used in place of a sounder in large installations, and also in smaller ones, as it is far more sensitive than any telegraph sounder can be. Bell magnets may be wound with number twenty or twenty-two wire.

1. Please tell me through your columns if a 220 or 230 volt motor will run satisfactorily on a 250 volt current? 2. Does resistance wire get hot when 140 volts are passing through it? 3. Would a series or shunt wound motor that consumed 6 volts, be required on a 250 volt circuit with a 244 volt lamp connected in series with the motor? 4. How is an instrument for telling the positive and negative poles made? 5. How much No. 25 German silver wire is necessary to reduce a 250 volt circuit down to 110 volts, so that I may run a motor with it? 6. How much stove-pipe wire would be required to accomplish the same result?

S. M. L., Midland, Mich.

### How to Plant Forest Seeds and Trees

Edited by Robt. G. Griswold

Sounder

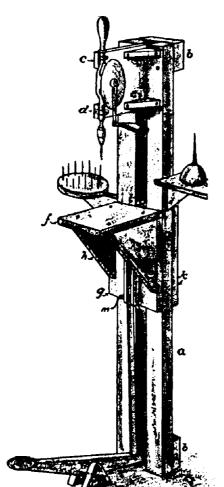

Rey

Good Judgment is neded in the planting of the forest seeds as regards the distance they should be place right to the forest seeds as regards the distance they should be place right to the distance they should be place right to the distance they should be place right to surface, as too shallow covering will result in the drying up of the seeds, and too deep covering may endanger their seeds a medium depth is a safe rule deep for large seeds, thin for small ones. The following the place of the seeds as medium depth is a safe rule deep for large seeds, thin for small ones. The following the seeds as a medium depth is a safe rule deep for large seeds, thin for small ones. The following the planting the seeds as a medium depth is a safe rule deep for large seeds, thin for small ones. The following the seeds is the safe the soil is or may be oxeded to the standard the safe of the seeds may be covered more deeply.

The manner of planting trees varies to some extent in fifteent states, but the same of the safe o

### Small Drill Press How to Build a

EVERY amateur's workshop a small drill press is almost an absolute necessity, and the cost of many of those on the market is beyond the pocket of the average boy. But this fact need not prevent his owning one, and a very serviceable one at that. The drill pictured below can be readily built in a few hours and will be found to give satis-

faction: it might also be called a "power feed" drill, since the work is fed to the drill by pressure of the foot on the lever below.

The drill proper is a small hand or breast drill, such as may be purchased at any tool dealers for about one dollar. This embodies the driving gear spindle and drill chuck, the most difficult parts to make and beyond the ability of the average amateur. Those of you who have used a small hand drill with very small drills can fully appreciate the advantage of having the stock rigidly held. There is an annoying tendency for the pressure of the hand on the crank to cause the drill to bend from side to side, often breaking it off short in the chuck jaws.

Then again it is very difficult to make a small drill follow or cut in a particular place unless the stock is firmly held, a feat very trying by hand alone. This is due mainly to the fact that the drill must necessarily be driven very slowly by hand, since, if a high speed is attempted a small drill will be either bent or broken at the start, and small drills require a high speed to make them cut properly.

The post of the drill, marked a, is

The post of the drill, marked

inches in section, and 4 to 5 feet long. Plane them perfectly smooth and straight and secure to the battens bb by gluing and two long screws in each end. The space between them should be 1 inch, and exactly parallel so that the table may slide up and down between

table may slide up and down between them.

The drill is securely fastened to a bracket c by means of small clips d. The wood is carefully cut out so that the stock fits it perfectly, allowing of no side-play or looseness. This bracket is fastened between the strips a by glue and long screws. The axis of the drill must be exactly parallel with these strips. Four small brackets e, two on each side of c, are glued in place which serve to make c rigid.

The table f upon which the work is placed, is also made of hardwood, such as maple or walnut, planed perfectly flat and true. It is mounted on the slide g by means of the two brackets h, glued and screwed into place. The table f must be perfectly square with the drills. On the back of the post is another slide k, also of maple, which is fastened to the front slide g by means of three ½-inch carriage bolts passing through the slot in the post. These pieces are held apart by the strip l, which is an exact fit in the slot and slides up and down free-ity. When the table is assembled it should so fit the post that it will slide freely but still allow of no shake.

To the front of slide g, and beneath the table f, two 1½-inch by ¾-inch strips of maple are secured, each being provided with a row of ¾-inch holes two inches apart, through which a steel pin is passed.

Directly beneath the table and secured to the floor is a feet lever by means of

is passed.
Directly beneath the table and secured on the floor, is a foot lever by means of which the table may be raised to the drill. This lever need not be over 15 inches in length, as no great pressure should be used with small drills. A connecting rod 1½-inch by ½-inch is

fitted into a slot in one end, the upper end being free to allow placing the pin in any of the holes. By this means a ready adjustment is provided for work of different thicknesses.

A small bracket with a circular shelf turning about a screw in the middle may he provided into which the drills can be placed, thus keeping them at hand for immediate use, while on the opposite side another shelf may be provided for the piece to be drilled is placed on

The piece to be drilled is placed on the table and with a slight pressure of the foot, fed to the drill. Small pieces can easily be held in the hand to prevent their turning and if larger drills are to be used, clamps may be easily screwed to the table to prevent their turning. If the sliding surfaces are rubbed with a wax candle or graphite, they will work very smoothly and without sticking. Should the weight of the table be insufficient to make it fall after the pressure of the foot has been released, one or two bricks may be fastened to the rear slide.

The writer used a small drill-press of this kind in his first shop many years ago, and has done some very accurate work on it. The foot soon becomes very sensitive in responding to the advance of the drill and follows it quite smoothly.

### The Flamingo's Plumage

There are about seven species of flamingoes, three of which are in America, frequenting the Bahamas, Florida and Cuba. In height the flamingo averages about five feet. If its curved neck were stretched to its full length the bird moved toward about the hord of an

stretched to its full length the bird would tower above the head of an ordinary man.

During May and June, the breeding time, the bird's bright colored plumage is faded, but reassumes its most radiant hues in winter. When first hatched the young have straight bills, which, after a time, develop into a bent shape.

The first plumage is grayish white, and passes through various tints of pink, rose, carmine or vermilion to the full scarlet of the adult, which reaches its deepest shade on the wings. Several years are necessary to perfect the final gaudy plumage.—Scientific American.

### CLEVER WORK WITH THE POCKET KNIFE JOHN L. DOUCHENY

FOR LAST PRECEDING ARTICLE, SEE FEBRUARY (1905) NUMBER

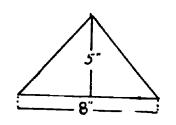

carefully worked out and accurate in every detail.

Have the clock you intend to enclose at hand, so you will be sure and get the circular opening in front exactly the same size as its dial. Place the clock, face down, on a piece of card board and draw a circle around the edge. Make another concentric circle a half inch outside the first and cut on the lines with a scissors. This constitutes a pattern for the round wooden frame. The latter is made of three thicknesses of cigar box wood. Cut a box into strips and lay them over the paper ring covering every portion of it. In putting on the other two layers be careful to break joints. Place the pattern over this rough frame, outline it and shave off even with the two layers be careful to break joints. Place the pattern over this rough frame, outline it and shave off even with the knife. Nail two twelve-inch strips as in Fig. 1 to the back of the ring, and one more of the same size to the narrow outside edge of each of those already on. The lower extremity of the ring should be six inches from the lower end of the strips. Next we make a simple box-like frame. The upright are twelve inches long. The crosspices for the top and bottom are six inches long. The manner of joining is shown in Fig. 2. Since it is a common alarm clock we are going to enclose we will have to put in a shelf to bring it to the proper height. This is best done by tacking small triangular blocks on the inside of each upright and then laying o'er them a snugly fitting (one-half inch) board that can be easily removed. Be sure and have the shelf at a height that will per-

can be easily removed. Be sure and have the shelf at a height that will permit the clock face to fit closely into the

mit the clock face to fit closely into the circular opening.

The roof frame is our next consideration. The one described here is the best for a first attempt. It is made of four pieces of one-half inch material. The front and back are triangles of equal size, twelve inches wide at base, vertical height five inches. The two sloping pieces are cut to join vertically at the top and extend one and one-half inches over the frame upon which they rest. This will make their length fifteen inches. You can fasten them together rest. This will make their length fifteen inches. You can fasten them together with small nails, or if you wish to do extra good work, with wooden pegs. The roof structure is shown in Fig. 3. You may put on a chimney or small pieces to imitate shingles. If you prefer a snow-covered roof a little cotton, fastened with glue and sprinkled with fine glossy particles will answer. For the old-fashioned thatch use excelsior in-

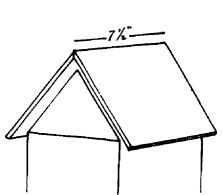

Fig. 8

stead of cotton. The front finishing is a matter in which you had better exercise your own judgment.

your own judgment.

The circular opening must be made a little smaller by tacking around it pieces that will extend over the brassy rim of the clock when it is in position. You can get a pretty effect by tacking around the circumference a piece of velvet and pinning on it buttons, representing the flags of all nations. The pieces of wood, if you use them, should be about the size of postage stamps. Two sharply contrasted colors arranged; alternately looks pretty. The whole is now enclosed in plain lumber. A quarter-inch piece of basswood or maple is good material. This completes the job. The beauty of the finished article depends altogether on the amount of pains you bestow upon it. Fig. 4 is a miniature wooden church.

### HOME-MADE MOUSE TRAPS

M ANY of the traps designed for catching mice are curious and interesting. Everyone is familiar with certain kinds.

ing. Everyone is familiar with certain kinds.

In the following article, we will show how you may make a few of these traps at home. No special apparatus is required—only such things as are found in or around every household.

A trap suitable for catching garden or field mice is shown in Fig. 1.

To construct it, first drive a stake firmly into the ground, near the spot infested with these creatures. Then take a piece of string and fasten a small peg to one end and drive it well into the earth. Thread two or three peas upon this string near to the ground and, tilting a brick upon one corner, bring the string over it and fasten securely to

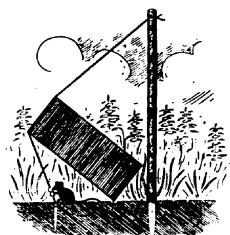

Fig. 1

the top of your stake. The illustration will make clear our meaning. The field mice will gnaw through the peas and string, and, much to their surprise, down

string, and, much to their surprise, down will come the brick.

In Fig. 2 we have a contrivance better suited for the pantry shelf. For its construction we need a large tumbler, a hook, a piece of thread and two pins. First, fasten your hook into the shelf above. Then stick one pin through a piece of toasted cheese and bend the other pin to form a hook—now tie both, near their heads, one at either end of your thread.

of your thread.

Fix the pin, holding the bait, into the shelf—above it tilt your tumbler—carry your thread up over the hook at the top

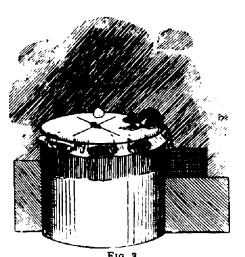

your thread up over the hook at the top and down again to the glass, allowing the bent pin to hook over the rim of the glass and hold it in position.

The illustration gives an excellent idea as to how this should be done.

Now the straight pin must be weakened until it will only just support the tumbler at the proper angle. When a

Fig. 2

mouse nibbles at the dainty morsel prepared for it, out comes the pin and down falls the glass, and Mr. Mouse becomes a prisoner.

Perhaps the best trap for all purposes is that shown in Fig. 3. It is made from a large jar, over the mouth of which has been tightly stretched and fastened a piece of paper.

Two cross cuts are made in the center of this paper, so that it forms a kind

ter of this paper, so that it forms a kind

of pitfall.

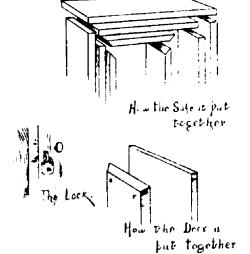

The bait is fastened above the center by means of a thread as shown in the illustration.

As soon as a mouse approaches the bait, it drops through the pitfall into the jar; the paper flying back prevents all possibility of escape. It is then ready for number two. Boxes of different sizes should be placed close to the jar to enable the mice to reach that elevation. The advantage of this trap over the others, is that any number of mice may be caught with but one setting.

### MAKING A "SAFE" FOR **MONEY**

By DWIGHT WOODBRIDGE

VERY common possession among boys who take care to save their spare pennies is a bank, usually a small metallic affair that answers its purpose very well while one is very young. But when we are older we like

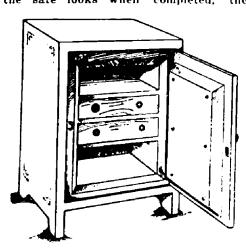

to do things in a businesslike way! Well, here is a "safe" that a boy can make, and when it is completed it will not only look like any "grown-up" safe, but will be commodious enough to hold other possessions besides money that a boy may wish to keep "safe."

wish to keep "safe."

It must be made of wood, of course, but we will make it so thick and so strong that it will be pretty nearly bur-

roor. largest illustration shows how afe looks when completed, the safe looks when

door being opened to show the construction of the latter, and how the interior may be arranged. Another illustration shows how the safe is put together. The

### **Build Your** Own Boat BY THE BROOKS SYSTEM

you can drive a nail and

IF you can drive a nail and cut out a piece of material from a full-azed pattern you can build a canoe—row boat—sail boat or launch in your leisure time at home, and the building will be a source of profit and pleasure.

All you need is the pattern costing from \$2.50 up and materials from \$5.00 up. The tools are common in every household. Patterns of over forty styles and sizes—all lengths from 12 to 55 feet.

The Brooks System consists of exact size printed paper patterns of every part of the boat—with detailed instructions and working illustrations showing each step of the work, an itemized bill of material required and how to secure it.

¶ Over six thousand Amateurs successfully built boats by the Brooks System last year. Fifty per cent. of them have built their second boat. Many have established themselves in the boat manufacturing business.

Originators of the Pattern
System of Boat Building
2600 Ship Street,
Bay City, Hebbean

top, sides and bottom, it will be seen, are composed of three pieces of board each. These boards may be three-quarters of an inch thick. The outside pieces are put together like an ordinary box, which is then lined with the next layer, three-quarters of an inch narrower than the outside, so that the rim of the door may fit into the depression and be "flush" on the outside with the edges of the outer set of boards. The third set of boards is just as wide as the second set, only the front edges are beveled, as shown in the cuts. Into these beveled edges fits the beveled-edged lining to the door when this is closed. Another cut shows the door with this beveled-edge lining screwed to it. If the boy-carpenter is equal to the task, a lock can be "let in" to the door, but otherwise it will be wiser to use a padlock fitted in the manner shown—a staple passing through a slot in the door. When the carpenter work has been finished and the outside surface made as smooth top, sides and bottom, it will be seen, passing through a slot in the door. When the carpenter work has been finished and the outside surface made assmooth as possible with sand-paper, paint the whole with two coats of black paint, mixing a little varnish with the last coat. A bit of "striping" about the corners with red paint will help out the effect, and make it look more like a real safe. Fit the interior in any way desired, or in the manner shown, which gives, two shelves and two small drawers. A good size for the safe would be a foot square, outside measurement, by nineteen inches in height.

### Boy's Hand-Power Auto

The picture shows what a nine-year-old boy at Oakland, Cal., constructed. His name is Earl Clifford. He took a coaster wagon and by means of a bam-boo lever placed vertically and operat-ing a short horizontally working wooden "driving rod," connected to an iron crank

fastened to one rear wheel, succeeded in producing a machine that makes quite good speed. The illustration shows the arrangement, which any bright hoy can make with a few tools. Earl made this wagon motor without any suggestions or assistance from any one .- Popular Me-

President and Editor. Vice-President and Ass't Editor. Secretary and Treasurer.

Carclough calls fishing an idle and un-social amusement which interferes with the games and encourages loafing. Of course it is only right and proper for him as captain to take that view, but nevertheless I maintain there is nothing like it for bringing fellows together and attaching them to each other. I don't mean in the literal sense; though I have known cases.

Once Fanshawe was fly-fishing on the Ripple just below Welford Aqueduct, where the canal is carried across the river, when a high and incautious cast caught the left ear of an inquisitive old caught the left ear of an inquisitive old gentleman who was leaning over the parapet of the aqueduct and watching the sport. As Fanshawe was well under the arch he could not see at first what had happened, and though the old gentleman talked pretty fast he didn't explain very clearly. They say Fanshawe played him for several minutes before a hencyclent harges came to the rescue a benevolent bargee came to the rescue and cut the line. It was rather awful, for he turned out to be a director of the Bank of England; a gold fish, as Crikey remarked; and he seemed to think that Fanshawo had done it on purpose, which was impossible. Several fellows experimented there afterwards, and al-

ways missed.
Still, as I was saying, a common taste for fishing does attach fellows to each other, and as soon as I found out that Briant was an enthusiastic angler there seemed to be a fresh bond between us, and an expedition was arranged for the

and an expedition was arranged for the next half holiday.

Thursday afternoon was warm and cloudy with a soft breeze from the south the kind of day when a young trout's fancy lightly turns to thoughts of grub. We did not linger long over the boiled beef at dinner, and were fairly quick in getting our tackle ready afterwards, but it seems that others were quicker for when we came in sight of the Aqueduct there were already several anglers established in good positions on the river bank. To reach it it is necessary to to the surface he began flopping about in cross the Aqueduct, which is in fact a the water in a way that showed that he viaduct as well, carrying both canal and pathway over the Ripple in a single span. However, and would be totally unable to For ours is but a narrow river, though For ours is but a narrow river, though crystal clear and full of fish; with deep

For ours is but a narrow river, though crystal clear and full of fish; with deep dark pools where the trout hide and the otter comes like a tax gatherer and feels his way in with his whiskers.

As we trotted across the aqueduct, Briant leading, for we had tossed which of us should carry the baskets and I had lost, we heard a hail which seemed to come from some place close at hand, though at first we could not imagine where. Then looking over the parapet we saw just below us young Washington Pickens, who had established himself on a bossy projection just over the keystone of the arch and was quietly preparing his line. The place itself looked perilous enough, and to reach it he must have walked along a ledge only a few inches wide and here and there much crumbled away. However the advantages of the post were undeniable, and we were immediately consumed with envy of the enterprising Yankee.

"Safe as the U-nited States," he called out, replying to an observation of mine on the risk he was running. "Just keep your eyes skinned and your ears cocked and you'll see me pull out a ten-pounder before you've got your rods fixed."

your eyes skinned and your ears cocked and you'll see me pull out a ten-pounder before you've got your rods fixed."

"How did you dodge the tollkeeper?" was my next inquiry, for old Crabbe was a character and no friend to Crosscombe "Dodged him with a shilling!" said Pickens coolly. "Now run along like good boys and go and catch minnows! No, I haven't got leave from cricket, if you want to know." This in answer to another question. "But I guess I know better than to spend the afternoon chasanother question. "But I guess I know better than to spend the afternoon chasing a fool of a ball. I bet I do, and if Carclough wants me he will have to come and fetch me." He settled himself comfortably on his dangerous perch, and ilropped his line just in the centre of the deepest pool, where you could generally

count on finding one or two big fellows

at home.
Briant and I went on across the Aque-Briant and I went on across the Aqueduct and descending to the river on the other side, found to our disgust that the best station near the arch was already occupied by Crickhowell and Postlethwaite, though the latter only was now fishing. As for Crikey, as usual, he had tired of the occupation in ten minutes and was lying on his back under the shade of a willow tree, with one of his lean legs cocked over the other, writing poetry. Crikey always wrote verses in poetry. Crikey always wrote verses in his spare moments, and some of them used to be printed in the poet's corner of the Westshire Mercury. Baines de-clared that Crikey paid for their insertion at advertisement rates; but that was his rotten envy. I read some of them myself, and they were ripping; miles better than Tennyson.

We had very fair sport, though noth-

We had very fair sport, though nothing to compare with that which young Washington had in his crow's nest. Whenever we looked up there seemed to be a streak of silver glittering and dancing at the end of his line, and though he disdainfully tossed two-thirds of his captures back into the stream, he soon had a round dozen of real beauties on the ledge beside him. Every time he caught a fish worth keeping he put his hand into his pocket and rewarded himself with an American caramel. Beastly dangerous sweets, I call them! Get one of them into your mouth in class and then let McCloskie, with his usual malignant cunning, ask you a question out of nant cunning, ask you a question out of your turn. You can neither bolt it not chew it, and have to sit there with the lockjaw while Sandy indulges in what he calls "wut" at your personal expense.

The afternoon was wearing towards evening and Briant and myself were just taking our rods to pieces and preparing to start homewards, when an exclama-tion from Rene made me look up and we A FRENCH FROG AND AN EAGLE (Continued from page 500.)

It was some time before Postlethwaite recovered from the shock occasioned by the Yankee's perfidy, and though their friendship was eventually renewed it was never quite so cordial and intimate as before.

CHAPTER X.

AT WELFORD AQUEDUCT.

It of the river appeared Carclough and Mr. Villiers Brown, on the lookout for defaulters at cricket. For ourselves, there was nothing to fear, as our permits were in our pockets, but Postlethwaite and Crickhowell were at that very moment crossing the Aqueduct and would certainly get bagged. In fact we saw Villiers Brown stop them on the other side while Carclough came on alone reconnoitering. It was evident that as yet he did not see Pickens, and the latter might easily have escaped, but the latter might easily have escaped, for his reluctance to abandon his catch As it was, he wasted valuable time in gathering the trout together and cram-

him over!"

As we ran up the path to the Aqueduct the slope of the embankment hid Pickens from us, but we guessed that he would keep under the shelter of the parapet as long as possible. He did so, and with disastrous results. The narrow ledge which he had to traverse was here and there almost compiled away. Border which he had to traverse was here and there almost crumbled away. Besides Pizarro was encumbered with his rod and creel now so well filled. He could never afterwards clearly describe how it happened, but just as we reached the top of the slope we heard a shout and s splash, and looking over the wall saw Pickens struggling in the water.

He could swim a little, but I suppose the depth of his fall had half-stunned him, for the force of the current seemed

the depth of his fall had half-stunned him, for the force of the current seemed to twirl him like a top, and he was swept helplessly down stream, till he caught a projecting willow branch and clung desperately to it, while his cries for help rent the air.

"Hold yourself tranquil, Mordaunt!" said Briant as I threw off my jacket. "See the captain goes to plunge!"

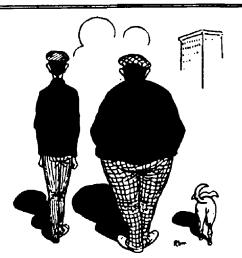

Carclough had rushed to the edge of the aqueduct at the first cry that Pickens uttered, and as soon as he had taken

ens uttered, and as soon as he had taken in the situation he sprang upon the parapet, doffed his cricket blazer and dived in without the slightest hesitation, though the drop was a most formidable one. To me, who knew very little about it, he seemed to go down straight enough; but Briant made a kind of hissing noise between his teeth, and called out:
"Fichu!"

help Pickens.

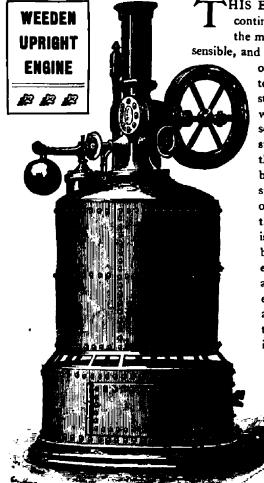

Then, as Postlethwalte and Crikey came hurrying up, with Mr. Villiers Brown a little behind them, we all saw the finest sight in the world: a difficult feat easily and perfectly performed Briant's movements had seemed to me alarmingly deliberate, but when at last he had cast aside his jacket and kicked off his shees and stood up on the paraoff his shoes and stood up on the para-pet ready for the plunge it was evident that here, at any rate, there would be no blundering, and that the unfortunate Pickens would be saved if he could hold on to his willow branches for a few sec-

onds longer.
"Down to the bank, and help them in!"

RUDE BOYS SAY THIS TRIO LOOKS LIKE 100

# AN ENGINE EASILY EARNED

HIS Engine still retains its popularity, and still continues to be easily the best dollar engine on the market. ¶ In construction it is simple and sensible, and in all its parts strong and durable. Unlike

other dollar engines it has no steam pipes to get filled with rust and dirt. The steam chest, steam and exhaust ports, whistle, whistle valve and throttle valve seats are all cast in one piece, and locked steam tight to top of boiler. It is made throughout of well tempered polished sheet brass. It exhausts steam through the smoke stack as shown in cut; which no other engine does. ¶ The safety valve is the lever and ball pattern. The valve seat is made large in order that the boiler may be easily filled through it. ¶ Every engine is thoroughly tested before packing, and fully warranted. ¶ All parts of the engine are interchangeable and we have always on hand duplicate parts with which to supply our customers. 

¶ Each engine is packed securely in a wooden, lockedcorner box suitable for mailing or expressing. ¶ Full directions for running the engine will be found in each box, with the price of duplicate parts.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35 cents. Price \$1.00 postpaid.

THE SPRAGUE PUBLISHING CO. DETROIT, MICH.

went curving down, down, close to the surface of the river with a scarcely persurface of the river with a scarcely per-ceptible splash, then reappeared swim-ming swiftly and strongly towards the American, who had ceased his yells for succor and seemed about to be swept away. Then for half a minute the wall hid them both from us; and when we reached the willows the rescue was al-ready effected, though Pizarro lay on his back nale and senseless supported by back pale and senseless supported by René, while Carclough, who had now re-covered his scattered breath and wits.

covered his scattered breath and wits, was doing what he could to assist him. We joined hands and drew them one by one up the steep bank, Pickens first white as a sheet and completely unconscious, then Carclough, a fearful weight and lastly Briant, who came out laughing, as if at a very good joke, and began shaking the water from his clothes over us, like a Newfoundland dog. He turned serious enough, however, when he saw how bad Pickens looked, and set about helping Villiers Brown to restore him It was lucky that we had the master there, for all that I myself could remember of the rules for resuscitating the apparently drowned was that you must not parently drowned was that you must not roll the person on a barrel; a useful thing to know so far as it goes, but it does not go far enough. However there was no fear of our trying such a monkey

rick as that, for there was not a bar-rel within a mile of us.

Under Villiers Brown's direction we first of all removed the clothes from Pizarro's neck and chest, and then wiped away the ooze and scum of the river from his lips, afterwards turning him a little on one side so that he might get rid of the water he had swallowed. Then we drew his arms up and down to simulate the motions of breathing, two of us rubbing hard all the while, till Pickens sighed, and a faint color came back into his face. We rubbed harder than ever then, and Carclough, who had charge of the arms, worked them for all he was worth. Then Postlethwaite, who had been sent off to the Seven Stars, on the other side of the bridge, for brandy, came running back with a bottle, and Briant managed to get a little between the patient's teeth. After that it was easy, and in a few minutes Pizarro was able to sit up and speak. He said we were a set of Rotters. late the motions of breathing.

(To be continued.)

### Boys

When my dad talks to me 'n Gus,
'Bout when he was smail, like us,
He was the best boy ever yet;
'N never got his shoes all wet
A-walking through 'most ev'ry pool,
When, rainy days, he went to school.
He never was as bad as us,—
When daddy talks to me 'n Gus When daddy talks to me'n Gus

Ile never scrapped with Uncle Jack,
'N never, never put a tack
In people's chairs; 'n, not like me,
Was prompt at dinner, breakfast, tea.
He never swiped a jar of jelly;
'r never called his stummick "belly."
He never tried to smoke and cuss,—
When daddy talks to me 'n Gus.

He never pinched his sister's cat, 'N put black beetles in her hat.
He never broke the baby's toys: 'N when he played, he made no noise. But sometimes, Uncle Jack 'n he Smoke 'n rec'lect things, after tea, 'N what they say, don't sound to us, Like when dad talks to me 'n Gus.

since the raid, and for hours he could find no other clew. Then he came upon the first bits of cloth which marked the At once he remounted his horse. trail. trail. At once he remounted his horse, clinging to this last hope, ignorant that that trail led not north, but far to the southwest. He rode all night and next evening came again to the home-spot, bringing with him six companions. They camped in a rocky fort near the fragments of the burnt stockade, and broiled their venison. The sun was still bright beyond the western ridge, but the shadows were gathering close about bright beyond the western ridge, but the shadows were gathering close about the fire. The frontiersmen ate in silence; it was the habit of the woods; about them the forest was still as death. Kinnard sat apart, smoking, his facopale and stern, his eyes upon a gap among the pine trees, lit by the western glow. Suddenly his gaze became fixed; then he rose, his eyes still on the height, and stretched his arm towards the sunset. Startled by his manner, his com-

set. Startled by his manner, his com-rades followed the gesture. Between the ranks of pines, motionless, stood an Indian warrior, a single feather in his scalp-lock, his left hand holding a rifle, his right extended as if pointing into the shadows. For a minute he was thus, a clear-cut silhouette against the sky. then was gone from the niche among the pines.

then was gone from the niche among the pines.

Kinnard, too, had vanished when his comrades turned to speak with him. He had gone alone, reckless of an ambush, in his fury. They cautiously circled the vailey and crept up the western hill. They found him standing by a great pine, and on its trunk, shining white in the evening, was fastened a piece of birch bark, carved with rude picture-writing. At the base of the tree lay a few bits of colored cloth.

Those bits of cloth meant that the marked trail was false; there was nothing left but to test the truth of the Indian's message. Next morning Kinnard set off for Pittsburg, to send an offer of ransom to Dunquat, the great half-king of the Wyandots, in his village at Upper Sandusky.

Years after Ohio became a state a piece of birch bark, rudely carved, hung on the wall of a small cabin on the Muskingum, not far from the place of the little Moravian village. There, at evening, the children used to gather about their mother, asking for a story.

"What story?" she would say.

"About the bark!" came the chorus.

So she would tell them how God softened the hearts of the great Wyandot chiefs, Dunquat, Red Eagle and Gray Wolf, so that a little girl was restored to her father's arms.

"And I was the little girl, Rose," said

"And I was the little girl, Rose," said

ACATIONS have come to be a necessity, but they cost money. A replenished pocket book is extremely desirable. Canvassers for The American Boy always have money because of the popularity of the best boys' paper in the world and the liberal terms we give.

### AMERICAN BOY DAY AT PORT-LAND. OREGON

(Continued from page 299.)

twelve boys from the Portland Y. M. C. A., who were down for a "stunt" on the vaulting horse. Led by Prof. Myers, physical director of the association, the boys, ranging in age from twenty to ten, gave a unique athletic exhibition, every turn being greeted by great applause, especially the performance of Prof. Myers himself and the funny antics of the youngest of the boys, who, half clown and half athlete, showed himself a real entertainer.

Then came the salute to the flag, which capped the climax to the fine program. The athletes had left the stage. By Mr. Sprague's side stood Chas. M. Taylor, a young bugler from Hill's Military Academy, of Portland. Far down the center aisle, at the back of the auditorium, stood Angus M. Berry, holding aloft

a fine American flag.
"To the Colors!" announced Mr. Sprague. The bugler put his bugle to his lips and there sounded out the bugle honors to the flag. Then the band struck up the Star Spangled Banner; the audience came at once to its feet and, as Berry came forward up the aisle bearing Old Glory, applause arose on every hand. Straight up the aisle marched the colorbearer, till mounting the steps to the platform he stood beside the bugler, facing the audience, the flag floating gracefully from its staff in full view. It was an inspiring moment when the band, having ceased playing, Mr. Sprague extended his right hand to the flag and repeated the following, each sentence being repeated in unison by the entire company with uplifted hand: "I pledge alleglance to my flag, whose stars and stripes stand for bravery, pur-

CHAS. WM. BOBISON

ity, truth and union. I pledge my life, my heart, and my sacred honor to love and protect it. I pledge allegiance to my country—one nation, indivisible, with liberty and justice for all." Then came the words of the Star Spangled Banner from every throat, accompanied by the big band with its blaring trumpets and resounding drums, the flag waving with the measure of the song.

The program was now over. Mr. Sprague stepped down from the platform. Fathers, mothers, sisters and the boys themselves pressed forward to grasp his hand and thank him and THE AMERICAN BOY for making possible so splendidly inspiring an occasion.

'Great, truly, is the American Boy," was the verdict of many a heart and lip, while, as at St. Louis so at Portland, and as voiced by President Goode in his welcoming address, everyone felt there should be one day of every year in every community devoted to the boys-bringing out the boy talent to lead and inspire other boys and give American boyhood to understand and appreciate its solemn responsibilities as the coming manhood of America.

# An Explanation

Owing to circumstances beyond our control we were unable to report the exercises of American Boy Day at Portland, Ore., and Bedford, Pa., as fully as the importance of the events demanded. Some of the addresses, the prize song, the letters from famous men, many photographs could not be used this month. Our September number will present further matter of interest in this connection. - W. C. Sprague, Editor.

ters. Melville Glassco, Charleston, Ill., wins the prize for the best list of answers to June Tangles.

Dudley B. Kimball, Parsippany, N. J., wins the prize for the best lot of original puzzles. The June Tangles were many in number and required much research. So much the more credit to those who mastered them.

Honorable mention is accorded the following 2. for excellence: J. Horace Trumbull, Clinton Fisk Elliott, Walter G. Benton, Wm. G. Nyce, Rudolph Jahn, Lee Gardner, George Edward Daniel, Nora B. V. Wallace, Samuel Menlendyke, S. Ward Seeley, Benjamin L. Miller, Herman Voelker, G. H. Stanbery (May, de-

layed).

A prize of two dollars will be given for the best lot of original puzzles suitable for October Tangles, received by August 20.

A prize of a new book will be given for the best list of answers to August Tangles received by August 20.

### Answers to July Tangles

Answers to July Tangles

1. The pictures in the upright triangle, reading from the top around to the left, are: Purse, Earth, Neagh, Nahum, Hosea, Olive, Perch, Korea, Irons, Names, Satan, Loris, Eland, Ether, Hinge, Acorn, Lasso, LVIII. Their initials spell: Penn, Hopkins, Lee, Hall. Their central letters, commencing with Nahum and reading in the opposite direction, spell: Harrison, Hart, Morris, The pictures in the inverted triangle, reading from the bottom up to the left, are: Sisal, Masts, Irons, Three, Hosea, Femur, Roach, Adder, Neagh, Kahau, Lasso, Isuah, North, Chest, Hinge, Abode, Satan, Easel. Their initials spell: Smith, Franklin, Chase, Their central letters, commencing with North and reading in the opposite direction, spell: Rush, Adams, Ross, Stone.

# How to Play the Mandolin TAUGHT IN EIGHT LESSONS > By LILLIAN STANDIFORD

SEVENTH LESSON.

CONTINUATION OF HOW TO PLAY IN DIFFERENT KEYS.

You can now play in the key of C, which is the natural key; the key of G, which has one sharp, and the key of D, which has f and c sharped. We will now look into the scale of one flat, which is the key of F. The note to be flatted is b. To make a note sharp you put your finger one fret higher; when you make a note flat you put your finger one fret lower. Trill each note in the following scale:

In "Yankee Doodle" you have the dotted eighth note; a dot after an eighth note is equal to a sixteenth. The sixteenth note is a note with two hooks. A sixteenth note is one-fourth of a quarter note; so when the time is four-four, count one to every four-sixteenths.

every four-sixteenths.

"Home, Sweet Home," here has two flats—b and e. There are two e flats on the mandolin; one, the first finger on the D string—to make it put your finger one fret lower; the other, e flat, is made on the A string, with the fourth finger—place your fourth finger between the fifth and sixth frets on the A string.

RULER TEXAS RIVER OF & CO. JA PAN Dudley B. Kimball.

CENTRAL ACROSTIC.

All words of uniform length. The central letters, read downwards, spell a valley devastated by General Sheridan in 1864.

1. Hurry. 2. Christian name of our President's youngest child. 3. A lake near the source of the Mississippi. 4. A fool. 5. A fruit.

6. A town on the Illinois river. 7. An Iowa

HAD always been very desirous of making a balloon trip, but it was not until the summer of 1897 that I was able to make arrangements whereby I could enjoy the delightful sensation of a voyage through the air. This one (my first) was made from the County Fair at Kirkwood Park, and while being a very good trip (we making about twelve miles to the southcast after a mishap in starting that brought us into a tree). miles to the southeast after a misnap in starting that brought us into a tree), did not just seem to satisfy me, but made me perhaps more anxious than ever to make a balloon voyage that would be of longer duration and take us over towns, lakes, woods and, in fact, all the things that I had pictured to myself as grand to behold from a balloon.

So, when I received an invitation from Mrs. Myers (no doubt the best air navigator in this country) to accompany her gator in this country) to accompany her on a voyage to be made from the Sandy Creek Fair grounds on August 24th, 1900, I was not slow in telegraphing my acceptance. When I arrived on the grounds at noon of the day of "sailing," it was raining and did not look as if we would make an ascension at all; but after an hour or so the storm passed and we decided to make the ascent at four o'clock. The sky had cleared a good deal and there were just enough snowy clouds to make it interesting when we reached a point of about twenty-five hundred point of about twenty-five hundred

feet.

After the usual precaution in arranging the halloon and its trappings, also balancing the huge gas bag so that it would not rush up into the upper regions, but take a slow motion, which would allow us to take a good amount of ballast (sand), the word was given and we were tossed clear of the heads of the crowd, and were on our way to "cloudland." To the cheering of the people below we waved our handkerchiefs and hastily took a few pictures of the gradually disappearing multitude below.

Our first point was to make certain

below.

Our first point was to make certain that we were not going in the direction of the lake, as the air was so still when we started that it was guess-work to know which way the upper current was moving; and as Lake Ontario was but three miles from the fair grounds, due west, we were well satisfied to find that our course was to the east, or nearly so. Placing our instruments in a position at the side of the car, or basket, so that we could readily see them, and opening our map, we prepared to look at the surrounding country, of which about 150 square miles was visible at a time as we sailed along. I could still hear very plain the band that was playing at the fair grounds, although fully three-fourths of a mile below us and a couple of miles to the west. At three thousand feet we passed through a cloud and it was promptly photographed just as a little of the earth below could be seen through of steam, only it was cold and through it. It seemed just like a vast cloud of steam, only it was cold and damp, and so chilled the balloon that it was necessary to throw out some ballast to check our descent caused by the chillwas necessary to throw out some ballast to check our descent caused by the chilled gas condensing and losing some of its lifting power. It was on emerging from this cloud that we beheld one of the prettiest sights that can be seen from a balloon. The sun had cleared to the west and a little above us, to the east, and just below was a cloud with our complete shadow upon it and a rainbow around it. This I tried to photograph, but it was gone before I could arrange my camera. I was informed by Mrs. Myers that it is seldom this beautiful sight is met with and probably was never photographed, so I was all the more sorry that a good picture could not be taken.

more sorry that a good picture could not be taken.

We were by this time clear and free from all clouds that could obstruct our view of the earth and at a height of forty-five hundred feet. Here I took a picture and then put away the camera to study the map and surrounding country. And what a grand sight! We were looking at what seemed to be a large and soft carpet with fields of corn, wheat, and other vegetation to make the figure of our beautiful "Wilton velvet." In the north just under us, was a small town which we took to be Hooker (we were following our course with the map), and in the distance to the east and just out of our line of travel were small towns not on our map. We could still see Lake Ontario in the far west and a large piece of wood loomed up in the east about six Ontario miles shead of us. The voices of the people calling to one another to "see the balloon" could be heard, and the barking of dogs and such like which was all that broke the death-like silence which is met at this height. We were now over one mile from the earth and Mrs. Meyers thinking that we

like silence which is met at this height.

We were now over one mile from the earth and Mrs. Meyers thinking that we were not in as good a current for our purpose as at about forty-five hundred feet, the valve cord was pulled and the barometer watched very closely to note our descent so as to check it before our desired point was reached. It was now five o'clock, we had been up one hour and had traveled about fourteen miles. The sun, which had been out for a little while, was gradually sending us up again by it's warming the gas, and it was now a question whether we could cross the big piece of wood that we were nearing and which extended from north to south about ten miles and fully as far to south about ten miles and fully as far

across, or whether we should make the descent right away. As we had come at least fourteen miles in one hour, and would find no railroad handy if we landed, we decided that we could easily cross the big wood before dark, although I shuddered at the thought of a possible forced landing in a piece of wood at least ten miles square and that had not even a clearing as big as the balloon.
We busied ourselves with watching a lumber camp, which we had discovered by hearing the noise of the saw, and noting the barometer and compass; with noting the barometer and compass; with the latter, should we by accident get stalled in the woods we would at least know the way to the nearest opening. Here another cloud was met which so chilled the gas that we fell through it and "off for the earth" at so rapid a pace, that small pieces of paper seemed to shoot up into the air when released at the side of the car. Thinking that the sun would counteract our fall in a short time, the balloon was allowed to go until sun would counteract our fall in a short time, the balloon was allowed to go until it was apparent that ballast would have to go overboard if we did not want to get into the trees, and so sand was thrown out and our descent stopped at a height of eight hundred feet, which seemed very low after our long stay at about one mile high. I could hear the sand as it fell into the trees, a thing that could not be heard from any very high point as the sand does not reach the earth at all except as fine dust. We soon discovered that we had been too hasty with the sand, at least with some of it, as we "passed right up" and were soon at the height of sixty-eight hundred feet, the highest point reached on the trip. the trip.

At this height a very good current was met with and we sailed along at a good pace soon clearing the woods, and had plenty of open farm land for a landing, when we decided to make it. We could now see Lowville loom up a little to the northeast and almost in our

As there were several small towns be-As there were several small towns below I thought that it was about time that a couple of letters that were promised to friends were written, and so two were dropped with a penny in each to help them to the earth without too much drifting. These were seven minutes in reaching the ground. One of these has since been delivered having been found the next night by John Lawler, of Martinsburg, New York, who signed and mailed it as per instructions on same.

mailed it as per instructions on same. It was now time we were thinking of landing as it was 6:25 and good places almost anywhere under us. Discovering that some one was talking to us we looked carefully along the road that we were hanging directly dver, and saw a team and party of men, and on questioning them found that it was Lowville and that they would help us if we brought her down. This conversation was held at a height of sixty-five hundred feet, at a height of sixty-five hundred feet, and was not difficult to maintain. Every-thing was now to business and the anand was not difficult to maintain. Everything was now to business and the anchor rope had to be untangled and made ready to throw, while Mrs. Myers gave the valve a good pull (about four seconds), and then hoth watched the barometer for further developments. Gradually the needle swung off the six-thousand mark, past the five-thousand, past the four-thousand, and now the balloon and earth had a race towards each other which we did not attempt to stop, and soon had the pleasure of a good bump as the basket struck the ground in a marshy pasture, only to bound high in the air again, dragging the anchor, which one of the men who had followed us into the field was running after and which kept just out of his reach. We noticed now that we had fallen into a very different air current than the one we had left. As we were moving to the north, and as there was a small wood in that direction, and very near, it was necessary for our man to get hold of that anchor and that very quick, or we must pull it in and throw out some sand and "step over the woods," for a wreck might follow any idea of approaching nearer. Our "sprinter" /at this point, nerved on by our cries to hurry, managed to get hold of the anchor and with mearer. Our "sprinter" lat this point, nerved on by our cries to hurry, managed to get hold of the anchor and with the aid of others soon had us fast. It now remained for us to cling to the basket so that no bump (we were swinging around a good deal) would cause us to fall out, which would mean that the balloon would make such a wild rush skyward with the remaining one that a bursting balloon would likely be the result, as the gas, expanding as it ascended, could not escape from the neck fast enough. Good precaution prevented this, however, and a few moments' pulling on the valve cord so weakened the gas bag that we could get out and attend to the deflating of the balloon. This is gas bag that we could get out and attend to the deflating of the balloon. This is done by allowing enough gas to escape so that the top can be reached, and then tying a rope to the bar at the valve and "let go," every one except those at the rope, the balloon will turn upside down and allow the gas to escape at the neck.

It was not a long matter to do this, and, folding things carefully into the basket, we were driven to Lowville with our airship tied on behind.

On reaching Lowville telegrams were sent to anxious families and friends and a late supper partaken of, after which the first train to Utica was none too early to take us to our homes.

Thus ended my second trib—thirty-five

Thus ended my second trip...thirty-five miles in a balloon.

[Editor's Note.-The writer of the forcgoing account informs us that on August 27th, 1904, at the St. Louis Fair, he broke the American record by making a flight of three hundred and twenty miles, remaining in the air twenty-three and a half hours. A medal was given him by the Exposition management for the achievement.]

# You Can Help

You want to see The American Boy succeed. Many thousands of you have said so, and many thousands of you have given evidence that you are in earnest by promptly paying your subscriptions year after year. Letters of encouragement and dollars for subscriptions mean much; but there is one other thing you can do, and it is a very important thing. It may not be known to you, but it is nevertheless a fact, that no publication can live and prosper on its subscriptions alone. The boy who pays One Dollar for twelve numbers of The American Boy gets in the course of the twelve months what costs us nearly if not quite that dollar.

Our profit must come largely from advertisements. Now, we cannot expect boys to advertise, so we cannot depend upon them for advertisements. We must go to the general field-that is, the business houses that are advertising in publications generally. Many advertisers, however, take the position that boys are not buyers, and that therefore such papers as THE AMERICAN Boy cannot sell their goods. It is harder therefore for us to obtain general advertising than it is for magazines intended for

How, then, can you help us to secure and keep the advertisements without which THE AMERICAN Boy cannot continue to be a success? Here is one way. See to it that your father and mother and your big brother and sister buy from advertisers who patronize THE AMERICAN Boy. What shoes do they wear? What soap do they use? What proprietary food do they have on the table? You propose to them that they help your paper—the only paper in America that is really looking after your best interests-by buying that soap, those shoes, that food you find advertised in The American Boy.

Many times people buy things without any particular preference or without having a reason for a preference, so that it will be easy in many cases for you to direct the purchases in your home in such a way that THE AMERICAN BOY will be the gainer. This applies to all things that you see advertised in The American Boy, as foods, clothing, firearms, toilet powders, shoes, schools, domestic animals, watches, soaps, cameras, boats, lawn mowers, matches, etc.

We believe we are not asking anything but what is fair. Six years ago when we started THE AMERICAN BOY, we were told that no such publication could succeed, and our friends pointed to scores of publications in the field that had died for lack of patronage. We have proved that a high toned boys' publication can be successful. THE AMERICAN BOY has been successful, but we have not yet made the money that begins to pay for the risk we took and the money and energy we have expended in making it successful. We are giving to the boys a big dollar's worth. We are giving to every family where there is a boy something that is worth more in shaping the boy's life and character than anything else probably that comes into the home from the outside. Are we asking anything unreasonable then when we ask that the boys see to it that everybody in the home patronizes those who patronize THE AMERICAN BOY?

Do this, and do it right away. The more successful becomes THE AMERICAN Boy, the better paper we can give you, so that if you do not want to do it for our sake, do it for your own.

Yours for our mutual benefit,

The Sprague Publishing Company.

NUMBER 11

(BEGUN IN DECEMBER) CHAPTER XXIV.

TAKAHAKI DEFENDS HIS PRIZE.

O THE GREAT relief of all on board the Honan, the onrushing mystery, from which they had expected nothing short of sudden death, slackened its speed until it lay motionless not more than fifty yards from them. The person who, with head above the conning tower, had directed its movements, now appeared on the tiny deck of his strange craft and disclosed himself to be a Japanese naval officer in full

Lifting his cap politely to the bridge, and indicating by a glance the flags at the steamer's masthead, he remarked in English:

'I am see that you are surrender.'

"Yes, and glad of the opportunity," replied Captain Crosscut. "We've already been partially blown up by one submarine; there's another somewhere under us trying to finish the job, and you are the third to have a finger in the pie. Also you are the first that has given us a chance to communicate our readiness to surrender.

"What ship is it? Where from? Where to? What cargo?" demanded Takahaki.

"Honan, from Cardiff, with coal for Vladivostok," was the answer.

"And you surrender to this ship of his Imperial Majesty, the Mikado of Japan?'

'I do, without reserve."

"Then if you will lower side-ladder and send boat, I will come on board for take possession. Same time I come alone, and if you do something not right, my boat will very quick diss-troy your ship. If I also am diss-troy it will not any matter. I am glad to be diss-troy for my Mikado.'

"He means it, too," remarked the Honan's engineer ir a low tone to his captain. "I know these Japs. They'd rather die for their Mikado, as they call him, than do anything else you can name."

So Takahaki went on board the big, coal-laden, freighter, where he assumed command without opposition, and when those who received him, next looked over the side the craft from which he had come was

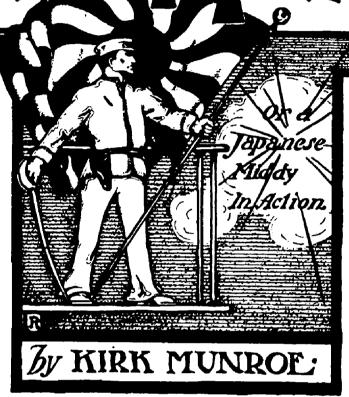

nowhere to be seen.
"Yes," he said in reply to their inquiring glances. "I send him down for tell other submarine not now to blow up this ship."
"Thanks, awfully!" said Captain Crosscut.

"A most thoughtful thing to do," added Engineer Bunker.

Then Takahaki began to issue orders which were promptly obeyed. Thus the anchor was weighed and the ship was got under way, sternforemost, before he had been on board fifteen minutes. As soon as she was fairly in motion, steaming slowly back over the course she had come the night before, the repair gang was again set to work, patching the hole in her bow, under the supervision of Captain Crosscut, who, at request of the new commander, had willingly agreed to aid in saving his own ship.

Upon taking possession, Takahaki's first move had been to disarm the captain and engineer. Then he ordered them to their respective staterooms where he proposed to lock them in. Against this they had protested; offering, in exchange for their liberty, to aid him in navigating his prize to the nearest Japanese port. This offer had been accepted; and so it happened that, as the ill-used Honan began her backward movement, Captain Crosscut superintended the repairs to her bow and Mr. Bunker occupied his usual position in the engine-room, while Takahaki Matsu gravely paced the bridge with four loaded revolvers depending from his belt and a pair of marine glasses in his hand.

Although the new commander strove to maintain a modest demeanor, he was intensely proud of his captures, which, if he only could get them to a Japanese port, would prove of such inestimable value to his country. He was quite certain that he could at least take them as far as Wonsan; for, as soon as the Honan's bow repairs were completed so that she could be turned around and driven head on, he proposed that she should tow the Naisha, thus relieving the latter's overworked crew of two from their perilous position. At present he knew the submarine was obeying his parting instructions to keep pace with the Honan but out of sight from her deck, and ready to close in at signal; for, through his glasses, he could plainly distinguish the black spot representing her conning tower some three cable lengths away.

Copyright, 1904, by Harper & Brothers.

For some time he watched her, thinking gratefully of his friend, Dun Brown, without whose aid his present success could not have been gained. Then he slowly swept the horizon, first taking a long view ahead, and last of all looking astern. To his consternation, in that direction, he saw not only a trail of dense smoke moving swiftly towards the Honan, but the low-lying huli from which it streamed.
In another minute Takahaki was in the pilot house

rummaging its signal locker, from which he extracted three small flags that he bade a quartermaster to display aloft. This signal was an order for the Naisha to close in. Next he called down the engine-room tube for Mr. Bunker to stop his engines and report immediately, in person, on deck. When that gentleman appeared, the young commander said:

'The engineer of my submarine is in great trouble;

will you go with me to help him?

"Well, I don't know-" began Mr. Bunker. "If you do that thing you shall not any more be prisoner when we reach Japan port."

Still the other hesitated. "That engineer is American man," added Takahaki. "What! An American! Why didn't you say so at first? Of course I'll go with you."

By the time the Honan had again been anchored, and Captain Crosscut had been ordered to continue his repairs with all speed during the temporary absence of the new commander, the Naisha was close at hand, and Dunster Brownleigh, looking from her conning tower, was awaiting with some anxiety, and much curiosity the coming of a small boat containing his friend and a stranger.

What's up, Taki?" he asked as the former gained the submarine's narrow deck, "anything gone wrong?

"Yes, Dun Brown," replied the young Japanese in a tone too low to be overheard by Mr. Bunker. "A Rus-si-an diss-troyer is after us. I tell this engineer of steamer that you are American and in much trouble. So he come for help you. He does not yet know of that diss-trover."

With an instant comprehension of the situation Dunster dropped below and stood ready to receive his guest. In the handling room the two gazed curiously at one another for a moment.

"Looks rather queer to find an American serving on a Japanese fighting craft in time of war," remarked Mr. Bunker after they had shaken hands.

"Any queerer than for another American to be helping the Russians by trying to run a cargo of contraband?

"Oh! I was doing that for the big money there is in it."

"While I am doing this because the Russians have just murdered my grandfather, have sentenced me to be shot, and will kill me on sight if they catch me." "Whew! And yet you say that you are an Ameri-

can?" "Yes, born in Chicago."

"Same here. Good old town!"

"And now I want you to help me out. There's a Russian destroyer after us. Of course she will put us out of business if she can. Even if she only recaptures that steamer we will be left in a peck of trouble, for our supply of gasoline is too low to run us to a friendly port, and we are too short-handed

to get to one anyhow. Will you stay with us?" 'Sure I will, partner! When Chicago finds Chicago in a hole out here among the dagoes, Chicago helps Chicago every time. Just make me wise as to what you want done, and I'll do it till all's blue," was the hearty answer of American to American.

The distress signals sent up by the Honan, a few hours before, had been noted in Vladivostok: and, with earliest dawn a torpedo boat destroyer had been despatched to discover their meaning. This low-lying craft had sighted the big ship long before she herself was seen, and she stood towards the latter under full head of steam. As she approached close enough to distinguish the hated flag of Japan flying above the almost equally hated ensign of Great Britain at the Honan's masthead her engines were stopped and a solid shot was sent hurtling angrily over the anchored steamer. Although it had been aimed high and evidently without intention of hitting the ship, it cut the signal halliards bringing the Japanese and British flags fluttering downwards, and crashed through the pilot house into which Captain Crosscut had just entered.

At sight of the ominous craft, that looked as venomous as an angry cobra, the captain and his gang of workers had hastily regained the deck from which, as the shot was fired, they were anxiously regarding this new menace to their safety. As the proud emblems of two great nations disappeared from view, the Russians, believing the flags they hated had been lowered at their command, and not realizing that their own shot had cut the halliards, prepared to take possession of the ship.

By this time they were lying, without steerage way, about a quarter of a mile from the Honan. They had but one small boat, and as it was stowed amidships on deck, several minutes were required to get it over the side and into the water. While this was being done the lieutenant commanding the destroyer was giving final instructions to the junior officer detailed to board.

The audacity of those pig-headed islanders!" he exclaimed. "For daring to fly a flag of the Makaki in Russian waters, you will, immediately upon taking possession, clap that captain in irons and confine him in the depths of his own hold. We will teach him that that flag may not be shown with impunity off Vladivostok.

Very good, sir," answered the junior, saluting and turning to depart. As he faced about he uttered a cry of amazement. From a direction opposite to that in which lay the steamer, one of the very objects they had been discussing, a sun-rayed flag of Japan, was skimming the sea less than a thousand yards distant, and advancing towards them, apparently upborne on a swirl of white waters. A few feet ahead of it rushed a round bit of blackness.

"Holy St. Michael!" cried the lieutenant; "a Japanese submarine directly upon us, and I didn't know the beggars owned such a craft. Dose her with the maxim! Cut that boat adrift! Full speed ahead! Quick, for your lives!'

So suddenly overwhelming was the surprise, and so unnerving was the terror inspired by this dreadful form of enemy, that for a minute these orders only produced a scene of the wildest confusion. Then a midship rapid-fire was trained, and with tigerish snarl, it began to spit out a torrent of bullets that tore the sea into foam about the approaching craft without in the least affecting its steady onrush. The hissing balls stung harmlessly at the thick steel of the Naisha's conning tower and one rent her defiant flag, but that was all. They could no more check her relentless advance than if they had been so many dried peas shot from a pop-gun.

Peering from a slit directly under the cap of her conning tower stood Takahaki Matsu, steadfast of purpose, clear-eyed, and with every muscle rigid. A few feet beneath him, intent only upon the duties he had so recently assumed, an American engineer calmly watched his bearings and his oil cups. In the handling room, two tense figures, representing the most western nation of the world and its most eastern, here united in bonds of closest sympathy, sternly awaited the word from above that should rouse them to fateful action.

A range finder showed the Russian to be but five hundred yards distant, then four hundred, three hundred, and finally but two hundred yards away. At this Takahaki gave the command to fire.

Instantly the motionless figures at the breech of the torpedo tube sprang into active life. As one

flung open the bow port and admitted water, Dunster Brownleigh turned on the sudden blast of compressed air that cleared the tube of its deadly missile and started it in arrow fight towards the destroyer. Almost at the same moment the Naisha's young commander staggered backward, and his body, slipping from the conning-tower platform, fell heavily to the floor of the handling room. As Dunster sprang to his friend's assistance, he was conscious of a heavy explosion, close at hand.

### CHAPTER XXV.

### MUTINY ON BOARD.

Anxious to witness the effect of his torpedo, Takabaki, peering through a narrow slit, had pressed his face against the steel side of the conning tower at the very moment that it was struck by the last shot fired by the doomed destroyer. The impact stunned him and he fell apparently lifeless. For a few minutes the diminished crew of the submarine were so busy attending to him and with their engines that they failed to note what was taking place outside. When Dunster Brownleigh, who believed that his friend was dead, finally took station in the conning tower and lifted its cap for a clear view abroad, no trace of their recent enemy was to be seen, save only an empty and idly drifting yawl boat. The torpedo had thoroughly accomplished its fatal mission, and with a heavy heart the young American directed the course of his little craft towards the still anchored steamer.

There he was met by news that her captain had been killed in the pilot house, and found himself confronted by the sole responsibility of navigating the great ship across the stormy Japan sea to a place of safety. For a moment his heart sank like lead, and he shrank from the perilous undertaking. But it was only for a moment, and then he was roused from his despondency by the voice of his fellow American:
"Well, sir," remarked Mr. Bunker, "it's up to you

to say what we shall do next. Kinder looks to me as if we should have to try for Vladivostok after all."

"I'm sorry if it looks that way to you," replied Dunster briskly, "for it docsn't to me. I had just about concluded to run for Tsushima."

"But that's nearly eight hundred miles away," objected the other.

"I know it."

"And we haven't a navigator on board."

"I think you are mistaken there, sir."

"What! Are you a navigator as well as an engineer?"

"I believe I may lay claim to such knowledge of navigation as is taught to officers of the American

"You don't mean that you are an Annapolis man?"

"I am, sir, or rather I was."

"Then all I can say is that the mystery of how you happen to be where you are, get's thicker and thicker the more one looks into it. But it's all right, far as I'm concerned; and as I said awhile back, Chicago'll stand by Chicago as long as there's a pound of steam in the boiler."

"Thank you," replied Dunster. "When I planned to try for Tsushima I was counting pretty largely on your help, without which I doubt if the stunt could be done. We did think of Wonsan, but without a pilot I am afraid of the coast, and anyway I'd rather deliver this ship directly to the Japanese Admiral commanding in these waters."

"I know. Kamimura. Nice old chap! Took me prisoner once before, when he was captain of a gunboat and I was 'listed on a Chinese battleship. Treated me white, too. I'll be proud to meet up with him again.'

"Then you, too, are a navy man?"

"Oh, not to brag of. Same time I've seen some service."

'Good!" exclaimed Dunster. "That makes me feel all the more certain that we can do the trick."

An hour later the Honan was again under way and steaming southward, this time head on, for the repairs to her bow had been completed as thoroughly as circumstances would permit. Takahaki, cared for by his faithful countryman, lay still unconscious, in the bunk that Captain Crosscut would never more need, while the Naisha was towed behind the steamer at the end of a long hawser. In the chart room sat Dunster Brownleigh studying a chart of the Japan sea, and at the same time sipping, with intense satisfaction, a cup of very black coffee, the first he had tasted since leaving the Cochise, and which seemed to him just about the finest beverage that ever had passed his lips. He had found no difficulty in assuming command, or in having his orders obeyed, for the villainous-looking crew not only were cowed by the pistols conspicuously worn by him, by Mr. Bunker, and by the Japanese, but apparently they still were awed by the proximity of the Naisha and the memory of what had happened to the Russian destroyer that had dared defy her. So they jumped to obey orders, and never before had the discipline of the ship been better.

At sunset of that same evening the body of the steamer's late, unfortunate captain was consigned to the sca, while above it the solemn service of committal was read, in choking voice, by the young man who had so strangely succeeded to his command.

When the sad ceremony was ended, Dunster hastened to the bedside of his friend who, for a few minutes had been left alone, and to his joy, found the latter lying with wide open eyes.

Thank God, Taki, that you are alive!" cried the

newcomer. "Do you know me, old man?"
"Yes, Dun Brown, I am know you," replied the other weakly. "But I am not know this place. Is it hospitle?"

"Hospital! No, of course not. It is your own room, on board the ship that you captured, and which we are taking to Japan. But this is your watch below and mine on deck. So go to sleep and I will call you at the right time."

"Was there not a diss-troyer?"

"Yes, but she disappeared long ago and now there's nothing to bother. So go to sleep, like a good chap,

or else I won't promise to wake you for your watch." Without further remonstrance Takahaki closed his eyes, and a little later was wrapped in the sleep that more surely than any other known remedy would restore his exhausted energies. After that, for nearly two hours, Dunster alternately watched the ship's course from the pilot house, and his sleeping friend in the adjoining room. Then he touched a bell and ordered the Chinese steward who answered it to bring him a cup of hot coffee. Giving this order in the captain's room, Dunster failed to notice that the steward passed out through the pilot house, where he exchanged a whisper with the man at the wheel. When the coffee came, Dunster drank it eagerly, though wondering somewhat at its extra bitterness. Five minutes later he sat in an armchair before the captain's desk, to which his head had sunk, buried in profound slumber. Eight bells came and went without his knowledge. The Chinese quartermaster at the wheel was relieved by another, and as the relieved man passed from the pilot house he glanced into the captain's room. There a lamp burned dimly, and for a moment the sailor hesitated, apparently fascinated by wnat he saw. Then he passed on and

A few minutes afterwards he returned, and with his heavy sea boots exchanged for felt-soled slippers, crept noiselessly along the deserted deck until he reached a side door to the captain's room. Opening this the fraction of an inch he peered within. All was as before. One motionless form occupied the captain's bed, and another, with loud breathings, slept heavily in a chair beside the desk. Thus reassured the intruder slipped into the room, carefully closing the door behind him. It had made no noise, but with its opening, a draught of damp air had rushed through the pilot house where, beside the man at the wheel, another, who had just entered, watched intently the trembling compass-card of the binnacle.

was lost in the outer darkness.

That draught of air from the captain's room blew cold on this man's face, and he stepped to the communicating door to learn its cause. What he saw was a crouching figure creeping up behind the sleeper in the chair, who so recently had proved himself a friend of Japan. Even as he looked this figure rose to its full height and uplifted something that shone dully in the dim light. In another moment Dunster Brownleigh's slumber would have been merged in the dreamless sleep of death; but his hour was not yet come. With a spring as noiseless and agile as that of a cat, the man who served Japan's Mikado, landed on the back of the would-be assassin, and a few seconds later laid him gently on the floor, dead, with a broken neck. Then the Japanese closed the door connecting with the pilot house, turned the key in its lock, and opened that leading on deck. Through this he dragged the still quivering body of the Chinese who, but a moment before, had believed himself to be owner of the ship, and bundled it over the rail into the oblivion of a night-shrouded sea. The Mikado's man had not been three minutes gone from the pilot house, before he again stood beside the binnacle peering at its wavering compass-card, and he who steered knew naught of what had happened during the short interval of the other's absence.

### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 13 From Ex-Governor Bliss of Michigan

EX-GOVERNOR A. T. BLISS OF MICHIGAN

EXECUTIVE OFFICE

June 6, 1904.

TO THE BOYS OF AMERICA:

I feel honored in addressing representatives of American boyhood Young men, be manly, do right. Remember that you are building a foundation for the future, and that the world often judges the man by his record as a boy.

With the next striking of eight bells Dunster was awakened by the Japanese now acting as first officer, and invited to a midnight lunch in the mess room, where he found Mr. Bunker already at the table. The latter reported an incipient mutiny in his department, early in the evening, that he had promptly quelled by knocking out two of the engine-room crew who had attempted to surprise him when they thought him asleep in his chair, and scattering the others by a show of leveled pistols.

"I don't know what the beggars were up to," concluded Mr. Bunker, "but I'm ready for 'em every time; for whenever I find it necessary to take a nap in my chair it's always with one eye and both ears wide open."

"Well, I'm glad there wasn't any trouble on deck," replied Dunster. 'For I am ashamed to say that I've been sound asleep with both ears and both eyes, ever since before eight bells. But I'm good now for another spell of duty and first I'll relieve the mate while he eats his supper. Then he'll have to stand another watch on deck while I relieve you in the engine room. That is if you are willing to trust me with your en-

"Well, I guess yes. The man who can handle the insides of a submarine surely can be trusted with the simple machinery of an old, Clyde-built hooker like this. Besides, there'll be nothing to do unless something goes smash, for I've got a well-drilled crew below. Only you want to watch 'em every minute, for the devil himself seems to be with them this night."

"All right," answered Dunster, "I'll watch 'em, for I'm wide awake now and intend to keep so.'

Shortly afterwards, when the young commander again turned over the deck to his first officer, and started below to relieve his weary engineer, the former said to him in Japanese: "Abunai! Ki wo suke nasai!" (There is danger! Look out for yourself!) and Dunster, thinking he referred to Mr. Bunker's recent experience, laughed as he answered: "Arigato. Sukoshi monai osoreru." (Thanks. I am not at all afraid.)

An hour later the self-confident lad from Annapolis found himself backed into a corner of the Honan's engine-room and fighting for his life against a dozen or more slippery, dirt-begrimed firemen, oilers, and coal-passers. Some were yellow and wore pigtails coiled about their heads; while others were swarthy, lean and with fierce, snake-like eyes. He had been able to fire but a single shot before they had rushed him into the corner where, with naked hands, he struggled hopelessly against their overwhelming numbers.

### CHAPTER XXVI.

"TASUKETE!"

According to previous statement, the Honan was manned by a scrub crew hastily gathered at Shanghai. Even they had shipped only upon promise of unusually high wages; for the navigating of those seas in war-time, even by neutrals, was an extra hazardous undertaking. Still, as the ship was cleared for Cheefoo, a short and comparatively safe run, they were tempted by the inducement and performed their duties faithfully until, to their dismay, they found themselves off the eastern coast of Korea, exposed to the fire of Japanese cruisers, and so evidently bound for Vladivostok that the nature of the venture on which they were embarked could no longer be concealed from them. Three of their number were killed by a chance shot fired in a fog, and shortly afterwards the ship narrowly escaped total wreckage on the Liancourt Rocks. Then the panic-stricken crew mutinied and demanded to be taken back to Shanghai.

After quelling this outbreak, Captain Crosscut acknowledged the true objective point of his voyage and promised to double his crew's already high rate of wage upon safe arrival at the Russian port.

With the subsequent career of the unfortunate ship to the time when, almost within sight of Vladivostok, she was compelled to begin retracing her weary way, we already are familiar; also we can fully appreciate the satisfaction with which her new commander headed her to the southward. Her crew, however, were by no means as satisfied as he with the changed condition of affairs. They realized that they were being carried back to probable captivity, possible death, and a certain loss of the golden reward promised them upon arrival at Vladivostok. And all this at the command of but three men, one of whom was believed to be for the present at least, helpless, while they numbered thirty. Also they fancied Mr. Bunker to be in similar position with themselves as to probable loss of pay and freedom under existing conditions, and imagined that if they could gain possession of the ship by overcoming the others he would be willing to aid them in carrying her to Vladivostok. Therefore, in forming their plans, while they were determined to kin the three who had come from the submarine, they only proposed to make him a prisoner, and thus hold him until he should accede to their terms. In pursuance of this design they had, earlier in the night, made simultaneous attacks upon him and upon the steamer's new commander, to whom had been given a cup of drugged coffee, both of which were defeated, as we know.

These failures instead of discouraging the mutineers only rendered them desperate and more than ever determined to effect their purpose. They knew that every mile of added distance on their present course increased the difficulties of a return to Vladivostok, and that it was vital to the success of their plans to gain possession of the ship that very night. Therefore when Mr. Bunker retired to his room for the rest he so greatly needed, and Dunster Brownleigh assumed his duties, the leaders of the mutiny believed that the most favorable opportunity for carrying out their design had arrived. But they waited until Mr. Bunker slept and Dunster had become sumciently familiar with his new surroundings to be less keenly observant of what was taking place than at

first. At length the young engineer, sitting with a loaded revolver lying across his knees, was meditatively regarding the speed indicator and calculating the number of hours that must elapse before Tsushima could be reached. Everything about him was quiet, save for the steady throb of machinery, and no other person occupied the room, though the forms of oilers on duty could dimly be seen now and then as they moved about the mighty machine for which they cared.

Suddenly there came a fierce rush of escaping steam from a cock purposely opened close at hand, and instinctively Dunster sprang to the throttle lever. The pistol that had rested on his knees fell to the floor and as he turned to recover it, after shutting off steam, the room swarmed with menacing figures coming from both directions at once. He barely had time to leap into a corner where the walls of the room protected him on two sides, and to fire a single shot from a second revolver that had hung from his belt, before the mutineers were upon him and he was using his otherwise ineffective weapon as a club to beat them back. Behind him was an electric switchboard. A knife, flung with uncertain aim at his head, struck this, and instantly the scene of conflict was shrouded in darkness. In a moment the excaptain of the Annapolis team had adopted football tactics, and with lowered head was furiously "bucking" the scrimmage in which nearly every man held another by the throat, while such as had knives were using them furiously and at random.

How Dunster gained the doorway he never knew; but gain it he did and he staggered out on the lower deck just in time to catch a sound of swiftly approaching footsteps. Panting and trembling from his recent exertions, he was bracing himself to meet a further attack, when on his ears fell the welcome sound of an exclamation uttered in Japanese.

"Tasukete!" (help) he cried, and to his amazement, he was answered in the well-known voice of the dear friend whom he had left an hour earlier, as he supposed, helpless in the captain's room.

"Dun Brown!" cried Takahaki. "Is it you? Are vou still live?'

"I believe so," was the reply; "but that I am alive isn't the fault of those black pirates inside. They have been trying hard enough to kill me.'

From the engine room came sounds of a fierce struggle, for the mutineers had not yet discovered the escape of the!r intended victim, and were fight-

ing each other in the dark.
Without another word Takahaki stepped to the doorway and emptied his revolver into the yawning blackness. The first shot was followed by yells of terror; but the last was echoed only by whimpering moans. A man in pajamas and bringing a lighted lantern appeared.

"What's the row?" he asked, sleepily. "Want any help?"

"I don't believe so, Mr. Bunker," replied Dunster, striving to speak cheerfully. "It was a row, but I guess it's all over now."

"Sounded like it. I thought you'd have one, but I knew you'd come out topside somehow, for Chicago always does. But who is this? Not the captain? Why, sir, I thought you were laid up for repairs."

"Yes, but I now am very ready for fight again. I become awake very well and was drink some tea, when through that telephone I hear trouble in engine

room and so come for see it." "Engine room telephone was the very thing that brought me here," said Mr. Bunker. "I always leave it open and sleep with the receiver close by my

head. But let's look inside."

The floor of that engine room resembled a shambles. In pools of their own blood lay four dead Lascars, and two Chinese desperately wounded. The remainder of the mutineers had disappeared. Dunster was bleeding from a couple of knife cuts, but neither of them was serious and he declared that the affair left him in better shape for duty than had any one of a dozen football games that he could recall.

After a brief inspection of the scene of battle, Takahaki, whom the urgent necessity for action seemed to have restored to his normal strength, ordered every light throughout the ship to be turned on. Then in the general illumination he and Dunster made a thorough search of both upper and lower decks, driving forward, at the point of their revolvers, to a place guarded by the Japanese and Mr. Bunker, every member of the crew they could discover. There the mutineers were searched for knives that were flung overboard as fast as found. One brutal looking coal passer, whose bloodstained headcloth proclaimed him to have been a participant in the recent attack on Dunsier, pretended to give up his knife; but in the act of handing it over, he made a vicious lunge at the heart of the Japanese who was holding out his hand to receive it.

Like a flash the latter knocked the Lascar's hand to one side, and in another instant a bullet from Takahaki's ready pistol had pierced the would be

murderer's brain.

"It is not nice for do such thing," remarked the young commander to his friend, as he carefully inserted another cartridge in the chamber of his revolver; "but it is the war for which we study at Annapolis, and so we must always be ready for do

"Yes, and do him before he gets the chance to do you," remarked Mr. Bunker. "That's my motto every time. 'Tisn't exactly the golden rule, but it's the iron rule of war, and the only one by which the game can be successfully played."

After this lesson the crew submitted without further struggle, the dead were flung overboard, and the wounded were roughly cared for by their shipmates, who, with the exception of half a dozen chosen by Mr. Bunker for immediate duty, were locked into the forecastle.

Although thus crippled almost to helplessness the Honan still was forced southward by the indomitable wills of a Japanese middy and his devoted American friend. The former took turns with his countryman at standing armed watch on deck, while Dunster and Mr. Bunker relieved each other in the engine room. In this condition it took them four days to reach

To the Readers of The American Boy:

'HE editor of THE AMERICAN BOY asks for an article on the subject "Why young Americans of today should interest themselves in politics. The reasons are so numerous that it would be difficult to furnish a complete

The young Americans of today will be the acting, governing force of tomorrow, and only by interesting themselves in politics-not only before maturity, but all their lives—can American citizens hope to do their full duty to their country; Free government is a responsibilitv as well as a privilege—a grave responsibility—for when one has the privilege of participating in the government he must share in the responsibility for bad government as well as in the credit for good government.

Whether one ever becomes a candidate for office may depend upon circumstances, but everyone—regardless of his occupation—should study the science of government, acquaint himself with public questions and give to his country his conscience and his best judgment on every question that arises.

In the study of public questions the most important thing is to get hold of the controlling principle. Only when one understands the principles which govern a subject does he understand the subject, and the fundamental principles applicable to politics are really everyday principles with which all are familiar. Thou shalt not bear false witness,'

"Thou shalt not steal" and "Thou shalt not kill "-these will be found to cover most of the questions, and of the three the second, "Thou shalt not steal," is probably the broadest in its application, for every pecuniary injustice done by one man to another-whether directly or indirectly, whether in violation of law or in the absence of law-partakes of that character of larceny.

One is never too young to begin to interest himself in the principles of government, and there is no age however advanced at which one can afford to be indifferent.

the latitude of Tsushima, and the islands barely had been sighted before a Japanese torpedo boat, on patrol duty in the Korean Straits, dashed alongside. Her commander could hardly believe the evidence of his senses when he found but two of his own countrymen on board and was told that they, aided only by a young American, had captured a submarine from the Russians, with it had compelled the surrender of this ship, incidentally sinking a Russian destroyer with all on board, and then, after quelling two mutinies, had brought their prizes safely across the Japan sea.

"It cannot be," he said. "Excuse me if I doubt your story, but it is too improbable. I will send you

to the admiral and we will see if before him you will dare repeat such a fairy tale."

So a prize crew was placed on board the Honan, her captors were relieved from duty, and she was ordered into Idzu Harra, the landlocked harbor of the Tsushimas that served as a base for Admiral Kamimura's blockading squadron.

"It is outrageous!" declared Dunster, indignantly, as, with his three companions he stood on the afterdeck watching the torpedo boat that was speeding away in pursuit of another smoke trail. "Taki, I wouldn't have believed that an own countryman would so doubt your word."

"It is great compliment," smiled the deposed commander. "I think so, My countryman"—here the speaker indicated the Japanese who had been with them from the first-"him think so too."

"In a way you are right," agreed Mr. Bunker. "At the same time it is pretty rough on you fellows after all your good work to go in as prisoners, or a least as suspects, instead of with the flying colors you deserve. As for me it makes no difference, seeing that I am a prisoner of war anyway. But say! Why don't you three desert this ship? There isn't a soul looking. Go aboard your own boat—we can haul her up short enough for you to slip down the hawserrun into Idzu ahead of us-you easily can outfoot this old cripple—and get your report in first."

"Great scheme!" shouted Dunster, his eyes glistening with excitement. "Will you do it Taki?"

"Hei. It is fine scheme! Yes, I will do." Thus it happened that half an hour later, when the young fellow from the torpedo boat now commanding the Honan, sat down to a dinner brought to the captain's room, his appetite was suddenly destroyed by a report that the queer thing, said to be a submarine, that had dragged behind them was no longer to be seen at the end of the towline.

At this the officer, who was very inexperienced, and who knew little or nothing of submarines, rushed aft to verify the report. Then he ordered the ship stopped, and instituted a search for the missing craft that revealed nothing more tangible than the frayed end of the hawser by which she had towed. Thus it became evident to the dismayed young man that the submarine had parted her towline and gone adrift.

### CHAPTER XXVII.

### TAKING FRENCH LEAVE.

First Takahaki, then Dunster, and last of all, their Japanese companion, slid down the taut hawser and gained the wet deck of the Naisha in safety. Of course they were thoroughly drenched, for the boat had been left with deck nearly awash, and the speed at which she now was dragged through the water drove a bow wave completely over it. Thus for a minute or until Mr. Bunker on the deck of the Honan could cut the hawser, the three adventurers were compelled to hang on for dear life, and with difficulty kept their heads above water. Then came a sudden release, and almost instantly, as the Naisha dropped astern, her deck was freed from its over-rushing wave, and her half strangled crew were enabled once more to breathe with comfort,

At once they got to work, and while Takahaki and Dunster, lifting the conning-tower hatch, hastened below to start the engine, their Japanese comrade hacked away at the trailing end of the hawser until he had cut it loose. The others found the interior perfectly dry, with everything as they had left it five days before. Thus in a few minutes the gasoline motor was "chugging" away merrily, and the Naisha was again in motion under her own power.

For a time they followed at full speed the ship from which they had taken French leave, gradually overhauling her, though not so rapidly as they had hoped, while the green heights of the Tsu islands were fast rising dead ahead. They were beginning to fear that she would reach port first, when suddenly she stopped, and then began to circle slowly as though in search of something.

"Just discovered that we are missing!" shouted Dunster gleefully. "Now if that chap will only hunt for us long enough we'll do the trick nicely.

And hunt, the Honan did, clumsily but perseveringly for the next hour, while the Naisha, with only alliscope and air-pipe above the surface, slipped past her undetected, and ran for the hidden harbor, with every foot of which Takahaki was perfectly familiar.

A mile off the entrance a torpedo boat on guard, cruised slowly back and forth; but the submarine, diving, evaded her without being noticed and rising boldly to the surface, ran through a narrow entrance into the smooth waters of a landlocked basin. Several transports and one lead-colored cruiser lay at anchor inside. The latter looked very business-like in her warpaint, stripped of every superfluous article, and with polished gun muzzles grinning from turret and shield. From her masthead floated the broad pennant of a rear-admiral, and towards this ship Takahaki directed the Naisha's course.

Suddenly there came a peremptory hail, through a megaphone, from the cruiser.

"Stop instantly where you are! If you advance fifty feet farther you will be fired upon."

With all haste the engine was reversed and an

anchor was got overboard. Again came the megaphone hail: "What craft is

that? Who are you, and what are you doing here? It is submarine Naisha, belonging to his Imperial Majesty the Mikado," replied Takahaki. "I am Midshipman Matsu in command, and have here come to

report to his excellency Admiral Kamimura. Directly afterwards came the order: "Compliments of the admiral and you will be received on board at

once.'

"But I have no boat." "Then will we send one."

A few minutes later the Naisha's entire crew stood on the deck of the flagship. An officer stepping forward to greet them hesitated, stared, and then hastily retreated. A moment later he returned and bowing low, not before Takahaki nor before Dunster Brown-

(Continued on next page.)

### OUR COUNTRY'S BOYS

Prize American Boy Day Song by Edward L. Viets, Age 17, Arlington, Massachusetts

Our country's boys are we,
The sons of Liberty,
Sweet Freedom's band.
We are no tyrant's tool,
We bear no scourge of rule
We fear no power save God's
Almighty Hand.

Our fathers by their blood Have saved this land from flood Of deadly foe. But when our sires are gone, Then must we boys be strong To guard our land from wrong, Suffering and woe.

What though our task shall be To light conspiracy,
Corruption's wrong;
What though the enemy
Be greed and treachery,
We'll live or die for thee;
Be this our song.

### THE IDEAL AMERICAN

Oration by Chas. W. Robison at the Portland Exposition American Boy Day

In the city of Washington stands a monument of

In the city of Washington stands a monument of great stature and of huge proportions; in its right hand is the torch of freedom; in its left, the scale of justice. It indeed symbolizes the "Ideal American."

As early civilization traveled westward, first Greece, then Rome, finally western Europe, rose to the supremacy. But what of these nations now? We look toward Greece and Rome, and see nothing of their ancient glory, only ruins; we turn toward the greater powers of western Europe and see that they, too, are fast losing their supremacy. Why is this? Is it the ravage of time? Is it destiny? The answer is No, emphatically no! for gazing east of Europe we see a great nation still struggling, which has stood for more years than we can number, and again looking westward, see a young nation rising to a world supremacy, with the motto: liberty, justice, and equality.

Many nations of Europe have been conquered; but very few laws for the benefit of the conqueror. Russia has held Poland for more than seventy-five years; not one effort has she made to uplift that poor, ignorant people. In 1898 we took the Philippines. Witain six years we clasped the little brown men by the hand and called them brothers. This is our first step to demonstrate to the world the true meaning of the talismanic words on which our government is based.

After the battle of Trafalgar, despite the carnage

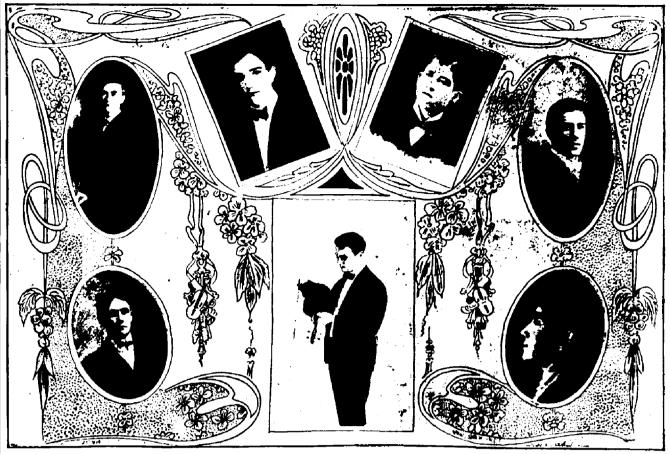

hased.

After the battle of Trafalgar, despite the carnage and the suffering, great was the rejoicing on the ships of the English; after the battle of Santiago, Captain Philip of the Texas turned to his men and said, "Don't cheer, boys, the poor devils are dying." This, my friends, shows to the world the true manhood of an "Ideal American." 'Ideal American.

"Ideal American."

We read in the history of the old world of the ambitious Napoleon's treatment of Josephine; but think of the martyred McKinley staying by the side of his invalid wife through poverty and riches, obscurity and honor. We think of Nero's cowardly and inhuman treatment of his mother, and then remember that beautiful picture of filial reverence, Garfield stooping to kiss his mother after his inauguration. Then thank Him who is on high for instilling into the heart of every true American boy the commandment above all others, "Honor thy father and thy mother."

We read of Caesar with his triumphs, followed through the streets of Rome by thousands of captives; Alexander feasting with his nobles after that memor-

BOYS WHO TOOK PART IN THE VIOLIN CHORUS ON AMERICAN BOY DAY AT THE PORTLAND EXPOSITION, JULY 5TH

able campaign in Egypt; and then, turning our eyes, see the picture of that "Ideal American," Abraham Lincoln, after having completed a civil war which has no parallel in history, walking alone and unattended through the streets of Richmond. We think of the French nobles riding to the guillotine with a smile of derision on their lips, and then see that grand old man who, though walking to his grave, did not hesitate to stop and kiss the child of a slave—a man who though he knew he was doomed to death fought for what he thought right. And now, from north to south, from east to west, hundreds of thousands of heads bend and pay homage to the iron will, the noble principles of that "Ideal American," old John Brown.

My friends, Boys of America, as sure as the clock

My friends, Boys of America, as sure as the clock ticks the hours of the day, minute after minute, just so sure is the time drawing near when either we must be "Ideal Americans," or the rising star of our nation, like that of many another, will set in obscurity.

I have named to you but a few men who have come to my mind as exponents of true Americanism, but if we, by emulation, enlarge the heritage of this noble ancestry, then shall it be with us as God said to Israel, "Blest be thy days in the land of thy fathers."

"Blest be thy days in the land of thy fathers."
In the city of Philadelphia there rests an old bell. Though cracked and marred by time it is still kept as a patriotic shrine for all liberty loving Americans, for once it rang out loud and clear the notes of Freedom, and its echoes still seem to say to the downtrodden of every nation, "Come unto me all ye who are oppressed, and I will give you liberty."

### MESSAGE FROM ADMIRAL DEWEY

Sent to the Editor of The American Boy to be Read on American Boy Day at Portland, and Other Places

Navy Department. Office of The Admiral of the Navy, Mills Building, Washington.

May 19, 1905.

To the Boys of America:—I have learned with much interest of the proposed celebration of American Boy Day this year at the Portland Exposition and elsewhere. I am glad the boys are to have a day,—it is right that they should have a part in every celebration. The boys of today are to be the men of tomorrow, upon whom is to depend very much of the future of this great country of ours, a country whose rapid yet stable growth has made it a marvel to the older nations. I hope that many of the boys, as they grow up, will develop a fondness for the Navy, and that all of them will realize the importance of maintaining a Navy commensurate with our standing as a nation, for this will surely be a great factor in preserving the peace of the world,

Very truly yours.

Very truly yours,

GEORGE DEWEY.

## FOR THE MIKADO

(Continued from preceding page.)

leigh, but before their humble Japanese companion, begged the honor of conducting him to the Admiral's

"Well, I like that!" exclaimed Dunster. "Who is he Taki? Do you suppose these duffers take him for the boss of our outfit?"

"I am not know who he is," replied the other, "only that he is Nippon man. Also I cannot tell why he is go for see admiral, for it is certainly known that I am commander."

"You say that you know nothing about the man and yet you have trusted him all this time? Why, Taki, he might have been a traitor in Russian em-

"Dun Brown," answered Takahaki vehemently, "of all millions of Nippon man not one could be a traitor to his Mikado. Such thing is impos-sib-le. No, my friend, he is Nippon man and so cannot be traitor. Why that admiral wish to see him instead of see me I may not ask; for on this ship the admiral stand in place of the Mikado, and so what thing he do is

Further conversation was interrupted by the return of the officer who had received them, and who now courteously invited them to accept the hospitalities of the wardroom while awaiting the admiral's pleasure.

Every man of the wardroom mess, trim, alert, and showing faces alive with intelligence, rose upon their entrance and gave them greeting at once polite and cordial. Refreshments were placed before them, and in the general conversation that ensued innumerable questions were asked concerning the handling and efficiency of subriarines. At the same time there was no trace of curiosity as to the personal affairs of the guests. Ordinary Japanese politeness forbids the asking of such questions, while according to navy etiquette, to seek information from officers who had not yet reported to the admiral, would constitute an unpardonable offense.

At the end of haif an hour spent thus pleasantly an orderly appeared and saluting, announced that the admiral would receive Lieutenant Matsu and his

As they entered the simply furnished after cabin, a kindly appearing man in undress uniform who was pacing the floor and dictating to a stenographer, courteously returned their salutes and said:

'Lieutenant Matsu I congratulate you upon your successful accomplishment of the mission upon which you were sent to Vladivostok. You were ordered to render a certain submarine torpedo boat unserviceable to the Russians and you have done this by carry-

ing her off under their very noses. Also you have sunk one of their destroyers and have captured one of their coal ships which I understand is momentarily expected to reach this port. Is all this true?

"Yes, honorable sir; it is very true; but also none of it could have been done without the wonderful aid of this my friend Brownleigh San of America and of one other Nippon man who I perceive has already made report to your excellency most flattering to me though I no longer see him.'

'No, Lieutenant, as he was in haste to reach Nagasaki I already have sent him in a swift boat. He left regards for you and doubtless you will hear from him presently. As to your friend, I am well informed of his valuable service to our cause, and I proffer him my profoundest gratitude. Also I am going to ask him to place us under still further obligation. Is your boat in condition for immediate service?

"With a very little of repairs and some fresh supplies she is ready, sir."

"Then Lieutenant, though you well have earned a rest, I cannot give it to you. Port Arthur is not yet fallen. The Russian ships sheltered in its harbor are not yet destroyed. The Baltic fleet is on its way to form a junction, which thing may not be permitted. The Admiral (Togo) wishes more than anything, for a submarine. You will take him one, going from here under convoy of a despatch boat which I am to send at once. If possible you will start within two hours. Of the great kindness of your friend, who is more familiar with the submarine than any of our officers, I will ask that he go with you for the giving of instruction to the engineers of the Admiral. Will you speak to him and ask if he will consent to do this one more great thing for the Mikado, in whose cause he has already rendered such honorable service?'

'Dun Brown," said Takahaki, "the admiral order me to take that Naisha quick to Port Arthur. He say it will please him for you also to go to Port Arthur if you are willing for do such great thing for the Mikado. Are you willing for go?

'Am I willing? Taki; I am afraid you are getting dotty! The idea of asking me such a question, when Port Arthur is the one place in all the world that I am most anxious to visit just now. Tell him that I not only accept his kind invitation with joy and gratitude, but that if he had sent you off without me, I should have taken possession of one of his ships, perhaps this very one, and followed you. If I couldn't have done it alone I'd have got Bunker to help me. Then how would your admiral have felt?

Takahaki noted with dismay a twinkle in the admiral's eye that seemed to indicate a certain knowledge of the English language, and he hastened to make formal announcement that his friend Brownleigh San had kindly consented to carry out his (the admiral's) wishes.

At this the latter expressed his gratitude to Brownleigh San by making that young gentleman a profound bow; a courtesy that "Dun Brown" returned in his very best Annapolis dancing class manner.

Then the admiral, turning to Takahaki said: "Mr. Matsu you will oblige me by at once filling out your requisition for such men and supplies as are necessary, and by making all speed with your preparations

for departure."
"Very good, sir," replied Takahaki, saluting, and turning to leave. Then he remembered a certain omission that he hastened to rectify by saying:

"Excuse me, honorable sir, but there is one more word to be said. It is of another American, engineer of that Honan, shortly to arrive, who aided us so greatly in bringing her that he has been promised his freedom and a reward.'

"I already know of him, and all promises made shall

"Also one question, honorable sir. May I ask why you call me by that honorable title of Lieutenant? "For the reason that you were commissioned

Lieutenant more than two months ago. Did you not know of it? It was for service at Port Arthur," was the smiling reply.

"Taki, I do congratulate you!" cried Dunster. seizing his friend's hand when the two were safely beyond the sacred precincts of the admiral's cabin. 'To think that you've been a Luff all this time, and we never suspected it! I say old man, see if you can't scare up a new uniform before we leave for the seat of war, bearing the insignia of your exalted rank and all that sort of thing, you know. If you do make the raise I wish you'd give me a hand-out of your old clothes, for I begin to feel very disreputable by contrast with my present surroundings.'

So Takahaki requisitioned not only a new uniform for himself, but one for his friend as well, and got them both; only his bore certain bullion embroidered bars and chrysanthemums, that were lacking on that issued to the young American. Still, as the latter said, it was navy cut, of navy cloth, and it made him feel good to get into navy blue once more.

In less than the allotted time, the Naisha having on board a crew of six, carefully selected men from the flagship, and escorted by a trim looking despatch boat, left the haven she had so recently entered, and started to round the southern extremity of Korea, preparatory to crossing the Yellow Sea. As she went out of Idzu Harra she met the Honan, which had wasted much time searching for her, coming in. The young officer in command of the freighter glared at the submarine in speechless indignation not unmixed with amazement; while Mr. Bunker, being notified of their passing, rushed up on deck to wave his late companions a combined greeting and farewell.

(Concluded next month.)

## American Boy Day at Cairo, Ill., July 20th, 1905

THE celebration of American Boy Day at Cairo. Illinois, took place on July 20th, under the leadership of I. A. Humberd, of Cairo. The exercises consisted of music, orations, etc., in the pavilion of the city park, a picnic dinner under the trees, and a street car parade. Owing to the illness of the editor of The American Boy, following his return from the celebration of American Boy Day at the Portland Exposition, he was unable to be present and take the part assigned to him on the program. A reading of the numbers of the program will indicate something of the good time the Cairo boys had on the occasion. The following is the program:

Piano solo Malvin Franklin
Welcome addressJudge W. S. Dewey
Welcome to boysGlen Butler, Cairo
Response
Violin solo
RecitationJim Kimmel, Carbondale
Oration, "Americanism"Jay F. Vickers, Vienna, Ill.
Piano solo
Letters read from eminent men.
Egg race

Rabbit race.

Piano solo......John Beck, Cairo Salute to the flag and the singing of "The Star Spangled Banner" and "America," led by the boys

of the Episcopal choir. Recitation ...... Earl Spence, Mound City, Ill. Vocal solo......C. J. McNulty, Cairo Violin solo.....David Rosenburg, Vienna, Ill. Song, "Our Country's Boys," to the tune of America, sung by the audience. Benediction.

The prize poem and the prize song were the poem and the song used at other American Boy Day exercises held throughout the country this year.

Great credit is due to Mr. Humberd for the energy he displayed in arranging for and managing the day, and for his enthusiastic interest in boys.

CHARLES TAYLOR AMERICAN BOY DAY BUGLER AT THE FORTLAND EXPOSITION

### LETTERS TO AMERICAN BOYS BY PROMINENT AMERICANS READ ON AMERICAN BOY DAY

FROM THE SECRETARY OF AGRICULTURE.

Office of the Secretary, Department of Agriculture, Washington, D. C.,

Washington, D. C.,

June 3, 1905.

Replying to your letter of May 12, asking for an expression directed to the boys of America, to be read at celebrations on American Boy Day, I have to say:

The late Senator Hawley of Connecticut, in speaking to me one day about the requirements for students at West Point and Annapolis, remarked: "The young man must have a good constitution, sufficient preparatory training, and be a boy who won't lie." I would add that a boy should be taught industry and economy; he should know the value of an hour and a dollar. Parents and guardians should see to their boys' physical development, their mental training, and their spiritual growth; if any of these three elements are lacking, you do not have the material for first-class Americans.

Very truly yours,

JAMES WILSON,

Secretary.

I. A. HUMBERD WHO SUCCESSFULLY CONDUCTED AMERICAN BOY DAY AT CAIRO, ILL., ON JULY 20TH

FROM THE GOVERNOR OF WYOMING.

The State of Wyoming, Executive Department, Cheyenne.

Cheyenne.

May 17th, 1905.

Yes, gladly, a sentiment to the American boy, God bless him! Outgrowth of Cavalier and Puritan, composite of the choicest and boldest blood of all nations of the earth. Reared in a land of Christianity and equality, freedom and enlightenment. The restless energy properly directed makes him a sure winner in the great world race which beneath the Stars and Stripes is a free-for-all, with no favorites. Perseverance and honesty make up the winning team.

Yours very truly,

BRYANT B. BROOKS,

Governor.

FROM THE GOVERNOR OF NEW HAMPSHIRE.

State of New Hampshire.

Executive Department.

Concord, N. H., May 17, 1905.

To keep the moral fibre of the American people as strong as it has been through our national history the American boys of today must be imbued with the spirit of true manliness. All that tends to that result will have my cordial approval and support.

Yours very truly,

JOHN McLANE,

Governor.

### FROM THE GOVERNOR OF MICHIGAN.

Executive Office, Lansing, Michigan.

Greetings to the Boys of America:—
May their tribe increase. I have no sympathy with those who say the boy of today has not the opportunity the boys of the past had. We have now great opportunities and men great enough to improve them. We always will have, and that makes a combination that can't be heat. That is the reason why our country is and will continue to be the best on earth.

Cordially yours,

FRED M. WARNER,

May 31, 1905.

FRED M. WARNER, Governor of Michigan.

FROM THE GOVERNOR OF IOWA. Executive Office, Des Moines, Iowa.

Des Moines, Iowa.

To the Boys of America:

The thought uppermost in my mind when I think of the boys of this country is one of hearty congratulation. You will play your part in the great drama of life during the most important period the world has ever seen. There is more work to be done than ever before. If you want wealth, there is more of it, actual and potential, than in any past time. If you want fame, the gates of opportunity opening into the fields of honor are wider than when your forefathers fought their way toward and through them. If you want to serve humanity, it never needed strong arms, high minds, brave hearts and pure souls more than now.

As you go forward to win the victories of life, I lay upon you one injunction: Say what you believe to be true, and do what you believe to be right.

ALBERT B. CUMMINS.

### FROM THE GOVERNOR OF TEXAS.

Executive Office, State of Texas. Austin.

Austin.

May 25, 190b.

Sooner than you can realize, you will be men. If you are good boys, as a rule, you will make good men. You are now laying the foundation for the future. The stronger, the deeper, the broader it is, the greater will be the support for the superstructure you are to rear. Build the house of your character upon a rock, to the end that it may withstand any storm that may come. Do not be in a hurry to stop the preparatory work. May the boys of America spring from the best achievements of their fathers to heights beyond ancestral attainment.

S. W. T. LANHAM,

Governor of Texas.

J. LAWRENCE WHITE BAKER CITY, ORE. WHO ST HIS SINGING CREATED A SENSATION ON AMERICAN BOY DAY AT PORTLAND, ORE.

# My Four Years at West Point (BEGUN IN SEPTEMBER, 1994) XXI. "A HUNDRED DAYS TO JUNE." "A HUNDRED DAYS TO JUNE." "I tied it up cold." "I fessed frigid." "Oh, about so-so," was the stereotyped question and the examination in English was fairly under way. This was conducted by the Communities of contraband anticles mittee that sat in No. 1, Academic Building, and was not so full of terror to the pleb immortal. My turn came all in due time, and I had to submit to the mental agony of hearing a to submit to the mental agony of hearing a to submit to the mental agony of hearing a to submit to the mental agony of hearing a to member of nny section tell what he difference in general standing, and we celebrated to submit to the mental agony of hearing a to submit to the mental agony of hearing

My turn came all in due time, and I had to submit to the mental agony of hearing a member of my section tell what he didn't know about "Campbell's Essay on Style." I had some sentences to parse, and among other things explained to the Academic Board "how to make the stick straight."

As a result of the examination four of

my classmates were turned out for a written." Two of this number had previously been turned out in math, and they were doomed beyond the shadow of a

doubt.
There were several days of suspense after the examinations were over, during which every one was on the qui vive for orders about the result of their work.
One cold, dreary morning, as the battalion was drawn up in line after returning from breakfast, the adjutant was seen hurrying to the front of the center of the battalion carrying some papers in his nurrying to the front of the center of the battallon carrying some papers in his hand. We all knew what that meant, and it was a moment of fearful anxiety to more than one cadet in that long line of

The adjutant proceeded to publish his

ders at once:
"The following-named cadets of the baying been found

Later in the day came the order turning back two of the six yearlings to our class. Their advent there was received with joy, not on account of their intrinsic worth, but because we could drop the "mister" in addressing them, and dared even to call them by the same nicknames as their yearling cronies used to do. Moreover, it was quite a delightful sensation to be called plain S—by men who had once made your life miserable. And the most wonderful thing about it all was that not one of us cherished any ill-feeling on account of the past.

Recitations, meanwhile, had been re-

meanwhile, had been re-Recitations. Hecitations, meanwhile, had been resumed as soon as the examinations were completed. Not a moment was lost. While the "found" cadets were busy disposing of their cadet caulipments and packing-up of their cadet caulipments. of their cadet entirements an partial of for their departure, we were attending recitations. At dinner many of the unfortunates appeared in their "cits," and looked so odd that I could scarcely recognize them. After the meal, I said farewell of my classmates that I could find. to all of my classmates that I could find.

There seemed to be real sorrow among

the second classmen over the loss of their

the second classmen over the loss of their fellow. They accompanied him in a body to the extreme bound of cadet limits, and the final parting was touching.

With the beginning of the term we took up a new course of study. We were marched to the commissary and furnished among other works with two French books, Keetels' Analytical French Reader and Keetels' Analytical and Practical French Common besides two new B. S's—a drab Keetels' Analytical and Practical French Grammar, besides two new B. S.'s.,—a drab one and a red one. The drab "B. S." was Abbott's "How to Write Clearly," and the ted one was Abbott and Sceley's "English Lessons for English People." The math, books were Davies' Legendre's Geometry, Davies' Surveying, and Church's Trigo-

There were many interpolations to be made in the math, books, particularly in the trigonometry, where every trigonometric function had to be divided by an interpolated Radius or "R." Geometry was the polated Radius or polated Radius or "R." Geometry was the first of these studies to be taken up, and plain and solid geometry were finished almost before I knew it. Then came the "trig." and finally the surveying, with a day or two of practical work in the field.

In the English Department, we had recitations in French on Mondays, Wednestern

in the English Department, we had reci-tations in French on Mondays, Wednes-days and Fridays of each alternate week, and on Tuesdays and Thursdays of the other weeks. The other days were devoted

to English.

The "English Lessons" were first taken up. My recollections of this book are rather meagre. I remember, however, that the principles of logic were taught by a

the principles of logic were taught by a system of spoons and bowls.

The French course was a "stickler" for many of us, especially those who had never boned French before. There were some men in our class who had talked French in Paris, and consequently they had things very easy for a while. Slowly and surely the hard workers and the men with marked talent for the analytical study of languages formed to the front. These men could not forged to the front. These men could not talk French with their traveled class-mates, but they formed the majority of the first section. Numbers one, two and three in our class had never seen a French book before coming to the Point and albook before coming to the Point, and al-though (as I once heard an instructor remark) their accent was Hibernian rather

remark) their accent was Hibernian rather than French, they had no difficulty in holding their places.

Somewhere about the middle of January the order was published giving the standings in the different studies. The fourth class in addition received a general standing compiled by combining math

Fortunately for me, demerits did not count in making out the January standing. I came out much higher than I had anticipated in both studies. In fact, Silkins, Fletcher, and myself were all in the first ten in general standing, and we celebrated it one Saturday night by devouring great quantities of contraband articles surreptitiously "dragged" by a "cit" friend. Henson, my roommate, managed to pull through in B. S., and did gloriously in math.

The same routine of drill for all the classes remained in force until March 15. Parade had never been suspended, and, on clear days, when the ground was free

from snow and the weather not too cold, we had parade in overcoats at 4:10 p. m. The Regulations provided that, weather permitting, there should be infantry drill by companies from March 15 till April 1 of each year. The authorities evidently considered these drills of great importance in limbering up the cadets in the manual of arms after their winter hibernatum. The word talking the matter over at dinsidered these drills of great importance in ner, and were curious to know whether we would attend. "Chub" settled the question for us, by remarking to his classarms after their winter hibernation. The drill was a bore to us, and if that was the case what must it have been to the upper classmen! The manual by the numbers—"Present arms, one, two," etc., were all so familiar that it was a great relief to get out on the plain and have the privilege of executing "fours right" or "platoons right wheel."

Would attend. "Chub" settled the question for us, by remarking to his classmates:
"General — is to be buried on Friday, isn't he?"
"Yes," his neighbor replied.
"Well, I'll bet ten to one that it rains on that day. I've been in this institution four years and have attended a dozen funerals, and at every one of them it has been frightfully cold. with a foot of spow of the statement of the classmates.

But we did not have much cause to com-

orders at once:

"The following-named cadets of the Military Academy, having been found deficient by the Academic Board, will proceed to their respective homes and there await the action of the War Department."

The list of names then followed. The deficient cadets were ordered to report to the Treasurer to settle their accounts.

The list included one second classman, six yearlings, and fifteen fourth classmen. After ranks had been broken, the plebs who had pulled through were rather free in offering their condolence to their less fortunate classmates. The upper classmen were more reserved, but it was apparent that the blow had struck deeper with them.

What poor deluded plebs we were! We really believed we were already bound by strong class ties when, at the very bottom of our hearts, we did not regret to see more than one of the fifteen depart from among us.

Later in the day came the order turning back two of the six yearlings to our class. Their advent there was received with joy, not on account of their intrinsic worth, but because we could drop the "mister" in addressing them, and dared even to call them by the same nicknames as their the plain along the railroad practice on the plain along the railroad guns or mortars, or else to rife target practice on the plain along the attention of the faritice.

and we went either to drill at the slegguns or mortars, or else to rifle target practice on the plain along the railroad north of the Point. These were all interesting drills, and we took a great deal of pride in our marksmanship.

Each day the sun set later and the weather slowly grew milder and balmier, as it brought us nearer the long-anticipated Yearling June. Every man in the corps kept a tally of the number of days ahead, and in truth the record was halked and penciled nearly everywhere.

One Hundred Days to June is the occasion of a grand celebration in the corps.

one Hundred Days to June is the occasion of a grand celebration in the corps. The nearest Saturday is a gala day. A german was given in the afternoon by the upper classmen, and exercises were held in the messhall in the evening. The entertainment consisted of two or three speeches by members of the first class, and the reading of the Howitzer. West Point has no college periodical other than the Howitzer, which appears annually.

Every one in the corps was invited to contribute, and the whole conglomeration was read by a first-classman elected for that purpose. The Howlizer was made the organ for perpetuating all grinds of the

The plebs took advantage of the opportunity to get in some effective thrusts at the upper classmen, and nearly all the contributors gave the officers over them some indirect but nevertheless effective digs. The authors of the articles were anonyment and the conformal of the chagging different properties. ous, and if any one felt chagrined, there was no help for it.

was no help for it.

Among all the upper classmen I think the "Colonel" received the heaviest bombardment from the Howitzer. Many of the officers and the ladies on the post attended, and the latter were given an excellent opportunity to gain a good insight into cadet life and the peculiarities of their friends.

Washington's Birthday was not observed as a holiday except in one respect. The band started out at reveille, and marched around the post playing "Army Blue," "Bad White and Blue" "Hail Columbia."

band started out at reveille, and marched around the post playing "Army Blue," "Red, White, and Blue," "Hall Columbia," and "My Country." The playing was hardly up to the standard, and as far as I was concerned, only served to interrupt my stolen nap between reveille and police call. The ground was covered with slush and the country of the standard full of mud-holes. Every now and then, one of the men who wielded a hig trom-

one of the men who willing a lik from-bone stepped into a hole and blurted out a note away above the proper one.

Decoration Day was not observed at the post except by the advent of hundreds of excursionists from the neighboring towns and from New York City.

These picnickers (as the cadets call them indiscriminately) stood and walked all around barracks and the Academic buildstared when there was anything to stare at, and when nothing was going on stared on general principles. There were on general principles. a great many heads peering out from the windows on the qui vive for pretty

Sight-seers who come to the Point to spend the day are called "picnickers" by the cadets. This term is not very sugges-tive of a swell class of people, and is properly applied only to those who bring their lunches with them and are willing to share it with cadets to whom they have not been

A great many excellent people visit the Point on the morning day-boat, returning in the afternoon. In cases where the friends of cadets have come up in that way, I

In looking through the N. Y. Herald for the army news one morning about the mid-dle of May, I saw the obituary of an officer of the retired list whose name became famous during the war for the Union as one of the most dashing cavalry leaders of the Northern army. The notice stated that the deceased officer was to be buried at West Point.

We were talking the matter over at din-

frightfully cold, with a foot of snow on the ground, or it has rained torrents. General—was a grand soldier, but never having seen him, I don't think I'll shed many tears over his grave. There is one thing I'm not going to do, that is to have a corps of cadets, yet to be born, turn out and tramp behind me to the cemetery."

The following Thursday at parade, the Superintendent's order was published giving a short sketch of the career of General—, and stating that he would be buried on the following day, and that the corps of cadets would attend the funeral.

Friday morning I went down to reveille

Friday morning I went down to reveille in a pouring rain, and as the day advanced in a pouring rain, and as the day advanced it came harder and harder until the area and the roads were seas of mud. At breakfast, the commandant's order was published. "D" Company was to escort the body, and the rest of the corps were to attend in white gloves and side-arms. Immediately after dinner, we were formed in the area. The escort were drilled a while in the manual of arms, particularly in firing.

We were marched out and formed on

We were marched out and formed on right into line, facing the chapel. The services were nearly concluded by this time. The hearse, which was waiting in front of the chapel, was an ordinary caisson, covered with black cloth, and draped with the stars and stripes, and was drawn by four horses. A cavalry soldler in full dress was mounted on the "off" horse of each team.

mounted on the "off" horse of each team. The steeds were prancing about, as was also the led horse supposed to be the dead officer's charger. The animal was black, and covered with a heavy black blanket. On one side of the saddle a cavalry boot was suspended with the toes reversed. We had a short "place rest" while waiting for the conclusion of the services, and I was thinking what a beautiful charger that was, and how thrilling his war experience had been, when I heard my front

perlence had been, when I heard my front

rank file say:
"There's old Greene. Couldn't have funeral here without him. He is a mighty mean horse in the hall, though."

mean horse in the hall, though."
Finally the chaplain appeared from the chapel, and the body was placed on the caisson and covered with the flag. The funeral procession was quickly formed. The band led, playing the standard army funeral march. Then came the escort followed by the clergyman. Next were the remains and pall-bearers and two or three carriages containing the chief mourners. The officers of the post marched immediately after, followed by the corps of cadets.

The rain fell ceaselessly, and the sky was of a dull leaden hue, but the procession moved forward with slow and stately tread. following the winding road to the ceme-tery about half a mile north of the post. The West Point cemetery is a beautiful spot, and the ideal place for a soldier's last sleep. It is on a plateau that overlooks the Hudson, and commands a lovely view to the north. Cro' Nest stands as an eternal sentinel over the heroes that rest below and sends back the subdued echoes of the cannon's hoom at reveille and retreat.
The old flag can be seen in the distance floating from the top of the flagstaff on

Trophy Point. When we had entered the little cemetery the corps was drawn up in front of the grave, the center of the escort directly opposite, the rest of the corps on the right of the escort. The remains were brought forward and placed over the grave, after which arms were presented, and the band played "Nearer, My God, to Thee." When the music had ceased, arms were carried by direction of the commander of the escort, and the body was lowered into the The escort was then brought to a " arms, and all stood with bowed rest on" heads while the chaplain performed the last rites of the Episcopal church.

This, my first military funeral, made a deep impression upon me. I can see it all now as vividly as I did in those old pleb days. There stood the chaplain in his long black gown hareheaded by the grave, with his eyes turned upward in prayer towards the dull gloomy skies. The wife and the dull gloomy skies. The wire and children sorrowfully took a last look at the beloved dead. The long line of gray the beloved dead. The long line of gray stood reverently by, all class distinctions, jealousies, ambitions stilled in the pres-ence of death. It was then there stole in-to my thoughts those impressive lines from Gray's Elegy:

The boast of heraldry, the pomp of power, All that beauty all that wealth e'er gave. Await alike the inevitable hour,

The path of glory leads but to the grave."

June means a great deal to every cadet. For the last month of so "— days to June" had been an occasion for celebration, according to the number of fives contained in the

tained in the – days. No time in the cadet's calendar is so dear to him as the month of roses. Then not only sisters, sweethearts, and parents come in full force, but it brings freedom to the

graduating and to the furlough class. The plebs find the "Mr." dropped from their names forever, except when addressed by the new plebs. The second class assume the sceptre and the chevrons abandoned by the graduating class. June indeed is a memorable month for West Point. Ten days to June was made the occasion

for a special celebration by the first class-men and the yearlings. It would have been too "b. j." for us plebs to celebrate in any organized manner, so I had to con-

in any organized manner, so I had to content myself with a walk around Flirtation in Silkins' company.

The yearlings were gathered around one of the fifteen-inch guns at Battery Knox. down on the edge of the cliff, overlooking the Hudson. This gun frowns over the river in all months except June, when nothing frowns at the Point. One of the yearlings had a guitar and accompanied the rest of the crowd in the oft-repeated songs of 'My Darling Clementine,' "Army Blue," "Son of a Gambolier," and "Benny Havens, Oh!"

The pauses for rest were utilized in giv-

The pauses for rest were utilized in giving the class yell and bumping some yearlings who had been guilty of undue levity against the monster cannon. Just as Silkins and I passed, one of the Albany day-boats swung to view on our right. At sight of the steamer the yearlings let themselves loose, for was not that the boat that was to bear them homeward in the course of three weeks? They waved their handkerchiefs, turned handsprings, stood on their heads, and shouted until hoarse. on their heads, and shouted until hoarse. The pilot of the steamer was evidently used to such exhibitions, for he replied with three hoarse salutes from the whistle, and was obliged to repeat them at intervals, as long as the boat remained in sight. Silkins and I wandered down Fiirtation paying little attention to the third class circus. It was natural, perhaps, that we grew confidential, and confessed to each other that we expected some young lady

grew confidential, and confessed to each other that we expected some young lady friends during the summer. And so we strayed from the path, and reaching a secluded nook, sat down for a few minutes in the twilight and surveyed our surroundings. Just why we did so, it is hardly fair to say; but that reconnoissance must have proved quite useful to both of us, for, almost two years after, I was sauntering down to one of these little retreats—not alone, and there I found Silkins, and he was not alone.

When we arrived at Gee's Point, where the lighthouse stands, we seated ourselves

the lighthouse stands, we seated ourselves on the old bench between the cedars and carved our initials in the seat. We could hear the first classmen singing up at Kosclusko's monument, on the parapet of Fort Clinton,—"Benny Havens, Oh!" "Here's to 8—, drink her down," and "Army Blue." The principal refrain in the last song was:

"We'll bid farewell to cadet gray, And don the army blue.

Ten days to June,-the man who didn't appreciate that was-well, he wasn't a

As far as studies are concerned, these last few days were, for the diligent men what the cadets call a "picnic." We were in general review in all our studies, which meant that we were going over the same ground for the third time.

Finally the first of June arrived, and in unnumbered places the chalkers had recorded the fact that it was O days to June,
the cipher being conspicuously large. The
day was marked by the arrival of the
Board of Visitors and lots of pretty girls,
the initiation of the series of exhibition
drills and exercises, the beginning of the final examination, and the donning of white trousers by the battalion.

The examinations were well attended by the Board of Visitors, not to mention others who did not belong to any board. Our examination in math. was written. French it was both written and oral. reading and translation being oral. English was oral.

Ilsh was oral.

There was another feature of these days in early June that I have not yet mentioned—viz., the New York newspaper reporter. This was the only season of the year that the metropolitan journals seemed to remember the existence of West Point at all, except in the rare inervals when some cadet fight took place. These were always described in true prize-ring style, and were generally accurate only in the and were generally accurate only in the names of the participants, which were gen-

erally spelled incorrectly.

Their accounts of the June exercises Their accounts of the June exercises were often amusing. A column and a half contained nothing more than, "cadets—white trousers—old Sol—lovely girls in pink, lovely girls in white, lovely girls in blue, old girls, young girls, pretty girls, and charming girls—orioles darting through the thickets like balls of golden fire—Filtration Walk." etc., etc. .

On the first of June we had a review in honor of some Brigadier-General, who was

honor of some Brigadier-General, who was visiting the post, and for whom a salute was also fired. Just as it is not good was also fired. Just as it is not good etiquette for a pleb to stand at attention to a new-comer, when he is already in the presence of an upper classman who ranks the new-comer, so it is bad form to give a review and fire a salute for a high military

(Continued on page 354.)

# THE DRY LAND JIG

By WILL LISENBEE

EAVEN only knows what will become of us now, Frank," said Mrs. Harland. "We have only a few dollars left. When that is gone, I can't see where the next is to come from.

But I shall find something to do, moth-

"But I shall find something to do, mother," responded Frank. "There is always work for willing hands. I shall find some way to earn a little money."

"I hope so, Frank; but it will be hard for you to get work where so many strong men are idle." She glanced out of the cabin window to the cluster of cheerless cabins that composed the Blue Rock mining camp. ing camp.

Six months had gone by since James Har-Six months had gone by since James Harland had moved with his wife and only son from Galena, Kansas, to this little mining camp in eastern Wyoming, where he was employed by the Cheyenne Mining Co. He had been killed by a premature explosion in the mines a week before the conversation with which this true story begins. After the funeral expenses had been paid the widow found herself almost penniless, with none to look to for support but Frank, her sixteen-year-old son.

Day after day, Frank went to the differout of employment. So Frank could find

out of employment. So Frank could find the mines had shut down for the winter, thus throwing a large number of miners out of employment. So Frank could find no job where so many men were willing to do anything to keep themselves and fam-

illes from starvation.

The boy never ceased his exertions, but

The boy never ceased his exertions, but continued to explore every avenue to labor. He had even failed after trying hard to get a place as dishwasher in the little hotel. Still he did not give up.

The weeks went by. A month passed, and he had succeeded in earning only fifty cents by chopping wood for a neighbor He next earned a quarter by shoveling snow from the dump at the shaft where his father had been employed.

snow from the dump at the shaft where his father had been employed.

While engaged in this work he happened to pick up some small pieces of quartz, which he showed to one of the miners, "Isn't there silver in that?" Frank asked. "Yes," answered the miner, "there is some silver and a little gold."

"Why do they throw it away?" queried Frank.

Frank.

There's too much dirt mixed with it. You see, when the ore is being mined there is considerable of it that gets mixed with the dirt and rocks and is thrown in

the waste-dump."
"But couldn't it be sluiced out?" "But couldn't it be sinced out:

"Yes, by carrying it on a burro to a
stream thirty miles away," the miner answered derisively. "But that wouldn't
pay. If it would, the dirt wouldn't be
light here." pay. If lyin' here.

"If a fellow could clean it up without moving it away, would it pay him? asked

Frank.
"I'd say it would. W'y, there's more 'an five hundred dollars lyin' in that dump, but it'll never be got out."

That night Frank scarcely slept an hour. Tossing upon his pillow, he was trying to devise some means of separating the ore from the dirt in the old waste dump.
"I believe it can be done," he said to

himself, over and over.
But how? That was the question. Many

But how? That was the question. Many experienced miners were in the camp out of employment. Surely, if they could do nothing with the dump, a boy could have little hope of turning it to good account. Could he be wiser than they?

Though these reflections discouraged him, he could not get that waste dump out of his mind. His thoughts wandered back to the time when he worked with his father in the lead mines, in Galena, Kansas, and he studied over the different methods they employed to separate the mineral from the rocks and dirt.

Persistence is the winner in most af-

Persistence is the winner in most affairs. After many hours a thought came to Frank like a revelation. Why not try the "dry land jig box," such as they used in Galena?

So excited did he become as the thought So excited did he become as the thought occurred to him that, though it was only three o'clock in the morning, he jumped from the bed, and dressing, told his mother of the plan he had in view.

"It will work, I know it will!" he said.

"God grant it may," responded his mother. "But how can you get the money to buy the outfit to work with? We haven't ten dollars in the house."

"I shall find some way to obtain the money," replied Frank, confidently. "I must first see the superintendent of the mine and find out if they will let me work

mine and find out if they will let me work the dump.

About nine o'clock Frank went to the superintendent of the mine and told him he wanted to clean up the waste dump on

he wanted to clean up the waste dump on shares. The superintendent smiled.
"I am afraid you are undertaking a difficult job," he said. "Where do you propose to get your water?"

'I shall not require much." Frank re-

"That is where you are mistaken. It will take more water than you will ever get without moving the dirt, and that won't pay."

But I have no intention of moving it. Frank replied, where it lies." "I mean to wash it up just

passing through the sleve causes the rocks and other lighter substances to be forced to the top of the sleve, while the heavy mineral is left at the bottom.

In the lead mines it was customary to sluice the dirt before passing it through the mining company and endeavored to induce him to go into partnership with him and furnish the necessary funds. But the carpenter, thinking the boy's scheme would fail, refused. Frank then tried another in the same way, but with the same result.

At first the plan was a failure but they

But he would not give up. Disappointment served only to strengthen his resolu-tion. One morning his mother saw that

asked.

"Show it to the superintendent of the

ing it.
"I know it will work," he said.

worked in Galena, and why not here?"
Then he boldly asked the superintendent if he would not advance money enough to

build the jig.

The superintendent was impressed favorably with the boy's plan as well as his business-like manner.

an earnest manner that the superintendent laughed outright.

"Very well, my boy." he replied, "Come around tomorrow morning and we will see what can be done.

The next morning when Frank called at

the office, the superintendent handed him a paper saying: "Give this to our car-penters at the shaft and show them what you want done and you'll soon have your outfit ready to go to work."

outfit ready to go to work."

With deep gratitude Frank hurried away to see the carpenters. By the aid of the little model he had made he soon explained to them what he wanted, and they promised to have the work done by the next evening. Frank then hurried home to tell his mother of his good fortune.

Two days later the jig box had been completed and placed in position at the waste dump.

completed and placed in position at the waste dump.

For the benefit of the readers who are unfamiliar with the workings of a jig box. I will give a brief explanation.

The jig consists of a water-tight tank, a sleve and a jig-pole, or lever. The sleve is simply a small wooden box, the ordinary dimensions being about thirty-six inches in length, eighteen inches wide and a foot dimb amount of \$1.648.25 the speaker in dumb amount of \$1.6488 the speaker in dumb amount of \$1.6488 the speaker in dumb amount of \$1.6488 the spe Frank replied. "I mean to wash it up just where it lies."

"That will be impossible." said the superintendent in surprise.

"It may be, sir. Still, I'm willing to give it a trial. If you will give me the privise is simply a small wooden box, the ordinary legg. I will work the dump up on shares."

"Of course we could have no objection to your trying the experiment," returned the superintendent, "and if you can really do what you think you can we can well afford to give you seventy-five per cent. of all the ore you clean up."

"Thank you," exclaimed Frank hearily. "Now if I can do the work in three weeks do you think it would pay me?"

"The substitute of the readers who are unfamiliar with the workings of a jig consists of a water-tight tank."

Frank replied. "Mell, yon haven't been working for mothing." the superintendent replied. "After working for a water-tight tank.

The jig consists of a water-tight tank of the workings of a water-light tank.

The jig consists of a water-tight tank of a water-tight tank of wordinary in the sleve is simply a small wooden box, the ordinary is simply a small wooden box, the ordinary.

Frank treel, will, you can do it in the speck of a water-tight tank as food and a jig-pole or lever. The sleve is simply a small wooden box, the ordinary.

Frank will be well, yon haven'te been working for mothing." the superintendent replied. "After deducting the moth is simply a small wooden box, the ordinary is simply a small wooden box, the ordinary.

Frank treel, you havenous of small wooden box, the ordinary

the sieve, which is then lowered into the water and churned up and down vigorously with the jig pole. The action of the water passing through the sieve causes the rocks

At first the plan was a failure, but they soon discovered that by placing the rods in the bottom of the sleve wider apart it would work. Before a year had passed tion. One morning his mother saw that he was busy at work making a miniature jig box.

"What are you going to do with that?" she asked.

"What are you going to do with that?" favor till the modern steam crusher made them observed. them obsolete.

"Show it to the superintendent of the mine," he answered, "and see if he won't advance me the money to go on with the work. I believe he will do it after he understands my plan."

That evening he carried his little model of the "dry land jig" to the superintendent, and explained the manner of working it.

The mobsolete. The mossilete. The first thing for Frank to do was to fill the tank with water. This he had to carry from the reservoir at the pump. "It will take me a half a day to carry the water and fill it," he said to his mothers, and explained the manner of working it.

That night a heavy snow storm set in which lasted for three days. When it ceased Frank found that ten feet of snow had drifted into the narrow valley where the jig had been placed.
"It is too bad," said his mother, "for

ably with the boy's plan as well as his business-like manner.

"But if I should advance you the money, and the plan should fail, how would I get my pay?" he asked.

"But it will not fail," said Frank in such an earnest manner that the superintender.

"It is too bad," said his mother, "for it will not melt away till spring, and that ends your work for the winter."

But Frank cheerfully replied: "I shall go in the plant of the plant

Half an hour later he was scooping out a hole in the snow directly over the jig. He worked all day faithfully, and by night had hollowed out a large room around the jig.

When the work was completed he found that the high walls of snow on every side afforded excellent protection from the wind and gave him a comfortable place to work in. That night he told his mother of what he had done. in. That night he had done.

he had done.
"My dear boy," she said affectionately,
"it does seem as if you allow nothing to stand in your way.
"I'll tell you what, mother, this business

has kept me thinking," replied Frank, "but if nothing happens now, I'll get to work as soon as I can fill the tank."

"Ah, that will be a hard task, indeed, to carry water so far through the deep snow!"

"Why, mother, the snow has saved me that trouble," laughed Frank, "for I'm going to build a fire and melt it in your wash boiler and fill up the tank."
"Well. I declare!" she exclaimed. "You

"You are actually pressing obstacles into your service. It beats all!"

The next morning Frank carried wood and built a big fire in his snow room at the jig. By noon he had melted sufficient snow to fill the tank.

Then he began work, and by night he was overjoyed to find that the jig was separating the ore just as he had calculated it would.

The superintendent of the mine came

The superintendent of the mine came down to see how he was progressing, and when he saw the little pile of clean ore by the tank, he expressed his surprise.

"By George! you are doing it!" he exclaimed, casting a look of admiration on the plucky boy. "Why, there isn't a man in Wyoming who would have hit upon your plan. How did you come to think of it?"

"We used the ligs in Galena" enemored

"We used the jigs in Galena," answered

"We used the jigs in Galena," answered Frank. "I used to help my father in the lead mines there, and I learned to operate a jig as well as any one."
"Well, you deserve to succeed, and I am glad your plan has worked. Here, take this. I will advance this on your ore, and if you need any more, let me know."

He pressed a twenty dollar bill into Frank's hand. Then before the boy could utter a word of gratitude the superintendent hurried away.

For three days Frank continued to work without interruption. Then the weather grew colder and the water in the jig tank froze, causing him to suspend labor.

grew coller and the water in the jig tank froze, causing him to suspend labor. But he was only ide a half day when he hit on a plan for removing this obstacle. He built a roaring fire by the jig, and by heating rocks and placing them in the tank, soon succeeded in thawing the ice, and was able to go on with his work.

sign. Sign.

tendent of the mine assured him that he had made a "good thing."

The ore was then weighed. As soon as the roads were passable it was sent to the mills across the mountains, where it was subjected to the "sampling" process and an assay made.

It was three weeks before the assayer's

report was three weeks before the assayer's report was returned to the superintendent. When at last it came he sent for Frank. "Well, my boy," he said, as Frank came into the office, 'I have got the assayer's report. How much do you think is coming to you?"

'I-don't know," hesitated Frank, "Not

## BOYS AS MONEY MAKERS

### Climbing the Ladder

Roy B. Cook entered the office of the Weston (W. Va.) Independent as "printer's devil" at the age of twelve. He er's devil" at the age of tweive. He soon rose from his position of "devil" and became, considering his years and his opportunities, a pretty fair compositor. Later he accepted a position with a druggist, working in the drug store when not in school, and graduating from the public schools with the class of 1904 at the age of 18 years. A few weeks age at the age of 18 years. A few weeks ago he went before the state board of phar-

macy at Martinsburg to try an examination for registration. He has received from one of the examiners a personal letter congratulating him on his success and complimenting him on the accuracy and excellence of his work before the board. He is perhaps the youngest druggist in West Virginia, holding a state certificate, and so far as is known, the only one who has so successfully passed the usually rigid examination before the state board without the benefit of a college education.

### It is the Man Who Knows How

Ignorance breeds failure and all failure is ignorance. The successful man is the man who knows how. Wisdom is simply the best way of doing the thing in hand. the best way of doing the thing in hand. The educated man knows the shortest way to the goal. Whoever comes to the front is the man that arrives because he knows the one last fact in the case. Robert Burns never went to college, but the one thing he did know he knew thoroughly, and he was the best equipped scholar of his generation—in his own field, which was singing the epic of the plowman's cottage. Contrariwise, it is ignorance that brings all the wastes. Ignorance has wasted our forests; ignorignorance that brings all the wastes. Ignorance has wasted our forests; ignorance ruined the rich soil of New England by washing away the nitrates; ignorance wasted half of the gold in the mines of California; ignorance and folly and vice destroyed the old nations and cities on the banks of the Mediterranean. Wisdom and knowledge and obedience alone can recover these wastes. Some men are college trained, most men are self-trained, but every man who succeeds represents the power of knowledge and wisdom in his own work. —N. D. Hillis.

# or Use Tobacco

An organization that has attracted great attention all over the country is the Chicago American Union Newsboys' Association of Fort Wayne, Ind., which is composed of 150 hustling newsboys ranging in age from five to eighteen years and with many well known newspaper and other prominent men as honorary members. orary members.

orary members.

The organization was formed February 15, 1896, by Charles A. Phelps, then a newsboy of Fort Wayne, Ind. It had originally sixteen members and has gradually grown to be a factor in Fort Wayne newspaper circles. Mr. Phelps has been the president since it was first organized. It has a full set of officers and holds monthly meetings and has a dancing school and drum corps.

Organized for the purpose of making all newsboys of the city first-class, clean and honest newspaper hustlers, its most rigid rule is that any newsboy

all newsboys of the city first-class, clean and honest newspaper hustlers, its most rigid rule is that any newsboy found smoking or chewing tobacco or using bad language is suspended and cut off from selling papers. A second offense is expulsion from the association. The results have been that Fort Wayne has become the best newsboy community and has the largest sale of newspapers—daily and Sunday—of any city of its size in the United States.

The newsboys have two excursions every year, one of which Mr. Phelps stands the entire expense. On every Thanksgiving Day Albert C. Alter, a prominent local cigar merchant, gives the newsboys a dinner at one of the leading hotels of the city, while the news firm of Phelps & Hadden do likewise on New Year's Day. The boys do not go go inside of saloons except to deliver papers, but catch all sales on the outside. Politeness and cleanliness are features among the Fort Wayne newsboys.

Charles A. Phelps, president of the organization, sold papers from the age of five years. At twelve he opened a small news stand and his business by honesty and pluck gradually became so large that he took as a partner Mr. Alfred L. Hadden, a well-known newspaper man.

### Cured the Habit Suddenly

Ikey, the new office boy, was smoking a cigarette and puffing violently, issuing large clouds of smoke, when the manager stopped his work, turned to him and said:

"Do you smoke many cigarettes?"
"Yes, sir."

"Does your father know it?"
"Oh, yes."

"Why don't he stop you?"
"He can't. I've got the habit."
"Well, I'll break your neck if you smoke any around here." The boy never smoked another cigarette while employed by that manager.

### Results That Flow From Correspondence

Soldier, Kansas, Camden, N. J.,

Mr. W. C. Sprague, Editor, Detroit,

Mich.:

Dear Editor—We thought it might be a pleasure for you to know that we became acquainted with each other through the columns of THE AMERICAN BOY. We both take THE AMERICAN BOY and like it very, very much—in fact, we don't see how a boy can go without it. We are especially interested in the editor talk each month. It contains a great deal of useful advice.

We have corresponded with each other for nearly two years, although we have never met.

Another thing we are interested in and that is the annual "American Boy Day." The boys, we are sure, would attend.

We have both chosen a profession, one music, the other law, and will strive to succeed in our chosen professions.

Remaining loyal American Boys, we are yours for M. M. M. M.

3860 Arch St., Philadelphia, Pennsylvania

### Mother

the high school this month.

When I bin swimmin' all day long,
An' had a fight or two.
An' come home in the ev'nin' time
A feelin' mad and blue;
There's just one thing that always seems
My angry thoughts to smother;
An' I fergit 'em when I see
The smilin' face of mother.

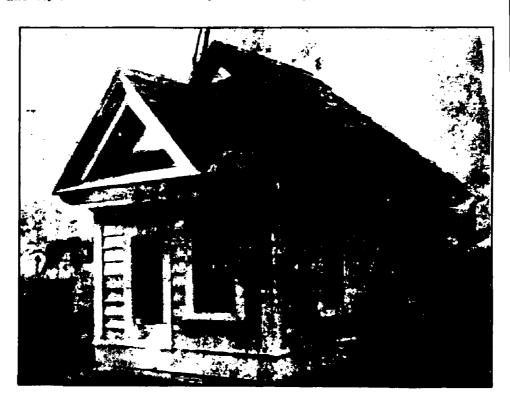

An' father sez when he comes home
From troubles on the street;
He sez that gentle smile, it makes
The whole blame world look sweet.
An' Carlo's dog talk sez so too
An' so does sis and brother;
I tell you they ain't nothin' like
The smilin' face of mother.

It kinder brightens every place,
An' I know what I know,
That when I die and go away—
Coz we all have to go—
I'll need one proof to show me where
I'm at, don't need no other,
I'll know it's Heaven when I see
The smilin' face of mother.

# BOWS AND ARROWS right angles to the notch. This is known as the cock feather and should always point away from the bow when the arrow is shot.

By A. NEELY HALI-With Illustrations by the Author

HE origin of the bow is not definitely known, but we find it em-ployed by almost ev-ery nation from the earliest

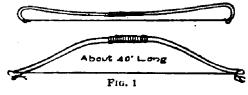

The English bowmen of the middle ages were far su-perior to those of any other nation in the use of this weapon, due probably to the length of their bows—five and six feet—and to their continual practice. It is said that twelve arrows could be discharged from the English longbow while the French crossbowman was discharg-ing one from his cumbrous crossbow.

The American Indian's bow was different from that of the English. It was of dif-ferent wood and was shorter.

ferent wood and was shorter. Fig. 1 shows two Indian bows, which are about forty inches long. The Indian's bow for shooting fish was shorter, generally one and one-half to two feet long. The bowstring, consisting of a strand of deerskin twisted or rolled, was strung very tightly from notch to notch, and required in drawing, more strength than the average white man posseses. Arrowshafts were frequently made from reeds, but the greater number were of twood. The length depended upon that of the bow.

the bow.

Arrowheads were generally made of hornstone, quartz, flint, obsidian, horn of deer, claws of eagles, and the spurs of wild turkey cocks. Thousands of these are to be found in the mountains, upon old battlefields, and in excavations for building purposes, where they were dropped by the red men when they were the monarchs of this country. In Fig. 2 we have a few specimens of stone heads, showing the variety of shapes and sizes showing the variety of shapes and sizes

The small heads are examples of

used. The small heads are examples of the young Indians' arrowheads, none of which exceeded one inch in length.

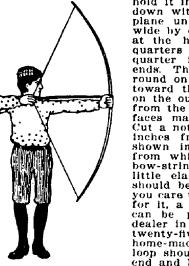

In making the filmt head, the Indian made a loop in a piece of buckskin which had been thoroughly wet in cold water; then, taking a piece of flint, he heated it very hot and chipped off what was not wanted with the wet strip of buckskin, until the required shape and size were obtained. obtained.

obtained.

The hornstone being much softer than quartz, was broken and shaped by striking it against the latter. The heads made of deerhorn were bored out to fit over the arrow shafts, and had grooves cut in them to make their victims bleed freely. Wooden arrowheads, used for hunting small game, were hardened by fire. The heads were attached to the shafts of the arrows with shews, generally of deer.

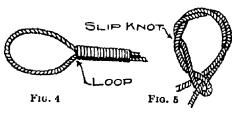

Today all arrowheads are made of iron, but the Indian had no knowledge in the working of metals, until the coming of the white man, when he took his firstlesses in tipping his arrowheads with brass.

greater part of his weapons, there was always a warrior in the tribe who was skilled in the art of arrow-making and did this work for his tribe. The shaping of the arrowheads was also done by

hold it in position, shape it down with a draw-knife or plane until it is one inch wide by one-half inch thick at the handle, and three-quarters inch wide by one-quarter inch thick at the ends. The bow can be made round on the inside or face toward the archer, and flat toward the archer, and flat on the outside or face away on the outside or face away from the archer, or the two faces may be made round. Cut a notch in the bow two inches from each end, as shown in the illustration, from which to attach the bow-string. A cord with as little elasticity as possible should be used for this. If you care to spend the money for it, a good cotton string you care to spend the money for it, a good cotton string can be purchased from a dealer in archery goods for twenty-five cents. With a home-made bow-string, a loop should be made in one end and bound with thread, as shown in Fig. 4. Singths

as shown in Fig. 4. Slip the loop over the upper notch, bend the bow until the center of the string is about five inches away from the handle, and attach the loose end to the lower

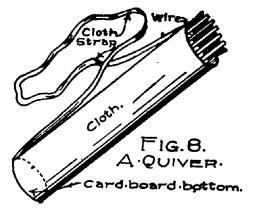

notch by means of a slip-knot similar to that shown in Fig. 5. The bow should then be sandpapered until smooth, and thoroughly offed with linseed-oil. Glue a piece of velvet about three inches wide around the center for a handle.

It is a mistaken idea to think any sticks pointed at one end and notched at the other will do for arrows. They may for some boys, but, as accuracy depends largely upon well-made arrows, care should be taken in making every detail. Arrows are divided into three parts; the head, sometimes called the pile, the shaft and the feathers.

The shaft is generally made of hickory, ash, elm or pine, and its length is dependent upon that of the bow. For a

A quiver of some sort should be provided large enough to carry a dozen or more arrows. This should be three inches shorter than the arrows, so that their

ends will project above the top. It may be made out of any thick cloth, as shown in Fig. 8. A circular piece of cardboard is placed in the bottom, to which the cloth is sewed, and a piece of heavy wire, bent into a circle, fits in the top to keep the bag open. The quiver should hang on your right side.

A simple target which is very quickly made is shown in Fig. 9. A circular piece of cardboard, with rings painted upon it, is mounted upon a broomstick, the latter being stuck in the ground

the latter being stuck in the ground wherever desired.

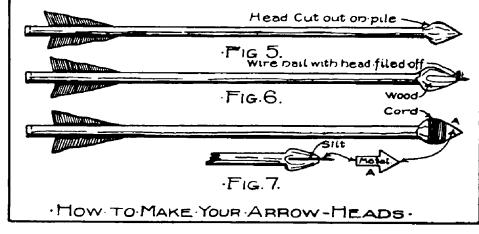

### Willie and the Impecunious Boss

Willie was a sweet boy, with a cherubic face, and he was temporarily in the employ of a hustling but impecunious attorney who was busy dodging collectors. One morning the Impecunious Attorney chided Willie ungently. A short time afterward the form of an Insistent Collector with a bill for \$46 appeared, and the Impecunious Attorney hastily clambered into the microscopic closet which contained the washstand, clambered on top of the wash bowl, and pulled the door shut, motioning frantically to Willie to tell the ubiquitous collector that he was out.

"I want to see Blank!" snarled the collector.

lector.

"He's out, sir," said Willie, smiling sweetly, "but I expect him in a short time. Won't you please take a chair and wait?"

Turkey feathers were considered best for arrow feathers, and were fastened to the shaft with deer sinews.

Although every Indian made the greater part of his weapons, there was reader part of his weapons are reader part of his weapons, there was reader part of his weapons are re

It is not supposed that boys would care to follow the Indian methods of preparing arrowheads of stone or bone, for they can be made much easier. They may be cut out on the end of the shaft

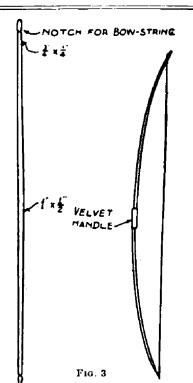

Thanks. Yes. I'll wait."

'He's just been gone a minute and I expect him back in a few minutes. Won't you look over the paper while you're walting?"

The collector accepted both the chair and the paper and reposed himself to wait comfortably. And Willie resigned hurriedly without waiting to tell any one about it and never returned for his

A deaconess had just finished telling the story of Peter's release from prison to a class of interested boys, when one of the number, a newsboy, exclaimed, ex-citedly, "Gee! wouldn't that make a jim-dandy extra?"

Briton got "rattled" A small Briton got "rattled" during a lecitation in English grammar when the question was put to him, "What part of speech is the word 'am?" The little fellow stammered out, "Which, ma'am, the ' that you eat or the 'am' that you

[The editor of this department still has a large number of typical amateur papers, which he will be glad to send to our readers, interested in amateur journalism, who send a stamped (2c) addressed wrapper to this office.]

### The N. A. P. A. Convention

The IN. A. P. A. Convention

The thirtieth annual convention of the National Amateur Press Association, in many respects the star convention of its history, was held at the Colonial Hotel, Cleveland, July 17-19. Large attendance, efficiency of work, enthusiasm, fair politics, a good time generally, characterized the convention. Among the delegates were some whose interest in amateur journalism was first aroused by their reading THE AMERICAN BOY. "Old-timers" and "fossils" fraternized with present-day active amateurs. Those present were the following: E. M. Lind (The Pagan), San Francisco, Cal.; Paul J. Campbell (The Scotchman), Georgetown, Ill.; W. E. Mellinger (Commentator), Frank Honeywell (Chain Lightning), C. F. W. Hegert (Clarus-Opinions), Linden D. Dey (Villa de Laura Times), Walter C. Chiles (Rising Age), Amanda E. Frees (The Owl), J. Irene Maloney, Malsie McLoughlin, Vida R. B. Combs, Chicago; John T. Nixon (Leaves), Crowley, La.; Sam'l De Hayn, Boston, Mass; Walter S. Goof (The Review), Blisstield, Mich.; W. B. Stoddard, St. Louis, Mo.; Ira Eugene Seymour (Venture), T. Harry The thirtieth annual convention of the

Walker, Kansas City, Mo.; Mabel Alberta Klump (Caprice), Newark, N. J.; Edwin Hadley Smith (Boys' Heraid), New York, N. Y.; Chas, A. Watkyns, Rochester, N. Y.; Harry R. Marlow (Searchlight), Warren, Ohio; Charies R. Hayek, Max S. Laird, Salem, Ohio; Nelson W. McCormick, A. B. Knapp, Ambler Heights, Ohio; Chas. E. Wing (Dewey), Twinsburg, Ohio; Russell Hertzog (La Critique), Hiram, Ohio; Warren J. Brodie (Random Amateur and Troglodyte), Timothy Burr Thrift (The Lucky Dog and Black Book), Alfred V. Fingulin (Waste-Basket), John S. Ziegler (Synthetique), Mary Morton Ziegler (Synthetique), Richard Kevern (The Mite), Samuel Loveman (The Wild Rose), Carl B. Harris (The Ambassador), W. J. Kostir (The Spectator), Jeannette Lansdowne (Oyster Shell), S. Marie Nye (Nye & Riley), Fred Metcalf, S. Hollingsworth, Dwight Anderson, Clyde Criswell, Cleveland; G. S. Connell (Antecedent), Connellsville, Pa.; Harold C. Whiteside (Philadelphia Amateur), J. Ray Spink (Pioneer), W. R. Murphy (Pioneer), Philadelphia, Pa.

(Pioneer), W. R. Murphy (Pioneer), Philadelphia, Pa.

The convention floor was the scene of much able discussion and forceful oratory. As in all amateur press conventions the membership was easily distinguished as divided into two parties—the literary and the political. It was expected that the opposition among some of the members to the Interstate Amateur Press Association would prove the bitter issue of the convention, but this did not materialize, to everybody's satisfaction.

The first session was devoted to organization for work and receiving the reports of officers. Secretary of Credentials Morris reported the acceptance of ninety new members, which number, together with applications acted upon at the convention, brought the year's additions to the membership to nearly one hundred. Secretary of Publicity Murphy showed that the cause had received a great deal of advertisement and publicity during the year and reported that nearly one thousand inquirers had received copies of typical amateur papers. He gave great credit to THE AMERICAN BOY for havthousand inquirers had received copies of typical amateur papers. He gave great credit to THE AMERICAN BOY for having interested many young persons in amateur journalism. Treasurer Ziegler reported a balance of nearly \$150.00 in the treasury. A satchel full of proxy votes was brought in by Commodore Brodie, the "daddy" of the Cleveland Club, who has been interested in amateur journalism for twenty years.

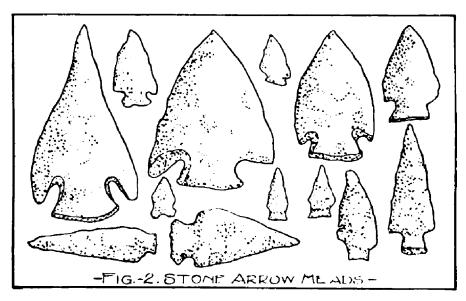

Club, who has been interested in amateur journalism for twenty years.

A trolley tour of Cleveland's sights and scenes was the first afternoon's social diversion. The question of pound rates for amateur papers received the attention of President Lind in his annual address. He reported that a bill would soon be presented to Congress urging the extension of pound rates to smaller.

soon be presented to Congress urging the extension of pound rates to amateur journals which were published by young people under twenty-one years of age, and which contained no advertising.

The work of the second morning was the election of officers, the storm center and climax of the convention. The two offices most vigorously contested were the first vice-presidency and the official (Continued on page 354.)

(Continued on page 354.)

certain persons, generally by the old men, who were unfit for other work. Like

men, who were unfit for other work. Like all Indian weapons and implements, the hows and arrows were richly painted. The quiver was made of skins of animals or bark, and was ornamented with beads and stained feathers.

It does not require much time to make a how and quiver of arrows, but as good archery depends largely upon the workmanship and material used, it pays to be very careful in making them. Authorities agree that the best woods for hows are the mulherry, sassafras, southern cedar, black locust, black walnut, apple and slippery elm, in the order named, but if a boy selects what appears to be a good, sound piece of wood, with straight grain, he has something which will suit his purpose.

The length of the bow should be about the height of the boy using it

will suit his purpose.

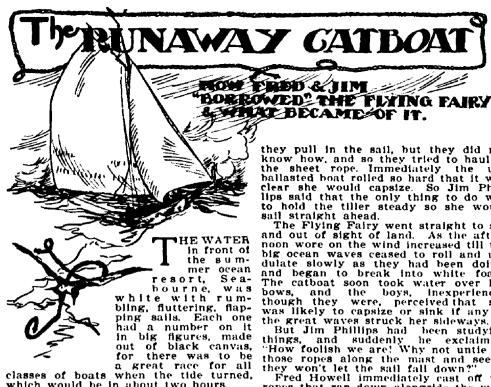

The length of the bow should be about the height of the boy using it.

Fig. 3 shows a five-foot bow, with the other proportions such as are commonly found upon the regular makes of bows. Cut your piece of wood five feet long, and, after placing it in a bench vise to

itself (Fig. 5), and will answer ordinary purposes if the wood is hard. For target practice a wire nail driven into the end of the pile, as shown in Fig. 6, with the head of the nail filed off and pointed, makes an excellent head. In Fig. 7, a thick piece of tin, copper, lead or other metal is cut out the shape of A and set into a slot cut in the end of the wooden arrowhead, after which cord is bound around the head to hold it in place.

Feathering is the next operation. Turkey and goose feathers are generally used, the former being

goose feathers are generally used, the former being considered the better of the two. Strip off the broader side of the vane of three feathers and glue them to the shaft one and one-quarter inch from the notch, spacing them equally from each other. One feather should be placed at

rew to return from luncheon and adjust it.

Fred Howell and Jim Phillips came along just then. Fred was from New York and therefore he had adopted a knowing nautical air when he became acquainted with Jim Phillips, who was from the interior. Fred didn't exactly lie; but somehow what he said, gave Jim the idea that he was intimately acquainted with every style of craft that enters the great harbor.

As a matter of fact, he had never heen on board of anything except a ferry boat, and all that he knew about other shipping was from seeing it as it passed up and down the big river and the bay.

So when the two boys saw the Flying Fairy and Jim Phillips, staring at the enormous sail, said, "My, but it looks to them, and puffed so terribly that is both Fred and Jim thought a vast sea ferry boat, and all that he knew about other shipping was from seeing it as it passed up and down the big river and the bay.

So when the two boys saw the Flying Fairy and Jim Phillips, staring at the enormous sail, said, "My, but it looks to them, and puffed so terribly that is both Fred and Jim thought a vast sea ferry boat, and all that he knew about other shipping was from seeing it as it passed up and down the big river and the bay.

So when the two boys saw the Flying Fairy and Jim Phillips, staring at the enormous sail, said, "My, but it looks the five fair the proposes. Year to the market of account to the proposes, when the two big eyes, one red and it was a steamship. They should with all their might, but though it swept so close to them that its rollers dashed over the catboat, nobody aboard it was market them.

Shouted with all their might, but though it swept so close to them that its rollers dashed over the cathoat, nobody aboard heard them.

as if that boat would fall right over when she gets away from the float," of course Fred had to show his superior wisdom. So he said, patronizingly:

"Oh, she's stiff enough. Prety good lines on her. I'd like to hold her tiller fairly in tow.

In the race and see what she's got in the race and see w

"Could you sail a boat with such a big sail as that?" asked Jim in admiring wonder.

"Certainly," said Fred. Sceing signs of disbellef in Jim's face, he stepped into the boat and took hold of the tiller, shoving it to and fro as he had seen men

do.
"She minds her helm, eautifully,"
mind her

"She minds her helm, eautifully," said he. Now she couldn't mind her helm because she was tied fast bow and stern. But Jim Phillips did not know what "minding her helm" meant, and neither, to tell the truth, did Fred Howell.

Liowever, it sounded so nautical that Jim, with new respect for his friend, also climbed into the catboat. And then the spirit of vanity impelled Fred to do just the foolish thing that might be expected of a boy foolish enough to be such a boaster.

pected of a boy foolish enough to be such a boaster.

He cast off the lines that held the boat. The next moment he would have given a great deal to undo the deed; for the stiff breeze blew the catboat away from the float instantly, and before he could collect his frightened senses the craft was a hundred feet off shore.

If the boys had shouted for help, all would have been well, for the boat was only drifting sternforemost, and it would have been easy to row out to her and sail her back. But Fred was too vain, to acknowledge to Jim that

ner and sail ner back. But fred was too vain, to acknowledge to Jim that he could not sail a boat, after all, so he wasted precious time trying to study out how to steer the boat.

Nobody on shore noticed anything wrong, for there were so many sails that one more or less did not atract attention. So the Flying Fairy drifted well past the anchored fleet before her owner, looking out of the hotel window, saw her.

Just as he ran shouting down to the beach, Fred Howell, still intent on deceiving his friend, pushed the long tiller away over to one side. Instantly the huge sail filled and the boat keeled over with a rush, throwing the boys into a heap under the gunwale, while the water

Luckily Fred had let go of the tiller in his terror when the great sail filled with a roar. This saved their lives, for it gave the boat a chance to come up in the wind a little.

But the big boom, in swinging, shipped

But the big boom, in swinging, shipped the tangled sheet rope around the tiller and again the boat heeled; then in the mysterious manner in which sailboats act, she headed around, the rope slipped clear, the bellying sail swung out until the boom was at right angles with the hull, and the Flying Fairy, light as a feather without her ballast, dashed headlong out into the one accent.

headlong out into the open ocean!

By this time, you may be sure, there were plenty of boats in pursuit. But the Fairy was so much faster than any other craft in the fleet that she soon other craft in the fleet that she soon left them hopelessly behind. There was no vessel propelled by anything except suils in the harbor, and the tugboat for which the owner of the Flying Fairy telegraphed had to steam thirty miles from the city. So the catboat was out of sight in the Atlantic ocean long before the tug arrived.

You may be sure that Fred Howell had lost all his vanity by that time. You may be confessed his ignorance of boats, and asked Jim Phillips what they would better do. Jim suggested that

Price of the cathoat was out of sight in the Atlantic ocean long before the tug arrived.

they pull in the sail, but they did not know how, and so they tried to haul in the sheet rope. Immediately the un-ballasted boat rolled so hard that it was clear she would capsize. So Jim Phil-lips said that the only thing to do was to hold the tiller steady so she would sail straight aboad

classes of boats when the tide turned, which would be in about two hours.

The biggest and swiftest catboat of the fleet, the Flying Fairy, lay alongside the boat float with a huge racing sail drumming in the wind. Her crew had just finished bending it on, and they had raised it full and taut to stretch it and discover any ill-fitting places.

The Flying Fairy was bobbing like a cork, and the thundering of the big sail shook her from bow to stern, for all her lead ballast had been removed, and was lying on the little pier waiting for her crew to return from luncheon and just it.

Fred Howell immediately forest that ran down alongside the mast transition of the sail came down with a roar, but it evans of distended with wind that it stuck to was so distended with wind that it stuck to was so distended with wind that it stuck to was so distended with wind that it stuck to was so distended with wind that it stuck to sereamed Jim Phillips. Fred Howell to be big, hissing, green, rushing seas.

"Cut everything you can reach!" recreamed Jim Phillips. Fred Howell to be beyed humbly, and the canvas fell in the boys jumped on it and tied it up, is so that the wind would not catch it. Then they could do nothing more. But the Flying Fairy, being so light, rode the seas buoyantly, now that she was relieved.

Night came, but the boys did not sleep.

went to Seabourne, with the Flying Fairy in tow.

Fred Howell was cured of boasting from that day on. The owner of the Flying Fairy forgave him and took both boys out many times after that. And while the adventure was enough to teach Fred a lesson, he learned still another one in humility, for Jim Phillips, the boy from inland, learned to sail a catboat long before Fred Howell, the New York boy, did. New York boy, did.

### The Room Mate and The Patent Leathers

HE AFTERNOON of the college reception, "Dumpy" Chandler and "Squat" Elliott made the startling discovery that they had only one pair of patent leather shoes between them. The room mates looked ruefully at the two shiny toes sticking mockingly out at them from under the edge bed.

"And there isn't time to go to the city for another pair," commented "Dumpy." "And we haven't any money, if there was time," added "Squat."

"I wouldn't care," said "Dumpy," after a pause, "if I hadn't a date with Amelia Perkins for the whole evening."

"And I persuaded May Walker to let me rush ice cream and lemonade for her," confided "Squat."

"Whose shoes are they, anyway?" asked "Dumpy," suddenly, after another period given over to deep thought.

"Squat" shook his head. "It's beyond me" he said simply

one thing for us to do. We'll both have to wear the patent leathers to-night."

"A heaven-full of angels may be able to dance on the point of a needle," philosophized the other, "but two men can't occupy the same pair of shoes at one and the same time."

"Drop your psychology," warned "Dumpy," "and listen to me. It won't do for the young ladies to be deprived of our companionship for the whole evening, when they have been looking forward to it with many pleasant anticipations, no doubt. So here's our only salvation. You say you don't know who paid for the patent leathers. Neither do I. Well, we'll divide the evening in them. Now, let's toss up a peny to see who will wear them the first half of the evening."

It was two best out of three. "Squat"

clear she would capsize. So Jim Phillips said that the only thing to do was to hold the tiller steady so she would sail straight ahead.

The Flying Fairy went straight to sea and out of sight of land. As the afternoon wore on the wind increased till the big ocean waves ceased to roll and unable and began to break into white foam. The catboat soon took water over her bows, and the boys, inexperienced though they were, perceived that she was likely to capsize or sink if any of the great waves struck her sideways.

But Jim Phillips had been studying things, and suddenly he exclaimed: "How foolish we are! Why not unite all those ropes along the mast and see if they won't let the sail fall down?"

Fred Howell immediately cast off the ropes that ran down alongside the mast and were fast to cleats at the foot of it, The sail came down with a roar, but it was so distended with wind that it stuck conversa. "In the face of numerous protests that the hoat jumped wildly into the big, hissing, green, rushing seas.

"Cut everything you can reach!" screamed Jim Phillips. Fred Howell obeyed humbly, and the canvas fell in a great heap to the deck.

"It was two best out of three. "Squat" won; and half an hour later "Dumpy" was busily engaged explaining to the was busily engaged explaining to the fair "co-ed," Miss Amelia Perkins, why he would have to put a few last touches on his thesis that very evening, in order on his thesis that very evening, in order on his thesis that very evening, in order of the excelling to be able to be with her the first part of the exception, but at nine he could, and it was after nine that the fun be-gan, anyway, and he hoped that, under the rider part of the evening for him, anyway, and he hoped that, under the circumstances, which were beyond his control, as she could see, she would not think him rude, but would reserve the latter part of the evening for him, arrayed in the circumstances, which were beyond his control, as she could see, she would not think him rude, but would reserve the latter pa

that he had been unexpectedly called to the city to meet an old friend just arthe city to meet an old friend just arrived from home, and that he would have to leave on the 9:15; at 8:40 they were enfolded by the deep shadow of the great cherry tree on the campus; at nine they had not emerged into the outer world therefrom, and at 9:30 "Dumpy" Chandler was cursing the moment that he proposed the plan which would permit both of them to attend the reception. He was in the midst of vowing vengeance on his room mate's head for the hundredth time, or thereabouts, when, suddenly, two shiny objects came crashing through the transom. "Dumpy" let his eyes follow where they fell—they were the communal patent leathers! leathers!

In three minutes by the clock Dumpy was making profuse apologies to Miss Amelia Bingham at the foot of the grand stairway, where she had impatiently awaited him since the hour: patiently awaited him since the hour; and, nothing daunted by her rather cold demeanor, in ten minutes after he had arrayed his extremities according to sartorial etiquette he was leading her in the direction of the great cherry tree.

The town clock had scarcely finished striking 2 when the last door on the third floor of the west wing was cautiously pushed open. Only the dim moonlight was struggling with the darkness in the room, and there was a mound in the center of the bed nearest the window.

"'Dumpy,'" whispered the voice at the door crack, "oh, 'Dumpy.",

No answer. "Squat" went stealthily over to the water pitcher. He picked it up. Swish!—and "Dumpy," wringing wet, was aroused at last.

Over him stood "Squat," brandishing the empty pitcher.

empty pitcher.
"'Dumpy,'" he shouted, gleefully,
"congratulate me! I got her—I got

For answer "Dumpy" suddenly reached under the bed, grabbed two black, shiny objects therefrom, let fly at the outline of "Squat," and as one took him in the small of the back, cried "Dumpy"

out:
"Drat you, 'Squat,' take the shoes! I
won't want 'em again till Amelia and I
are married!"

are married!"

That happy event took place in the national capital two years ago, and one of the things remarked of the bridegroom by observing persons was that while he was immaculately arrayed at all other points, he had evidently become so flustered at the last while dressing that he had neglected to change his old shoes for a pair in keeping with the rest of his outfit and the occasion.

### How the Writer of The American Boy Day Prize Poem Enjoyed Himself in Portland

Logan, Ia., July 19, 1905. Dear Mr. Sprague

I want to heartly thank you again for the fine time I had at Portland and for the prize that was there awarded me. As this is the second time I have won Boy day means more to us now than it did last year, for we see that it will most probably become a permanent and time-honored anniversary. And why not? Let it be celebrated year by year, even it there is a World's Fair where. even if there isn't a World's Fair where-

at to hold it.

The Portland press and people treated me very nicely indeed during my short stay there. Western hospitality showed its kindly side to me, and I was the guest at a number of beautiful and happy homes. From the actors who stepped py homes. From the actors who stepped across the footlights to talk to me in my box at the theater and newsboys who recognized me from my pictures in the papers they were selling, to refined ladies and gentlemen who stopped me on the street and on the fair grounds to shake hands and congratulate me, everyone treated me royally and I want to thank them for their kind offices in my behalf. Henry Masten, who delivered the address of welcome, and his mother were especially kind in their efforts to entertain me.

Yours very truly,
ANGUS M. BERRY. entertain me.

### August Company Letter Letter From Headquarters of the Order of The American Boy, Read Before Each Company at its Aug. Meeting

American Boy, Read Before Each
Company at its Aug. Meeting
Detroit, August 15th, 1905.

My Dear Captains and Brothers of Our Order:
The secretary of the treasury of the United States, speaking recently at a large meeting of workers and friends of the Y. M. C. A., said: "I am often asked what a boy should do, and my answer is to do anything, but be sure and do that thing better than it is now being done." He went on to say that that was the one great secret of success in life. I quote these words of Mr. Shaw as an answer to the question I have been sometimes asked by hoys who say, "I want to go to work, but I do not know what I am fitted for." If you I do not know what I am fitted for." If you I do not know what I am fitted for." If you I do not know just where your particular bent lies I would advise you to strike out and do something—anything that is clean and honorable. Time will bring knowledge and experience, and sooner or later you will find the niche for which you are fitted. The something that you do, however, must be done well. Doing things in a half-hearted, slipshod manner has never yet brought success, on the contrary, it has not only brought trouble in the doing, but has bred habits which have blocked the onward and upward path of many an otherwise brilliant career. The only way to success is by doing things and doing them well. It brings satisfaction and produces self-confidence, and the boy who has confidence in himself and does things well accomplishes what he sets out to do. Such a boy will also command the respect and influence of those with whom he comes in contact. Doing things well involves hard work, of course, but surely the boys who read and admire such men as Abraham Lincoln, James A. Garfield and the many others whose deeds are deathless in the history of our country can think it no disgrace to follow in their A. Garfield and the many others whose deeds are deathless in the history of our country can think it no disgrace to follow in their footsteps. It was the wisest of men who wrote, "Whatsoever thy hand findeth to do, do it with thy might," and the wisdom

of the injunction is as applicable to-day as it was when the words were penned.

### AMERICAN BOY DAY AT PORTLAND.

AMERICAN BOY DAY AT PORTLAND.

While the American Boy Day celebration at the Lewis and Clark Exposition was, in point of numbers, somewhat below that of the one held at St. Louis last year, yet in excellence of the performers and enthusiasm of the audience it was fully up to the high standard of 1904. Among the large number of boys whom I had the pleasure of meeting after the celebration there were very few members of our Order, but owing to the length of the journey which the majority of our members would have had to take their absence was easily explained.

It took hard, persistent work to bring about such a celebration, but the success which resulted has amply compensated me. I feel in every way confident that American Boy Day has now been firmly established and that each succeeding annual gathering will appeal more strongly to the minds not only of the boys themselves, but also to all right thinking men and women who are desirous that the boys of America should grow to true American manhood.

The splendid celebration also held at Bedford, Pa., on July 4, just goes to show what

manhood.

The splendid celebration also held at Bedford, Pa., on July 4, just goes to show what can be accomplished even in a small town where every one is striving for the best re-

I trust that I shall have reports of a great many other enthusiastic meetings from all over our land.

### LEGION OF HONOR.

LEGION OF HONOR.

For a long time I have been trying to formulate some plan whereby a boy who has won honorable estesm in any laudable effort might receive some distinction that should be prized by such a boy and be looked upon by others with respect. The result has been that I have had made a badge consisting of a medalion suitably engraved to which is attached, by a chain, a bar having stamped upon it the particular thing for which it is awarded, as for instance, heroism.

This badge, together with special mention in the Legion of Honor Roll of THE AMERICAN BOY, will be given to the boy, not necessarily a member of our Order or a subscriber to THE AMERICAN BOY, who has performed some specially brave or meritorious work which shall be properly vouched for. The badge is not a cheaply gotten up or tawdry toy, but a handsome and expensive work of art in durable metal, and any boy who receives it will feel honored in wearing it. A similar badge will be given for scholarship to the boy who at the end of any school term stands highest in the school.

RENEWING SUBSCRIPTIONS.

### RENEWING SUBSCRIPTIONS.

As the fall months are approaching when schools once more open and the boys come home from their vacations I trust that you will take up your meetings and your work feeling greatly invigorated by your summer outings.

Let me again remind you, captains, of the importance of having the subscriptions of the members of your companies renewed as soon as they expire to keep up your company strength.

O. A. B. PENNANTS, ETC.

### O. A. B. PENNANTS, ETC.

O. A. B. PENNANTS, ETC.

No company club room or individual den should be without one of our O. A. B. pennants. They are exceedingly handsome, made of the best materials and the price—50 cents—is very little over cost.

Companies can obtain these pennants as well as many other articles which boys need by getting new members, and the beginning of the school session is a good time to commence the work. Yours for M. M. M. M.

WM. C. SPRAGUE,

President General.

Our August Feld Day contests will consist of three events, viz: For boys under fifteen years of age (1) 120 yards Hurdle Race; (2) Three standing jumps; (3) Tug of War for teams of five boys. For boys above fifteen years of age: (1) Team Race, I mile; Teams of four, each to run 440 yards; (2) Three Standing Broad Jumps; (3) Tug of War by teams of five boys.

Each company's contest will take place on a day selected by it as near Saturday, August 26th, as possible, and at a convenient place previously agreed upon.

The starter and judge of the events shall be adult persons, men or women.

The judge shall keep the records, including the time and distance of each event, and also decide all questions arising during the contests, seeing that they are conducted in a fair and impartial manner.

At the close of the contests the judge shall forward to me, over his signature, the name, age and address the time taken and distance in each event of the boy or team under fifteen years of age, and the same particulars of the boy or team over fifteen years of age who defeats all other competitors in the different contests.

When the records of all the companies have been received at headquarters we will com-

When the records of all the companies have When the records of all the companies have been received at headquarters we will compare the records of each company and confer upon the boy under fifteen years of age who has made the best record in each of the contests of any boy under that age in the Order, the title of "American Boy Junior Champion, 1905." To the boy over fifteen the title of "American Boy Senior Champion, 1905." The names and records of the winners of the various championships will appear in "The American Boy."

### RENEWING SUBSCRIPTIONS

I again wish to draw the attention of captains to a matter of importance; and that is, that in order to keep up the membership in their companies, they should carefully watch for the expiration of their members' subscriptions and see that renewals are sent in before such subscriptions run out.

# QUARTER-MILE RUN

By H. L. Hillman, Jr., American and Metropolitan and Military Champion, 1905 - Holder of World's Indoor Record

H. L. HILLMAN, JR.

H. L. HILLMAN, JR.

THE MOST interesting of all races to the spectators is without doubt the quarter mile.

It possesses the good features of both the sprint and the longer distances, inasmuch as it is fast enough to be exciting, while not permitting of any laying back for the finish, as is so often seen in the latter events.

Being the happy medium, the 440-yard run is an event in which two classes of runners have equally good chances.

The first and perhaps the most often successful is the sprinter who has stamina enough to keep up a good pace over the distance with a strong start and finish, while the other class of runner who can hope for success in the quarter mile is the strong man, who can go the distance with a long, even stride right up to the finish.

The training for this event must receive the closest attention, and I have found the method here given the best means of getting into shape.

To improve the wind and limber up the muscles, a slow mile twice a week for a couple of weeks will have the desired effect.

A little cross-country running will be

couple of weeks will have the desired erfect.

A little cross-country running will be found to be very beneficial to a beginner. In fact, all the boys of a school would find such exercise a good way to start their training. After these runs a rubdown will be found to be helpful and exhilarating. For stiffness in the muscles at the start a combination of witch hazel and alcohol well rubbed in will be found a good preventative.

After the first two weeks of preliminary work a regular schedule should be begun.

Commencing the third week, start in by running about a quarter mile at a slow pace to warm up. Then make six or seven brisk starts from the mark. running forty or fifty yards each time at

running torty or fifty yards each time at a good pace.

This will make you quick in leaving the mark, a very important factor to a quarter-mile runner.

Take a brief rest and then finish your day's work by going three hundred yards, not too fast, but at a fairly good pace

On the second day follow up the same course of work, only finishing with a six hundred yard run in place of the three hundred yards run the previous day.

Follow out this system of training to the end of the week, alternating the dis-tances run at the conclusion of each day. By this time the runner should be in fairly good shape, and two days' training will be found sufficient the next week.

On the first day practice the starts finishing with a 220-yard run, and about the middle of the week run a half mile. At the conclusion of this schedule any boy should be in good shape for competi-

tion and by running once or twice a week should be able to keep in good

week should be able to keep in good form.

Now that we know how to get into shape for this event, the next thing is to acquire the correct form and judgment of pace. These are two of the most important things to learn. Let the arms swing naturally at the sides, keep the head rather inclined forward and the body erect. These are the principal points to remember, and should be often practiced. At the beginning of a race run hard for about fifty yards, then settle down to a good, fast clip, keeping enough strength in reserve to be able to make a strong finish. About a hundred yards from the tape start to make the sprint for home. The runner will no doubt tire a little at this stage of the the sprint for nome. The fullies will he doubt tire a little at this stage of the game, but by plugging it out and remembering that the other fellows are as tired as he is he will be pretty sure to finish somewhere near the front.

to its habits.

Smoking is a very injurious habit to an athlete, especially cigarettes, and to become a good performer it must be ab-stained from entirely, as must indulging in alcoholic liquor, another enemy to an

in alcoholic liquor, another enemy to an athlete.
Eat good, wholesome food, barring pastry and candy. Always retire and arise early. A boy in training must have from ten to eleven hours sleep. Gymnasium exercise, such as basket ball, bag punching and pulley machine, helps greatly to strengthen the abdominal muscles, which play an important part in all athletics.

The system of training here advocated

In all athletics.

The system of training here advocated for the quarter-mile run is one which can easily be followed by any schoolboy without in any way interfering with his studies, and is so simple that he can practice on any open space.

The boy who adheres to these rules strictly should be found among the prizes at the conclusion of the race.

### The Boy That Blows the Bugle

Joseph R. Gilder in August St. Nicholas

I hardly know, exactly, just what I'd

like to be— A soldier in the army, or a sailor-boy at sea.

at sea.

I love the noise the drum makes, the horse the colonel rides,
The flag the sergeant carries and the soldiers' jerky strides.
But when the tide turns seaward, and up the anchors come.
I forget the flying banners and the bugle and the drum.
O then I'd be a sailor, with rough and tarry hands,
Bound out for Yokohama, or "India's coral strands."

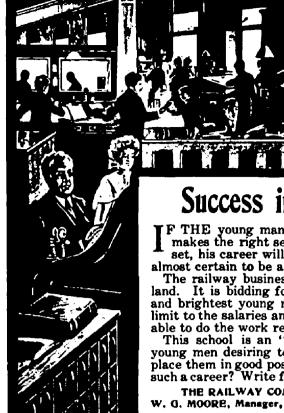

Bound out for Yokohama, or "India's coral strands."
And yet, although I'm fairly brave, and not afraid to roam,
I shouldn't like to find myself too far away from home.
So, if I get the chance, some day, I'll give the folks the slip,
And get to be the bugler on a trans-Atlantic ship.

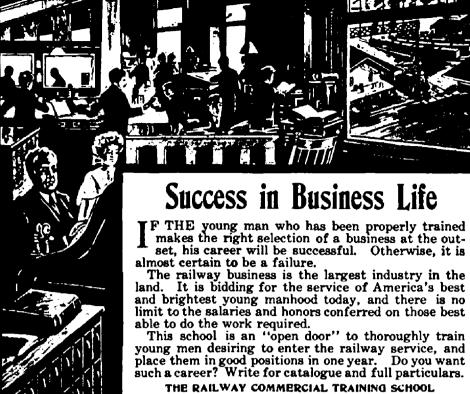

An Explanation

### Swift Revenge

I was taking luncheon with a friend who has a little boy about 3 years old. As a very special favor, and to please me, his mother allowed him to come to the table, telling me that she could not promise that he would behave in the proper manner, as she had never tried him before.

The bright little fellow behaved very well through the first part of the lunch, and his mother was feeling quite proud of him. When the dessert came on the

# Mr. Gladstone, When a Boy

It is not always safe to follow the example of good and great men, even when advised to do so. The following personal incident once related by the famous English statesman, Gladstone, to a small vis-itor, is a case in point. He said: "When I was a little chap, just leav-

ing off my kilts, my father sent me to dine with Beaconsfield, who, having taken a fancy to me while visiting in Norfolkshire, wanted to have me as his

"My good father, as he parted with me on my way to his Lordship's, said, "Now, William, when at his Lordship's board be sure you do exactly as he roes. Well, I went to the good man's house, and gut down at the table and anxiously watched my host while he served the guests, bent my host while he served the guests, bent of course on following my father's orders to do exactly as his Lordship. When the guests had been served, his Lordship looked up from his plate and soon sneezed several times. I watched him, and soon I sneezed the same number of times I had noted he had done. Nothing was said, the meal continued without interpretary.

was said, the meal continued without in-terruption for a few more minutes, then his Lordship exclaimed:

"A beastly draught, and, wheeling around in his chair, called to his valet to close a door that had been left open near

close a door that had been left open near his Lordship's seat.

"Again I watched him; then, repeating the exclamation he had uttered, I wheeled around in my chair and gave a similar command to the valet.

"There was a silence; his Lordship's brow knitted, his lips closed, and he gave me such a hard and inquiring look that I trembled from head to foot.

"At last he spoke; his voice not harsh.

At last he spoke; his voice not harsh,

but determined. See here, William, are you imitating he asked.

'Oh, no, your Lordship,' I stammered out. "Well, what does this mean?

"Well, what does this mean:
"Only, your Lordship, that I am doing what father told me. He said I was to watch you at the table and do exactly as you did.
"His Lordship laughed merrily, then

turning to his guests, said:
"'I am taught a lesson. I must not do
that which I would not have others do."

Then, closing the story with his little visitor, Mr. Gladstone said:
"Little man, always be careful; never do anything because other people do it unless you are certain it is good and pleasing unto God."—Exchange.

## THE WOOD RAT OF SOUTHERN CALIFORNIA

The wood rat of Southern California is one of the most interesting little

The wood rat of Southern California is one of the most interesting little creatures of the lesser animal world. He seems to be endowed with a deal more intelligence than other members of the rodent family.

His chief characteristic is the carrying off of all manner of things to his nest. He takes great delight in entering houses and selecting all manner of things to his taste, from jewels to cigars.

A wood rat was captured in a harmless trap, that he might be more closely studied by a certain naturalist. He appeared at close range to be a very handsome little creature, his eyes wonderfully bright and bead-like, and his coat a close, fine drab, well cared for.

He seemed to have little fear, but looked at those who came near with a sort of curiosity and astonishment. He sat on the naturalist's desk and finally, becoming better acquainted with his new surroundings, ran nimbly about the room, examining everything. After assuring himself that no harm could come to him, he commenced to search about for something to carry away. He sprang upon a small stand and looked its contents over. A small ivory paper cutter in the shape of a sword seemed to please his fancy, and he seized it in the center and, holding it firmly in his mouth, he sprang down and scampered to the sofa, which was piled with cushions, behind which he carefully hid his plunder, and then went eagerly back for more. On the second trip he took a small ink wiper in the shape of a doll with very full skirts.

After the cushions were removed behind which he had hidden these things, he did not seem at all alarmed, but took them and carried them carefully to another bidge place helpind a little desk and then started out for more to add to his hoard.

After the cushions were removed behind which he had hidden these things, he did not seem at all alarmed, but took them and carried them carefully to another hiding place behind a little desk, and then started out for more to add to his hoard. After this he was put back in his cage and later carried back to his nest in the woods, which, by the way, was filled with all manner of things, including cigars, envelopes, a shaving brush, a pocket knife and some visiting cards. All of these had been purloined from a gunning club situated not far distant from the home of the wood rat.

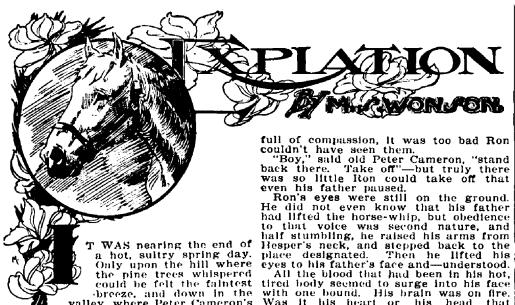

It was found that the gunners had constantly missed articles and fancied that a dishonest servant must have been guilty of the thefts. The strange habits of this little animal have caused it to be named in Southern California the "robber rat."

The nest of the wood rat is heautifully made, being in the form of a ball, and sometimes measures three or four feet in diameter. It is made of leaves, grasses and twigs, and is sometimes placed high in trees, or again low down, close to the ground. It is perfectly smooth and finely finished inside with the floss of weeds and plants, a lining making it the softest, cosiest of places.

These little creatures live on nuts and large seeds. They have a good-sized storehouse under ground, approached by a tunnel near their nests. They also have extra storehouses for their stolen goods, of which they make no use whatever, but steal with the mania of the kleptomaniac.

They are very gentle little animals and may be handled with ease. They may be made into charming, contented pets, their one disadvantage being that they will steal and carry off all manner of small things.

The scientific name of the wood rat is Neotoma, and it is a native of California. Naturalists have of late been deeply interested in it, and have paid close attention to its habits. The nest of the wood rat is beautifully made, being in the form of a ball, and

to go.
Why had his father given him Hesper when Jake said she was the slowest horse on the place? To be sure she was his father's favorite, and as trustworthy as she was slow. But Ronald's brain was too hot and excited to remember

What was holding Bill Dyton back? Oh, stupid Hesper! Had a horse no am-

Oh, stupid Hesper! Had a horse no ambition?

"Come along there, Bill," called Jake, from the other end of the field. "Why, even Ron's beating ye."

He had not meant to insinuate that Ronald was the poorer plower of the two. Indeed, he was full of encouragement for the ttred, impatient boy, and wanted him to think he was doing better than Bill, even if he wasn't. But neither of the rivals understood.

With an angry motion, Bill Dyton jerked out the long, pointed stone that had impeded the plow, and started forward, while Ronald, stung to the quick by the realization that Jake's words had taken away his last chance of redeeming himself, sprang toward the horsewhip Bill had dropped behind him in the furrow.

It was not quite against the rule, this horse-whip, though all the men knew how old man Cameron felt about it— he who loved his horses next to his children, and gave stern justice to each. Bill had been brought up to use a whip, so had Jake, too, and the other men; but when use meant at most a gentle reminder, and each horse on the place was minder, and each horse on the place was minder, and each horse on the place was examined nightly for any mark of viol-It was not quite against the rule, this dren, and gave stern justice to each. Bill had been brought up to use a whip, so had Jake, too, and the other men; but when use meant at most a gentle reminder, and each horse on the place was examined nightly for any mark of violence, even Bill was beginning to learn wisdom by experience.

wisdom by experience.

Across from the pasture came Peter Cameron; but Jake, who was nearest, did not see him, and Ronald, panting, so furiously angry with himself that he was ready to ascribe his anger to any other cause, vented his rage on the object nearest, patient, plodding liesper, who had loved him from babyhood.

One—two—three blows had fallen before Ronald heard his father's voice, hefore Jake had had a chance to perceive

fore Jake had had a chance to perceive what was going on, before even Bill had recovered from his astonishment.

Peter Cameron was running, running as he had not run for years, with a loud, imperative voice ringing over the field. "Ronald Cameron, for the love of Heav-

Ron dropped the whip, scarce knowing he did so. Then a bitter, burning shame surged over him from head to foot. He had struck Hesper, dear old Hesper, who had carried him on her back almost before he could walk, who had loved him best of all the children, who had even saved his life once, when a bridge was gone and only Hesper knew; how could he have done it? And his father—
When Peter Cameron reached his son, with Jake just behind, Ronald's arms were around the horse's neck. Perhaps he was hiding the quick tears that had sprung to his eyes, perhaps he was afraid to meet his father's stern gaze.

But the voice was sternest after all. There was unrelenting retribution in the face bent on boy and horse alike, and yet the eyes that meant most, were so had carried him on her back almost be-

Monjon

"BOY," SAID PETER CAMEBON, "STAND BACK THERE"

There was a rustle of hay underfoot that escaped the notice of neither boy nor horse. Ronald was on his feet in an instant, ready to give an alarm; but it was no stranger who spoke in the

darkness.

"Son," he said, "the sleep had failed me, too, and I heard you come out. Shake hands, hoy. It's a bitter thing to me the night that I can't ask your forom papynood.

ws had fallen befather's voice, bechance to perceive

where the mgnt that I can't ask your forgiveness as you're asking the mare's;
but I did it for the best, lad, and not in
anger, as I'd do it again this minute,
sore as it grieves me still."

Over the two clasped hands, bent the cold, damp nose of the loving creature who had indirectly been the cause of it all, and father and son reached up together to pat it gently.

### WATERMELON THE TRAP

OR TWO YEARS the doctor had been

"No difference," replied Tom, and so the two boys argued the question until finally Tom fell, and promised to accom-pany his cousin on a raid that night, "just this once."

When it came to the actual creeping into the doctor's garden in the dark and taking the melons, Archie, who had been so keen for the project in the broad light of day, weakened perceptibly, and just as the two boys began to crawl through the fence he had a sudden attack of fear, which he tried to convince himself was conscience.
"I don't know but it is wrong to steal

"I don't know but it is wrong to steal watermelons, after all," he whispered to Tom. "In fact, I am SURE it is. Let's go home."

"Pshaw!" said Tom. "You're afraid. That's what the matter with you."

Tom had been ready to back out at any time before this, but now that he saw

time before this, but now that he saw his cousin showing the white feather he was determined to carry it through. So he went forward, followed by the trembling city boy, who was ready to run at any sound.

disappointed in his intention of enjoying the fruits of his water-melon patch. Just as soon as the melons ripened some boys of the neighborhood stole them at night. That was why the aged physician now stood grimly in the midst of the bearing vines with his medicine case in his hand. He stooped down and thumped two melons. "These will be about right to pick by to-morrow," he said to himself; "but I suppose some of those pesky hoys will 'hook' them before morning. Well, if I melon patch, sciected the two ripest any sound.

Suddenly a blind on the doctor's house was blown to with a bang. Archie was off like a shot, but Tom stood still with his heart beating violently, till, seeing that it was only a loose blind, he went on with his looting. Had he come on the expedition alone he would have run home as fast as he could, but he "wanted to show Archie," and so, recovering himself; but I suppose some of those pesky hoys will 'hook' them before morning. Well, if I melon patch, sciected the two ripest to tory for the Grammar School.

can't eat them myself, at least I'll try and find out what boys are stealing them."

With this he "plugged" the two melons, and, taking a little vial from his medicine case, inserted a little white powder into each of the reddening hearts of the luscious fruit.

The vial was labeled "Ipec.," which was the doctor's abbreviation for ipecacus and proceeded to eat the rich, juley hearts of them. The doctor had put in only a small dose of ipecacuanha, and the boys did not notice anything suspicious in the flavor. picious in the flavor.

"O, DOCTOR, WILL I DIE?"

At 2 o'clock that morning the doctor's door bell rang violently and the old man poked his head out of the window.

Farmer Browning stood below and called: "Come over to my house as quick as you can, doctor! My boy and my nephew, who is visiting us, are both dying, I think. Oh, dear, hurry, hurry up!"

dying, I think. Oh, dear, hurry, hurry up!"

To the surprise of farmer Browning the doctor laughed.

"Oh, they won't die," said he. "They are all right. I know what is the matter with them. I'll be right down."

Farmer Browning had driven over in his buckboard wagon, and soon, with the doctor seated beside him, he was driving home again as fast as his old mare could get over the road. There was confusion and distress in the Browning homestead when the two men arrived, but the boys were reported to be comfortable, though badly scared.

"Oh, doctor, will I die?" cried Archie.

"Not for about seventy years yet," answered the man of medicine. "And it will take you about seventy-five years, continued he, turning to Tom.

Then the doctor turned everybody except his patients out of the room and proceeded to tell the boys what was the matter with them.

"It was a mild dose of harmless."

proceeded to tell the boys what was the matter with them.

"It was a mild dose of harmless emetic," he said in closing, "and will do you no harm. But I want you both to promise me, right here and now, that you never will steal watermelons or anything else again as long as you live."

The boys promised and kept their promise. As for the doctor, he never "gave them away," as the boys put it, though he did charge Mr. Browning two dollars for the visit, considering that little enough return for his watermelons and his midnight ride. and his midnight ride.

### Cat That Nursed Coons

Nestled in a soap box in the kitchen of the farm house of John Pooler, near Neury, is a family of six raccoons being nursed by the family cat, after the little animals had barely escaped death at the animals had barely escaped death at the teeth of a cross-cut saw which Mr. Pooler was working. The mother of the raccons was killed by the saw, being unable to escape from the log through the same hole that she had entered late last

If the orphans thrive in the future as they have in the past few days they will live to maturity, much to the delight of the Pooler children, who have already named them after the children of President Roosevelt's family. Mr. Pooler's cat immediately took a liking to the coons when they were brought to the house, and since then has nursed them affectionately.—Lewiston Journal.

encounter

There was a tense note of appeal in the cry—clearly the call of a creature in distress.

Suddenly an answering bellow startled Suddenly an answering bellow startled the woods. Turning sharply in his saddle, Jim caught a hurried glimpse of a big, brindled bull dashing madly toward the spot where the cow was lowing. A moment later a cow went running in the same direction. She, too, was lowing frantically. Then above the other sounds rose one that made the boy shiver. It was the barking of timber wolves—a flerce, ever-famished breed, ready to at-

tack anything that came before them.

The boy thought of the danger that even a swift horse would incur in the presence of those furious dog-fiends.

Also he thought of his father's favorite cow, helpless, hamstrung, amid that snarling, snapping circle. Must he flee, or go to the rescue? He was tossed between two impulses. He was by no means sure that his father's cow was in danger. But on the other hand, he had been sent out to search for her, and search he would, wolves or no wolves. So urging his horse swiftly forward, he followed in the wake of the fleeing cow.

The course led toward a small pine-

fringed ravine, several hundred yards distant. Before he approached near enough to witness the savage scene, Jim knew from the confused murmur that a flerce fight was in progress.

His horse, however, became frightened and it was with difficulty that he succeeded in urging him near the ravine. Finally it became necessary to dismount and tie the horse. This being accom-

plished, Jim unstrapped his rifle and crept cautiously forward among a sparse growth of young pines. His plan was to shoot some of the wolves, then dash for

Suddenly he caught sight of a score of big, gray timber wolves, viciously essaying to hamstring an active young cow. She was using her sharp hoofs and horns with deadly effect; the bull and the cow which had recently rushed to and the cow which had recently rushed to her rescue were valiantly assisting in the repulse of her tormentors. Yet the boy realized, as he watched the gaunt, active wolves, that the young cow, which was already wounded, must soon succumb to her assailants. But as he raised his rifle to fire at the leading wolf he perceived some distance in the rear a big black bear. Having a special score to settle with bruin, Jim sent a well-aimed shot in his direction, but by some chance missed the vital spot, inflicting a fiesh wound which so infuriated the bear that, unable to discover other cause for his wound which so infuriated the bear that, unable to discover other cause for his pain, he instantly fell upon the nearest wolf, stretching it out lifeless at a single blow. Advancing with rapid strides into the midst of the pack, the bear created a momentary consternation, during which the cattle, quick to take advantage of the opening, rushed rapidly off toward the settlement. As they swept past Jim saw that the one which had been first attacked was the stray cow he was seeking.

cialties.

Finally he was within a few the cramped figure. The slen the cramped figure. The slender pine was swaying perilously, threatening to dip earthward beneath the heavy burden. But the bear climbed on unheeding, his cunning little eyes fixed upon his prey. Suddenly he snapped at the boy's feet, but ere he reached them Jim had drawn them closer up to his body. Then hap-The slender pine

hut ere he reached them Jim had drawn them closer up to his body. Then happened what seemed an earthquake, during which the bear lost his balance and pitched headlong to the ground, and every wolf disappeared as if swept from the face of the earth by a mighty hand. When Jim recovered his equilibrium he was clinging tenaciously to the tree. Underneath a number of big wolf-hounds were tearing at the fur of the bear and several wolves which had fallen. Five mounted backwoodsmen were soon on the scene. At their head rode old Si Martin.

soon on the scene. At their head rode old Si Martin.
"Hullo, Jim," he called, cheerily; "cum down an git yo' b'ar skin. Dog my buttons ef he didn't like ter git you."
"Quarest thing I've ever seed." he run on; "er b'ar hunting' with wolves; but ef hit ain't so you kin shoot me."

"Write on your doors this saying, wise and old, "Be bold! be bold! and everywhere be bold."

### Because He Wore Pretty Clothes

Jealousy engendered in the hearts of his little boy friends by the pretty clothes his father had given him for being promoted in school led to the death recently of 10-year-old Charles Feingold, of New York city, and the arrest of 8-year-old John Quirk on suspicion of being one of a group of boys who threw

Charles into the river.

The boys with whom Charles usually played took exception to his appearance in his new clothes. They lured him to the dock at the foot of West Nineteenth street, and there, according to stories

wolves stood off watching eagerly, their cruel eyes agleam.

Jim had failed to bring his hunting-knife. So he was helpless before the approaching brute.

Nearer, nearer climbed the bear, avoiding carefully the dead limbs in his way. Evidently climbing was one of his specialities.

The little fellow revolted, and as he reliable to fight the hove began to

and spend the money.

The little fellow revolted, and as he raised his fists to fight the boys began to crowd around him and shove him toward the end of the dock. Suddenly, with a cry of fright, he was pushed from the dock and landed head first in the river. The how was unable to swim and dispendent. The boy was unable to swim and disappeared. As his body rose none of the other lads who could swim made any effort to save him. Quirk vigorously denies that he had anything to do with Feingold's death.

A rather intimate confession appears in note received by a Philadelphia teacher a note it....that reads:

that reads:
Teacher: If Louis is bad, please lick him till his eyes are blue. He is very stubborn. He has a great deal of the mule in him—takes after his father.

ABDUL AZIZ, MOROCCO'S YOUNG SULTAN

LORD CURZON OF KEDELSTON

ALPONSO XIII, KING OF SPAIN

### A Focus of European Diplomacy

His name is Mulai-Abd-el-Azi, though the world at large calls him just Abdul Aziz. As Sultan of Morocco he rules 6,000,000 black people, dwelling in a territory something larger than the combined areas of Michigan, Indiana, Ohio, Illinois, Wisconsin, Minnesota, Missouri and Arkansas. And he stands to-day in the political game which European diplomats are constantly playing as one of the most important pieces on the board. France wants to control his country; England, Italy and Spain are willing she should, but Germany is to be reckoned with on the other side of the question—and it is a contest for so great a stake that the world looks on with keenest interest. keenest interest.
Abdul Aziz is the most entertaining of

Abdul Aziz is the most entertaining of royal figures. Only twenty-seven years old, he has for eleven years governed an empire where still exist conditions like those pictured in the "Arabian Nights." The ways of his land are those of the fifteenth century, while the monarch himself is as progressive as a modern Parisian or New Yorker. This may be due to the fact that his grandmother was a clever Irishwoman, or, perhaps, to the young man's fondness for European advicers. His favorite councillor is a Scottish soldier, Harry Mac Lean, who not only has trained the Moroccan troops into a creditable body of men, but has encouraged Abdul Aziz in his liking for present-day scientific amusements.

The hoy emperor is an expert swordsman, as expert a billiard player, a pho tographer as clever as a professional, while the royal "stable" includes an automobile coupe, two petroleum bicycles, a captive balloon, a naphtha launch and a miniature railroad train. The grounds of the imperial palace at Fez are never so joily as when the country's ruler is playing engineer on his twelve-horse power locomotive, which puffs

ruler is playing engineer on his twelve-horse power locomotive, which puffs along three miles of private track, the laughing members of the royal house-hold packed close into the diminutive

### The "Strong Man" of Old Asia

World-students now believe that 'the most important developments of the immediate future—commerciai, economic and political—are to take place in Asia, that ancient "Cradle of the World," and it is this probability which gives added interest to the personality of Lord Curzon, to whom the statesmen of to-day of the East" refer as "the strong man of the East." name

His name is George Nathaniel Curzon, his title is Baron Kedelston, his age is forty-six "and a half" (as a child would put it), and he lives in the Vice-regal lodge at Simla, or the palace at Calcutta, as Governor-General of British India. Think of a man not yet fifty directing the movements of a land 150,000 square them. is George Nathaniel Curzon miles larger than all the states east of the Mississippi, inhabited by nearly four times as many people as dwell in those same states—Asiatics, at that; far more ignorant and far less capable of taking care of themselves than is the ten-year old American boy!

But Curzon trained himself for the work. First he sought a political education in the London offices of his govcation in the London offices of his government, a training in diplomatic ways and means that brings out all there is of the executive and "leader" in a man. Then for years he traveled slowly through Asia, keeping his eyes open, learning the ways of the people, as well as their languages. Persia, Slam, Indo-China, Korea, Afghanistan—he knows them all nearly as well as he knows the great Indian peninsula which he has wisely ruled for six years. In England he is no more than any other subject of Edward VII; in India he is "the strong Edward VII; in India he is "the strong man," holding her very destiny in his

Americans may be the more interested in him, not only because he is so excel-lent an example of how young men with the proper h art in their work may climb, but also because he has married Mary Victoria Leiter, daughter of the late Levi Z. Leiter, Chicago's millionaire

### The Youngest of the Kings

Alfonso XIII. of Spain has been lately much in the public eye. He has been paying royal visits to France and Eng-

land, while, of more interest to the world than this, he is said to be planning to marry—and the wedding of a nineteen-year-old sovereign of so famous a land as Spain is a matter of importance. Various European princesses have been picked out by gossip as his future queen, but Alfonso himself has yet betrayed no definite idea as to where his choice will fall; when approached on the subject he usually jokes it out of debate, as when, the other day, he remarked to some Privy Councillors: "Gentlemen, I warn you; when I marry I shail choose an American girl. The daughter of Uncle Sam is always rich—that will please you. She is, of course, a republican—that will charm my people. And then she will be beautiful—which will just suit me."

Alfonso muy lay claim to being the best educated of all crowned heads. He

which will just suit me."

Alfonso may lay claim to being the best educated of all crowned heads. He is quite at home whether speaking or writing in English, French, German and Italian, as well as Spanish. He never travels without certain volumes of poetry—the German Goethe, the English Byron, our own Longfellow, and the old Latin Horace, many of whose odes, by the by, he has translated into his native tongue. Moreover, he is especially fond of mathematics, is well up on history, and draws cleverly. Perhaps it is even more interesting to add to this list of accomplishments that he is an ardent motorist, has tried ballooning and likes in all Spain. ali Spain.

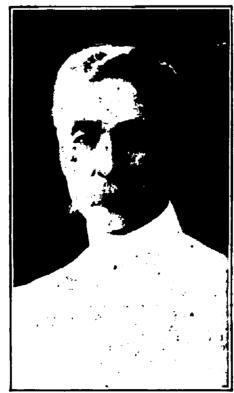

### "Ran to Fires" all His Life

"The municipal fire department of Manila I believe to be as efficient as any in the United States, saving only those of the largest cities."

of the largest cities."

This statement comes from Secretary Taft's report of present conditions in the Philippine Islands, where he has done so much good work, but its surprising truth is due less to the executive head of the War Department, than to Hugh Bonner. Who is he—this man who could set himself down among a lot of brown Indians to whom discipline was unknown and where proper firewas unknown and where proper fire-fighting apparatus were undreamed of, creating out of such material a body of firemen worthy of such praises as

It is a simple story. Hugh Bonner has always been a fireman. Whatever else

HUGH BONNER

he may know, there is no question but that he knows all there is to know about this hazardous calling. He began his "studies" before the Civil War, as a mere lad pulling on the ropes of New York's ancient hand-engine, "The Lady Washington." Eventually he became foreman of that squad, and from that on climbed and climbed till, at the end of thirty-ning years, sorvice he found thirty-nine years' service, he found

himself chief of the department in America's largest city. Not only had he grown up in the service; he was him-self a vastly important part of that serseif a vastly important part of that service, for it was due to him that chemical engines were introduced, and that self-propelling steamers became practical facts. It was Bonner who drove the first chemical that ever answered an alarm.

This was the man Taft, as Governor of the islands, called to Manila three years ago. It took him twelve months to get

ago. It took him twelve months to get out proper machines; when they arrived a good water supply was ready, and another two years had finished the work.

# WIMMI

By JOSEPH W. SPENCER Holder of Taventy-three American Records, 1,000-Yard Metropolitan Championship, 1902

HE HUMAN body is not very well designed for natatorial feats. Since we are not equipped with fins, it is rather difficult to force the body

is rather difficult to force the body forward in the water with any speed, but with instruction and practice it is possible to increase the ability of the average swimmer two or three times.

Regarding swimming as a sport, our English cousins are far in advance of us, as is shown by a comparison of English and American swimming records. The reason for this difference is that the English show much more interest in the pastime than we do, and, in additon, swimming pools are numerous and well patronized in that country. There are indications that the interest throughout the United States is increasing. New swimming tanks are being built every year, and records at all distances are being cut down.

Considered as an exercise, swimming has two points which in particular company.

Considered as an exercise, swimming has two points which in particular commend it. The muscles of the chest and back are greatly developed and the lung capacity is increased. As distinguished from many other sports, swimming has a practical application, particularly for those who live near the water or take an interest in boats or yachting. It gives not only an ability to save one's self in cases of emergency, but in many instances to save others. Granting that the water is not too rough, or so cold as to benumb, a good swimmer should be able to cover five miles, or to keep afloat as many hours. This would not be a remarkable performance when one considers that there are men who have gone twenty miles or more without rest or let up.

let up.
The specific gravity of the body is such that water will nearly support it with-out effort on the part of the swimmer. With the lungs well inflated, the average person can, with a little practice float motionless in salt water. To do so in motionless in salt water. To do so in fresh water requires considerable practice and development of the lung capacity. Because of the greater sustaining power of salt water, those who are unable to swim will find it a little easier to learn the art in the sea. After some degree of ability has been acquired the difference in fresh water will not be noticed except in the attempt at motionless ticed except in the attempt at motionless

Those who are entirely unable to swim Those who are entirely unable to swim will find that it is practically impossible to teach swimming by any sort of a written article. The knowledge can only come by actual work and practice in the water. Children, as a rule, under favorable conditions, work out the ability to keep afloat by their almost undirected efforts, but the best way to learn is to have the help of a friend who understands the art, or the assistance of a competent instructor, where possible.

The intention is to present in this article a description of what are known as "racing strokes." These can be easily learned by people who have had enough experience in the water to be classed as those who are "at home" in that element. However, there are certain points relating to elementary swimming which it is well to touch upon for it kept in mind.

However, there are certain points relating to elementary swimming which it is well to touch upon, for, if kept in mind, they will aid in overcoming the most serious difficulties. There are three things which will help the beginner if dependent upon the instruction of a friend. The first is that an inflated belt or other device for keeping the body afloat will make it easier to learn the stroke. The attention is not distracted from the propattention is not distracted from the prop-er performance of the necessary motions by the danger of sinking. With the help of the belt each stroke may be taken slowly and executed according to instruction. In this way much useless

floundering and waste of strength is avoided. As soon as the idea of the way of using the limbs is acquired, the belt should be discarded and the attention directed to be a strength of the s

should be discarded and the attention directed to keeping the body afloat by means of the stroke.

The next important thing is to avoid the natural tendency to keep as much out of the water as possible. Most beginners try to keep the head, neck and even part of the shoulders above the surface. This cannot be done easily, even by a good swimmer. Every portion of the body which is kept above the water is a dead weight upon the effort to keep afloat, and soon produces exhaustion. Swim as low in the water as possible, so long as the breathing is not insible, so long as the breathing is not in-terfered with. If the water is not rough let the body drop till the chin is just im-

let the body drop till the chin is just immersed.

The third thing to remember is that the leg stroke is not understood by most of the people who swim. Beginners are often told to draw the legs up and then kick them back, the idea being that propulsion is attained by kicking at the water. This principle is wrong, and those who swim that way have difficulty in making progress. The proper way is to draw the legs up; then extend them, but at the same time separating them till they form an angle of about forty-five degrees to each other. Then, with the legs straight and "toes pointed," swing them together forcibly, as if they were the blades of a pair of scissors. It is this last part, or the swinging together of the legs, which gives the propelling force. The principle of the legs forms a wedge on which the legs act in closing, and the resultant force moves the body forward. legs forms a wedge on which the legs act in closing, and the resultant force moves the body forward. It would be well for the beginner to practice this leg stroke while holding by the hands to some convenient pole or other stationary object at the surface of the water. At first work on the three parts of the leg motion, with a slight pause between each, until with practice the whole stroke may be made continuous.

Of the racing strokes for fast swimming, there are only two which are in general use. These are the over-arm side stroke and the trudgeon, or double over-

general use. These are the over-arm side stroke and the trudgeon, or double over-arm. It is inadvisable for one to try to learn either of these strokes unless one has gained considerable proficiency in the ordinary method of swimming, or, as it is called, the "breast stroke." For racing the general sentiment in this country is that the trudgeon is the best, but there are many advocates of the side

racing the general sentiment in this country is that the trudgeon is the best, but there are many advocates of the side stroke. The majority of the latter men are those who do long-distance work, so it may be said that the side stroke is better suited for events which pass the quarter-mile mark. The trudge is undoubtedly superior for short races, but as it is more difficult to master than the other, it is best to begin fast work by learning the side stroke.

The characteristics of this method are that the body is kept on the side, and that the upper arm is brought clear of the water and swung forward through the air for each stroke, while the under arm performs its entire motion under water. There are many who swim in a manner which closely resembles the side stroke, and for such it is generally easy to acquire good form. The most important point in this style of swimming is to keep the body on the side. It will be noticed that when one swims the ordinary breast stroke the upper part of the chest is forced directly against the water. The result is that progress is greatly retarded, but in the side stroke the top of the shoulder is presented so that it to a certain degree cuts the water. Therefore the hody should be kept on the side and the tendency to roll on to the chest when the upper arm is thrown forward should be avoided.

The novice should first determine on avoided.

avoided.

The novice should first determine on which side he will swim. In this respect individuals differ. The question can be determined by trying both sides. The one which seems to afford the most natural position should be selected as the best for the individual, and all subsequent work should be undertaken in accordance with that decision.

The upper arm stroke is made by swinging the arm forward above the water until fully extended, straight to the front. The arm is then dropped into the water and swept downward and back, through almost a full half circle. When near the surface and parallel

When near the surface and parallel with the body, the elbow is bent and the arm lifted quickly from the water, elbow first. It is then ready for the swing forward for the next stroke. The lower arm stroke is made by thrusting the hand out from the shoulder (all the time under water), and when extended to the front is swept through the water—not straight down and back, as in the case of the upper arm but it is straight down and back, as in the case of the upper arm—but a little to the front of the body. This movement is complete when the arm lies almost against the body. The arm is then bent and the hand brought up close along the body till in front of the shoulder, from which point the next stroke begins. Care should be taken to make the sweep of both the arms as long as possible. There is a natural tendency to cut short that part of the stroke which forces the body ahead. This must be avoided, and a good, full sweep of the arms acquired. The principle of the leg movement is the same as previously explained, in connection with elementary swimming, but there is the difference that, in the side stroke the legs must be separated in the

there is the difference that, in the side stroke the less must be separated in the way that one would separate them to take a step in walking—that is, one in front of the other. In the former ex-planation it is understood that the legs are to be separated sideways of the body, or as they are when one stands with the feet apart.

As to the order in which the motions of the different limbs are made, it is necessary to regard the propelling part of the respective strokes and to execute them in the following order: Lower arm,

them in the following order: Lower arm, upper arm, leg, lower arm, etc. These should follow each other continuously. As soon as one ends the other should commence, so that the body is kept moving forward continuously.

Probably the most difficult part of the side stroke is the breathing. The body being on the side and carried very low in the water, the face is nearly covered. In fact, many swimmers have their heads almost under the water at one part of almost under the water at one part of the stroke. It will be found that there

### ALLIGATOR ON THE BOARD OF TRADE LUCY S. ORRICK

MARC STUDYING THE QUOTATIONS

THE CHICAGO BOARD of trade may have its bulls, it may also have its bears, as does every other board of trade, but it was left to the City of New Orleans to introduce a novelty on 'change in the way of animals which rivals even the bulls and bears of financial fame. This honorary member of the stirring institution is Marc Antony, an alligator of much local renown. He was brought to the building in a box when he was no larger than a lizard and was immediately given quarters in the rear of the offices where, a.. mascot of the institution, he has ever since been cared for by members of the Board.

Ment tank as chipper and light-hearted as if about to luxuriate once again in his own, his native mud on the banks of the lovely Teche.

SWIMMING

(Continued from page \$12.)

is naturally a slight lift of the body on the end of the sweep of the upper arm stroke. This lift will bring the face partially clear of the water, and the breath must then be taken in through the mouth—never through the nose. The object of this is that any little splash of water drawn in with the breath will stop

Whenever the door of his tank is left open he takes advantage of the opportunity to inquire into the state of the market. He waddles directly to the seat of warfare on the floor of the great room and appears to study the blackboard quotations with all the earnestness exhibited by the other members of the Board, indeed he has devoted so much time to the mastery of the subject that

room and appears to study the blackhoard quotations with all the earnesthoard quotations with all the earnesthoard quotations with all the earnestines exhibited by the other members of
the Board, indeed he has devoted so much
time to the mastery of the subject that
his countenance has acquired an inscrutable expression altogether in keeping with the operations of a long time
plunger on 'change. Having gathered all
the information he desires, he waddles
back to his cement tank and meditates
on the market probabilities of the future. While his mind is thus engaged
his body is equally busy. Often dissatisfied with the amount of water in his
tank, he has learned that by turning a
faucet he can increase the supply, also,
after years of close figuring, he has discovered that unless the drain hole in
the basin is closed the water runs off
as rapidly as it comes in. So he climbs
up, turns the faucet with his snout and
flups his great tail over the hole below.
There he rests in the water till moved
to visit the floor again.

Marc is greeted warmily by his friends,
but his bulky hideousness is a grewsome
sight to strangers and inebriates. It is
said in New Orleans that Marc has so
far distanced the Keeley Institute in the
matter of destroying the taste for liquor
that the "gold cure" will never be able
to catch up, and he does it, too, in the
most philanthropical of manners, for he
never charges a cent.

Marc's sense of humor is intensely
keen for a saurian, at least so his friends
assert, and on occasions when his appearance has brought about a particularly disastrous result, a smile has been
known to waver around his thick brown
lips and he has been even accused of
winking. The other day a man well
sonked in Scotch high-balls entered the
Hoard of Trade making noble and ostententive to the business in hand. In his
tortuous course across the floor he ran
athwart Marc in all his unsullied loveliness, mouth open, teeth gleaming, and
eyes plercing. The man's hair stood on
end. He gave a gaps of hor

so proudly exhibits Marc to the Northern visitors—or it may go even a step further, and reach out for some toothsome Board of Trade man leaving no other trace of the missing man than an uneasy feeling in Marc's interior known to mortals as dyspepsia.

As it is, Marc is happy as an alligator should be. He secludes himself under the building during the chilly season.

the building during the chilly season without food or drink, and at the first breath of spring crawls out to his ce-

financial fame. This honorary member of the stirring institution is Marc Antony, an alligator of much local renown. He was brought to the building in a box when he was no larger than a stroke. This lift will bring the face partially and was immediately given quarters in the rear of the offices where, and mascot of the institution, he has ever since been cared for by members of the Board.

Marc is now six feet in length and fourteen years of age, and while a hale and well-preserved bachelor, has known few of the joys that make alligator life sweet. The lady of his dreams, Cleopatra by name, occupied apartments in another portion of the city and was ruthlessly shipped to Canada without a word of farewell to the prisoner at the Board. It is safe to assume that Marc indulged in the usual crocodillan regrets, idle and insincere tears. As a philosophical alligator, however, he promptly forgot Cleopatra, and with almost human intelligence devoted himself to various clever performances for his own divertagement.

Whenever the door of his tank is left open he takes advantage of the oppor- tunity to inquire into the state of the stroke to be made with the body in nearin the mouth and will not choke the swimmer by being drawn into the throat. After one has acquired proficiency in the side stroke, the trudge may be attempted. The point which characterizes this method is that both arms are brought forward above the surface of the water. In this way one avoids the resistance which is encountered in forcing the under arm forward in the side stroke. It is evident that the body cannot be kept on one side. There must be a decided roll, which will bring the shoulders alternately near the surface. That shoulder which is naturally carried uppermost in the side stroke must be brought up farther than the other, to allow of breathing on that side and to allow the propelling part of the leg stroke to be made with the body in nearly the same position as in the side stroke. The alternate rolling of the body is accomplished by allowing the sweep of each arm to raise each shoulder, so that the arm can be lifted out and swung forward straight to the front, as is done with the upper arm in the side stroke. forward straight to the front, as is done

with the upper arm in the side stroke.

The order or succession of the movements of the limbs is the same as previously described.

The fact that the trudge keeps the face

The fact that the trudge keeps the face under water most of the time will necessitate considerable ability in catching the breath, for the mouth can only be above the surface for a fraction of a second each time. To make it possible to inhale in this short period, the breath must be exhaled while the face is still under water. When this is done there is enough time to fill the lungs if the air is drawn in quickly.

There are certain rules which apply to both the trudge and side stroke, which,

limbs so that one stroke follows the othlimbs so that one stroke follows the other in regular and even succession. This keeps the body moving steadily forward and prevents the loss of power which will result from a "sag" in the stroke. Second, remember that the head is only to be carried just high enough to bring the mouth clear of the water at the time when the breath should be taken. Third, reach well forward with the arms and make the propelling sweep as long as possible.

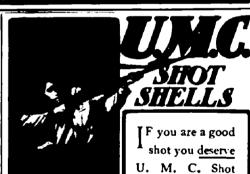

If one can master either or both of the under water. When this is done there is enough time to fill the lungs if the air is drawn in quickly.

There are certain rules which apply to both the trudge and side stroke, which, if kept in mind, will aid in developing water too long, if you wish to derive speed. First, time the movement of the

PROFESSOR PUPIN'S PIGS.

These are not the five little pigs who went to market, but they are the property of Professor M. I. Pupin, and to him they owe their young lives, for the eminent professor was summoned hastily from his duties at Columbia College to his farm at Norwich, Conn., when it was discovered that the mother pig would not own her little ones. Professor Pupin is of course known the world over as the inventor of the marvelous new system of long distance transmission of telegraph and telephone power. But Professor Pupin's ingenuity is equal to the emergency, whether he is dealing with a problem of world-wide importance to mankind, or a litter of new-born pigs on his Connecticut farm. The mother of these little pigs refused to own them, and Professor Pupin was summoned to the rescue, and he proved himself equal to the problem by having a small trough made, in one side of which were bored five holes for the necks of five hottles, each with a nipple on the end. These hottles were filled with warm milk, and the hungry pigs ate their first dinner ravenously, and as if they had never been accustomed to any other method.

### Tricks With a Tumbler

Many are the tricks to be performed with the commonest of household articles, and much amusement may be derived from some of them. We will describe a few which need little apparatus other than an ordinary tumbler. Select two half dollars and a dime; place them in a row, with the dime in the center, upon a table covered with a cloth; let a tumbler rest mouth downwards upon the two larger coins. Now ask anyone present to remove the dime

ask anyone present to remove the dime without touching either the tumbler or the coins. They will probably laugh and say that it cannot be done—that it is impossible! impossible!
But it can be done, and it is easy—

But it can be done, and it is easy—very easy—when you know the way.
Resting the right hand on the table-cloth, scratch gently near the tumbler with the second finger nail, as shown in Fig. 1, and the dime will slowly but surely move towards it. Keep this up for a minute or so, gradually withdrawing your finger, and the dime will very soon come clear out from under the glass.

Now take a small metal tray, and see that both it and your tumbler are perfectly dry. Turn the glass upside down and rest the tray upon it as in Fig. 2. Select a piece of rough, brown paper,

about the size of your tray, and after warming it, rub it briskly with a brush or upon your trouser leg and then place it upon the tray. The tray immediately becomes charged with electricity.

Now extinguish the gas and get someone to touch the tray with their finger—

there is, at once, a sharp click and a bright electric spark. This trick, which is really an experiment, may be repeated as often as you wish by rubbing the paper afresh and laying it again on the

This finished, light your gas, and fill your tumbler nearly full of water, then tell your audience that you intend to turn this same glass upside down without spilling any of its contents. They will suspect some catch but there is none

none.
Take a sheet of writing paper rather larger than the mouth of the glass, lay the paper upon it and press it firmly down. Now with the hands thus, turn it over until it is bottom upwards and then carefully remove the hand from contact with the paper. Much to the astonishment of everybody the paper remains upon the mouth of the tumbler not a drop of water can escape.

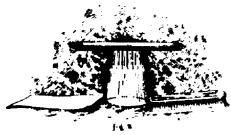

To restore the glass to its original position, press the hand against the paper and turn it upwards with a quick movement.

movement.

movement.

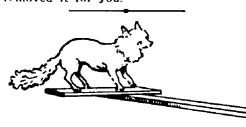

After the foregoing tricks, your friends will not suspect a catch, and you may successfully bring your entertainment to a close, with the following:

Place the glass of water in the center of the table, then borrow a hard hat, and with it cover the glass so that it is hidden from view. Now you can further astonish your friends by informing them that you intend to drink the water from the glass without removing the hat. Crawl under the table and when immediately beneath the spot where the glass stands, turn the lips upwards—

make a sucking noise as though drinking and smack the lips as though you had enjoyed the refreshment. After a few moments, rise from under the table, and with a smile of confidence tell someone to remove the hat and see for themselves that you have kept your promise!

promise?
Unthinkingly they will raise the hat, only to find the tumbler of water unchanged. Now pick up the glass and, drinking the water, tell those present that you have drunk from the glass without removing the hat, even as you said you would—someone clse having removed it for you. removed it for you.

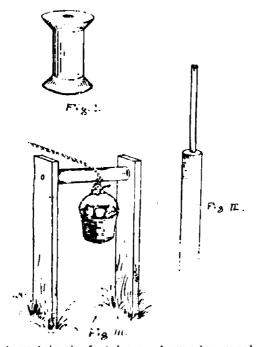

### A Revolving Target

By Dwight Weedbridge

No matter whether it be an air-gun, a gun with ammunition of rubber balls, a how-gun, or bow and arrows, the boy who possesses it is pretty sure to have made a target with a multitude of circles, one about another, each one grow-ing smaller until the black dot in the center is reached. It is always one's that the slope of a sharpened pencil. made a target with a multitude of circles, one about another, each one growing smaller until the black dot in the center is reached. It is always one's ambition to hit this dot, or "buil's-eye"—which shows that there is the most pleasure in trying to do that which is against the sandmost difficult. After a time one gets tired of firing at a fixed target, and moved back and

than a bull's-eye.

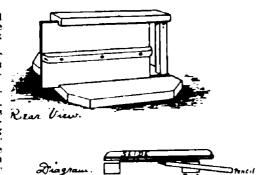

The cuts show how to make a revolv-

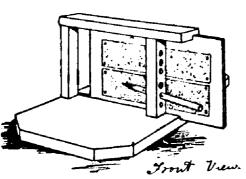

target is six feet long. A wooden spool (Fig. 1.), about six inches in length, is firmly screwed to the under side of this firmly screwed to the under side of this at one end, and a hole an inch in diameter is bored up through the center of the spool and through the revolving arm. A post is now to be provided, the lower end of which is inserted in the ground firmly. In the upper end is inserted an iron rod, to pass up through the spool and revolving arm. On the outer end of the arm is placed the target—a figure of some wild animal cut out of pasteboard. Now if a cord is wound about the spool beneath the arm and carried over a roller set between two boards (Fig. III.), and a weight is tied to the end of the cord, the target will begin to revolve, slowly or rapidly, according to the amount of weight placed at the end of the cord. One can then take his stand at whatever distance he at the end of the cord. One can then take his stand at whatever distance he pleases, and attempt to hit the figure as it passes around in a circle. When he becomes expert in hitting it moving slowly, he can put more stones into the pail and thus increase the speed.

### Making a Pencil Sharpener By Dieight Woodbridge

It is quite an art to sharpen a pencil to a nice point with a jackknife and very few there are who can do it web. There are little pencil-sharpening machines on the market, but they are out of the reach of most people because of their cost. A little home-made machine is shown herewith—one that a boy can very readily make. A front and a rear view are given

in the accompanying cuts, which tell their in the accompanying cuts, which tell their own story of construction. A stout piecof board about fifteen inches long and seven inches wide forms the base. At the middle point of each side a square post, six and a half inches high, is secured by screws passed up through the baseboard. Across the top is secured a crosspiece, wider than the posts; in the under side of which a groove is cut to correspond with a similar groove cut across the baseboard at one side and almost up to the perpendicular posts. In these grooves a thin

piece of board is fitted to slide easily, but not loosely. At the back of this sliding piece of board is fitted a handle so that the slide can be worked back and forth easily. On the slide of the slide next to the posts are stretched two strips of sand paper, or emery paper, one much "finer"

wants something even more difficult forth. The diagram that is given shows than a bull's-eye. made.

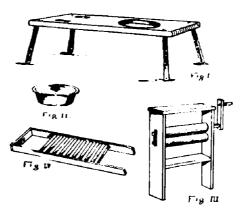

Now, to sharpen a pencil, pass it through one of the holes opposite the coarser sandpaper, holding the pencil in one hand and moving the slide back and forth with the other. The hand holding the pencil should keep the latter slowly revolving, that the end may be evenly planed off by the sandpaper all around. When nearly sharp enough remove the pencil and place it in a hole opposite the fine sand, or emery paper and finish the work. Hold the point steady so that the tip of the point may not be broken off.

If a mistake is made at first in boring the holes in the post (not getting them at the right angle) the holes can be plugged up with wood and new holes bored. Now, to sharpen a pencil, pass it through

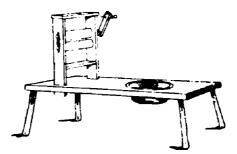

### For Your Sister

By Dwight Woodbridge

Here is something a boy can make for a small sister that will be sure to appeal to her heart. Fig. I. shows the bench, which is plain and easily made. It should be thirty inches long and thirteen inches wide. The legs should be about fifteen inches in length. The top

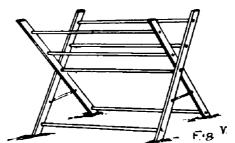

can be of three-quarter inch board. Now can be of three-quarter inch board. Now buy at the grocery or hardware store a tin dish like that shown in Fig. II. Get one that has a flat, projecting edge at the top. The cost will be only tencents. Now lay the dish, upside-down, upon one end of the table and mark about it with a pencil. A quarter of an inch inside this circle draw another, and cut this circle out of the board. When this has been removed, cut around on the outer been removed, cut around on the outer circle with the point of a jack-knife,

cutting only as deep as the thickness of the projecting edge of the tin dish. Now cut away the surface of the wood inside the circle and the tin dish will fit into the opening, its top being "flush" with the top of the bench. No better nor more convenient wash-tub could be found-easy to take out and not able to

found—easy to take out and not able to be upset.

Fig. III. shows the wringer, the rollers of which are sawed from some broken shovel, or other handle. A wire nail is driven into each end of these, and they pass through a slot in either side of the frame, a rubber band passing over the two nails to hold the rollers closely together when in use, and yet allow them to separate when a thick piece of cloth is being passed between them. In-

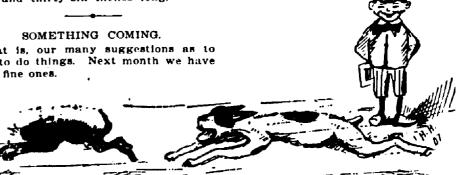

stead of a nail in one end of one of the rollers, insert a round bit of wood, at the outer end of which attach such a handle as is shown. The rubber band on this side of the wringer will pass over the handle shaft of one roller and the nail in the other. The frame of the wringer will present no difficulties. Two slots are cut'in the bench for the insertion of the lower ends of the side pieces. The wringer should stand about twelve inches above the top of the bench, so make the side pieces fifteen inches long. The wash-board is twelve by eight inches, and is made by cutting creases in the side of a piece of board and nailing this between two side pieces. A top piece is then nailed on. The tin dish that serves as a wash-tub should be stead of a nail in one end of one of the

piece is then nailed on. The tin dish that serves as a wash-tub should be about ten inches in diameter across the

top.
The clothes horse (Fig. V.) needs no description. Let it be about thirty inches high and thirty-six inches long.

That is, our many suggestions as to how to do things. Next month we have some fine ones.

# Benny Clapper's Ocean Voyage

Benny was sixteen and adventurous. He wanted something more than the calm delights of a Vermont farm. He thought the matter over as he ate his supper of bread and milk and cold apple ple and decided he would go to Japan.

Being without parents, no one could really stop him. When he announced his intention, his Aunt Millie made no objections. But she stroked his brown head lovingly and told him to be sure and choose rightly.

Thus it came about that a few mornings later he took an old carpet-covered hand hag that had belonged to his uncle before the civil war and boarded the train for Boston.

Boston.

In Boston he went to the water front and stayed a night at a little hotel. The next morning he was out early to meet captains. His first interview was with a man who had a lot of cattle to go to England and wanted him to go with him. "Just the man I want," he said. 'You understand cows and can care for them night?"

nicely. Benny thought it strange that his first

Benny thought it strange that his first attempt to go to sea should be met by an offer to do stable work, and he rejected the proposition with some surpri-e.

"Ship for Japan? Sure!" said a man to whom he spoke a few minutes later. "Ship sails to-night. Twelve a month and rations with a chance to see all the foreign lands and get promoted. Come over to the hotel and sign for a voyage."

In a minute Benny had signed a greasy looking book, received a dollar, and was told to be at the wharf at nine that evening as the boat would be there ready to take him to the Kitty Bell, which would sail at once.

"Just in time." said the man he had hired himself to sail with, "tu nble in." And Benny and his carpet-covere grip-sack soon were on their way across the harbor.

A most unpleasant odor from a small

A most unpleasant odor from a small salling vessel they approached made the boy hope that they would soon be out of its neighborhood; but instead, the boat was pulled alongside.

"Here," exclaimed Benny, "I am not going to ship in any little fishing boat like this. I'm not going in any ship that is not big enough to make a voyage. You are fooling me and I won't go."

"All right," replied the mate; "stay here and be comfortable," and while the rest of the crew climbed aboard, Benny staye I behind, declaring what he would and what he would not do, till suddenly the boat was hoisted bodily out of the water and brought to the deck amid the laughter of the men.

of the men.

"I am going ashore right now," declared the boy indignantly.

"Good bye, give my regards to the folks," laughed the captain of the oysterboat, who had just come up from below.

"Here is the feller that's going to Japan," sang out one of the crew. "He wants to go home and drive oxen," mocked another. Then the taunting chorus of a sea song began: other. Then song began:

"We are outward bound to the China Seas, With the grog just served and a faviring breeze.

And to all we say each lubber agrees; Oh, ho, fer ole Japan!"

The leader of the singing stood under a lantern and Benny did not miss him when he flung a bucket. It struck him fairly in the chest, and there was a yell of approval of the boy's courage in attacking Spanish Joe, the biggest man on board.

But the captain held up a warning hand. "No scrapping, boys. He's fresh, but all right. Here, boy, you must not fight. Your name is down for a month's time with us at oyster dredging. You will learn a lot and you better go easy or you will

with us at oyster dredging. You will learn a lot and you better go easy or you will get a rope's end. Lend a hand at the anchor there. No back tailk."

Thereafter Benny worked at the bickbreaking dredging, pulling up the heavy dredge with its load of shells and oysters, toiling in all sorts of weather, generally in the hot sun of the late September days, and growing wiser as he gained a wider view of life and its hardships.

He tried at first to get ashore when the boat came into harbor with the results of the work, but he had not much chance the first week, and after that he concluded to wait till he got his wages.

There was a good deal of joy, too, for the boat was in charge of an exceptionally

There was a good deal of joy, too, for the boat was in charge of an exceptionally fair and kindly man, though he did follow the bad example of others and get young men to sign under false representations. "Does 'em good," was his excuse, and perhaps, in many cases, it did.

One day when Aunt Millie was selecting some small ple pumpkins for a thanksriving dinner she was surprised to find Benny standing beside her in the barn shed. "Mercy! Why. I thought you went to Japan!" she exclaimed.

"No," said the boy, as he gave a nautical hitch to his trousers, which had no heen again supplied with suspenders. "I saw enough of Japan without going very far from Boston. I have concluded to let myself for a year to Silas Weatherhed. He wrote me down there in the city that he'd give me eighteen a month and my board. Hullo, here is Bose! Old dog seems glad to see me. Seems kinder good to get home."

IM FIRST appeared on the job when the old "Times" building was being torn down. A few of the workmen grew to know him as "that red-headed kid that was always buttin' in." Tim did have a propensity for asking questions.

When the old back-number newspaper building was finally a thing of the past, and the new "Manitowoc" started, Tim became a "regular." Each morning of the first week saw him with a bundle of newspapers, making the rounds at dinner time, and with a cheerfulness which was irresistible but wearisome, plying the men with questions about the details of the work.

"Sure now, if you want to know all these things, why den's and leaves papers for eight of 'em."

Clement put several questions to the boy, who answered them in his own direct, crisp way.

"All right, son. You can start in, or rather keep on, as you seem to have gotten the start of me already. Mind, I don't want any fresh kids in this place, by You've got to mind your P's and Q's and don't want any fresh kids in this place, by You've got to mind your P's and Q's and alon't straight, out you go."

"Yes, sir, and thank you." Then with any more of yer val'ble time," he was the might meer bime. Clement saw little of the boy, except and leaves papers for eight of 'em."

Clement put several questions to the bow, who answered them in his own direct, crisp way.

"All right, son. You can start in, or rather keep on, as you seem to have gotten the start of me already. Mind, I don't want any fresh kids in this place, by You've got to mind your P's and Q's and alon't want any fresh kids in this place.

"Yes, sir, and thank you." Then with any more of yer val'ble time," he was the might meer bime in his own direct, crisp way.

"All right, son. You can start in, or rather keep on, as you seem to have gotten the start of me already. Mind, I don't want any fresh kids in this place.

"Yes, sir, and thank you." Then with any more of yer val'ble time, he was the might meet bime.

of the work.

"Sure now, if you want to know all these things, why don't you get a job, and learn the business?" queried goodnatured Tom, who ran the big hoisting engine. Tim pondered on the suggestion. An hour later he turned up at Tom's elbow.

"Who will I ask?" he demanded.

"Who will you ask; ask what, you little bother; what are you chinning about?"

"Who will I ask fer de job?"
"What job?"

"What job?"

"Why, de job on dis building. If I'm goin' to learn de busines, who will I ask fer de job?"

"Oh, go over and ask that 'guinney' over there, that's digging the hole."

Tim, a little doubtful, but determined, did as he was bidden, only to find that the "guinney" comprehended him not. In a few minutes he was back again.

"Why don't you giv' it to me straight? Who will I ask?"

By this time Tom had lost his sense of humor, and was worrying over a lever, and said roughly, "Go ask Tom Burden."

estness.

"Well, Tim Flaherty, you get the job.
Go tell the timekeeper to put you on at
'two per,' as water boy. And see that
you keep out of trouble, and mind your
own husiness."

own business."

"Say, mister," called Tim, as Burden moved away.

The superintendent frowned. "Too much pay, youngster?"

"Not enough. But kin I sell papers along wid it? That'll help out Of course, if I'm goin' to learn de business, I have to start at two per, I s'pose, but I can finish out wid de papers."

"All right, only don't bother me any

"All right, only don't bother me any more."

"Thank you, sir," said Tim, lifting his old cap, and as Burden passed out of hearing, bowing low to the ground, "for de large sum of two per."

Tim showed up at the timekeeper's, and after considerable jollying, intally persuaded that worthy, with the aid of the slip he had received from Burden, that he was "on de staff."

The sky-scraper rose, slowly it seemed to the owners and onlookers—but to the workmen, seeing the actual labor involved, the immense structure, the largest in the city, seemed to fairly shoot into the air.

Tim, relating his day's experiences at home, always spoke of it as "my sky-scraper". True to his statement, Tim tried to learn all that he could of the business. In bits and fragments, it is true, but he did come to know, among other things, that cement must be pushed, not shoveled, in order to have it work right; that experts in soil, actually tasted it, and made their plans for foundation accordingly. Many a day Tim followed in the wake of the "dirt man," as he called the expert, tasted, as he tasted, listened to his statements and observations, and stored them away in an unusually bright brain.

At last the great building was ready for occupancy. In fact, some tenants

At last the great building was ready for occupancy. In fact, some tenants were in before the top floors were completed. Tim had stuck to his post. The boss carpenter, and the head mason stoutly maintained that "Timmie Redhead" had been the mascot of the building, and that fewer accidents had occurred because "Timmie" had presided over all undertakings.

BY NELLA B. WIGTATREFLE

"Yes, sir. Do you wish an entire floor? We can make any alterations desired by tenants."

Tim's keen blue eyes smiled straight into Ned Clement's brown ones, in full appreciation of the humor of the situ-

"No, sir, but I'd like de 'sclusive right' to work dis building as newsboy and bootblack. I was newsboy and shiner for de other folks when de building was up, and I hates to part company wid it.

Clement's cyes twinkled. "Well, I don't know," he said slowly. "Mr. Wright on de thoird floor knows

as he might meet him in the corridors, until one day when the owners decided that he could handle matters more intelligently by having his office in the building itself. About a week after he had moved into Room 32, Tim presented himself smile and all

had moved into Room 32, Tim presented himself, smile and all.

"Now, young man, what is it this time? Do you wish to buy this building, including the land?"

The blue eyes flashed a smile, but the boy was full of his errand.

"Mr. Clement, number one is empty again. It won't let for a cent, because it's too cold and damp, and it's dark there, too. How much would de rent be, to me?"

"Why, Tim, have you gone into business?"

"No, sir, but I want to. If it isn't too high, I would like to get number one for im, a little doubtful, but determined, did as he was bidden, only to find that the "guinney" comprehended him not. In a few minutes he was back again. "Why don't you giv' it to me straight? Who will I ask?"

By this time Tom had lost his sense of humor, and was worrying over a lever, and said roughly, "Go ask Tom Burden."

Straightway, Tim started to find Tom Burden, and after half an hour's search, found him, and put his request.

The burly superintendent looked him over quizzically, threw back his head, and laughed. Tim felt that something must be amiss, but looked straight into Burden's eyes, and said stoutly:

"Sure, and why shouldn't I have a job, and learn de business? Me name's Tim Flaherty, and I want a job." The last three words were emphasized a little more strongly than the others, and the curly red poll, keen blue eyes and jolly little Irish face, grew grave in his earnestness.

"Well, Tim Flaherty, you get the job."

turned out of his sky-scraper. Sidling up to Burden, he managed to get his attention long enough to ask. "Who is de guy what lets de offices?" and had that gentleman pointed out to him.

The next day Tim watched his opportunity, and catching the manager alone, marched straight up, and in spite of a queer little feeling of fright, put his question squarely:

"Are you the gent'man what lets de offices?"

The next day when Clement arrived, the door to Room I was open, and a girl was scrubbing the floor. He was sure it was Tim's sister, from the resemblance. The next day he saw the platter was Tim's brother. The third day the room was practically ready for the room was practically ready for the noon, accompanied by Tim, his brother, and father, and an admiring small brother. brother.

The fourth day Clement, in common with the other tenants, found hanging to his door by a string a small card reading as follows:

Hang this card outside your door if you want a

SHINE OF PAPER. We cover this building every half hour, and

WILL CALL and SERVE YOU.

Clement hung the card as directed to see what would happen. In about fifteen minutes a small edition of Tim opened the door quietly (he had Tim's instructions as to the quietness) and inquired, "Shine or paper?"

"Strand Magazine."

The younger edition produced a pad

"Strand Magazine."
The younger edition produced a pad and pencil, and to various other items added: "No. 32—Strand."
So Tim started in business. The stand is there to-day, but on the door of number thirty-two there is a sign which reads:

T. FLAHERTY-Superintendent.

And those who know say that T. Fla-herty owns more than half the stock in the Manitowoc sky-scraper, the best pay-ing piece of real estate in the city.

### Temptations of the Athlete

That the successful college athlete That the successful college athlete must maintain a high academic standing is one of the interesting points made by Dr. William G. Anderson, Director of the Gymnasium of Yale University, in his article on "Making a Yale Athlete," in Everybody's Magazine for July. Dr. And rson says:

in Everybody's Magazine for July. Dr. And rson says:

"Against the tendency to make sport rather the chief end of man's college course than a wholesome incident, many safeguards have been devised. In many colleges the student is barred from athletics if his class work falls below a certain standard. If a man falls in his studies and returns the following year, he is called a 'repeater,' and cannot compete in athletic contests until he has made up his deficiencies. At Yale it is the fact that all efforts to regulate college athletics have won the sympathy and co-operation of the students. The evils of betting, too high-keyed excitement and absorption in the contest, the temptation to neglect recitations, the notoriety of the athlete, must be and are fraught with persistent effort.

"Sport is a safety-valve for the healthy youth who must and should be active, and we must find the right way to use this surplus energy which is bound to 'blow off.' The department of physical training in the modern college is devised to meet the rational demand and need of the healthy student. Organized sport has obliterated the old-time carousing in the saloons, the drinking-bouts, and the rioting, and has raised new standards of right and healthy living."

# Office Workers

Not one office worker in 50 knows the right kind of a pencil for his particular kind of work. On pages 6 and 26 of Dixon's Pencil Guide he will find his pencil designated by both name and number.

Other pages for every person and every use.

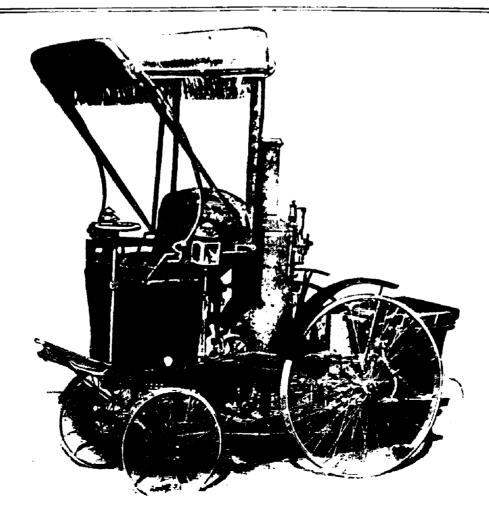

Dixon's Pencil Guide, a 32-page book, indexed by wocations, correctly indicates the right pencil for your special use. The book is absolutely free.

over all undertakings.

The day the Manitowoc was turned over to the owners was a sad day for the boy. He felt that he was being from the picture that it has an upright engine and boiler.

This horseless carriage, which is claimed to be the first one built in the United States, is owned by Achille Philion of Akron, Ohio, who now keeps it as a relic. It will be noticed from the picture that it has an upright engine and boiler.

# Protecting the Squirrels

of Evanston, Illinois, brought a number of gray squirrels to the city, and also began agitating the question of protecting and feeding the squirrels in the native timber in the midst of which the town stood. He set the example by protecting those in the trees about his own home. The idea took readily with all clases of people; the boys, so often maligned as ruthless savages, became leaders in the movement, and champloned the cause of the forest denizens. The squirrels began to multiply rapidly, and to spread through the town. If a boy was seen stoning a squirrel, he was immediately stoned by the other boys; it was not long before anyone was seen attempting injury to a squirrel at his peril; and a law was soon

other boys; it was not long before anyone was seen attempting injury to a squirrel at his peril; and a law was soon enacted for their protection. One day several boys from Chicago visited Evanston, and began to amuse themselves by pecking away at the squirrels with their slingshots; the Evanston boys ran for the police, and soon the Chicago boys were under arrest, and it cost their fathers a good round sum to settle the bill and secure their liberty.

Today these squirrels may be seen crossing the street as you ride on the electric cars; they caper on the lawns, chase each other on the fences, run along electric wires, and up and down tree trunks; as one hastens to work in the morning, they go frisking from the sidewalk to the bole of the nearest tree, and peep around at him as he passes; some will even follow the boys and girls as they go to school, to feed upon the nuts which they throw to them; and some of the tamest will not only take nuts from the hand, but will climb upon the person and search in pockets for them.

Indeed, so accustomed do these squirrels become to being fed, that they do

Indeed, so accustomed do these squir-rels become to being fed, that they do not store food for winter as they are

A POX SQUIRELL AT HIS PAVORITE TABLE

accustomed to do in their native state. In the severe winter of 1903-4, the acorn crop having been short the previous season, the people of Evanston feared for their squirrels, and the city, through its genial, kind-hearted policemen, distributed to them many bushels of nuts. And doubtless policemen will do as much in staying the hand of crime by feeding squirrels and cultivating the love of the people for them, as they will in arresting criminals.

By CRAIG S. THOMS

A SQUIRREL HOUSE

makes off with a nut, you will observe that he hunts carefully for a place to hide it, and looks about him, evidently noting landmarks, before laying it away.

noting landmarks, before laying it away. A little hole is dug; the nut is well poked in with the nose, and then covered.

These buried nuts, the squirrels, in their wild state, seem able to find, though covered with snow; and doubtless the city bred ones could do the same, did necessity arise; yet it must be admitted that, on account of being fed, they are in danger of losing their habit of providing an ample store for extreme winter weather, and possibly also of losing the power to locate those that they bury. In trying to prove that these squirrels did not dig up what they buried, one lady cited the case of a gray squirrel that ate the soft parts of her cherries, and buried the pits along her fence. These buried pits grew, and sent up a row of cherry shoots until they were a row of cherry shoots until they were a

row of cherry shoots until they were a foot tall.

Most squirrels found in cities are of the gray species; though I have known fox squirrels to eat from the han; and in some places the red squirrels come into the door-yards for food, and chase each other from limb to limb in trees under which the school children play.

More than others of their kind, the red squirrels are accused of robbing birds' nests. It is not unlikely that cities where squirrels are plentiful are compelled to pay for the pleasure which these animals give, and the love of nature which they engender, by the loss of many song birds, which otherwise would build their nests in the trees.

In cities where squirrels abound, every hollow tree or branch is occupied by them, and many nests are seen in the treetops. They will occasionally gnaw their way through a roof, and I know of one instance where they even gnawed through the lead water pipes; but the best way of preventing such depredations is to place in a convenient tree near one's home, a warm house made for them, where they can pass the winter in comfort. them, where they can pass the winter in comfort.

people for them, as they will in arresting criminals.

It may be questioned, however, whether these animals would starve as quickly as people imagine. Winter trees are never without their buds, though they be safely ensconced in thick scales; and most any warm, sunshiny day one may see these animals high in maple or elm feeding upon them, venturing out in their scarch even to remotest twise, which one would not expect to bear their weight. Upon these buds alone, they doubtless could live for weeks; though meanwhile the trees would greatly suffer.

But these city squirrels have larger stores of food laid away for severe weather than most people imagine, for a goodly proportion of all whole nuts given to them are buried, and buried, not the markable dexteraity.

Squirrels take naturally and kindly to man, and are quick to utilize the advantages which their nearness to him brings. Just as the English sparrows, by building their nests in the vines witch shade our porches, under the eaves of our roofs, and in the shades of the arc lights upon our street corners, escape all their natural enemies and multiply with surprising rapidity, so the squirrels, when protected in our cities and towns, are in no danger from the est in a constant search for food. These animals as well as squirrels climb trees readily; and the marten will even pursue the squirrel from branch to branch and from tree to tree, and capture him otwithstanding his remarkable dexteraity.

In the wild timber no squirrel is absolutely safe: Hawks—especially the red-tailed, red-shouldered, goshawk, and Cooper's hawk—circle and wheel above them, watching eagerly with telescopic eyes for the whisk of a bushy tail; when the raccoons and wild cats meet the squirrels at the holes of their nests, or are able to enter their hollow trees, it faires ill with the little fellows; the black snake, also, has been known to capture and swallow them; and the foxes are ever on the alert to snap them up when they can catch them upon the ground; not to mention the hunter, who feels a license in the wild, for there the squirrel is game.

In our cities and parks these dangers are escaped. The noisy rush of a dog may send the woodland favorites in seeming consternation up a tree; or the half-curious stealth of some family cat may promise an unpleasant encounter, in which the fur files for a moment; but

half-curious stealth of some family cat may promise an unpleasant encounter, in which the fur flies for a moment; but these are lightest of comedies; the dark tragedy of relentless search and struggle to the death, is wholly of the wild.

It is undoubtedly true that the citifying of the squirrels, not only brings to them greater safety, and results in their rapid multiplication, but also brings to the people, and especially to the children, an increased love of nature. A hundred squirrels in a town will attract more attention, be more in the minds of the people, and be more talked about, than ten times the number of birds. Birds live largely among the leaves, and are little seen; while the squirrels are everywhere—on the lawns, the sidewalks, the trunks of trees, and

SQUIRREL DESCENDING A TREE

in the streets. Most of the birds go south in winter; but at this time the squirrels attract greatest attention.

### Precedent Was Not Followed

Jamesey had been notified that after

Jamesey had been notified that after Saturday his services would not be required. Saturday afternoon he went to his employer.

"I want me pay," he said.

"Monday is pay day."

"When a kid is fired he ought ter have his pay."

"Monday is pay day here!"

"Dis is a blame funny deal ye're handin' me. It never happened ter me before. Dey always hand me me pay when dey fire me."

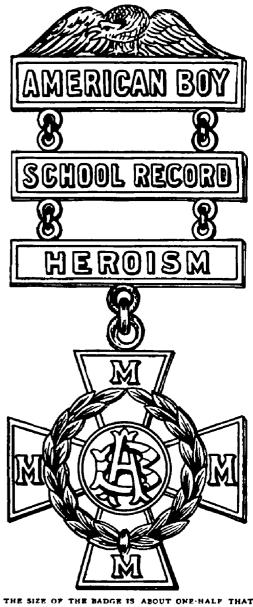

### Breaking it Gently

The boss was bending over a table, looking at the directory. The new office boy slipped up quietly and poked a note into his hand. The surprised boss opened

it and read:
"Honored Sir: Yer pants is ripped."

A CRITICAL MOMENT IN A GAME OF BASKET BALL

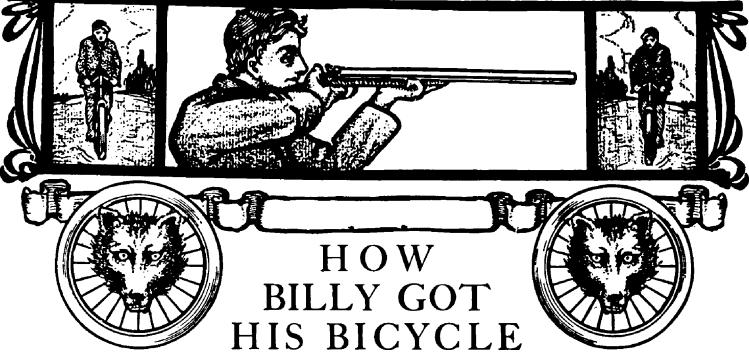

OF THE ILLUSTRATION. ANY BOY CAN BARN ONE OR BOTH THE BARS

Upon every American boy who wins distinction by heroic effort in any laudable direction or by obtaining the highest average term grade in his school, the publishers of The American Boy will, free of charge. confer the American Boy Legion of Honor Badge, an illustration of which appears on this page. The badge is of metal, silver plate quality, and consists of a medallion suspended from a bar on which is engraved "Heroism" or "School Record," or both, as the case may demand; this in its turn is suspended from a bar, on the back of which is

Boys thinking themselves entitled to this distinction should notify us promptly, as the badge will not be awarded if notice is not received by us within three months after the event that gave reason for it happened. If school record be claimed, send the statement of the teacher with his address. If heroism is the ground of distinction, send the statement of some prominent man or woman in the community, and also the name and address of the mayor or principal official of the town.

No school record or act of heroism bearing date before September 1st, 1905, will be considered.

**ADDRESS** THE SPRAGUE PUBLISHING CO. DETROIT, MICHIGAN

BILLY BENNETT was thirteen years old, and wanted a bicycle. There is nothing strange in that, as most boys of thirteen want a bicycle. But very few boys could give as good a reason for desiring a wheel, as could Billy.

Billy.

His father had recently settled on a homestead in the prairie country of Dakota. Neighbors were few and far between, and the only school within reach of Billy was three miles distant. This made a long, weary tramp for the boy twice a day, and if anything was needed to stimulate his desire for a wheel it was provided by the road. Straight as an arrow, level as a floor, with just enough travel on it to wear off the prairie sod, and sufficient wind to remove every particle of dust, each foot of it was fit for a race track.

ery particle of dust, each foot of it was fit for a race track.

"If I had a wheel," Billy had said in urging the matter with his father, "I would be able to help you more with the work, night and morning. As it is, I have to leave for school at eight o'clock and I am never home until five. With a wheel, fifteen minutes for the road, night and morning, would be sufficient. Miss Ray, the teacher, comes the same distance on a wheel, and she never takes more than sixteen minutes, and once, when the wind was favorable, she made it in eleven minutes."

when the wind was favorable, she made it in eleven minutes."

But expenses are heavy and returns slow, in opening up a new farm, and Mr. Bennett was obliged to be cautious.

"Wait until we can afford something better than a sod house for mother and the babies," said he kindly, "and then we'll talk about a wheel."

Billy dropped the subject with his father, but never for a moment gave up the idea of getting a wheel. If his father could not afford it, he must see what he could do about it himself. On a recent visit to the county-seat he had seen a beautiful new bicycle for sale at twenty dollars, and he forthwith began to study all possible schemes, by which to study all possible schemes, by which he might earn that amount. No results had, however, come from

No results had, however, come from his scheming, when one Saturday morning in April he obtained permission to take his father's gun and visit the lake bed a mile distant, in hopes of securing a mess of wild ducks. This lake bed was really the bed of an old lake, usually dry, but now containing considerable water from the recently melted snow and the spring rains.

water from the recently melted snow and the spring rains.

Billy dropped into a dry gulch as he approached the lake, and following it down to its mouth crept immediately into a dense clump of willows, the only bit of cover near the water. A large, shallow pond lay spread out before him, and toward the farther end, but clear out of reach of any shotgun, was a large flock of ducks.

"Perhaps if I keep out of sight they may swim around this way, or another flock may alight at this end of the pond," Billy said to himself.

believe I'll sneak back now and get some."

After a little further watching of the wolf, which seemed wholly unconscious of danger, Billy crawled back out of the willows, and keeping carefully behind the clump until he reached the mouth of the ravine, set off at full speed for home. Arriving there, he obtained the shells, and hastily explaining the situation to his father, waited only to swallow a lunch which his mother insisted on his taking, when he started again for the lake.

"Wait until he gets within fifteen rods, with a den of young hidden."

and then give him both barrels—one after the other," called his father after

him.

answered Billy, hurrying along.

Crawling out of the mouth of the gulch on his hands and knees, Billy treached the willows safely, and peered through the branches for the wolf. There he was, as large as life, and even a little nearer than before. He seemed to the fur, drew him to the surface.

Never mind. Here they were, and each one was worth two dollars at the council nave led nim to suspect it.

Never mind. Here they were, and each one was worth two dollars at the council nave led nim to suspect it.

By "GEORGE CROSBY"

he finding game plenty, and was apparently perfectly at ease and well satisfied with the situation. He would walk up to a clump of long, dead grass and, raising himself on his hind legs like a squirrel, would spring forward and strike the clump with his fore feet. If a mouse ran out there was a lightning-like snap, a squeak, a gulp, and he was ready for the next victim.

"You're mighty spry," muttered Billy. "Just come a little nearer, and I'll see if you are spry enough to dodge twenty-four buckshot."

Once the wolf made a futile spring af-

Once the wolf made a futile spring af-Once the wolf made a futile spring after a meadow lark that he frightened out of the grass, and then, hurrying back, seemed very busily engaged at the spot from which the bird had flown.

"You robber!" groaned Billy; "you've found the nest and are eating the eggs. I'll get you if I have to sit here all night."

It began to look as if an all-night vigil It began to look as if an all-night vigil would be necessary, for the long afternoon wore away, and though plainly in sight all the t me, not once did he come close enough to offer anything like a fair shot. Just as the sun was going down he passed out of sight in a dense patch of dead weeds which covered the banks of a dry gully, at least a hundred and fifty yards from the pond. Billy seized his gun and ran noiselessly toward the weeds.

ward the weeds.
"If I can get there before he sees me, perhaps I can get him as he runs out," thought he.

Reaching the weeds, with both barrels

Reaching the weeds, with both barrels at full cock, and every nerve alert. Billy walked slowly into them. The wolf was still there—he felt sure of that. It could not have left the weeds—which covered less than one-fourth of an acre—without being seen. Watching closely in front, at the right and left, but mostly at the edges of the weed patch, where he expected the wolf to spring out, Billy had crossed two-thirds of the patch, when suddenly, right at his feet, there was an angry snarl, a vicious snap of gleaming white teeth, and the wolf, with every hair on end like an angry cat, and tail swelled to twice its natural size, sprang up from the ground, looking to Billy's startled gaze as large as a lion—gave one leap into the dry gully and disappeared from sight.

For an instant only was Billy startled; then he sprang to the adde of the ditch

For an instant only was Billy startled; then he sprang to the edge of the ditch, with the gun at his shoulder, and looked eagerly along the gully—which was drifted full of loose, dead weeds—for a down to its mouth crept immediately with the gun at his shoulder, and looked to he most clump of willows, the only bit of cover near the water. A large, shallow pond lay spread out before him, and toward the farther end, but clear out of reach of any shotigun, was a large flock of ducks.

"Yerhaps if I keep out of sight they may swim around this way, or another flock may alight at this end of the pond, Billy said to himself.

So he placeth his gun conveniently in the sock of the gun flow again to his shoulder hurt cruelly, but his book was visible among the willow roots, prepared for a long wait. Taking his eyes finally from the coveted ducks, and allowing them to wander idly over the surrounding country, he gave a start of surprise. There, in a dry part of the heavily loaded where the charge of buckshot had leave the wolf showed no intention of coming nearer, and soon Billy began to consider at what distance it would be safe to risk a shot.

"These shells are loaded with fives, said he at length." I don't suppose they would kill him at more than six or seven rods; and long before he'd get that closs hed probably smell me or see me. There are some shells loaded with toxishot at the house, why didn't bring entry sould have been right on top of it."

Recrossing the flower of the wolf above the house, why didn't bring entry the wolf wolf where the house, why didn't bring entry sould have been right on top of it."

Recrossing the ditch, string and the first of the wolf and son billy wagen. The wolf and the proposal propo

the lake.

"Wait until he gets within fifteen rods, she-wolf, with a den of young hidden and then give him both barrels—one afsomewhere about; though he realized r the other," called his father after now that the actions of the animal, to-m. gether with the season of the year, "If he's only there when I get back," should have led him to suspect it.

"Ouch!" he yelled, and dropping the cub like a hot coal, gazed ruefully at his hand, where several tiny blood spots showed the effects of the sharp teeth of the vicious little beast.

"You young villain," said he, "I'll soon fix you."

Picking up his gun, he drew out the remaining shell, and then separating the stock from the barrel and using the latter as a club, he stretched out the young wolf—which was about the size of a cat—dead at one blow. The remaining cubs were treated in the same way, and then Billy took an invoice of stock. Nine young wolves and the old one. Twenty dollars bounty! Billy felt that he virtually owned that bicycle now, and snapping the several parts of his gun together, set off in high glee to secure the aid of his father in removing the scalps.

"So this is the lad that killed those wolves?" said the merchant. "I heard about it on the street. Keep the wheel a week?" said he, lifting it out of the a week?" said he, lifting it out of the rack, "not a minute. Here, kid, ride that wheel home, and when the county board pays you, you can pay me. A boy that can get away with an old wolf and a lot of young ones can't wait a week for a wheel."

scalps.

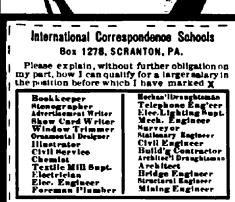

The following Monday Mr. Bennett and Billy drove to the county-seat to claim the bounty.

"You'll have to wait until next week,"

"You'll have to wait until next week, when the county commissioners meet," said the county clerk, to whom they applied. "I'll keep these scalps and put in your claim. Come in about a week from to-morrow and you'll get your money." Considerably disappointed at the delay, they left the court house and walked down town. As they passed the store where Billy had seen the wheel, he coaxed his father to go in and look at it. There it was, bright and shining in its rack.

"Do you suppose they would hold it for me a week?" asked Billy.
"What's that?" said the merchant, who had heard part of the question.
Mr. Bennett explained that Billy had twenty dollars coming to him in a week for wolf bounty, and would like to buy the wheel if it could be kept for him.

THE AMERICAN BOY REACHES 125,000 AMERICAN HOMES

"So'm I: but how'll we

do it? The bone man don't come around no

don't come around no more, and the junk feller's got another job."
"Aw, we aren't in it for such small truck. I'm onto a big thing." Three pairs of cager eyes were turned upon the speaker, Billy DePew, who was a year older than the others, and could really read newspapers.

What is it, Billy?

"Think ye might tell." But Billy was shy. A secret was a sweet morsel, to be well rolled under ".s tongue before sharing it with kids.

"I heard my father talkin' with another man about trusts," he said, shaving a long silver off a stick with his new knife, which was the envy of every boy in school who had none. "I read about 'em in the paper, too."

in the paper, too."
"What's trusts?" asked Jerry Lincoln,

"What's trusts?" asked Jerry Lincoln, in a voice of great respect for the boy who knew so much.
"Why, a trust is where some men corner the market, y' know. Buy up all the pork, er the cotton, er oil, whatever 'tis, and then raise on the price and make a lot o' money. See?"

"If John buys three apples fer three cents apiece, and sells 'em for five cents each, how much does he make," recited Ted Jones. He had just reached problems in his arithmetic, and to his notion the trust idea fitted in very aptly. "Say, we kids buy something, and sell it for more. Then we'd be a trust, wouldn't we?"

Billy looked at the young man with pity and scorn. "Aw, come off! Everybody does that that sells anything. That ain't no trust. I heard this man talkin' to my father about furs, too. The man said there was lots of money in furs. I move y' that we make a trust in furs." The bulging secret had grown so heavy that it could be held no longer, and Billy looked around on his admiring friends

"But where'll we get the furs? There ain't no bears, nor wolves to hunt no more," Ted Jones asked doubtfully. He was a timid, white-faced boy, who could always see objections. "We ain't got no money to start with, neither."

money to start with, neither."

"The man said a good cat skin was worth money. That there was lots of people wearing catskin furs that didn't know it. They take 'em and shear 'em and color 'em and fix 'em up gaudy. He said it was just the time of year now, while the new fur is on; our Tab has been sheddin' fearful, but she's all sleek and fine now. I'll put her into the pool if we make the trust."

Billy's father was a railroad man, and

Billy's father was a rallroad man, and he heard not a little of pools and pooling in the home talk. Three pairs of eyes began to sparkle. Cats were a very familiar source of possible profit and income, and with such a leader as Billy, trust seemed a brilliant idea, full of promise.

"Our Tommy is a whaling big fellow lots bigger than your Tab. His skin ought to be worth more." Jerry Lincoln had a habit of measuring pieces of pie

"Did y' catch any?"

"Yes, a tortus-shell. See where she bit me? It's a box, y' know, with a tran door and a piece of meat in the back for bait. My but she was mad when I let her out. She pitched into the others something fierce."

"Well, I'm using slip-nooses," said Jerry Lincoln. "I caught one last night, too—a big, black one, with white stockings."

"That one belongs to the Widder Bis-

"That one belongs to the Widder Bis-e. She'd slip-noose you if she knew

you had him," Billy remarked in a tone of regret, for he happened to know how much comfort and company the cat was to the lonely old lady, who always had a kind word for the boys. For the first time since the trust had been formed a doubt of the honesty and manliness of the scheme began to dawn upon his mind.

"Well, she won't know it, all righty. I'm after a big malty now. He runs in our alley, and I reckon I'll get him tonight."

More Important than problems or spelling lessons, was the question, "Did y' catch any?" in the days following, and "Couldn't we give 'em chloroform?"

spelling lessons, was the question, "Did y' catch any?" in the days following, and Miss Grey, the teacher, was puzzled to know why four of her bright boys had so suddenly become careless in their study and recitation.

Jerry Lincoln dropped out entirely for a few days, and when he came back he was quite a hero, still terrilly hoarse and with a pocketful of horehound drops. "Ye see, I hald for that big malty feller," he croaked, "but he was fearful shy. I set my noose out in the alley with a bully chunk of meat in the middle of it, and me a layin' out in the weeds and arbidin' onto the string. I'd a been all right, if it han't come up to rain, and I got soakin' wet."

"But did y' get him?"

"Naw," cried Jerry, in hoarse disgust, "but he got the meat and bolted, and the string just slipped off in the end of his tail. I got the doctor, though, next mornin', and a whole lot of bitter stuff to take. Ma says he asked two dollars just for comin' round and stickin' a little glass thing under a feller's tongue, and stayin' to be a doctor when I grow up. It's easier'n seat."

The cat question began to be quite a serious one about this time.

and stayin' ten moneasier'n scat."

The cat question began to be quite a serious one about this time. Mothers is leaned over back fences and told each is other how Tommy, Tabby or Kit had dispepeared, and mice were growing more bold and numerous every day. The rats out without fear, and at the DePews one fat old fellow had come up on the porch and eaten his breakfast out of the same dish with the puppy, which had it how with a guest so bold and unusual.

"Is mother belowed as the beginning of more morning, after the stock in fur was nearly, if not quite, complete, "Such a nearly, if not quite, not nearly, if not qu

If I hadn't been so dead gone for sleep, I wouldn't have got even a cat-nap." He was just in off a hard run, heavy-eyed and frowning.

"They were having a cat convention, maybe, father," Nellie remarked, with sympathy. "It is too bad you should be disturbed when you needed the rest so much. I do wish we knew where Tab has gone to. It isn't like her to run off this way." way.

Queer that we should be long on cats "Queer that we should be long on cats when everyone in the block is complaining of being short," said her father. "I threw everything I could muster, but it was too pitch dark to get a good shot at anything. Billy, you go out and gather up that truck by the back fence and bring it in." Billy went out with a streak of gray and white lightning. Tommy after her, the entire market in cathering it in." Billy went out with a skins following in one grand rush for quaking heart, for he well knew that if the parent nose once began to smell the rat in the case the trust would break up looked at each other with dejected faces. "Sav. Jerry, that was a slump in fur and

cats, and the desired article of commerce, a cat skin, when it came to the pinch. Four boys armed with assorted weapons, assembled in the barn the next day at early evening, each one feeling weak in the knees, though he would not have let the others know it for the world.

Tabby was a most loving, confiding creature, and she came purring around Billy's legs just as he had raised his club to strike, taking the nerve out of his uplifted arm in a most embarrassing way. She had a trick, too, of leaping upon one, and with one jump she lit on Billy's shoulder, curling herself around his neck, and rubbing her little pink nose against his ear and lapping at it with her tongue. It was very trying when a boy needed so much to be brave and heartless.

of fear and aversion. "Oh, I can't. I can't," he wailed, turning white and sick as he threw down his ball bat. "I ain't never killed nothin' bigger'n a grasshopper, and I can't," and turning about he fled from the scene of terror, leaving he fled from the scene of terror, leaving the door open behind him in his agita-

The boys in the accompanying photograph are eating green corn, which they have bought for a penny an ear. It has been boiled and nicely buttered, and is healthler than the candy or sweetmeats for which boys are so apt to spend their money. Selling corn in this manner upon the streets of our large cities is an innovation, to say the least.

#### THE INSPIRATION OF LINCOLN

By HENRY WATTERSON

(Extract from a speech delivered at Chicago, February 12, 1895. Used by permission of the author.)

What was Abraham Lincoln's mys-

terious power, and whence?
His was the genius of common sense;

of common sense in action; of common sense in thought; of common sense enriched by experience and unhindered by fear. Inspired, he was truly, as Shakespeare was inspired; as Mozart was inspired; as Burns was inspired; each, like him, sprung directly from the people.

him, sprung directly from the people.

I look into the crystal globe that slowly turning, reveals the story of his life, and I see a little heartbroken boy, weeping by the outstretched form of a dead mother, then bravely, nobly trudging a hundred miles to obtain her christian burial. I see this motheriess lad growing to manhood amid scenes that seem to lead to nothing but abasement; no teacher; no books; no chart, except his own untutored mind; no compass, except his own undisciplined will, no light, save light from heaven; yet, like the caravel of Columbus, struggling on and on through the trough of the sea, always toward the destined land. I see the full-grown man, stalwart and brave, an athtoward the destined land. I see the full-grown man, stalwart and brave, an athlete in activity of movement and strength of limb, yet vexed by weird dreams and visions; of life, of love, of religion, sometimes verging on despair. I see the mind, grown as robust as the body, throw off these phantoms of the imagination and give itself to the practical uses of this work-a-day world; the rearing of children, the earning of bread, the cumulous duties of the husband, the father, and the citizen. I see the party leader, self-confident in conscious rectitude; original, because it was not his leader, self-confident in conscious recti-tude; original, because it was not his nature to follow; potent, because he was fearless, pursuing his convictions with earnest zeal, and origing them upon his fellows with the resources of an oratory which was hardly more impressive than it was many-sided. I see him, the pre-ferred among his fellows, ascend to the eminence ordained for him, and him It was many-sided. I see him, the preferred among his fellows, ascend to the eminence ordained for him, and him alone among the statesmen of the time, amid the derision of opponents and the distrust of supporters, yet unawed and unmoved, because thoroughly equipped to meet the emergency. The same being, from first to last; the little boy weeping over a dead mother; the great chief sobbing amid the cruel horrors of war; flinching not from duty, nor changing his lifelong ways of dealing with the stern realities which pressed upon him and hurrled him forward. And, last scene of all that ends this strange, eventful history. I see him lying dead there in the capitol of the nation to which he had rendered "the last, full measure of his devotion," the flag of his country wrapped about him, and the world in mourning at his feet. Surely he was one of God's elect, not in any sense a creature of circumstance, or accident, or chance.

of God's elect, not in any sense a creature of circumstance, or accident, or chance. The inspired are few. Whence their emanation, where and how they got their power, by what rule they lived, moved and had their being, we know not. There is no explication to their lives. They rose from shadow and they went in mist. We see them, feel, them, but we know the circumstance of the circumstances. rose from shadow and they went in mist. We see them, feel them, but we know them not. They came, God's word upon their lips; they did their office, God's mantle about them; and they vanished, God's holy light between the world and them; leaving behind a memory, half mortal and half myth. From first to last they were the creations of some special Providence.

Providence. Tried by this standard, where shall we find an illustration more impressive than

find an illustration more impressive than Abraham Lincoln, whose career might be chanted by a Greek chorus as at once the prelude and the epilogue of the most imperial theme of modern times?

Where did Shakespeare get his genius? Whose hand smote the lyre of the Scottish plowman, and stayed the life of the German priest? God, God, and God alone; and as surely as these were raised up by God, inspired by God, was Abraham Lincoln; inspired by God, was Abraham Lincoln; and a thousand years hence, no story, no tragedy, no epic poem will be filled with greater wonder, or be followed by mankind with a deeper feeling than that which tells of his life and death.

#### The Swimming Needle

If you tell your friends that you can make a needle swim, they will probably laugh at you. But the trick is not at all difficult, and there is no "catch" about all difficult, and there is no "catch" about it, either. Fill an ordinary goblet with water to the brim and place it on a firm base so that it will not tremble. Then select a fine sewing needle and cut a piece of letter paper into a small oblong so that it shall be a little longer than the needle. Set this piece of paper gently on the water. Put a tiny drop of oil on your finger and rub the needle with it. Then lay it carefully on the paper. Of course the paper will support the needle and everybody will say: "Huh! That's nothing." But just tell them to wait.

wait.
Within a few moments the paper, becoming soaked with water, will sink slowly to the bottom of the glass. But the needle will not go down with it. If the surface of the water is perfectly still the needle will remain alloat.
The explanation is simple. The cohesion of the molecules of water is such that the liquid resists the entrance of other bodies as long as the molecules are not disturbed. If it is placed on the water with sufficient skill, it is even possible to make a flat ring of metal swim. But the needle trick is easier.

The admiration which Bob felt for his Aunt Margaret included all her attributes, and even possessions which the aunt herself was not wont to consider desirable. "I don't care much for plain teeth like mine. Aunt Margaret," said Bob, one day, after a long silence, during which he had watched her in laughing conversation with his mother. "I wish I had some copper-toed ones, like yours."—Zion's Herald.

EAR, O ATHLETES! Have you tried water-baseball? No; not water-polo or water-football, but the good old national game, played on a lake or bay or swimming pool, or a quiet bit of river where there is not much current.

If you haven't tried it and turn in the water to throw it. But it is no easy matter to throw a ball while treading water, and the chances are that the throw is a bad one and you are safe.

You now turn your attention toward second. To steel it are the second.

much current.

If you haven't tried it get in line and begin at once with the new game of the season. They are playing it in the west, where the swimming season seems to begin much earlier than it does along the Atlantic coast. There the sport has become more than a fad of the moment. It is enjoying a boom that is almost a

mania.

One need not be a great ball-player nor a star swimmer to play the game. All it requires is a rudimentary knowledge of baseball and fair swimming ability. The outfit consists of a tennis ball, a yard or less of broomstick and four rafts—one large and three small.

The batsman and the catcher stand on the big raft. On a small raft ten yards away stands the pitcher. He may deliver the ball in any style he chooses so that that it crosses the plate. In striking everything goes—bunt, bingle, swat or foul tip. There are five men on a side. The moment bat and ball come in contact the batsman must start for first base.

It doesn't matter frow the ball is hit, you count it as fair. Indeed, it is a triumph of skill to turn and swing with the ball and send it flying past the

Suppose you have driven a good ball out near third base. You pile overboard with a dive toward first. As you rise to the surface you see the third baseman and the pitcher furiously swimming after the ball.

To your excited even it some in the surface is a support of the surface of the surface of the surface is supported by the surface of the surface

To your excited eyes it seems as if first base were a mile away. As you near the base you see the pitcher seize the

But it is no easy matter to throw a ball while treading water, and the chances are that the throw is a bad one and you

You now turn your attention toward second. To steal it seems easy, and so, as soon as the pitcher delivers the ball, you start. But if all goes well with the other team, when you have gone about a third of the distance you notice that the second baseman has the ball. Giving up here of guinning second you turn to rehope of gaining second, you turn to re-gain first, only to note that the first baseman has followed you and waits for the ball about five feet to your rear.

You again turn your efforts toward second, only to see the second baseman swimming toward you. With much splashing you try to evade this latest comer, but you are put out and retired amid the yells of the onlookers. The game is full of fun. Sometimes an ardent baseman will lean too far over to one side in his efforts to get the ball. This will cause the raft to tilt until the player loses his balance, and in his efforts to loses his balance, and in his efforts to regain the center of the raft it will shoot from under him, and he will land smack on the surface of the water.

The game is full of unexpected fancy stunts. The spectators laugh even more than they do at the ludicrous happenings in indoor baseball, for the rolling and tumbling in the water makes the mishaps twice as funny.

Along the sandy reaches of the Shrews-bury River and the Great South Bay and thousands of other bays on the Atlantic coast the game ought to be popular this summer.

It is most important to have one keen-eyed watcher constantly looking out for all the players who are in the water, so that there shall be no danger of accident. —New York World.

ser has exceptional talent, but it would be only telling half the story to omit saying that he has been a persevering worker. He, like all others who achieve it, is ready to say that success in any undertaking is not a matter of inherited talents but a matter of zealous efforts in cultivating these talents.

#### Arthur Adolph Loesser

Graduated From Public School No. 165, West 109th St., New York City, at Age of Ten Years.

Eight years school work in about four years is the remarkable record of Arthur Adolph Loesser, of No. 463 Central Park West, New York city. Entering school at the age of 6 years Master Arthur has completed his grammar school education at the age of 10. It takes a bright boy who is willing to work real hard to do

ARTHUR ADOLPH LORSSEE

this. This combination is not so very rare among the boy readers of THE AMERICAN BOY, but it is certainly rare enough to deserve a notice here. Especially is this hotice deserved since young Loesser, in addition to carrying home a grammar school diploma at the age of ten years, has in his short life made himself master of the piano. His recitals on that instrument have been listened to with pleasure by the critical audiences which assembled at the Waldorf Astoria music room, and have been honored with favorable comments by musical writers on the New York papers. This is a distinguished record few make even when they have made music a study for years.

music a study for years.

It is needless to deny that Master Loes-

#### Y. M. C. A. to Teach Art of Navigation

The faculty of the Young Men's Christian Association of New York city are to add a new and novel course of instruction to the curriculum of the institution. It will be thorough study of yachting and the principles of navigation. Some kind-hearted philanthropist recently gave the association a beautiful schooner yacht, named the Amazon. The yacht is 108 feet over all and twenty-one feet beam. Immediately the possibilities afforded by the yacht presented themafforded by the yacht presented them-selves to Dr. Frederick Knowles, of the y. M. C. A., and he originated the yachting course, utilizing the Amazon as a training ship for the young men who wish to learn the mysteries of tacking,

training ship for the young men who wish to learn the mysteries of tacking, reaching, running and combing.

The captain and the cook will be professionals, but the rest of the crew, thirty in all, will be Y. M. C. A. boys, and, it is said, will be picked for their positions according to their build and abilities. For instance, the young man possessing the greatest volubility will be made first mate; he of the greatest rotundity and capacity for food will be made cabin boy, while the one with the most lung power will attain to the enviable position of bos'n's mate.

When the first crew returns another will be sent out, and the process will be repeated till the shrill nor westers begin to blow. Then the crew will lay off and spin yarns till the season reopens next year, when they will go out again.

This will be kept up for four years, at the end of which time it is expected that

This will be kept up for four years, at the end of which time it is expected that each of the young men will be proficient in all the duties, that fall to the lot of a first mate, harring the explosive style of speech, and will be adepts in the art of navigation. Dr. Knowles, who is attached to the Harlem branch of the association of the secondary and the secondary and the secondary are the secondary and the secondary are the secondary and the secondary are the secondary are the secondary are the secondary and the secondary are the secondary and the secondary are the secondary are

ciation, will accompany every crew as athletic instructor.

The Y. M. C. A. officials would not say who is the donor of the Amazon. She was built at Bayville, L. I., in 1899. Her tonnage is 95 and she draws 9 feet of water. ater. • Those who finish the course will be

given diplomas in navigation.

We have good terms to offer to sub-scription agents. Write Subscription Dept., The American Boy, Detroit, Mich.

I set of 8 cards for 20 cents postpaid 100 assorted 1000

¶ You can easily sell these handsome cards for 3c apiece or 2 for 5c, so that if you sold 1,000 cards your net profit would be \$17.00. Now is the time—just when school is opening and the boys are coming back from their vacations — to sell them, and any hustling boy can sell 1,000 cards, as every boy will want at least a complete set, and maybe more.

¶ You are in position to buy and sell these cards at the same prices at which the dealer buys and sells them.

# The Boy Photographer

Edited by HUGO ERICHSEN

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subjectioners only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographe in any event to be our own, without further payment than the payment of the prizee. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

"STANDING ROOM ONLY" Second Prize, by Perry N. Trask, Silver Creek, N. Y.

#### For Mounting Photographs

Liesegang recommends as a mountant 80 grains of dextrine and 20 grains of calcium nitrate in 2 ounces of cold water.

#### Current Comments

Victor Conley—You would have been entitled to honorable mention if you had not amputated the feet of your Indians. In every other respect the photograph is very good. C. A. Fulmer—Your "Spokane River" is too large a subject for so small a camera.

#### The Brownie Contest

Photographs by the following have been entered in our Brownie contest, which closes September 1st: Eldred Meyer, Edwin Peterson, Ernest Bertholdt, Arthur Uhl, Chas. A. Brown, Edward F. Andrews, Joseph D. Cecil, Harry Belden, L. C. Robinson, Wm. C. Sleeman, Harold Hope, Roland Bachman, L. E. Harmon, Stuart Randolph Whitman, and Luke Matthews, Jr.

#### Honorable Mention

We regret to say that our roll of honor is a very short one this month, owing probably to the fact that a great many of our photographic friends are away on vacation. It is headed by Theo. E. Rein. The distinction is also herewith conferred upon: Wm. J. Juengert, Arthur H. Black, Harvey N. Seney, Arthur A. Beck, and Kerr Forman.

#### Our Prize Pictures

E. E. Trumbull's seascape, to which First Prize is awarded this month is a work of art that would do credit to some of the world's best photographers. "Standing Room Only," the second prize photo, by Perry N. Trask, is also a very clever piece of work that would have been worthy of the talented brush of Mme. Ronner, the world's most famous painter of cats.

#### Drying Marks

Be extremely careful over the negative drying operations. If you use a drying rack, never place the negatives film to film, but always with the emulsion side facing in one direction. If possible, always stand the platestwo or three grooves apart. The negatives should dry spontaneously and evenly; if the center takes longer to dry than the outer portions, the negative will be uneven in density.—Ex.

#### Improving Matt Surface Prints

Improving Matt Surface Frints

It often happens that a matt print has insufficient depth in the shadows, and instead of the deep tones being full of detail, they are clogged because of the dull surface. Bromide, platinotype, or P. O. P. prints with a matt surface, may be considerably brightened by using the following mixture:

Pure white wax, 50 gr.

Dammar varnish, 20 minims.

Pure oil of turpentine, 50 minims.

Melt the wax and then add the other ingredients. To treat the print, smear the surface with a rag dipped in the paste; then polish with a soft fiannel.—Photographic Times.

#### A Trick Worth Knowing

To avoid halos on interior exposures, when windows are in the line of the objective (lens), the following method is recommended:

"THE INCOMING TIDE" First Prize Photo, by E. E. Trumbull, Plattsburg, N. Y.

Your local Merchant should handle the STEVENS. ASK HIM. If you cannot obtain, we ship direct, EXPRESS PRE-PAID, upon receipt of Catalog Price.

140-page Catalog, illustrating and describing in detail the entire STEVENS line, will be mailed for 4 cents in stamps to pay postage. Send for 11—If you shoot or are going to, you will need it.

SEND 10 CENTS IN STAMPS FOR STEVENS ALUMINUM BANGER

Great Career

as statesman, orator and lawyer by de-

claiming to the chickens and cattle in the barn. By mere determination and persistent effort to learn the law he overcame lack of opportunities and obstacles that do not confront the young man of to-day.
The ambitious youth who would achieve fame and fortune at the bar, in public affairs or business, but who cannot afford the time and money necessary to attend a law college, should

through the Sprague Correspondence School of Law—the original. It brings to his home, by mail, the instruction and drill of the college. Thousands of our students have passed the required state examinations, and have been admitted to the har in every state. Others have applied this knowledge toward commercial pursuits, and through it have gained prominent positions. Send for our catalogue, which tells all about our three courses: Preparatory, Commercial and College Law Course. Also book of interesting letters from hundreds of our successful students, aberral Terms—Special Offer now. Write to-day and us help you.

The Sprague Correspondence School of Law, 370 Majestic Building, Detroit, Mich.

To avoid the over-exposure of the window, particularly when a fine landscape is visible through the open window, make first a short exposure for the window. Now close the shutters and darken the room as much as possible, and make a flashlight exposure of the interior without changing the position of the camera. The natural and artificial illumination should of course agree as much as possible. If the plate is now developed, it will be seen that landscape through the window and interior have obtained the correct exposure. In case that there are no shutters, the interior exposure may be done after nightfall.—German Exchange.

#### Queries and Answers

S. R. Whitman—We cannot enter into personal correspondence, with those intending to compete in our contests, the conditions of which have been fully published. Luke Matthews, Jr.—Yes, tone of your solio print is all right. I. E. Blahm—Most photographs reproduced in THE AMERICAN BOY are 4x5 or 5x7. C. H. Thomson—I am not familiar with the paper you mention and would advise you to correspond with the Eastman Kodak Co., which will answer your inquiries promptly. As Brownie photographs labor under a disadvantage in our regular contests, on account of their size, we have arranged a special contest for them; if you have any prints, send them along. Personally I prefer a plate camera. Edwin H. Corbin—Velox postals that are entirely the work of the individual submitting them are admissible to our contests. Yes, we are always looking for good photographs that may be used for the cover. Prize money could be applied on subscription, if desired. 8. R. Whitman-We cannot enter into per-

# The Boy Mechanic and Electrician

A Permanent Department

Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns.

Edited by Robt. G. Griswold

#### The Boy Mechanic and Electrician Prize Contest

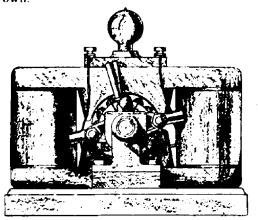

CONTEST NO. 1.

Dear American Boys:

We wish to become better acquainted with you in your own workshops and with your individual work, and to this end have decided to run a few contests, publishing each month the best picture and accompanying short description of some one of your many workrooms, or something that you have built. Now what we want for the first contest is a photograph and three hundred word description of your workroom—not all

photograph and three hundred word description of your workroom—not all fixed up for the occasion, but just as you live in it with your tools and instruments about you—and with yourself in the room if possible.

This month (September) I will give to the boy sending me the best picture and description of his workshop: A Complete Set of Castings for a 52 Watt Dynamo or Motor, with detail drawings, just like this picture. It is a beauty and measures 8½ inches in length by 5 inches in height. A thoroughly up-to-date high-grade machine, and one that any boy may be proud to own.

The successful picture will be published in the November Issue
ROBERT G. GRISWOLD,
Dept. Editor.

RULES OF CONTEST.

Contestants must be subscribers to The American Boy.
If pictures are to be returned, stamped addressed envelopes must be enclosed.
Full name, address and age of contest-

Full name, address and age of contest-ant must be given.

Prize will be awarded solely on the merit of the subject, the greatest weight being given for display of inventive talent and ingenuity.

All pictures must be received on or before September 20th, 1905.

#### Experimental Lessons in Electricity

POWERFUL PLUNGE BATTERY.

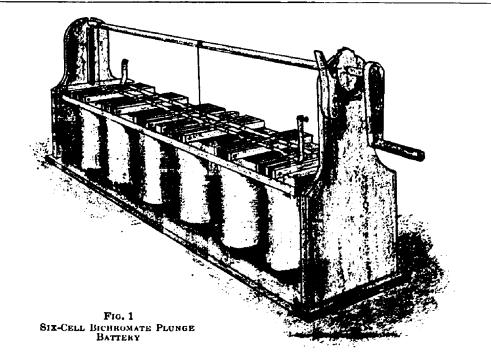

LESSON 5.

N OUR LAST lesson we constructed a very simple cell of a piece of copper and a piece of zinc. The current derived from this cell was not very great but it very plainly illustrated the means whereby chemical action between the liquid of the cell and the two elements generated electricity and how it could be collected. This simple cell shows the principle upon which almost all cells are constructed, and in this lesson we will take up the construction of a very powerful battery, and one that any boy can readily build.

There are many different types of cell N OUR LAST lesson we constructed a tivery plainly illustrated the means whereby chemical action between the liquid of the cell and the two elements generated electricity and how it could be collected. This simple cell shows the principle upon which almost all cells are constructed, and in this lesson we will take up the construction of a very powerful battery, and one that any boy can readily build.

There are many different types of cell that could be described at this point, but none so powerful, so reliable, and at the same time cheap. Many boys already possess small motors and other electrical apparatus that may be operated with this battery.

It is of the type known as the "Grenet" or bichromate-of-potash (pronounced bicro-mate) cell, and is universally used for experimental work of every description. Owing to the internal chemical areas of the promotion of the pinces continuing when the

battery is not in use if they are left in battery is not in use if they are left in the solution or electrolyte, it is necessary to take the zincs out of the solution when finished, or else they will be rapidly eaten away. In this battery the zincs and carbons are all lifted out by a small crank at the top, and owing to the fact that the elements are dipped or plunged into the solution when needed, the name of plunge battery has been given to it.

This is what is called a "closed cir-

This is what is called a "closed circuit" battery, because it is generally used on a closed circuit, requiring a constant supply of current such as a motor or lamp. Such cells as the sal-ammoniae or lamp. Such cells as the sal-ammoniae (pronounced sal am-mo-ni-ac) type used on telephone and electric bell service are called "open circuit" cells, and, owing to the fact that they become polarized very rapidly, are used only in cases where intermittent service is required. They become exhausted very rapidly when used on a closed circuit, but regain their strength after being allowed to rest. Undoubtedly many of the readers have experienced this difficulty in operating small motors by a sal-ammoniae cell. These names only signify the type of cell, since the chemical action is exactly the same in both—the sal-ammoniae cell does not.

The battery about to be described is composed of six cells, but, if one wishes he may use any number of cells. Each cell will give when fresh from 1.9 to 2 volts pressure each, and the six cells connected in series (connecting in series means connecting the zinc of one cell to the carbon of the next cell and so on

means connecting the zinc of one cell to the carbon of the next cell and so on throughout the six) will give about  $6 \times 2 = 12$  volts, which is quite sufficient for ordinary purposes. The current generated is large and very steady.

Fig. 1 shows the battery complete in its box with the small crank and windlass above, by means of which the six sets of elements are lifted out of the solution or lowered into it at will. In Fig. 2 is shown the box in detail and the dimensions allow a 6-inch space for each cell. The wood may be either pine or

action of the zines continuing when the are securely nailed to the base. The two inches wide by seven inches in length

guides are then nailed inside the ends as shown. These prevent the frame from swinging to and fro as it is being lifted.

The frame is made of five pieces, two long sides, two ends with a notch cut therein to fit over the guides, and a middle support. This frame is made fairly stout to prevent bending under the weight of the six sets of elements. A screw-eye is screwed into the middle of each end and the middle support and to each end and the middle support, and to these is tied a stout piece of cord which passes up and around the windlass, being fastened thereto by a matting tack or small staple. As the windlass is turned it winds up these cords and thus lifts the frame.

For the windlass use a broomstick or

For the windlass use a broomstick or curtain-roller, 40 inches long. On one end is fastened the ratchet wheel which is cut out of hard wood. The hole should be a snug fit over the drum, and a long, thin wire nail driven through the ratchet (drilling a hole for it first) will prevent its turning. About two inches to the right of this ratchet fasten the crank in a similar manner. A still stronger job will result if glue is used in addition to the nail.

A small pawl, also cut from a piece of hard wood, is fastened by a screw to the

the nail.

A small pawl, also cut from a piece of hard wood, is fastened by a screw to the side of the box so that it will drop into the notches of the ratchet and prevent the weight of the elements turning the shaft. It is held against the ratchet with a rubber band passing over two tacks, as shown in Fig. 1. When it is necessary to lower the elements, one hand can hold the pawl out while the other lowers them into the solution to the required depth. A wire nail driven through the shaft on either side of the end of the box opposite the ratchet will prevent its moving to and fro as it is turned.

The jars are of giass and may be made of the one- or two-quart size fruit jars, cutting off the narrow tops with a red-hot poker. This method, which will prove of value a great many times in experimental work, is illustrated in Fig. 3. Jars may be readily made of old bottles, as the necks can be cut off very easily. Ifeat a poker to a bright red heat and slowly pass it around the jar at the point where the cut is to be made. If the crack does not start immediately, touch the heated spot with a drop of water, when the crack will start and follow the hot from completely around the jar. A

the heated spot with a drop of water, when the crack will start and follow the hot iron completely around the Jar. A light rap will cause the top to fall off and the keen edges may be smoothed off with a fine file wet with turpentine. The jars should be six or seven inches in

jars should be six or seven inches in height.

The elements used in these cells are carbon and zinc. If the amateur can afford it, each cell should contain three carbon plates and two zincs, but a very good cell may be made with one carbon and one zinc plate only. These plates, which may be obtained from any dealer in electrical goods, should be about two in electrical

and fastened together as shown in Fig. 4, the two outside and middle plates being of carbon, and the second and third plates of zinc. The clamps, which are shown in detail in Fig. 2, are made of oak or other hard wood, especially the twelve outside strips, as they take the strain. Boil them thoroughly in melted paraffin, or varnish them thoroughly with shellac. The ends are provided with 4-inch holes, through which pass two 3-inch by 4-inch carriage or stove bolts, with a washer under the heads and nuts. When the nuts are set up the plates will be firmly clamped together as shown, but before this clamping is done two 4-inch strips of copper, polished very bright, should be bent as shown and inserted between the plates and the wood separators to make a connection for carrying of the current. hent as shown and inserted between the plates and the wood separators to make a connection for carrying off the current. One strip is bent so as to make contact with the three plates of carbon only, while the other makes contact with the two zinc plates. Be sure that they do not touch each other (place them about an inch apart), and make the arches high enough to insure that there is no possible chance of touching the underlying plates. The free ends should be provided with a hole for a binding post screw. This forms a complete set of elements for one cell, and the battery shown requires six such sets.

This method of clamping the plates together is far better than securing them to the strips by means of screws, because the solution in the jar will gradually creep up to the top and destroy the screws, ruin the contacts, and cause the plates to drop off into the jar, probably breaking it. Should this corrosion take place in this case, it is a simple matter to loosen the nuts, remove and wash the plates and scrape the contact surfaces bright and clean. When they are re-

to loosen the nuts, remove and wash the plates and scrape the contact surfaces bright and clean. When they are replaced they will be as good as new. If a line is drawn around the top of each carbon with some melted paraffin wax, just below the wood strips, it will prevent this creeping to a great extent.

These groups of plates are all supported from the frame by the ends of the wood clamps, and their weight is quite sufficient to prevent slipping, although as a precaution small blocks may be glued to the sides of the frame after they are in place to act as guides.

The jars may now be put in place and filled with the electrolyte which is made according to this formula:

Sulphuric Acid..... 4 parts by weight

Sulphuric Acid...... 4 parts by weight Potassium Bichro-

Pour the water into a large stone jar; then very gradually add the sulphuric acid, only a little at a time, stirring the water vigorously at the same time. This

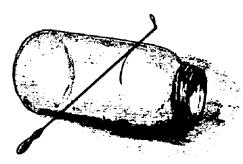

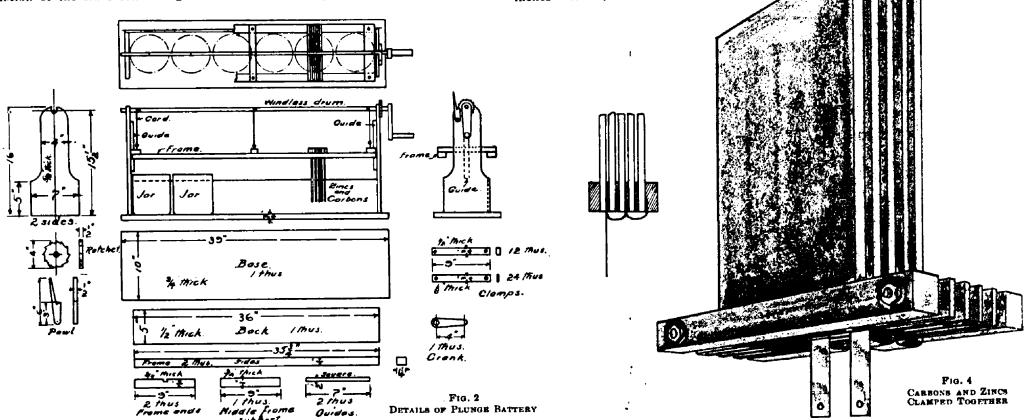

Fig. 3-Cutting Bottle with Red-hot Poker

caution is necessary owing to the great heat generated when the acid mixes with the water. Then pulverize the potassium bichromate and stir into the potassium bichromate and stir into the mixture of water and acid until dissolved. Use great care in handling both the acid and potassium bichromate, as they are poisonous. The acid makes a very sore "burn" if it gets on the skin and quickly eats a hole in any garment upon which it falls. You need have no fear, however, if you are careful.

When the solution is cold, fill each jar to within a half-inch of the top, when the elements are lowered as far as they will go. The potassium bichromate is used in this solution to prevent polarization, which it does by combining chemi-

cally with the hydrogen which would otherwise collect on the zinc plate. You can easily try this experiment with the simple cell that you made in the last lesson. Mix some potassium bichromate with the sulphuric acid and water and see what action it has upon the hydrogen bubbles. see what action it has upon the hydrogen bubbles as they collect on the surface of the zinc. This is what is known as a liquid depolarizer and is only one of many substances that may be used for this purpose. There are also many cells in which a solid substance, such as black oxide of manganese, is used to prevent polarization, and this is said to be a solid depolarizer. The solution soon becomes very dark, but it need not be thrown out for a long time. A little acid added from time to time will materially prolong the life of the solution, but when the battery begins to run down rapidly after closing the circuit, it signifies that the potassium bichromate is almost exhausted and it is chromate is almost exhausted and it is best to make a new solution rather than try to add new material. The old solution becomes so full of the products of chemical decomposition that it is practically worthless. The acid is worth about ten cents a pound (the commercial quality is good enough), and the potassium bichromate costs about twenty-five cents a pound.

cents a pound.

The zinc plates are gradually eaten away, while the carbon plates are never affected. But, since they are lifted out of the solution each time after use, they will last a long while. Those who care to take the trouble may preserve their zincs in the following simple manner: The process consists of amalgamating (a-mal-ga-mat-ing) the surface of the zinc plates with mercury. Wash the plates thoroughly and dip them for a few minutes into a solution of one part sulphuric acid to four parts water, and then rub mercury over the surface with a woolen cloth. It will adhere thereto and cover the entire zinc with a bright coatcover the entire zinc with a bright coat-ing. Rub off any excess mercury. While the power of the battery is in no way affected by this treatment, the life of the zincs is greatly prolonged. Enough mercury for this purpose may be purchased at a drug store for ten or fifteen

cents.

The amateur that makes this battery The amateur that makes this battery will be highly pleased with it, as he can run quite a powerful toy motor, heat several inches of fine iron wire to a white-heat, light a number of small lamps, operate a miniature are lamp, decompose water, and get powerful sparks from induction coils. It is the simplest, cheapest and most powerful battery of its size that the amateur can make and is always ready for use. When not in use there is no wasting of zincs, as they are lifted entirely out of the solution. By regulating the depth to which the plates are immersed so that just sufficient current is supplied and no more, the life of the battery will be just sumcient current is supplied and no more, the life of the battery will be greatly lengthened. When the plates are lowered entirely into the liquid, chemical action takes place over their entire surface, while only part of the current generated is needed and the balance is a

The greatest cost of this battery is in the zinc and carbon plates, but this may be cut down by using less plates per cell. If a local tinsmith carries heavy sheet zinc you might be able to get sufficient scraps to make the twelve pieces re-quired. The carbons should cost about afreen cents each.

In the next lesson we will take up other forms of galvanic cells that may be used in telegraph, telephone and other service. Space will not permit the description of the galvanometer in this lesson.

#### Query Box

Will you please tell me how many feet of wire like the sample enclosed (I do not know the gauge number) will have a resistance of one ohm? Also, please tell how to make an induction coil for the talking part of the telephone. E. P. H., Liberty Center, Ohio.

Ans. The wire is No. 29; at 68 degrees F. 12 feet, 3 inches of this wire will have a resistance of practically one ohm. Our space will not permit of this description at this time.

Can you tell me what size wire to use in winding a small induction coil to go into one's pocket? How many layers for both the primary and secondary coils?

C. O., Rochester, N. Y.

the wire is attached to the binding post, and, after passing around the nails, passes under the base to the key, then alongside of the lever to the wire that is wrapped around the key and which makes contact with the square plate beneath. From this plate the wire leads back to the other binding post. The small coil is unnecessary.

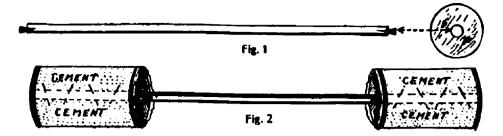

Please give me directions for making a storage battery. Can a storage battery be charged from a telephone magneto, or a hand magneto, or a hand-power dynamo? Can such a storage battery be used for incandescent lights, running small motors, and other experimental work?

R. S. B., Jefferson, N. Y.

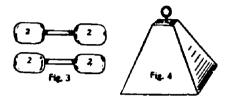

R. S. B., Jefferson, N. Y.

Ans. Storage batteries and their construction will be described in an early issue of THE AMERICAN BOY. Magnetos generate alternating currents and a storage cell cannot be charged with them, but a hand-power dynamo, if wound for direct current, would do so; the cell would of course be rather small, but it might be used for experimental purposes. It takes a long while to fully charge them and a hand dynamo would make it very laborious. Better make the plunge battery described in this issue, which is far more powerful.

# How to Make a Pair of Dumb-Bells BULLDYOUR OWN BOAT

ANY BOY can make a pair of dumb-bells for himself and a lifting-weight, also, which will do quite as well as any he could purchase, providing he does his work carefully. First procure two large tin cans, such as fruit is often canned in, and cut the ends out of each. Shape four round pieces of wood just large enough to fit tightly in the ends of the cans, and then cut a hole in the center of each piece of wood, as shown in Fig. 1. Procure, also, a hardwood bar the length of the ordinary dumb-bell—a length of old broom hard dumb-bell—a length of old broom handle will do very well.

For filling the cans mix one part of cement with two parts of sand and add water until it is soft, but still has a dewater until it is soft, but still has a degree of firmness. Pack this closely into the cans and insert the wooden disks into the ends of the cans. Insert the hardwood bar through the holes in the inside disks so that it runs clear through the center of each can of cement, and joins the cans with a proper length of rod between (Fig. 2). It is well to first string the two inner disks on the bar and then drive a few nalls through each end then drive a few nails through each end

of it hefore pushing into the cement, to give it a grip. The disks are then pushed along the rod to fit into the open end of each can. Put a wedge in each end of the can to hold the bar in place. The other dumbbell is made in the same manner.

At this stage let the hells stend for At this stage let the bells stand for

At this stage let the bells stand for five days or until the cement is perfectly dry, then remove bits of wood and tin until only the cement is left. Cement dumbbells may be filed into shape, as in Fig. 3, and painted, also, if desired. Fig. 4 shows a lifting-weight made of cement. Its construction is very simple. The cement is packed into a wooden the probability and the construction is the construction of the cement is packed into a wooden the cement is packed into a wooden the construction of the cement is packed into a wooden the cement is left.

The cement is packed into a wooden mould previously prepared, and an iron rod, with a ring is thrust in at the top. When the cement is dry the wooden mould is removed.—Popular Mechanics.

#### Words of Appreciation

Winona Lake, Ind., June 19, 1905.
You are to be congratulated on the great work you are privileged to do for the boys of America through your matchless paper, which is a joy to me every time I see it.

W. J. SEMELROTH,
Editor of the World Evangel.

Cocoanut Grove, Fla., June 17, 1905.
I wish THE AMERICAN BOY the continued and complete success it so well deserves.

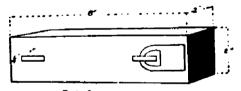

KIRK MUNROE.

#### THE CLEVER WORK WITH POCKET KNIFE JOHN L. DOUCHENY

No. 9—The Padlock Design

No. 9—The Padlock Design

In DECIDING what to treat in these talks, we have made it a point to exclude designs whose making require special or extraordinary talent. Although this month's subject is a little more difficult than preceding ones, it is strictly in accordance with the above stated principle. The objects you must draw have very simple outlines and models to copy from are always at hand. The piece upon which we begin work is a white pine block, eight inches long, four inches wide and two inches thick. The first work as, in every other case, is to draw out a diagram. Read the article through until you understand the design thorout a diagram. Read the article through until you understand the design thoreughly before you attempt to do this. When every stage of the work is clear it is time to begin. The finished design consists of two staples connected by a hasp; hanging from the right-hand staple is a padlock. The left-hand staple is the first to consider. Lay the block before you on a table, grain running right and left. The staple diagram is simply a small rectangle one inch long and one-quarter of an inch wide. The one-inch lines are parallel with the grain

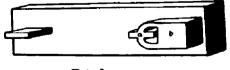

ellipse or elongated circle. A few coats of the wood. Draw the first one inch from the left end of the block, and four inches to the right of that draw another on a level with and exactly like the first in every respect. The padlock when finished will hang from the right-hand staple, but in the diagram it extends out to the right. You will see the reason of this when C. O., Rochester, N. Y.

Ans. As you give no explanation of the use to which this coil is to be put, we assume that it is merely for giving small shocks and such a coil may be made by wrapping a 1/4-inch iron-wire core with four layers of No. 22 single cotton covered magnet wire, and the secondary coil may be wound with about forty or fifty layers, depending upon the size that you wish to carry. The length of the coil may be about three inches.

Please explain how to connect the ends of the cuttining described as for the right of that draw another on a level with and traw another of the and traw another on a level with and traw another of the and traw another of the and traw another o size that you wish to carry. The length of the coil may be about three inches.

Please explain how to connect the ends of the wires wound around the nails in the telegraph shown in the June number. Also explain the nature of the small coil running alongside of the key.

Ans. This instrument was evidently not intended as a receiving instrument as no switch was provided. One end of the wire is attached to the binding post, and, after passing around the nails, passes under the base to the key, then alongside of the lever to the wire that alongside of the lever to the wire that alongside of the lever to the wire that

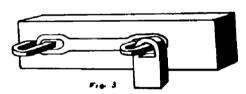

of the stick. Fig. 2 shows the job after the first operation. We will now confine our attentions to the part marked b until it is reduced to an exact imitation of a padlock. The part marked a, to which it is connected, is a rough design of the staple. Whittle it until it is actually a wooden staple and the lock will become loosened and hang down. At this a wooden staple and the lock will become loosened and hang down. At this stage also finish the other staple. This is done by simply cutting away the central portion. The block should now be a little less than one inch thick. Go over it carefully with chisel, knife and sandpaper until the top surface is as smooth and level as the bottom. The block has now protruding from it two staples; to the one on the right a lock

is inseparably attached. We have not yet considered the hasp, but will do so now. As in the case of the real iron article, it overlaps one at the center and entirely surrounds the other.

Draw the diagram accordingly. Door latches have numerous different shapes.

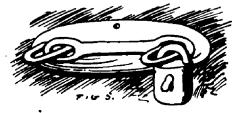

The one pictured is best to use, because it is simple and conforms to the general outlines of the design. It is about one and one-quarter inches wide at ends and

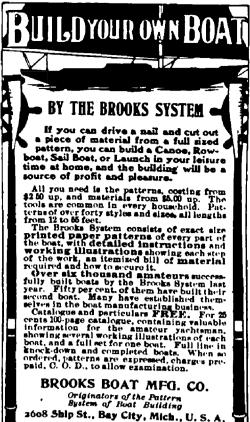

three-quarters in the center. Mark it out as shown in Fig. 3. Cut away the surface of the block outside the lines until the hasp is raised out one-quarter of an inch. It is quite easy to carve out the retaining part behind the hasp, but before doing so finish the ends. This is done by taking out small splinters with the knife until the hasp is entirely free of the staples and does not touch any part of them. This accomplished, go over the hasp and shape it up to look like the real article. Leave two small retaining pieces in the middle to hold it firm. Once more smooth the face of the stick and remove all roughness and stains with sandpaper. Have a model handy and refer to it constantly model handy and refer to it constantly so you can get a perfect copy. The back part is finished up by cutting it into an ellipse or elongated circle. A few coats of varnish, as near the color of the wood

advise you to be particularly careful with the end parts. They are fragile on account of the shortness of the grain. A small and very sharp blade should be used in cutting them. Don't let the point sink in too deep and always bear in the direction of the solid back. Hold the knife lightly and draw it back and forth in a see-saw motion. When you have it to nearly the desired size smooth the knife lightly and draw it back and forth in a see-saw motion. When you have it to nearly the desired size smooth with a piece of glass or the blade held at right angles to the wood. Bore a hole in the center of the top to hang by. Fig. 5 is a picture of the finished article. If you understand the directions and follow the suggestions given you should be able to make it in a few hours. Perhaps the best way to go about it is in spells, a little today, a little tomorrow, and so on. Change of work is rest, you know, and besides the intervals between efforts will give you a chance to think out new and advantageous methods.

#### Boys' Books Reviewed

THE ISLAND CAMP, or The Young Hunters of Lakeport, by Captain Raliph Bonehill. This popular author of boys' books with this volume commences a series which will deal with boys' outdoor sports of all kinds. Camp life in winter is placed before the young reader with all its delights. Hunting, fishing and shooting all kinds of wild game, including squirrels, deer, woives, bears and moose and all the fascinations of life in the great outdoors are told in a way that will send thrills of delight through the boys and set them longing for similar experiences. The boys in the story are maniy and courageous and ready to assert themselves against wrong-doers, and they have a splendid guide and friend in the old hunter, Joel Runnell. The book is nicely illustrated by Jay Hambidge. 321 pages. Price \$1.25. A. S. Barnes & Co.

A. S. Barnes & Co.

A PRAIRIE INFANTA, by Eva Wilder Brodhead. Lola's mother, the Mexican wife of a somewhat thriftless Texas gold miner named Keene, dies in a little mining village in Colorado. Her father, desirous of going again into the mountains, places Lola with Miss Combs, who idolizes her. Lola thinks her father is paying Miss Combs for taking charge of her, but everything comes from Miss Combs' own scanty store. The principal characters of Lola and Miss Combs are finely drawn, and, altho' the book is principally intended for girls, we think the boy who begins to read it will find sufficient interest to make him finish it. The little book is nicely illustrated. 157 pages. Price 50 cents. Henry Altemus Co.

All books reviewed are sold by us at publishers' prices. Address The American Boy, Detroit, Mich.

President and Editor. Vice-President and Ass't Editor. Secretary and Treasurer.

#### AMATEUR JOURNALISM

(Continued from page 336.)

editorship, while Philadelphia was greatly opposed by one faction for 1906 meeting place. Tim Thrift was elected to the presidency without opposition; Charles A. A. Parker (Literary Gem), Boston, Secretary of the Inter-State Association, easily beat out I. E. Seymour for First Vice-President; Frank Honeywell was elected Second Vice-President on second ballot; J. Ray Spink became Recording Secretary, and J. Irene Maloney Corresponding Secretary without difficulty. Treasurer John S. Ziegler was re-elected. Paul J. Campbell, a dark horse, was elected Official Editor over the avowed candidates, B. J. Goldstein and W. R. Moscow, the first barely lacking a majority. W. J. Brodle, E. M. Lind and James F. Morton, Jr., were elected Executive Judges. Philadelphia was selected as the place for holding the next convention, snowing under Kansas City and Chicago, the only other candidates. Miscellaneous business consumed the only afternoon session on Tuesday. dureditorship, while Philadelphia was great-

and Unicago, the only other candidates. Miscellaneous business consumed the only afternoon session on Tuesday, during which President-elect Thrift delivered an address promising to abide by the constitution and have his Board do likewise. The Treasurer's bond was read and filed, as well as numerous telegrams and letters.

and letters.

The laureateships, or annual literary competitions, were judged and conferred by famous writers. Joaquin Miller conferred the poet laureateship on Ethelwyn Dithridge of New York, and honorable mention on Arthur H. Goodenough of Brattleboro, Vt. Jack London gave the laureateship for stories to Flora S. Emory laureateship for stories to Flora 8. Emory of Warren, Pa., and honorable mention to E. Miniter of Boston. John Winslow Snyder awarded the essay laureateship to E. M. Lind of San Francisco, with honorable mention to Paul J. Campbell of Georgetown, Ill. Willard O. Wylie awarded the honor for best histories of amateur journalism to E. M. Lind of San Francisco and honorable mention to A

amateur journalism to E. M. Lind of San Francisco, and honorable mention to A. V. Fingulin, Cleveland.

At the banquet good fellowship reigned supreme. The toasts, according to amateur custom, were drunk in cold water. The toasts were brief and well-spoken. The Following responded: "The Presidency," E. M. Lind; "The National Amateur," Tim Thrift; "Inter-Association Fellowship," Ira Eugene Seymour; "Publicity in Amateur Journalism," W. R. Murphy; "The Ladies," W. E. Mellinger; "The Gentlemen," Amanda E. Frees; "Impromptus," J. T. Nixon and W. J. Brodie. The toastmaster was W. C. Chiles. At the conclusion of the banquet some mineralogical specimens were presented to Edwin Haddey Smith. to Edwin Hadley Smith.

to Edwin Hadley Smith.

The third day was taken up by routine matters such as memorial resolutions, the presentation to the Association by John T. Nixon of ten copies of his "History of the N. A. P. A." and resolutions of thanks to hosts, the press, etc.

On the last afternoon the delegates enjoyed comic opera and the evening was filled with farewells. The delegates parted strengthened in their love for amateur journalism, bubbling over with enthusiasm for the N. A. P. A., and well satisfied with the outcome of the convention.

#### The U. A. P. A. Convention

The U. A. P. A. Convention

The United Amateur Press Association convened in ninth annual session at Kansas City, Mo., July 7-10. It was only at the last moment before the convention assembled that the place for holding it was definitely settled. President Morris J. Cohen changed the place to Minneapolis on account of factional strife in the convention city, but at the first signs of peace shifted the meeting place back to Kansas City. The attendance was not large as compared with previous conventions held in the East, nor was the convention as successful in point of interest and business accomplished as many of its predecessors. Those who attended, however, had a good time.

The following answered the roll: Henry G. Wehking (The Maverick), St. Louis; E. F. Suhre, St. Louis; Geo. W. Darragh (Publico). Philadelphia; Sam De Hayn, Troy, N. Y.; Lee B. Chase (The Pennant), Chicago; Homer P. Pickreil (Midnight Owl), Wichita, Kans.; R. M. Lowell (Inland Amateur), Champlain, Minn.; Paul H. Appleby (The Chum), Sedalia, Mo.; Berry H. Akers (The Stork), Richmond, Mo., and from Kansas City, Ira E. Seymour (Venture), Follett Greeno (The Bookworm), Harry R. Brown (The Mo-

gul), T. Harry Walker, C. Arthur Block (Kansas City Amateur), R. Shaw, Wil-llam Coleman, R. Dinwiddie, E. B. Fraw-ley, Ward D. Coble, Melvin A. Thalman, and last but not least, the Misses Florand Louise Haward, Block and

4-"He told me not to touch the gun."

Wensing.
The interest centered, as is usually the case in amateur conventions, in the election of officers, which took place on election of officers, which took place on the last day. The candidates for the presidency were John W. Smith (The Amateurist), Philadelphia; Henry G. Wehking (The Maverick), St. Louis, and F. Clifford Davis, of Philadelphia, who publishes no paper. Candidates for the position of official editor were Lee B. Chase (The Pennant), Chicago, and Homer P. Pickrell (The Midnight Owl), Wichita, Kans. Some dissatisfaction among the members has followed the reports of the election from the fact that the convention discarded all proxy ballots, which record the votes of absentee members, owing to the alleged negligence of the Secretary in not forwarding members, owing to the alleged negligence of the Secretary in not forwarding his report of eligible members. The statement is due Secretary F. D. Murphy that he claimed he forwarded his report in due time. Further dissatisfaction has arisen from the fact that the convention city put up local candidates for nearly half of the officers and succeeded in electing five of their number. The officers elected were the following: F. C. Davis, of Philadelphia, President; J. F. Roy Erford, Seattle, Wash. First Vice-President; Flora Haward. Kansas City, Second Vice-President; Edward F. Daas, Milwaukee, Secretary; Homer P. Pickreil, Wichita, Kans. Official Editor; T. Harry Walker, Kansas City, Treasurer; Follett Greeno, Kansas City, Historian; William F. Coleman, Kansas City, Lau-

reate Recorder; Augustus S. Hamilton, Newport News, Va., Eastern Manuscript Manager; Louis G. Brechler, Fennimore, Wis., Western Manuscript Manager. Directors: Sam De Hayn, Troy, N. Y.; Edward M. Lind, San Francisco, and Harry R. Brown, Kansas City Mo.

Milwaukee was selected as the place for holding the next convention.

The sessions of the convention were held in the parlors of the Midland hotel and all of them were presided over by Vice-President C. Arthur Block, excepting the third day, when President Cohen appeared and took charge. William F. Coleman, of Kansas City, acted as Secretary pro tem. Reports of officers were read and committees appointed to select an emblem, to prepare articles of incorporation, and to draft a new constitution. The articles of incorporation, and to draft a new constitution. The articles of incorporation submitted were tabled, and the new constitution, as proposed adopted. According to the old constitution fan be made unless submitted to all the membership. Under the new constitution or he made unless submitted to all the members, creating the office of Second Vice-President to be filled by a female member; changing the dividing line for yearly conventions from the Allegheny Mountains to the Mississippi River, and giving the President the right to remove lnactive officers.

The banquet was a scene of joility. All political feeling seemed to have died when the members gathered around the feetal board. The following toasts were responded to: "The Western A. P. A." First appears a Brigadier-General, then a senior Major-General.

official, when there is already an officer in the post who ranks the new arrival. But, oh, no! They don't come that way. First appears a Brigadier-General, then a Major-General, then a senior Major-General, then a Lieutenant-General or a General (in case there is one, and he feels in eral (in case there is one, and he teels in-clined to come), then perhaps the Secretary of War, and last possibly the President Sometimes the Secretary of War arrives with another dignitary, and the President does not show up at all, in which case, if the total number of possible reviews be represented by n, the actual number will be neg

(To be continued.)

# The Boy Pathfinder

A NEW BOOK FOR BOYS BY WM. C. SPRAGUE, EDITOR OF THE AMERICAN BOY

The Boy Pathfinder is the second of a series of books by Mr. Sprague known as The Making of Our Country Series. The first book of the series was The Boy Courier of Na-

poleon, published last year, which gave in story form the history of the Louisiana Purchase. The new book -The Boy Pathfindertells in story form the history of the Lewis and Clark Expedition.

▼HERE can be no more attractive way of studying history than through books written in the style of fiction. Young people, held by the story, absorb the facts of history in a way not to lose them. Mr. Sprague takes as his hero George Shannon, the boy member of the Expedition, who left school at Pittsburg to join Captain Lewis and follow him and his co-laborer, Captain Clark, through the perils of the wilderness. There are exciting experiences with bears, buffaloes, wolves and Indians. Young Shannon is twice lost. The tone of the book is high. Illuminated cloth cover. Handsome illustrations. Ready for delivery September 1st.

PRICE \$1.50—DELIVERED ANYWHERE

The Boy Courier of Napoleon can be purchased at the same price, or the two for \$2.75, derivered.

Address: The Sprague Publishing Co., Detroit, Mich.

#### GENUINE INDIAN **BOWS AND ARROWS**

We have bought a lot of four-foot, Indian, boys' hunting bows and ar-These bows are all hand rows. made from selected second-growth ash, split and not sawed. They are handsomely decorated in colors with the crude art of the Indian squaw. They are the genuine article and will give splendid satisfaction, as they will not easily break.

We have a limited supply of these bows and arrows which we will sell at 75 cents each (one bow and one arrow), and will deliver them free on receipt of that price; or, to anyone who will send us an absolutely new subscription to THE AMERI-CAN BOY, with one dollar, we will send one of the bows and arrows free of charge. This does not apply to a renewal subscription or on your own subscription.

Address, The SPRAGUE PUBLISH-ING COMPANY, Detroit, Mich.

to play it.
And that's right.

McGinnity, of the Champion Giants, was pitching against the Cincinnati Reds. Miller Huggins got in a scratch hit over to end field. The next time Huggins came to the bat McGinnity gave Huggins came to the bat McGinnity gave the sign for an outcurve. The ball was knocked into the left fielder's hands; he did not have to move a step. When Huggins picked up the stick for the third time, McGinnity again signed for an outcurve, and again the ball soared into the left fielder's hands.

It takes brains to control the ball in this fashion, for control of the sphere means knowledge of cause and effect, and arm alone cannot impart this knowledge.

"Smiling Mickey" Welsh will always

knowledge.
"Smiling Mickey" Welsh will always
be remembered in New York as one of
the two men who won the pennant for
the metropolis in 1889, "Tim" Keefe
being the other. "Mickey" had a slow
ball that was almost unhittable. In adbeing the other. "Mickey" had a slow ball that was almost unhittable. In addition, he had a way of ceaselessly smiling while in the box; deliberate delivery and studied grin so tantalized the batsmen that most of them would lose their patience and temper and hit at the sphere too soon or too late, with the customary fatal results.

Here were head and arm combined.

Talk to any old ball player about the man in the box, and before long he will be telling you of pitchers who have lost their mechanical ability long since, but

their mechanical ability long since, but are still in the game. Express astonish-ment at this revelation, and the reply

ment at this revelation, and the reply will come forth:

"Yes, their delivery is dinky, but they've kept their places through head work. They don't depend on their arms alone. They couldn't. But they win victories where pitchers equipped with splendid arms only couldn't, simply because they study the situation and act in the light of it."

Oute frequently these men of head find

in the light of it."

Quite frequently these men of head find recourse in displaying immaculate gall, to the disgust, anger and, finally and logically, discomfiture of their opponents. Right along they do not pitch a single ball without having a certain purpose in mind. In this they are like the brainy pitcher with tip-top mechanical ability, who, if there is a man on first and another on second, will not send toward the batsman the same sort of ball

and another on second, will not send toward the batsman the same sort of ball that he would if third held a run.

It takes head to know ho different kinds of balls will act under constantly varying circumstances; and which kind to throw, and where to throw, at the psychological moment. It takes head to provide the affect of the sales that affect and different for the sales and the sales affect and different for the sales and the sales affect and psychological moment. It takes head to realize the effect of each different sort of ball on the arm; it takes head so to vary delivery that the arm will not become glass at a critical moment. The ball cannot be controlled without study, any more than book learning can be got without it; and study, as we all know, to our sorrow, takes brains. Not practice alone will make perfect in throwing without it; and study, as we all know, to our sorrow, takes brains. Not practice alone will make perfect in throwing different balls. McGinnity, who holds the secret of the underhand raised ball, spent the greater part of four years in acquiring it. He says that he consumed acquiring it. He says that he consumed more gray matter over the problem than he has over any other one thing to date. "Billy "Rhines, of Cincinnati, who partially mastered this ball ten years ago, wrinkled his brows over it constantly, and finally had to give up the task, because, as he confessed, he could not study it out. And "Billy" had a wenderful arm

Practically every ball other than the straight ball has been brought forth as a result of diligent study; or if accident has partially led to its discovery, study alone has developed it; the spit ball, for example.

#### WHERE THE CATCHER COMES IN.

WHERE THE CATCHER COMES IN.

"The pitcher is the most important factor in the actual game of baseball," says a high authority. "He is 80 per cent of the team. A star pitcher can win with a mediocre team back of him."

It is head as well as arm that makes this true to a great extent. But not altogether; for, no mater how wonderful an arm a pitcher may be blessed with, or how active a head, he is always dependent, to a certain degree, on the catcher for his reputation.

It is this way: A pitcher, by reason of his position, has the greater part of the diamond at his back most of the time. But the entire field is spread out constantly before the catcher's eyes; it is as a map unrolled before him. He knows the positions of the various players at all times; he is able to note, instantly, any tendency toward a

change; he is supposed to know, better than any one else, the failings of the different batsmen. Therefore, a pitcher time and again depends upon the catcher to give the signs for the balls which in his judgment will produce the best results under the circumstances. If the catcher's judgment is good up goes the pitcher in public estimation; if poor, thumbs down for the man in the box! Shortly after Frank Hahn joined the Cincinnati Reds, he was put in the box to pitch against Delahanty, Lajoie, Mc-Farland, Wolverton and other 300 per cent hitters. Hahn was a youngster, from the old Western League; "Helmy' Peitz, the Reds' catcher was an old stager and acquainted with the devious ways of the heavy hitters. He gave Hahn the signs for every ball; next morning the Cincinnati papers hailed with paroxysms of delight the youngster who had not given Dalahanty et al. a single hit in nine innings.

Pitchers generally recognize the position that the men who catch their deliveries occupy toward them. So do the catchers. When "Tony" Mullane was twirling for the Reds and the late "Kid" Baldwin was his partner, it was not an uncommon occurrence for "Tony" to rush up to "Kid" after the game and exclaim hotly:

"You threw me down. You knew he

up to "Kid" after the game and exclaim hotly:

"You threw me down. You knew he could hit that ball!"

And Baldwin would coolly reply, as he tugged at a stocking:

"Cheese it, "Tony," I'm the man who makes your reputation for you."

On the whole, pitcher and catcher are usually on excellent terms, and, quite frequently, are cronies. Mathewson and Bowerman, of the champlon Giants, are examples. They are known among their team-mates as inseparables; what's one's tother's and, besides swearing fealty in the ordinary way, both are members of the same secret society lodge.

lif this friendly condition did not prevail, the lot of the manager would be a great deal more arduous than it now is; for, among other things, every pitcher knows that his catcher watches him with an eagle eye in the preliminary work-out, and if he does not come up to his usual form therein, the manager's attention is called to the fact, with the result generally that another pitcher is ordered into the box at the last

#### DISCOVERING NEW TWIRLERS.

Many stories are told of the efforts of many stories are told of the efforts of team managers and magnates to secure new pitchers; one of the best is from the lips of Charles W. Murphy, assistant secretary of the New York Baseball Club. During the course of one of the seasons, when Mr. Murphy was sporting editor of a Cincinnati paper, he soon noticed that many the telegraphic converges.

ticed that among the telegraphic reports of baseball games played throughout the state there were always sure to be two or three a week telling of the pitching prowess of a certain Amos Scott. One night the account would run in some such fashion as this: "Amos Scott pitched today for Bethel, and defeated the Batavia team, striking out nineteen

"Tell me about him—quick!" shouted Mr. Brush.

"Send to Bethel for Amos Scot," was the answer, as the editor spread before the magnate's eyes the sporting pages recounting the wondrous feats of Amos Scott, of Bethel.

That day an emissary was dispatched to Bethel to make terms with its great pitcher, and in less than a week he was in the city, a full-fledged Cincinnati Red.

The night before he was to accompany the team east, where he was to make his bow as a major leaguer, Amos Scott dropped in to thank Mr. Murphy for suggesting his name to Mr. Brush. Grateful to the core, he took up a valuable half-hour of his benefactor's time, then started to go, when Mr. Murphy bethought himself of a question—a natural one for an editor to ask.

"By the way, do you know our corre-

"By the way, do you know our correspondent in Bethel?" mentioning his name.

"Do I?" grinned Amos Scott "Sure! I'm your correspondent there—that is, I was till I came here."
Suddenly a great light dawned on Nr. Murphy. Dazed by it for a momen! he sat silent. Then he said, as he reached out and shook Amos Scott's hand 'reare-

well:
"Well, if you're han an grow as you are a press agent, you're a wond-

team; the big managers prefer to see him tried out first in a minor league. But the moment he proves his college prowess not ephemeral, that moment he becomes an object of intense interest to

prowess not ephemeral, that moment he becomes an object of intense interest to major league managers.

Not infrequently a manager discovers that a rival has failed to realize the potential twirling powers of a certain pitcher, and a dicker is slyly entered into by the discoverer which puts him in possession of the player, to the subsequent sorrow of the other. A case in point is that of Frank Hahn. When he was in the Detroit team of the old Western League he was looked upon as a fair pitcher. Along came the Reds one day; their manager sized up Frank and the possibilities that lay dormant within him, and in a short while numbered him among his players. Frank speedily proved himself to be a star southpaw.

The moral of this is that sometimes it is not necessary for a manager to look further than his nose for a "discovery" that will make the bleachers ring with shouts of hilarious joy.

BALLS THAT ARE PITCHED.

#### BALLS THAT ARE PITCHED.

BALLS THAT ARE PITCHED.

Whenever a bona fide discovery is made numerous tales always follow of the new and passing strange sorts of balls the "discovery" can pitch—balls which will surely revolutionize the game. Let it all be set down to advertising purposes. Many of the different sorts of balls which are supposed to emanate from the pitcher's box are thrown from the fertile brains of press agents, and nowhere else. Here is a list of the different balls actually being pitched today, some, of course, having their variations:

The out-curve, first of the curved balls; the in-shoot, which next developed; the drop ball, which followed the in-shoot; the fast straight ball; the slow ball, which appeared when pitchers began to use their heads as well as their arms; the under-hand raised ball, which only McGinnity, of the champion Giants, has mastered; cutting the corners, dating back about fifteen years; the cross-fire delivery, which is pitched by very few twirlers; and the spit ball, of recent origin and much potency.

This list was furnished by one of the leading pitchers of the country, and a second O. K.'d it. Both asked that their names be not used. "We don't want to get in bad repute with our fellow twirlers," was the excuse they offered.

#### Mugs, Friend of Engineers

Mugs, a little black and white kitten. returned to the Union depot the other night from Moberly, Mon. Mugs is a traveler and is recognized as the depot mas-

No one about the depot seems to know when Mugs appeared or how she got her name. To say that Mugs is pretty would name. To say that Mugs is pretty would be stretching a point to the limit, but the depot guides and enginemen don't care much for beauty. They like Mugs because Mugs likes them. The cat scampers about through the crowds and streams the angle of hit seems to know the control of the control o

scampers about through the crowds and under the engines, but seems to know when it is give so to do and when not.

About wo weks ago, when Engineer Stout who holds the throttle on the visoash Flyer out of here, climbed into his cab he found the kitten sitting on the seat. Mugs jumped down, and he thought the cat was gone until the train had gained full speed. All his attention was on the track in front of him, when, with a start, he found the kitten sitting in his lap, swaying with the engine and playing with the loose sleeve of his jumper. The cat had no permit to ride on the engine, and yet Stout didn't see

Initials, Fourth of Numbered letters, in July; zig-zag, Read, order: Tennyson, Holmes. Ross, Penn.

14. Carroll, Chase, Clark, Ellery, Franklin, Gerry, Hall, Hancock, Harrison, Hewes, Hopkins, Hopkinson, Lee, Lewis, Livingston, Lynch, Middleton, Morris, Morton, Nelson, Penn, Ross, Stockton, Stone, Walton, Wilson, kins, Lynch, Penn, 26.

#### New Tangles

#### INDIAN TRAIL.

Write the names of the required seven In-Write the names of the required seven in-dian tribes horizontally to fill the squares, one letter of the tribe in each square. Thus (a) has six letters, and (g) eight. Then hit the trail in numerical order, from 1 to 9, and the numbered letters in order will spell the name of the Indian squaw who guided Lewis and Clark to Oregon.

#### HOLIDAY ACROSTIC.

All words are of uniform length, and the 22. three terminal letters of each are the same. The initials spell an American holiday.

1. To purify by smoke. 2. To kiss. 3. Final.
4. To take root. 5. To do for the third time.
6. To dull. 7. To appoint. 8. To strain liquid.
9. To throw out. 10. To vibrate. 11. To make smooth 12. A partner in marriage.

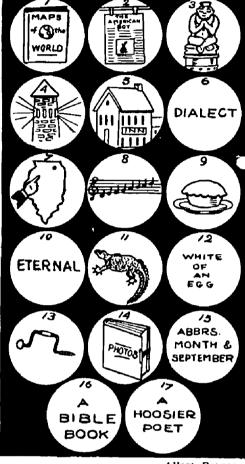

—D. Waldo Brown.

#### A SPLENDID BOOK FOR BOYS

#### "Three Boys in the Mountains'

THE story of Western Adventure—clean and inspiring—that ran in The American Boy through the greater part of 1901, has been issued by The Sprague Publishing Company in book form. This story is one of the longest and best stories that has yet appeared in The American Boy. Its author is the editor of The American Boy. Its author is the editor of The American Boy. Its sufficient to indicate that it rings true in morals, and that nothing has been allowed to enter the story, that will hurt a boy, but that everything is there that will give interest and dash to the narrative. It brings in the pleasures of the hunt, the chase and the camp, and deals with Indians and animals in plains and mountains. It is a good healthy story that a parent will be glad to have in the hands of his boy.

(BEGUN IN DECEMBER)
CHAPTER XXVIII,

HOW TOGO BLOCKADED PORT ARTHUR.

CIXTY MILES northeast from Port Arthur lie the Elliot group of small islands, low, treeless, and grass-covered, commanding the eutrance to Yentoa Bay. The latter is a deep indentation of the Liao Tung peninsula, and at the head of this bay was landed the Japanese army that should besiege Port Arthur. In order to secure the transports immunity from attack by Russian torpedo boats that lay in wait at both Port Arthur and Dalny, the Japanese, in three weeks' time, constructed the most remarkable boom defense known to the history of war. It was composed of a double line of floating timbers, no one of which was less than two feet in diameter. fastened together by heavy chains, and supplemented throughout its entire length by a four and a half inch steel hawser. Depending from this gigantic boom were miles of wire screens and heavy fishing nets in readiness to entangle the propellers of any steam vessels that might break through the barrier. From Terminal head on the mainland, to the first island this mighty boom crossed six miles of open seaway subject to swift rushing tides, flerce storms, and great waves. Then it connected island with island until the outermost of the Elliot group was reached and a well-nigh impregnable chain of defense ten miles in length was completed. With this accomplished the busy fleet of

At the end of a single month the Russians had been so driven back that this method of defense was no longer considere t necessary. Therefore the first sixmile length of the boom was taken to pieces and removed, thus leaving a free passage for the ships of Admiral Togo's blockading fleet which found quiet anchorage and a most convenient base of supplies in the very center of the Elliot group.

transports from Japan came and went in safety.

Perhaps some of my more thoughtful readers will here protest: "But you have said that these islands were sixty miles from Port Arthur. How then was it possible for Admiral Togo to maintain a blockade with his fleet at such a distance?"

Of course you will have imagined the Mikado's blockading fleet to lie off the Russian harbor as did Admiral Sampson's ships in front of Santiago uuring our own war with Spain. And that is just what Admiral Togo must have done three or four years earlier in order to maintain his blockade. Then wireless telegraphy had not been invented, nor mechanical, floating mines perfected. At the time of the Russo-Japanese war both of these devices were at the great admiral's disposal, and he made use of them to lighten as far as possible his strenuous task.

So narrow and obstructed—as the entrance to Port Arthur that but one ship might issue at a time, moving very slowly for fear of mines that the Japanese planted just outside the entrance on every dark night. Beyond the zone of mines a flotilla of swift torpedo boats were always on watch. Each of these was equipped with a wireless outfit that kept them in constant communication with the Japanese fleet lying snugly at anchor in a quiet narbor sixty miles away.

Once, when the Russian fleet did go out it occupied six hours in the operation: while in less than four hours from the sending of the first wireless alarm, Admiral Togo's entire force of battleships, cruisers, destroyers, and torpedo boats was on hand waiting for the enemy to leave the protection of his forts. The Russians, not yet sufficiently desperate to risk a general engagement, looked longingly at the open sea, looked apprehensively at Togo's grim battle line, and then sorrowfully steamed back into their battery-protected harbor. When they had disappeared behind the forts, the Japanese, disappointed of course, but having more confidence than ever in their own method of blockade, returned to their comfortable station among the Elliet islands.

To this place, towards the close of a gray winter's day, came the Naisha. Her convoy had signalled their approach, by wireless when still one hundred miles distant. Then she had dashed ahead, leaving the slower submarine to follow on a course already carefully indicated. Takahaki had visited the Elliot islands before and so knew what to expect; but to Dunster Brownleigh the scene opened by rounding a sandy point, after an hour's run along the desolate coast of Da Chan island, was so startling that he gasped with amazement.

sasped with amazement.
In a deep, almost landlocked harbor, screened from

observation by four surrounding islands, was disclosed the ultimate hope of Japan, Admiral Togo's mighty fleet of battleships, cruisers, destroyers, hospital ships, colliers, repair ships, and transports, lying quietly at anchor with banked fires, but in readiness for instant action. On the low beach beyond were vast accumulations of coal, provisions, munitions and supplies of every description, piled in the open, or stored in long ranges of shed-like structures from which substantial wharves extended to deep water. Everywhere, over the placid surface, darted launches and despatch boats; everywhere were signs of ceaseless activity without a trace of confusion, and over all proudly floated the sun-rayed banner of Japan, the new world-power of the Orient.

High above one great battleship hung the bluestarred flag of an admiral. "It is the Mikasa," said Takahaki "and there must we make report"

Takahaki, "and there must we make report."

So the Naisha, watched with eager curiosity by thousands of officers and men, who never before had seen her like, threaded her way towards the flagship until finally she lay alongside. She was barely made fast when an active little middy ran down the side ladder and announced that the commander of the submarine, together with his American friend, was expected on deck.

Promptly obeying this summons, our young friends were welcomed at the gangway by Vice-Admiral Shimmamura, a fine-looking officer who acted as chief of staff, and who informed them that the admiral would receive them at once. A minute later they stood in the presence of the foremost sailor of Japan, and possibly of the world. He was a little man, small even for a Japanese, with stiff, black hair standing straight up from his head, and bristling, iron-gray imperial and mustache. His features were expressionless as a mask; but their every line was of dauntless resolve and absolute firmness. Although noted as being a stern man of the fewest possible words, his face lighted at the entrance of our lads, and he gave them kindly greeting.

Both of them were at that moment covered with confusion, caused not only by finding themselves in the presence of so great a man, but by having been announced as "Lieutenant-Commander Matsu" and the "Count Casimir of Warsaw."

"What a queer mistake," thought Takahaki.

"How could they know of that?" mentally asked Dunster.

Noting their confusion, and readily guessing its cause, the admiral promptly set his young countryman at ease by saying:

"It is all right, Mr. Matsu. The announcement of your promotion for good service, recently rendered, came by wire from Tokio yesterday, and your commission as Lieutenant-Commander is now on its way. I reserved to myself the pleasure of being the first to greet you by your new and well-won title."

"Honorable sir, it is too much!" stammered Takahaki, "I do very little thing; what any Nippon man might do, and but for this my friend it could not have been done at all."

"I know," replied the admiral. "To this friend, the Count Casimir of Warsaw, who prefers to call himself 'Brownleigh San of America,' Japan owes much. Already has it been told to the Mikado what he has done for us, and I am instructed to inform him that

his majesty's personal thanks, sent by special courier, will reach him very soon."

As these words had been spoken in English, Dunster replied by saying: "While I am deeply grateful to his majesty, as well as to you, sir, I cannot conceive how the Mikado has so promptly been made aware of certain private matters that I supposed only known to my friend here and myself."

The admiral's eyes twinkled as he answered: "The secret service of Russia is famous through out the world. While that of Japan is not so widely advertised, it is perhaps, equally efficient. In it are men of highest rank and finest education, humbly disguised and facing ignominious death at every turn for pure love of country and the glory of their Mikado. Such was he who, in appearance a Chinese mechanic, served with you on the submarine until reaching Idzu Harra. is master of several languages, including English, though that he did not confide even to you, and when I add that he is a member of the Imperial family, I give you information that I trust you to consider as strictly confidential. Is your curiosity satisfied?"

"It is, sir," replied Dunster. "And I thank you for your explanation. Also I beg to apologize for having been so inquisitive."

"No apology is necessary from one who has proved himself so good a friend of Japan."

"Perhaps not so much a friend of Japan, sir, as an enemy of Russia and a friend of Mr. Matsu, who was my roommate at Annapolis."

"Yes, I know of that Annapolis friendship," said the admiral with a smile. "There you taught him to play football; while he taught you Jiu-jitsu."

"Apparently, sir, you know every detail of my past life," laughed Dunster.

"No, my young friend, only those that affect Japan; and such things we must know, for they make up the sum of knowledge that in time of war is greatest power. Now then, let us speak of the future. While it is not permitted for a foreigner to fight the battles of Japan, it is allowed that he shall teach us how to fight, and I much desire to engage your service as instructor for some of my young men in the art of the submarine. May I ask if you will thus act, taking quarters on this ship, with rank of professor, and pay of captain dating back to the day of your leaving Annapolis?"

For a moment Dunster hesitated, and glanced at Takahaki

Intercepting the glance, the admiral smiled a smile of comprehension as he added: "Lieutenant-Commander Matsu will remain in command of our only submarine, though attached also to this ship as assistant to the professor in his instructions."

"In that case, sir, I shall be very happy to accept your splendid offer," said Dunster. "Only I must give warning that Taki—I mean Mr. Matsu—knows far more about submarines than I do."

more about submarines than I do."
"Oh no, honorable sir!" interrupted Takahaki, eagerly. "I am not have the knowledge of my friend the Count Casimir, for he study long time after I leave America."

"I believe, gentlemen, that I have sufficient information upon which to base my judgment of your relative abilities," said the admiral in a tone that put an instant end to any further debate. "And by the way Mr. Brownleigh, I have one condition to impose. It is that while you remain with us you will not attempt to send out any letter for publication in America or elsewhere. I may add that I am a pretty constant reader of the Service Journal published in your country. Now, gentlemen, I will bid you a good-day, commending you to the care of my chief of staff, who will assign your quarters and see that you are provided with everything needful."

As the two young men left the admiral's cabin upon the conclusion of this momentous interview, the orderly on duty was shocked to see one of them shake a fist in the face of the other, and to hear him utter an unintelligible expression in English. What he of the fist said was:

"Taki, old man, if you don't drop that confounded Count business, I shall feel obliged—I certainly shall—to call you a JAP!"

"On this ship I not very 'fraid of that thing, Dun

Brown," replied the other with a grin.

A few days later came the special courier with despatches from Tokio; and that evening our lads were again ordered to the presence of the admiral.

This time he received them on the after deck where he stood in full uniform, attended by a glittering staff that included every commissioned officer of the ship.

For several minutes the two young men whom he had summoned stood before him amid an unbroken silence, while the fighting admiral gazed at them with unseeing eyes and apparently without knowledge of their existence. It was as though his spirit were communing with the spirits of his warrior ancestors, and he listened to words that none other might hear. Suddenly he came back, and almost abruptly handed to Takahaki the parchment commission, signed by the Mikado, that gave him rank as lieutenant-commander in the Imperial navy. Also he handed him a superb sword that had come as a gift from Prince Hito, "one time honored with service on submarine torpedo boat Naisha."

As the embarrassed young officer attempted to frame a reply to the admiral's kindly words of presentation, the fine band of the flagship relieved him of the necessity by striking up the national anthem of Japan. Although this composition did not appeal at all to Dunster Brownleigh, either as a sentiment or as a musical composition, it appeared to afford great satisfaction to all the others present.

Then came the turn of the young American whose fortunes had become so knit with those of the land of the rising sun; and as he stepped forward the admiral handed him a small but richly carved box of sandalwood. In it lay the superbly jewelled insignia of the Golden Falcon, together with its broad ribbon of watered silk and an autograph letter from the Mikado constituting the Count Casimir of Warsaw a knight of this famous Japanese order. In addition to this, Dunster received from his recent companion the Prince Hito, a magnificent silken costume of a Japanese noble of the old regime. But, best of all, as he accepted these things, the band crashed into the stirring strains of "The Star Spangled Banner," at which Dunster's speech was suddenly choked with emotion, and he turned hastily away to hide the tears that filled his eyes.

#### CHAPTER XXIX.

#### THE NAISHA FULFILLS HER MISSION.

In 1894 the Japanese captured Port Arthur from China in less than three days, with a loss in killed of thirty-one men. A little later she was forced by the combined powers of Europe to relinquish her prize to Russia. During the next ten years the new occupants devoted their best military energies, backed by unstinted millions of roubles, to making it the strongest fortress in the world, stronger even than Gibraltar. With the opening of the year 1904 they believed they had accomplished their purpose and that Port Arthur was impregnable. Besides the chain of powerful forts, placed at every point of vantage on the great semi-circle of hills lying behind Port Arthur, and extending from sea to sea, the harbor was occupied by the most powerful European fleet ever seen in Eastern waters; while both hillside and water front were thickly sown with mines. To the north, up the mountainous backbone of the Liao Tung Peninsula the outer defenses extended for twenty miles to the strong fortifications of Nan Shan (South Mountain) back of Dalny. Placing General Stoessel in command, and giving him some fifty thousand men, together with a two year's supply of provisions and ammunition, Russia laughed to scorn the idea that any nation in the world could take Port Arthur from her.

But the Japanese determined to try once more for the great prize of which they had been robbed in 1895. So in April, 1904, they began operations by landing an army in Yentoa Bay, some fifty miles distant from the place they proposed eventually to capture. During May they fought the spectacular battle of Nan Shan, put the Russians to headlong flight and took possession of Dalny. Then they moved southward. steadily ousting the enemy from position after position and driving him before them until, by the end of July they had him cornered in Port Arthur itself, and were established before its main line of defensive works. During August and September the Mikado's men made repeated attempts to pierce these by bombardment and to carry them by furious assault. But the works were too strong, and by the first of October, after losing more men than were numbered Arthur garrison. settled down to a siege in grim earnest, using those time honored weapons pick and shovel, and the methods of trench approach, parallel, tunnel and mine. Also, realizing the need of heavier batteries. they brought from their home coast defenses eighteen immense 11-inch howitzers, from which they proposed to drop huge shells, each holding 500 pounds of a high explosive, not only into the forts, but into the city beyond the forts, and on the decks of the warships hiding in the harbor beyond the city. From he end of the railway, each of these great guns was dragged to position, sometimes three or four miles distant. by the sheer, brute strength of nearly one thousand men; and each had constructed for its emplacement a massive bed of concrete, eight feet thick and eighteen feet in diameter.

For three months these monster guns thundered against the "impregnable" fortress; breaching its walls, dismounting its artillery, exploding its magazines, shattering its buildings, and sinking, one after another, the splendid fleet of warships that huddled for safety under the high shores of the harbor. Then, on a day of sleet, drizzle, and bolsterous winds, Admiral Togo summoned Lieutenant-Commander Matsu to his cabin and spoke to him as follows:

'The Russian Second Pacific Fleet is in the Indian Ocean. It soon may appear in these waters, and we must be ready to meet it. Before that time my ships must be refitted in home ports; but I cannot withdraw them so long as Port Arthur remains untaken, or its harbor holds a single hostile warship in condition for fighting. One of the Russian battleships has thus far escaped injury from the land batteries and still floats ready for service. It must be attacked and destroyed from the sea, and you are the man whom I have chosen to accomplish this task.

Takahaki's face glowed with pleasure as he thanked the admiral for the great honor thus conferred upon him. "The Naisha is ready sir," he added, "and can set forth at a moment's notice."

"Then you may start at once, leaving this place in submerged condition so not to attract attention. When out of sight proceed to Port Arthur and report arrival to officer commanding patrol flotilla, but await final instructions from that Destroyer displaying two blue lights. Here is a chart showing channel supposed to be free from mines, and probable position of ship you are to destroy. Now, go, always remembering that what you do is for the Mikado and that his spirit will be with you.'

"I may bid farewell to my friend?" hesitatingly queried Takahaki.

"No," replied the admiral kindly but firmly. "Not even to him, for I desire this movement to be executed with utmost secrecy."

So the Naisha quietly sank from sight, and her departure was unknown to any save her own crew. who supposed they were off for one of the many practice runs with which they recently had been kept busy. Even Dunster Brownleigh, happily engaged in demonstrating certain problems of submarine work to a group of eager young officers in the wardroom, had no intimation that his dearest friend had just been sent on the most desperate service at that moment confronting the Japanese navy.

Some hours later, on reporting to the commander of the patrol flotilla off Port Arthur, Takahaki also handed him a sealed letter and a slim packet carefully enveloped in oiled silk, with the request that if he did not call for them within two days, they might be delivered as addressed. Then he waited and watched for two blue lights; but not until the night was nearly spent did they appear. Hastening in that direction he found them to be borne by a slim, manyfunnelled Destroyer, that was lying head on to the seas under easy steam. Running under her counter and hailing, Takahaki was answered by a voice that sounded suspiciously like that of the admiral himself.

"Is it Naisha?" "Ay ay sir, it is Naisha."

"Then, in the name of the Mikado, carry out your instructions.'

That was all, and in another moment the two blue lights had disappeared, while the little Naisha, making better weather than many a larger craft, was heading in towards the bold coast just beginning to assume form in the dim light of dawn. With deck awash, and only her conning-tower lifted above the dull waters, she was such a mere speck on the surface that even the powerful glasses from the forts on Golden Hill, The Tiger's Tail, Ki Kwan Hill, or White Wolf, always sweeping the sea for signs of a Japanese approach, failed to detect her.

The proud ships of Russia, driven from the inner harbor by the terrific mortar fire that sought out its every anchorage and hiding place had fled for safety outside, under the high, fort-crowned bluffs of the coast. At first they had gathered in a cove at the foot of Golden Hill; but even there the relentless shells had found them out, sunk most of them, and scattered the three or four survivors.

From the lofty summit of 203 Meter Hill, only two miles away, for whose capture the besiegers had paid

Photo by C. J. Daugherty A BOY'S TREE-HOUSE AT LONG BEACH, FLA

thousands of lives, hyposcope observers could readily locate each ship and accurately direct the fire of hidden batteries by telephonic signals. So the fugitives were relentlessly followed and sunk until only one, the mighty battleship Sevastopol remained. crouching close under the bluffs topped by White Wolf Fort. No smoke was allowed to betray her presence, she was invisible from the Japanese observatory on Meter Hill, her lead-colored hull was one with the gray coast, and no gleam of glass or metal was permitted to flash a tell-tale signal. For a time her crew were watchful with the alertness inspired by a great fear; but with the passing of day after day in safety they grew forgetful of their danger. Then came a night of revel, when officers from the shore forts were entertained on board, and champagneplentiful in Port Arthur to the very end-flowed with reckless freedom. To change the air of the overheated room a port was flung open, and no one of the revellers noticed that it was on the seaward side of the ship. So a stream of electric light flashed across the dark waters until it was caught by the watch officer of a distant scout boat lying at anchor on her post. The bearings of the light were carefully noted, and with the following dawn they pointed to a dim bulk close inshore and barely distinguishable from the coast line. As Admiral Togo sat at breakfast that morning a wireless message brought him the news that the last Russian battleship had been located hiding in the White Wolf's shadow. With the next dawn the Naisha, running through a field of mines as boldly as though such things were unknown, drew near to her mighty but unsuspecting foe.

Of course Takahaki knew of the mines; but as it was impossible to locate them, while to proceed slowly would cost minutes that were more precious than human lives, he simply dismissed them from his mind and rushed forward regardless of everything save the spot plotted on his chart as the hiding place of the last battleship. Once his heart almost ceased its beating as his little craft struck some floating object a glancing blow and there was a harsh grating sound under her bilge. But, whatever it was it did not explode nor was there any leak in the Naisha. So it did not matter that death had made a clutch at him only to miss him by a hair's breadth.

At length the great ship loomed above him, close at hand much as an elephant might tower above a mouse, and all at once there was a bawling of orders and a scurrying to and fro on her decks. Then came a flash, a roar, and a solid shot passing high over the submarine, plunged harmlessly into the sea half a mile beyond. Other shots followed in quick succession, and even the White Wolf woke up with a snarl of guns, though it could not yet discern its enemy.

When something less than two hundred yards away, Takahaki discharged his torpedo, and from the open hatch of his conning tower, as regardless of the storm of bullets tearing the air to shreds about him as though they were so many rain drops, he watched the air bubbles that marked the swift course of the terrible missile. He could trace it halfway to the great target for which it was fairly aimed, and then he held his breath in expectation of what might follow. But there was no collision, no explosion; nothing save only the venomous spit of machine guns threshing the sea into a froth with their flail of bullets.

The young commander knew what had happened, the instant his time allowance of seconds had elapsed without result. The battleship was protected by a torpedo net hanging in the water from a floating boom of logs; a fringe of steel against which his little engine, that he had hoped would deal so telling a blow, was fruitlessly beating. He must submerge and discharge another torpedo at a depth sufficient to pass it beneath the net.

'It is now that I wish for my friend Dun Brown!"

he sighed.

At the moment of firing that first shot the Naisha's engine had been reversed; and as Takahaki began to give order for submergence, the little craft was going at full speed astern. Of a sudden there came from the upper air, a sound of terror, quickly followed by the crash of a thunderbolt into the sea, and an eruption as frightful as that of a volcano. A mighty volume of water was lifted on high, only to fall again in foaming cataracts; while driven through its awful were a few crumpled mass of blackened fragments.

The attention of an observer on Meter Hill had been attracted by firing from somewhere beyond the White Wolf Fort; and thinking that it might indicate the location of the missing battleship, he suggested that a few 11-inch shells be dropped in that direction. So an order was transmitted back over the hills, and in another minute an enormous projectile was hurtling skywards in the direction indicated. As it fell the observer on Meter Hill calmly noting its "Too far off shore. Range location, telephoned: westward, three hundred yards."

A gunner gave a half turn to a screw, a huge muzzle was deflected the fraction of an inch to one side, and a second monster shell, filled with a quarter of a ton of Shimose, went screaming and moaning on its lofty flight. In its descent it struck the last of the Port Arthur battleships, crashed through three armored steel decks and blew out her bottom. was the work of the Naisha accomplished.

That evening a Japanese torpedo boat destroyer that had come far and fast dashed alongside the Mikasa, and the sphinx-like Admiral, who had been for some hours absent, once more boarded his flag-Without speech and barely glancing at those assembled about the gangway to do him honor, he walked past them and stopped at the entrance to the wardroom, where he stood for a moment looking in. A young man sat at a table writing, but with his back towards the door. A glance served to show that he was not a Japanese, and the other, stepping to where he sat, laid on the table before him a sealed letter and a long, slender package enveloped in oiled silk, containing a sword.

As Dunster Brownleigh, covered with confusion, sprang to his feet and saluted, the admiral gazed at him for an instant with expressionless face. Then,

without a word he sought his own cabin where, as he carefully filled a pipe, a single tear trickled slowly across one of his rugged cheeks.

#### CHAPTER XXX.

COMMANDER MATSU, AND CADET BROWNLEIGH OF •ANNAPOLIS.

When interrupted by the admiral, Dunster, writing a letter home, was penning the following paragraph: With you dear people this is Christmas eye: while with us it is only the close of an ordinary day. If Taki were here he would help me recall one year ago tonight, when he and I danced at an academy hop. Not until it was ended and we were back in our own room, would he tell me that he had been ordered home to take part in the war that is now upon us, and that he should be gone before sunrise. splendid record he has made for himself since that time! I have never known a chap more modestly brave than he, nor one of greater ability. If the war lasts a year longer he is almost certain to become a commander, in which case I expect he will be the youngest in the Japanese navy. At this moment of writing I cannot imagine where he is, for he has been sent away on some secret service; but-

With their last battleship sunk, with half their forts in the enemy's hands, and those that remained to them shattered by mine and shell until they lay open to assault, with sickness decimating their ranks and starvation staring them in the face, hopeless of succor by land or sea, and almost exhausted by months of ceaseless fighting, the heroic defenders of Port Arthur realized that the time for surrender had arrived. So on January first, 1905, a white flag fluttered above their crumbling parapets and, as though by magic, the dreadful turmoil of battle was quieted.

A few days later negotiations had been concluded, and the men of Japan once more were in possession of their own. Among the first to enter the fallen fortress, as an especial honor, and by virtue of his rank as a knight of the Golden Falcon, was Dunster Brownleigh. Long ere this he had learned of the last glorious service performed by his dearest friend, and now his chief desire was to view the spot where Takahaki had given up his life for the glory of his Mikado. So, accompanied by two others from the Mikasa's wardroom, Dunster made the tedious pilgrimage to the bluffs crowned by the White Wolf Fort. At their base was a narrow beach heaped with a confused mass of wreckage, among which were many bodies stiff-frozen, coated with sea salt, and thus preserved with every feature intact.

Dunster had not cared hope that he would find even a trace of his friend; but the blessed privilege was granted him and as he examined body after body, they came at length, once more, face to face. While the tears of him who is left behind in a great loneliness streamed from the eyes of the living, on the face of the dead was the smile of one who has finished well his task and gained the great reward.

A little later a mighty battleship, proudly flying the sun flag of Japan, and that of the silent admiral who was foremost of all the Mikado's sailors, steamed slowly into the exquisitely beautiful harbor of Nagasaki, receiving and answering thunderous salutes from the warships of many nations that vied with each other in doing him honor. For the present his work was done, and he had come home for rest and refreshment before setting forth to meet the second Russian fleet sent out to give him battle. Also the Mikasa brought home her dead, and once more were Dunster and Takahaki sailing in company.

Among the foreign warships that shook the Nagasaki hills with their loud-voiced welcome was one in spotless white, flying a flag that to Dunster's longing eyes was the most glorious on earth. He had not seen it since Russian hands had lowered it from the jackstaff of the Cochise; and now it filled him with an intense homesickness. Hardly had the Mikasa dropped her anchor before a captain's gig shot away from the American ship and her commander, in full dress uniform, was the first to greet the home returning admiral.

As this visitor gained the Mikasa's deck, where he was received with all honors, Dunster Brownleigh was only restrained by the strict etiquette of the occasion from springing forward and claiming his recognition; for, to his amazement, the American officer was none other than that one whom he had last known as superintendent of the naval academy at Annapolis. But he was forced to curb his impatience, for the guest was immediately conducted to the admiral's cabin, to which, a little later Dunster was summoned. At the entrance one of the admiral's staff, there gathered, announced him as the "Count Casimir of Warsaw, by graciousness of the Mikado, Knight of the Golden Falcon."

The American captain had risen to greet this personage with such formalities as his announced rank demanded; but at sight of the young man he hesitated, and a look of blank amazement overspread his face. Then, even as the admiral with a quizzical smile lighting his stern features, was beginning a formal introduction, the other sprang impulsively forward with both hands outstretched.

"Dunster Brownleigh, by all that is wonderful!" he cried. "My dear boy, what is the meaning of all this Count and Knight business? What have you been doing? How do you happen on board this ship, just in from Port Arthur which no American officer has yet been allowed to visit? Answer me quickly, for I am consumed with curiosity."

"I don't know how to answer you quickly, sir, for it would take hours to tell you of all that has happened to me since I left the academy."

to me since I left the academy."

"Then come and dine with me, for I must hear

your story, and we sail for home this very evening. Besides there are some friends of yours on board who would be terribly disappointed not to see you."

Dunster looked at the admiral to see if he had permission to accept this invitation, and the latter

answered it for him, saying:
"Captain, before giving the Count Casimir a chance

to accept your kind invitation, I wish to ask a favor; and it is that you will take him with you to America. Under extraordinary conditions he has nobly served the Mikado, and thus won the everlasting gratitude of every Japanese; but now we may no longer make use of him, since it is contrary to the policy of our government to allow foreigners to take an active part in our quarrel with another nation. Thus by granting my request you will relieve an embarrassing situation."

"Nothing could give me greater pleasure, Admiral. Will you go with us, Brownleigh? Of course I can't take you as a passenger, but fortunately I can offer you the position of captain's clerk, and can promise you a cordial welcome to the wardroom mess."

"I should love it above all things, sir; for now that Taki is gone, and with no prospect of further service, I feel very useless here and out of place. Also, I might as well confess than I am awfully homesick for my own country and my own people."

"Of course you are, and the question of your going being thus settled, why can't you get ready and return with me now to the ship?"

Again Dunster sought the admiral's face, and again the latter answered for him: "It is perhaps better that he would stay with us until we have paid last honors to his friend Commander Matsu, whose body will leave this s. p in two hours' time for transportation to Tokio."

Dunster started at the title given his friend. Could it be that promotion had come to Takahaki even after his heroic death, or had the admiral made a slip?

"Commander Matsu?" repeated the American captain in a tone of inquiry and looking at his young countryman. "Of course he can't mean the Japanese cadet of that name who was sent to Annapolis and left there but little more than a year ago?"

"Yes, sir," answered Dunster eagerly. "He refers to Takahaki Matsu, my roommate and dearest friend. He rose within a year to be Lieutenant-Commander, and was killed at Port Arthur only a few days ago."

Here's to Kirk Munroe!

KIRK MUNROE

AUTHOR OF "THE BLUE DRAGON" AND "FOR THE MIRADO".

Two Great Continued Stories That Have

Appeared in the American Boy

UR readers will remember that in 1902 we promised them two continued stories by that famous writer for boys, Kirk Munroe, and that Mr. Munroe made a journey around the world for the one purpose of obtaining material for these two stories.

Many who were readers of the paper in 1903 will recall that we suggested to the boys that they write letters to Mr. Munroe, sending them to Hongkong, and telling him about where they would like to have him put the scenes of his stories. Mr. Munroe reported that he had a "barrel of mail" at Hongkong, and that many of the letters followed him to Japan.

Well, Mr. Munroe returned in due time to his native land and set to work on the two stories. The first one, "The Blue Dragon," made its bow to our readers in the December, 1903, number: it ran until the fall of 1904, when the second of the two stories, "For the Mikado," began. The current issue of THE AMERICAN BOY contains the last chapters of "For the Mikado.",

We have carried out our promise and have given the boys two of the very best stories ever written, indeed we doubt whether "For the Mikado" has ever been beaten by a writer of boys' stories. It is with deepest regret that we part with Mr. Munroe's name, as it has appeared in our columns from month to month for over two years.

"Since when," added the Admiral, "he has again been promoted, and as Commander Matsu takes his place among the immortals of Japan who have died for the glory of their Mikado. It is ordered that he be given a royal funeral, and the ceremonies will begin on this ship at the hour of noon. If any of his American friends desire to be present they will be welcomed in his name."

Thus it happened that at high noon of that day, a throng of officers not only Japanese, but representing every warship then at Nagasaxi, were gathered about a flag-draped casket that lay in state on the after deck of the Mikasa. From her jackstaff the sunrayed banner of Japan drooped at half mast, while a similar emblem of sorrow was displayed from a masthead of every other warship in the harbor. On the casket lay the full dress uniform of a Commander in the Imperial Japanese Navy. Also about one end, was draped a small silken American flag, the privilege of which had been asked by, and granted to, certain of those who had known and loved him at Annapolis. Now they stood foremost among the many assembled to do him honor; Dunster Brownleigh, Ensigns Cyrus Snelling and Ezra Lloyd, and half a dozen other officers from the American battleship, including its commander.

The great admiral, with expressionless eyes that seemed to gaze into the unfathomable future, and with bared head, stood at the foot of the casket, while the band played softly and the Mikasa's officers filed slowly past, each saluting the dead and touching his uniform with gentle fingers. Then, escorted by a detail of officers, the body was borne to a waiting launch on which it was to begin its long journey to the nation's capital. As it left the Mikasa she began a salute of minute guns that was continued until one had been fired for each year of the young commander's life.

That same afternoon the great white American battleship, with homeward-bound pennant streaming from her mainmast head, and her band waking the hill echoes of Nagasaki with its crash of martial music, lifted her anchor and began slowly to thread the narrow passage leading out to the open sea. As she passed the Mikasa her guns thundered forth a farewell that was answered by a mighty roar of artillery and cheering from the Japanese flagship.

An hour later Dunster Brownleigh stood on her after bridge straining his eyes for a parting glimpse of the fair land that held all now remaining of his dear friend and one-time roommate, a land that had honored him, a land for which he had fought, and a land that he loved but the soil of which he never had trodden. As he stood there buried in reverie, the ship's commander came and rested a kindly hand on his shoulder.

"Well, Brownleigh," he said, "there is another of your life chapters closed. What shall be written in the next? Are you coming back to us, or have you other plans?"

"If it were possible, sir, I should like to go back to Annapolis and graduate with my class," replied Dunster. "I hadn't thought of such a thing until after Taki's death; but in a letter that he left for me he begged me to do it, and if it were possible—"

"It is entirely possible," interrupted the captain heartily. "You have a long voyage before you and time for a lot of study between here and New York. I will help you, and so I am sure will Snelling and Lloyd, who are fresh from the grind. If you say so

we will make a beginning this very evening."

"I do say so, sir, and thank you from the bottom

of my heart," responded Dunster gratefully. As the homeward voyage was made by way of the Suez canal, Dunster, before reaching New York, had completed his first circumnavigation of the world. The ship first stopped for coal at Hongkong, allowing him, Snelling and Lloyd time for a run up to Canton and a day in that most wonderful city, and her anchor was next dropped at Singapore, within one degree of the equator. Her third stop was at the lovely island of Ceylon, where her officers, as in duty bound, paid their respects to the only American lady resident of Colombo. Then across the vast expanse of the Indian Ocean she ploughed her way to Aden; hot, treeless, verdureless, and rainless, and thence up the entire length of narrow, deep-blue waters known as the Red Sea to Suez. From here, while she passed slowly through the great canal, our three young friends again got leave that enabled them to rush by train up to Cairo and see its sights, the Nile, the pyramids, the sphinx, and the desert, before rejoining the ship at Port Said, where she was taking in coal for her Mediterranean run. They stopped at Malta for a day, at Naples long enough for Vesuvius and Pompeli, and finally anchored for several days among the British warships gathered in the shadow of the mighty rock that stands, the world over, as the enduring symbol of strength. Passing out of the narrow straits, and bidding farewell to the old world at Cape St. Vincent on the coast of Portugal, they headed fairly across the Western Ocean for the blessed haven in which stands Liberty enlightening the world.

Of course Dunster's parents had, long ere this known of his home-coming; and when the ship reached New York they were on hand with a rapturous welcome.

"Oh, my boy! My boy!" sobbed his mother, as she flung her arms about his neck.

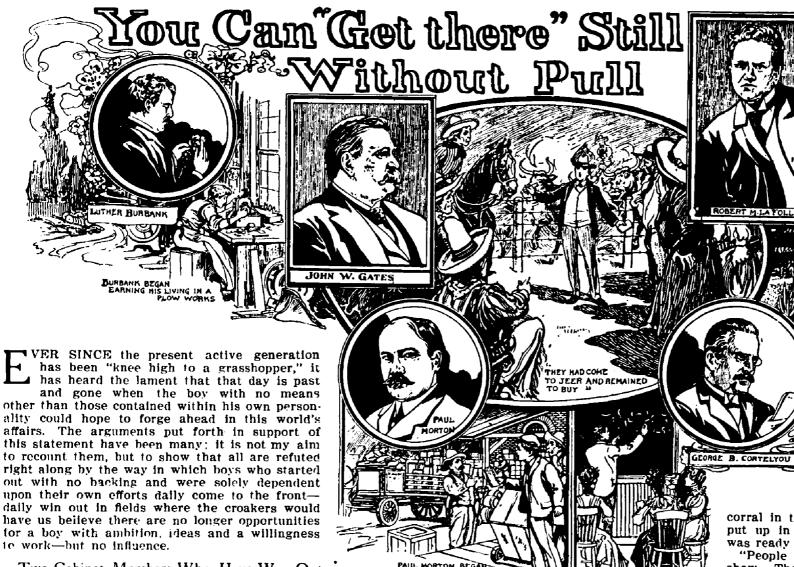

"Here it is, mother Mirska! Here is what I went for!" cried Dunster, as soon as he could free himself from her clinging embrace. At the same time he snatched from his bosom the silver case she had given him on parting. Now, in addition to the note written with her father's blood, it held a snow-white lock of hair, sent to her from a Russian prison with that father's blessing

father's blessing.

"And so, son." said Mr. Brownleigh, "I understand that you are now the Count Casimir of Warsaw?"

"No father, Dun Brown of America, if you please. Knight of the Golden Falcon of Japan in memory of my dear friend, Takahaki Matsu; but hoping, above everything else, soon to be once more, Cadet Brownleigh of Annapolis."

(The End.)

Two Cabinet Members Who Have Won Out Recently

George B. Cortelyou, Postmaster-General, is a boy who has been winning out lately in great shape.

When the eighties dawned he was still a schoolboy. In 1883 he learned stenography and became a teacher at a meager salary in the school in which he studied. For two years he was a court reporter. Next, he rose to the principalship of a college preparatory school; still later he was a private secretary and confidential stenographer. All these several steps he took in less than eight years; and in the beginning of the last decade he found himself in Washington, the private secretary of the then Fourth Assistant Postmaster-General.

His career since then is pretty well known; and the fact that he has enjoyed the confidence of three Presidents, one of them a Democrat, is pretty conclusive evidence that George B. Cortelyou has won out through his own efforts and not because of that mysterious thing called "pull."

Paul Morton, who seems to be winning out in a notable sort of way just now, began as an office boy in a freight office of a western railroad. He was then sixteen years old. But the way in which he applied himself to his lowly duties as office boy won him a clerkship; from that position he went to a rate clerk's desk; and so on up to general passenger agent, when he successfully fought a serious strike of engineers and firemen, and gained recognition in railroad circles throughout the country. The same qualities that caused him to win out then, and to win a clerkship while an office boy, are sending him forward still.

Thomas F. Ryan, now for the first time a national figure, was a humble dry-goods clerk in Baltimore for two years following his departure, at the age of seventeen, from the none too prosperous home of two aunts in Virginia. Then he went to New York, entered a broker's office in a minor position, and in four years had won a seat on the Stock Exchange. Shortly after he began the series of big financial undertakings that have won him the respect of "the Street"; and now he is known far and wide as the man whose action put a stop to the internecine strife in the great Equitable Life Assurance Society.

#### Humble Beginnings of Three Governors

Robert M. La Follette, who has certainly been winning out in more ways than one in Wisconsin the last five years or 30, was only eight months old when his father died. Thirteen years later he was the head of the family, helping to support his mother and her other three children by doing the work on the family farm.

For five years he farmed, then sold the property, and moved to the State capital. There he entered the State university, became locally famous as an orator; had hankerings for the stage, but was kept from it largely by reason of the debts hanging over him; went to work in a law office; in five months was admitted to the bar, and since that day, some twenty-five years ago, has managed to attain his present political eminence in the face of constant opposition of the bitterest sort.

Everybody knows how Joseph W. Folk, a boy with no backing, became a lawyer, went to St. Louis from Tennessee to practice, was offered the nomination of Circuit Attorney by the Democratic bosses, in the face of his declaration that ne would wear no man's collar, and, when elected, began his great work of unearthing graft and putting the grafters in the penitentiary. He is a national figure, and he has won out beyond a doubt.

Also there is Charles S. Deneen, Governor of Illinois. As a boy he worked hard on a farm in Illinois. Then he taught school and studied law books when he got an opportunity. He went to Chicago to finish his studies; his money gave out; he tried to gain employment in a law office, and failed. When reduced to his last penny, he got an offer of a

position in St. Paul, held down the place till he was on his feet again; went back to Chicago, and succeeded in gaining his degree by poring over Blackstone by day, while he taught school by night. Once more he almost starved, this time while waiting for clients; became interested in politics, displayed much shrewdness at the game; eventually was elected State's Attorney; put influential grafters of various sorts in jail with startling rapidity, and last year won the Republican gubernatorial nomination in the face of bitter and long drawn out opposition. Mr. Deneen's life has been an uphill struggle right from the beginning—but he has won out.

#### John Weaver-Luther Burbank

Lately the whole country has been filled with the news of the battle which Mayor John Weaver, of Philadelphia, has been waging in the name of reform upon the regular Republican organization. Well, he is another boy who started in without "pull," and is winning out.

Less than thirty years ago he came to this country from England, a stow-away, and a runaway from his father's humble home. He nearly starved while seeking work in New York. Then he went to Philadelphia, where he became a clerk in a dry-goods store at seven dollars a week. He wanted to rise in the world, so he studied stenography, and became a court reporter. Next, he read law in spare moments, and was admitted to the bar. He was soon making more than a comfortable living as a commercial lawyer when the Republican leaders, looking about for a respectable candidate for District-Attorney, took him up and elected him to the office. Before he had got fairly started in the work he was nominated for Mayor and elected, and to-day it is a safe guess to make that the men who offered him to the people of Philadelphia as a thoroughly respectable candidate are wishing heartily that they had left him alone to continue winning out in the field of commercial law, and not given him the opportunity to win out, also, as a reformer.

Luther Burbank, the Californian who has won world-wide fame within the last year or two because of his wonderful creative work in horticulture, began earning his living in a plow works. Boy though he was, he soon invented a "valuable addition to some machinery used in the shop, causing his wages to be multiplied twenty-five times."

While he was working early and late in the factory, his thoughts were ever on flowers and plants, for which his fondness dated back to babyhood. So, despite tempting offers, he quit the factory and since then has devoted himself to his chosen field. More than once he has faced starvation in a land of plenty, as a life-long friend has truly said. Until within recent years he was an object of scorn even among his relatives, and his friends pitted him to a man. But he had faith; failure and the hard knocks of the world could not thwart his purposes; at last he won out, and to-day those who once derided and called him crazy now lead in the applause.

#### How Gates Got His Start

The name of John W. Gates is rolled so frequently on many tongues these days that people generally have come to forget that only within the last half-dozen years or so has he been prominent in any large degree.

A little over thirty years ago he was a married boy of eighteen and the proprietor of a picayune hardware business in a country town a short distance from Chicago. Here he struggled along trying to make both ends meet until Isaac L. Ellwood, the man who first manufactured barbed wire in this country, hired him as salesman, with the cattle country as his field.

"Gates put a 'spool' of the wire in his trunk and

carried it as baggage to Texas. He arrived at San Antonio a lad of twenty-three, obtained a permit of the Mayor to erect a

corral in the plaza—the first barbed wire fence put up in Texas—hired twenty-five steers, and was ready for business.

THE PAHILY FARM

"People came from miles around to see the show. They were to be convinced against their wills that the slight barbed wire barriers could avail against Texas steers. Cowboys drove the cattle in every direction except through the prickly wire. They had come to jeer and remained

"Gates sold more wire at eighteen cents a pound in a day than Ellwood could manufacture in a month. So successful was his trip that he then and there decided, to use his own words, 'there was more money in manufacturing barbed wire than in selling it on a salary of \$100 a month." He induced a St. Louis friend to embark in business with him, and with \$8,000 capital and two machines the boy salesman began his career in industry, finance and speculation that has won him the attention of two continents.

#### Winning Out in the Steel Business

John C. Osgood, formerly president of the famous Colorado Fuel and Iron Company, and who, as president, fought and won a battle with John W. Gates for the control of the company, was compelled to become an office boy at the age of fourteen in a cotton mill in Rhode Island. His willingness to work soon won him promotion, and before long he moved to New York, where he was a clerk in a produce commission house for three years. Then he went back to Iowa, where he had lived as a child; at nineteen he was cashier for a coal mining company, and a few years later held the same position in a national bank.

By the early eighties young Osgood had become recognized as a coal mining expert, and was sent to Colorado by a railroad to report on the coal resources of the state. He was not long in discovering the wonderful possibilities of the state as regards coal; he set about at once securing coal lands; and a few years later formed the company that is now a giant in the industrial world. But when it was organized its headquarters was in one small room and the office force consisted of Mr. Osgood and an office boy.

Charles M. Schwab is another boy who has arrived at the front in recent years through his own efforts. His successor as head of the Steel Trust, William E. Corey, started in one of Carnegle's steel mills in as humble a position as did "Charlie" Schwab; in fact, the history of iron and steel has always been a history of ambitious boys coming to the front by reason of their own innate abilities.

#### And so on Ad Infinitum

As examples of what a boy with no other power than his desire to get there can accomplish in the field of amusement, consider the career of the late Kirk La Shelle, and that of the late Samuel Shubert.

Heinrich Conried, who became America's grand opera impressario on the retirement of Maurice Grau, was the son of a poor weaver; was apprenticed to and learned the trade; became a strolling actor and later a star; came to this country to assist in the management of a German theater; and worked his way up to the control of the leading German theater of New York. All the time he was dreaming how he would produce grand opera if he ever got the opportunity, and when the chance did come three years ago he seized it while other men were preparing to do so, and during his first year as impressario won international fame, being the first person to produce "Parsifal" beyond the sacred bounds of Bayreuth.

These are but a handful of the men who have been winning out in these latter years; the recital could be continued indefinitely, until it became monotonous. But it would all be to the same point—that you can surely "get there" still without "pull," if you have the "stuff" in you.

#### The Best Capital

The best capital for a boy is not money, but the love of work, simple tastes and a heart loyal to his friends and his God.

THE PINISH OF THE LEANDER VS. VESPER RACE AT HENLEY, JULY 5TH, 1905, IN WHICH LEANDER (THE ENGLISH CKEW) WON OVER THE VESPERS (PHILADELPHIA) BY A LENGTH IN THE TIME

# Leander vs. Vespers at the Henley Regatta

By Morris L. Williams, of the Vesper Boat Club

HE Vesper Boat Club of Philadelphia having won the championship for eight-pared shells at the Paris Exposition in 1900, and the World's championship at St. Louis in 1904, very justifiably felt that its crew was in line to enter the Henley Royal Regatta, held annually at Henley-on-the-Thames, England, for the Grand Challenge Cup, and the final stamp of rowing primacy.

the final stamp of rowing primacy.
The Henley races are open to all amateur oarsmen who have never done any manual labor, a restriction which sounds strange enough to democratic American

ears.

The quintessence of rowing honor and glory is to be a member of the eightoared crew that wins the Grand Challenge Cup, or to single-handed win the
Diamond Sculls, but no foreign crew has
ever yet been strong enough to wrest
the cup from the buildog grip of the
determined Britons, although many have
tried, including the Varsity crews of
Yale, Cornell, and Pennsylvania, the Argonauts of Canada, and the Vespers of
Philadelphia, besides a large number of
crews from the continent.
Several Yankees, however, have been
able to carry away the Diamond Sculls

able to carry away the Diamond Sculis

able to carry away the Diamond Sculis in the single event.

To become a member of the Leander Boat Club, from which the crew that so successfully defended the cup was picked, the applicant must have "sat" in a winning boat in one or another of several of the classic events of the English rowing calendar. The Leander membership is not confined to men from any one locality but includes the whole of English. locality but includes the whole of England, affording a wide and excellent choice of material for the defense of the cup when the alarm of a foreign inva-

and, attording a wine and excellent choice of material for the defense of the cup when the alarm of a foreign invasion is sounded.

In the light of the Vespers' Paris and St. Louis victories no false modesty need forbid our saying that the Leander crew realized that in the Vespers they would meet opponents well worthy of their steel; indeed, that opinion was openly voiced by the rowing experts along the Thames after seeing the Yankees train for a few days. The experts frankly admitted that neither of the big university crews could hope to beat the Americans past the flag, so on Leander alone the hopes of England was pinned, and worthily as it proved.

The differences in the style and outfit of the two crews are of interest: The Vesper stroke is the sculling stroke, a long slide (twenty-two inches) which is traveled moderately fast, hands shot quickly away from the body, hody bending forward as the slide is made so that when completed the body and arms are in a position for a hard catch; after the stroke the blade of the oar is carried back nearly flat over and close to the water and is dropped into the water just as the blade assumes the perpendicular, so that it seems to just slip into the water without making any splash, and is likely to mislead one into thinking there is not a hard "catch." Such, however, is not the case, as there is no part

of the stroke more emphasized by Coach Dempsey of the Vesper Club than the hard, quick catch. Dempsey's reason for carrying the oar close to the water and slipping it in just as you turn the oar blade to the perpendicular, is to prevent any loss of motion, or, as it is termed among oarsmen, "fanning the air."

The English style is different: The slides are only sixteen inches, so that the rowers must reach farther and swing back farther to get the same length of stroke. It is this long swing of the body that gives the peculiar effect and which misleads one into thinking they are rowing a longer stroke. What we gain on the long slide they do with the body. Furthermore the Englishmen do not carry their oars back so close to the water, but they do "feather" them before they drop in, that is, the position of their blades for the catch is several inches above the water and perpendicular to it, consequently there is a noticeable splash when they throw their shoulders on, which is not present in the Vesper stroke, and which conveys the impression that the catch is harder.

There is very little difference in the boats excepting in the arrangement of the seats and riggers. Instead of swivel rowlocks such as the Yankees use, the Englishmen have two stiff upright pins with a thong of leather across the top from one to the other to prevent the oar's jumping out. The oars striking against these pins at the catch make a thumping noise, preferred by the Englishmen, so they say, because it enables them to keep time and catch together, and also because they are stiffer than the swivel locks.

The seats in the Leander shell are not in the center of the boat as the Yankees have them, but are situated on the opposite side from the rigger, the rigger being made shorter and stiffer, facilitating a hard catch, so the Englishmen claim.

The odd length of the course, one mile and tive hundred and fifty yards, is accounted for by the projection of Temple Island into it near the start. The entire distance is marked on both sides by pilings which are taken up each year after the regatta. Reaching from one

one it would be a physical impossibility for the Yankees to row their style all the way through, and while the English experts admitted that the Vespers might lead to Fawley Court (about halfway of the course) yet they would "crack" or "go to pieces" as a Yankee would say, between the halfway mark and the finish if Leander gave them no breathing spell midway

if Leander gave them no breathing spell midway.

While the Leander boat kept the race rather well in hand at all times, it could not fairly be said that the Vesper crew went to pieces at any stage of the race. At the very start the Leander shell jumped its competitor half a length, which lead was increased to a full length by the time both boats were well under way. The short course makes the race really a sprint all the way, and of an entirely different character from the four mile races of the American college. an entirely different character from the four mile races of the American college crews. Before Fawley Court was reached the Vespers began by a series of short spurts to cut down the lead of the Englishmen until at the halfway mark they were but a half length behind, but from the halfway mark the Leander boat gradually nosed ahead until at the finish nearly a full length separated the crews of the flying shells. Captain Willis, of the Leander boat said, after the race, hat as the Vespers crawled up approaching Fawley Court he "passed a very bad moment," and anyone who has watched a close and important race will appreciate the feeling which prompted that a close and important race will appre-ciate the feeling which prompted that

ciate the feeling which prompted that remark.

The Vespers were defeated but not disheartened, and eagerly await the next opportunity to try again for the world's greatest rowing trophy. Accurate and intimate knowledge of the course, the climate, and the conditions, count heavily in any contest; with loyalty, enthusiasm, harmony, and the experience of 1905 to aid, the result of the next race may be different. may be different.

SOME OF THE BOYS WHO ARE TRACHING BIBLE CLASSES IN PATERSON, BROOKLYN AND RAST

# The Cabin Boy Who Became an Admiral FITHE DAISY

By FRED MYRON COLBY

This boy was a shoemaker's apprentice, who had walked all the way from the little village of Cockthorpe to carry a pair of shoes to the great admiral, Sir John Narborough, whose birthplace was that same small Norfolk parish. His dress was almost grotesque, his doublet was made for him to grow to, and reached nearly to his heels, and the sleeves had to be rolled back, forming large cuffs. He had on shoes but no stockings, and his head-covering was his master's holiday hat, one of those wide-brimmed Spanish chapeaus with a wide band and a quantity of gold lace upon it.

upon it.

There were a dozen other people stand-

There were a dozen other people standing on the quay, but none presented the striking appearance of this small lad in the big doublet and Spanish hat. Truth to say, none of them so well deserved the notice, for this unpromising looking boy was destined to win fame in the days to come and place his name high among English worthies.

As he stood in the June sunshine a boat put off from the great man-of-war and was rowed to the pler. In the prow stood erect a tall, stately figure, clad in the rich costume of the time, and with a tanned, determined face. The boat touched the quay, and while the swarthy seamen backed water with their ashen blades, the man with the courtly dress and the grand, determined face stepped ashore, amid the boisterous greeting of the crowd of idlers. Bowing heartily, with bluff good humor, the newcomer was about to walk away when he found himself stayed by this slim little figure in the grotesque garb.

"Are you Admiral Sir John Narborough," asked the lad, with a trembling voice, at the same time removing his hat, in the presence of the greatest sea captain after Prince Rupert, that England then had.

"Your snip: the Benerophon: gasped the boy.

"Why, yes, as my cabin boy," said the admiral. "I have made up my mind that you have the stuff of a sailor in you. You do not answer? Sir John Narborough is not in the habit of having his offers slighted."

"It is not that," answered the boy catalate. "but I am an answerentice and my

narnorough is not in the most of naving his offers slighted."

"It is not that," answered the boy quickly; "but I am an apprentice and my master holds my service. Besides, I have not money enough to buy my outfit. Yet a sailor will I be some day." And the small freekled face looked as determined as that of the famous commander above him.

"Said I not that you were to be my cabin boy? I will advance you twenty pounds, which will compensate your master, and here is a guinea for the shoes. My ship sails in three days. When shall I look for you back, my young seaman?"

"I will return the day after to-morrow," replied Cloudesley Shovel, who thus made his first step toward the proud position he was to occupy in English history.

lish history.

Once on that element for which he had cherished such a longing, young Shovel showed his zeal and adaptation for the service. He was on board the Bellerophon in that storm of shot and significant when "Gunpowder Jack" nearly not this match in the Dutchman De Ruyter. It was a both contested buttle and ter. It was a hotly contested battle, and after hours of desperate fighting the English flagship, with shattered masts, and riven canvas and a fatal shot in her hull, was almost disabled in the midst ter. paced his deck, hurriedly with an anxious brow.
"I wish I could in some way send a message to Captain Gibbon, of the Reliance"

Among the number who stepped forward to volunteer for the dangerous mission was the young cabin boy. Bareheaded naked to the walst, and without his shoes and stockings, he stood, his blue eyes flashing, before his commander. "Let me go, sir," he cried, with true, heroic spirit.
"My brave ind. what can you do?" ex-

heroic spirit.

"My brave lad, what can you do?" exclaimed Sir John, with amazement.

"I can swim, sir, and I am small, not likely to be seen. I will carry your orders in my mouth, and if I should happen to be shot I shall not be much missed. Let me go, sir."

"Gunpowder Jack" dashed one of his hands across his eyes, the other he placed upon Cloudesley's shoulder.

"Go, my brave fellow, and God be with you. If you live you will be an admiral some day."

A cheer went up from the deck of the

himself stayed by this sum not himself stayed by this sum not in the grotesque garb.

"Are you Admiral Sir John Narborough," asked the lad, with a trembling voice, at the same time removing his hat, in the presence of the greatest sea captain after Prince Rupert, that England then had.

"I am the Admiral, what can I do for you?" answered Sir John kindly.

"Thave brought your shoes," said the boy, "Oh, you are the lad I saw in the shoemaker's shop at Cockthorpe. And how would you like to be a sallor?" asked the admiral.

The freekled face of the youngster grew animated and his blue eyes flashed. They were brave, true eyes that looked one squarely in the face and would have faced a loaded cannon with the same look.

"Oh, if I only could; it is the wish of my life," he cried.

"I am the Admiral, what can I do for you?" answerd Sir John kindly.

"A cheer went up from the deck of the flaship as the little, sturdy brown fig. A cheer went up from the deck of the same look as it moved through the tumint of waters. On and on it dashed, steadily through half a mile of that raging sea had been upon the deck of the Reliance with "Gunpowder Jacks" message upon the cabin boy who became still between his teeth. Meanwhile on the Bellerophon the batter aged on despairingly. The grand old flaship, riddled through and through have faced a loaded cannon with the same look.

"Oh, if I only could; it is the wish of my life," he cried.

"I am the Admiral, what can I do for with so that raging sea with moved through the lumint of waters. On and on it dashed, steadily remains of the cabin boy who became and plunging iron hall, and at last he cambered upon the deck of the same look.

"And there in the company of the date of that raging sea. With a flaship and hall have the four the side of that raging sea. With a stay was a last slowly but surely sinking in a wild country is to stop and sit down. The day was quite lost came on it the estimated location of such the four the same look.

"Con the four the first the side of the same look of one squares, have faced a loaded cannon same look.

"Oh, if I only could; it is the wish of my life," he cried.
"How soon then could you be ready to join my ship?"

"Your ship! the Bellerophon!" gasped the boy.

"we cabin boy," said british tars, were soon hammering away are soon hammering away.

But gritty think of striking; he and ms verified a watery grave to a surrender to ferred a watery grave to a surrender to decorge still floated from his masthead. But before the day was quite lost came succor from the English reserve. A half dozen huge men-of-war manned by British tars, were soon hammering away. British tars, were soon hammering away at the Dutch ships that had closed around the Bellerophon, and in half an hour De Ruyter was in flight, and history had to record another victory due to the valor of British mariners and the bereim of a young cobin how

to the valor of British mariners and the heroism of a young cabin boy. From this time Cloudesley Shovel's career was onward and upward. So thoroughly was he established in his commander's good opinion that a few years afterwards, when Narborough was sent with a fleet to chastise the Dey of Tripoli, for his acts of piracy upon British ships, wishing to convey a remonstrance to that dignitary before he began operations, Sir John selected his protege as the fittest person to undertake the mission.

Armed with his credentials, young Shovel appeared before the Dey, who received him with Oriental haughtiness and was even insolent in his treatment; but the boy quietly ignored the insults and kept his eyes open. When he left the despot's presence, he had projected an attack on the Tripoline ships that lay at anchor under the guns of the city.

an attack on the Tripoline snips that is, at anchor under the guns of the city. Narborough was so struck with his young midshipman's sagacity that he at once gave his sanction to the scheme. "And," said he, "I know no person so well calculated to carry the project into account on a site author."

For this man. gallant exploit he was made a lieutenant.

Three years afterwards the young sailor became captain of the Sapphire. Rapidly he ascended the steps of gradation;
Rear Admiral of the Blue; Rear Admiral
of the Red; Vice Admiral of the Blue;
Vice Admiral of the White and Admiral
of the Blue. He was knighted by his
king, married the young widow of his
old patron, Sir John Narborough, and
lived in great style when at home in his
stately manor house at Staffords in Norfolk, and in his princely residence in
Soho square. So high and honorable
had the barefoot cabin boy become.
Visitors at Westminster Abbey will
find in the great transept a costly monument which the grafitude of a nation
raised to the memory of a hero who
so well and faithfully fought the battles
of his country, and upon it they will
read these words:
"To Sir Cloudesley Shovel. He was
deservedly beloved by his country, and
esteemed, though dreaded, by his enemies."
And there in the company of the Three years afterwards the young sail-

watercourses and other landmarks as you have passed. Then make up your mind that if you must stay out all night, alone in the woods, it is no killing matter. the the woods, it is no killing matter, but rather an interesting adventure. Having recovered your mental balance, then take note of the lay of the land around you, the direction of its drainage, the character of its vegetation, and the hospitalities that it offers to a nightbound traveler, in the way of drinking-water, sound downwood, natural shelter, and browse. Then blaze a tree on four sides—make big blazes that can be seen from any direction. Do this even though there he several hours of daylight ahead, and although you have no present inten-tion of staying here; for you do know that this spot is only so many hours from camp by back trail, and that you may have good reason to return to it

Now try to get an outlook over the sur-reunding country. In flat woods this will be difficult. If you can risk climbing a tail tree do so. Select one that you can tall tree do so. Select one that you can climb, and having gained your outlook, note the compass direction of water-courses and other landmarks, mapping them on a bit of paper, for a lost man's memory is treacherous. The courses of memory is treacherous. The courses of small streams show where the main valley lies. Decide where to go, take the compass direction, note how the sun

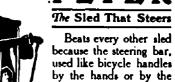

strikes it, and descend.

Now, as you travel, make bush-marks
by making blazes on trees, or bending down a shrub here and there along the trail, so you will easily follow your way back should you have to pass the night in the words.—From "Camping and Woodcraft," by Horace Kephart, in Field

imprint of a moc-casin which was never worn by an Ojibwa! The

never worn by an Ojibwa! The Indian hunter stooped to look at it, then shaded his eyes and peered around him. There was no trembling branch to show where an enemy lurked in the underbrush. The snow was falling softly and would soon erase the strange footprint, but where was the man who made it? The hunter thought of his people who did not suspect any danger, he thought of a maiden thought of his people who did not suspect any danger, he thought of a maiden with eyes like a fawn and he bound his blanket tighter around him as he crept along in the path of the enemy. Soon there were more footprints. He found a trail beaten deep and hard by the feet of many warriors. Stealthily he followed it as it came nearer to his village and from behind a clump of trees his keen eye traced its narrowing circle. Yonder, in the little group of tepees were all those he loved best, and he passed his hand across his eyes, as though to shut out the sights they must soon behold.

It was still early in the morning when

It was still early in the morning when the hunter returned to his tepee, and sat down in his usual place without a word. He had expected to spend the entire day on the hunt but none asked why he returned so soon. Silently he began whittling his bullets so that they could be easily slipped into his gun, then he carefully cleaned his gun and sharpened his long knife; he took his war club and spear and laid them beside his gun and his long, sharp knife, but still he spoke not a word. His father watched these preparations and when they were finished he rose slowly saying he would go and get a few sticks of red willow to smoke. As soon as he was outside the tepee he hastened toward the forest and soon saw fresh footprints in the snow. Examining them closely he saw that they were made by the Outagami or "Foxes" with whom his people were often at war but they had not been on the warpath for a long time. Without delaying a moment he returned to his tepec and urged his family to flee to a neighboring camp. Then his son spoke for the first time. "It is too late, my father, I have seen the trail. All we can do is to prepare for death. The village is entirely surrounded." There was silence again as the young man reached for his knife and tried its edge against his thumb. "An Indian does not fear death unless it comes with dishonor," said the old hunter. "If the enemy takes you captive do not anger them in order that they may kill you quickly. Go with them, but when you realize that you have not another day to live let them hear your death song. Sing the song which you heard in your vision as a boy, sing it strong and full that they may know your spirit cannot be conquered by a dog of an Outagami!"

All that day the Ojibwa worked at fortifying their camp. They cut down trees and formed a barrier of logs and bushes, building it high and strong. All that night they heard, through the dark, strange sounds like the hooting of owls the hunter returned to his tepee, and sat down in his usual place without a

watching for the first streak of dawn in the east which would probably bring the attack. During the night the old hunter took his two little granddaughters and led them out into the dark. He found the direction of the wind and of the falling snow and after carefully deciding the direction of their flight he sent them out toward the enemy. Yet he hoped that by some chance they might make their escape. The blackness soon swallowed them and he stood alone listening for the yell that should tell of their discovery. The snow fell unheeded on his bare head as he waited long for the cry. When it did not come he crept hack to his tepee, comforted in the hope that the little girls were safe.

Morning brought the loud and piercing war whoop, the yell and the crash, and in a few hours the snow was spreading its soft whiteness over the Ojihwa warriors who would fight no more. Only the old hunter escaped alive. Weak from his many wounds he made his way alone through the forest, seeking his grand-children. At last he found them with a party of friends who were hastening to the relief of the little village. Many were the eager questions, for the relief party could scarcely believe that he alone had escaped. With great tenderness the old hunter clasped the children in his arms, in a value effort to quiet their grief at the death of their parents. At last he arose and with feeble footsteps led his friends toward the ruined camp and showed them the path taken by the departing enemy. The sight of the hated foot prints seemed to bring new life to his weary body. He pressed on recklessly, calling the others to follow. Thus he suddenly came in sight of an Indian who had fallen behind the rest of the war party and was walking leisurely along the trail. There was the glint of a tomahawk hurled through the air, and the Outagami would never overtake his comrades. The avenging Ojihwa heard a loud halloo, growing louder as it came nearer, and they dropped noiselessly into the deep snow beside the trail, a friendly rock sheltering them. Two of the warriors were returning to find the brave who had lagged behind them. A swift steel gleamed in the sunshine, and the war party would wait in vain for their return. According to Indian custom the war party had stopped to smoke and discuss the battle, and when the two messengers did not come back they sent three more. They smoked and talked and waited in vain until at last, thoroughly alarmed, the entire war party turned back. The Ojihwa greeted them with a volley from their muskets, and the noise of the batten camps of the Ojihwa. Silently they too found the trail of the war party and hid themselves beside it. They had not long to wait for the little party of avengers were ove Morning brought the loud and piercing war whoop, the yell and the crash, and in a few hours the snow was spreading

the enemy. Tomorrow I shall leave you."

Beside the fire they tried to argue with him, saying, "Our brother, take your share of the spoil, here is a blanket, a warbonnet—a necklace of claws"—but he pushed them aside. "How shall these trifles comfort me? Some day I will have revenge!"

Early the next morning he took his

grandchildren by the hand, said good-hyo to his friends, and started on his long journey. He knew of a place bye to his friends, and started on his long journey. He knew of a place among the northern lakes where the beavers built their lodges and made their dams undisturbed by any hunter. The place was known only to himself and for two years he lived there, hunting the beavers and storing away the rich furs. The little girls learned to help him dress the skins, they hunted the smaller animals and kept the little camp in order. At the end of two years the old hunter made a large canoe, building it broad and strong for he was planning a long voyage. He sorted his store of beaver skins,—rare furs such as a white man had seldom seen. The old hunter had laid his plans deep and well—he would seek the French as his allies! The packs of furs were laid in the canoe, the little girls and the store of provisions were stowed among them, and the old hunter took his place, pushing the canoe out from shore. Down the river and through the little lakes they glided, then out on the broad bosom of Lake Michigan. They passed the trading post at Michilimackinac and drifted down through the straits into Lake St. Clair.

With much interest the children

St. Clair.

With much interest the children looked at the islands in upper Lake Huron, and their grandfather told them the story of the wicked old magician called Ishkom Daimeka, who used to

"AT LAST-MY SONS-AT LAST"

he the keeper of the gate of the lakes. He once stole a beautiful maiden and the spirits were so angry that they raised a terrible storm, so terrible that it tore away part of the shore and swept off the old magician's lodge, tearing it into fragments which lodged in the shallow water forming those islands. So low water, forming these islands. So the time and the distance slipped away until the little party was in sight of Fort Detroit.

Fort Detroit.

A little above the fort the old hunter ran his canoe ashore and made his camp for the night. The next morning he blackened his face with coal, threw ashes upon his head and gashed his body with his knife so that it was covered with his knife so that was covered with his knife so tha ered with blood as a sign of mourning. In this horrible guise he started for the Fort with his packs of beaver skins Strange sights greeted his eyes. The be conquered by a dow of an futural string their court of the court of

condition. An interpreter was secured and the hunter was permitted to make his plea to the French commandant, laying the packs of rich beaver skins at his feet. Fortunately for the hunter and his mission the Outagami were (Continued on page \$66.)

MANY BOYS who correct their watches by the "regulator" clocks in telegraph offices and on public buildings all over our country ever stop to think of how this correct time is obtained? Yet as a matter of fact this determining of the correct time is considered of such importance that the United States government takes charge of andered of such importance that the United States government takes charge of
the work and makes it one of the principal duties of one of Uncle Sam's most
famous institutions—the United States
Naval Observatory. Indeed, this observatory has come to be popularly known as
the government "time factory" for the
very reason that it does tell time that all
the people rely upon as being right to the people rely upon as being right to the fraction of a second. The dally announcement from Wash-

ington of the correct time was not originally planned for the benefit of the millions of people who now depend upon it to keep their clocks and watches from

GIVING THE SIGNAL

becoming "too fast" or "too slow." Instead it was intended at the outset for the navigators who steer vessels upon the occurs and who can by means of this time announcement correct their chronometers, the instruments which en-able them to find their way about when

out of sight of land.
Gradually, however, the people who like to have their time-pieces register correctly found that it was a great convenience to get the official time from Washington each day and so the service broadened out until the purpose for which it was established hecame one of the least prominent of its uses. Now, whereas Uncle Sam ascertains the correct time for all his citizens, he does not deliver it to them. The telegraph companies do that and for doing it they are paid the sum of \$15 per year by the owner of each one of the seventy thousand clocks which are set direct from Washington by means of the electric current and without having the hands moved back or forward by any human moved back or forward by any human

The sum of one million dollars a year which the telegraph companies receive for carrying the correct time is designed for carrying the correct time is designed to reimburse them for stopping all husiness on the 350,000 miles of telegraph wires in this country for three minutes before noon each day. The electric signal which announces that 12 o'clock has arrived at Washington is flashed so rapidly over the net work of copper strands that overspread our whole country that it requires only one-fifth of a second to

in any one "time strip" have the same time but as we travel from east to west we find that in each time belt the clocks are exactly one hour slower than in the division of the country to the east of it. Thus when the noon signal goes out from the seat of government it is 12 o'clock not only in Washington but in Baltimore, Philadelphia, New York, Boston and all the other cities in the "Eastern" time belt, but it is only 11 o'clock in Detroit, Cleveland. Chicago, Cincinnati, Indianapolis and the various places in the "Central" time belt; just 10 o'clock in Denver and the cities of the "Mountain" time territory and exactly 9 o'clock in San Francisco and the communities within the "Pacific" time area. Of course the people of three out of the four sections of the country have to make due allowance in setting their watches by Washington time but they get accuracy to the fraction of a second, just the same. The determining of just what is the correct time for sending out the noonday signal is one of the most interesting features of the government's work. Every boy is told at school that our day

features of the government's work. Every boy is told at school that our day is measured by the sun and so it is in a general way but science has found that Old Sol is not wholly reliable—he does not always make his journews in ex-actly the time expected. The difference is never enough to bother the ordinary person but it is an objection in the eyes of the experts who wish to determine time to the hundredth of a second and so these men now depend upon the stars which travel up and down the heavens scarcely varying the slightest amount from the beginning of a century to the

A government employe is detailed to watch the stars on every clear night through a telescope known as a transit through a telescope known as a transit and by watching the movements of the stars and noting just when they pass over the imaginary lines of the earth (shown in every geography) he is enabled to correct or set right an immense clock close at hand. This clock in turn regulates another clock nearby and this latter clock when connected with the latter clock when connected with the telegraph wires of its own accord sends out the signal which marks noon at Washington. This time-sending clock is so arranged that when it is connected

is so arranged that when it is connected with the telegraph system it sends out a signal for each swing of its pendulum. In other words it can be heard all over the land as it ticks off the seconds and just before noon it is made to skip several seconds so that the listeners everywhere will know that the midday hour is almost upon them.

On New Year's Eve there is sent out a midnight time signal which marks the beginning of the new year but this signal instead of being sent merely to the cities and towns of the United States is flashed all around the world telling the people of every nation that a new year has been born in the greatest of republics. Uncle Sam's odd New Year greeting requires less than ten seconds publics. Uncle Sam's odd New Year greeting requires less than ten seconds to make its flying journey around the globe and in that brief interval the electric spark travels over 1,180,000 miles of telegraph wires and ocean cables. Of course the difference in time, already noted is even more noticeable in the case of this signal. For instance, our soldier boys in the Philippines have finished their New Year's dinner ere this tiny telegram comes announcing that it is midnight at home.

#### AN INDIAN HUNTER'S REVENGE

(Continued from page 365.)

in bad favor with the French. Only a short time before they had actually tried to storm the fort at Detroit, aided for carrying the correct time is designed to reimburse them for stopping all husiness on the 350,000 miles of telegraph wires in this country for three minutes before noon each day. The electric signal which announces that 12 o'clock has arrived at Washington is flashed so rapidly over the net work of copper strands that overspread our whole country that it requires only one-fifth of a second to travel from the national capital to San Francisco but nevertheless it is deemed wise to stop all business on the telegraph wires for full three minutes before the announcement is sent out so that all over the country persons will know that the signal is sent out from Washington at precisely noon each day but it is nowhere near noon in many of the parts of the country to which it journeys in quicker time than you can wink. This is due to the fact that we have in the United States four different standard or legal times. The country is divided by

promised to go with us on the war path. Before many moons I shall be revenged for the death of my sons. You shall all help me and many scalps will hang in your lodges." With such words he went from village to village, and canoes were sent to the Fort for more guns and more bullets until all was ready for the attack. Louvigny himself led the campaign with the French troops and their wild allies. They found the Outagami in a fortified village with a palisade of logs and earth so solid that the French cannon could not make any impression upon it. Then the French commander decided upon military tactics and put

SENDING THE TIME SIGNALS

his engineers at work digging trenches. Closer they came, working under cover of night, planning to undermine and blow up the Indian fortification. The Outagami fought feroclously, the women fighting and falling beside the men, but when they saw the trench within a few feet of their wall they asked for terms of surrender. Louvigny demanded that they make peace with all tribes friendly to the French and go to war with every tribe who were enemies of the French, taking captives to supply the places of Indians killed in former battles with the French. He also demanded that they pay the cost of this war in furs and send six chiefs or sons of chiefs to Quebec as hostages.

At the point where the tree is to stand thrust a spade vertically into the ground, bend it backward and forward until a V-shaped opening is made, and then place the tree into it, slightly deeper than it stood in its natural position. Care should be taken to have the opening large enough to permit the natural downward direction of the roots. After the tree has been inserted the spade should be removed and the opening closed by a firm pressure of the foot. It is imperative that the opening be entirely closed, and the earth firmly pressed about the roots.

A boy should accompany the planter with a basket of seedlings, his work being to keep the plants covered and to hand them, one at a time, to the planter as wanted.

be better to fight on, and if it must be so let the French finish their work and blow up the entire village? The young braves favored the course but the counsel of the older men prevailed. Loud was the wailing in the Outagami camp that night, there was mourning and lamenting, but the old hunter walked alone under the peaceful stars saying "At last—my sons—at last."

On the 12th of October, 1716, Louvigny reached Quebec with his six hostages and there was peace in the lodges of the Ojibwa.

Reduced in numbers the Outagami

the Ojibwa.

Reduced in numbers the Outagami left their hunting grounds in the Green Bay country and traveled westward toward the Mississippi river, beseeching their friends the Osangis to adopt them into their tribe that their council fire be not extinguished. The request was refused at that time and the stricken tribe pressed on, defeated by its enemies and deserted by its friends.

So the Indian hunter was avenged for the death of his sons.

#### Collecting and Planting Young Trees

When young trees are obtained from the woods they should be carefully removed from the ground with a spade to prevent the injury which almost in-variably occurs when they are pulled up. The roots should not be allowed to dry, or the tree will fall to live when it is planted. This can be prevented by

is planted. This can be prevented by covering the trees, as soon as taken up, with wet moss or some other moisture-retaining substance, and keeping them covered until planted. Ordinarily it is advisable to plant the seedlings the same day they are collected.

Great care must be taken to select suitable weather for collecting trees. The day should be cloudy and damp, with little or no wind. The soil should be moist and friable, but not wet. The general time for removal is determined by the locality, the best being in the spring, just before the buds start. No plant should be collected that is not healthy, and care must be exercised to make no scratches or bruises on either make no scratches or bruises on either

make no scratches or bruises on either roots or stem.

To permit planting in straight rows and also proper spacing of trees in the rows, a cord with equidistant knots can be stretched along the line of the intended row, about four inches to one side, so as not to interfere with the planting

planting.

In planting on sod a desirable method is to cut out and remove with a sharp, straight-edged spade a square piece of surface sod one and a half to two inches in thickness. Then make a hole deep enough to receive the roots, plant the tree in it, compress the soil firmly about the roots, cut the removed piece of sod in halves, and insert about the planted tree. This is a slow and expensive method, but it insures success even in a comparatively dry season. In some regions a much cheaper method of planting will be successful if the season is not too dry. This method may be described as follows:

At the point where the tree is to stand At the point where the tree is to stand thrust a spade vertically into the ground, bend it backward and forward until a V-shaped opening is made, and then place the tree into it, slightly deeper than it stood in its natural position. Care should be taken to have the opening large enough to permit the natural downward direction of the roots. After the tree has been inserted the spade should be removed and the opening closed by a firm pressure of the foot. It is imperative that the opening be entirely closed, and the earth firmly press-

#### BOYS AS MONEY MAKERS

#### Earned a Trip to Europe

Emanuel Neilson, a son of Conrad W. Neilson, of Bridgeport, Conn., twelve years old, spent his vacation in Denmark, this summer, paying all of his expenses with his own money earned by carrying newspapers—the Telegram in the morning and the Post in the afternoon, thus making two trips each day, covering several miles on foot, and necessitating an early rising that he might be at the press-room door as soon as 5:30 o'clock every morning.

All this time Emanuel was attending school and keeping up well with his classes, as he is ambitious for an education. He is a bright boy and his parents and teachers are fond of him. He went on his long trip alone, though

EMANUEL NEILSON

his mother was in Denmark to meet him, having salled a few weeks ahead of him. He did not accompany her because he wanted to earn some more money and did not want to leave before school closed. He sailed in the steamer "United States" to Copenhagen by the north route which took ten days, so that he was out on the ocean a long time for a little chap unaccompanied by relatives. He is a quiet, manly fellow and a favorite with his customers, who say they never have to wait for their papers when they are due.

If a boy of twelve can earn money enough to pay for a European trip, who of us but can hope to do so?

#### Education First, Money Afterwards

A New York boy by the name of Morris Schateffer has refused an offer of \$18,000 a year, preferring to continue his schooling. Young Schateffer is only fifteen, but he has won such distinction as an inventor that the General Electric Company offered him an extraordinary salary. A newspaper dispatch under date of New York, July 26, tells the story in this way:

"Eighteen thousand a year for a boy fifteen! And he turned it down! It came to Morris Schateffer, of 872 Gates avenue, who solved a problem for signaling for electric roads. His system is in use on a part of the Brooklyn Rapid Transit lines. According to report, he has been offered \$25,000 for his invention, but he thinks it is worth twice as much. He declined an offer to go with the General Electric Company at \$18,000 a year, because he wants to finish his course in the public schools."

In preferring an education to so promising a position, young Schateffer shows that he views life from a higher standpoint than those do who sacrifice everything to the accumulation of wealth. A well-trained mind can furnish the body all it needs, namely, food, ciothing, and shelter, but a purse, however well filled, cannot supply either brain or conscience.—The Commoner.

These clubs are obtaining new members every day. Every hoy who has a hobby should join one. Valuable information and instruction can be received by the members from each other. Write and tell us the club you desire to join and enclose 50c as membership fee. Address Correspondence Club, cure of the American Boy, Detroit, Mich.

#### Uneconomical Economy

In St. Louis there is a Yankee who settled in the Mound City after the Civil War, and has there built up a fortune of millions. The economies and conservatism by which he has accumulated his little pile have increased with his years.

little pile have increased with his years. Acquisition has become a habit.

He has one son, over whose expenditures he keeps careful watch. Recently this offspring took an uptown car. The father, who saw him board the car, and knew his destination, judged he had spent his fare foolishly.

That evening, after dinner, the elder called the younger man into the library, saying he had something to tell him. "But first," he interrupted, rising from his chair, "I will turn down the light; we can talk just as well in the dark, and it will save the gas." He then proceeded to give reasons why the expenditure of the uptown carfare was unnecessary. As he went on explaining the value of of the uptown carfare was unnecessary. As he went on explaining the value of economy, out of the darkness where his son sat he heard a fumbling and shuffling. Much to his distaste the noise continued. At length, heated to impatience, he cried, "Sam, what are you doing?" "Father," came from out the blackness, "I can hear just as well without 'em, and while we're sitting here in the dark

and while we're sitting here in the dark

I'm taking off my trousers to save 'em,' For the rest of that evening economies were not discussed.—Success.

Good agents wanted to solicit subscrip tions. Liberal commissions. Address Agency Department, The American Boy, Detroit, Mich.

"Listen, my children, and you shall hear Of the midnight ride of Paul Revere," may not know that the house in which this true patriot was born is still standing, and that it is in appearance very much as it was when Paul Revere was born beneath its roof in the year 1735. The house is in Boston, in a locality now inhabited almost entirely by foreigners, but in the days of Paul Revere this locality was sometimes called the

pulses, and he does well to seek to imitate the fine and high spirit of the brave men of old, who have been true to themselves and to their country.

Paul Revere was a man of this type. The story of his midnight ride has thrilled many a boy and inspired in him a spirit of patriotism and of loyalty to his country. Some of the schoolboys who have recited Longfellow's stirring poeth, beginning with—
"Listen, my children, and you shall hear off the midnight ride of Paul Revere."
may not know that the house in which this true patriot was born is still standing, and that it is in appearance very much as it was when Paul Revere was born beneath its roof in the year 1735. The house is in Boston, in a locality now inhabited almost entirely by foreigners, but in the days of Paul Revere this locality was sometimes called the "Bloody Massacre" in Boston. It was from this house that he went forth to attend some of the secret meetings that resulted in the famous Boston "tea party."

While Paul Revere was not one of the great men of the Revolution, he was always a man who could be depended upon to carry through successfully any undertaking requiring spirit, decision and unfailing courage. A man of this kind may reigners, but in the days of Paul Revere was one of the most useful number of his day and generation.

THE FINEST AND MOST COMPLETE MINIATURE LOCOMOTIVE IN AMERICA

THE FINEST AND MOST COMPLETE MINIATURE LOCOMOTIVE IN AMERICA
There has just recently been completed at Cuyahoga Falls, Ohio, what is said to be the
finest and most complete miniature locomotive yet built in this country. The length of this
locomotive over all is fourteen feet and the size of the cylinders 4x7 linches. The diameter
of the drivers is sixteen inches. There are 36 inch-and-a-quarter flues. It is equipped with
double tube Metropolitan injectors, electric headlight and steam brake. The engine develops
a speed of eighteen miles an hour and is twenty horse power, carrying 150 pounds pressure
Its total weight is about two tons. The largest engines in the United States weigh 225 tons.
Pour passenger coaches in miniature comprise the train which this locomotive is to haul.
The length of the entire train is 80 feet. A track has just been completed for it along the
banks of Silver Lake. On the route is a tunnel 90 feet in length. The builder of this locomotive, Frank E. Jones, learned his trade in the same shop and under the same superintendent as did Albert Pitkin, the well-known president of the American Locomotive Company.
Mr. Davis designed this miniature locomotive, made the drawings, patterns and machine
work, and in fact every part of the work alone,

six years in college. He heard in Cal-cutta that his countrymen in Turkey had started a hopeful movement which looked toward liberty and educational reform, and being very patriotic and loyal he resolved to come to Constantinople and join the movement.

When he arrived there he was surprised to find that his countrymen were

being persecuted, and that the better condition of his people for which he longed was very far off.

He was in every way a refined and cultured gentleman. Having resided for years in some of the best English families in Calcutta he became a thorough years in some of the best English families in Calcutta, he became a thorough English scholar. He declared with glowing enthusiasm that the highest ambition of his life was to teach his countrymen, the Armenian young men.

We grew very fond of him, and my host resolved not to part with him, since he was such a valuable helper. Many a pleasant visit we had together. His name was Rabyan.

One day we waited dinner for him

one day we waited dinner for him but he did not come. He had gone out for an hour's walk. That evening a messenger from the Russian embassy called with an open note from Mr. Rabyan which said:

called with an open note from Mr. Rabyan which said:

"Kindly deliver my clothes to the bearer, destroy all loose papers, and receive my library as a donation to the school. I am told that I am to set out on an unknown journey."

With sorrowful haste we carried out his instructions. We knew that any attempts to see him or to correspond with him would only make trouble both for him and us. We also knew that the Russian embassy could put him to death if they chose, and we mourned for him as for one whom we should never see.

I left Constantinople, and a few weeks later I found myself on a little vessel going from the Bosphorus to Trebizond. I had stowed away my goods below, and had gone to the deck, when my eye was attracted to a familiar figure sitting well up in the bow, quite apart from the crowd of passengers.

His head was howed, and not until he lifted it could I be sure that it was the young Armenian whom I liked so much.

I went over to him at once. "I was afraid you might be injured or even dead," I said. "I am so glad to see you here."

I had noticed that he was not shackled nor guarded in any way as a pris-

I had noticed that he was not shack-I had noticed that he was not snackled nor guarded in any way as a prisoner would have been. He turned his
great luminous eyes on me and they
were full of despair. "Ah!" he said, "better for me if they had killed me. I am
on my way to Siberia as an exile; that
means a living death." "But where is
your guard?" I asked, eagerly. "You
do not look like a prisoner. Why can
you not escape?"

"Hush!" he said, putting his finger on his lips. "This is a Russian ship. There is no chance of escape until we reach trebizond. I cannot go ashore without my Russian passport, which will at once give me over to the Russian officers who

give me over to the Russian officers who are waiting for me. The only escape is to jump into the water and commit suicide." "Oh, don't do that!" 'I cried. "Something may happen to save you. Something must happen." He shook his head despairingly. "I know too well how these Russian exiles are watched." My sympathies were at once strongly aroused for this fine young fellow, doomed to terrible punishment, when his only crime had been a desire to uplift and help his countrymen. I tried to think of something I might do, but all my plans seemed like the ravings of a crazy man. How helpless we were with Russia back of us and Siberia before us! I said to him: "Does anyone on board know you?"

know you?"
"I think not."
"Well, then, keep below and out of sight for a while until I can think of some plan."

some plan."

He went below at once, but I saw by his sad face that he had little faith in my power to help him.

While I was thinking hard and growing more desperate I heard one of my fellow-travelers speak of the captain as a fine fellow—an Englishman named Humphrey. It did sound so familiar—Captain Humphrey whom I had met five years before in London. It might be. I would make inquiries. I sought him out and found surely enough that he was the very captain I had met, and a royal fellow he was, too. I had not visited with him long before I told him the story of one of his passengers. He was full of sympathy, but he hastened to say:

"My dear fellow, there is no use in getting wrought up over this. When Russia gets after a man he is helpless. What can we do? As he says, he can jump overboard and drown, which to my mind is much better than Siberia."

I left him very much disheartened, and felt that I could not go and teil the

It happened that through a stupid mis-take of the porter there had come into my possession a bundle containing some long over-boots and a stovepipe hat. I had no use at all for these articles,

and I felt pretty cross toward the blun-dering porter. The bundle I had ex-changed for these cumbersome articles of clothing contained my fine camera and

a traveling rug.

I was tempted to throw them over-board that morning when I found them in the cabin. Now I began unpacking them, more because I could not sit down calmly than for any known reason. The boots and hat were new and in good condition, and to relieve the sad silence which had fallen. I held up the stovepipe hat and put it on Mr. Rabyan's

head.

We laughed a little over it, and then to carry out my poor attempt at fun, he slipped on the long over-boots.

"You look really like an English ser-

vant," I said.
"Oh, if only I might be your scr-vant!" he answered.

vant!" he answered.

I jumped up as a sudden thought struck me. I got a razor and proposed to remove his shining black beard so that his face should be clean shaven. Then I had him look in the mirror. He said: "I would not know myself, you have changed me so."

"Very well," I said. "You shall pass for my English servant on this ship, and shall speak only English."

The transformation was so complete

The transformation was so complete that when we called the captain down he looked curiously at my "servant" and declared he never would have thought of him as the fellow who had come on

I took Mr. Rabyan's passport and every article which would point to his identity, made them into a bundle and dropped them out of the window.

"Very good, very good," said the cap-tain, "but how are you going to get him ashore? Every passenger must present himself at the passport office and show his passport." his passport.

Here was a difficulty and a very formidable one. I had not thought of it in my excitement. We stared at each other stupidly, and the dawning hope in the Armenian's face gave way to

in the Armenian's face gave way to black despair.
"You see," he said, "you see, there is no hope for me. If I hide on the ship they will search everywhere and find me, and if I land without a passport they will catch me."

We all knew that this was true. I had been too sanguing. It seemed then

We all knew that this was true. I had been too sanguine. It seemed then that I had been almost cruel to raise his hopes only to disappoint him again. The captain went to his room, but soon he came back again. He was a very calm, self-possessed Englishman, but I could see that he was somewhat excited. He cleared his throat several times before he spoke, and he pulled his mustache and walked around the table and spoke cautiously.

no one on board suspected that he was assuming a position of which he knew almost nothing.

We did not once speak of the landing at Trebizond, but I am sure that we three thought of it very often.

When we drew into the harbor I handed Bahyan my passport

Rabyan my passport. We saw to our alarm that the Rus-We saw to our alarm that the Russian bishop was there waiting for his victim. Rabyan had to march up to him and present his passport. He said afterward that the hand which held the precious document shook in spite of his strongest efforts at self-control.

The hishop looked at it and then at him very sharply. He passed him on and then laid his hand on Rabyan and detained him. He looked at the passport sharply, folding it before he passed him on with a nod.

He looked at everyone who landed with his keen official glance, and then when all had landed but myself, he came on board with his soldiers to claim his

on board with his soldiers to claim his prisoner.

He saw at once that I was not the one he wanted, and he went straight to the captain.

Captain.

Captain Humphrey treated him with the greatest politeness, and offered a large reward to the crew or to any soldier in the bishop's company who should

find the prisoner.

After a long and thorough search the hishop returned to his post and wrote to the Russian embassy at Constantinople that the prisoner had undoubtedly jumped overboard and was lost.

In the meantime Mr. Rabyan went straight to the house of the English consultant and carried my note which said that

sul and carried my note which said that I was on board without a passport.

The consul sent word to the pasha, and he kindly sent his own boat and brought me ashore without any regard

brought me ashore without any regard to the passport office. I had very queer sensations while I was receiving this kindness from the pasha.

I met Mr. Rabyan at the place agreed upon and we proceeded as quickly as possible to Mosul. Here we were so fortunate as to find an English officer going to Calcutta. He was looking for a guide and interpreter on the long journey down the Euphrates Valley and Persian Gulf to Calcutta.

I recommended my companion, and the English officer was delighted to secure his services.

ire his services.

Mr. Rabyan's joy and gratitude were

beyond expression. Calcutta was the very spot where he most wished to be. When he reached there he became the editor of an Armenian newspaper for the enlightenment of his countrymen in the East. I secured a copy and sent it to the missionary, who showed it to a member of the Russian embassy in Con-

stantinople.

They were very curious to know how their prisoner, who had been reported drowned, could be a lively editor in Calcutta. But I can assure you that their curiosity was never satisfied.

"Yes, yes; go on."

"You are to give Mr. Rabyan your passport, and let him land with it and go to the English consul. He can carry a note from you which says:

"'Dear Sir:—I am on board without a passport. Can you get me ashore?'

If he sends you one, you are all right. If your friend here is seized, and your passport taken——," he shrugged his shoulders, and we supplied the rest. "It would go hard with us."

"We will chance it." I said.

Mr. Rabyan carried out his part of English servant well. I am sure that

#### A "Bestower of Happiness"

We are told on good authority that the word "boy" means "bestower of happiness;" the word "girl," "she that comes rejoicing;" the word "brother," "supporter," and the word "brother," "friendly." They are very ancient words, that is, they have come down to us through long ages, as might be expected. Yet it is a little strange that we should use them, instead of words derived from Latin or Greek; for they come from a time far back of that in which these languages sprung up, from away back in the earliest attempts at speech. They mean much from their derivation, and mean much from their derivation, and we would be glad to know that every boy was a "bestower of happiness," that every boy made his home happy, his school happy, and everybody happy about him.—Ex.

#### To Make a Magnet Knife

Lay the blade of a pocket knife or table knife flat on the back of an orditable knife flat on the back of an ordinary kitchen stove shovel. Then press the round knob of the poker or the fire tongs tightly down on it and rub the knife blade hard, being careful to rub in only one direction—from the handle of the knife to the point. Turn the blade frequently so that both sides will be rubbed equally well. After doing this steadily for a little more than a minute, the knife blade will have become magnetic and will lift a needle or steel pen with ease.

AVID MINOT considered himself an ill-used boy. That is, he held that opinion for several hours of a certain day. Later in the day, he would not have exchanged lots with any other lad in all America.

This is how it happened. David was directed one bright spring day to go down to Savin Hill beach and "dig a mess of clams." VID MINOT considered himself an

The boy was aghast at the order. He did not dare attempt remonstrance with his father, but he hurried to his mother, nearly choking with half-suppressed sobs, which, big boy though he was, he

nearly choking with hart-sapinates, sobs, which, hig boy though he was, he could not hide.

"Mother," he exclaimed, passionately, "just think, father says I must go after clams and it's the day of the drill on the Common and you know you said I might go."

"I said I hoped you could go." corrected his mother, quietly, but pityingly, for she knew what a disappointment the deprivation would be.

"All the boys are going, mother," said David, imploringly; "they're all going in Lijah Bennett's big team."

"I'll see your father," said Mrs. Minot. soothingly, "but," seeing the boy's face brighten, "don't count too much on it, David."

brighten, David."

David did count on it, however. knew his mother's powers as ambassa-dor. He knew her kindly influence sel-dom failed and he deemed his cause as good as won. So the disappointment was more keen when she returned and told

more keen when she returned and told him his father's flat was unaltered.
"Father says he's sorry, David, but we must have some clams. Tomorrow Uncle Jonathan Davenport is coming to dinner and father says he promised long ago to have a clambake for him when he came, and there's no one but you to go for them." go for them.

go for them."

"Couldn't Jake go?" implored David.

Jake was the hired man.

"No," replied his mother; "Jake's got to get in the early hay, from the marshes. There ain't anyone but you, David. I think you must go, but I'll put you up a nice lunch and you can have a clambake on the beach."

Ordinarily, this would be a great treat but on this day nothing atoned for the lost trip to Boston.

out on this day nothing atoned for the lost trip to Boston.

"There ain't a boy I can get to go with me, either," complained David, "and it's no fun having a clambake

house and spacious outbuildings would have been in ashes ere nightfall. For it was wartime-the war of 1812—and have been in ashes ere nightfall. For it was wartime—the war of 1812—and that very afternoon nearly all the male population of Dorchester were either viewing or taking part in the parade and drill of the home militia on Boston Common, leaving the town practically at the mercy of any hostile force. No one dreamed that such a force was nigh. Although some of the older and wiser heads had pointed out, time and time again, that the place was easily accessible and assailable from the coast—that an attacking force might be quickly and quietly landed—at either Savin Hill or Commercial Point, ravage the town and depart ere help could be found to repel them, yet no home guard had been raised, no sentinels posted at either of these vulnerable points.

Both plans had been broached. David's father was anxious that something should be done along the line of protection, for his farm was one of the first which would be reached by an enemy landing at Savin Hill beach.

In case of an armed invasion, such as had occurred farther south on the coast, the Minot place would be sure to suffer and the invaders would find rich picking, for the Minots were forehanded and possessed quantities of both live stock and provisions, as well as valuable furniture and precious plate.

All this was known to David and he had listened eagerly to many a long conversation between his father and the other selectmen of the famous old town.

conversation between his father and the other selectmen of the famous old town. Stephen Minot, however, had never quite succeeded in convincing his compatriots of the urgent need of establishing a guard. They were too apt to think that his rather exposed position made him over-anxious.

made him over-anxious.

This was partly true, but at the same time the elder Minot was public-spirited and clear-minded. He knew the enemy would not stop with his place, though they might begin with it. They would loot the entire town if once they gained a foothold in it, and this was easy enough unless some organized band of patriots was ready to oppose them.

"Post men on the old embankments at Savin Hill," he used to say. "Keep them there to notify us of any incoming vessels. Then we can be ready to repel any attack."

repel any attack."

As yet, his wise advice had not been acted upon

David thought of it, as, after having filled his barrow with clams and having enjoyed the clambake, he lay upon the embankments and gazed far out upon the water of beautiful Dorchester Bay.

water of beautiful Dorchester Bay.

His good nature was quite restored.
David was apt to make a stout fight against fortune's ill favors, but once they were proven to be inevitable, he generally acquiesced and made the best of a bad bargain. So he felt fairly happy as he and Ezra lay on the grass and waited for the tide to come in.

"We'll have a dip, Ezra," said David, "as soon as the tide is high and go along home after it's a bit cooler. The clams will be mighty heavy before we

clams will be mighty heavy before we get them home."

Then David patronizingly detailed his father's views and wishes to his small

comrade. Ezra listened eagerly and questioned

curiously

with me, either," complained David, "and it's no fun having a clambake alone."

He looked aggrieved. "Everyone is going on the Common."

"Oh. I guess not," said his mother, cheerfully; "I saw Ezra Pomeroy this morning and he ain't going for he told me his mother was afraid to let him his mother was afraid to let him years old."

David was 14, and a tall, well-built and for his age. He had, as his mother often said, "the making of a tall man" and "took after" the Minots, all of whom were six-footers.

David, grumbling and petulant, at last departed, not disdaining, finally, to accept both the lunch and Ezra's company, though he threw the one into the harrow disdainfully and scarcely vouch-safed a friendly greeting to the other.

"He'll get over it," said Mrs. Minot to herseif, "but I wish he could have gone in town."

We are so short-sighted, we mortals. If David had gone in town it might cept both the lunch and Ezra's company, have built such ramparts? Not the Inthough he threw the one into the barrow disdainfully and scarcely vouchsafed a friendly greeting to the other.

"He'll get over it," said Mrs. Minot to herself, "but I wish he could have gone in town."

We are so short-sighted, we mortals. If David had gone in town it might have been that the comfortable farm-

GIRLS AND BOYS EASILY EARN

horizon. "What vessel do you s'pose that is, Dave?" he asked, as he pointed it out. "Oh, I don't know," replied David;

their languor and taken a nap had not Ezra's black eyes espied a sail upon the

"perhaps a fishing schooner or a lumber vessel going to go up Neponset river."

"P'raps it's one of them war vessels chuck full of Britishers, like your father was talking about," suggested the small lad, not because he really thought so, but the state of the second s but just to give a zest to the conversa-

"What would you do if it were?" said David, laughingly; "climb a tree or hide in a hollow stump?"
"Not I," answered Ezra, vallantly; "I'd

"Not I," answered Ezra, valiantly; "I'd just get up and march across the front bank here, and they'd think I was a soldier, and they'd get back a great deal quicker than they came."

He suited the action to the word. With the clam digger, which bore a bloated resemblance to a gun, on his shoulder, he paced to and fro upon the bank, occasionally making believe fire and shouting defiance at the birds and bushes and the distant sail.

David watched him, lazily and laughingly.

"You wouldn't scare a crow," he said; "you're too little. No one could see you, except they stumbled over you accident-

Ezra retorted merrily and they forgot for a while the approaching vessel in their boyish fun and frolic. David crept up and captured Ezra, gun and all, and they rolled over and over, shouting and

they rolled over and over, shouting and scrambling.

When they were tired of play, they took a look at the tide and incidentally at the vessel, which now was fairly near and loomed large before their vision.

David became pale as he saw the craft.

"Ezra," he exclaimed, excitedly, "as true as you live, that's a British war vessel. There's no roal or lumber aboard that bark!"

Ezra, frightened, began to cry, but

Ezra, frightened, began to cry, but David soon stilled him. During their play the vessel had crept so near that even their unpracticed eyes could see its character.

They'll take me away," whined Ezra,

weak with fear. weak with fear.

"No, they won't," answered David;
"what would they want with a baby like you? Keep still, Ezra. You can easily hide in the woods if they land. Perhaps they're going on to the Point, anyway."

But they were not. Even as his quick brain ran over all the tragic possibilities of the outlook, the sails were slackened the vessel hove to, and prepara-

ened, the vessel hove to, and prepara-tions for sending a boat ashore were

David thought more swiftly than ever ne had done in his short life before. Ezra and he could easily and safely hide in the woods near by. Perhaps they had better do so, for though he knew the soldlers would probably not abuse two boys, he knew well that a lad of his age and size would be considered a prize worth taking. They would impress him and he would be forced to serve against his own countrymen. It might be years ere he saw home and friends again. The temptation to make himself safe

The temptation to make himself safe and scarce was great and almost overpowering. He could so easily creep (Continued on page 577.)

#### **BUILD YOUR OWN BOAT** BY THE BROOKS SYSTEM

If you can drive a nail and cut out a piece of material If you can drive a nall and cut out a piece or material from a full sized pattern, you can build a Canoo, Rowboat, Sail Boat, or Launch in your leisure time at home, and the building will be a source of profit and pleasure.

#### Company News

SILVER GATE COMPANY, No. 26, San Diego, Cal., is one of the many companies which really appreciate the advantages derived from the order. It has recently received 10 new members, has \$15.00 in the treasury, a basket ball and grounds to play, and expects to put up tennis courts and obtain a clubroom. It has a library of 25 books and about 100 magazines. We are promised a picture soon. LEBANON VAL-LEY COMPANY, No. 57, Annville, Pa., recently elected the following officers: Edward books and about 100 magazines. We are promised a picture soon. LEBANON VALLEY COMPANY, No. 57, Annville, Pa., recently elected the following officers: Edward M. Smith, Capt.; Roger Saylor, Lleut.; Edward Marshall, Secy.; Paul Loser, Treas, and Libn. Dues 2 cents a week. It has commenced a library with 13 books, and has a kym with dumb-bells, punching bag, boxing gioves, and an exerciser. The boys are scouting for new members. The pamphlet we send contains copy of proposed constitution and bylaws which companies may either adopt in whole or after to suit themselves. MOVILLE HAWKEYE COMPANY, No. 59, Moville, 1a., is progressing nicely. It has at present 9 members with \$2.00 in the treasury and 15 books in its library, also a gym outht of dumb-bells, Indian clubs and boxing gloves. It has its charter framed and a fine clubroom. W.GONER URIT COMPANY, No. 1, Wagoner, Ind. Ter. The captain sends us some of his work as a printer, consisting of a receipt for dues, a notice of meeting and a certificate of membership, all tastefully gotten up. He says he has printed a banner on cloth 36 inches wide with the name and division of the company. We are promised a picture. YOUNG AMERICAN ATHILETIC COMPANY, No. 28, Petaluma, Califf., has framed its charter and recently held a fine entertainment which gave it quite a neat sum of money. The members celebrated American Roy Day in somewhat of a quiet manner, their number not being sufficient to warrant their appearance before the general public; however, they had a good time. This company is also saving money to build a club house. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its thrifty-third letter, from which we note that four meetings were held during July, at which the attendance suffered on account of the usual incidents of the warm while gave in the reasury of their meetings during the warm months, and during August they intended visiting many places of interest. WHITE HALL ATHILETIC COMPANY, No. 58, Albenwood. Ps., has 9 members and holds its meetings every We in the library and \$2.00 in the treasury. U. S. GRANT COMPANY. No. 73. Waynesfield, Ohlo, has recently bought 17 books for the use of its members. Several new members are expected so soon as school begins. THE SANGAMON BAY LEAF COMPANY, No. 45, Decatur, Ills., sends us through its enthusiastic company counsel a long and extremely interesting account of the company's outing

JOSEPH HOSMER, OF FT. MORGAN, COL Who Delivered an Eloquent Response to the Address Welcome at the American Boy Day Exercises of the Portland Exposition, July Fifth.

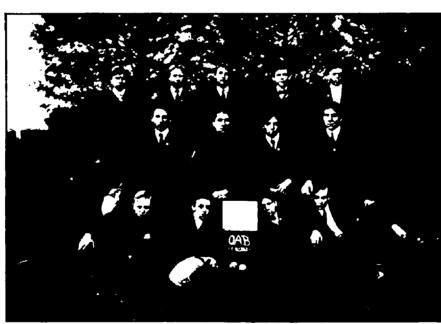

# The Order of The American Boy

Under the Auspices of "The American Boy"

Object:--- The Cultivation of Manliness in Muscle, Mind and Morals The object more definitely stated: To promote mutual and helpful friendships

among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

J. FRANK HANLY CO. No. 27, WESTFIELD, IND.

of 10 days at Decatur Chautauqua Grounds. The company had its headquarters in a large tent divided into 5 compartments, hoard floor, cots and hedding. On the outside of the tent the boys nad a large banner erected with the letters "O. A. B. Headquarters" printed on it. They also used another tent as reception room, which contained a table, register, pens, ink and paper and lots of AMERICAN BOY literature. Addresses, lectures and other programs were enjoyed, and under the instruction of Dr. Searle, of Paris, Texas, the boys were taught baseball, basket hall, tether hall, tennis, swimming, rowling, jiu jitsu, drills, kite-making, etc.; altogether the boys seem to have had a most enjoyable and healthful outing. Next month we give pictures of headquarters tent and of Dr. Searle. JEFFERSON DAVIS COMPANY, No. 2, Palmetto, Fla., has got a nice club room, rent free, furnished with chairs, two lamps, deak for captain and secretary and some nice pictures; also a dozen books and \$12.00 in the treasury. Its gym consists of boxing gloves, punching bag, game of flinch and checkers. It has an O. A. B. pennant and will huy a large American flag. Fines are imposed for disorderly conduct. It gave a party recently at the home of V. C. and all had a good time of 10 days at Decatur Chautauqua Grounds. Master Anderson made 'Seein' Things at

#### He Made a Hit

Here you see Chauncey Anderson, of Buffalo, N. Y., who made a hit at the celebration of American Boy Day at Chautauqua, N. Y., Iuly 2nd. The Chautauqua Herald, in commenting on Chauncey's part in the programme, said: "The feature of the morning Patriotic Programme on American Boy Day, July 22nd, at Chautauqua, was the recitation by Master Chauncey L. Anderson, of Buffalo. Chauncey recited a poem by Eugene Field, entitled 'Seein' Things at Night',—a poem that has been much abused by inferior speakers. The beauty of this boy's performance was the complete absence of mechanical elocution. He managed his voice so skillfully that he could be heard all over the large auditorium, to the delight of the audience. His play of facial expression, and jerky boyish gestures imitated nothing; they were the thing itself:

Night' a novelty. His recitation was the only one on the programme to receive an encore, and his second selection met with the same response. The question on the part of the audience was, 'Who could have taught him?' Inquiry elicited the fact that no one had taught him, but that he had taught himself. The secret of his success was his naturalness."

CHAUNCEY ANDERSON

#### Looking Ahead

Portsmouth, Va., Aug. 7, 1905.

Sprague Pub. Co.:

Gentlemen-I have read about The American Boy Day in the August issue of THE AMERICAN BOY, and I read it with pleasure. But let me remind you that in the year 1907 The American Boy Day ought to be held at Jamestown Exposition, at, a place about twelve miles

from where I live.

The Jamestown Exposition will be held on Hampton Roads, one of the best har-bors of the United States and very historic, and in dear old Virginia, the Mother of States and the mother of presidents, seven presidents having been born within its boundaries; and one that has produced such men as Washington, Jefferson, Henry, Madison, Lee and Stonewall Jackson. All Virginians ought to and have a right to feel proud that they are Virginians, because, take George Washington, the Commander-in-Chief of the American Army in the Revolution, also the first President, and who was also called the Father of His Country; take Jefferson, the man that drew up the Declaration of Independence, and was also a signer of it; take Patrick Henry, one of the most gifted orators the United States has ever seen. orators the United States has ever seen, and the man who (we can say) started the Revolution. And again, did not Cornwall's surrender to Washington in glorious old Virginia, at Yorktown? And coming down to the Civil War, was there not Robert E. Lee as much loved by the Northern army as he was by the Southern army? And again, as Jackson, with a battalion, was holding back a whole army. General Ree rode up and, seeing him, said: "There stands Jackson like a stone wall," which gave him the name of "Stonewall Jackson." I again say, and will say, that anybody ought to be proud they are Virginians, and stick by Virginia wheree'er they go.

Furthermore, the Jamestown Exposition will offer a sight to the inland boy which no exposition has heretofore done. Hampton Roads is large enough to hold all the warships of all the nations on the globe, and an inland boy will see real battleships, cruisers, gunboats, torpedo boats, torpedo boat destroyers, and also submarine boats—not only American, but also foreign. I see American ships almost every day, as the navy yard is about a quarter of a mile from where I live. I have pictures of many boats in the navy, taken at the navy yard here, some of which I will send you soon.

Hoping you will choose the Jamesand the man who (we can say) started

yard here, some of which I will send you soon.

Hoping you will choose the Jamestown Exposition as the meeting place July 5, 1907, I remain.

Yours for M. M. M. M.,

STANLEY W. BRINSON.

517 Henry St., Portsmouth, Va.

P. S.—The Jamestown Exposition will be held to celebrate the 300th anniversary of the first English-speaking settlement in America, at Jamestown, in 1607.—S. W. B.

#### WHY I AM PROUD OF MY STATE

We invite our readers to read the foregoing letter of Stanley W. Brinson, of Portsmouth, Va. There is a patriotic boy for you! HOW he is of old Virginia! And he has ample reason to be.

It has occurred to us that boys elsewhere might wish to express themselves with reference to their states. Surely every boy, no matter in what part of the United States he may live, has some reason for being proud of his state. It will do him good, as well as furnish some instructions to others, to give vent

to his feelings.

To make it an object for boys to tell why they are proud of their native states, we will open our columns for patriotic letters; but we cannot give the invitation gener-Virginia has expressed herself; now let us hear from a northcrn state—say Wisconsin. Let the boys of Wisconsin tell us why they are proud of their state.

To the Wisconsin boy who sends us before October 15th the best letter of not over 500 words, we will give \$5.00; and we will print the letter in the November number of The American Boy. The following month we will take another statc. We will proceed in this way until the boys of many states have had an opportunity to express their state pride.

AR, FAR away, in the wilderness of western Maine, lies Andover Surplus, amid whose forests Hamlin's lumber camp clings to a rock-ribbed mountain side miles and miles from any human habitation. The lit-tle group of log cabins that compose it shrink back timorously into the dark

it shrink back timorously into the dark spruce and tamarack woods, silent save for the logger's ax, the crashing fall of glant trees, or the rattle of chains as the heavy two-sled teams, laden with logs, plunge down the mountain side to the waiting river in the valley.

Here it was that I met Chipman Wenzel, a veteran pioneer and hunter from Nova Scotia, and here, by firelight, lying in his bunk evening after evening, while the wind whistled keen outside and the snow drifted over the camp roof of unhewn poles, he spun me numberless yarns about the wild creatures he had slain, among them this true story of his first bob-cat.

It was down in "Skish," as we call

It was down in "Skish," as we call Nova Scotia, and I was only a little chap (he said), just large enough to pull a trigger, when one autumn my father made me a present of his old cap gun. Twas a rickety, smooth-bore, that never shot twice alike, yet it seemed to me the finest weapon in the world, and I wouldn't have swapped it for a Winchester. How well I still remember the season—early October—with the hills a blaze of yellow and crimson foliage and a golden haze that mellowed the whole atmosphere, the most perfect hunting weather of the year—a perpetual invitation for the sportsman to try ual invitation for the sportsman to try his luck in wood and field.

So it was that on the Saturday after-noon following my receipt of the old muzzle-loader I pocketed a box of caps, took a bag of home-cast leaden slugs, shouldered my venerable gun and set out privately for the woods, in the hope of bagging a partridge or two before sundown. sundown.

of bagging a partridge or two before sundown.

I had not far to go in order to reach the forest. In those early days the great woods hemined us closely in, and Medford, my home village, was sandwiched snugly between Minas Basin and the great pine-clad hills that rose to the westward, behind which tossed and sparkled the tide-swept Bay of Fundy. The road from our farm led first through rough pasture land, then out past the saw mill and so up along the hillside, until at last the twilight-vaulted aisles of the forest hid it from sight. On I toiled under the weight of the old queen's arm, kicking up the dust with my bare toes and keeping a sharp eye out for partridges. The sun lay warm and bright along the country road, blue-jays cried out harshiy in the tree tops, crickets chirruped in the meadows and it was hard for me to be silent, but my hunting instinct conquered the whistle that rose to my lips and I plodded on in silence, hoping to flush a covey of the shy birds and bag a fat hen-partridge for our Sunday dinner.

Whir-r-rrr! Brr-r-rr!!

A whole flock rose almost at my feet with a drumming rush that jumped my heart into my mouth, and sped wildiy of in a blur of brown wings, wheeling in a wide circle toward the forest. Down came Old Bess from my shoulder and up again she went at aim just as the last brown wing flickered in behind the sheltering pines.

"Oh, lordy; lordy me!" I cried in

brown wing flickered in behind the sheltering pines.

"Oh, lordy; lordy me!" I cried in sore vexation. "What a shot that would have been! Blame such luck, anyway!" The old gun-barrel traced tremulous circles in the air as I stood looking along the sights at the baffling trees.

Then my gaze wandered, and suddenly I saw, not ten rods away, a great, sleek, tawny cat, basking in the warm sunlight, a monster pussy lying with closed eyes and languid limbs among the fernbrakes at the roadside.

My poor heart stopped beating entirely

My poor heart stopped beating entirely My poor heart stopped beating entirely then, and the heavy gun weighed down my arms. No bear is half so fierce, no moose so savage, quick and deadly as an infuriated wildcat. There lies no safety in climbing a tree or in flight from this savge ball of madness, bristling with teeth and claws, no hope of salvation from its wild attack save in one sure, deadly shot. To wound a wildcat, meredeadly shot. To wound a wildcat, merely, means almost certain death, for with one spring the creature is at the hunter's throat, and that is the end of his hunting, without reprieve or stay.

ing, without reprieve or stay.

Even as these thoughts chased themselves through my frightened brain Bobby gave a savage little prr-r-rr, stretched his lithe limbs, opened his greenish-yellow eyes, and stared at me. That look, full of hold and cruel curiosity, stiffened my backbone and revived my hunting nerve. After all, why should I be afraid? I had been horn and bred almost in the woods, I was large and strong for my age, and I had a gun. The thought of Old Bess decided me—it would be disgraceful to run away as strong for my age, and I had a gun. The thought of Old Bess decided me—it would be disgraceful to run away as long as I had her, I told myself. Perish the thought! No, I would stand my ground, see the thing through and take home Mr. Cat with me as a surprise to the folks and a specimen of my marksmanship.

So thinking, I raised the barrel of the old smooth-bore again (the giant cat still staring at me in amazement), up and up until the bead at the muzzle just just beyond in a screeching, spitting heap try road.

covered his ugly head. Then, bracing myself, I shut one eye in approved hunting fashion and pulled the trigger.

Snap!
Only the cap exploded, the powder-charge hanging fire for an instant, just long enough to let the muzzle wander to one side. Then—bang!
Off it went with a roar like thunder, numbing my shoulder and half deafening me. The smoke hid everything from me; then it cleared just in time to let me see pussy, much astonished, loping off unharmed into the bushes, unwounded by even a single one of the leaden slugs which had torn the earth and ferns close beside where he had been lying. Tears of vexation started to my eyes, but still, as I hastily reloaded, I felt thankful that the giant cat had turned tail and ran away.

"I guess he's about as badly scared as and ran away.
"I guess he's about as badly scared as

of blood-stained fur. Quick as thought the wounded beast came back at me; I met him with the point of my knife, then sprang aside. Again he turned on me, still yelling with rage and pain, but with something in his cries that told me he was sore stricken and the fight was turning to my advantage. For the last time I cut him in the side as he lay half-dazed in the road; he struck at me with his great claws, I dodged a second too late, and the sharp hooks ripped my sleeve to ribbons, tore my arm and sent me stagkering backward. Too excited to heed the pain or even feel at, I snatched up my gun by the barrel, swang the butt high in the air and brought it down with a resounding crash on the great cat's ugly head. Again I struck and still again with all my might till the lithe limbs relaxed, the yowls and cries ceased, and I knew my life was safe.

"I guess he's about as badly scared as I am," thought I to myself, as I tipped up my powder-horn and poured in a double charge, then rammed the wadding home and dropped a dozen slugs into the barrel. Whatever might betide, I was bound the wildcat should not take me unaware.

Should I abandon my hunting expedition, run back home and trust that the bob-cat would do the same? Or should I follow him up, force a fight and win it? This question I turned over hastily in my mind, and in an instant, with the rashness of youth my resolve was taken—I would carry the campaign through to the end, cost what it might. No wildcat could scare me, I said, as long as I had Old Bess under my arm; so, holding the queen's-arm ready cocked, I cautiously advanced along the sunlit road.

Hastily taking off my coat I looked at my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in my wounded arm. The scratch was long and deep and bled freely, but I tore a strip off my shirt, held one end in m

I had not far to go, for less than twenty rods farther on I once more saw pussy standing in the bushes, glaring savagely at me and grinning with those savagely at me and grinning with those terrible blade-like teeth. I realized now that it was death for one or the other of us, and gripped the old iron barrel all the tighter, my heart thumping meanwhile like a trip-hammer. One more glance at the gun-cap, then up went the gun once more, and once again "Snap!" went the hammer, without exploiting the charge. At the same instant, the great creature began slowly to creep toward me, as a house-cat stalks a mouse, step by step, growling ominously, and raising the fur along its neck and spine. Without taking my eyes from the wildcat I threw off the spent percussion cap, set another in place and knelt in the road for steadier aim. Then quickly cat I threw off the spent percussion cap, set another in place and knelt in the road for steadier aim. Then quickly I drew my large jack-knife from my pocket, opened the long blade, and gripped the handle in my left fist. If the gun missed fire again, it was knife or nothing, I knew; yet I was perfectly cool and my hand hardly trembled at all or again I rejsed the rusty barrel, laid as again I raised the rusty barrel, laid it over my knee and brought the sights to bear on the ugly, flattened head of the wildcat, now not ten rods distant from

Nearer and nearer crept the cat, step Nearer and nearer crept the Cat, step by step, with stealthy, fascinating grace. Nearer and nearer gleamed the cruel yellow eyes and froth-flecked teeth. Still I held my fre. "One! Two! Three!" counted, then I pulled the trigger.
"Bang!"

Down I tumbled backward, knocked flat in the dust by the recoil of the double charge; then with a wild rush a great tawny form hurled over me and landed

Tired and unstrung as I was did not desert Mr. Bob, but pulled my-self together, tied up his hind feet with some stout cord I had in my pocket, shouldered Old Bess and started off shouldered Old Bess and started off home, dragging my game after me—and a heavy lond he was for a tired, trembling boy! Before I got halfway home I met Uncle Paul Willard, a near neighbor and erratic old fellow, the especial chum and comrade of all Medford boys. His astonishment made me laugh, in spite of my exhaustion, but I tell you I was glad to run across him! He took hold and carried the cat for me, and Old Bess too, for he saw I was pretty near my breaking-down point. When we got home there was a great to-do, but Uncle too, for he saw I was pretty near my breaking-down point. When we got home there was a great to-do, but Uncle Paul tempered the whirlwind for me, so I got nothing worse than a good scolding and a stern warning never again to risk my life in any such "fool enterprise," as father called. Mother cried over me a little, and kissed me too, which made up for father's scolding; and somehow, through it all I couldn't help feeling that my father, who had been a great hunter in his day, was just a little proud of me. So it was a very happy as well as a very tired boy that crept to bed that night, up the creaking oaken stairs into the old attle of the farmhouse. farmhouse

farmhouse.

Kings County paid me three dollars bounty, next week, and the skin brought me another two, so you see I had five dollars of my own, which gave me a good start toward buying a good rifle. I've had a dozen since, but Old Bess still stands behind my door at home, and I haven't yet forgotten how she saved my life thirty-odd years ago, by kicking me life thirty-odd years ago by kicking me over in the dust of a Nova Scotia coun-

## The Dollar Watch

(Other Ingersolls, \$1.50 and \$1.75) (New Ladies' Watch, just out, \$2.00)

The business of a watch is a serious business. It deals in time, the most precious element of life, the very stuff that life is made of.

Our daily movements are governed by reference to a watch and there is just one thing absolutely demanded of that watch, —accuracy. Without this, it is worse than a nuisance.

The one great predominating feature of the Ingersoll Watch is its accurate timekeeping quality. It is positively reliable.

No watch made in this country or

Europe selling under ₹8 or ₹10 even approaches it in accuracy. Imitations selling at Ingersoll prices resemble it only in outward appearance. As time-keepers

they are worthless,
Wonderful ingenuity, great resources,
experience, originality, invaluable patents and tremendous output are the only things that make the Ingersoll watch possible. A reputation gained in over 12 years of faithful service as well as the binding guarantee placed in every Ingersoll watch, stand behind each one.

More Ingersolls (8,000 daily) are sold in

this country than all others put together. Many of our most eminent men in all walks rely on an Ingersoll and

IT IS GOOD ENOUGH FOR YOU!

Sold by 50,000 dealers throughout the country or postpoid by us. Booklet free.

Look for INGERSOLL on the dial and accept no substitute

Bed Clothing should be warm and light. Blankets and thick counterpanes should never be put upon the bed. The weight is depressing, retains perspiration, causes nightmare and is unhealthy. Blankets are warmer than woolen and weigh only eight ounces each. Made of strong sterilized paper, kid finish, will not slip or rustle. Cost less than washing Blankets. They are an application of A Weil-known Scientific Principle. Every bed should have one between sheet and top cover. Price \$3.00 a dozen full size, or we will send three full size for sample, postpaid, for \$1.00. Boys can sell more Paper Blankets in one day than they can papers in a week. WHITELAW PAPER CO. DEPT. 5, CINCINNATI, OHIO.

store when Red saw something move behind the lilae bushes on the campus. Now we'd been expecting trouble, for some of the town people were pretty mad about a cigar store Indian that had been missing for some time.—I'm sure I for one would have been glad enough to get rid of the thing, for as long as it was locked in my cupboard I had to keep my clothes under the mattress. Well, when we saw the commotion behind the bushes we former a skirmish line and advanced slowly for fear of an ambush, but when we saw Molly, old Finnegan's cow, we were pretty mad. We sat down right there on the grass and tried the case. Red was the judge, Sport was the lawyer for the defense, I was the prosecuting attorney, and Pete was the jury. Sport made a pretty strong plea. He said the cow was driven by the necessity of getting her daily grass, and that anyhow she couldn't read the trespass signs. I said it wasnt' a matter of pity, but of justice: that if the campus was to be a pasture ground for cows, we'd better close the college and start a

signs. I said it wasnt' a matter of pity, but of justice: that if the campus was to be a pasture ground for cows, we'd better close the college and start a dairy; and that anyhow it wasn't our fault if the cow's education had been neglected,—there were plenty of signs around. The jury deliberated a few minutes and brought in a verdict of "guilty," and the judge said the penalty for such an offense was to spend the night in the chapel. So really it was all Red's fault.

I must say it wasn't easy. We couldn't either shove or push that cow up the steps, but after we laid planks for her she went up like a lamb. Then we closed the door on her and went to bed. It seemed to me that I'd just gone to sleep when Pete knocked on my door.

"Say," he croaked—Pete's voice has had moss on it for some time—"we forgot those blamed Easter decorations, and I'll bet Molly's finished them. Put on something and come down."

I put on my raincoat over my night clothes and hurried down. We were a

on something and come down."

I put on my raincoat over my night clothes and hurried down. We were a scared lot, you can just believe, when we met on the chapel steps, and we were more scared when we went in. The sight was awful. Molly had stripped the palms and the rubber plants down to their stalks, and was just starting on the Easter lilies. She looked as big around as a hogshead, and go through that door she couldn't. We pushed and we pulled, but she didn't move an inch. We worked for an hour, and then we had to leave her and go back to bed, but I don't think any of us slept much. The next day was the saddest Easter I ever experienced. We were afraid to stay away from chapel, but when we saw Prexie sitting there among the saw Prexic sitting there among the wreckage—well! The bare stalks of the rubber plants and palms looked like the rubber plants and paims looked like a forest after a fire, and in the front pew sat Finnegan, holding Molly by a rope. The rope wasn't needed.—you could tell by looking at that cow that she couldn't move. Sport nudged me to look at the big window, and there was John the Baptist with his foot gone, and a big hole in the river Jordan. It was even worse than we'd expected, and we learned later that it took forty-eight even worse than we'd expected, and we learned later that it took forty-eight hours and a vet to get that cow in condition to be moved, but we went off Monday morning for Easter vacation and didn't hear anything more for a week. I can tell you we hated to come back the following Monday, for we knew there was a row waiting, and ever since we shaved old Duff's Saint Bernard like a French poodle we'd been suspected of every lark in the school. Tuesday morning when we went to chapel it was blowing hard, and rain was pouring in through John the Bap-

chapel it was blowing hard, and rain was pouring in through John the Baptist's foot and the river Jordan. I can't remember ever feeling so sad before, although I have felt worse since,

but that's further on in the story. After prayers Prexic made a few remarks about the cow. He was really almost mild, but at the end he gave us an undercut that bowied us over.

"Fortunately for the school in general, although most unfortunately for himself, one of the members of the faculty was troubled with insomnia, and had seen and recognized the miscreants!"

Pete gave me a kick that sent my leg asleep for an hour, and Sport kept blowing up at his hair and making it stand on end, to look unconcerned. But the worst was to come.

"And now, young gentlemen, I have another matter to place before you. Yesterday, Dr. place before you.
Yesterday, Dr.
Brown, of the Suburban liospital,
made a proposition to me which
I consider an honor to the school. You are given an opportunity to perform a noble deed, an act of kindness and charity, demanddeed, an act of kindness and charity, demand-ing some small self-sacrifice. Gen-

ie played his last trump and took the trick.

ie played his last trump and took the trick.

"Perhaps I would better say," he said, pulling out a plece of paper, "that much will be forgiven those who take this method of proving that mischief, and not wickedness, is at the bottom of the recent scandal. Otherwise I need scarcely say that the young gentlemen whose names are here, will be dealt with severely." He wound up by saying that "volunteers" would meet Doctor Brown and himself at the hospital at two o'clock, and then he dismissed us. Right after Latin hour we four got together to talk it over, but there didn't seem to be any help. In the end it came to this,—volunteer for a noble action and be branded as a hero, or refuse and have to pay the bill for fixing John the Baptist and the River Jordan, not to mention the veterinary surgeon.

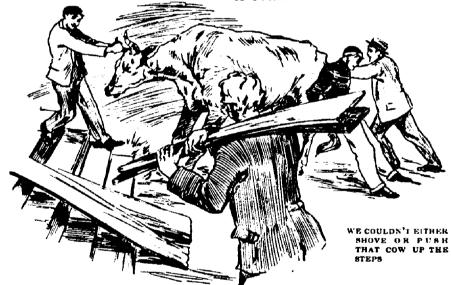

Well, we went. We were a little late, because so many things happened to keep us back. Pete sprained his ankle

looking instruments, and an awful smell. There was one doctor there—I think it was Helliday—and he was running everything. So after we'd sat down (you know how a fellow's knees shake sometimes, mostly at the dentist's) they brought in Augustus. No, he wasn't exactly handsome, and he didn't inspire to any extent what you might cail lierole sentiments, which only goes to prove that Prexie's a gentleman. The doctor shook hands with us.

"You're fine fellows," he said, "and before we go on I'll explain this thing a bit. You've all seen pieces of ground where grass won't grow, and you know what's done to fix it—it's sodded. Well, this man can't grow a decent crop of skin, and what we want is to transplant a little turf, so to speak. It only hurts for a minute, boys, so don't be frightened."

we didn't laugh much. Sport raised a sickly grin, but the rest of us couldn't. The doctor said "first" but none of us moved. Then Prexie said to go alphabetically, and that brought Red first, his name being Agans. Red's always wishing his name had been White or Young, but coming in the A's he's first in everything. Well, Red stepped out and one of the nurses rolled up his sleeve. Another one lifted the lid of a steaming, sizzling affair in the corner and said "the instruments are ready," in exactly the same way as if she'd said steaming, sizzling affair in the corner and said "the instruments are ready," in exactly the same way as if she'd said "the roast is ready." She lifted out a tray of murderous looking instruments, and Red got so pale his hair looked pink. Then the doctor picked out two little things with sharp claws, and walked up to Red, holding them out. Now you know even a hard hearted dentist hides the forceps until you get your mouth open. But not so this doctor, oh no. He holds them up for Red to see, and he says, "These little things are only to hold the skin taut and smooth." With that he jabbed one into Red's left arm, and Red, he just gave a whoop and ran! Bolted out the door like the cork out of a pop bottle, and we could near him falling down one flight of stairs after another. The doctor looked mad and the nurses laughed, but I was sorry for Prexie—he looked so deadly ashameo. He didn't say anything, but just wiped his glasses and said "Next."

Sport's name is Brown, so he came mext. As I said before, his father's a doctor, and that explain's a good bit, i knew he was going to spring something, and so he did. He stepped forward, looking very serious, and he says to Prexie:

and had to limp all the way, and Red had to go back half a mile for a hand-kerchief, although I had two and offered to lend him one. I had an awful headache myself, but Sport was as cool as if he had been going to get his picture taken. He knows a lot about such "I'm really sorry, professor, to see this poor fellow lying here, and to be unable to help him, but the fact is," he doctor, "I'm what's called a bleeder, a hemi—, hemi—, hemi, well, hemisomething."

"A hemophile?" suggested the doctor. things—his father's a doctor—and he said that skin grafting was a mere trifle. We all really depended on Sport.

We had to wait a while in the recepmere

tion room for Prexie and the doctor. A hospital's a smelly place,—I could taste hospital's a smelly place,—I could taste the smell, and pretty soon Pete said. "boys, the pain in my ankle and the smell of carbolic acid have about finished me. I've got to have a little fresh air or I'll be all in."

About half way along the hall, Pete's ankle began to get better. It improved pretty fast, and when we looked out the window a minute leter he was run-

the window a minute later he was run-ning down the drive as if he was making a base. Sport wanted to go after him and bring him back, but we thought him and bring him back, but we thought if he once got into the open air he might be taken the same way, so we stood against the door. Then Prexie and Brown came in, and stood and talked awhile. We listened to every word, I tell you. First Brown says:

"Yes, Holliday, one of the internes, took an interest in the man. I'm sure I don't know why, for he's a big, black river roustabout, marked like a patchwork quilt with razor scars."

work quilt with razor scars.

Prexie didn't seem so deadly eager when he heard this. "Why don't you try guinea pigs?" he asked.

But the doctor laughed until he shook.

"Guinea pigs! Why, man, he would be growing fur!"

growing fur:"

Prexie scemed to be getting sorrier every minute. "But how about grafting white skin onto a negro?" he said.

Old Brown nearly had a fit. When he got his breath he said, "My dear sir, old mother nature has her own way of adjusting these meteers.

"A hemophile?" suggested the doctor. "Yes, a hemophile. I bleed for days from the slightest cut. I—I hope you believe me, sir?" this to Prexic. Good old Prexie! He always believes his boys. But the doctor was more than half mad, and when I saw those nuises

nail mad, and when I saw those nuises almost choking I made up my mind to go through with it if they did the Merchant of Venice act and took a pound. Sport took his hat and walked out as cool as you please. The doctor laughed a little and he said.

"Well, we've dwindled like the Salvation army on a rainy night. Next."

ou ever saw!
We tried to pull him out, but he was

We tried to pull him out, but he was wedged to stay and at last we had to lift the table off him. One of the nurses gave me a little glass with some stuff in it, and said to give it to him when he began to come around. So there I sat tailor fashion on the floor and waiteyes. His sleeve was rolled up, but there was just a scratch on his arm, which shows it was only a scare. It was pretty fine of him to offer when he didn't have to, and was in such an awdidn't have to, and was in such an aw-

In a minute he opened his eyes, and I Old Brown nearly had a fit. When he got his breath he said, "My dear sir, gave him the stuff. He raised up a little and looked around. Then he said, adjusting these matters. Now, boys, if in the most astonished way, "Why, bless you are ready we will go upstairs."

The first sight of the operating room turned me cold and prickly all over—off his own arm to heat anything, and glass tables all around, shiny, queer-Augustus was one grin from ear to ear.

In a minute he opened his eyes, and I nient for him, and the babe crowed thrice and grew up in her court."—Century Magazine.

The first sight of the opened his eyes, and I nient for him, and the babe crowed thrice and grew up in her court."—Century Magazine.

#### How a Shrewd Cat Catches Sparrows

Laconia boasts of a cat which combines science with her natural instincts of bird hunting to rather a remarkable de-

stree.

She has discovered that when she turns her back toward a flock of sparrows in the street they pay little or no attention to her and approach quite closely. She has also discovered that the plate glass show window of the Booth jewelry store makes an excellent mirror under certain conditions of light, and that by looking toward the window she can watch the chipples in the street and at the same time give the birds no reason to suspect that she is interested in anything except Booth's gold rings and jewelry display.

Sparrows come along the street every

Sparrows come along the street every few minutes, and, although at first rather shy of the cat, they evidently observe that she is paying no attention to them, and gradually work up quite close to her in their search for food. Pussy keeps perfectly passive until one of the birds happens to stray within easy jumping distance, and then she turns like a flash and captures the unlucky bird in an instant.

People who observe the cat for the People who observe the cat for the first time gazing at the reflection of the sparrows obtain an idea that she herself is being fooled by the reflection and stop to watch, expecting that she will finally jump against the show window in her efforts to catch the birds, but they find that they have underestimated kitty's intelligence when a bird approaches too near the dead line.—Laconia Democrat.

#### Big Catch by a Small Boy

Anglers who have hooked leviathans at liuntington Beach and lost them through smashed tackle may now breathe easier, thanks to the luck and main strength of a little pickaninny of that place, Arthur Cassell, son of the village barber.

Little Arthur qualified in the fisherman's class by hooking and landing in the surf at that resort an immense black sea bass, which, after a most desperate

the surf at that resort an immense black sea bass, which, after a most desperate tussle and several threats to engulf the entire outfit, pickaninny and all, was finally beached by the medium of a hand line of sashcord dimensions and a hook that under other circumstances might well have anchored a line-of-battle ship.

well have anchored a line-of-battle ship. A crowd helped make the landing.
It is not often that black sea bass stray so far inshore, being almost essentially a fish of the banks, but this one did to his sorrow, and his weight is unofficially reported as 270 pounds—quite a day's work for a slip of a colored lad who probably never in his life will attain within fifty pounds of that total. Needless to say, the proudest boy in Huntington Beach is named Cassell. He will never forget the experience.—Los Angeles Times.

#### How to Make a Trap for Rabbits, Rats and Mice

From an old six-inch pine fence board

From an old six-inch pine fence board cut off four pieces two and a half feet long, and one six inches square for the end of the trap and another four inches by eight inches for the door. Use old boards, as new boards scare rabbits.

Fig. 1 shows how the box is made. It should be four inches wide and six inches high on the inside. The top and bottom boards project one luch beyond side boards at the back and end board is set in. The top board should be two inches shorter than the sides at the front. Nail a strip on the top board back of door and one on the bottom board so game cannot push the door open from inside the trap and get out.

In the middle of the top board bore a hole and put a crotched stick in for the

In the middle of the top board bore a hole and put a crotched stick in for the lever to rest on. Bore another hole in the top of the door for the lever to pass through. Two inches from the back of the box bore a hole for the trigger, which should be made out of heavy wire in the manner shown in Fig. 2. The door of the trap must work easily and loosely.—Popular Mechanics.

#### Why the Bears Fought

C. M. Russell, the Western painter, tells an amusing story of a bear fight which he thinks is funnier than any humorous sketch he has ever seen portrayed on a vaudeville stage. He had been out a vaudeville stage. He had been out with a guide all day, and toward evening they saw, far down the road, two bears sauntering along, quite oblivious of the presence of human beings, as the go through with it if they did the Merchant of Venice act and took a pound. Sport took his hat and walked out as cool as you please. The doctor laughed a little and he said.

"Well, we've dwindled like the Salvation army on a rainy night. Next."

It took only a minute, and it didn't hurt much after all. But I'd been so excited beforehand that I got sick and dizzy. I saw Prexie rolling up his sleeve, and then I sat down in a chair and closed my eyes. There was a terrific bump, and one of the nurses said "Mercy!" I jumped up, and if you'll believe me, there was Prexie right under Augustus's table, in the deepest faint you ever saw!

We tried to pull him out but he wind was in the wrong direction. Russuld and his guide quickly jumped behind a small thicket, and when the bears were within shooting distance the painter of the first and struck one of them fair in the side. The shot stunned the animal for a moment, and he was under the impression that his mate had struck him a terrific blow when he was not looking. As there appeared to be no reason for this chastisement, he proceeded to retailate by attacking the other bear. About this time the guide took a shot at the assaulted animal, with the result that the brute was infuriated and imagined he had been struck with undue force by his comrade. Upon this the two bears set to and hed a truck one of them fair in the side. The shot stunned the animal for a moment, and he was under the intension that his mate had struck him a terrific blow when he was not looking. As there appeared to be no reason for this chastisement, he proceeded to retain the brute was infuriated and imagined he had been struck with undue force by his comrade. Upon this the two bears set to and he distance the painter of the within shooting distance the painter of the within shooting distance the painter of the first of the proceeded to restain the struck one of them fair in the side. The shooting distance the painter of the within shooting distance the painter of the within shooting distance the pai impression that his mate had struck him a terrific blow when he was not looking. As there appeared to be no reason for this chastisement, he proceeded to retaliate by attacking the other bear. About this time the guide took a shot at the assaulted animal, with the result that the brute was infuriated and imagined he had been struck with undue force by his comrade. Upon this the two bears set to and had a terrific fight.—Success.

#### Small Boy's Mixed History

Around the great striking figures of history the small boy weaves curious answers. "Moses's mother pitched his little cradle within and without with pitch and left him there in the pool of Siloam. But when the daughter of Solomon got the green leaf from the dove she hastened and brought food convenient for him, and the babe crowed thrice and grew up in her court."—Century Magazine.

#### The Coming Man of the Commons

American boys proud of the record attained by that American, Winston Churchill, who has written three such splendid stories of his country's history, may well look country's history, well look across to England at another

THE ENGLISH WINSTON CHURCEILL

Winston Churchill, whose promise is quite as great as that of the American who shares his name.

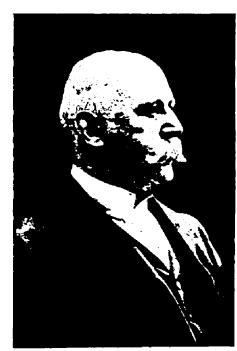

The Britisher's full name is Winston Leonard Spencer Churchill, but it is by the first and last only that he has become so widely known for all he has accomplished in his thirty-one years. He has soldiered it in Cuba and on the Indian frontier; he has, as war correspondent, writen up the campaigns in the Soudan and South Africa—where he was captured by the Boers, only to take chances into his own young hands and escape; he has traveled the world over, has written five books (four of them big successes), and now has gone into politics, sitting in the House of Commons. His enemies know him as too strong and self-assertive to be cowed or cajolled, while his friends' opinion is summed up by no less a judge of good metal than the veteran, T. P. O'Connor himself, who declares: "There is no position in public life which I think this wonderful young man cannot in time attain to."

wonderful young man cannot in time attain to."

That this "coming man of the Commons" should be an able speaker is not to be wondered at, since even as a Harrow boy of fifteen he seized every opportunity to harangue his schoolmates; that he should be a capable leader is natural, since his father, Lord Randolph, was pre-eminently that; but there are many who say to-day that the young man's greatest strength is his common sense and his determination to win—and these qualities have come in the American blood which his mother brought to the family.

#### "Jacobs, Who Builds Tunnels"

Eighty feet down beneath the surface waters of the Hudson, in an electric-lighted compressed-air chamber, are laboring day after day a gang of men, pushing before them, through the mud and silt and rock, twin tubes, progressing at the rate of a couple of feet a day.

"CHARLEY" M. JACOBS

Their work will some time culminate in the completed Pennsylvania Railroad tunnel—the result of the skill and ingenuity and courageous persistence of one man—"Charley Jacobs, who builds tunnels.

Charles M. Jacobs is one of the most remarkable of present-day world workers. Born in England fifty-five years ago, endowed with immense common ago, endowed with immense common sense, and from youth a student of things rather than of books, he followed up five years of practical labor in one of the Hull shipyards with such engineering triumphs as have made his name honored in India, China and Australia, as well as on the continent of Europe and in this country, which he now calls his own. He has had wide experience and his personal bravery is a by-word among the men who follow him into any work that calls. This is to be taken literally, for Mr. Jacobs is no mere "office engineer," studying blue-

prints and figures; he gets out among his laborers for hours at a time and every day, and his kindness and enthu-slasm have resulted in a small army of

slasm have resulted in a small army of followers, who balk at nothing when he says go ahead.

His present task of tunneling beneath New York's North river will he, when finished, the most remarkable of the world's underground ways. All that "Charley" Jacobs has to say about it, however, is:
"Hendrik Hudson was the first white

"Hendrik Hudson was the first white man to go over the river, and Jacobs is going to be the first white man to go) under it."

#### The Mikado at Home

The Japanese commanders, reporting one victory after another, ascribe their successes to "the virtue of the Emperor." The sturdy Jap fighters of the files sing heartily the praises of their ruler.

MUTSURITO, THE MIKADO OF JAPAN

And both officers and privates are abso-

And both officers and privates are absolutely sincere in their expressions. What sort of man can this Mikado be?
Mutsuhito, who rules in victorious little Nippon, is an undersized man of fifty-three years—thirty-eight of them on the throne—and is father of five children and grandfather to two others. He governs a group of islands covering 161,225 square miles (a territory about the size of Arizona and Colorado combined), in which dwell 44,700,000 and more people, and for this he receives an annual "salary" of \$1.500,000—but all these facts are not so indicative of the man whom his people so love as are the more characteristic little details less often put into print.

man whom his people so love as are the more characteristic little details less often put into print.

In the first place he is the embodiment of m thod and democracy. His day is divided and subdivided for all duties which Mutsuhito cares to see to. He rises at seven, sits at breakfast just fifteen minutes, then spends an hour over mail and dispatches, and so it goes till bedtime again, which falls at 10:30 to the wink. All is done with perfect freedom from ceremony; no American President could be more unassuming of the outward forms of rank than this monarch of the east. He is always studying, too, with tutors in politics or law, geography or history, literature or the languages, and (above all) poetry.

Mutsuhito is the most poetic sovereign in the world. Scarce an evening passes that he does not compose some of those odd little couplets called "Wa-Ka," usually passing them over for inspection and criticism to the poet and professor, Takasaki, who has held the post of literary adviser to this imperial verse maker for thirteen years. On the authority of this gentleman, the Mikado has turned out some 37.000 highly creditable "pieces" up to date.

#### An Eleven-Year-Old Genius

He looks quite like any other small boy of eleven years—brown eyes, curly brown hair, blue, sailor knickerbocker suit and all—but his name is Franz von Vecsey, and that, to all Europe and

FRANS VON VECSEY

America, stands for one of the most remarkable musicians who ever put bow to violin. He is a Hungarian by birth, but the whole world of music to-day claims him as its own.

Franz's father was a violinist, too.

# A FRENCH FROG AND AMERICAN EAGLE

AN ENGLISH SCHOOL STORY—By E. S. TYLEE

BEGUN IN MARCH

CHAPTER XI. AN INVITATION.

AN INVITATION.

WE HURRIED young Pickens back to the school as quickly as possible, and gave him in charge of the matron, Mrs. Mole, who was full of denunciations of our wickedness in allowing him to fall into the water; which, under the circumstances, was pretty good. The interesting victim was put to bed in the infirmary and dosed with some hot drink preserved by Mrs. Mole for such cases. Pizarro seemed none the worse for his immersion, in fact he distinctly scored by it, getting a day or distinctly scored by it, getting a day or two's holiday with all the indulgences of invalidism and none of its discom-

forts.

The matron was very anxious to do as much for Briant, but he laughed at her luguhrlous prophecies, and after changing his clothes appeared as usual at tea. It was more difficult to induce Carclough to change. He was so strong that nothing seemed able to hurt him; his tie had lost its color in the water and he wanted to content himself with changing that. Mrs. Mole, however, settled him in no time.

The real excitement came on the following Monday when Mr. Pickens arrived, sent post-haste from Bristol by momma who indeed would have come herself, if she had not just then been prostrate with an attack of her chronic neuralgia. He found Washington Pizarro sitting up and taking nourishment in the most reassuring manner, suffering indeed from nothing more serious than a slight hoarseness, a good excuse for red-currant jelly. His father told him that he was an almighty fraud, and pulled his ears. Before he had been two minutes at the school he had inquired for his son's rescuer, and when René Briant came, no one would have recognized the cool self-possesed Yankee in nized the cool self-possessed Yankee in this excited gentleman, who wrung the French boy's hand so hard and poured forth such a torrent of grateful elo-

quence.

As for Briant, who was generally so collected, he was red and white by turns and forgot all his English in his embarrassment, so that for some time he could only stand and stare at Mr. Pickens as the latter continued to utter the most flattering speeches appealing now and then for confirmation to Carclough and myself. Finally, nothing would content Mr. Pickens, but he must see the place where the accident had occurred; so as soon as we could get leave we started with him for the aqueduct and inspected the scene of our exciting adventure. Mr with him for the aqueduct and inspected the scene of our exciting adventure. Mr Pickens insisted on our describing the whole event in detail, and as far as possible acting the thing over again. He declared that his son should learn to dive at the first opportunity and began again to praise Briant for his bravery. But René had now recovered both his calm and his English, and protested:

"But I have done nossing, absolutely nossing!" he declared. "It was Carclough, see you, who was the brave. He it was who risked his life, for he is ver bad diver, ver bad. As for me that was most easy. I pray you, speak no more of it!"

"Sir, I admire your modesty, though

was most easy. I pray you, speak no more of it!"

"Sir, I admire your modesty, though you carry it to an extreme!" cried Mr. Pickens: "But my Washington owes you his life, and I am not going to let him forget it. As for his momina, you will hear what she has to say to you when I make you known to her. For of course you will come and spend your next vacation with us. That I regard as a settled thing."

"But I do not know," began Briant. Mr. I ickens cut him short:

"Why, Washington's momma would never forgive me if you went anywhere else. Your friend Mordaunt, too," he went on, turning to me. "We shall be just the right party for a cruise in the

as a settled thing."

"But I do not know," began Briant.

"Why, Washington's momma would never forgive me if you went anywhere else. Your friend Mordaunt, too," he yust the right party for a cruise in the focah Eagle. She is a dandy, sir, though I say it. My people took her round the Hebrides last year, and this fall we propose to take a trip to the Irish coast."

He would hear of no demur from René, and as we trotted back to the school he was talking about the plan as eagerly as a hoy. He told us that he invariably suffered from seasickness during the first few days alloat, but seemd to think that this only enhanced the plensure of a cruise. We were all charmed with him, more especially when he began telling us stories of his youthful experiences as a frontiersman in the wold West. They were as interesting as Crickhowell's wildest inventions, and had the additional attraction of truth. Mr. Pickens had taken part in several fierce battles with the Indians, had hunted buffalo on the great rush to Colorado in the early days of the silver mines. All this he described in his own peculiar but expressive American idlom, stopping now and then to point out to his member the Alamo" was the battle cry All this he described in his own peculiar but expressive American idiom, stopping now and then to point out to his amo, they did not die in vain, for "Reson how different his lot was from that member the Alamo" was the battle cry of his own wild and needy boyhood, which cheered the Texans in the battle

dwelling on the singular advantages that Pizarro enjoyed, and urging him to make the best possible use of them. I am not sure that Pizarro agreed with

I am not sure that Pizarro agreed with him.

Doctor Hardress did not raise any serious objections to Mr. Pickens' proposal concerning Briant's holidays. In fact it was in several ways a most convenient one. Briant's only home was with a relation of his mother's who acted as guardian to him in money matters, but who seemed to have little or no affection for his ward, and had already proposed that he should remain at the school during the holidays. His consent to the change of plan was easily obtained; and at the end of the term the three of us started together in the South Wales express to join the Ocean Eagle, which was now lying in Milford Haven ready for her cruise. Mr. Pickens came down on the following day, having been delayed by business at Bristol. He brought with him some preparation which was supposed to be an infallible remedy against seasickness; but fortunately from end to end of our journey the weather was gloriously fine.

#### CHAPTER XII. OUR SUMMER HOLIDAYS.

We had a fair and pleasant run across We had a fair and pleasant run across the Irish Sea and one sunny morning saw the old Head of Kinsale looming above our bows to welcome us to Erin. Then we coasted along the southern shore, admiring the vivid and everlasting verdure of the fields, till entering Cork harbor and passing Spike Island and Haulbowline we came to anchor just outside Queenstown.

The harbor semed to be in great commotion and for some time we were at a loss to understand the reason. Small

the Irish Sea and one sunny morning saw the old Head of Kinsale looming above our bows to welcome us to Erin. Then we coasted along the southern shore, admiring the vivid and everlasting verdure of the fields, till entering Cork harbor and passing Spike Island and Haulbowline we came to anchor just outside Queenstown.

The harbor semed to be in great commotion and for some time we were at a loss to understand the reason. Small boats were busily darting to and fro, and a good-sized crowd had gathered upon Queenstown quays. It was one of the crew of the Ocean Eagle, an old man-o'-war's man, who first divined the cause of the excitement. A large shark had been seen in the harbor and had made a desperate attempt to secure a man who was bathing from a small boat accompanied by only a single friend. The swimmer had escaped with great difficulty, and the baffled monster was now visible at only a few yards distance as though it waited for a chance at another victim.

for Mr. Pickens he threw his lean body backward and hauled like a steer. For some seconds the shark actually held us, but at last numbers prevailed and our prey came in over the side.

Briant, young Washington and my-self were immediately swept out of the way by Winter and the master, for the immediately swept out of the way by Winter and the master, for the deck with the strength of a tiger. Mr. Pickens, incautiously venturing near the deck with the strength of a tiger. Mr. Pickens in country way by Winter and the master, for the deck with the strength of a tiger. Mr. Pickens in country way by Winter and the master, for the deck with the strength of a tiger. Mr. Pickens he the shark actually held us, but at last numbers prevailed and our preview in over the side.

Briant, young Washington and my-leading the find the fast numbers prevailed and our preview in over the side.

Briant, young Washington and way by Winter and the master, for the induced the same hades of the straint, and the master, for the adverted the monster with the straint and the rest of t

"Happen the master would let us have a try at the beast!" said the old navy man, whose name was Winter. Young Washington heard him and hurried impetuously off to his father to ask for the required permission. Mr. Pickens was already loading his Winchester repeating rifle with the intention of taking a shot at the shark, but on hearing his son's request he immediately consented to let Winter try his plan. Accordingly a large piece of fat pork was fetched from the yacht's store and affixed to a hook at the end of a long line. Winter seemed very much disappointed to find that the meat was perfectly fresh and good.

"I do fear as how it bain't tasty enough for he!" remarked the veteran who had evidently been accustomed to carve for sharks of delicate and fastidious appetite. It soon appeared, however that our present must was too

earve for sharks of deficate and fasting-ious appetite. It soon appeared, how-ever, that our present guest was too hungry to discriminate, for hardly had the luscious morsel been dronned over-board when a rush and a jerk at the line gave notice that our bait had been taken

"Pipe all hands to haul in shark!" shouted Winter, giving an imitation of a call well-known but seldom heard on a man-o'-war. A score of sturdy hands were on the line immediately, we boys foremost and tugging for our lives. As for Mr. Pickens he threw his lean body backward and hauled like a steer. For

#### DAVY CROCKETT'S CABIN

By W. O. PAISLEY

A LTHOUGH most of our boys know the story of the Alamo and that Davy Crockett, the famous frontiersman, gave up his life there, fighting for the independence of Texas, few of them know that the ruins of his home are still standing only a few miles from where he died

which followed, and before two months had passed General Santa Anna was cap-tured and the independence of Texas recognized by him on the battlefield of San Jacinto.

seeming to consider the adventure and the catch we had made full compensation for his hurt. Of course it put a stop to all chance of his going ashore that day, and would probably keep him a prisoner on his own yacht for some time to come. But he would not hear of our remaining with him, and told us to be off and enjoy ourselves and send him the best surgeon in Queenstown to see what the damage was.

the best surgeon in Queenstown to see what the damage was.
Winter accompanied us ashore. He knew the place well and was to escort the doctor back to the yacht. We parted from him as soon as we had found the surgeon, and set off to see the sights of Queenstown and Cork, having been previously enjoined to return on board not later than eight o'clock in the evening.

previously enjoined to return on board not later than eight o'clock in the evening.

We did not linger long at Cove, as the Irish cail it, for we were impatient to reach Cork; so after visiting the cathedral and watching from the quay the arrival of a great Atlantic liner, we hurried to the railway station and in a few minutes were speeding along the line which connects Cork with Queenstown. The distance is only a few miles and we soon steamed into Cork Station, which was in a great state of hustle and confusion as a regiment of soldiers were just entraining for foreign service.

"Kyar, your honor!" cried the driver of one of the many jaunting cars which were drawn up in line just outside the station. He was a great rosy-faced Irishman with a particularly goodhumored face, so we immediately jumped up on his vehicle, though Pickens expressed the gloomiest views as to our chances of sticking on.

"Hould toight, sorr!" cried our Jehu, as soon as we had explained that we wished to be driven to Blarney Castle; in a moment we seemed to be in the grasp of a sort of hurricane, which swept up out of the station yard and through the crowd of carts and cabs outside at lightning speed. Every time the car turned a corner our driver uttered a sort of Irish yell, as much for the relief of his ever-flowing spirits as to give warning of our approach. At first we could do nothing but cling to the car and each other for dear life, and had no leisure to look about us; but by degrees we became accustomed to the eccentric motion of our novel conveyance which was for all the world like a square box hung round with teatrays. Try to balance yourself on the rim of the tea-tray set up on end and you have a fair idea of the difficulty of retaining your seat on an Irish jaunting car.

Onward we swept through the streets of Cork with a fine disdain of all pre-

Onward we swept through the streets of Cork with a fine disdain of all precautions. Twice we were nearly cast forth headlong as the car grazed the edge of the curb-stone, and once we caught a basket from an old woman's stall, scattering a shower of plums in all directions. Pickens afterwards sent her five shillings to compensate her for the loss. At every narrow escape we had our driver utered a wild "Whirroo!" and plied his whip as if he were bent on making the next disaster a complete one.

one.

At length the heautiful river valley which we had been following broadened out into a wide plain in the midst of which we saw the grey walls of Castle Blarney rising above their mantle of green leaves. Our car stopped suddenly with such a jerk that we were nearly spilled upon the road; and we got down, feeling considerably relieved that our hurricane ride was over. Young Pickens handed the driver his fare, which the man received with a deprecating grin:

grin:

"Shure, sir, and won't ye remimber the droiver, thin?" he asked.

Pizarro was feeling himself all over to ascertain whether any of his bones were broken. This examination concluded, he felt disposed to score off the simple minded Irishman.

"Certainly!" he said, "I'll remember you in my will, you know."

"Faix, sorr," answered the man, "an' your honor will live a hundred years, and will I be waiting for my money all that toime?"

Pizarro laughed and gave him an extra

Pizarro laughed and gave him an extra

Pizarro laughed and gave him an extra shilling, and we went on into the grounds of the castle. There seemed to be some sort of country fair in progress, for several swings and a merry-goround were on active service, and in one part of the lawn a crowd of people were engaged at kiss-in-the-ring.

Well, we had no end of a good time going over the castle, examining the remains of the ancient dungeons and chasing each other round the battlements. Of course we all duly kissed the Blarney stone, each in turn being held by the other two, for the stone, the touch of which on the lips is supposed to confer the power of persuasive oratory, is set in the outer wall of the castle, and to me, and my ears still singing with the lasting own marks manshin that this circular provisible result. The companion's "Minutemen" Calendar for 1906, in the Comp the power or persuasive oratory, is set in the outer wall of the castle, and to kiss it you need a couple of muscular and obliging friends to hang on to your legs. On the whole it is pleasanter to watch some other fellow doing it.

We spent so much time in the castle

that we were very late in returning to Cork, and nearly missed the last train Cork, and nearly missed the last train to Queenstown. It was quite dark when we got back to the Ocean Eagle, and Mr. Pickens, between the pain from his ankle and anxiety about Pizarro, was in a high state of excitement. Our long day of sight-seeing had thoroughly tired us and after a heavy supper we were not sorry to be ordered to bed. Young Pizarro and myself slept in a little cabin opening from his father's, while Briant's herth was farther aft. I am a sound sleeper in general and seldom dream, but that night I had a most exciting vision. It seemed that the crew of the yacht had mutinied, on account of weevils in the biscuit, and invaded the saloon, under the command of our the saloon, under the command of our school matron, Mrs. Mole, who wore a brace of pistols at her belt and carried brace of pistols at her belt and carried the Jolly Roger. After a gallant resistance we boys and Mr. Pickens were overpowered by numbers and laid bound in a row at the foot of the mainmast. In vain I offered the matron the entire contents of my pockets, consisting of seven pence half-penny in copper and a mechanical pencil-sharpener, if she would spare our lives. She answered sternly that it was not treasure she desired but revenge, and that a boy whose socks were so constantly in need of

Who cuts out and sends this slip at once (or the name of this publication), with \$1.75 for The Youth's Companion for the fifty-two weeks of 1906, will receive The nine weekly issues of The Companion for November

and December, 1905. The Thanksgiving and Christmas Double Numbers.
The Companion's "Minutemen" Calendar for 1906, in twelve colors and gold.

I awoke and found myself sitting up in bed, with all the clothes kicked off me, and my ears still singing with the crack of the pistols. That the latter had been no illusion was immediately evident for our berth seemed filled with smoke, and from Mr. Pickens' adjacent cabin came the sound of hurried footsteps and voices. I was out of bed in a twinkling and rushed into the cabin, where I found Mr. Pickens standing in the middle of the floor in his night-clothes, holding a still smoking revolthe middle of the floor in his night-clothes, holding a still smoking revol-ver in his hand. Plzarro was already halfway up the companion ladder. The crew were evidently alarmed, for there was a noise of bare feet pad-padding along the deck, and presently a hearded face gazed in upon us from above with a look of consternation.

Mr. Pickens laughed when he found himself the centre of our frightened ring, and tossed the revolver away. "Come back, Wash!" he called to his son, "You won't catch the marauder this

son, "You won't catch the marauder this trip, and your momma wouldn't like to see you around in your nightles. Guess it was only a touch of dyspepsia. For a minute I thought I was back in the old frontier days and there was a road agent in the room. Good thing I didn't plug one of you boys by mistake."

So saying he ordered us all back to our berths, resisting his son's suggestion that the vessel should be searched for the intruder if he existed. He laughed when Pizarro urged that he should at any rate be allowed to keep watch for the rest of the night. The only account he could give of the matter was that he had been suddenly aroused from slumber by an impression that somebody or something was in the socks were so constantly in need of ter was that he had been suddenly darning was not fit to live. Upon this aroused from slumber by an impression we resigned ourselves to our fate, and that somebody or something was in the

cabin, had perceived some vague form just stealing out at the door, and had thereupon, with the instinct of an old frontiersman, reached for his revolver and fired pointblank at the object, though apparently without result. He had, with good renson, such an opinion of his own marksmanship that this circumstance confirmed him in the belief that he had merely been visited by some hallucination, due to nightmare, and declined to allow any systematic inquiry, though young Pizarro, his imagination fired by the tales of adventure which were his favorite reading clung to the idea of a midnight assassin, hired perhaps by some of his father's business opponents to rid them of their successful rival. René Briant, it seemed, had slept through all the noise and confusion, and was greatly chaffed by us at breakfast next morning in consequence. For some days afterwards the exciting incident was a frequent theme of conversation (N. B. Magonder, I wrote we talked of nothing else), but as nothing further occurred to cause alarm we all gradually came to the conclusion that Mr. Pickens' theory of the matter was correct.

At the end of the week we weighed the matter was correct.

At the end of the week we weighed anchor and the Ocean Eagle continued her cruise round the coast of Kerry. The rest of our holiday was exceedingly pleasant but too uneventful to be worth

recording.
I am awfully sorry if this chapter am awtuny sorry it this enapter ends too abruptly. Mr. Magonder wanted me to go gassing on about Kil-larney and Connemara and our emotions of awe and admiration on beholding that wild and rocky shore, as he said. He is dead nuts on scenery. I don't mind it myself, much; but I hate long descriptions, and I dure say you are the same.

our new possession, we found that it far exceeded our expectations. We had been looking at a lot of cances and naturally expected ours to resemble, in a way, the ones we had seen, but we found, to our agreeable surprise, that there was no comparison. It was built of cedar planking and covered with canvas, making a smooth surface. It had our club name, "Evanston," painted upon the bow in gold letters, and, as the canoe itself was pointed a most green it showed up very gold letters, and, as the canoe itself was painted a moss green, it showed up very nicely. The dimensions were eighteen feet long, thirty-three inches wide in the middle and tapering to a point at the ends. It was built after a famous the ends. It was built after a famous Indian model plan and would easily carry four and leave plenty of room for the outfit. The outfit consisted of a tent, cooking utensils, clothing, wool and rubber blankets, canned goods, firearms, ammunition, a fishing outfit (which, however, we did not use) and last, but not least, some money.

Although it was late in the evening when we had finished inspecting our outfit and canoe, we determined to try it and see if it would paddle as well as it looked. We carried the canoe down to Lake Michigan, about a quarter of a mile distant, and, as the lake was very rough,

Lake Michigan, about a quarter of a mile distant, and, as the lake was very rough, launched it from the boat club harbor. We paddled up to the Life Saving station and landed there to rest before starting back. On the return trip we forgot about the waves, and, heading for the south, the first thing we knew we got a large wave broadside and over we went. The water had not been heated yet and was several degrees cooler than was pleasant. Luckily we were in water not over our heads and we emptied the canoe, and, crawling in over the ends, headed out into the lake so we water not over our heads and we emptied the canoe, and, crawling in over the ends, headed out into the lake so we could come in with the waves, but made a mistake and landed at Greenwood street pier, about half way between the Life Saving station and the boat club. We didn't feel like going out and risking another "dip" and the wind blowing against our wet clothes had already chilled us, so we decided to carry the canoe from there instead. But, oh! how much heavier it was than when we carried it down; we stopped at every corner to rest, and, when we finally did get back to our club house, we all hustled for home to get out of our wet clothes. When we got home the folks were not going to let us in, we looked like drowned tramps—and felt rather like it, too. Liste and I had on blue army shirts and the color decided to have a race. It ran so fast we couldn't keep up with it and we were covered from top to bottom with purple dye. However, the initiation ducking we received was the only time in our whole trip we had an upset—and to tell the truth, we were not anxious for any more unless the water was heated a little for our special benefit.

We spent all of our spare time at the

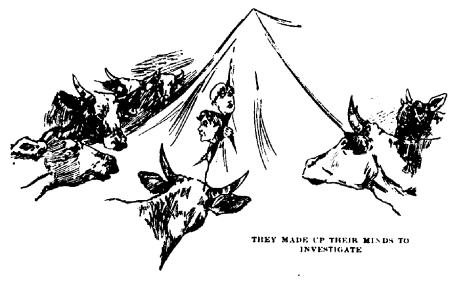

trip we had an upset—and to tell the truth, we were not anxious for any more unless the water was heated a little for our special benefit.

We spent all of our spare time at the lake getting used to the canoe, and, when we were ready to start, we could get along at a pretty good rate. Tuesday night, July 5th, about half past eleven, the expressman came, and after each out to the cane when it hit the stone wall came back again and meeting the one from the other wide. only night. July ath, about half past eleven, the expressman came, and after loading our outfit on the wagon and saying good-bye to our parents and friends, we started for the city. On the way down it started to rain; we all crawled underneath the boat and went to see us bobbing up and down like a crawled underneath the boat and went to see us bobbing up and down like a cork, but since he had waited so long he couldn't wake us up enough to get clear in and he had to leave his feet hang out in the cold, cold rain. About half past two I was awakened by the jolting of the wagon and found that we were at the Wells street bridge and in a few minutes we reached the fire boat station. As it was pouring, we threw a weight to keep the horse from running away and made a run ourselves for the subway, so we could keep dry. A policeman wanted to know what we were doing there: we told him and after a away and made a run ourselves for the subway, so we could keep dry. A policeman wanted to know what we were doing there; we told him and after a short talk he started on his beat again after wishing us good luck. About three o'clock the rain slowed up a little and we carried our worth showed up a grood The fireman on watch showed us a good place to load the canoe, and after a lut of trouble, as it was so dark we could hardly see more than a couple of feet ahead and a canoe is not the steadlest thing to walk about in with your arms full of hundles, we got it loaded to our satisfaction and after lighting our headilight and taking our places we shoved off. The firemen wished us good luck and in another minute we were headed down the river. Passing under the Wells street bridge, we turned down the south branch of the river, feeling kind of funny, I admit, but we could not turn back now. As we were passing under the Halstead street bridge we broke our pennant staff in two and the staff fell in The fireman on watch showed us a good

took the way they pointed out and in a few minutes lost sight of them. As we were going through the stock yards district we were met with an assortment of odors that was alarming. We knew that the packers made use of most everything down there, but felt sure that if they would only bottle up some of those odors and export them to Japan, the Japs, by using several different varietles at once, might be able to overcome the Russians in Manchuria providing, of course, they were not overcome themselves, and be able to capture it without any loss of them own men. The river at this point is about as broad as the Illinois and Michigan canal at Lockport. As we entered the drainage canal we noticed large piles of dirt along both sides of the canal as far as we could see. We met a string of canal boats loaded with stone bound for Chicago, but they did not bother us as they were going too slow to throw any swell. So taking our time and wasting a good deal of it, we arrived at Willow Springs, twenty-two miles from Chicago, in time for breakfast. After we had dined we secured some more information we were

make a carry of about a quarter of a mile here on account of the river Durage, which divides the canal into two parts. The level of the canal into the parts, the level of the canal. Thanking the lockkeeper for his advice, and with him still trying to persuauous not to continue, telling us that a couple of young boys had been drowned in the river at Morris a few days before, we stuck to our plan of going to see for ourselves and went ahead with his struy wishness of good luck. About four-thirty we arrived at Marseilles and with the lockkeeper's permission we slept in a house beside the locks. As we were cooking supper, a rainstorm came up and by the time we had find the proper good were an anything at the proper word to use for food when you are out camp, and buying the things we wanted for supper, we carried down enough wood, and buying the things we wanted for supper, we carried down enough two, and buying the things we wanted for supper, we carried down enough word to use for food when you are out camp, in grub—I believe that is the proper word to use for food when you are out camp; in g. It tasted better than anything I sever atc, I can tell you. We had quit four follows for food when you are out camp; in g. It tasted better than anything I sever atc, I can tell you. We had quit four follows for food when you are out camp; in g. It tasted better than anything I sever atc, I can tell you. We had quit four follows for food when you are out camp; in g. It tasted better than anything I sever atc, I can tell you. We had quit four follows for food when you are out camp; in g. It tasted better than anything I sever atc, I can tell you. We had put four the follows and they had to turn the bridge for us they wondered what asylum we hades a caped from. About this time the camal put the stock yards out of busing proposition. Say, the odor from that canal put the stock yards out of busing proposition. Say W FOUR BOYS, Lisie Kinkald, Norman Henning, Morris Beck and and put it out to dry—when the sun man Henning, Morris Beck and and put it out to dry—when the sun should come up, if it ever did—and then it was night or the next morning. However since Christmas, and on May 28 were and Michigan canal and the river we to to exact, Maine, to complete it, when the looked around for someone from whom the grocer gave us a lot of large boxes, we would be ready to start on what was to us the most interesting, exciting, and altogether wonderful event which had so far come into the even tenor of our lives.

After numberless trips to the freight office, on June 1st, about 4 o'clock, we would never called up and given the information that the canoe had just arrived. You can bet we did rustle to get it! Two of the boys went over to the freight house and carried it down to our club house and carried it down to our club house our new possession, we found that it far exceeded our expectations. We had been done and put it out to dry—when the sun we awakened and did not know whether we awakened and did not know whether we awakened and did not know whether sun it was night or the next morning. However, the sun it odry—when the sun it was night or the next morning. However, the sun and put us straight and after than five we read and the river we was an ight or the next morning. However, the sun and the river we we awakened and did not know whether did and the verying to get a fire started and falling, only and the river we was a wing to go and the grocer gave us a lot of large boxes, we could get the needed information. And buying the things we wanted for the criver we saw supper, we carried down enough wood to last us over night. After we had so far come into the even tenor of our laws to go. They grow—I believe that is the proper word wanted to know where we were going; to use for food when you are out campion that the canoe had just arrived. You and the river we were going; to use for food when you. We had quite there, our boat was son, who had stayed with us all night, made us a present of the biggest, juiciest steak, and sometimes when I am dreaming I can just see ourselves eating that steak; it lasted about as long as a snowball in a furnace. We did not feel like starting right away—I don't know why, perhaps, but I am sure it wasn't because we ate so much—so we hung around town until about ten o'clock. Then we carried our canoe around the locks until we got to Marseilles and then we got tired of loading and unloading it every time, so we paid to go the other twenty-two miles. Jollet is about eight miles below Lockport, and we got there about noon. We came very near ending our trip there by going over the dam. We were on the east side of the river and heard the roar of the dam, we also notleed how much swifter the current was, so paddled across and just made the locks and caught a rope they threw to us in time to save ourselves from gotwenty-two miles from Chicago, in time for breakfast. After we had dired we were on the east side of the river and secured some more information we were in need of and then went ahead. At this point the rock part of the canal starts, and as it is about sixty feet wide and a stone wall goes straight up from the surface of the water, you can imagine the sort of a place we were in. At intervals of about 160 yards there are iron ladders reaching down to the water, you fall over into the water, you fall over into the water you can swim to one of the ladders and a bundle to it he pulled it up, and then

port. It was a few minutes to twelve when we arrived at the controlling works at the end of the canal, and gave a vote of thanks for having seen the last of the stone piles; but after we had seen the Illinois and Michigan we wished heartily that there was another drainage canal to travel on instead of this canal.

when the canoe was empty we tied a when the canoe was empty we tied a rope to each end and pulled it right up the side to the top. There were a lot of men around and they carried our stuff around the locks, the policeman watching to see that they didn't take anything. They let it down in the river and then let the luggage down, and after we had thanked them and got ourselves had thanked them and got ourselves scated, the crowd wished us good luck and we pushed off. As there was a good current here we soon lost sight of them by passing around a bend in the river. At Lockport they told us that three canoes containing two fellows each from Morgan Park. Illinois, were three days ahead of us, and one containing two fellows was nine days ahead. We made upour minds to catch these fellows and beat them to St. Louis, so as to have the honor of being the first to complete the trip in a canoe from Chicago to St. the trip in a canoe from Chicago to St. Louis. We had lunch that day in a field and played bail and consulted the map. and about two o'clock we loaded and did some very tall paddling before supper

That night we camped in a field with a lot of steers for company. In the norning the steers made up their minds to investigate and they made a complete circle around the tent where we were. We tried to scare them away, but they would only go a short distance and then would come racing back and try to fall would come racing back and try to fall all over the tent before we could head them off. About ten o'clock they refired to get some feed and we got a pick-up breakfast, loaded up the canoe and startbreakfast, loaded up the canoe and started with the intention of passing the boys from Morgan Park; but we had delayed too long with our friends 'the steers and at locks No. 18 the lockkeeper tried to scare us by telling us that the Illinois river was running "like a man with a bear after him." (I am quoting the lockkeeper) and that there were so many steamboats that we would have to go that mile and when we finally dia nothing else to do but dodge them. How-land, the cannoe was half filled with ever, we told him that we would go ahead water. Another half hour of this would and see for ourselves and if it was as he said we would decide on some other way to get to St. Louis. We had to the first wave all right, but they came

make a carry of about a quarter of a mile here on account of the river Du-

keeper's story we ought to have reached St. Louis in ten minutes, but all the current we could discover seemed to be running the other way and inquiring about the steamboats, they told us there were three a week. Either the lock-keeper was drunk or talking through his hat, we did not know which. Stopping at Peru for provisions and water, the man in charge of the pumping station knew several of our friends back in Evanston and he gave us all the inforpling at Peru for provisions and water, the man in charge of the pumping station knew several of our friends back in Evanston and he gave us all the information he could about the steambouts. There was one due that night about eight o'clock and he advised us to look out for it, as we might get run down. At first the people of LaSalle and Peru thought that we belonged to the Morgan Park boys crowd and wanted to know where the other boys were. We left Peru about four o'clock and paddied down four miles below Spring Valley, and as it was rather rough and the place looked rather nice we decided to camp, and when we had the tent pitched we found we were in a swamp. The only way we could get to the coal mine, where we got our water, was by taking the cance. Lisle and I went after the water. When we had returned and were talking with a fisherman, we heard a whistle and the steamer Vernon Swain came around the steamer Vernon Swain came around the steamer line water. We wondered why, but soon found out, for as the steamer came near all the water was sucked out for about four or five feet and then as it passed came back ir, two big waves and made things rather lively around there for a while. Down at the camp it came to within five inches of the tent and the boys thought there was a flood. That night we went swhming and as the water was warm, had a very picasant time. The next day was Sunday, but we got an early start. About two miles helow camp we passed a bunch of Poles and dagoes naving a good time; they wanted us to come in and have something to drank with them, but we knew that we would not get out with what we went in with, so we did not answer them, but padded hard and soon were out of sight. At Henry we but we knew that we would not get out with what we went in with, so we did not answer them, but paddled hard and soon were out of sight. At Henry we almost went over the dam before we knew it; there is only cighteen inches fall here and we did not notice it much. We had dinner there and stayed until about three o'clock, when we decided to start and see if we could make Lacon. The man in charge of the Fulton pontoon bridge told us that we could camp on the bridge and permitted us to cook our supper in the boiler room. During supper we had quite an interested auditive and we made up our minds that if we ever got a vacation, we would got to Lacon. I guess there are more girls. to Lacon good looking ones, in that town than in any other town in the United States. If you don't think so, just trot around there next summer and see for yourself. That night we had a swim in the river, and next morning at five o'clock we started. We wanted to stay a couple of weeks, but didn't have the nerve. The river below Lacon widens out from about three-quarters to a mile and a half. The land is so low that it covers quite a large extent, and as the wind was from large extent, and as the wind was from the south it kicked up some pretty nasty waves. We stopped at Chillicothe for breakfast and to let the Vernon Swain go down ahead of us, but she did not come; instead, the Gray Eagle came up the river. As Morris had finished digging potatoes out of a farmer's field—the farmer was cutting grain about five feet away—we started, thinking we the farmer was cutting grain about five feet away—we started, thinking we could keep ahead of the Vernon Swain. We stopped at Mossville and got some hread (there are no stores, except a saloon). While here the Vernon Swain came down and we thought we would make Peoria by four or five that even ing. After leaving Mossville the river makes a broad turn to the east; it is sowide here that it is called "Peoria Lake" It is eight miles from the beach to Mossville and about a mile and a half from Mossville to Spring Bay. We crossed from Mossville to Spring Bay and ed from Mossville to Spring Bay and then headed struight across for the beach. We were about a mile from the beach when it commenced to blow a reg-ular gale. It took us about two hours to go that mile and when we finally dia

so fast that the next four or five would come right in, not waiting to be invited. We were very glad to get on dry land and the fellows at the beach helprd us to pitch our tent. We had just got it up when a real storm came and very nearly blew the tent into the lake. The wind would come rushing down the bluff and shoot over the river so hard that it flattened out the waves. If we had been out in the canoe we would never have reached the shore. In the evening it cleared up and the fellows at the beach tried the canoe and said that it beat any thing they had ever seen, elther in looks or speed. We spent most of the evening visiting the people at the beach and in the houseboats, going to bed about five o'clock. We left the beach about five o'clock and passed Peoria, six miles south, at five-thirty. The distilleries at this point empty their refuse into the river and the smell of whisky is very strong. We malled some letters in town and got a jug full of water. Stopping at Pekin for breakfast, we went on to Havanna, but breaking a paddle near Liverpool, we had to go on with only three paddles from there to Havanna, making the twenty miles in two hours and five minutes. Arriving at Havanna, we landed near some boat houses; among them was one which belonged to the mayor of the town. As he said it was them was one which belonged to the mayor of the town. As he said it was safe to leave our things, we cooked supper and went uptown. On Main street we counted twenty-four saloons and the population of the town is thirty-five hundred. If we had been drinkers we could have drowned ourselves in liquor, as everyone wanted us to have a drink. We took the broken puddle to a man who fixed it in two and one-half days and wanted to charge accordingly, but as we objected he came down to a reasonable figure. When we got back to camp that night we were too tired to pitch the tent, so we rolled up in our woolen blankets and then our rubber blankets and were soon fast asleep. We slept the next two nights in a launch. The next morning we went in swimming and Morris threw his trousers on top of the cabin and after our swim we went inside and played cards. At noon Morris, who was to go uptown for "grub," felt to see if he had his money and remembered that he had left it outside and went to get it, but the trousers were gone and with them the money. We hunted the river over all day, but no trousers were to be found. We then decided to cut down expenses by traveling faster. On the evening of July 15th, after a hard day's work, we slept, or rather tried to sleep, at Meridona. This is a fine place for mosquitoes. They would not leave us alone for a minute. We slept in a government launch, but it was so hot we had to get up and walk up and down the beach. This, however, brought little relief, so finally we rolled up, head and all, in our blankets and thus managed to get a little rest.

The next day we had about a bushel of red bumps scattered over us that made us feel anything but comfortable. The following day was about the same as the one before, working bard and losing our pennant, which, however, we did not miss until we stopped at Hardin. At six o'clock we had a light lunch, but hurried on as we were determined to make Grafton that inght. Just as we could see the lights of Grafton ahead of us, we heard the steamer Gray Eagle whi

dinner about four miles below Alton, near the mouth of the Missouri river. When we hit the current from the Missouri we did not kick about its speed, but on the contrary it went too fast for a while when we got the full force of the current. Just before we got to St. Louis we stopped on one of the dikes and took a rest. We also went over the "Chain of Rocks," though we did not know it at the time and didn't care. We paddled down to the Merchants' bridge and landed about two 'clock at the West End rowing club. We pulled out, and after talking a short time voted we had a fine time and were glad that we were the first to complete the trip by canoe from Chicago.

We hunted up our relatives and gave an account of ourselves. As Morris said, "it was all right but for the fact that we had too great a variety of food—bread for breakfast, plain; bread and butter for dinner, and bread, butter and sugar for supper.

#### HOW A BOY SAVED BOSTON

(Continued from page 369.)

away and hide securely in one of the many nooks on the hill.

Not for long did he dally with the suggestion. He soon thrust it away

suggestion. He soon thrust it away sternly.
"Exra," he said, calmly, "you creep out and hide up back of High Rock. No one can see you there or think of you being there. Quick, now!"

The little lad obeyed. He was soon snugly ensconced behind the big boulder, but after a few moments scared hiding, curiosity compelled him to cautiously peek and see what Dave might be doing.

Dave's quick wit had served him a good turn. It was to be the means of saving a town from destruction and, perhaps, many of its people from death and imprisonment. Remembering Ezra's prank and recognizing its possibilities, David had seized the clam digger, placed it, musket like on his shoulder, and was composedly marching sentinel-like on the banks where they had merrily played an hour before. Even to Ezra's eyes he presented a martial appearance. No wonder, then, that to the distant and suspicious gaze of the crew of the English vessel the supposedly safe shore depril and opposition. They had heard that Dorchester Bay was absolutely open and unguarded, yet here, at the most accessible point, was a fort apparently manned and ready for a fray.

One boatload of soldiers had already started, but in obedience to a signal from the vessel had halted, awaiting further

the vessel had halted, awaiting further

the vessel had halted, awaiting further commands.

David felt afraid that his youthfulness or the harmlessness of his weapon might be detected. They might find out the truth. As they had seen him, he concluded that now the wisest plan was to also see them and then disappear from view. So, as he paced around the old green bank again, he halted when facing the vessel and bending downward, appeared to be answering or addressing someone inside. Then he leaped down behind the sheltering sod and peered carefully out to see what effect his ruse might have had. If it had been useless he meant to step boldly out into the open and make a break for the town. Savin Hill in those days was over a mile from the nearest farm and that was his father's homestead. He thought he could get there in time to thought he could get there in time to warn the people so that, at any rate, they could drive their cattle into the woods and secrete their smaller valu-

ables.

There was no need, however. The stratagem was a complete success. After a few moments' indecision, the boat returned to the ship, the men climbed aboard, and in the course of an hour—a iong and wearisome hour to the boys—it started seaward again.

The tired but happy boys ran home,

they were forgiven for their forgetfulness.

That very night, Elder Minot called a meeting of the men of the town, at which David and Ezra were the sleepy but happy heroes. When the narrow escape of the town was realized, David was praised to an extent which his father feared would make him vain. It did not, however, and he generously gave much credit to his little companion, for, he said, if it hadn't been for Ezra's fooling and playing soldler he'd never have thought of the plan. Then, he continued, Ezra might have spoiled it all by crying or refusing to hide, but being a brave little man, he helped.

While Ezra, not to be outdone, related again and again to the envious boys who had been so very unfortunate as to have heen on Boston Common all through this exciting experience, the dazzling details. "Why," he said, "Dave looked just like a soldier. I most thought he was one, myself. I'd have heen sure it was a fort and he a soldier."

The boys all trooped down to Savin Hill and tried the feat over and over.

The boys all trooped down to Savin Hill and tried the feat over and over, until a real guard was placed there and maintained until all danger of invasion

maintained until all danger of invasion had passed.
"Supposing you'd gone in town, David," said his mother, quietly.
"Supposing I had." echoed David; "just think if I had. We might not have had any home now, nor any father, either," he added, "because he'd have fought them if they'd come here and he might have been killed."

And this is how David came to change

Correspondence Club.

#### With the Boys

Leon B. Hills, of Newport, Wash., has a unique pet. It is a fawn, which on August 1st., the day he sent the picture which you see, was ten weeks old. One day when two boys were in the woods with their dog they came upon this fawn; the dog chased it into the water and the boys waded in and got it. It was so small when captured it could easily be carried in the arms. Leon has a pen in one corner of the yard, where the fawn is

LEON B. HILLS AND BIS PETS

And this is how David came to change his opinion as to being abused.

A NEW CLUB: Send us 50 cents and join The American Boy Musical

Rept. Our young friend is also very fond of the dog, which appears in the picture. He is an intelligent dog, doing many tricks, such as shutting the door, playing opossum, catching a ball thrown to him, swimming for a stick, fetching his master's slippers, and even playing basehall and football. The dog is 2½ years old and is very fond of the fawn.

All three are very great friends, as the picture indicates.

Munroe Nicholas of New York City sends us a photograph taken with his new camera. The mere fact that he has taken a picture and sent it to us would hardly he worthy of The mere fact that he has taken a picture and sent it to us would hardly he worthy of mention, perhaps, were it not for the fact that his camera came to him by way of a reward for his high grade in his class at school. His father promised that if he would do well in school he would give him a camera when school closed in June. The 30th day of June the young man was able to report to his father an average grade of 97 per cent, the highest in his class. His father, true to his promise, immediately bought him a ten dollar camera, which takes pictures  $3\frac{1}{3}\times 1\frac{1}{4}$ . In addition to this his father bought him a developing and printing apparatus. The picture he sends is the picture of his mother, and is remarkably well taken for the length of time he has been practicing. The young man has aspirations toward a steam launch, and is saving up his money to buy one "next year." He is already the proud possessor of a rowboat.

boat.

We are not surprised that Munroe's father and mother say THE AMERICAN BOY is the best boys' paper. Judging from the father's action in rewarding his boy for good work in school, we have great confidence in the judgment of that father.

Clarence Stanley, Tillamook, Ore., sends to the Editor's son, some samples of moss found on the tide-land near Tillamook. The dried moss looks more like fine lace than like moss.

A great animal story, a great football story, and one of our editor's "life stories" next month

BOYS' MILITARY BRIGADE, CHAGRIN FALLS, O.

Chagrin Falls. Ohio, has a most unique and interesting military brigade of boys which now numbers twenty-six and is under the leadership of Captain Harold March, a graduate of the Culver Military Academy. It is under the auspices and receives its support from the First Congregational church of Chagrin Falls. Every Tuesday the brigade has either a drill or a business meeting. The drills last two hours. All the officers watch the drilling carefully to see that every part of it is carried out just right. There is one lieutenant, three sergeants and two corporals. The boys wear uniforms consisting of regulation leggins, thaki pants, blue shirts, and fatigue field hats with cross arms. The gun they carry is the carbine that was used in the army about the year 1876. It weighs about seven pounds. When they go into camp everything is conducted as nearly in accordance with the U.S. army regulations as possible. The brigade takes part in all public processions at Chagrin Falls.

BOY HAVE THE SHOULD AN ALLOWANCE?

One method is to hand a five-dollar bill to a child in much the same fashion as you would toss a five-cent piece into a street beggar's tin cup. This method is strongly recommended to all parents who hold that children should ever be filled with the spirit of humility, a term synonymous with humiliation with them.

them.

Another method is to make the child feel that he is receiving a gift, and the hand which gives it is able to give many more such gifts without the least bit of trouble. This method is recommended

DOLING OUT FIVE CENTS

POR MYSELF, I solved the problem while still an awkward shaver running barefoot about the town streets. There was an alluring popcorn and candy, store on the main street, and there was a still more alluring little maiden across the street who ing little maiden across the street who simply doted on candy and hot, buttered popcorn. I approached my father for the wherewithal to purchase just a taste of corn and candy. The first time my touch was successful, and the second and the third, and then appeared the parental frown.

"Just this once." I pleaded. "Just this once," I pleaded.
"No," was the reply.
"Please, pa."
Silence

Silence.

"Please, pa—aw, please."
No answer.
"Now, pa, please."
Still silence.
"Pa, won't you? Say, pa—"
"No!"

"No!"
It was a reverberating no, that made the hot pavement under my feet tremble. So off I scooted home to nurse my woes. But, as chance would have it, when I entered the sitting room, there lay a shining quarter upon the mantlepiece. I took it. A little while later I was taking popcorn and candy to the idol of my heart. Still a little later I

was taking a licking in an upper chamber with as good grace as it was in my power to muster.

It was at this time that I conceived

a plan of action for the dim future when I should have boys and girls of my own. I informed my father of it when he had finished dusting my jacket to his entire satisfaction.

tire satisfaction.

"Glad you give me the lickin'," I said,
"'cause now I'll give my kids money
for keeps every once in a while when
I grow up, and they won't have to take
money they see layin' around that don't
appear to be nobody's to buy things
with."

I forbear to tell what followed this bit of information. Suffice it is to say that I am more than ever convinced that to spare the allowance is to warp

the child financially.

There is a man I know who poohpoohed at the idea of giving his son and daughter each an allowance. Both saw the color of money only when their sentences were persuasive enough to cause their parent to reach down into his cavernous right hand trousers pocket and dole out a quarter or a dime with the air of a man who owned all creation and had all creation's creatures depend-

and had all creation's creatures dependent upon him.

The boy went into business at the age of 18. He got \$7 a week and lived at home, free of cost. I'll say that much for his parent. But the boy was always "broke." And bills were always pursuing him. You see, when he did get hold of a little money he did not know how to handle it, for he had yet to find out the way.

how to handle it, for he had yet to find out the way.
You can't expect a boy to know what to do with a dollar at 18 or 21, if he has not been allowed to experiment with it while in his childhood days. Practice makes perfect in the art of manipulating money, as in all things else; and it occurs to me that the number of youthful spendthrifts would be noticeably less, and savings bank accounts considerably increased, if parents generally less, and savings bank accounts considerably increased, if parents generally recognized this fact, and let primary-class John, and grammar-grade James, and high-school Jake struggle with the problem of making a stipulated sum of money last a week or a month.

Of course, there are different ways of giving a child an allowance.

to all parents who believe that children

to all parents who believe that children should be brought up in the belief that they are the progeny of millionaires. A third, and saner, method is to tell a child that ten or fifty cents a wek, or ten dollars a month, is his, provided he does something to earn the money. The desire to be up and winning money is inherent in us all; it should be stimulated in us all; and the sooner a child is impressed with the idea that he must earn his way through the world, the less liability there is that he will prove a failure at the job when it is high time for him to face the world in deadly earnest.

Susie, you dust the sitting room every "Susie, you dust the sitting room every morning," said a mother to her eight-year-old, "and every week I'll give you fifteen cents as pay for the work. "Grace," to her twelve-year-old, "you dust downstairs and I'll give you fifty cents a week; and Jack," to her son of ten, "keep the yard clean, and you'll get thirty-five cents avery Suturday night

ten, "keep the yard clean, and you'll get thirty-five cents every Saturday night.

A man may cut an impressive figure doling out five and ten-cent pieces with a lordly air to his petitioning offspring. But he is sowing the wind of niggard-liness and will reap the whirlwind in their spendthrift habits later on.

He is a wise father who instructs his child in the power of the dollar, but he is still wiser who lets his child find it all out for himself. Experience, not words, is the great teacher in matters financial, as in all things else. And think of the wholesome morals that can be drawn for the benefit of youth from the dollar experimentally spent—one of which is, if you would have a dollar when you want it, hushand the dollars when you have them in pocket.

The sa means of variety in working it is often advisable to break the monotony of setting up the "body type," or that used for the designing and composition of "headlines." or titles, to the various articles already "set up."

A Typewritten Journal and Its Contents

A printing press is by no means a necessity for the publication of an amateur paper. This fact has been proved conclusively by Keith F. Warren's bright and breezy journal, The West Newton Gazette, which is first typewritten and then mimeographed. What one boy can do others can follow. The resources of amateur publishing are open to lads who have a dollar when you want it, hushand the dollars when you have them in pocket.

It is now in the middle of the third volume, which fact is a tribute to the energy and per-

EARNING HIS MONBY

There is no royal road to learning of any sort, but some roads are shorter and more easily traveled than others. The shortest possible road to knowledge of the art of husbanding the almighty American dollar is the allowance, be it ever so picayune.

"Tommy," asked the teacher of a small pupil, how many days are there in a year?"

"Three hundred and sixty-five and a fourth," answered Tommy. "How can there be a fourth of a day?" asked the teacher.

"Oh," replied the little fellow, "that's the Fourth of July!"

#### Composition or "Setting Up"

The directions for use which accompany printing presses are usually so condensed as to require supplementing. A number of practical points are touched upon in this article.

Preliminary to actual printing comes "setting up" the type. The former operation is called "press work" and the latter is known as "composition."

First of all the young printer should care-

Preliminary to actual printing comes "setting up" the type. The former operation is called "press work" and the latter is known as "composition."

First of all the young printer should carefully arrange his type in the "type case," a box with small compartments designed to hold the various letters. A mix-up of type is called "p!" by printers, and pains must be taken to prevent any such catastrophe. Care is also necessary to get the letters and figures in the proper boxes. The most difficult characters to classify heing d, b, p and q. The type should be handled in such a way that the "faces" of the letters will not be injured by coming in contact with the sides of the wooden case. In "distributing" or placing the type back into the right compartments after a "joh" has been finished, these same precautions against mixing up or battering the type is "set up" by means of the "composing stick." which is a small instrument usually made of iron, with a flat base piece, a solid vertical piece at one end and a move ble piece at the other adjustable to the desired column width. The type is set from the case in the stick, line by line. After setting the composing stick to the length of the line desired for the work in hand, take it firmly in the left hand. The letters are then picked up from the type case and placed in the stick, with the "nick" which is cut in the side of every type facing outward. As soon as the line is full insert enough spaces to tighten it sufficiently to hold of its own force. It may be necessary to take out one or two spaces and substitute others of thinner proportions. It is wise not to space too tightly. Care should be taken to see that the lines are uniform in length. Neat work requires attention to hyphenation. Words are not to be broken indiscriminately, but only at the syllable. A good pocket dictionary is an essential in every printing office both for hyphenation and for spelling.

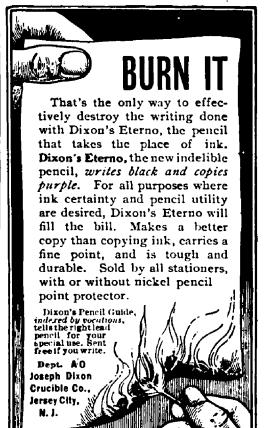

When one line of type is in position place beneath it a "rule"—which is a strip of thin metal cut to the size o

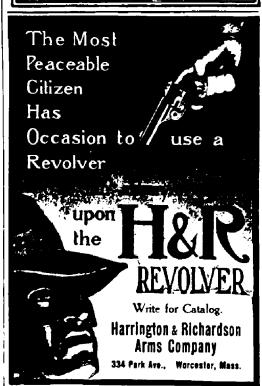

A Typewritten Journal and Its Contents

A printing press is by no means a necessity for the publication of an amateur paper. This fact has been proved conclusively by Keith F. Warren's bright and breezy journal. The West Newton Gazette, which is first typewritten and then mimeographed. What one boy can do others can follow. The resources of amateur publishing are open to lads who have access to a typewriter. The West Newton Gazette consists of four typewritten pages and contains local, editorial and news sections. It is now in the middle of the third volume, which fact is a tribute to the energy and perseverance of its young printer and editor. Although now issued monthly the Gazette was started as a weekly. Keith hopes sometime to have a printing press, with which he can have a printed magazine. Keith has the love for journalism in his blood, for his father is in the newspaper business. Since his seventh year Keith has kept a diary of current events. He was born December 24, 1892, and is thus in his thirteenth year. He is now attending the Pierce Grammar School of West Newton. Mass., where he ranks high as a scholar. Next year he will go to Andover Academy to prepare for entering Yale University. In addition to his hewspaper, which has a good circulation at 5c per copy in Newton, Keith is engaged on a story entitled "Taki Hokkido," which details the American school life of a Japanese boy.

KEITH PAULENER WARREN

# In the Line

By A. T. DUDLEY

Author of

Following the Ball Making the Nine

Illustrated \$1.25

As "Following the Ball" gave the for-tunes of a player in the back field in connection with his general school life, so "In the Line" tells how a stalwart young student won his position at guard and developed manliness at the same time. The fine points of the game are brought out as only an expert can, and the story is a good and jolly one.

Mention The American Boy When Answer-

ing Advertisements

TWO YOUNGSTERS, IN WHOM THE EDITOR OF THE AMERICAN BOY IS GREATLY INTERESTED, AND THEIR PONY, "SPARE", AT THEIR SUMMER HOME ON GROSSE ILE. MICHIGAN

Oddly enough, the smaller a pony is, the greater is his price.

In selecting a Shetland pony care should be taken to assure oneself of his quietness and steadiness. He may be rather small, but should possess a round body and wide back. If he has a good walking pace in addition to the above mentioned characteristics, one that is smooth and easy and yet free from stumbling or blundering, he may he safely acquired without fear of disappointment.

The pony straight. The little animal must be made to realize that he is to obey straight. The little animal must be made to realize that he is to obey a signaling that he is to obey the reins: a purposeless hauling control, an effort should be made to get out at the back end of the cart. In this way one can drop to the street or roadway with comparatively little injury, whereas by jumping from the side one is liable to be thrown and to land upon one's head.

By practice you will soon become acquired without fear of disappointment.

The surest way to spoil a good pony

acquired without fear of disappointment.

The nourishment of the pony should be varied, according to his size, the amount of work performed and the season of the year. If hay and grain are provided, a mere trifle monthly will satisfy all the feed bills. Shetland ponies rarely require shoes, or, if they do, only in front. As for a stable, any corner in a woodshed or other outbuilding will answer. The harness and vehicles should be suited, of course, to the size of the animal.

Oddly enough, the smaller a pony is, the greater is his price.

In selecting a Shetland pony care should be taken to assure oneself of his and pulling of the lines would only constituted by the control of the should be taken to assure oneself of his and pulling of the lines would only constituted by the control of the lines would only constituted by the control of the lines would only constituted by the control of the lines would only constituted by the control of the lines would only constituted by the control of the lines would only constituted by the control of the lines would only constituted by the control of the lines would only constituted by the control of the lines would be cont

The surest way to spoil a good pony is to bully him. First-class horsemen never use a whip on a pony except to call his attention to the direction in which he is expected to turn, lightly flicking him on the right or left shoulder, as the case may be. The whip should only he used for punishment, when the latter is really required; people with a temper have no business with a horse.

When a pony is well trained, a delicate manipulation of bit and reins will convey the intelligence to him that you want him to move—and this applies to every movement of which he is capable—starting, stopping, turning and back-

The possession of good, strong hands, quick eyes, a cool head, judgment, courage and patience, besides a knowledge of harness and harnessing, are essentials to skillful driving. But, as the average boy is possessed of most, if not all, of the personal characteristics above referred to, and an understanding of the intricacles of harnessing can be easily acquired, he should experience no difficulty in learning to manage a pony within a very short time.

Before mounting to the driving seat it is well to be sure that the harness is intact and has been properly put on. Unless the pony is docile, somebody should hold him until the driver is seated and the reins are gathered up. The seat, by the way, should be neither too high nor too low, the driver being in such a position that he can use his body, arms and legs to the best advantage

cheeks, or to too high checking. All these conditions have a tendency to cause the animal to remonstrate against the treatment received.

If a pony is inclined to jump or rear in the harness, this action can be prevented by a strap over the hips that is fastened on either side to the thills, and by checking the head either up or down. A pony in rearing usually throws his head forward. Sometimes a shortening of the over-check and raising his head a little will prevent this tendency. The best way, however, is always to talk persuasively to the animal, as he is intelligent and can generally be better controlled with kindness than by the use of the whip or see-sawing on the reins. When a pony becomes frightened at anything, always try to quiet him by talking kindly to him. If talking will not calm him, get out of the cart and take hold of his bridle, allowing him to stand a little while so as to view the object that alarmed him, or until it has passed by. With young, intelligent ponies it is a good plan to lead them gently up to the object which they fear, allowing them, if practicable, to touch it with their nose and to sniff at it. They will soon conclude that there is nothing dangerous about it, and upon seeing a similar object in the future will not become frightened at it.

If a pony shows a tendency to run away, it is necessary to keep a close watch on him, a moderately tight rein, and to be constantly on the lookout for anything that may alarm him and cause him to bolt. If the driver is forewarned, he can prevent the pony from getting his head free and starting off on a dash. If it should be difficult to hold him back, an effort can be made to break his stride by alternate pulls on the right and left rein, thus changing his head from one side to the other. This will mix up his gait, and render it difficult for him to run at great speed. But methods of this kind can be better employed on a clear country road than on the streets of a city where there are many vehicles. If the pony becomes absolutely beyond con

"rule of the road." But it is just as well to know, at the outset, that you are expected to take the right side of the

are expected to take the right side of the road whenever you meet other teams and vehicles. When a team comes up from behind, turn to the right and let it pass on your left hand side.

In conclusion, my dear lad, I would entreat you not to let the poor pony fret in the stable. Not one pony in a thousand gets work enough. And don't forget the other boys in the neighborhood, the poor little fellows who have no pony.

# To Start Next Month

The Tripod Fox, a continued story by Clarence Hawkes. This is one of the best animal stories ever

The Joy Claim, an exciting story of the early days of Kansas, in three parts, by Will Lisenbee.

Stories of My Own Boyhood, a series of ten stories by the editor based upon his own life as a boy.

# Make Money

# Edison Phonograph

Any boy can do it. Amusement halls in big cities charge you Ic. to 5c. to hear each Edison Record. You can give Phonograph concerts to friends and neighbors and charge 5c. to 10c. admission-\$1 to \$2 per concert

Everybody enjoys the Edison Phonograph-big folks as well as little. There's always fun where there's a Phonograph. It soon pays for itself.

If you lack the money, ask your parents to buy one for you. Then pay them back from the concert profits.

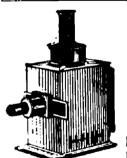

The improved Edison Phonograph is the most perfect type of sound reproducer. It costs no more than inferior imitations, yet being constructed on the only correct scientific and mechanical principles, is far superior to all others. Edison Gold Moulded Records are highest in quality, yet lowest in price of any good records. Every genuine Edison Phonograph and Edison Gold Moulded Record bears the inventor's Trade Mark signature, thus:

Shomas a Edisono

Edison Phonographs cost from \$10 up; Records, 35c. each. Write us for free list of Records and new booklet, "Home Entertain-ments With the Edison Phonograph", which tells how any boy or girl can conduct a Phonograph concert and make money.

Phonographs so'd by dealers everywhere. National Phonograph Co.

A PLUCKY BOY an , incident 'eminole EDITH ROBINJON

"It'll be about a hundred Indians, directly," said Mark. "Unsaddle your ponies, turn them loose, and help to make the house secure. We can talk after-

ward."
Soon after the treaty of '32 with the Seminoles, whereby they were to go to a reservation west of the Mississippi, Frank Brevat had moved to far South Florida, thinking his herds of cattle would have room there to increase and make him a rich man by the time the country was settled up. As yet his only nelghbors were near Fort Brook on Tampa Bay, thirteen miles away. The Indians, occasional visitors, had been friendly, and he did not mind the isolation, feeling sure the time was not distant when he would have nearer neighbors. He built a comfortable hewed-log house on a heautiful knoll in the pine woods, thirteen miles from Fort Brook, and, as was the fashion on the fron' er then, provided it with loopholes for nossible emergencies and with heavy

woods, thirteen miles from Fort Brook, and, as was the fashion on the fron' er then, provided it with loopholes for possible emergencies, and with heavy double shutters at the door and window openings, secured by stout bars, and he was careful to keep on hand a good supply of powder and lead.

His family consisted of his wife and five children, of whom Bob, twelve years old, was the eldest; and his wife's mother and sister were now living with them. He and Mark Luton had been schoolmates in Georgia and had come to Florida together, but since then Mark had been a scout and hunter, partly in the government employ, and visited the Brevats only occasionally.

Knowing his friend as he did, Brevat did not waste time in asking questions. "Unsaddle, Bob," he said, "and start the ponics off toward the range."

"Now, Mark, what else?"

"Get inside and fasten the windows and doors, while I bring one more turn of water," was the answer Coming in with that, Mark asked, "How many guns have you?"

"Two rilles and a shot-gun."

"Can Bob shoot a rille?"

"Nearly as well as I can," said Frank.

"While I'm doing it keep a good lookout through your loophole. How long
has it been since you have seen anyone
from the settlements?"
"Not since before Christmas, when I
went to Tampa for supplies."

"Not since before Christmas, when I went to Tampa for supplies."

"That accounts, then, for your being here now. More than a month ago there was a row at Fort King in which Major Thompson and six of his men were killed. Since then every settler between here and St. Augustine that didn't manage to get out has been scalped. Day before yesterday a company of soldiers was ambuscaded forty miles north of here and every one of them killed. This morning I crossed the trail of a large party of Indians that were heading this way, and no doubt they expect to take your scalps along with them to the Tampa settlements. They don't know, probably, that a hundred men have been sent down the coast by water to reinforce Fort Brook."

"Wouldn't it be hetter for us, even now?" asked Frank, "to put the children on the ponies and try to reach Fort Brook?"

"No, the Indians are too near. Of

"No, the Indians are too near. Of course I don't know for certain they'll come this way, but if they do it will not be long before they come, and they'd sure overtake us before we could get to the fort. If it were only you and I

T WAS SOON after noon when a tall man, carrying a rifle over his shoulder and in his belt a hatchet and hunting knife, walked hastily to the door and without other salutation asked abruptly, "Mary, are your folks all at home?"

"All except Frank and Bob, who has just gone off to the range," was the answer. "But Frank can head my horn?"

"Yes, but we can talk about that later. Do you think Frank can head my horn?"

"Yes, he hasn't heen gone ten minutes."

Instantly Mark Luton's horn was sounding a call which he knew his old friend would recognize if within hearing.

"He'll hear that, I am sure" said

a turry to make another rush.

The young about think are the minutes.

"Yee, he heard heer gone and the minutes."

"I thought your eyes were sharper.

"I the clearing, you'll catch a glimpse of one here and the clear of the clearing, you'll catch a glimpse of one here and the clear the clear of the clear o

IN A PEW MINUTES HE HAD BOB THOROUGHLY BLACKED

but don't waste a shot; we'll need all we have before we are through, and we must manage to keep as many of the guns loaded as possible, in case of a rush—look out, Frank! It's coming now! They think there is no one here but you and the obligant.

and the children."

The Indians had circled around the clearing, and now, with a whoop, made a rush from all sides at once. Three fell in response to the rifles and shotgun,

"Now, Mark, what else?"

"Get inside and fasten the windows and doors, while I bring one more turn of water," was the answer Coming in with that, Mark asked, "How many guns have you?"

"Two riles and a shot-gun."

"Can Bob shoot a rille?"

"Nearly as well as I can," said Frank.

"And Mary?"

"She can use the shot-gun."

"See that they are all loaded, then, as quickly as possible, and let Kate be moulding builets. With mine, we have three rifles besides the shot-gun. Unless there is a rush, you and I had better handle them, while Mary and Bob load for us."

When the preparations had all been made Frank said, "Now, Mark, tell me what's up."

"While I'm doing it keep a good lookout through your loophole. How long has it been since you have seen anyone a rush from all sides at once. Three fell in response to the rifles and shotgun, but the rush was too impetuous to be stopped; a dozen or more hurled them, stopped; a dozen or more hurled them, while frank.

I'm a rush from all sides at once. Three fell in response to the rifles and shotgun, but the rush was too impetuous to be stopped; a dozen or more hurled themselves against the door, and, unable to push it open, tried to batter it down with their tomahawks, thinking, no doubt, they would have time while the inmates were reloading. That was before the day of breech-loaders.

But Luton was wonderfully expert, and in infecten seconds or less he had poured a handful of balls over charges of powder in the shotgun, and then through the loophole nearest the door he fired back to the woods, leaving several on the ground in front of the door, and as they ran Bob handed him a rifle, with which he got one more, while Frank's rifle brought down another.

"The other rifle, quick!" exclaimed Luton.

"I am crippled and couldn't load mine," said Frank. "My left arm was broken by a bullet that came in at the loophole as they rushed forward."

"That's bad," said Mark. "Here, Mary, you and Bob will have to watch while I see to Frank's arm. We'll have a few minutes' time at least, for they won't be in a hurry to make another rush."

"Maybe they've got enough and will leave us," said Frank.

"You ought to know more about Indians than to think that. When they leave here they'll take our scalps with them, unless help comes. But let me see that arm."

with to-night."

"Let me try a shot at that fellow, Mr. Luton; I'll stop him, anyway."

"Blaze away! You can't hit him, but if it's an Indian you'll show them we have sharp eyes and are watching."

Taking careful aim, Bob fired, and the head and shoulders of an Indian raised convulsively and fell back behind the log.

once on his back I would soon be at the fort, for I know every foot of the way."
"Well, strip off to your waist; in the absence of anything better, I'll black you with soot, which will make it harder for them to see you at night; but first get a pair of scissors and let me crop your hair; there must be as little as possible about you for them to hold to."

In a few minutes he had Rob there

about you for them to hold to."

In a few minutes he had Bob thoroughly blacked, including his bare feet and ankles, and wearing nothing but a pair of trousers and a belt, he looked very like a young negro. Then, with a piece of fat bacon, Mark greased him until his skin glistened like ebony. "Now," he said, "if one of them gets his clutches on you, you can wriggle out of his hands like an eel."

Then fastening his hunting knife in

his hands like an eel."

Then fastening his hunting knife in Bob's belt, he said, "This is the only weapon you can carry. Bob, but it is a good one, and if you should come in contact with one of those devils, use it as best you can. Now tell the folks good-bye, and I'll drop you out of the window."

as best you can. Now tell the folks good-bye, and I'll drop you out of the window."

When Bob returned he said, "Now, Bob, remember our lives depend on you. If you get through at all it will be by crawling like a snake, a few inches at a time. If you succeed in getting beyond the Indians, then make all the haste you can, rouse the captain at the fort, tell him the fix we are in, and make him come at once; it will be too late if he waits for daybreak."

Then, putting out the light in the room, for it was now quite dark outside, and with a fervent "God bless you!" he swung Bob to the ground, saying to himself, "That was the hardest job I ever had to do. The boy has hardly one chance in a hundred, but that is the only chance for him or any of us."

Very slowly, flat on his face, Bob crawled from the house, and was soon lost to view. Then, almost breathlessly, the household waited, straining every ear to catch any sound that would indicate his discovery or capture by the Indians, but soon they had all they could do to defend the house from the efforts the Indians were now making to pile straw against it.

One at a time, on each side, a man would run forward with an armful of straw and throw it against the house, and zigzag movements to escape the shots, and it was more than the slender garrison could do to watch and defend all sides at once.

As soon as it had grown dark Mark

der garrison could do to watch and defend all sides at once.

As soon as it had grown dark Mark had cut holes from the loft through the gable ends of the house and carried up water to be used in extinguishing fires, which proved a wise precaution. The Indians worked slowly and carefully; now and then Mark got in a telling shot but the piles of straw grew until Mark sald, "It only needs a match now to burn us out." But no attempt at burning was us out.

If help does not come, we will at least die together."
"Spoken like a true woman, Mary," said Mark. "Lie down, then, with your face to the floor, to avoid the smoke. It will take the fire half an hour to eat through these thick walls, and for as long as that we can hold out."

Rapidly, however, the walls grew hot, the heat became stifling, the smoke suffocating; a few minutes more would have ended it all, when a voiley of rifle shots and a ringing cheer told them help was pounding at the door and calling to them to come out, and a dozen men were

them to come out, and a dozen men were lighting the fire.

Thanks to his blackened skin, Bob had succeeded in crawling past the Indians, though several times he had passed almost though several times he had passed almost within touch of one, and so cautious had he been that it had taken him two hours or more to go the first two hundred yards. Then he had managed to find his pony, and the rest was only a matter of time. Fifty men came back with him from the fort, and with the Indians plainly outlined between them and the fire-light, their one volley had been so destructive as to end the fight.

The rescued family returned with the soldiers to the fort. Bob is still allve, and is one of the cattle kings of far South Florida.

A Fine Football Story next month. Watch!

#### St. Martin's Boys Build a House

IT IS NEEDLESS TO SAY THEY HAVE JUST HAD A HAIR-CUT

Some time ago in these columns we described the college established in Philadelphia by the Rev. C. H. Robinson for poor boys of good character. Called after Saint Martin, the "college" became the home of a number of boys whose parents had resigned all claim over them and who were to be trained and taught until they reached the age of twenty-one, or such age as the rector should consider them fitted to cope with the world. Now the boys of this school have distinguished themselves by building a house and living in it with perfect con-

selves by building a lit with perfect contentment for the entire summer.

Through the generosity of one of the members of the church to which the "college" is attached a site was donated on the beautiful estate of Miss Percival. on the heautiful estate of Miss Percival. Devon. Pa., and here the boys repaired for the summer. First it was necessary to erect for themselves a habitation and under the direction of the rector they set to work to construct one. In one of the pictures they can be seen at work on the house Every nail was driven by the boys themselves, every square foot of paint was applied by the youngsters and when the place was finally finished, or as much so as was necessary, the boys could point with pride to the finished habitation and say: This is the house that we built. The house would not impress an architect, but it is cozy and satisfactory from the standpoint of the boys themselves, who have passed in it the

boys themselves, who have passed in it the hest summer of their not too bright lives. It is a two-story structure, with porch on the front, and in the rear a tiny kitchen.

When the house had been built it oc-

their home. At present the house is little better than a shell, but next sum-mer it is the intention of intention the rector provide ma provide match lining for the inside and prompt the boys to decor-ate the interior as their fancy suggests. match

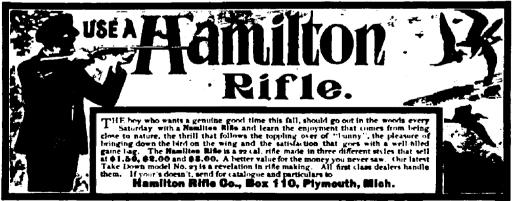

as their fancy suggests.

Between the upper floor and the roof is space for an attic, which it is intended to turn into a club room for the boys. Recently a local tonsorial artist was called in to cut the hair of the boys. A game of baseball was in progress and the youngsters objected to the delay necessitated by a too careful removal of their superfluous locks. As the artist was in a hurry too, he adopted the swiftest means known to tonsorial art for the removal of hair depriving the boys of their hirsute crowns with a pair of clippers. The game was not long delayed, but the appearance of the boys, in the opinion of some of their friends at least, was not greatly improved by the hair-cut.

#### Stamp Inquiries

Stamp Inquiries

A. L. S.—Your Peru stamp catalogues \$1.50.
A. R. L.—Your stamp is from Morocco. G.
D.—You can buy the stamps you mentioned in
your letter from any firm advertising in THE
AMERICAN BOY. O. G.—The publishers of
THE AMERICAN BOY do not buy stamps but
most any firm that advertises stamps would
gladly buy what you have. M. F. B.—Your
inquiry will be answered by an article on the
Triangles in the U. S. postage stamps, which
will be in the next issue. Mrs. C. C. C.—Have
all your stamps free from paper unless they
are on the entire envelope, which sometimes
makes them worth a good deal more. Then
send one of each kind to some dealer that
advertises in THE AMERICAN BOY and he
will tell you just the ones that are worth anything. Postmaster, B. C.—There are a good
many used postage stamps that are very
valuable and then again there are some that
are of no value; the best way is to do as suggested in one of the foregoing answers. H.
C. L.—Your stamps are catalogued as foilows: No. 1, \$1.00 used; No. 2, \$10; No. 3
is not catalogued. Dealers pay about 1-6
catalogue for stamps, but this rule does not
hold good with all stamps. Ligonier, Ind.—
No. 1 is from Spain. No. 2 is not described
well enough to tell to what country it belongs.
R. F. O.—The Omaha stamps were Issued during 1898. The stamp you sent belongs to the
issue of 1898 and 1899. D. C.—The first stamp
is unpriced in the catalogue, the next catalogues \$80, and the third catalogues \$10.

#### Stamp News

It is a good deal better to have one good specimen of a country than a lot of poor ones, for stamps are like people, they are known by the company they keep.

There is an old saying that "three removals are as bad as a fire," and this saying is true in philately. It hurts a stamp to be hinged and it is advisable to remove them as little as possible.

"Fine feathers make fine birds" is another saying that will not apply to philately. Deal

rance teathers make the birds. Is another saying that will not apply to philately. Deal with good and honest firms whether they be large or small. The dealer that does not have a circular or even a printed letter-head may beat the big firm.

#### A Queer Ad Found in a Stamp Paper MATRIMONY.

A collector of postage stamps, possessing 12,544 specimens, desires to contract a marriage with a young lady, also a collector, who has the blue Mauritius penny stamp of 1847.

others need apply. There won't be many applicants, we think.

#### Origin of the Postmark

Great Britain can claim the honor of having originated the postmark. The first one, which was used in London as long ago as 1660, was a very simple affair, consisting of a small circle, divided into two parts. In the top portion were two letters, indicating the month, while in the lower half the day of the month was shown. No endeavor was made to show the

#### How the Indian Walks

A woodsman walks with a rolling motion, his hips swaving an inch or more to the stepping side, and his pace is cor-respondingly long. This hip action may be noticed to an exaggerated degree in the stride of a professional pedestrian; but the latter walks with a heel-and-toe step, whereas an Indian's or sailor's step is more nearly flat-footed. In the latter case the center of gravity is covered by the whole foot. The poise is as secure as that of a rope-walker. The toes are as that of a rope-walker. The toes are pointed straight forward, or even a triffe inward, so that the inside of the heel, the outside of the ball of the foot, and the smaller toes, all do their share of work and assist in balancing. Walking in the woods in this manner, one is not so likely, either, to trip over projecting roots, stones, and other traps, as he would be if the feet formed hooks by pointing outward. The advantage is obvious in snowshoeing. If the Indian were turned to stone while in the act of stepping, the statue would probably stand ping, the statue would probably stand balanced on one foot. This gait gives the limbs great control over his move-ments. He is always poised. If a stick cracks under him it is because of his weight, and not by reason of the impact. He goes silently on, and with great economy of force. His steady balance enables him to put his moving foot down the table.—From "Camping and Woodcraft," by Horace Kephart, in Field and Stream.

#### A Martyr

A friend tells of a recent visit a sen-ator made to church with one of his grandchildren. The little fellow tried several times to talk, but was always told he could not talk in church. "Then, grandpa," he begged, "please take off my shoes and let me move my toes."

#### Yer Feet Ain't Empty

50, Miami, Florida.

In his "Comic School Tales," H. J. Barker gives some amusing answers by children technically known in England as "Howlers." "A teacher was giving a lesson on the circulation of the blood. lesson on the circulation of the blood. Trying to make the matter clearer, he said: Now, boys, if I stood on my head the blood, as you know, would run into it, and I should turn red in the face. 'Yes, sir,' said the boys. 'Now,' continued the teacher, 'what I want to know is this: How is it that while I am standing upright in the ordinary position the blood doesn't rush into my feet?' And a little fellow shouted: 'Why, sir, because yer feet ain't empty.''

#### Whose Baby Was It?

"A teacher of a class was disturbed by giggling among certain boys and called upon one of the culprits to tell him the cause. 'Please, sir,' responded the lad, 'Turner says he knows of a baby who was fed elephant's milk and gained ten pounds a day.' 'Turner,' said the teacher sternly, 'you should not tell lies.' But it's true, sir,' rejoined the pupil. 'Whose baby was it?' 'The elephant's, sir,' replied the lad."—Chicago News.

# The Boy Photographer CLASS

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the nest best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpon. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

FIRST PRIZE PHOTO, BY ARTHUR H. BLACK, DALLAS CITY, ILL.

#### A Royal Camera Fiend

The Sultan of Morocco is passionately fond of amateur photography and loses no opportunity to practice this modern black art. Not long ago he had two hand-cameras made in London at a cost of \$15,000.

#### Varnish for Films

White hard varnish, 10 ozs.; liquid ammonia, .880, sufficient to just dissolve the precipitate first formed; water 5 ozs. The film is varnished in the ordinary way, but without being warmed.

#### Our Roll of Honor

The photographs of the following, submitted in our regular monthly competition, were decidedly above the average in point of merit and are therefore entitled to special mention: H. E. Fry, Harry Parry, Wm. Sunderman, E. W. Skilton, Perry N. Trask, R. L. Binney, Kerr Forman, L. E. Cavanaugh, H. D. Lippincott and Miner C. Purdy.

## A Plate Lifter

Just a little bit of string put across a developing tray lengthwise before putting in the plate makes the cheapest and most effective plate lifter possible. A few inches must be left sticking out at each end to get hold of. Lift these alternately, raising the plate half an inch, and you have a rocking apparatus "fit for a bing." W. T. R. in "Photographic Times."

## Our Prize Pictures

"Kittens," by Arthur H. Black, which takes first prize in this month's competition, is the kind of a picture that girls call "cute." It was taken on a Cramer plate, developed with pyro, and printed on velox paper. T. E. Rein's second prize photograph represents the gunners of the U. S. S. Michigan, about to bombard Chicago with a blank shell by means of a two pounder.

## Efficient Police Photography

A certain man "wanted" in Russia had been photographed in six different positions, and the pictures were duly circulated among the police departments. The chief of one of these wrote to headquarters a few days after, saying: "Sir, I have duly received the portraits

SECOND PRIZE IN SPECIAL "BROWNIE" CONTEST, WON BY HARRY BELDEN, GLOVERSVILLE, N. Y

of the six miscreants whose capture is desirable. I have arrested five of them, and the sixth is under observation, and will be secured shortly."

# Making Bottles Air-tight

Sealing wax is a useful substance to the photographer, especially in the dark room. It is cleaner and less greasy than paraffin wax, the uses of which it to some extent fulfills. It is specially useful for preventing the deterioration of bottled chemicals. A thin layer of the wax over the cork and round the rim of the bottle will render the bottles as alr-tight as if they were stoppered. Stoppered bottles are always preferable of course; but the additional expense is to be considered, especially as corks, when well waxed, are equally satisfactory. pecially as corks, equally satisfactory.

# Insufficient Fixing

In spite of all that has been said or written about fixing, there are many people who seem to labor under the impression that when the creamy appearance is gone the plate is fixed. This is not the case, and in point of fact the process is little more than halfway through

at this point. Indeed, the safest plan is to leave the plate in the fixer nearly as long again as it takes to clear the negative. More plates are spoilt by neglect of this little matter than by insufficient washing. Stains and other troubles of a like nature are bound to result if the fixing is not carried sufficiently

#### Current Comments

Reveil Smith—The negatives of prints submitted are apparently all right, but the prints have been improperly toned. It would be better to wash your plates in running water right away than to let them stand in water over night. Place prints between white hlotting paper if you propose to dry them under a weight after mounting. You will have to learn by experience when a negative is sufficiently dense to be removed from the developer. T. Sleszynski—Your photo of the New York hall of records is the best of the lot, although the remainder are creditable. But we believe you are capable of still better work; try again. John F. Kirk—Your father has every reason to be proud of his son. For a beginner, your work is very good. We are naturally pleased to note that our photographic page proved of service to you and sincerely thank you for the compliment you pay us.

#### Brownie Contest

Brownie Contest

Our Brownie contest, which ended promptly on the first of September, was not only surprising on account of the large number of participants but also because of the excellence of many of the photographs entered, a circumstance that rendered the choice of prizewinners a rather difficult task. Brownle photographs had been submitted from every part of the country and nearly every state in the Union was represented. After a careful consideration of all the points involved in the selection, the first prize was awarded to Rodman Wright Chamberlain, of 63 Franklin Sq., New Britain, Conn., for a very artistic little print entitled: "Sunset on the Lake," a snapshot taken with a Brownie camera (No. 2) at Bantam Lake, Conn., July 16, just as the sun went down. We regret that, owing to its nature, we cannot reproduce it; a half-tone would not do it justice. The second prize was captured by Harry Belden, of Gloversville, N. Y., with a photograph appropriately termed "A tug of war," of which an illustration appears in this column.

Among those, whose good work entitles them to special mention, are: Wm. V. Hill, Edwin Peterson, John Bradley, Ernest Ber-

tholdt, Arthur Uhl, Jos. D. Cecil. L. C. Robinson, B. A. Buell, Ernest D. Ivey, Walter E. Grinnell, Earl Margerun, F. C. Lewis and Chas. J. Manuel.

# Drying Negatives Rapidly

Drying Negatives Rapidly

It is sometimes of great importance that a negative, after development, should be fixed, dried and ready for printing in the shortest possible time. The old-fashioned method of procedure was to immerse the negative, after a brief washing to remove the hypo, in a bath of methylated spirit, but this, even in the days when unmineralized spirit was procurable, was an uncertain method, as it frequently happened that on drying there was an opalescence in the film which was only removable by rewetting. By the use of formalin the result may be attained with greate-certainty and in less time. After fixing, a minute's washing under the tap or spray will remove most of the hypo. The negative is then to be placed for five or ten minutes in a formalin bath—one part of 40 per cent formalin to 8 parts water will be strong enough—and again washed under the tap until water flows freely over the surface. The negative malin to 8 parts water will be strong enough—and again washed under the tap until water flows freely over the surface. The negative may then be immersed with impunity in hot water—it will stand even boiling water. After a few minutes immersion, which will complete the removal of the hypo and will thoroughly heat the plate, it may be removed, and the surface moisture taken off with a cloth, and in a very short space of time the negative will be dry.—Photogram.

#### Queries and Answers

Harry M. Biggin—The larger the camera, the larger the view it will take. Velox prints should be washed immediately after fixing. George Ringrose—Glad to know that our suggestion proved of service. You can avoid trouble with hypo you mention by keeping it gestion proved of service. You can avoid trouble with hypo you mention by keeping it in a tightly closed tin box. Lee Sanborn—The film washed off your plates because the gelatin was dissolved by the heat; in summer it is necessary to put lee in the developer to obtain perfect results. Harry Cunkle—Write to the manufacturers of your camera and enclose stamped envelope for reply; they will tell you what to do. A. Howell—Take negative to professional photographer and have him put some "opaque" on the scratch; it will show white in the print, though. M. E. Hultslander—A good backing for plates may be made as follows: Water, 10 ounces; gum, I ounce; and powdered burnt slenna, I ounce. This solution is applied to the back of the plate with a stiff brush. After exposure and previous to development, it should be removed with a tuft of cotton-wool. Ray Main—The Solgram process does not require a special negative, although the use of orthochromatic plates and a ray filter is recommended. Write to the company for printed matter. Chester Simpson—Print your photographs a little deeper than desired in the finished print. Prints always fade to a certain extent in a combined bath

# An Ancient Landmark

By J. L. HARBOUR

THE OLDEST building in the United States, if not in all North America, retaining its original form, is unquestionably the old Craddock House in the ancient town of Medford. Massachusetts, about ten miles from Boston. This house is built of bricks brought from Boston, England, about the year 1633.

If you were to visit the old town of Medford and were to ask for the "Old Fort," you would be directed to this very ancient house. When it was built about two hundred and seventy-two years ago, there was no other house near it, and the country round about was filled with wild beasts and with Indians, many of whom were hostile to the few white settlers there were in the vicinity. This old house seems to have been built as a place of refuge for the white people in case of a siege. Being of bricks, it was better calculated to resist attack than any other house in that part of the country. It was also designed as a trading If you were to visit the old town of try. It was also designed as a trading post. The house once had a high and strong palisade around it, and its strong gates were carefully guarded by armed

men.

This ancient house was built by Matthew Cradock, or Craddock, first governor of the Massachusetts Company, a man of "means" and affairs, who played an important part in the early history of New England, although he never set foot in the land in which he had large possessions, but intrusted his American interests to agents he had sent over from England. Thus it was that Matthew Craddock never saw the house that to this day bears his name.

We read in the extended history of this

this day bears his name.

We read in the extended history of this time-honored mansion that "The walls are half a yard thick. Ponderous iron doors secured the arched windows at the hack, and the entrance door was strongly cased in iron. The fireproof closets, huge chimney stacks and massive hewn timbers, all told of strength and durability in the plan of the builders. A single pane of glass, set in iron and placed in the western chimney, overlooked the approach from the town. It was just such a house as might have served the turn even of an inhabitant of the Scotish border, with its loop-holes, narrow windows, and doors sheathed in iron. Against an Indian foray it was impreg-Against an Indian foray it was impreg-

When this old house was young every man went armed to his dally toil, or, as an early poet has written: For once, for fear of Indian heating

## Light Sensitive Postal Cards

Apply the following solution to the cards with a brush:

When the cards are dry, float them in the dark upon a five per cent nitrate of silver solution. When dry, they are ready for printing. If exposed in artificial light, they require about a second. Rodinal is best for development. Any druggist can prepare the solution.—Ex.

# The Boy Mechanic and Electrician

A Permanent Department

Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns.

Edited by Robt. G. Griswold

# Query Box

Will a small alternating current dynamo operate a 4-ohm telegraph sounder, or are the magnets wound differently for alternating currents? If so, how? Does a telephone generator give the same kind of current as a dynamo?

O. C., Norwich, Kan.

dynamo?

O. C., Norwich, Kan.

Ans. The instrument might work, but hardly as well as with a direct current, owing to the rapid changes in polarity of the magnets. A telephone generator, by which we take it that you mean the magneto used for ringing the bells, gives an alternating current, and the bell is of a special type in which the armature is polarized so as to respond to the changes in polarity of the magnets.

Please tell me how to make a battery to op-Please tell me how to make a battery to operate a 200-foot telegraph line which a friend and I have constructed. Also how to make a two H. P. dynamo and motor to be run by water power. My shop is some little distance from a brook and I would like to have a dynamo operated by a water wheel and run the wires up to my shop. I am sixteen years of age. G. H. T., Putney, Vermont.

Ans. A gravity battery is the best type for telegraph lines and their construction will be described in Experimental Lessons very soon. Our space will not permit of a description of the motor and dynamo you desire at this time.

A hoy friend and I are thinking of making a set of wireless telegraph instruments to operate over a distance of twenty-five miles. Do you think it would be too hard for us to do?

G. D. S., No. Yakima, Wash.

Ans. As our space is too limited to attempt a description of apparatus powerful enough for such a distance, we would refer you to Sewall's "Wireless Telegraphy" and "Induction Coils" by Norrie.

Please tell me whether the current in trolley wires, electric, telephone and telegraph wires will affect the working of a wireless telegraph installation when they pass in front of the "wireless" station. If so, how may it be overcome? B. T. E., Baltimore, Md.

Ans. If you run your aerial wire sufficiently above these wires they will have little or no effect. It is advisable to keep the aerial as far from their influence as possible, and it might be well to erect a 30-foot pole from the top of the house, suspending the aerial from it.

Please let me know how to protect the telephone described in the May issue from lightning, so that it would not be dangerous if I used wire. How far will it work and what size wire shall I use?

A. R. H., Jr., Falson, N. C.

A. R. H., Jr., Falson, N. C. Ans. Owing to the fact that this teicphone depends upon a taut line for its successful operation, no very good lightning arrester can be installed. It would be much better to disconnect the wire outside the building during electrical storms. A small hook could be attached to each end of the wire to facilitate this, and the wire could be quickly connected again after the storm. No. 20 iron wire should be very satisfactory.

should be very satisfactory.

I am about to build a dynamo, and there are a few questions that I would like to ask, Would not double cotton covered wire do instead of double silk covered? Will not a good varnish take the place of shellac varnish? Would unblacked stove-pipe iron take the place of Swedish iron? The capacity of the dynamo is 10 watts. Would that light a lamp for a room 9x11 feet? What is vulcanized fibre. Could hard wood be used in its place? What are the brushes made of? Please tell me a simple way to make the slotted armature disks. The directions state that before a dynamo will work, the field magnets must be magnetized, and that this can be done with a good bichromate battery. Will any other battery do as well? What is meant by polarity? Would a ½ H. P. steam engine run this dynamo?

W. C., Pembine, Wis.

Ans. D. C. covered wire may be used.

Ans. D. C. covered wire may be used. Ordinary varnish does not dry as quickly as shellae, but it can be used. Yes, stovepipe fron may be used with excellent results. Your dynamo would light a very small lamp, but not give sufficient light to illuminate a room of the size you mention. Yulenized thre the angea very small lamp, but not give sufficient light to illuminate a room of the size you mention. Vulcanized fibre is a material used as an insulating medium in electrical work. It comes in different colors and resembles hard rubber in texture. Hard wood may be used in its stead but is not as good. The brushes may be made of copper strips. The easiest method of making the armature disks is to cut them out and then file the slots in a few at a time while they are held in a vise. A dynamo always requires a little magnetism in its fields before it will generate any current. The fields may be magnetized by using a battery of two or three cells, sending the current through the field windings in the same direction that it will flow when the machine is running. Any type of battery will do this. Polarity refers to the existing condition of opposite poles in a magnet; that is, when we speak of the polarity of a magnet or field we refer to the north or south poles; see more explicit definition in Webster's dictionary. Yes, a ¼-H. P. engine would run this dynamo nicely.

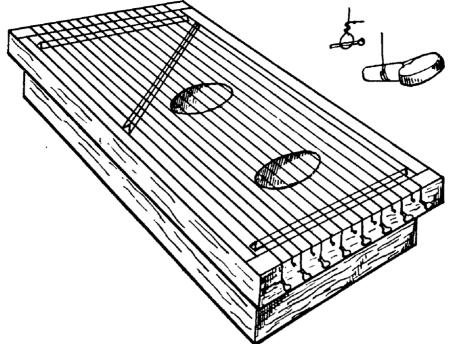

Can the motor described in the March number be wound so as to run as a dynamo? Can "Crowfoot" batteries be used to operate battery lamps? E. G., Montecito, Cal.

Ans. This motor will run as a dynamo, Ans. In smotor will run as a dynamo, provided you connect the field coils with a battery, and lead two wires from the brush binding screws. The battery will excite the field, and upon rotating the armature, a current will be generated. It will not be very powerful, however.

I have a telegraph instrument that lightning burnt out, about six feet of the wire in one of the coils being ruined. Can it be fixed without getting a new coil? I rewound it but it did not work. The instrument was of the 20 ohm type. P. P., Carrington, N. D.

Ans. There has undoubtedly been greater damage to the wire in this coil than you imagine, else the rewinding, after cutting out the injured portion, should have given you a good instrument again. Examine the wire cafefully and see if there are not some other

# How to Make a Zither By R. T. CARLTON

THE FOLLOWING description tells how to make a zither out of an ordinary eigar box. Scrape all the paper labels off of a 50-cigar size box and draw the nails. In the piece that is to form the top of the box cut two sound below the country of the second below the secon

is to form the top of the box cut two sound-holes as shown, about two inches in length and one inch wide. Glue the parts together, and, if no clamps are at hand, place weights on the top to insure a perfectly tight joint after drying. Cut four strips of some hard wood such as maple or walnut, one inch wide and one-half inch thick, of such lengths that they will form a frame around the upper side of the box as shown in the cut. Glue these pieces to the sides of the box, the these pieces to the sides of the box, the upper edge being flush with the top securing the ends by brads or small

To the top glue two triangular bridges of hard wood % inch high for the strings to run over. Another triangular bridge 7-16 inch high is glued to the top in a diagonal direction, having its ends respectively 3 inches and % inch from one end as shown.

Peg holes are now drilled in the ends of the frame, % inch apart, seven holes in one end and eight in the other. Midway between these hores are driven stout way between these holes are driven stout tacks or brads, over which one end of the strings pass. There will be fifteen strings % inch apart. The pegs may be purchased of some dealer in musical instruments, or cut out of hard wood.

When complete, sandpaper the box, stain with mahogany or rosewood stain, and varnish.

and varnish.

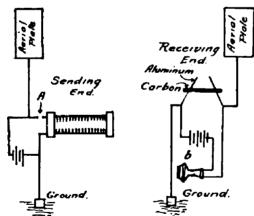

The strings may be cut to the proper length from a spool of mandolin string wire, and strung on the zither by twisting one end around a tack as shown, and the other end passed through a small hole drilled in the peg. By turning the peg the tension of the string may be increased or decreased. The short strings should be of rather fine wire, the longer strings being somewhat coarser. The strings may be tuned with the plano, using the key of C, thus giving the instrument two full octaves.

A Unique Wireless Outfit

N INTERESTING letter has just been received from one of our experimental readers, stating how he has successfully constructed a unique wireless telegraph system. While this is not adapted for transmission over any considerable distance, it shows the inventive genius of its author. The letter reads:

\*\*Receiving\*\*

\*\*Rec

I had no induction coil, so my partner, the induction coll. We simply used a common spark-coll (a small

of a fair-sized house, using a gas pipe for the ground.

Note.-While this seems to be a very Note.—While this seems to be a very simple outfit, it is in reality very similar to the one described in the January and February issues. Instead of using an induction coil for the spark, Mr. C. obtains a small spark when the circuit is broken at A, and a slight impulse is thus transmitted to the aerial wire. The telephone receiver is perhaps the most delicate receiver that we have and is used in several systems. At the short distance that these instruments were placed tance that these instruments were placed apart, it would be quite possible to detect the message in the telephone receiver, and it would be very interesting if Mr. C—— would tell us just how far he can make this outfit work.

Editor.

places that have been burnt. A new coil would not cost much, as you could pur-chase the wire and rewind it yourself.

In the formula for current strength measured In the formula for current strength measured with a galvanometer in the July issue, should not "r" be the Greek character pronounced "P!" = 3.1416, as you use that value in the example? Can you give me the value of H for western North Carolina? Would not example? Can you give me the value of H for western North Carolina? Would not the action of the coil described in the January issue be improved by the use of platinum contact points?

J. W. P., Marion, N. C.

Ans. Yes: a typographical error was made in setting the formula mentioned, and the "r" should have been the Greek characted pronounced pl, which represents the value 3.1416. The value of H for western North Carolina is about .20. platinum contacts would prevent rapid corrosion.

In your question department, will you please "primary" and "secondary" colls?

K. B. Meeker, Delavan, Ill.

Ans. The words "primary" and "secondary," when used with reference to induction coils, define a particular part of the coil. An induction coil is composed of two parts or coils, one through which the current generated by some outside means, such as a battery of cells and the other a outside means, such as a battery of cells or dynamo, is passed, and the other a coil in which a current of higher or lower voltage is generated by induction. The first coil, which is generally wrapped about a core of fine iron wires and placed inside the other, is called the primary coil, and through it is passed the prime or first current. The coil surrounding this, which may have a greater or lesser number of turns and be of finer or coarser wire, is called the sec-

ondary coil, as in it is generated by induction a second current of different voltage.

1. What is the difference between a "bi-chromate cell" and any other wet battery?
2. Why are the zincs amalgamated in such cells and not in others?
3. If I color some white cotton-covered magnet wire by dipping it in paint, would the wire be as well insulated, or would the paint be a conductor?
4. About how many yours and ampered does a common part your part of the part of th or would the paint be a conductor? 4. About how many volts and amperes does a common dry cell give? 5. If space permits, please tell me how to make a voltmeter. 6. In a description of a battery I read that it has a capacity of 150 ampere-hours. Please explain what is meant by "ampere-hours." 7. What is the difference between an open and closed circuit battery? 8. Please give the correct pronunciation of the following words, as I have heard several different ways: Volt, ampere, commutator, coulomb, farad, galvanometer, induction, ohm, rheostat, solenoid, voltaic, potential, coherer, electrolyte, electrician

C. R. S., Galesburg, III.

Ans. 1. A bichromate cell derives its name from the fact that bichromate of potash is used as a depolarizer in the potash is used as a depolarizer in the electrolyte; other wet cells have different solutions. 2. To prevent the rapid destruction of the zincs. Any cell is better for having amalgamated zincs, but few of them do owing to the extra expense. 3. It depends largely upon the nature of the paint. Many annunciator and bell wires are so coated, and if the coloring pigment is not metallic the paint should have no effect. 4. Dry cells vary from 1.2 to 2 volts, but the output in amperes is not very great, owing to the rapid polarization of the cell and its comparatively high internal resistance. 5. A voltmeter will be describ-

ed in a later issue. 6. The term amperehour means an output of one ampere for one hour, and "150 ampere-hour capacity" means that the cell will give one ampere of current for 150 hours before becoming exhausted. Or it might give 2 amperes for 75 hours, or 3 amperes for 50 hours, just so long as the product of amperes and hours equals the maximum of 150. For every ampere of current generated there is a definite quantity of zinc consumed, and as many amperes of current may he derived from a cell as the quantity of zinc will afford. The actual quantity of current delivered, however, is referred to in "coulombs." and this term will be explained fully in a later lesson. 7. No difference in principle, but merely a difference in the class of work for which used. Any open-circuit cell will work well for a few minutes, but then becomes polarized, when the output rapidly diminishes so that if a constant supply is required these cells cannot be used. The open-circuit cell may be altered into a closed-circuit type, however, by mixing with the solution some substance that will prevent polarization. This is very fully explained in the lesson on the bichromate plunge battery. 8. The words are pronounced as follows: Volt; am-peer; com-mu-tator; koo-lomb; für-ad; gal-va-nom-eter; in-duc-shun; om; re-o-stat; sole-noid; vol-ta-lk; po-ten-shal; ko-here-er; e-lek-tro-lite; e-lec-tri-shun.

If a coil of wire is wrapped about a piece of Babbitt metal, does the metal become per-

If a coil of wire is wrapped about a piece of Babbitt metal, does the metal become permanently magnetized for a short time? If not, I would like to cast field pieces for a dynamo. Where can Babbitt metal he procured, and how much can be purchased for a certain sum?

H. S. C., Detroit, Mich.

certain sum? H. S. C., Detroit, Mich.
Ans. Babbitt metal cannot be magnetized and will not do for the field castings of either dynamos or motors. It may be procured at metal stores in the large cities and the prices will vary from thirty to seventy cents per pound, depending upon the quality. If you contemplate making a dynamo, use cast iron or cast steel for the fields.

# How to Keep Tools

It is always best when buying tools, to purchase really good ones, as they last much longer, save trouble, and, if properly used, result in good work.

When the tools have been obtained, it is advisable to make a box for them; this should be a little longer than the length of your longest saw, and about one foot high by one and a half feet wide.

wide.
When not in use, all steel tools should

wide.

When not in use, all steel tools should be rubbed over with vaseline, and sharp tools, such as chisels, should be wrapped up in flannel, not all in a heap but each o'e in a fold by itself; if packed away like this, they will be none the worse if left for some years, and will only require the vaseline rubbing off before they are again ready for use. It is a good plan (if the place where the box is kept is not quite dry) to raise the box from the ground by means of four small pieces of wood, so as to allow the air to pass underneath.

When the tools are in the workshop, each one should have its place; the saws should hang from nails driven into the walls, the planes should have shelves fixed up for them, and for the chisels it is advisable to bore some holes with a brace in a long strip of wood so that they fall in up to the "hilt," or rather handle. As for bits, they can be kept in a tray or small box, and all other tools that will not hang up can be placed on shelves. It is a good plan to make a box with divisions for the nails, screws, hinges, etc., or failing this, they can be kept in labeled tin canisters, so that it is possible to know the length of the mails and whether they are cut or wire ones without removing the lid. Do not keep tools on the bench when you are not using them, as ten to one some of them will quietly fall into the shavings and be thrown away next time you sweep the workshop out. When you buy your ollstone, if it has not a wooden case, be sure to make one with a lid, as this often saves it from breaking and keeps the dirt from gathering on the top. With respect to the oil which is used, nearly any kind will do, unless it is sticky, like linseed oil, or too thin like paraffin; oilve oil is very suitable. When sharpening tools, hold the iron at about an angle of 45 degrees with the very big, but should be firm and fairly heavy. At one end should be fastened a stop to hold the wood whilst planing, and a vise should be fixed to one of the sides. It is not necessary for the amateur carp a stop to hold the wood whilst planing, and a vise should be fixed to one of the sides. It is not necessary for the amateur carpenter to have all the tools to begin with; in fact, a start can be made with only a 24-inch saw, a smoothing plane, a hammer and three chisels (1/4-in., 1/4-in. and 1-in). These can be added to whenever practicable whenever practicable.

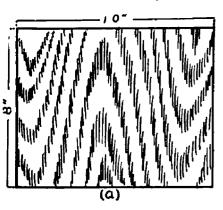

# Beveridge is Glad He Laughed

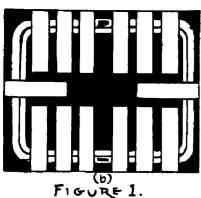

"The direction of my career was completely changed." said United States Senator Albert J. Beveridge to the writer, "by a careless laugh. When I was a youth in Illinois I heard that the Congressman from our district intended to hold an examination to determine what young man he should appoint to West Point. I pitched in and studied hard for that examination, and found it easy when I came to take it. Most of the other fellows seemed to be still struggling with it when I had finished, and I was so confident that I had made few mistakes that I was in a pretty cheerful frame of mind. This is why I laughed when one of the strugglers asked a rather foolish question of the professor in charge. The latter evidentasked a rather foolish question of the professor in charge. The latter evidently felt that the dignity of the occasion had been trified with, for he scored one per cent against me. When the papers came to be corrected this loss caused me to fail one-fifth of one per cent below the boy who stood highest on the list. He is a captain in the army now, where I suppose I should be had it not been for that laugh. I believe in the power of cheerfulness. Looking back, I am rather glad that I laughed."—Success.

#### CLEVER WORK WITH THE POCKET KNIFE JOHN L. DOUCHENY

No. 10—A Basket

IF, IN THE AMERICAN BOY'S vast family of readers, there is one who has followed these articles steadily, he will have realized before this the magnificent, we might almost say, infinite, possibilities of this most fascinating art, problem whittling. THE AMERICAN BOY is the first paper in the world to give its readers a chance to become initiated to the mysteries of this art. No series even faintly resembling this one has ever been published before. Each article is like a materialized problem in algebra and has the double advantage of training both hand and brain. The original proposition seems quite impossible of execution; the finished job is as simple as "A-B-C." Take this month's for example. Who would think it possible. tion seems quite impossible of execution; the finished job is as simple as "A-B-C." Take this month's for example. Who would think it possible to whittle the basket (a—Fig. 4) with its sides, bottom and swinging handle out of one flat, solid piece of wood (h—Fig. 1). First get a good clear piece of any

soft wood, such as basswood, poplar, white pine, or pulp wood, size 10x8x1 inch. The work proper starts with the important task of drawing the diagram. The wood, which has been soaking in

water for two days or more, may be sur-face dried before beginning. On the cen-ter make a round cornered oblong as in Fig. 2, which is to be the bottom of the basket.

Fig. 2, which is to be the bottom of the basket.

The grain of the wood is at right angles to the long side of the oblong, as indicated by (a, Fig. 1). This is very essential to the success of the work. Radiating in all directions you will notice fourteen small strips. These will be the sides of the basket. The outside or larger oblong is to be the top rim. Ponder over this until you see clearly what is meant. After marking the piece exactly as shown in Fig 1 carve away all the parts shaded black. It should be marked the same on both sides. Next the two oblongs or parts outside the strips are cut down (from both sides) to a depth of one-half inch. The looks of the block after this cutting has been done is clearly shown in (b, Fig. 2). The utmost care must be taken in doing this work, for a slight slip or jar would work, for a slight slip or jar would necessitate beginning all over again. Whenever possible do your carving with the wood lying flat on a hard unyielding substance. It is well to have an oil

have with the first and you will see that it is to be a very natural looking basket after all. One thing may surprise you. While the imitation seems good enough in other respects it certainly lacks a handle. Now the top rim, which has been purposely left big and bulky, will come to our rescue. All we have to do is to whittle it into two movable inseparable parts, one of which will be the handle. Fig. 4 shows the rim removed with the necessary guide lines to begin work. First devote all attention to the arable parts, one of which will be the handle. Fig. 4 shows the rim removed with the necessary guide lines to begin work. First devote all attention to the making of holes by means of which the handle will be attached. To balance properly they must be placed so as to form the ends of the diameter. It is just another application of the chain principle which has been thoroughly explained several times in our earlier articles. The parts at this time must be outlined at right angles to each other. Leave the ears as thick as possible for they will have to bear considerable strain. Before we do any cutting at all the handle appears like an ordinary basket handle laying as they do when not in use on the top of the rim. This it is, in reality, but before it can be swung up to an upright position it must be carved loose. This particular carving is perhaps the most difficult part of the present job. Carefully hack and pick away with the smallest blade of your knife. Long experience has taught me that this is the shortest way in the long run. Part b, of Fig. 3, shows very clearly how these portions are rendered movable. When you have made the long slit that releases the handle you can remove it and shave the ends to fit into the holes which have been made to receive them. The part of the top rim which has not been utilized as a handle is cut down even with the top surface of the rest of the rim. We may now consider the job complete. I would advise you not to try to smooth it off. A little roughness will only tend to show that it has been laboriously carved out. If the tout. If the tout. If the tout. If the out. If the out. If the out. If the tout. If the out. If the ou If possible soak it in linseed oil or swab

to know them and drive them back into the bush with blows. The medicine men make the candidates

stand in a row and open their mouths.

Then one of the front upper teeth of each boy is either knocked out or pulled out. If the tooth comes out easy, it is pulled out by being bent upward, but if it resists it is knocked out with a club. After that the boy is a boy no longer, but a young man, and in some tribes leaves the general camp and goes to live in a camp of young men.

## He Still Had the Oranges

Senator Grady tells of the following incident with great delight:
A boy was about to enter the Metropolitan Museum of Art, carrying in his hand

a large bag apparently well filled.
"What have you got in that bag?" said

the doorkeeper.
"Oranges," replied the boy "A dozen
of 'em. Want one?" of 'em. Want one?"
"No; and you can't bring them in

"Why not?"
"It's against the rules; but you can have them checked."
The boy stood thinking for a moment, then slowly went outside. In about fifteen minutes he was back, minus the

'Guess I can go in now, can't I?" he

asked.
"Hold on. Have you got those oranges concealed about your person?"
"Yes, sir; all 'cept the skin. I throwed

The boy got in.

# Guarded Indifference

May C—, the six-year-old daughter of a Presbyterian clergyman in a small Georgia village, had a playmate, Jimmy by name, of whom it was her custom to make a special mention in her evening prayer at her mother's knee. One evening after some childish quarrel, Mrs. C— noticed that the hoy's name was omitted from the petition, and said, "May, aren't you going to pray for Jimmy tonight?" "No, mother; he's a mean, hateful boy, and I'm never going to pray for him any more." Her mother made no reply, not wishing to add fuel to the flame and decided to allow the youthful conscience to work out the problem in its own way. In a few moments she fell upon her knees, and said, in a tone of guarded indifference: "God, you can bless Jimmy if you want to, but you needn't do it on my account."—Harper's Weekly.

## Distance of Thunder

It is interesting and useful during thunder to be able to tell the distance of the focus of the storm. This can be done by recollecting that sound travels at the rate of about 1,125 feet a second. If the interval between the flash of lightning and the thunder be one second, then the distance is 1,125 feet and so on. If a minute elapses the storm is thirteen miles away. Thunder, it is said, has never been heard fourteen is thirteen miles away. Thunder, it is said, has never been heard fourteen miles from the flash, although the sound of cannonading may be carried 100 miles

# The American Boy My Four Years at West Point

(BEGUN IN SEPTEMBER, 1904)

XXIII.

A YEARLING AT LAST.

THE EARLY part of June was devoted to examinations and exhibition drills. Parade took place at 6:15, and the cadets not having any drill for the day were allowed release from quarters after four o'clock. It is not my purpose to describe them, as they were the same as those we had through the entire year. the entire year.

Hundreds of interested spectators were present at every drill and parade, and each cadet in the corps did his best, including even the first-classman in the front rank, who was lugging his gun for the last month of the last year.

month of the last year.

One of the exhibitions that our class gave was in gymnastics and fencing. This came off in the gymnasium, and included club swinging and dumb-bell exercise by the entire class. The crack performers displayed their skill in fencing, antagonistic exercises, and gymnastics on the horizontal bar, and on the parallel bars.

We also gave an exhibition drill at the siege gun battery, and did some good firing at the target placed against the face of Target Hill, over beyond the swimming grounds. Then a barrel was anchored out

of Target Hill, over beyond the swimming grounds. Then a barrel was anchored out in the river and surmounted by a red flag. We banged away at this with mortars and made the water around the barrel splash, but, when we were through, it still floated and the flag waved, as if nothing had happened to disturb them, though we came mighty nigh shattering them more than once.

Earn Money in Secretary and Treasurer.

We had still another drill, illustrating military pyrotechnics. We fired all sorts of combinations of saltpetre, sulphur, and charcoal that exploded in the air amid prolonged "Ah ——'s!" from the young ladies sitting on the bank and benches behind the battery. The performance concluded by a "Fire by Battery," which resulted in a general explosion of bombs, a thick shower of vari-colored sparks, and another long chorus of "Ah ——'s!"

Graduation day had been fixed for the twelfth of June. Each class, as it finished its examinations, was allowed release from quarters for the day, with certain restrictions, varying with the class. The first received the most privileges, and the fourth the least.

Those last two or three days were halcoyon ones for the first classmen, but they

Those last two or three days were halcyon ones for the first classmen, but they could not speed fast enough for the plebs, who found but little enjoyment in them. On the evening of the lith of June, the graduating hop took place. The mess hall and a room in the rear of the officers' mess "known as Schofield Hall," were thrown open to the dancers. In the mess hall a german was held, where most of the dancers were first and second classmen, while Schofield Hall was mostly patronized by yearlings and plebs—think of it—plebs!

I do not know how the custom of allow-

I do not know how the custom of allow-ing plebs to attend this hop originated. It may have been due to a charitable impulse of the upper classmen, or perhaps it was a

nervous.

In many of these controversies, a good-In many of these controversies, a good-natured upper classman, overhearing the remarks, would say: "Well, you men had better make a break at the graduating hop, or you will never get in the swim." Our old friend from Ohlo, who had became a fixture in the first section in all his studies, and who was convinced that his mental superiority would give him an entree where his conversational powers and polish would not, had declared to his roommate that he was "going down to get something to eat anyhow."

And so, after inquiring what he was to wear, what he was to do, and what he was

In Addi- wear, what he was to do, and what he was to say when asking a young lady to dance, he went into Schofield Hall, arrayed in his tion to your prohest dress-coat, a crimped collar, a pair of new "hop shoes," a pair of high-water white trousers, and a part in his hair over his right ear. In asking for information, however, he had gone to the wrong man. Silkins had gotten hold of him, and stuffed

him, as they say, to the ears.

The youth, after standing around the door for an hour or so, with his hands on his hips, disappeared to come forth later when lunch was served. At the table he did more justice to himself-and the lunch

In several cases a first-classman, sent invitations galore, and had forgotten how near many of the invited ones lived at West Point, was favored (?) with half a dozen scented little notes saying:

"My Dear Mr. Blank: Your kind invitation just received. I will be up to West Point, early in the afternoon of the 11th. I know I shall have a perfectly lovely time at the hop, and you are awfully kind. "Cordially yours,
"MISS DOOFLICKET."

And so there was nothing for the firstclassman to do, but to skip around and take five plebs into his confidence. 'Mr. Dumgood, have you a partner for the hop?"

"No sir."
"Well, I will get you one. Wouldn't you like to take Miss Dooffcet-prime? She's

a spooney girl, and a fine dancer."

This condescension on the part of a firstclassman generally carried the day, and classman generally carried the day, and Miss Dooflicket-prima was disposed of.

I escorted a young lady, whom I had promised long before to take to my first hop. She was pretty and charming, and I felt more flattered than she (which is perhaps saying a great deal) when she was sur-rounded by a little group of yearlings, ask-

The programme consisted of twenty-four

By A GRADUATE

off. I had a delightful time, and my cup of happiness seemed overflowing, when one of my chief yearling tormentors of last

cises were to take place.

The first-classmen had really made their

last appearance as cadets the night before at parade, although the gray was not to be discarded until noon of the 12th. This farewell parade had been strikingly impressive, and there were tears in more than one pair of eyes before it was over.

pair of eyes before it was over.

The first-class privates fell in without guns in the line of file closers, the rest of the battalion being formed in single rank. When the Adjutant gave his last command of "Sound off," the band remained in its place and played "Home, Sweet Home." As soon as the air was finished, it marched to the front, over the usual route, playing "Auld Lang Syne" "Benny Havens, Oh," "Army Blue," etc. On resuming its place, "Home, Sweet Home," was again rendered. The bugler then sounded retreat, and the cannon boomed. As soon as the report of the gun was heard, the adjutant called, "Rear open order." At this command, all the first-class privates assembled on the line with the other officers in the front of the battalion. cers in the front of the battalion.

cers in the front of the battalion.

The adjutant replaced his sword, all the first classinen faced toward the center, and as the adjutant stepped off, closed in on the center. Upon halting in front of the commandant (who presided over parade on this one occasion) they removed their hats, and the commandant delivered a forest? and the commandant delivered a farewell

When he had finished, the first-classmen marched slowly back to barracks, and the marched slowly back to barracks, and the companies were marched in by the first sergeants. When we were about halfway back, I saw the first-classmen draw up in line, and, as each company passed, the graduates removed their hats, their last homage to their comrades in gray. Each first sergeant, as he passed the group, brought his company to "carry arms," and saluted. It was a sad, but still a thrilling that I experienced as I marched

ment, while the sweet strains of the music were ringing in my ears, and the graduates stood there so still and thoughtful, I realized that I was not a man, but an integral part of the corps of cadets. The emotion was too complex to analyze, but it must

of my chief yearling tormentors of last camp brushed by me and thrilled me with the words, "To-day, you are a yearling."
Yes, the hands of the clock pointed to 12:15, and it was time for dinner, which was served in the gymnasium. After dinner, dancing was resumed, and was kept up, without intermission, until 2:30 a.m.
Reveille came at 6 a.m. as usual. After breakfast, the first-classmen and yearlings were busy making their final preparations were strewn with boxes, bales, and rubbish.
Silkins and I, not being interested in their preparations, sauntered toward the chapel, and surveyed the platform and the large canvas canopy where the graduating exercises were to take place.

The data to analyze, but it must have been similar to that which moves the soldier on leaving his home, and native town, to march off to war.

At 10:35 on the 12th, the different companies fell in for the graduating exercises, as at parade the day before. Led by the band, we marched over to the platform, in front of the Library, where we stacked arms and broke ranks. The exercises were delivered, and the class of General Sheridan. I shall not describe these exercises further, because I was only a pleb, and my interest then was that of a spectator.

The exercises being finished, we fell in

The exercises being finished, we fell in behind the line of stacks on the edge of the plain, and marched back to barracks, where we formed on the road, facing the north. The crowd of spectators followed us thither and stood about in recovery the state of the state and stood about in groups in front of us.

The most interesting moment of the day

The most interesting moment of the day arrived when the commandant called upon the adjutant to publish the orders. The latter took his usual place in front of the battalion, and immediately published his last orders as a cadet. These related to the furloughs that were to be given to the third-classmen, and the graduating class. Then came the new "makes," or the roster of officers for the succeeding years. My chief interest was in the new makes for adjutant, first captain my own company officers, and the lance corporals. The last were my own classmates, and the term "lance" was applied because they were on probation until the list of full-fiedged cor-

"lance" was applied because they were on probation until the list of full-fledged corporals should be announced in September. I listened intently, for, to tell the truth. I did "have hopes." Slikins and Corp were both near the top of the list of new corporals, but when the whole twenty were named. I was not among the chevroned crowd. I knew that my only claim was my class-standing (which didn't amount to much)—I had trodden many a path in the area—I had a goodly share of demerits, and was not super-military,—yet I came near feeling disappointed.

We broke ranks shortly after twelve o'clock—then came the miserable business of offering congratulations to the new makes with a lump in the throat and a tongue from which white lies flowed in profusion.

profusion.

There were only two classes to march down to dinner that day under the command of the new first captain. The happy men of the other two classes sauntered into orought his company to carry arms, and men of the other two classes sauntered into saluted. It was a sad, but still a thrilling feeling that I experienced, as I marched tasting their soup, started around the past this line of cadet gray and white. All sense of individuality seemed to be lost in a general "esprit de corps." "My whole bear and yearlings said "good-by" to me, and I must confess that I did not ing was stirred to its inmost depths. Yet I feel very sad when I said to Olcott. "Goodwas only a pleb, a mere drop of water in the change that a day can bring forth.

ALBERT SPALDING TO BECOME A FAMOUS VIOLINIST.

That Albert Spalding, the sixteen-year-old son of Mr, J. W. Spalding, of New York City, is destined to become one of the most famous violinists of the day there seems to be little doubt. Mr. Spalding made his professional debut at the Nouveau Theater, Paris, France, on June 6, and on this occasion his rendition of Saint-Saens' Concerto, Bach's Chaconne, Beethoven's Romance and Sarasate's Zigeunerweisen, a most difficult programme, held the full seating capacity of the theater spellbound. Mr. Spalding is rich in capability, plays with great sentiment and perfection of technique, and at this early date is pronounced a "finished virtuoso."

Mr. Henry Mapleson, of operatic fame (son of Col. Mapleson, who brought out Patti), in a letter to young Spaiding's parents, says: "Let me again express to you my positive conviction that your son Albert is destined to occupy a very prominent position in the musical world. \* \* \* I was delighted with his playing last night and saw at once the brilliant career open to him."

dances, and the hop-cards were made out as complete as possible before the hop came bespeak for him a bright and successful future.

#### XXIV.

THE SECOND SUMMER IN CAMP.

The men who were to go on leave must have been extremely impatient to get away from the Academy, for, although the day-boat did not leave until three o'clock, the procession to the North Dock started be-fore the rest of us had returned from dinner. How odd and brand new all these cadets looked in their "cits." To judge rom the sly looks that many of them bestowed on their civilian clothes, it was apparent that they deemed themselves fashionably dressed. Whether they appeared better than in the cadet gray is an

pen question.

A large number of the visitors left on the same boat. By 2:45 the few cadets that had lingered behind, to pay their farewell calls, on the post, had disappeared from sight down the hill.

I sauntered to Battery Knox and awaited the approach of the boat, as it was off limits to go to the dock. I could see the crowd below me. Pappiness and impatience crowd below me. Pappiness and impatience were in every movement. When at last the Mary Powell came in sight around Gee's Point, she was hailed with the wildest cheers. Several hundred passengers were already on board and they crowded the decks to see the fun. The steamer band added to the excitement by playing

an inspiring air.

The cadets on the dock hardly waited for the boat to land before they begun crowding on board. It did not take long for the furlough men and the graduates to embark, and soon the Powell gave a few hoarse whistles and steamed away, amid the waving of handkerchiefs and the "good-bys" from the friends left behind.

I stood in the warm sunlight on the paramet and watched the receding best until

I stood in the warm sunlight on the parapet and watched the receding boat until
the turn in the river concealed her from
view. A strange feeling of loneliness crept
over me, and I hardly found the comfort I
had anticipated in becoming a yearling.
Jumping had almost ceased long before,
and the dropping of the "mister" was a
mere novelty and a poor consolation. If
I were only one of those happy fellows on
the steamboat, going to my home and were drills under a hot sun, two months and a half of dreary camp life, and more studies in September.

When I returned to barracks, this sense of loneliness increased. The rooms, halls and plazza wore a dismal, deserted appearance. Few cadets were visible, and room after room were destitute of all things except rubbish composed of discarded belts, dress hats, boxes, etc. The only person I could have sought for consolation was "Silkins," but he had been made an acting first sergeant, and was too busy with his new duties to give me any of his time. Corp had attained the height of his present ambition, for he was a corp,, and spent of loneliness increased. The rooms, halls ambition, for he was a corp., and spent most of the afternoon in wandering around the post with another corp. Both wore

noons that I had ever spent, and I was ly, and remarked at the end of the recitaglad when supper-time came. At eight tion that he saw no connection between o'clock I went to the small hop in "No. 1," the English sentences that he had given and soon recovered my usual buoyancy of Mr. Henson and the French one on the

We were several days in barracks before the order for going into camp was published. We had lots of "release from quarters," but the days were about equally monotonous. Some diversion was to be found in watching the new cadet officers become rattled at the different formations, and in critically surveying the young genand in critically surveying the young gen-

We brought down all our property at breakfast, and made our formal entry at eleven o'clock.

The list of "found" men had been pub-

lished two or three days after graduation. One second-classman was thus unfortunate, and we lost seven men—among the number my roommate Henson. He was a generous fellow, and by his uniform good humor and joviality had made himself quite popular in his class. We were deeply sorry to see him go. He felt very bad over it, but, honest-hearted hero that he was, strove his best to conceal his disappointment and sorrow. Holding my hand, he said to me that he had one consolation he had done his best. Yes .- he had, and was not his fault that he possessed so little talent for modern languages. He devoted four solid hours a day to that department, and his marks at the end of the week almost invariably added up-'deficient.''

Keetel's French Grammar is divided into

short French sentences. These were given out by the instructors who wrote the translation in English, and we were expected to put them into French again.

Now, as long as these sentences were translated into French that was sufficient, but we soon learned that the French in the book was the best French. When Hendelmann and the sufficient was the sufficient with the sufficient was the s son discovered this fact he did not waste the steamboat, going to my home and any time in translating the sentences for friends! All that I could see before me himself, but by dint of hard labor memorwere drills under a hot sun, two months ized the French by the paragraphs, often with only vague ideas as to the English of the sentences.

One day he was given a paper containing a paragraph lettered "c." But it was a peculiar "c,"—it had been hastily made and resembled an "a." Henson was puzzled for a long time, and finally asked the in-structor if that was an "a" or "c." The instructor replied that that was immaterial, as he would not have to translate the letter.

When my roommate went back to the board, he studied the English sentence for some time, but was unable to gain any needed light. Then he scrutinized the letter and came to the conclusion that it was an "a." So he laid the paper down on the chelle truth and wrote out exercise. their new chevrons, and evidently formed the chalk-trough and wrote out exercise a first-class "mutual admiration society." "a" perfectly correct. When called upon Altogether it was one of the bluest after- to recite the instructor listened very grave-

board. Then, much to my friend's chagrin, the whole matter came out, and his repu-

tation as a French scholar sank below zero. So, having lost Henson, I had to cast about for another tent-mate. Silkins and Corp had gone over to other companies and were out of the question, for I had resolved never to leave my native company of my own free will. However, there was themen of the class below us, who tip- a class mate in another company who tapped around the area with wrinkled in the same section with me in all coats and uncomfortable braces.

Little time was lost in moving into camp. mate. I prevailed upon him to secur a class mate in another company who was studies, and with whom I was quite inti-mate. I prevailed upon him to secure a transfer to my company, and to room with me,

His name was Canville, and we proved to be very congenial, with the exception of the occasional quarrels we had about the washbowl. It was generally my fault, for I own that I was addicted to the untidy habit of washing and not emptying the bowl immediately. When "Canny" wanted to wash and found the used water in the boats he protested so sharply that I genbasin, he protested so sharply that I generally retorted in kind. Then we would not speak to each other, except when necessary, for several hours. A congenial smoke, however, brought us together and we were better friends than ever.

We were kept quite busy during the rest

ao of the month of June, but enjoyed a real He pleasant vacation in the mere relaxation from study.

Troop parade came at eight in the morning, and at nine we went either to the siege battery or to rifle target practice. At twelve we took our dancing lesson. There Reetel's French Grammar is divided into twelve we took our dancing lesson. Inere lessons. In each lesson are a number of was not much to be done in the afternoon paragraphs lettered a, b, c, etc., containing except police duty. As the yearlings were short French sentences. These were given the only men available for this duty it out by the instructors who wrote the translation in English, and we were expected two days "off." Policing the company to put them into French again.

Now, as long as these sentences were pleb days, for the cadet officers treated us ranslated into French that was sufficient. with more consideration. Four o'clock police call, coming as it did in the middle of the afternoon, was enough to break up the whole afternoon.

First-classmen were allowed to walk on First-classmen were allowed to walk on cadet limits between 9 a. m. and retreat, but the third-classmen were confined to camp. The only way by which they were allowed to leave camp was by permit or on O.G.P. A member of the old guard was entitled to old guard privileges. He was excused from all duty and permitted to walk on cadet limits until 1 p. m.

As there were only fifty odd men to walk guard and eighteen were detailed each

guard, and eighteen were detailed each day, guard duty formed no inconsiderable part of our task. It was very tedious work,—this walking guard. The half-hours

work,—this walking guard. The half-hours moved with a snail's pace, especially during the heat of the day and the lonely hours between midnight and reveille. Our only diversion when on guard was the fun afforded by the "Seps," who went on guard for the first time. In some instances they "tied it up" as completely as a pleb sentinel would on his first tour, but after our Sep classmates had perbut after our Sep classmates had per-formed duty two or three times, they knew almost as much about it as the more ex-

amost as much about it as the more experienced June men.

At the outset of this series of articles I advised the reader not to be a Sep, and promised that I would explain why later on. If I have not already brought out this point, I can summarize the disadvantages as follows: first, a Sep must needs be broken in and keep up his studies at the same time; second, he never seems, as a rule, to catch up with the June men until the end of the second year; third, his jumping begins where that of the June men ends; fourth, Seps are very rarely men ends; four made corporals.

All of the corporals were utilized as drillmasters, including several yearling privates. I was among the latter. I took a great deal of pains with this work, and gave my plebs little rest. It is much more fun to drill than to be drilled. While acting as drillmasters we had the privilege of cadet limits the same as first-classmen.

By the time the plebs came into camp the number of drill masters had been so reduced that only several corporals were

Hops and concerts began as soon as w entered camp. There were two hops and one german each week, and the band ren-

dered their concerts on the other evenings of the week except on Sunday.

The plebs came into camp about the middle of July, and we tried to make things interesting for them. Their expension of the was characterized by the same monotony and discomfort as ours: but Istence was characterized by the same monotony and discomfort as ours; but WE WANT nappy as ne. The ney for the "Colonel" had gone. we, for the "Colonel" had gone. The adjutant was not half as particular as our "pleb adjutant," and the first captain treated the plebs with about as much consideration as he did the yearlings. As a result, the third class had to exercise particular vigilance in keeping the plebs well had been shop, Cable Road, Merry Go R may be run with toy Motor, Steam Englished. braced.

I often sat in my tent and watched the procession of plebs passing the first cap-tain's tent at the head of A Company street on their way to the ice-cooler or the shoeblack's tent, and very rarely were they halted. The first captain of my day always kept his weather eye open for slouching plebs. Many a time have I seen one of my classmates start out on a journey to the water-tank, and after carefully surveying the surroundings, reduce his brace perhaps one-half. As he passed the tent of the first captain he furtively gazed in, and observing that worthy in his "back yard," wrapped in a sheet and apparently sound sleep, he reduced his brace another half. Then the inanimate form of another half. Then the inanimate form of the first captain suddenly became animate, and the pleb nearly jumped out of his shoes, as somewhere behind him came in tones of thunder, "You man, come back here!" As the novelists say, let us kindly draw a veil over what followed. It is enough to state that this particular pleb never again slouched by the first captain's tent, whether or not the latter was at

But now all was changed, and Canville and I used to sigh wearily as we watched the plebs slouch unmolested past the first captain's tent. We tried to average up things by bracing the delinquent plebs our selves but the best of us was a poor substitute for a first captain clothed in towering wrath and a sheet.

(To be continued.)

# Pay Day

# What Does It Mean To You?

If you are in that discouraged line of men who get the same pittance week after week, year after year without hope or prospect of something better, it's time you appealed to the International Correspondence Schools. Ask them how you can in your spare time, qualify for a better position, a higher salary and a safe future. They will make the way so plain and easy for you that your only wonder will be that every worker in the world is not following the thousands who have already reached success over this highway,

Mark on the coupon the occupation you prefer and mail it to the I. C. S. It costs nothing. It will surely help you some. It may make your fortune.

#### International Correspondence Schools Box 1278, SCRANTON, PA.

Please explain, without further obligation on my part, how I can qualify for a larger salary in the position before which I have marked X

# Other Freaks

After seeing the photograph, "A Freak of Nature," in the April number of THE AMERICAN BOY, I thought I would write and tell you that there are several of the same kind not far away from my home. It is said that they were so formed by the Indians bending over a sapling and cutting off all of the branches but one.
This one they let grow straight up.
These trees mark the trail to a certain part of the Great Lakes.

C. W. B.

# Just as He Thought

A small boy was reciting in a geography class. The teacher was trying to teach him the points of the compass. She explained: "On your right is the south, your left the north, and in front of you is the east. Now, what is behind you?"

The boy studied for a moment, then puckered up his face and bawled: "I knew it. I told ma you'd see that patch on my pants."-Ladies' Home Journal.

It is estimated by good authorities that school slates will have entirely disap-peared from the schools of the United States within the next ten years,

# THE BOY PATHFINDER Mr. Sprague's New Book for Boys

"Well done, lad!" cried the captain. - Page 37.

The Boy Pathfinder is the second number of the series of boys' books written by Wm. C. Sprague, editor of The American Boy, under the serial title of "The Making of Our Nation Series." It describes the adventures of George Shannon, the youngest member of the Lewis and Clarke expedition that in 1804-05 found a path across the western mountains to the Columbian River and the ocean.

# A SPLENDID BOOK FOR BOYS

# "Three Boys in the Mountains'

THE story of Western Adventure—clean and inspiring—that ran in The AMERICAN BOY through the greater part of 1901, has been issued by The Sprague Publishing Company in book form. This story is one of the longest and best stories that has yet appeared in THE AMERICAN BOY. Its author is the editor of THE AMERICAN BOY. Its author is the editor of THE AMERICAN BOY. Its sufficient to indicate that it rings true in morals, and that nothing has been allowed to enter the story, that will hurt a boy, but that everything is there that will give interest and dash to the narrative. It brings in the pleasures of the hunt, the chase and the camp, and deals with Indians and animals in plains and mountains. It is a good healthy story that a parent will be glad to have in the hands of his boy.

DETROIT, MICH., NOVEMBER, 1905

Number 1

WAS a clear, crisp morning in October, with just chill enough in the air to set the blood tingling and whet the appetite. There had been a hard frost the night before, and along the little watercourses and in other low places there was a white lacework of frost, suggestive of what the cold would do a few weeks later.

Reynard, the red fox, was following a small stream up the wind, looking for his breakfast. This was his favorite way of hunting, for it gave him both the advantage of seeing and smelling, so if the wind had been in the opposite direction he would have hunted down stream instead of up.

His appetite was very keen this morning, and thus far he had merely whetted it with a field mouse. By the side of an old log he had got the scent, and after poking about under the log with his paw he had frightened the little creature out into his open mouth.

If you had told Reynard that it was a fine thing to have a good appetite, he would have replied sarcastically that it depended on how plentiful game was and what luck one had in hunting.

A heavy flight of woodcock had come in the night before from the north, and every now and then he flushed one. This made it interesting. There was little likelihood that he could surprise one as he had done the week before, while boring, but it gave added interest to his hunting to know that game was plenty.

This sleepy old woodcock had been boring for angle worms in the loam and had just located one when Reynard happened along. He had thrust his bill into the mud until the mushy loam came up to his eyes, and so did not see the fox behind him. Just as he pulled the worm up the fox sprang. The worm escaped, but it was quite otherwise with the woodcock.

Once this morning the wary fox had got a slight whist of man-scent at a stony place in the brook. The scent was faint, and after making a thorough examination he had concluded that it was old and had gone on hunting, merely crossing to the other side of the brook as a precaution that was easily taken.

Presently he got a good whiff of game-scent from up stream, and stealthily advanced upon it. His nostrils were extended, his hungry, yellow eves ablaze. and his whole frame quivering with excitement.

As he drew nearer he crouched low to the ground, going almost upon his belly.

Then the wind freshened and he got a strong whiff of bird-scent; there was no mistaking it.

A few more crouching, creeping steps brought the fox out into a small open spot, where the brook broadened into a pool five or six feet across. There, just over the middle of the pool, a foot or so above the water, was a sparrow, hanging head down and quite motionless.

Reynard's first impulse was to spring, but as the bird neither fluttered nor moved, this impulse was checked and he fell to considering.

It was very queer that a bird could sustain itself in mid-air without using its wings. It also was not afraid of him. This, too, was queer. Then the fox noticed a small, straight twig running from the bird's feet up into the branches of the tree that overhung the brook.

The bird was holding to this, or the twig was holding the bird. This seemed more likely, for the bird must be dead, as it neither fluttered nor chirped.

It was a very handy breakfast, almost providential, in fact, but there was something about it that the fox did not like. He was accustomed to working for his board, and this having the meal set before him without price seemed queer.

Then he sniffed the bank up and down the little stream for thirty feet. There seemed to be no manscent. He crossed over and tried the other side. This, too, was untainted. After all, perhaps it was all right.

Once he thought he got a whiff of man-scent off a

broken twig, but finally concluded it was the taint he had gotten farther down the brook that still lingered in his nostrils.

The bird was too far out over the water for him to reach it from shore, but there was a convenient stone, covered with a bit of moss, half way between him and his breakfast. This would make good footing. A fox never wets his feet if he can help it, and he would use this stepping-stone.

He paused a moment with his paw in mid-air, as he reached for the bird. It was all strange, and too easy. He would like it if the bird would flutter, then he would spring upon it and tear it to bits without hesitation.

Pooh! what was the use of questioning the good fortune that had made his breakfast so easy? So he put out his paw and stepped upon the moss.

Then something sprang from the water and caught his paw just above the first joint, so quickly that he knew not how it was done. With a lightning jump he sprang backwards, bringing a long snake-like thing out of the brook after him and a queer clam upon his

Whe-e-e-w! How it bit! He snapped at it and shook his paw, but it still clung. Then he bit at it furiously. It did not bite back, but it was so hard that it hurt his teeth, while he seemed to make no impression upon it. The bones of a rabbit or partridge would have been ground to powder by those strong jaws, but this strange clam did not seem to mind them. But he would soon shake it off, and he spun round and round, snapping and snarling, even crossing to the other side of the brook. But the snake-like thing followed him and the clam bit harder and harder. He would try what effect water had on perhaps he could drown it.

He held it under water for a minute or two, but it still nipped him, and the snake-like thing followed as before.

Perhaps if he would kill this noisy thing that rattled after him everywhere he went the clam would let go his paw, so he attacked the chain furiously, but it was as hard as the strange clam, and only mocked

Then he lay down and licked his throbbing paw and wondered vaguely how it had happened. He many a tuft of moss was painted crimson. was always care-

kill him.

new pocket handkerchief while he slipped the noose over its feet, so as to leave no scent, and returned the same way he

came. So whatever scent was left in setting the trap the brook had carried down stream.

Reynard had discovered the point where the trapper had left the brook, but it was so far away from the trap and the scent was so faint that he had failed to connect the two. Besides, moss usually grew on stones in the brook, and the whole arrangement fitted together so nicely.

Then a twig snapped in the bushes and a new, wild terror seized Reynard. It was someone connected with this device who was coming to do him further harm. He cowered upon the ground and lay very still. It was only a rabbit hopping through the bushes. Ordinarily he would have crept stealthily after him, but now his own troubles engrossed his attention.

At each rustle of the wind in the leaves his fears increased. The rat-a-tat of a woodpecker in a tree near by made him jump, but now his paw no longer pained him, for it was getting numb. It really felt as though he had no paw below the first joint.

He wriggled and twisted, bit and tore, lay upon the ground and shook his paw, sprang suddenly into the air, crossed from one side of the brook to the other, and tried every stratagem known to fox cunning, but all to no purpose, for the ugly clam still held his paw with a grip like death.

Foam dripped from his lips and his eyes grew wild and bloodshot. His breath came hard and fast, while, in his heart, fear contended with sullen rage for mastery.

He was very thirsty, but did not dare drink in the brook, for he thought it would do him some harm.

The fields and woods had seemed so free and wild an hour before, and now they were filled with terror. This bit of a demon on his paw had changed every-

After one of these wild plunges in which he shook himself, rolled and tumbled, snapped and snarled, he bit at his paw in sheer desperation; it did not hurt as much as he had expected, and a new thought came to him. If he could not get his paw from the strange creature's mouth, he might leave the part it had hold of there and escape on three legs.

He bit at his paw again. This time the teeth sank to the bone and made him cringe.

After all it would not be so funny to deliberately gnaw one's own leg off. For a time he considered, then went at the paw again.

'The flesh was not so bad, for he tore it madly. cringing and trembling at every bite, but the bone would be more difficult.

Soon it gleamed white, and he stopped to rest and get his courage back. He felt sick and queer, and the ground was covered with his own bright blood.

When the pain had lulled he would begin again. It did not cease, but got steadily worse, so in sheer desperation he renewed his efforts at amputating his own member.

He never could gnaw through the bone as he would that of a rabbit; there must be some other way. So he held the hideous clam down with his well paw and bent the torn and bleeding one over backwards. Farther and farther back it went and Reynard set his teeth tightly. Grim desperation was in this bloody act. How supple the bone was. Then it snapped with a loud pop, and he knew the worst was over. He lay down again for a moment to get back his wind and courage, and then with a few sharp crunches of his jaws severed the limb and was free, minus the torn and bleeding forepaw in the trap. Free to hop off on three legs into the woods.

But he left a bloody trail on ferns and leaves, and

It would never do to bleed like this. Already he was getting weak, so he made his way cautiously to a spring that he knew of near by.

Cold water was good to stop bleeding and to draw out fever and pain. He had learned this the summer before, when he had stuck a bramble in his foot. So he dipped his paw in the spring, taking care this time not to step on any mossy stones

When the cold water had partially stopped the bleeding and relieved the pain a little he went away to look for a balsam tree, to apply a favorite remedy that his mother had used on him when he was a young fox and had cut his face on swale grass.

He soon found the desired tree and broke open several of the blisters with his teeth. It was warming up by this time, the sun being two or three hours high, and the balsam flowed freely. This he lapped up with his tongue and applied it to the ragged stump. The balsam was very sticky, and it stuck the ragged ends of skin over the broken bone, which luckily had snapped at the joint, leaving a fairly smooth end.

Besides sticking down the skin over the end of the bone, the balsam helped to stem the bleeding. In half an hour's time he had stopped the blood and made a very respectable stump with these simple remedies. A man with all his knowledge of bandages and splints might have bled to death in the same predicament.

Then he went away into the deep woods to let nature do the rest. He found a scrub spruce with low-hanging branches; this would screen him from curious eyes while he took a nap. He crawled in under the friendly branches and lay down to sleep. For a long time the newly amputated paw throbbed so that he could not rest, but he bore it grimly with set teeth, and finally fell asleep from sheer exhaustion

When he awoke it was night. The stars were shining brightly above him. He could see them winking and blinking through the tree tops, and the night wind was sighing softly in the pine tops.

He was ravenously bungry, and his paw throbbed with renewed energy. He was also lame in every joint from the wrenching that he had got in the trap.

There seemed to be no way of gratifying his appetite, for his lame paw would not permit of his hunting. Usually he would have crossed the mountain and gone into the meadow to hunt mice on so bright a night, but now this was out of the question.

But his aching member and his hunger would not let him rest, and he hobbled painfully about, hoping to find food in some unexpected manner,

Presently he heard a rustling in the underbrush, and two other foxes crept cautiously out into the moonlight, coming directly towards him.

Reynard at once recognized them as his little brother and sister, whom he had not seen for two days.

How lucky it was they had appeared at this time! Here was aid at last.

Reynard greeted his brother and sister with a short bark, expressive of joy and surprise, and they came

of his mutilated paw. The three-legged fox held up his wounded member imploringly, licking it, that they might see his suffering.

But at the sight his own brother and sister drew back and snarled at him. He was different from what they had seen him before. He was maimed, and no longer one of them. He was a crippie, an outcast, and not worthy of their friendship.

Then the wounded fox was reated to a most cruel illustration of the barbaric law of the survival of the fittest, which is carried out so regorously in the woods, and which at once debars maimed and crippled animals from the rights and privileges of their kind.

His own little brother and sister set upon him furiously, snapping and biting at his wounded paw, and showing him plainly that henceforth they would recognize him only as an outcast.

At first great astonishment possessed the fox, then outraged fury, and he backed up against a tree and defended himself in a manner that made his assailants draw away to a respectful distance. He was really much larger than they, and had been something of a bully before his accident, but clearly his day had passed.

From that hour on he was known to both man and beast as the three-legged fox, an outcast and a

This story, The Tripod Fox, is one of the best animal stories I have ever read.

WM. C. SPRAGUE.

vagrant, hated and tormented by his own family, and hunted and dogged by men.

In time he learned to travel very well on three legs, but he never could conceal his identity.

If any boy on his way to school saw a ragged fox track, he would at once tell the other boys that the tripod fox had crossed the night before up in Jenkin's pasture. If the snow was soft one of the paw prints was always deeper than the others, and if it was very deep you could see where the stump dragged in the snow.

Hunters were glad to find this ragged fox track in a new snow, for they always felt sure that their hound would catch the lame fox, within an hour after starting him.

Many stories were told by fox hunters of how they almost bagged the tripod fox, but he wore his hide just the same, and defled them to the end of the chapter.

He never could excel in the long, hard chase, for his lameness prevented that, so his wits had to make up what he lacked in fleetness. There were many kinds of hunting too that he had to forego, but he developed a cunning, and resource, that was not matched by any other fox in the county.

His method was usually the ambush or still hunt.

quickly to him, but drew back, uncertain at the sight and he rarely stalked his game, as other foxes frequently did. His hunting took patience, and long waiting, but he usually got his game.

He would lie for hours in some hollow beside a woodland path, where the autumn winds had piled up leaves until they were deep enough to cover him. His nose and eyes just showing, he could see and not be seen. You might have watched the pile of leaves, that so well matched his own reddish yellow, and not see them move for an hour, but let some luckless rabbit or squirrel come jumping along the path, and he would spring from the pile like a flash and have them before they knew it

At other times he would lie behind an old log for an entire afternoon watching the squirrels playing in the trees, and spying out where they hid their mast. If he saw that a squirrel was hiding his store under the roots of a tree, he would mark the spot in his mind, and taking his place just one spring from the hole, behind the trunk, there he would stand like a statue, his hungry, yellow eyes glued upon the hole. He never shifted his position or seemed to get cramped, for he knew better than you or I do that a motionless object in the woods is very hard to discover.

But when the long-watched-for game appeared he rarely missed it. In the same way he had spied out a cock partridge's drumming log, and by lying close under one side of it, where it was rotten, he surprised this most wary of birds, and pinioned him before he could move a wing.

Mice hunting he also carried on successfully, but his specialty was poultry and other thieving about farm houses, where great caution had to be exercised, and only a fox with wits could go continuously and keep his brush.

There he not only had to guard against traps, but also against the farm dog. And as he was not swift of foot, he would fare badly in a race for life. This being the case, he usually reconnoitered the premises to be robbed, and discovered whether there was a dog upon the place. If he found that it was guarded in that way, he would look for a farm house that had no dog.

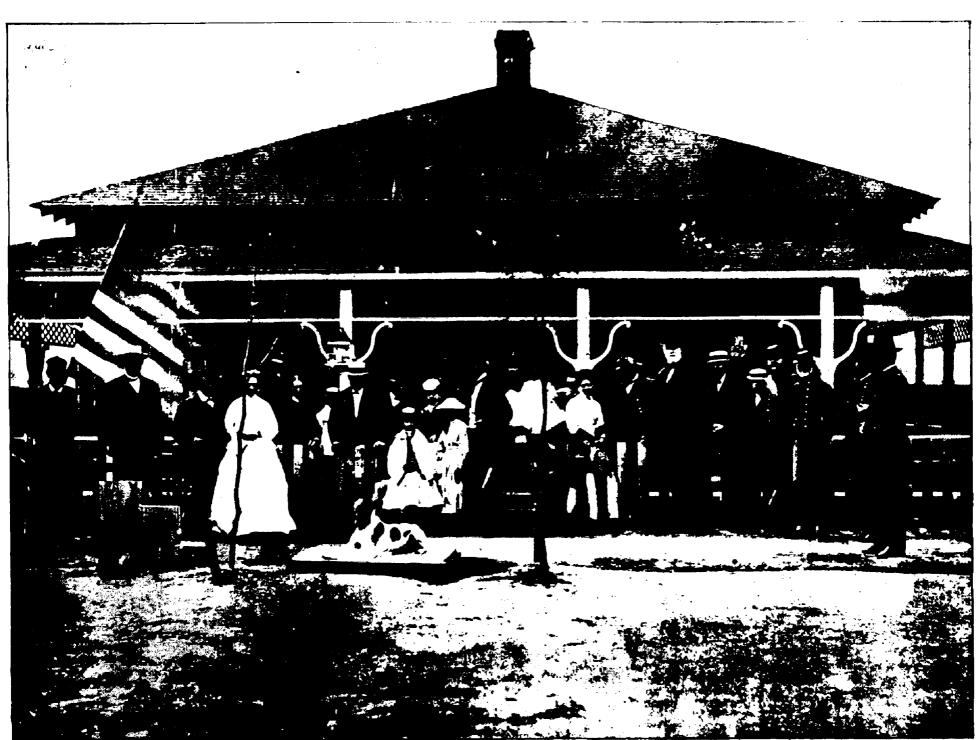

On one occasion he misjudged the premises and was surprised in the very act of robbing a hen-coop, by the canine protector of the place.

It was lucky for him that the dog was a coward. and retreated with a gashed face, before the battle had really begun, or his coat might have suffered.

I have discussed the point with many old fox hunters, and I cannot discover that a dog was ever known to draw first blood in a scrap with a fox.

The fox is so much quicker and more subtle than the domestic animal that he always gets that advantage. I do not think that a dog ever killed a fox. without carrying off a scar or two, to remember the battle by. Of course, a fox when cornered is no match for a gritty dog, but he is game from the quivering tip of his nose to the end of his bushy tail.

(To be continued.)

HAD been asked to play left field for the Hickories, the crack

native town-and one

THEbaseball team of my No. 1--A Con-

of the best teams in the state. The regular left fielder had been disabled and a game was to be played with a nine at Z-, a city some thirty miles away. No greater honor could come to me than that of being asked to "substitute" in the Hickories, and none that could surprise me more. True, I had been, for two seasons, one of the members of the Stars, a club second only to the Hickories in our town, but to be asked to substitute in the famous Hickories was a glory I never dreamt of. But it was a fact. The captain of the Hickories had said it, and, dazed with the honor, I had accepted the appointment.

Soon every fellow in town knew I was to be the substitute player in the game with the up-the-river team the following Saturday, and at once every baseball player in town envied me. I know my hat band at once became too tight and I am sure I took on a high and mighty air about home. But secretly I was frightened. What if I should not play well? What if I should fail in the test? No one knew how nervous I was during the week preceding the game,

A GLORY I HAD NEVER DREAMT OF

for I affected an air of self-confidence that concealed my real feelings. I know that I didn't sleep well, and that my meals were a matter of duty. All my spare time was spent in our backyard practicing at batting balls thrown by my younger brother, who was almost as proud of the distinction suddenly thrust on the family as I was.

You must know that the Hickories were a great club—the greatest at that time in the whole state of Ohio, and I was but seventeen—the youngest lad that had ever worn an "H" on his breast. Everybody man, woman, and child, in our little town, held this in a respect approaching nearly to awe, because it had brought great glory on the little community, and indeed it was a club to be proud ofgood, straight, honest ball players.

True, I was to play in but one game—as a substitute, but that was enough to make me feel a sort of 'cat may look at a king" feeling as, arrayed in the blue uniform with the white "H," I joined the others and marched with a band and a crowd of enthusiastic rooters to the steamboat that was to carry us to

It was a glorious boat ride. Everybody was hopeful and happy. The Hickories, with a string of victories behind them as long as any one could remember, were confident of an easy victory. My own courage was high. The "H" on my breast seemed to inspire me. All my anxiety was gone.

- a large crowd met us and escorted us At Zto a hotel where we ate dinner, and then followed us to the grounds, preceded by our band.

The game was a hot one. I did my share—took every fly that came into my garden, stopped a hot grounder and caught a man on second, by a good throw, ran far out over the foul line and nabbed a twister just on the edge of the crowd; and at bat I was not the worst, though I was never much at the bat, being too slight of build for a heavy hitter. So that when the game was over I had the satisf .ction of having the captain of the Hickories sa, to

"You took everything that came your way. ...ou're

all right."

My fellow-players and the crowd thought so, too, and I never before was prouder and happier than when, on the boat that night returning home, the game was being played over and over by little groups of tired but happy young fellows, and my name was spoken with praise.

I had not disgraced the name of the Hickories. had not been unworthy of the "H" on my breast. The next day everybody in my home town would know that I was able to play alongside of Tom and Ike and Charlie and the rest of the famous nine.

#-6. Sprage

It was my moment of triumph—and my moment of greatest weakness, boys. Strange, isn't it, that when a fellow thinks himself great he is nearest to being small. The greatest temptations follow the greatest victories often-I was about to say always.

I smoked my first cigar that night. I had always prided myself on being clear of this habit. My companions generally smoked. Nearly every young man in our town smoked. The Hickories smoked. But my father did not smoke; nor did his father before him. No near relation of mine used tobacco. I was brought up to think it an unnecessary, wasteful, injurious habit. I never intended to fall into it.

But I was one of the Hickories. We had won a signal victory. I was one of the heroes. I was no longer a common ball-player.

We were sitting on the upper deck of the steamboat in front of the pilot house—some four or five of us. It was a beautiful, moonlit night. water reflected back the moonbeams, the hills rose dark and majestic on either side, the steamer was gay with lights, every heart was light, though limbs

were weary.
"Have a stogle, old man." A thousand times before that I had said no. But say it now, great as I was? That would be playing the baby. I reached for the proffered weed-a long, thin fellow such as we used to know as Wheeling stogles. In a moment a fire burned at its taper end and I was really, in every sense, now one of the Hickories.

It takes a long time for a veteran smoker to smoke up a stogie. It takes a new hand at the weed an incredibly short time, for a new smoker pulis faci and hard. The wind was blowing in my face as I sat facing the bow, so that much of the smoke emitted from my lips found its way at once back into my face. But I enjoyed it and said so, and took another. Not until half of my second stogie was gone did I realize the way the wind was blowing, so I turned my back to the bow; that was better. Then the conversation dragged. The boys were Then the conversation dragged. tired; and so was I. I wondered how far we had come. The water did not give back the same light it did. I thought it looked duller; it certainly sparkled less. The chug, chug of the engines seemed to grow harder and the bo t to quiver more and more as she leaped forward. The air was growing oppressive. The voices o. in, companions seemed far away. They were growing sleepy, I thought. Someone said something about the foul ball I caught on the edge of the crowd. It didn't seem wonderful to me. It was growing oppressively warm.

flannel sort with the "H" on it seemed to choke me. I unputtoned it a litle, took off my cap, and pushed back my hair. My forehead was damp. My stogie had gone out. I wondered if the boys would miss me if I left them for a moment to get a drink of water. Perhaps I had better tell them what I am going awa; for, I said to myself. No, I'll just make a

EDITOR

quering Hero strange enough I did

quiet exit and say nothing. The water was on the deck below, but not go in the direction

of the companionway, but in the very opposite—back to the stern of the boat-back to the railing just over the big wheel that was turning—turning, and oh, that turning! Why did it turn? Then comething else turned. I turned—inside out.

Glory! Oh, the glory of that day! I was one of the Hickories and oh, so proud of it at that moment! Don't you believe it, boys. I would have sold, exchanged, given away without hesitation or question all the giory of that day for a clean conscience and a clean stomach.

I stayed back in the shadows of a big smokestack, gathering all the soot and smut that poured over and around me, sick in mind, in heart, in stomach, as no boy had ever been before. The uniform of the Hickories, the "H' on my breast, were nothing

now. I despised myself, and of all things on earth the least desirable to me now was the praise of friends. I was frightened too lest someone should see me-weak, fallen, disgraced.

At last the boat touched the home wharf. It was midnight. I waited till I knew that all the boys were off the boat, then I crawled out of my dirty hidingplace, staggered weak and trembling to the companionway, clutched at the railing with both hands, tottered down, felt my way uncertainly to the lower deck, and thence to the wharf. I heard the band playing a lively air and the boys shouting as they marched away up the middle of the main street. It sounded awful in my dull ears. volted again at the unseemly disturbance of the midnight quiet. It was a shame and a disgrace to thus arouse a virtuous, sleeping town. I would not join in it. My home was a mile away, at the far end of the town. How could I ever reach there? And I a champion! A Hickory! The thought made me sick again and I sat down on a curbstone to think it over, with my head between my hands.

Then, hearing the sound of approaching footsteps, I arose and walked into an alley. I had sense enough to know that if I followed that alley I would reach the back gate of our yard. So up the alley I trudged, and stumbled. The band in the distance was playing "Hail to the Chief." And one of the chiefs was in the alley, trembling, groaning, and wiping the cold, moist drops of dampness from his honored brow, praying for strength to get home and into bed without a single, solitary voice to greet and welcome him.

There must come an end to all things, so there was an end to the alley. With scarce strength enough left to turn the key in the lock I entered the dear, old home, silently sank amid the pillows of a sofa in the sitting room and thanked a kind Providence that the hero was still alive—though very,

very sick. My father was always an early bird, and the next morning he caught the worm—a very humble worm with a dirty "H" on its breast, and a white face streaked with dirt, where it had laid its head in its hands—oh, so often and so long.

Fathers know more than boys give them credit

(Continued on page 11.)

# The Boy Who Thinks He Can't

By J. L. HARBOUR

HE "TOO SMART" boy, the boy who thinks that he "knows it all," the boy who "needs to be taken down a peg or two," is never a very agreeable sort of a boy, but, after all, I really think that he is preferable to the boy who is forever saying "I can't." The "too smart" boy will be sure to get his "come-uppance" and will be set in his proper place so often that the wings of his vaunting spirit will be clipped in time, and he will be willing to keep within his proper limitations. But the "I can't" boy makes his own limitations, and they are so narrow, so restricted that they keep him miles and miles from success in life. Who ever heard of an "I can't" boy amounting to anything in life? I never did. You never did. No one else ever did. At least not until someone gave the boy a real good shaking up and helped him to come to a realizing sense of his unworthiness and his own unmanliness in continually undervaluing the ability God has given him. A boy with the invaluable inheritance of good health and with even an ordinary degree of education should never dare say "I can't" to any ordinary undertaking. In fact, many boys have achieved an extraordinary degree of success with the education left out. Abraham Lincoln did. Booker Washington did. Hundreds of men have made the greatest success in life with only self-education.

Do you happen to have a high school or even a grammar-school diploma hanging in your room at home? You have? Very well. Then don't you dare stand before that diploma and say "I can't" to everything in life. If you have a diploma I have mentioned or, better still, if you have a college diploma, you are better equipped for the battle of life than thousands of men have been who have made their mark in the world. You are so much better qualified to say "I can" than other boys have been who have said it, all the same, and made good their words.

Undervaluing one's self is weakening to character. It is weakening to one's will power. It deadens ambition and prevents the growth of one's powers. The boy who says "I can't," and sticks to it, soon becomes inefficient, and there is no sorrier spectacle in this world than a well and strong man whom people regard as "real good, but inefficient." They are the kind of men whose wives and children have to support them, and a man of that kind never stands high in the community-never.

They are like the men who "mean well," but who never follow up their good intentions by doing well. It was only yesterday that I heard a great, strong, fine-looking man in the prime of life spoken of as being "a good man, but inefficient—one of those men who simply don't seem able to succeed at anything." And I said to myself: "I suspect that he was one of these 'I can't boys,' and I really have no doubt that he was. No real alert, "up-and-coming" boy ever develops into an "inefficient" man. And no "I can't" boy ever becomes a strong and masterful man until he changes his "I can't" for "I can." The world has such an admiration for a masterful man, and even those who are too kind or too polite to give voice to it have a certain contempt for the inefficient man. I know of one whose friends always speak of him as "poor Jones," only that isn't the real name, because he is so helplessly and hopelessly incapable of doing anything for his own support or the support of his family.

Now, you "I can't" boys must look out or in the years to come your friends will be speaking of you as "poor Smith" or "poor Jones" or "poor White," and that will be a very great humiliation indeed.

The boys and the men who are pushing to the front in all lines of high human endeavor are the boys and the men who are not undervaluing the gifts that God has given them. They have a proper pride in their own powers. One can have this without being conceited or boastful, and no wise boy is ever the one or the other. The "I can" boy never says very much about it, while the "I can't" boy is forever voicing his own inefficiency. And he usually does it with a whine, and that is what you boys would be apt to call a "dead give away."

The "I can't" boy who adds whining to his incapacity does "give himself away" dreadfully, but fretfulness and whining are usually to be found with incapacity. They are a part of the general make-up of the "I can't" boy. Now, are you a boy who thinks he can't? Stuff and nonsense! You can, you can, you can! Stand up, brace up, hold up your head, present a brave and manly front to the world and say "I can," and thank God that He has given you the health and strength and the resolution to make good your words. Now let us hear no more of this "I can't" business from any boy who may read this.

# giving was Held

By H. D. M.

HAVE BEEN wondering how many of the thousands of readers of The American Boy who will read the proclamation of the President fixing Thanksgiving Day, 1905, have ever thought of when and where the first American Thanksgiving took place. It is a most interesting story, carrying us back far beyond the momentous days when the people of America fought for freedom against Great Britain, far beyond the incidents of the old colonial times, back 2x5 years to the very beginning of American history when the Pilgrim Fathers, that little handful of brave men and women, first set foot upon "the stern and rock-bound coast" of New England at Plymouth. Did you think it was so long ago?

The boys and girls of America have been taught that July 4th is the greatest day in American history because on that day American independence was born, and that alongside of July 4th should be placed April 19th, the day on which that first shot was fired which was "heard around the world"; but I think that November 21st, the day on which William Bradford, Elder William Brewster, Edward Winslow, John Carver and Miles Standish, with their little following, stepped from their boat on the spot which was to be the settlement of the first American colony, ought to be the foremost and greatest of all cherished days.

It was a dreary, cold and most miserable welcome the little company received. Hunger and cold, insufficient protection, constant fear of the attacks of wild beasts or prowling savages confronted them. No wonder that sickness and death at once appeared Among them. As we read of the awful hardships which they suffered and endured and learn that fortysix of their number died during that first terrible winter, we marvel that any escaped.

Notwithstanding their destitution and their weakness, the survivors toiled and struggled unceasingly, uncomplainingly, hope of better things and better days buoying them up and strengthening their

# When the First Thanks- MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 14-From the Governor of Indiana

WINFIELD T. DURBIN, GOVERNOR OF INDIANA

The boys of the United States have as their own the richest heritage ever handed down to a rising generation in any age or

Manfela T. Durbin

courage. When the Spring of 1621 arrived, with its gentle, life-giving breezes, the little colony, which now only numbered about fifty, started bravely on the work they had before them.

In April the "Mayflower," that little vessel which was the only link connecting the Pilgrims with the outside world, set sail for England. The captain offered free passage to any who wanted to go back, but not one accepted.

During the months that followed the clouds of adversity disappeared for a time, and the sunshine of prosperity brought cheer to the hearts of the little band. A good harvest was gathered in, and they were able to make their dwellings secure and comfortable against the storms of the coming winter, while the health and strength of all were renewed. To these simple and devout men and women, as they compared their present comfort and prosperity with the destitution, want, suffering, and bereavement of the preceding winter, this was a time for special Thanks giving. Governor Bradford gave public expression to this feeling when he made proclamation of a time for a special Feast of Thanksgiving. Preparations were at once commenced. The woods resounded with the crack of rifles; wild turkeys and deer were brought in, and the women folk made appetizing feasts for all. Many tempting dishes filled the roughly hewn tables, savory meat stews, venison pasties, dumplings of barlev flour, bowls of clam chowder with sea biscuit, roasts of all kinds, broiled fish, cakes and plum porridge, and great baskets containing wild grapes. plums and nuts. Massasoit himself, King of the Wampanoag Indians, who had proved a friendly chier, and ninety of his warriors came as invited guests. bringing with them baskets of oysters as their gift. the first ever tasted by the white men.

The feasting and merrymaking began on Thursday, about November 1st, 1621, and ended with what may be termed a State dinner on the following Saturday. All work was suspended during this time, boys and girls romped and played, while the young men engaged in friendly athletic contests with their Indian guests.

Such was the first Thanksgiving. The boys of America should revere the memory of the men and women of that far off time, for through their indomitable courage, their patience, their perseverance and their unquenchable faith, we have in large part the blessings of a free and favored land.

# From Page Boy to Playwright

When Augustus Thomas was born forty-six years ago the American stage was notably enriched, though thirty-four of those years were to pass before any playgoer should see what the profession had gained. In those years Mr. Thomas was running up and down the aisles of the Senate Chamber at Washington, "paging it" for the country's law makers; was serving all sorts of turns on a great railroad, spending six good years learning the practical details of that calling; he was reporting and drawing cartoons for papers in Kansas City and his own native St. Louis, and, later, writing special articles for New York journals, and dabbling'a, little in politics. Then, last of all, he wrote plays.

Here was a career not permitted to he devoted to one foreseen end, for "Gus" Thomas had to do what lay nearest hand and do it well. He did just this, with the result that he saw life at close quarters, mentally jotting down what he saw, so that when, at length, he turned to write his plays, he had real life to put into them—and they succeeded.

"America's foremost playwright" he is today acknowledged, and it is worthy of note that only one of his sixteen dramatic pieces has to do with any country other than this. "Alabama," "In Mizzoura" and "Arizona"—the most popular of the man's output—are American

AUGUSTUS THOMAS

to the backbone, for their author—as page boy, railroader, journalist, or politician—had met their characters, known them, and then drawn them for the rest of the world to meet and know.

# The "Gray Wolf" of Siberia

When Portsmouth's peace news was followed on the plains of Manchuria by the armistice between the facing armies of Japan and Russia one of the world's most thorough generals lost his greatest chance to write his name high up on the page of twentieth century history. This was the leader of the men of the Czar, Lleutenant-General Linevitch, who had played a part in all the eighteen months fighting, climbing at last to supreme command—just too late to fight his own great battle.

His men call him "The old gray wolf."

Ninety-three per cent of all the children of school age in Japan go to school. When the same thing is true in Russia, the Russian generals and admirals may not get beaten every time they fight.

Laurence Solding. Spaulding, Minn., age 13, and his brother, age 10, are the happy possessors of a carpenter and blacksmith shop, 10x12 feet, built by themselves. They have a set, of carpenter tools and also a set of blacksmith tools, and are happy in their work.

Rev. E. C. Romine, of Philadelphia, Pa., says that when he was a boy on his father's farm in New Jersey, he owned a Shepherd dog. This dog one time in bringing up the cows-had a leg broken. His young master carried his pet to the house, carefully set the broken leg, and the dog got well. In after days whenever his master would rub the place where the leg had been broken, the dog always wagged his tail, by this expressing his gratitude. gratitude.

Loftus H. Ward, Pueblo, Colo., age 12, is the youngest boy in the Centennial High School? District No. 1, of that city. He completed the eight grades, including one year's work in Latin and Algebra, in the public schools in less than five years' actual attendance. Loftus is taking extra work in the high school with the view of receiving five points the first year toward the sixteen credits required for graduation. He is organist in the Junior Endeavor Society of the Central Christian church. He is a fifth degree member of the O. A. B. and anxiously awaits the arrival of his paper each month.

GENERAL LINEVITCH, COMMANDER OF THE PIRST (MANCHURIAN) ARMY COEPS

Linevitch has been active—and uniformity successful, which can be said of not another Russian officer upon the field. At Mukden, where he commanded the First Manchurian Corps, "The old gray wolf" repulsed thirteen consecutive Japanese attacks, and then, being recalled, brought his lessened regiments back into the lines in perfect order, bands playing, men singing, and scarcely a straggler missing.

When General "Joe" Wheeler heard this, he said: "That fellow's good enough to be an American."

# A Millionaire in Overalls

The saying that there are but "three generations from shirt sleeves to shirt sleeves" is exemplified in far from the usual way in the case of Cornelius Vanderbilt 3d. Worth \$300,000 a year from his father's estate, and half as much more from his business connections, he yet has chosen to follow a life almost as truly that of a workingman as was the career of the famous old "Commodore" Cornelius, who laid the broad foundations for the Vanderbilt fortune. Today's Cornelius was a boy of ideas and action from the start, and it was no surprise that he should "find something to do" the first possible minute after he had finished his education at Yale. But finance held no attraction for him; his was the mechanical genius, and in less than a year from graduation The saying that there are but "three

cinders beneath a panting engine. But Vanderbilt wanted to know certain things, and was not afraid or ashamed of learning them—wherefore he did learn. He was an American youth with the right stuff in him.

Bronzed, athletic, curly-haired and clear-eyed, Cornelius 3d has today twenty-three patents to his credit, all in that chosen field of railroad mechanics. There is a tank car and a coal car, improved models, and more widely known is the Vanderbilt firebox, now used on the Baltimore & Ohio and Union Pracific roads as well as on that great "N. Y. C." system, so indelibly identified with the Vanderbilt name. It is a box which economizes not only fuel but power—and Mr. Vanderbilt declares he could never have constructed it had he not crawled under those engines, with inherited wealth forgotten, and his eye single to the goal of achieving something for himself.

# "The Cecil Rhodes of Old Ireland"

Ireland's leaders, in earlier days, sought the end of self-government for their beloved island too often through more or less lawless channels. Not so does John Redmond work; and no man has exerted a stronger influence upon the Nationalist party since the great Parnell. England's parliament is fast

JOHN REDMOND, M. P., "THE CECIL REODES OF OLD IRELAND"

approaching a political crisis that will make history, and Redmond is destined to play too large a part in that battle for American boys not to know somewhat of him

for American boys not to know somewhat of him.

He is 54, thoroughly familiar with the law, has a broad education, won at Dublin's Trinity College, while, above and beyond every other helping trait or attainment is a nature flery yet under perfect control, and a power of oratory which has won the fear of his enemies and the respect of his friends in that legislative body where he has sat since 1891. His nickname of "The Cecil Rhodes of Ireland" fits him exactly, for he has that other British "empire builder's" ability, and power as well as his features.

features.

An Irishman of Irishmen, Redmond is one of the ablest generals in parliamentary tactics in the House of Commons. Ready in debate, he yet knows as well when to sit silent as when to strike swiftly and hard. He has fought many a battle in climbing to his leadership, but the greatest of all, if forecasts prove true, must come before another year dawns. The end of his fighting Redmond himself has summed up best:

great battle.

His men call him "The old gray wolf," and the grizzled veteran of 65 "looks the part." But his keen eye is kindly, and his firm mouth can speak with truest feeling; Linevitch's soldiers worship him for his solicitude for their welfare as well as for his magnificent discipline and successful leadership.

Forty-four years ago he began his fighting, and has been at it ever since. First it was in the Caucasus, where there have recently been such fearful riots; then it was the Russo-Turkish society would not have recognized this ampaign of '77-'78, with all of Russia's almost endless little Asiatic wars to follow, and the Boxer Rebellion in China, man in overalls, acquiring technical the first moment of this latest conflict."

His men call him "The old gray wolf," and the grizzled veteran of 65 "looks the has found had. He has fought many a battle in climbing to his leader-ship, but the greatest of all. If forecasts prove true, must come before another year dawns. The end of his fighting Redmond himself has summed up best:

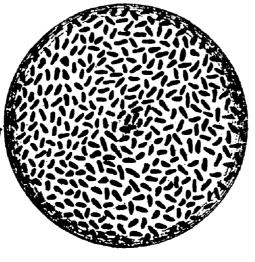

"While I control Ireland's votes," he puts it, "they will always be cast as suits the best interests of the 'ould sod.' My policy is to make English government of the island both difficult and dangerous. I am confident of success, and unhesitatingly predict the day when the first moment of this latest conflict when this meant crawling among the

# Our Pie Puzzle

"Around Thanksgiving we all went down to Aunt Mary'—quite a number of young people went along, and a right merry time we spent that evening. There was fun for everybody—games were played and good things were

eaten.

One of the most interesting events of the evening was the bringing in of a large fruit pie. No ordinary fruit pie, either! It was studded all over with raisins so thickly that one could scarcely see the crust between.

Then Aunt Mary announced that a prize would be awarded to the one who could tell the least number of pieces into which the pie could be cut so that each piece would contain an equal number of raisins. Of course, we first had to find out how many raisins there were. This was no easy matter. Then we had to find what two numbers multiplied together gave that number, and take the lesser number for the pieces.

We have had a sketch made of this interesting fruit pie, and want our readers to tell us the lowest possible number of pieces into which it could be cut, so that each should contain an equal number of raisins.

A good boy's book for the correct solution first received.

From Hon. W. W. Barrett, State Superintendent of Irrigation and Forestry and State Fish Commission of North Dakota

Church's Ferry, N. D., Sept. 27, 1905.

Mr. Wm. C. Sprague, Editor THE AMERICAN BOY.

KEEP YER HANDS OFF THE GAL'S DRESS, THEY MIGHT 'SIL IT"

T WAS on an evening in the latter part of July, 1868, that Henry Babbett sat in front of his little sod shanty, calmly smoking a small clay pipe, and gazing across the unbroken prairie, a thoughtful look upon his bearded face.

his bearded face.
In a little brush shed adjoining the shanty, his wife was busily engaged in preparing the evening meal, assisted by her daughter Martha, a tall, paic-faced girl of some sixteen years of age. At one end of the shed, upon the soft grass, lay Joey Babbett, aged seven, fast asleep, the low summer wind toying with his tangled curls and rocking the tops of the sunflowers to and fro as it swept by with a subdued murmur.

A rickety pine table containing a few cracked plates and some tin cups stooil

A rickety pine table containing a few cracked plates and some tin cups stood near at hand, and on this was placed a liberal supply of corn dodger, fried bacon and a cup of sorghum molasses. "Supper's ready, Henry," said the woman, sticking her head around the corner of the house.

"Supper's ready, reflect, woman, sticking her head around the corner of the house.

Mr. Babbett rose with a yawn, and entering the shed, took a scat at the table.

"It's time we heard somethin about the land, ain't it, Henry?" asked airs, is along while settlin' uv the question."

"It's got ter be argied," replied Mr. Babbett was one of those individing sort to be argied, replied Mr. Babbett in a gloomy tone, "an when anything's got to be argied in Congress it takes time; but Congress'il settle."

"Then you don't think that ole Joys goin' to kgit the Neutral Lands?"

"Then we'd as well go back to ole Missoury an' go on rentin' land?"

"Then we'd as well go back to ole Missoury an' go on rentin' land?"

"Yes, an' git the leaguers after you," said his wife. "They say they're goin' to git it of the Gover'ment yit, an' if a settler tries to buy his claim of Joy they'll fix him."

they'll fix him."
"I reckon this is a free country," remarked Mr. Babbett with a show of anger, "an' a man ken buy uv whom he pleases—'specially a man that's fit fur years in the war. But 'tain't no use ter worry over the matter. Congress'll settle it—leaguers or no leaguers," and he relapsed into silence.

The Rubbett femily had moved from

The Babbett family had moved from Missouri to southeastern Kansas a month before, and had settled on a quarter-section of prairie in what was known as the Neutral Lands.

This tract, which consisted of 800,000 acres, had been ceded in trust to the United States by the Cherokee Indians nearly two years before.

nearly two years before.

The Secretary of the Interior had been made the agent of the Cherokees to sell the lands. He was authorized to advertise for sealed proposa's, and to sell to the highest bidder for cash, in parcels not exceeding 160 acres each at \$1.25 per acre, or to sell the whole body at not less than one dollar per acre. But, recognizing the difficulty of selling so large a body in parcels of 160 acres each, it was finally decided to sell the whole 800,000 acres in a body, and then it happened that Mr. James F. Joy, of Michigan, became the owner of the Neutral Lands on June 10, 1868, or about a week before the Babbett family had settled on the claim.

However, as there were about one

However. as there were about thousand families on the lands before the period of Joy's purchase, they were permitted to buy their claims at an ap-praised valuation of from one dollar and a half to four dollars per acre, or

about two dollars less than those who

about two dollars less than those who bought under the Joy contract.

A large number of the settlers declared that the Joy transaction was a swindle, and asserted their rights to settle under the homestead and pre-emption laws. Thus began a bitter war between the Joy and anti-Joy factions. Anti-Joy leagues were organized throughout the two counties of Crawford and Cherokee, and intense excitement prevailed.

Meantime, designing politicians, seeing a chance to make themselves popular with a large portion of the misguided settlers, connected themselves with the various leagues, urging the members to resist the claims of Joy to the last, with force of arms if necessary. Some of these politicians were even sent to Washington in the pay of the settlers to try to induce Congress to take some action in the matter.

All kinds of reports were set affoat, and few of the settlers understood the true situation of affairs, and were impatiently waiting for Congressional aid. Thus matters stood when our story leagues the least ter git the neighbors down on us, and they may do us harm."

"If won't be driv inter nothini," replied Mr. Eabbett with a show of feeling, "and they 're through with the job."

"To you suppose they'll come here to harm us, father?" asked Martha, her pale face wearing an anxious look.

"If dunno, Marthy. If they do, let 'em come. I hain't run from nobody yet and a life they do, let 'em come. I hain't run from nobody yet and a life they life they in the recommence now.

The sun, like a great wheel of fire, was fast going down across the level prairie, and a soft wind stole with a subded murnur through the swaying grass. Presently the orb disappeared and night settled rapidly over the plains.

Martha threw a faded shawl over her head and stole from the cabin and out across the prairie in the direction of Peter Davis' cabin. She was going to ford and Cherokee, and intense excitement prevailed.

Meantime, designing politicians, seeing a chance to make themselves popular with a large portion of the misguided settlers, connected themselves with the various leagues, urging the members to resist the claims of Joy to the last, with force of arms if necessary. Some of these politicians were even sent to Washington in the pay of the settlers to try to induce Congress to take some action in the matter.

All kinds of reports were set affoat, and few of the settlers understood the true situation of affairs, and were impatiently waiting for Congressional ald. Thus matters stood when our story opens.

come ter the league meetin' ter night at my house. Thar's important business to he transacted, an' ye'll he thar, I reckon

"Kent say that I will," said Mr. Babbett. "I ain't a member uv the league, an ain't got no business thar."
"That's just why we want ye ter come. At the meetin' last week the chairman

At the meetin' last week the chairman lowed that he might be led ter inquire what ye meant by not j'inin' the league, an' that if ye didn't make yer appearance at the next meetin' thar'd be trouble fer ye."

"I ain't comin', Peter Davis!"—he spoke with a sharp accent in his voice—"an' I may be led to inquire what yer goin' ter do about it?"

"Yer case will be referred ter the committee on ways an means." answered

mittee on ways an means." answered Davis with peculiar significance. "I'm not authorized ter give opinions that belong ter the department uv justice, but I think the usual penalty mentions

somethin' about a rope an' a tree."

Henry Babbett threw out his hand with a gesture of anger and pointed across the prairie in the direction from whence Peter Davis had come.

"Ride!" He uttered the command in the c

"Ride!" He uttered the command in a sharp, imperative tone. "Don't yer ever come back again with any sich word ter me. This is a free country an Kansas! I fit four years in the war fer the privilege uv doin as I please, an I ain't goin' ter let sich a scarecrow as ye air tell me what ter do."

Peter Davis wheeled his horse around with a sharp terk of the rein. As he

with a sharp ferk of the rein. As he rode away he turned in his saddle and said 'It's fer ver own good I told yer, an'

if yer knows what's best fer yer ye'll take my warnin' fore it's too late," and without waiting for any reply, he galloped away.

"Better go to the meetin', Henry," said irs, Babbett from the shed. "It ain't

side

"Mr. Cheerman," said Peter Davis, rising from his seat in the corner of the room, "news has just been brought that ole Joy is goin' ter open a land office under the management uv a man by the name uv John T. Cox. What action aire we ter take in the matter?"

"Hang the agent an' any one that befriends him," said Jim Baker, a muscular claim-holder from Cow Creek Valley. "That's the sort o' treatment we've got ter give, an' the sooner the better."

This sentiment was ratified by a burst of applause that fairly shook the building. 'Mr. Cheerman." said Peter Davis, ris-

committee was then appointed to A committee was then appointed to draft resolutions regarding the Joy land agent, and while these were being prepared, Peter Davis made an elaborate speech in denunciation of the settlers who refused to aid the leaguers in the battle for their "rights."

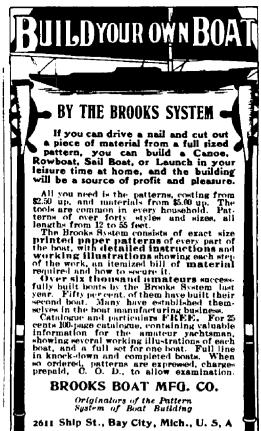

At the close of his speech the committee reported the following resolutions:

First-Resolved, That if John T. Cox does establish an office in this county for the purpose of affording the settlers an opportunity of purchasing under the an opportunity of purchasing under the Joy contract, we will hold the same as a common nuisance, working hurt and doing injury and annoying the people, and we have the right and will abate such nuisance; peaceably if we canforcibly if we must.

"Second—Resolved, That any member of our league who shall argues to again."

of our league who shall refuse to assist in abating said John T. Cox and his office, shall have meted out to him the like treatment that we propose to John

T. Cox.
"Third—Resolved, That any

Bed Clothing should be warm and light. Blankets and thick counterpanes should never be put upon the bed. The weight is depressing, retains perspiration, causes nightmare and is unhealthy. Paper Blankets are warmer than woolen and weigh only eight ounces each. Made of strong sterilized paper, kid finish, will not slip or rustle. Cost less than washing Blankets. They are an application of A Well-known Scientific Principle. Every bed should have one between sheet and top cover. Price \$3.00 a dozen full size, or we will send three full size for sample, postpaid, for \$1.00.

A look of terror came over her thin, pale face as she staggered back against the wall. Then stepping quickly to one side, she held up her hand as if to signify that she had something to say. She tried to speak but her voice failed her. "Hold on till we larn what she's got to say," said Jack Baggs. Then addressing the girl he added: "Go on an' tell us what ye're doin' hyar this time o' night."
"I'm no spy," began Martha, speaking with an effort. "Mr. Davis said you were going to harm my father. What has he ever done to any of you that you should mistreat him? We are poor folks come to Kansas to get a home. Is this

come to Kansas to get a home. Is this the way Kansas people treat their neigh-

"Sissy," said Davis, laying his hand on the girl's arm, "yer pa has disobeyed the injunctions uv the league—a very grave offense, the punishment fer which has jist been under discussion. It will be

jist been under discussion. It will be necessary ter detain ye till the lergue takes some action in the case."
"Peter Davis," remarked Jack Baggs in a calm but firm tone, "jist take yer hands off uv the gal."
"Who says so!" blurted Davis, turning upon the speaker, but still holding fast

to Marthas arm.

"I do!"

"Then I reckon I'll do as I please,"
returned Davis in a contemptuous tone.
"I ain't in the habit uv noticin' the bark-

in' uv a puppy!"

Jack Baggs stepped forward, and with a quick movement pushed Davis aside.

"Keep yer hands off uv the gal's dress," he said, "they might sile it. If ye want ter put yer hands on anybody, list put 'em on a man!"

With an exclamation of rage Peter Davis drew a revolver, but before he could use it, it was knocked from his hand by Jack Baggs, who picked up the fallen weapon and placed it in his own belt. uv a puppy!

belt.
"Take care, Peter Davis!" he warned, a dangerous glitter in his eye. "You may be a murderer as well as a cowardly bully."

In a moment all was excitement in the room.

the room.

"I denounce him as a traiter ter the league!" cried Peter Davis in baffled rage. "He deserves ter be hung and I'm in fer doin' it!"

"Silence!" commanded the chairman in a loud, imperative tone. "We hain't come hyar ter be fussin' among ourselves, but fer business."

"That's the idea exactly," came from Jim Baker.

That's the idea exactly, came from Jim Baker.

In a few moments order was restored. Then, as they turned to where Martha Babbett had been standing, they found that she had disappeared.

As soon as Martha Babbett escaped from the cabin, she crept around to the back of the building so as to avoid the guards, and fled in the direction of home. "O father!" she cried as she entered the shanty almost out of breath, "they are coming! let us leave here—quick.

father!"

"What's the matter, child? aire ye gone crazy?" asked Mr. Babbett, sitting up in the bed.

"I have just been up to Davis' cabin and heard them plannig to—to—kill you!" cried Martha with a sob.

"Mercy on us, Henry!" exclaimed Mrs. Babbett in a terrified voice. "What on earth are we goin' to do?"

"Do?" cried Mr. Babbett, "I ain't goin' ter do nothin' but stay hyar an' fill some uv 'em full uv lead if they bother me." As he spoke he rose from the bed, and hastily pulling on his clothes, took down a rifle from the rack in the corner and began to examine it by the dim light of a kerosene lamp. a kerosene lamp.

a kerosene lamp.

"For goodness' sake, Henry, let's git out of here," exclaimed Mrs. Babbett, trembling with fear. "They are a set of murderers and we'll all be killed!"

"I reckon they'll hafter git us first," observed Mr. Babbett coolly. "A man's house is his castle, even if it is made uy sod, an' they're goin' ter have trouble before they git in hyar."

Just then the gound of rapidly and

You'd better git out o' this unless ye want ter have a heap o' trouble.' Then, without waiting for a reply, he wheeled his horse around and galloped off.

"We'd better go, Henry," preaded Mrs. Babbett.
"They'll kill us all

They'll kill us all

if we stay here."
But Mr. Babbett refused to move, and began to make preparations to de-fend his house. He barred the door se-curely, and then collected his ammunition and placed it within easy reach.

A few minutes passed and then the tramp of hoofs could be heard, and a large squad of horsemen gal-loped up and drew rein a short dis-tance from the shanty.

"Hallo thar! what do ye want?" called out Mr. Babbet through the small hole that served as a win-

# My Four Years at West Point

(BEGUN IN SEPTEMBER, 1904)

XXV.

THIRD CLASS YEAR.

NEW PROGRAMME of drills went NEW PROGRAMME of drills went into effect immediately after the Fourth of July. The only change for us, however, was the substitution of light battery drill for slegg gun practice. The new artillery drill was rather exciting and we all enjoyed it. The light battery consisted of six sections, and the third-classmen acted as cannoneers. Four horses were allotted to each piece and to each caisson, and we maneuvered all over the cavalry plain.

After the piebs ioned the battailon in

maneuvered all over the cavalry plain.

After the plebs joined the battallon in August, an infantry company drill was added in the afternoon at 4:30. It was very tedious, lugging a gun around under the flaming sun, and listening to the timeworn commands of, "Fours right," "right shoulder arm," etc. The only diversion we poor fellows in ranks could find was in listening to the babel of volces that proceeded from the line of file-closers, and now aimed at the fourth-classmen.

now aimed at the fourth-classmen.

Finally the 28th of August arrived, and with it the return of another furlough class. We fell in for dancing, just as the furlough men came in sight at the top of

furlough men came in sight at the top of the hill near the library, and were debarred from taking any active part in the reception, although we could see the hilarious proceedings as we marched by.

The 1st of September found us back in barracks ready for another year's work. The course before us included analytical geometry, French and drawing. The upper sections had made a start in analytics in the latter part of pleb year, but at the beginning of the new year we began again in that study. So in French, we started our Keetel's grammar and went started our Keetel's grammar and went through it once more. In translation, we had two volumes of Roemer's "Cours de Lecture and Traduction." After finishing

had two volumes of Roemer's "Cours de Lecture and Traduction." After finishing analytical geometry, we took up Church's Descriptive Geometry, and by January went as far as shades and shadows.

Many members of the class had studied algebra, geometry, and trigonometry before coming to the Point, and possessed, therefore, some advantage over the rest of their classmates. But in this new course in mathematics, most of us were on the same level, and it was a long pull and a hard pull. The January examination showed a few decided changes in class standing. few decided changes in class standing. Many cadets who stood high in January were second rate men, and in some cases cadets who in our opinion the year before were candidates for civil life, were now forging up to the first section.

forging up to the first section.

As we looked back on the mathematics of the year before, it seemed but childish play. We were getting what I thought then, and what I think now, the hardest part of the four years' course.

How the "immortals" boned in those days! I remember one man in my class who could not "comprehend" the analytical problems at all. He studied the little paper on which the math problems were given out, and learned that B-23 meant the 23d problem in that particular subject under consideration in Bowser's Analytics, T-16 meant the 16th problem in Todhunter's Analytics, etc. So he purchased all these books at his own expense, pored over all the problems for each day's lesson, and in many cases memorized the answers. and in many cases memorized the answers. It was a standing joke in the class to go up to his man and say, "Hello, Sep, what's the answer to B-17?"

However, I would not advise any one to try the system, for it closely resembles the study of Webster's Unabridged Dictionary to fit one's-self for an examination in spelling. The better to point a moral to this tale, I will add that that Sep said good-by

As for drawing, that included, for the first half of the year, construction of the various problems in descriptive geometry.

various problems in descriptive geometry. At the January examinations we lost six more men, five found in mathematics, and one in mathematics, French, and discipline. Discipline is as much of a study at the Point as mathematics, and counts the same. A cadet is allowed 125 demerits from June to January, and 90 from January to June. If he passes that limit, the Academic Board find him deficient and act upon his case, the same as if it were a deficiency in one of his studies. One-third of the number of demerits that the plebs receive each month is removed which is a mercieach month is removed, which is a merciful provision made by the authorities, who recognize the fact that plebs are reported by the cadet officers for offenses which are overlooked when the upper classmen are concerned.

are concerned.
You sometimes hear it said that a certain graduate went through West Point without receiving any demerits. In point of fact this is well-nigh impossible, though it may be that now and then an absolutely perfect man enters the U. S. Military Academy. Cases are not unknown of graduating without demerits, but that was due to the credit assist.

to the credit system.

If, in the total demerit for any month, a If, in the total demerit for any month, a cadet receives less than eight demerits, he is credited with the difference between the number he actually receives and eight, which difference is subtracted from the total number for the term. To illustrate, suppose that for the first three months of a year, I have a total of seventeen demerits. In April, I receive two demerits. I am then charged with six, and my total is thirteen. If in May I receive eight my total is twenty-one.

The number of demerits given for an

The number of demerits given for an offense depends upon the gravity, and ranges from 10, 7, 5, 4, 3, 2 to 1. A breach of confinement is ten demerits, smoking is five, an absence is three, a solled gun is two, and a late is one,—at least this was

two, and a late is one,—at least this was the rule in my time.

From January to June we studied shades, shadows, and perspective, differential and integral calculus. In modern languages, we took up Borel's Grammaire Francaise, and Bocher's college series of French plays, and Volume II. of Roemer's "Cours, etc." Borel's grammar is really a French grammar in a double sense, for it has not a word of English between the two covers.

two covers. Drawing included topography and plot-

We were required to make a colored-fin-ished map of our survey.

As for drills, we had battallon infantry drill in September. In October we had light battery drill, and target practice with

In November, however, we entered upon a new era in the way of drills. I refer to cavalry exercises.

The class was separated into two equal divisions. With each, riding alternated dally with drawing. Each one of these divisions was divided into two sections, one section attending from 2 to 3, and the other from 3 to 4.

I had ridden a horse only a few times before I went to West Point, and then I bestrode a rickety white steed, aged thirty years, that had been turned out in the fields to die. Thrilling stories about feats and accidents in the riding had prepared us for what was coming to the riding had prepared us for what was coming.

We were told by wise upper classmen that the cavalry instructor would put us on our horses bareback at the outset, and keep the whole squad at a "measly dog-trot" until every man had bitten the tanbark. Then there were Sweet, Hannibal, and Napoleon, vicious brutes, who reared and plunged in the most frightful manner, and who were so wicked that if they and who were so wicked that if they could not reach you with their rear heels, would not reach you with their rear neers, would paw at unwary cadets with their front feet. We wanted to look out for MacDonald, who had been known to walk in a perpendicular attitude from one end of the hall to the other, so evenly balanced in this dreadful posture that if the rider even thought of anything behind him

anced in this dreadful posture that if the rider even thought of anything behind him, the horse was sure to fall over backwards. As a result of these awful tales, I went down to the riding-hall confident of taking a bath in the tan-bark and spoiling my new riding-sult. The riding academy is at the turn of the road leading from the south dock up to the plateau on which West Point stands. It is dear to the heart of every cadet, not only on account of the south dock up to the plateau on which West Point stands. It is dear to the heart of every cadet, not only on account of the fun and excitement that he has had there, but because it is the first building to come into sight, when sailing up the Hudson, and the last one to fade from view as he turns the bend in the river on his way to New York. How many heroes, dead these long years, have looked lovingly on the ivy-clad walls of the riding-hall and said farewell forever to West Point!

We were marched into the riding-hall, and, to our surprise, found each steed saddled. The instructor, after explaining how to mount, gave the command, "Stand to horse," when each man faced about and took the horse directly to the rear of him. After counting fours, the command was given, "troopers, prepare to mount—mount!" Considerable time was spent in mounting, for it was new to many of us. After we had executed

to mount—mount!" Considerable time was spent in mounting, for it was new to many of us. After we had executed this preliminary satisfactorily our instructor commanded, "By file, by the right flank!" and we started off in turn on a procession around the hall. We walked at first, trotted a little, executed a few simple movements by the flank and that was all. No one fell off, and none of the horses attacked his rider. At the next two drills, we were taught the simple exercises of leaning back, extending the arms in different directions, reaching over either side of the horse's neck, and using either hand in managing the steed.

When I went to the hall for the fourth time, I saw that it had come at last. The horses were standing in line, and in place of the saddle there was nothing but a plain gray blanket strapped to the animal's back.

After standing to horse, it did not take

By A GRADUATE

me long to find that I was the proprietor for the time of the dreaded Hannibal. I kept the squad waiting several minutes for me to mount, and narrowly escaped to stick or three miles around the country, brought up at the starting-place again. We were required to make a colored-finished map of country.

or not, and, as a consequence of this indif-ference I learned to stick to my horse equally well with the rest of my mates. We made rapid progress in horseman-

ship. Before the year's course was finished in April, we had learned to pick up heads from low posts, while the steed was run-ning, to jump hurdles, and to dismount. vault the horse, and remount while he was at a gallop.

nishing goods' men came up to the Point, and by submitting permits, we were allowed to order suits of clothing. When these suits were brought up for our inspec-

tnese suits were brought up for our inspection, furlough did not seem so very far off. As June approached, we celebrated on every possible occasion as only yearlings know how to celebrate.

When at last we want down to reveille, and every man told some other man that it was the first of June, we found examinations and a long series of exhibition drills staring us in the face.

#### XXVI.

The examination in mathematics was oral and was as usual held in the library. French was oral and written The examination in drawing consisted in a scrutiny of the drawings and the marks by the Academic Board.

We gave an exhibition in light battery drill, but played a minor part, as the first-classmen, who acted as officers, bed the

visions of furlough ever before us. After the examinations were concluded

we had a great deal of time to ourselves, which was devoted to the young ladies and

graduating and the furlough classes. The battalion was as usual formed in single rank, and we could hardly wait to get in the line, so impatient were we to hear the

the breast of his coat we had to listen to a long string of first-class standings before ours was published. These orders were the first official notification of the result of the examination, and if a cadet did not find

(Continued on page 31)

HERB IS A PICTURE OF THE MOST IMPORTANT POLICEMAN OF THE LONDON PORCE. HE ACCOMPANIES THE KING ON ALL HIS JOUNNYS THROUGH LONDON, AND IS A WELL KNOWN FIGURE IN ALL PROCESS. JNS

when we struck a trot the trouble began. I had not learned the secret of the true cavalry seat—a firm grasp of the horse's flanks by means of the thighs. I balanced myself until I became tired and could hold on no longer. I prayed for the command, "Gallop!" but it came not, so waiting until I observed a soft pile of tan-bark, I tumbled off in as dignified style as possible. I got through the day with only one more fall.

The next time, with my usual luck. I drew that other equine imp, Napoleon, and had three falls. At the third bareback drill, Hannibal again fell to my lot, and I went off but once. After this last experience, I cared little whether I was thrown or not, and, as a consequence of this indif-

at a gallop.

The last half of March being quite mild, and with clear weather as a rule, we received a good dose of infantry company drill. In April, we had another turn at light battery drill and target practice, and May was devoted to battalion drill.

We were all so impatient for the approach of June, that we began counting the intervening days while it was yet December. My class did its part in making the "Hundredth Night Celebration" a success. In the month of March, the tailors and furnishing goods' men came up to the Point,

#### SECOND CLASS YEAR.

classmen, who acted as officers, had the most prominent work. We escaped this year with only two reviews.

These early days in June passed slowly indeed, and it was hard work to study with

laying plans 'or furlouth.

The graduating parade had more interest for us now than the previous one, for it is customary to read out the standing of the

standings.

When the adjutant drew the orders from

# THE CHILDREN'S DELIGHT

OU remember how it was yourself when you were a child—how your father or big brother or perhaps grandpa, made you a "lovely" little wagon out of a soap box and a plank and two old wheels—maybe it had four wheels. Anyway, you'll never forget how happy that little wagon made you.

The most acceptable birthday or holiday gift you could make to your boy or girl is a Studebaker Junior wagon—the finest and strongest miniature wagon in the market.

a Studebaker Junior wagon—the finest and strongest miniature wagon in the market. It is built after the style of the regular Studebaker—oak frame, farm wagon gearing with bent hounds and adjustable reach, all parts strongly ironed and braced, welded tires, staggered spokes, hub boxes and caps, oak shafts (or pole if desired) handsomely painted throughout. Call on your Studebaker agent or order direct.

# BOYS AS MONEY MAKERS

# One Way to Raise Money

A novel way for boys to raise money is nere described by one of the boys from a Sunday School in Oak Park, Ill., which had undertaken to raise \$500 toward a

had undertaken to raise \$500 toward a good enterprise.

In January, 1904, a committee prepared a list of forty boys, to help in the collection of old newspapers and magazines. A squad of ten boys was to accompany the wagon on its trip every Saturday afternon, the services of each boy being called for but once in four weeks.

The families in Oak Park were asked to save their old newspapers and maga-

The families in Oak Park were asked to save their old newspapers and magazines and when the wagon made its weekly trip, people in most cases, had a quantity of old newspapers and magazines saved up. The wagon would stop about once in each block to allow the boys to fold, bundle and load the papers collected in that block. This is where boys to fold, bundle and load the papers collected in that block. This is where most of the time and labor was expended, as the newspapers had to be folded so as to form a half-sheet size, and tied into bundles not less than twenty-five pounds in weight, and not too heavy for convenience in handling. The magazines were bundled separately. The wagon loads were stored each Saturday in one of four "receiving stations." When a sufficient quantity had been collected to fill a small car, an afternoon was set aside for this purpose and a party deleaside for this purpose and a party delegated to assist in the work. The car was shipped to the Howe & Davidson Co., paper box manufacturers, at Marseilles. Illinois.

The figures relating to the sale of the papers are as follows:

22,000 lbs of paper at \$11 a ton ......\$121.00 Less 3 per cent cash..... 3.63 \$117.37 22,000 lbs of paper at \$11 a Hire of wagons ..... \$ 5.00 Twine for binding, etc..... 5.00

With the exception noted above, the wagons were loaned every Saturday afternoon by business firms, and no storage was paid. The work of collecting, bundling, hauling and loading; was done entirely by the boys.—Association Boys.

Net proceeds .....\$107.37

# As a Bait

A gentleman who recently moved to a suburb of London declares that for tact and diplomacy he knows nobody to equal his neighbors there. He had scarcely settled himself in his new home when one day he heard a hen proudly cackling in his backyard. He went out to see what could have brought a strange hen into the yard, and found that the fowl had just laid an egg in the woodbox outside the kitchen door. While the gentleman was still wondering where on earth the creature had come from, the shock head of a thin and tall boy of twelve years rose from the yard of the house next door.

"Hullo!" said the youngster.

"Good morning," answered the gentleman.

"We got plenty o' eggs." remarked the

man.
"We got plenty o' eggs," remarked the boy. "Ma says you can have that one our hen jes' laid in that wood-box o'

yourn."
"Thank you, very much."
The boy still hung on the fence.
"We ain't goin' to charge you for it," he went on.
"That's very kind, indeed," answered

the new neighbor.
"It's a gift." remarked the boy.
Then there was silence for a few mo-

ments.
The boy still clung to his side of the

fence.
"I say," he said finally, "ma says now you're acquainted with us she'd like to know if you would lend her your sofa, as we've got a party to-night!"

ships and trains, navies which builds empires and populates con-tinents; which converts the prariries from their wilderness and deserts from from their wilderness and deserts from their waste, and changes them into the rich grain fields of the world; which fashions the clay into brick, quarries the granite and builds cities, great and glorious in their enterprise, achievement and spiendor. It is something which gives no promise in appearance, but it is alive and bristling with energy and power. and power.

It is a young man! and, above all, an "American boy."

## Presidents of the Future

Upon the general doctrine of probabilities, said the statistician, there are now living and 16 years of age or over nine persons who will serve as President of the United States within the next

40 years.

This is upon the supposition that no man shall be elected President more than twice, and that the average of the last 116 years shall be maintained as to the

number of re-elections and the number of deaths in office.

The chances are that the Presidents after 1932 and up to 1944 are now preparing for college. It would take a very farseeing man to guess who will be President at any election between 1928 and 1944, or even to name the probable candidate of a single party after 1924.—New York Sun.

# Accomplished by Boys

Apropos of the number of boy prodi-Apropos of the number of boy prodigies that are springing up in all parts of the world, it is interesting to note that many famous writers mad? their names when quite young.

Alexander Pope, for instance, wrotehis famous "Ode to Solitude" when he was twelve years old.

Macaulay wrote his first volume, the "Primitiae," which took the literary world by storm, before he was in his teens.

Charles Dickens did his "Sketches by Charles Dickens did his "Sketches by Boz" so well that before he was twenty-two his name was known far and wide. Lord Palmerston, England's great statesman, was admired while at school for his brilliant work, and wrote letters in English, French and Italian that are models of composition today.

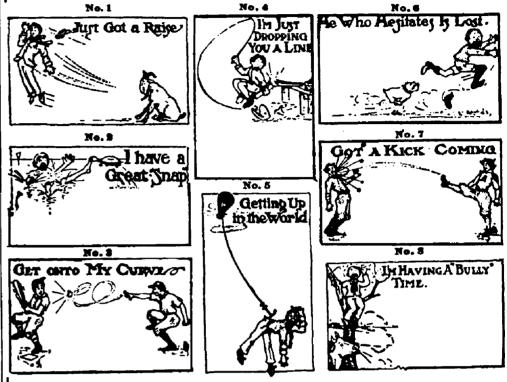

# A Cellar Workshop

Lindsley E. Gay, Stockbridge, Mich., age 15, sends a picture and description of his workshop. This workshop is fitted up in the cellar of his home; it is light and warm so that he can work in it all the year round. It is fitted up with an assortment of tools including a steam engine. The steam engine is a second-hand one and was obtained from a man for whom the boy engine is a second-hand one and was obtained from a man for whom the boy did some work. Lindsley took it apart, cleaned and painted it and then set it up in his workshop. It runs a churn, a scroll saw or anything that requires light power. The young workman has a telegraph instrument, and together with a friend has put up a telegraph plant, making their own batteries and connections. They can talk to each other, although they live at opposite ends of the

# American Boy Post Cards

# Printed in three colors—red, yellow and black

THIRTY THOUSAND of these humorous and artistic cards have been sold within the last 30 days. The boys are well pleased with them. Some buy them to mail to friends, others to paste in their post card albums, and other boys buy them in quantities and act as selling agents. Here are the cards in miniature.

The cards are regular postal card size, and printed in three colors.

1000 Assorted Cards for \$8.00

the Prices:

1 Set of 8 Cards for 20 cents, postpaid 100 Assorted Cards for \$1.00 500 Assorted Cards for \$4.50

Cash with order.

Dealers sell these cards at 3c. apiece or 2 cards for 5c. A handsome profit can be made by enterprising boys by buying and selling these in quantities. Orders filled promptly.

# HOW TO INFLATE A FOOTBALL

CHARLES HORNER

To AN ARDENT footballer there is probably nothing under the sun more irritating than the gradual deflation of a football soon after the game starts. The writer has a very vivid recollection of an inter-school match last sea son. The kick-off was inevitably postponed one evening an hour and a half before dusk. The teams had lined up, but when the ba'l was brought on to the ground it was discovered to be half deflated, and no reserve ball was available!

After unlacing the case the bladder is placed inside, with the tube protruding through the hole in the tongue or flap. This is clearly shown in the second photograph. Of course, the soundness of the bladder must be assured. A slight bunct ire may be the cause of gradual deflation in an old bladder; while a new one, bought at a shop which has no good name to lose, may be more or less perished. But it is not a difficult matter to blow up and place the bladder under water, as with a bicycle tire.

bladder under water, as with a bicycle tire.

Push the flap inside the case and insert the nozzle of the pump in the tube. An ordinary bicycle-pump may, of course, be used, but a proper football inflator is naturally preferable. Adaptors may be obtained, however, for a few cents to fit on to a bicycle-pump, which then serves equally as well as the proper instrument. Pinching the tube against the nozzle to prevent it from being blown off, the handle is then worked with the right hand until the ball is blown up sufficiently hard.

so far, it is possible to proceed with-out any assistance, but the final stages of tying up the tube are better done with

assurance doubly sure the tube is doubled over on itself and tied once more. While inflating a ball without assistance it is sometimes difficult to avoid loss of air at this stage when the pump is withdrawn, and hence it is often a wise plan to blow the ball up a little harder than necessary, to allow for a slight loss. Having assurance doubly

sary, to allow for a slight loss. Having then, finally tied the tube, it must be tucked inside the case and the latter laced up. Now, it is practically impossible to lace up a football without a proper awl made specially for the purpose and costing but a few cents; otherwise, sore fingers, broken nails, and a ball with a prominent bulge will be the final result. The awl, which is conveniently curved, is thrust through one of the holes in the case; the lace is then threaded through the eye at the end of the awl, and the instrument drawn back of tying up the tube are better done with the aid of another pair of hands.

A stout piece of string, neither too thick, nor yet thin enough to cut into the rubber, is now tied round the tube close to the flap, just it side the case. Tied tightly, this might be sufficient to prevent the escape of air, but to make ball with a prominent bulge will be the face wound during the game.

The awl, which is conventioned through one of the holes in the case; the lace is then threaded through the eye at the end of the awl, and the instrument drawn back will want to renew quick in bringing the lace with it. In this way

the lace may be drawn as tightly as desired, even to the breaking point, and with the hardest bails. Finally, after tying, thread the end of the lace (using the awi for the purpose) under the crosspices, not only to give it a neat appearance but to prevent a possible ugly face wound during the game.

Has your subscription expired? You will want to renew quick in order not

# The Thoroughbred Boy

scrub, but sometimes yells "scrub third base"; (g) a boy who will be neat and clean, and blacken his heels whether there's going to be an inspection or not; (h) a boy who can tell a good story and be cheerful without "blow," and "brag" and "banter"; (i) a boy who isn't dis-

couraged by a puncture, whether he gets it far away from home, or in the school room, or on the ball field, or in the store where he works, but who sets to work mending that puncture, and then pedals on to new paths of knowledge and duty.—W. N. P. D. in Trinity.

# Essay on the Fly

Here is a small boy's essay on the fly:
"The fli is a little animile that gets in
the butter in the good ole summer time.
It haz eight legs; 4 to walk on; two to
shuffle together an to to tickle with. shuffle together an' to to tickle with. Files found all over Amerky, but mostly on baid heds. He are the cause of much cussing by folks what he pesters with his tickling legs. The fli cannot be snuck up fer he has eyes in his back rite behind the shoulder blades. The fli loves to get on a baby's nose and shuffle his feet. It is fun to leave him bee on the baby's nose ef yer mother ain t eroun' to land on you fer it. The fli is commonly called a fli, but he has another name. Pop calls him a helluvanuisance."

# A Hand-Reared Boy

An old farmer in Nemaha County re an old farmer in Nemana County remarks that a home-grown, hand-spanked barefooted and hard-fisted country boy makes a much better fighter in the battles of life than does the pampered, high-collared, creased-trousered youth of our towns and cities, whose clothes have always been dusted with a whisk broom instead of a shingle.—Kansas City Journal.

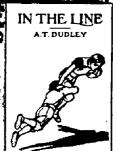

When a boy I always used "U" (U. M. C.) cartridges, because I knew they would not misfire. When I got a shotgun and a highpower rifle I stuck to U.M.C. ammunition and found it equally perfect.—A Sportsman.

THE HALL OF FAME FOR GREAT AMERICANS

By deed of gift, in 1900, the Council of New York University accepted from one whose name was not revealed, the sum of \$100,000, subsequently increased to \$250,000, for the purpose of building on University Heights. "The Hall of Fame for Great Americans." The structure was completed by the close of 1900. It is semi-circular in form, 506 feet long, 15 feet wide and 170 feet high. Within the colonnade there are 150 panels, each 2 by 8 feet, which are to bear the names of Americans deemed the greatest in their respective fields.

The Council drew up certain rules, of which the most important are:

Only those born in United States territory and have been dead at least 10 years to be eligible.

Only those born in United States territory and have been dead at least 10 years to be eligible.

Consideration of the following classes of citizens was recommended: Authors and editors, business men, educators, inventors, missionaries and explorers, philanthropists and reformers, preachers and theologians, scientists, engineers and architects, lawyers and judges, musicians, painters and sculptors, physicians and surgeons, rulers and statesmen, soldiers and saliors.

Fifty names to be inscribed on tablets in the panels at the beginning and five additional names every fifth year thereafter, the full number of 150 thus being completed in the year 2000.

The public to be invited to send in nominations. Every nomination seconded by a member of the University Senate to be submitted to the judgment of 100 eminent citizens chosen by the Council, each of whom should vote for 50 candidates.

In October, 1900, the ballots of the judges were laid before the University Senate. The names submitted numbered 234. The result showed that 29 candidates had received the requisite number of votes and these were chosen. Owing to unforeseen delays, it was resolved to elect the remaining 21 and also the 5 additional nams in 1905. The 29 names so honored are: George Washington, Abraham Lincoln, Daniel Webster, Benjamin Franklin, Ulysses S. Grant, John Marshall, Thomas Jefferson, Ralph Waldo Emerson, Henry W. Longfellow, Robert Fulton, Washington Irving, Jonathan Edwards, Samuel F. B. Morse, David G. Farragut, Henry Clay, Nathaniel Hawthorne, George Peabody, Robert E. Lee, Peter Cooper, Ell Whitney, John J. Audubon, Horace Mann, Henry Ward Beecher, James Kent, Joseph Story, John Adams, William E. Channing, Gilbert Stuart, Asa Gray.

# No. 1--Ulysses Simpson Grant

Ferry.

In the west, during the opening years of the nineteenth century. years of the nineteenth century, when the population of the country was small and widely scattered, the boy who wished to obtain an education had a particularly hard row to hoe. In fact the whole period that Ulysses Grant's father spent in school was only six months. As he grew up, however, and realized the advantages which education gives a boy, he ever, and realized the advantages which education gives a boy, he set earnestly to work to educate himself. By hard and persevering study, ofttimes under great difficulties, he became not only a good English scholar, but an able debater on politics and many other subjects, frequently penning articles which were published in the local newspaers. While he was fond of books and reading, he was also noted as a steady and industrious workman. These things brought the young tanner to the notice of a gentleman whose son

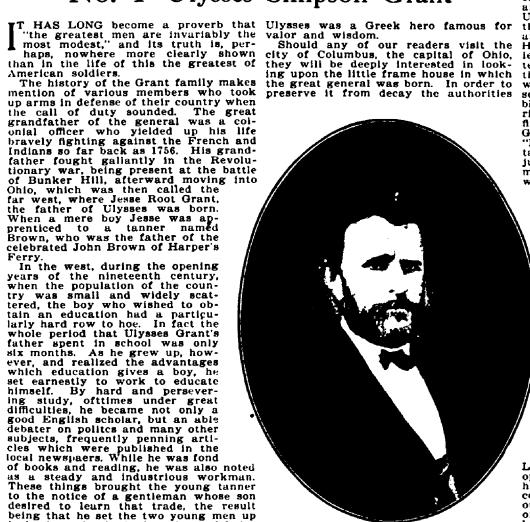

to the notice of a gentleman whose son desired to learn that trade, the result being that he set the two young men up in business in the little village of Point Pleasant, Clermont County, Ohio. Here, in a little story and a half frame house on the banks of the Ohio, on April 27th,

on the banks of the Onio, on April 27th, 1822, the future great soldier-president of the United States was born.

Of Grant's mother there is very little of importance recorded. We do know, however, that she was a devoted wife and a loving mother, ably and untiringly assisting her husband to bring up thereformly worthly. Her moiden name was family worthly. Her maiden name was Hannah Simpson, being the daughter of

one John Simpson, a farmer in the neigh-borhood of Point Pleasant.

The great and momentous subject of choosing an appropriate name for their first born was earnestly discussed by the fond parents, but failing to agree they resolved to submit the matter to the grandparents and other relatives of the child. At a family council it was decided that the name should be chosen by ballot. The first name drawn from the hat was Ulysses which was declared to be the child's christian name. As the grandfather, who had written the word Hiram was much disappointed that his choice had not been drawn, the boy's mother declared that Hiram should be a part of her son's name, and so the baby was christened Hiram Ulysses Grant. A curious way of paning a baby surely was christened Hiram Ulysses Grant. A says he never saw an alg curious way of naming a baby, surely. But looking at the whole life of this boy, it seems us if there was something prophetic in the names and the manner of their choice. Hiram, you boys who have a considerable part of a read your Bible will know, was the king and we are told of the of Tyre. He greatly helped King Solomon to build the temple at Jerusalem and was wise as was the king of Israel.

ULYSEES SIMPSON GRANT

have erected a large structure of brick and iron called the Grant Memorial Building and placed the little house within it.

Before Ulvsses was a year old his parents moved with him to the little town of Georgetown, about twenty miles east of Point Pleasant, where his father had secured a larger tannery to meet his increased business. Here, General Grant says, he attended school from the time he was five until he was seventeen years of age without being absent a single quarter.

From all that we can learn Ulysses

From all that we can learn Ulysses would have willingly given up schooling much sooner than he did, if he had had his own way, for he did not care for school.

Country schools in those days were of a very humble sort. There was nothing like the system of class grades that we have today, the teachers were by no means first-class, and were continually changing, so that an education had under such conditions was very elementary. In the book that General Grant wrote long after he had become famous he says he never saw an algebra or a book

long after he had become famous he says he never saw an algebra or a book of mathematics until after he received his appointment to West Point.

Those were the days, however, when the free use of the rod was held to be a considerable part of a boy's education, and we are told of the bundles which were cut from the beech trees near the schoolhouse, and how young Grant

But there were many things that this short, sturdy, freckle-faced, blue-eyed boy did like. He liked to play, to fish, to go swimming in summer and to take part in snowball fights and skating matches in the winter. Above all things he loved horses nerhans he was willing matches in the winter. Above all things he loved horses, perhaps he was willing to do the chores around his father's farm because he could, in this work, be with the horses. He early showed his father that he was not only skillful in driving horses, but also careful and kind to them, so he was allowed to haul the wood for the stoyed and do other work.

driving horses, but also careful and kind to them, so he was allowed to haul the wood for the stoves and do other work around the farm when quite young. Before he was eleven he was a good plowman, and after that age he did all the work of the farm at which horses werrequired. This was splendid training for a healthy, vigorous manhood.

The boy's home life was the happiest possible. He was allowed the fullest liberty that a boy of his age should have provided his tasks were done. He was allowed to go long drives to Cincinnati, Louisville, Chillicothe and other towns, to visit friends. At home he was generally the leader in fun and sport. The boys liked him, because he was goodnatured, never a boaster and always willing to give the other boys a fair show; but they knew better than to try him too far, for he would stick to his point and never give in if he believed he was right. He was a boy also who could be trusted and who betted a lie. I rether

him too far, for he would stick to his point and never give in if he believed he was right. He was a boy also who could be trusted and who hated a lie. I rather think that was a good beginning.

Jesse Grant had great faith in his son's judgment of horses and allowed him to buy, sell or trade whenever he saw a good opportunity. Two stories are told of his youthful horse dealing experiences. A neighboring farmer had a colt which Ulysses very much desired and his father, after much coaxing allowed him to make the purchase. Proud of his commission the boy told the farmer he wanted to buy the colt. The farmer asked him how much his father told him to pay. "He told me," replied the truthful Ulysses, "to offer you \$20.00, and if you wouldn't take that, to offer you \$22.50, and if that was not enough, then \$25.00, but not a cent more." This example of the boy's simplicity was too good to keep and it was long before he heard the last of it.

Another of his horse trades took place

Another of his horse trades took place when he was about fifteen. He and another boy had driven to Flat Rock, Kentucky, to visit friends and while there traded one of his carriage horses for a young colt, receiving ten dollars to boot. With much difficulty the boys got the new horse harnessed to the carriage and started for home. On the way a ferocious dog jumped at the horses' heads and they immediately bolted. Before Ulysses could get them under control they were on the edge of an embankment and within a step of falling twenty feet. His companion took fright and ran off leaving Ulysses alone to manage the terrified animals. Again they bolted and the boy was almost in despair, but he was determined to take the horses home, so taking his large, red handkerchief he blindfolded the flery colt and finally arrived at his uncle's with this queer outfit. Do you remember the words that General Grant wrote from Spottsylvania. "I shall fight it out on this line if it takes all summer." Well, he showed just the same grit, patience, and determination in conquering the balky colt when a boy.

During school vacations Grant young colt, receiving ten dollars to boot

when a boy.

During school vacations Grant did quite a little business hauling and trucking for neighbors, and got quite a reputation for making

and saving money.

It is more than probable that young Grant, if he thought about his life work at all, imagined that it would be that of a farmer, cer-It would be that of a farmer, certainly not that of a tanner; so we can imagine the boy's surprise when his father said to him one day: "Ulysses, I believe you're going to get an appointment to West ont. I wrote to Senator Mason and it looks as if you'd get it."

"To West Point." exclaimed the amazed boy, "Why, I don't want to go there."
"But," said his father, "I want you to go, and I guess you'll go if I say so."

"Well," said his son, very slowly, "If you say so, I'll have to go, but

"Well," said his son, very slowly." "If you say so, I'll have to go, but I know I don't want to."

When the appointment came it surprised the Georgetown folks, as they thought that little "Lyss Grant" was not smart enough, and Lyss himself was very much of the same opinion, for the boy was modest as to his ability. However, the papers had come, so on May 15th, 1839, Ulysses set out for West Point, using all the means of transportation then available, steamboat, canal boat and rallroad. Journeying very leisurely, he did not reach West Point until the 31st, when he reported at the Academy for the entrance examiat the Academy for the entrance exami-

You will remember that Grant was christened Hiram Ulysses Grant. He detested the initials, for the boys of Georgetown persisted in calling him H. U. G.; but Congressman Hamer in filling out the West Point application coning out the West Point application confused him with his younger brother Simpson and wrote his name Ulysses Simpson Grant. The name was so recorded on his appointment and in the Academy books. Grant protested, but it was of no use and Ulysses Simpson Grant it was for ever. Of course his brother cadets "caught on" to the initials and he was at once nicknamed Uncie Sam. He passed the entrance examination and "Sam Grant," as his chums called him, became a West Point cadet, altho' he disliked the idea of becoming a soldier.

## Company News

ABRAHAM LINCOLN COMPANY, No. 41, Peru, III,—There seems to have been some politicis introduced in this company's election of officers, as the report says the ballot box was stuffed in the election of captain. However, it evidently turned out all right and the following officers were elected: Liszt J. Lenzen, Capt.; Ernest Roth, V. C.; Otto Castendyck, Secty. Arthur Zimmerman, Treas.; Verdi Lenzen, S. A. The membership has almost doubled and the members are going to have their pictures taken and send us a photo. The members are busy also preparing for good fall and winter work and will have their semi-annual entertainment about Thanksgiving. Any person can decline nomination for office. The ex-captain sends us the report of his administration and it is a very good one. STEPHEN DECATUR COMPANY, No. 28, Brooklyn, N. Y., sends us its 35th report. We note that during August five meetings were held and were very successful, notwithstanding the absence of many members. Bicycle trips were taken to places of interest and thoroughly enjoyed. September saw the taking up of company work again and as the members are enthusiastic and the club house is in good shape, there is every hope of a most successful season. The members are greatly interested in history and literature, and intend to inaugurate educational contests with other companies. This is a first-class idea and we trust to have interesting reports. The Boston American Boy Day was abandoned this year on account of circumstances we could not control, but next year we are certain to have a splendid celebration at the "Hub." JAMES LICK COMPANY, No. 30, Campbell, California, intends to give an entertainment soon and the members are busy rehearsing. They have been also purchasing furniture, such as chairs and a lamp for their club room. The

DR. SEARLE, OF PARIS, TEXAS Who Gave Great Attention to O. A. B. Boys at the Decarter (III.) Chautauqua in July

charter has been framed. WHITE LILY COMPANY, No. 27, South Milwaukee, Wis, has the following officers: Connie Jack, Capt.; Ely McClellan, V. C.; John Lacy, Secty; Earl Whittmore, Treas.; Sidney Hirshburg, Libn. The treasury is enriched to the extent of 69 cents, with more to come in. GARDEN CITY COMPANY, No. 12, Walla Walla, Wash., is progressing nicely. The Vice-Captain writes that he is persuading the members of the company to become members of the Y. M. C. A. A good thing to do. THE BOYS' CLUB COMPANY, No. 10, Sylacauga, Ala., has now the following officers: Nail McLeod, Capt.; Evan Howard, V. C.; Rea Roberts, Secty. and Treas.; French Craddock, Libn. The club room is on the second floor of the First National Bank and meetings are held there each Friday night. The members take quite a number of magasines and have between 50 and 60 books in their library. It is their 27, South Milwaukee, Friday night. The members take quite a number of magasines and have between 50 and 60 books in their library. It is their ambition to have the best company in the Order, and they are trying hard for the honor. WORTH BAGLEY COMPANY, No. 1, Concord, N. C., has 5 new members and has erected a gym 40 feet by 20 feet and fitted it up with trapeze, rope ladder, punching bag, wrestling mat, dumb bells and swinging rings. It has also 40 books in the library and over a dollar in the treasury. The officers are: Linwood Fink, Capt.; John Boger, Lleut, and Treas.; Sam Kennett, Secty.; Eugene Fink, Libn., and Jos. C. Fink, C. C. It has a bail team and is providing suits of blue duck with the letters O. A. B. in white, HONEST ABE COMPANY, No. 38, Freeport, Long Island, N. Y., returns thanks for the "fine prizes we received for increased membership." The following officers were recently elected: Harry Gunning, Capt.; Hilbert Johnson, V. C.: Harold Wilson, Treas.; Elliot Ross, Secty. We are promised a picture of the members in the near future. GENESEE VALIEY COMPANY, No. 53, Wellsville, N. Y., held its election of officers Sept. 21 and the following was the result: Jay Fuller, Capt.; Charles Fuller, V. C.; Donald Wilson, Secty.; Harley Wight, Treas. This company is progressing nicely, having 11 members and a fine club room. The members intend having a good time this win-

# The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS Under the Auspices of "The American Boy"

Object:--The Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

ter. THE SANGAMON BAY LEAF COM-PANY, No. 45, Decatur, III., in its September report mentions quite a few changes in the company. It has a fine club room at the captain's home. This is a company which believes that "keeping everlastingly at it brings success." and is a good example of the proverb. It has done quite a lot of good and the members are being educated to be kind and unselfish in their dealings with others less pleasantly situated. LEWIS & CLARK COMPANY, No. 15, Clarkston, Washington, added \$10.84 to its treasury by selling candy popcorn and lemonade on July 4th. The business men of the 'own are taking an interest in the company. On Sept. 23rd the members went on a picnic and had a jolly time. THEODORE ROOSEVELT COMPANY, No. 51, Nashville, III., has the following officers: the number of our subscribers and gaining many new friends. Now, while you huve helped us in this scribers and gaining many new friends. Now, while you huve helped us in this scribers and gaining many new friends. Now while you huve helped us in this scribers and gaining many new filends. Now while you huve helped us in this scribers and gaining many new filends.

# A Most Successful Company

The Sangamon Bay Leaf Company No. 45, of Decatur, Ill., deserves more than passing mention for the success which has attended its efforts along various lines during its official year. From the report of the Company Counsel, who has been the Nestor of the organization, we learn that it has increased in membership from eleven to thirty-four; that it has a fine clubroom with quite a large number of books, etc., in its library; that in addition to providing for its own expenses the members have given to assist others the sum of \$15.00. Among those whom they helped was a woman who was ordered to a milder climate; a boy who was accidentally shot, another boy who was in need, and they also subscribed to the equipment fund of the new another boy who was in need, and they also subscribed to the equipment fund of the new Y. M. C. A. building. This meant self-sacrifice on the part of the boys and they deserve the greatest credit. We are glad to recognize such generosity and kindness on the part of the companies of our Order, and trust more will take up such work.

# November Company Letter

My Dear Captains and Brothers of our

The month of November in each year brings around an important anniversary to the Headquarters of THE AMERICAN BOY, and also, I think to the army of our Order as well as to the other over 110,000 boys who read and enjoy the paper from month to month. It was in November, 1899, that the first number of THE AMERICAN BOY was published with 5,000 subscribers. To obtain another 5,000 subscribers then looked to be a very difficult matter, but my business associates and myself believed we could make a paper that would catch the hearts of the boys, and the intervening years have only served to strengthen that belief. This month the number of copies printed will be nearly 130,000. Surely a wonderful growth in the very short space of six years. Of course this great increase has been mainly due to the efforts of my associates and myself in showing the boys of America that THE AMERICAN BOY could and would be of the greatest help to them in everything worthy; but credit is also due to those boys, both to the O. A. B. and those who are not members, for their loyalty and their helpful enthusiasm in bringing before their companions and acquaintances the merits of the paper, The month of November in each year

thus increasing the number of our subscribers and gaining many new friends. Now, while you have helped us in this matter, we at Headquarters have also helped you, not only by giving you the best boys' paper ever published, but by substantial rewards in the shape of handsome and useful premiums, and when I ask you to continue your efforts to help obtain 200 more companies before January 1st, 1906, I am sure of a hearty response. The premiums listed in the November number of THE AMERICAN BOY are well worth striving for, as they are just the things which boys want and are the very best of their kind. The money which the boys can earn in addition by taking an agency for the sale of the paper will be very handy at the approaching Christmas season, and I would advise you to begin at once.

## THANKSGIVING.

I am sure every one of you is looking forward to a bright, jolly Thanksgiving, and to visions of turkey, pudding, pie and the other good things to be disposed of at that time. Well, don't forget in the midst of your feasting and fun that there are homes where boys will not be able to celebrate Thanksgiving as you are able to, and that the best and most enjoyable Thanksgiving any one can have comes from helping others. Wishing you all the pleasures of this Thanksgiving season, giving season,
Yours for M. M. M. M.,
WM. C. SPRAGUE,
President General.

# The American Boy Legion of Honor (Open to all Boys Everywhere)

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school, ending on a date since September 1st, 1905, have received the highest average term grade in their classes in all studies and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years.

LEGION OF HONGR ROLL.

## THE JOY CLAIM

(Continued from page 9.)

mitte uv the leaguers ter ask ye to sur-

mitte uv the leaguers ter ask ye to surrender."

"You be? Well, I'm Henry Babbett, corporal uv the Home Guards, an' I'm in hyar with a gun an' a bucketful of ammunition ter ask yer ter go away an' 'tend ter yer own business!"

"No foolishness, ole man; do ye intend ter jine the League or not?"

"Do you intend to 'tend ter my business er am I ter do it myself?"

"None uv yer sass!" exclaimed Simpkins angrily. "We're hyar ter bring yeter terms, an' we're goin' ter do it. Duye mean to jine the League? If not, you can consider yourself under arrest."

"Do ye want ter git hurt? If not, ye'd better keep away from my house."

"Am I ter understand that ye refuse ter surrender ter the League?"

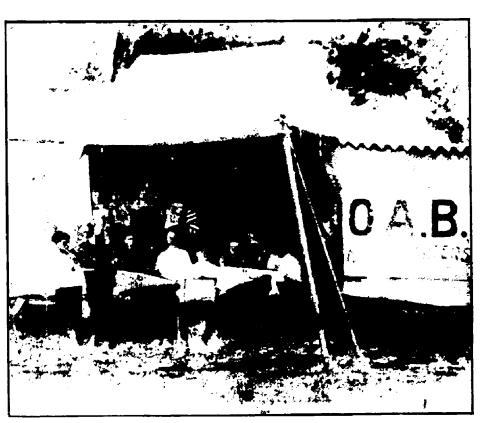

"Yer hain't seen me give up this gun yit, have ye?"

"Then we'll haf ter take ye by force."

"All right—come on. I reckon I can stand a little skirmish about as well as any man that ever came from Clay County."

(To be continued.)

At this season of the year we should have an average of one new company  $\mu$  day for the O,~A,~B,

THE SANGAMON BAY LEAF CO., No. 45, DECATUR, ILL., AT THEIR HEADQUARTERS AT THE DECATUR CHAUTAUQUA GROUNDS

REAT NEWS." Parker!" whispered Jack Salt to the fat powder-monkey, who was busily polishing one of the guns of the little brig Never Despair. "We're bound to Malta with despatches from Lord Nelson to Admiral Collingwood, and Lieutenant Merryweather says he won't be surprised if we're chased by a French frigate before long. You see, although Nelson is blocking up the French fleet in Toulon harbor, the enemy knows that he sent Collingwood with six ships to Malta to refit, and if they can rake up enough stray vessels at Marseilles, they'd try to prevent Collingwood from rejoining his chief. Anyhow, the lieutenant says we shall be lucky to get to Malta. We're on a dangerous errand—worse than that Barbary pirate one."

"Well, sir," responded Parker, "so long as I ain't blowed up again on a empty stomach I don't much care. Once in a lifetime is enough, and I ain't anxious to lose my arms and my eyes like Admiral 'Oratio! As I've said before, there he times when I wish I was 'ome with mother: but I suppose we shan't get back to Merridew again until 'Oratio licks that French fleet into smithereens."

"I'm afraid not," replied Jack.

"I should like to be 'ome by the autumn," said Parker.

"Why?" asked Jack.

"Because of the apples, sir," replied the powder-monkey. "There was a speshul tree in the squire's orchard that I used to look on as my own, and now my young brother, Peter Nathaniel, 'Il cat 'em all. But thanks be, I brought a good store aboard with me, and I've got a few left now, Master Jack."

"Better eat 'em at once, then, before the French capture us," said the midship-in.

then, before the French cap-ture us," said the midship-

"So I will, sir. Never thought of that," returned Parker. "But do you really mean that the Never Despair

mean that the Never Despair will have to fight her way to Malta?"
"Well," said Jack, "a tengun brig like the Never Despair can't expect to beat off a French line-o'-battle ship or a couple of frigates, but we can show a clean pair

or a couple of frigates, but we can show a clean pair of heels and crack away at our pursuers. I oughtn't to have told you that we carried despatches. Nobody knows it except the lieutenant and ourselves, so don't you squeak."

"Not me," replied the powder-monkey. "I only opes that something will occur to give me a chance of distinguishing myself, that's all. I want to be brought before 'Oratio, I do! I want him to say: 'Parker, my boy, you're a man after my own 'eart. I loves yer. Parker. You're a 'ero of 'eroes, and I'll introduce you to the king at the first oportunity, and beg him to appoint you my second in command."

"'ifa, ha!" laughed Jack. "And what would you really Parker?"

mand."
"Ha, ha!" laughed Jack. "And what would you reply. Parker?"
The powder-monkey struck an atvitude and puffed out his fat cheeks.
"Reply?" he said. "I would say: 'My Lord 'Oratio, give us your flipper! You're the boy for me!"
Sail ho!" sang out the look-out so suddenly that Jack Salt jumped, and, plinning round, ran and joined Lieutenant Merryweather on the poop of the

nt Merryweather on the poop of the

brig.
"Is she French, do you think, sir?"

brig.

"Is she French, do you think, sir?" he asked.

"Can't say," replied the little commander of the Never Despair; "but we must be prepared for squalis, Salt. I wish we had a bigger crew. What can forty do against a frigate's crew of four or five hundred? We shall have to run, of course, if this ship's an enemy, and he content to let off our long Tom in the stern in the hope of bringing down some spars. Lucky we've got Squint-Eye Bill aboard. He's one of the best gunners of the fleet; and Captain Brace-bridge was a brick to pass him on to me from the Firebrand."

Ten minutes passed—twenty; and then, gazing through his telescope, Merry-weather gave a low whistle.

"A corvette!" he said softly.

"French, sir?" asked Jack Salt.

"Yes," returned the lieutenant. "A fine vessel. Forty guns, by the look of her, and probably a crew of three hundred men. She's been scouting between Sicily and the coast of Africa in the hope of spotting us. The French would guess that a despatch vessel would be sent from Lord Nelson to Admiral Colling-wood ere the ships at Manta would put to sea. Anyhow, here we are, and there is, the corvette."

to sea. Anyhow, here we are, and there is the corvette."

Then his voice rang out

"Clear for action?"

The boatswain's whistle sounded shrilly, the seamen and the gunners, laughing and 'cheering, ran to their posts, the eight guns, four to starboard

On and on came the corvette—a beautiful sight. She heeled slightly under the strong breeze, and the spray was like snow about her hows as she plunged along. The skles were as blue as could be, not a cloud was to be seen, and the seas danced as though for joy. Bang!

The corvette had fired a shot across the brig's bows, but the Never Despair dushed on.

dashed on.
"We're in for it now," said Merryweather. "We shall slip past the corvette, but she'll overhaul us unless we
can damage her rigging.
He turned to Squint-Eye Bill.
"When she comes round in pursuit,
bring down her foremast, Bill!" he cried.
"You understand?"
The gunner grinned.
"Ay, ay, sir!" he answered.

The Never Despair raced past the cor-

"Slipped her!" cried Merryweather, rubbing his hands. "Ah! here she comes after us! My word, Salt, this old brig can sail, though! If only Squint-Eye Bill shoots straight, we may escape yet. Look, there's land!"

Jack gazed at the dim, irregular outline.

line.
"What is it, sir?" he asked.
"The coast of Sicily," replied the lieu-

"Sail, ho!" again yelled the look-out.
For a moment Merryweather was silent, but his brown scarred face grew very grim as he clapped his telescope to his eye and swept the horizon.

Presently he said
"A frigate, Salt, or I'm a Dutchman.
We're fairly caught. I'm afraid."
A gruff voice from behind him
growled

growled
"Shall I fire, sir?"
"Yes, bluze away, Bill," said Merryweather; and the squint-eyed gunner,
training his weapon, carefully applied the match.

Bang! went the long Tom, and the round shot tore through the corvette's

"Too high!" sang out the lieutenant.
"Take the foremast low down, Billy!"
"Ay, ay, sir!" answered the gunner,

Britons the world over have just celebrated the 100th anniversary of the greatest British naval victory of the Napoleonic wars, which was fought off Cape Trafalgar Oct. 21, 1805. The British fleet numbered 27 ships of the line and 4 frigates under Nelson; the French-Spanish fleet numbered 33 ships of the line and 5 frigates under the French admiral, Villeneuve, and two Spanish admirals. The French and Spanish lost 19 ships. Villeneuve was taken prisoner and Nelson was killed. On going into this famous battle Nelson flew the signal from his masthead, \*England expects every man to do his duty." His last words were, "Thank God, I have done my duty." The English people erected a noble column to Nelson's memory in the most important center of London, which they called Trafalgar Square, and numerous other monuments were erected to his memory throughout the empire.

> and again the long Tom roared. time it seemed as though the shot shaved the mast by but a hair's breadth, and there was a commotion in the corvette.

there was a commotion in the corvette. It was plain that the Frenchmen were in terror lest their ship should be crippled and the brig escape.

"Everything depends on Bill," said Merryweather. "Ah, the corvette has started firing her long how-chasers! Herecomes a shot!"

Whize! came the ball, and whistled harmlessly through the rigging of the Never Despair.

Never Despair.

Never Despair.

Bang!
For the third time the brig's long Tom bellowed, and Squint-Eye Bill roared with joy and began to dance a horn-pipe. For the shot had struck the corvette's foremast just above the foreyard. It was tottering! Hurrah! it was falling! Crash! Down it came, burying the crew of the French ship in a hopeless mass of canvas and tangled rigging.

What a cheer arose! The seamen of the Never Despair yelled themselves hoarse and the brig sped upon her way. But although the corvette was shaken off, there was still the frigate, which was coming up hand over hand.

"We can't escape her," said Merry-weather. "Salt, I'm going to run the brig right in close to the Sicilian coust, and send you ashore. You may have to swim for it, but you'll have to go."

"You must carry the despatches to Palermo," replied the lieutenant. "You will find there an Englishman whose life I once saved. He is a merchant, and owns shire. I will explain to you how to find him, and I am sure that somehow or other he will smuggle you safely to Multa with the despatches for Admiral Collingwood."

"And what of yourself, sir, and the Never Despair?" replied Jack. Bang!

"And what of yourself, sir, and the Never Desnair?" replied Jack.
"Oh, never mind me," returned the lieutenant. "You'll have enough to do to look after yourself!"

An hour later Jack Salt was standing on the beach of a little cove about seven miles from Palermo, gazing at the Never Despair that, with the dear old cross of Saint George fluttering proudly over her stood out from the shore to meet the French frigute and to fight her last

and four to port, were run out, and the long weapons in the bow and stern of the brig were carefully londed with round shot. By the great gun in the stern stood a huge, grinning, ugly man, arrayed in nothing but a pair of trousers. He was Squint-Eye Bill, the famous gunner.

On and on came the corvette—a beaument. She heeled slightly under the sight, which is the despatches, with orders to go first to the Englishman at Palermo, carrying a letter from Merryweather, which, it was sight, and the spray was like the spray was like the midshipman watched and the midshipman watched watche

Malta.
Yet the midshipman watched and watched the battle until the two ships drifted round a headland and out of sight, when he turned, and hastened towards Palermo.
Merryweather, who knew Sicily well, had given him full directions, and aithough night was drawing near, he was in hopes of reaching the Englishman's house soon after dark.
For a while he kept to the cliffs, until he came upon a track leading apparently down into a valley, and so on to a high roud which would probably take him straight to Palermo. Scarce, however, had he entered upon this track, which ran between great boulders and wooden slopes, then a whistle sounded, and suddenly he was surrounded by a savage band of Sicilians.

Luck tugged his dirk from its sheath.

band of Sicilians.

Jack tugged his dirk from its sheath, but a huge ruffian lifted a club and dashed him senseless to the ground. He was captured by brigands!

When he awoke from his swoon it was midnight, and the stars were glittering in their myriads in the blue-black heavens. He gazed around him. To the right roared a great fire, and around it were seated a dozen brigands—fierce, swarthy ruffians, armed to the teeth. Jack's arms and legs were cightly bound and the cords were cutting cruelly into his flesh. So great was his agony that he could not stiffe a groan, whereupon the brigands rose, and coming round him, dragged him nearer to the fire.

One of them spoke broken English, and kicking Salt's legs, this fellow asked him who he was.

him who he was. Jack was silent.

"You English sailor!" said the brigand kicking him again. "What you do here? I was sailor once, on Engleesh trading ship. That why I speak English. You come from brig that fought French ship off coast, eh?"

Jack nodded. Merryweather had made him sew the despatches maide the lining of his jacket so that, although the brigands had robbed him of his dirk, his
watch, and the few coins that were in
his pockets, the precious packet of orders from Lord Nelson to
Collingwood were still safe.
"Why you leave brig?" demanded the man. "Desert,
eh?"

Jack shook his head.

"Why you come ashore, then? Coward, eh?" Again the midshipman

then? Coward, eh?"
Again the midshipman shook his head.
"Water!" he implored.
The brigand laughed.
"No water till you answer me who you are," he said,
"I'm a midshipman from the brig Never Despair," said Jack. "I'm here because you brought me here. If

to do his said Jack. "I'm here because you brought me here. If you hadn't caught me I should have been safe in Palermo by now."

"Why you want to go Palermo?" demanded his inquisitor, while the other brigands stood around, watching and waiting. "Why you want to go Palermo? You is sy! Ah, you Engleesh want conquer Sicily—to make it like Malta—to build forts, eh, and have harbors for ships, so to sail forth and fight French. You is spy. I say, and shall die spy's death!"

Jack made no reply. There had been

Jack made no reply. There had been some talk in the English fleet about taking possession of Sicily. It had great strategic advantages, and if the French made an attempt to conquer it, there was no doubt but the English result. no doubt but that the English would step in and strive to wrest it from them. Jack Salt saw that this brigand knew

of this, and he also knew that whether the French or English took Sicily, brigandage would be stamped out, and the gandage would be stamped out, and the inhabitants governed with a rod of iron. No longer would it have the name of being a nest of robbers. If, therefore, these rufflans decided that Jack was a spy, he was doomed.
The English-speaking brigand turned

to his comrades and chattered flercely to them in their own tongue. They an-

no doubt at all, for the frigate carried nigh five hundred men and four-and-fifty guns, but nevertheless the gallant little commander of the brig opened fire at his great antagonist and actually strove to run alongside and to bourd her.

The noise of the guns was deafening: fight. That she was doomed there was Jack could scarce see the ships for smoke, but his heart thrilled and the blood ran hot in his veins as he heard selves into a line. commander of this great antagonist and action run alongside and to bourd her.

The noise of the guns was deafening: fight. That she was doomed there was Jack could scarce see the ships for smoke, but his heart thrilled and the blood ran hot in his veins as he heard the shouts and cheers of the little brig's crew.

He would have given worlds to be age and looked again at his tormentors. Then he summoned up all his courage and looked again at his tormentors what were they going to do?

He was not kept long in suspense One and all drew their long knives, and at the command of their chief, the man at the command of their chief, the man midshipman. It whizsed midshipman. It whizsed

one and all drew their long knives, and at the command of their chief, the man at one end of the line flung his keen weapon at the midshipman. It whizsed past his head. Another rufflan threw, and this time a sharp pain in the right arm told Jack that the knife had grazed him.

him.

Again he shut his eyes. The cords cut into his wrists and caused him terrible pain, but what was this to the death that was now so near. Another knife came straight at him, its haft striking his face a horrid blow. He was nearly blinded by the blood that flowed from his forehead, and in his misery he gave vent to a long, ringing shout for help—yet with no hope or dream that help was near.

But it was!

help was near.

But it was!

A loud command, a resounding British cheer, and then all at once into the glade rushed a crowd of British seamen, headed by none other than Merryweather. Cutlass in hand they fell upon the brigands. gands.

gands.

It was Merryweather who cut down the chief, and it was fat Parker, the powder-monkey, who selzed a flaming brand from the fire and dashed it in the face of the English-speaking ruffian who had questioned Jack Salt. Down he went, and a pistol bullet finished him, while the seamen cut Jack's cords and tenderly laid him on the ground.

"Lie still, and drink!" said the lieuten-

'N most of the homes reached by this paper there is some one who would he glad to know the liberal offers made by the publishers of Scribner's Magazine to those who secure subscriptions for it.

> Scribner's Magazine is known the world over. It sells for \$3.00 a year - no less. It is easy to get subscriptions for it.

If you will send us your name and address and mention this paper we will send you an interesting Retrospect of the Magazine's contents for a number of years, containing over one hundred half-tone reproductions of its noted illustrations, and at the same time tell you about some of the interesting things to appear in the Magazine in the near future and how you can best secure subscriptions.

Address SCRIBNER'S MAGAZINE, 153-157 Fifth Ave., New York

SHERIDAN
ELEVEN, its
subs and its
scrubs, were
gathered together in the
gyn. awaiting
Coach Balley's
left half, was relating over again the
tragle story of defeat last year at the
hands of Van Arsdale. A greater portion of
Brand's audience had either played of
watched that harrowing game, but there
were four husky freshmen on the tean
this fall and that these might be entlightened and reinforced the great game was ened and reinforced the great game was recalled. "The worst of it was, Van Arsdale

"The worst of it was, Van Arsdale came here and the five thousand people were friendly to Sheridan, except the little bunch of rooters that came down from Van. It was Thanksgiving day, but hot—too hot for football. "Member, Bobbie?" Brand turned to Bobbie Wicks, the captain and fullback, a broad-shouldered bright-eyed boy of eighten dered, bright-eyed boy of eighteen.
"Yep," said Bobby mournfully.
"The heat took the tuck out of all of

us. Our tongues were hanging out a yard at the end of the first half and neither goal had been touched. You know neither goal had been touched. You know how it feels when you're so hot you can't breathe right? During the intermission Bailey talked the grit back into us, and we went to the scratch hot for a winning. Mind you, it was the hast game of the season, and we had whipped our whole schedule—just like this year. At the end of ten minutes we had the ball on their twenty-yard line—and then Bobby Wicks here got his collarbone broken—had to quit—"

"I wanted to stick, but Bailey wouldn't let me," Bobby said, shaken with memories.

with memories.
"That's a fact, fellows," Brand went "He had to be dragged from the But everybody knows if Wicks field. But everybody knows if Wicks had one foot in the gym and the other in the lab, he'd play out a game on his knees. We began to lose our margin. Lane, the sub fullback, was a good player and all that, but vith Bobby out—well, we felt wring, that's all. Van Arsdale was on our ten-yard line with only a couple of minutes' play left. Green, their right half, got by Banks, got by me. We all looked to Lane, standing there between our goal posts, and just a little this side. And then—and then—"

Brand couldn't get the rest out. He sat there, hammering his helmet upon the matting. "And Lane tackled short

and Green dove over the line with the ball, and we were cooked," added Wicks, as one would speak of violent death. "All ready, boys,"

11

1

neither had a monopoly upon courage or ambition, and each had a single primary thought—victory.

Two minutes before Sheridan took the field on the afternoon of Thanksgiving day Coach Bailey had the following to

Two minutes before Sheridan took the field on the afternoon of Thanksglving day Coach Bailey had the following to say:

"Boys, we're away from home and the crowd is with Van Arsdale. Don't let noise make it an uphill game. You'll have no time to listen to rooters, anyway. You're all in condition. So far as I know there's not a sore spot nor a weak spot in the team. You ought to bring back honor to old Sheridan.

\* \* Remember, boys, that no part of school spirit has to do with hate: the fundamental spirit is good nature. Play

hard; play fair; don't fumble, but if you do fumble for a loss, if you do make a mistake-forget it at once, forget it remotely. This is the test of courage. Worrying about a mistake weakens calls for repetition—"

"Are you all ready, Sheridan?" a voice

shouted.
"All ready, responded Bailey.
There was a roar from the stands outside and the players of Sheridan knew that the favorites were running on to

"All ready, boys," sang
Coach Balley, thrusting his head through
the door of the gym. The squads noved
out to the field. It was Tuesday afternoon—the last real practice day before
the Van Arsdale game on Thanksgiving.
"All I've got to say," finished Rand,
"is that next Thursday night there'll be
a different story to tell, or I'll wint to
drop into some quiet lake."

"And all I've got to say," muttered
Captain Wicks, thoughtfully, "is that
Bailey will neve; know again wiether
I've got a pain in the shoulder or not."
"Cheer up, fellows," said little Remey,
the quarter. "We'll scalp 'em this time."

Among the eastern iestitutions for college preparation, the Sheridan Military

Agriculture of the field by Green. Thus the
center of the field by Green. Thus the
forty-yard kick-off was erased in one
play—a beautiful run, a beautiful tackle.
For fifteen mortal minutes the play
and again the bail changed hands, because no gains were made. Then Gaylord, right half for Van Arsdale, and the
heaviest player on the field, dashed
around Sheridan's end, eluding Brand,
and aimed like a comet at the goal, fifty
yards away. The sound of a hurricane
at sea arose from the grand stands. Bobby Wicks, the only barrier between Gaylord and the goal, made for the runner.

pered strangely to Brand: "I wish this

There was a roar from the stands outside and the players of Sheridan knew that the favorites were running on to the field.

"Go after them, boys," was the last order from Bailey.

Little Remey was whistling. Had you asked him the tune, he would have been unable to tell you.

A cold, dull, windy day—gray, fastilying clouds above, a dry, hard, white barred gridiron below—and in the midst of contrasting silence, Sheridan of the blue trotted into the arena and faced the orange of Van Arsdale.

The home team kicked off. The ball fell into the arms of Brand on Sheridan's ilfteen-yard line. Interference closed about him, with Remey the point of the wedge. Running low, they sped over the white ribs of the gridiron, each white line passed meaning a gain of five yards. Remey was knocked aside. Brand swung like a pendulum behind his two

battle-lines.

Van Arsdale's ball; a line-up ten yards from the center of the field, in Sheridan's territory; signal, and big Gaylord plows about the end; Brand throws him like a lariat on the gridiron rim after a ten-yard gain; the force of the tuckle whips the ball from Gaylord's hands; Bobby Wicks seizes it, while Remey, Keeler and others break a hole for him. Keeler and others break a hole for him. All are passed but the lanky Rooke, Van Arsdale's fullback. Rooke smashes the interference and downs his man, making the prettiest tackle of the day, but Bobby Wicks has made forty yards! It may have been Bobby's big gain; it may have been utter weakness. At all events, Van Arsdale held Sheridan but we downs work. It the last two min-

two downs more. In the last two min-utes of play Brand, the final of a criss-cross signal, slipped by Green and Gaylord, and the grandstands arose as one man to see the splendid Rooke dodged— and Brand fall—inside of Van Arsdale's

Bobby Wicks, back with the others, arose from his knees. He scarcely knew why he had been upon his knees. He rubbed his eyes and prepared to kick goal for the extra point. He was numbed from head to foot; could see but vaguely the goal posts and the crossbar. His toe met the ball and the latter sailed grandly between the posts. Then Bobby Wicks fell to his knees again. Coach Bailey bore him from the field.

In the thirty seconds of play which remained, vanquished Van Arsdale did not succeed in passing Sheridan's ends, and there was a substitute in the place of Bobby Wicks.

Six to nothing in Sheridan's favor was the season's history.
Ten minutes after the last whistle sounded Wicks opened his eyes in the gym. Bailey and a physician were bending over him. Brand was holding his hand.

widting was over."
"I wish I were an iron man like you,"

not founded upon strength, but upon the sheer grit which outlasts strength; both knew that the line which held up a minute longer than the other would win the laurels; both momentarily expected a crash. \* \* By strength alone these players would have been unable to regain their feet after the scrimmages. They staggered a little while reaching their places! And the spirit that enabled them is the invincible spirit of victorious them is the invincible spirit of victorious

Bobby Wicks.

President Roosevelt has succeeded entirely by his own manly energy and pluck, and by a perseverance that knows no obstacles. He first came prominently

no obstacles. He first came prominently before public notice on account of an incident in which his courage and grit drew forth the admiration of all.

When a young man he went out to the Far West ranching, and as is generally known, horse thieves are the bane and pest of all pioneering communities. Teddy Roosevelt's ranch was cut in two by a wide stream, and, for crossing this, he had a fine little skiff that he had brought out from New York. Apparently the horse thieves had a good opinion of it, for having been at their old game and being pursued by a band of irate ranchers, they appropriated the skiff one night and went off down stream.

and went off down stream.

Roosevelt was furlous the next morniing when he found out what had hap-pened, and he determined to set of after them, accompanied by a couple of his cowboys. But the difficulty was how to follow the thieves. No saddle horses were

tollow the thieves. No saddle horses were available on that side of the stream, and the river could not be crossed, owing to the absence of the boat.

It was here that the future President's determination and resource stood him in good stead. With the aid of his two men he built a rough flat-bottomed boat, and Russ so prompt in this that he come men he built a rough flat-bottomed boat, and was so prompt in this that he came up with the desperadoes' camp, while two of them were out foraging for food. One man kept the camp, and he was captured without a shot. The others returned later and were easily caught, Roosevelt covering them with his revolver, while one of his men relieved them of their weapons.

The whole party, captors and captives.

The whole party, captors and captives, supped together that night, and the next morning they set out in the skiff for the rearest town three hundred i dies away. For eight days they kept to the stream, and then, sending his men back, young Roosevelt undertook to see the prisoners safely in gaol himself. A cart was hired and placing the thieves in this their guardian followed on foot, revolver in hand, at some distance behind. The men made no attempt to escape, for they knew that it would be instant death if they did.
A frontiersman who drove the cart was

A frontiersman who drove the cart was suspiciously friendly with the thieves, and so during one halt Roosevelt had to keep watch the whole night himself, knowing that if he was once drowsy or off his guard he would be killed. Eventually he landed his prisoners safely at Dickerson, and received as a reward fifty dollars from the Government. Such as Such ar dollars from the Government. exploit was naturally much talked of all over that part of the West, and the future President became for the first time a public man.

# A Short Story

A tail girl named Short long loved a certain big Mr Little, while Little, little thinking of Short, loved a little lass named Long. To make a long story short, Little proposed to Long, and Short longed to be even with Little's short-comings. So Short, meeting Long, threatened to marry Little before long, which caused Little in a short time to marry Long. Query: Did tail Short love big Little less because Little loved Long?

A small boy was reciting in a geography class. The teacher was trying to teach him the points of the compass. She explained: "On your right is south, your left the north, and in front of you is east. Now, what is behind you?"

The boy studied for a moment, then puckered up his face and bawled: "I told Ma you'd see that patch on my

told Ma you'd see that patch on my pants."

Parent: "When that boy called you those names I hope you didn't call him any back?"
Son: "Me? No. I only said one word. father."

Parent: "And what was that, my Son: "Ditto!"

Full Clamp Fastenings.

We call attention to the extra quality and strength of steel used in the brackets on hockey skates. Every bracket warranted not to break.

The runners are made from the best rolled cast steel, highly polished. Other parts made from cold-rolled steel. The entire skate is nickel plated and buffed. Put up in boxes. Sizes, 9 to 12 inches (state size).

Given to "American Boy" subscribers for 4 new yearly subscriptions; or for 8 new yearly subscriptions and 50c; or for 2 new yearly subscriptions and \$1.00; or for 1 new yearly subscription and \$1.50. Price \$2.00 postpaid.

# Parlor Football

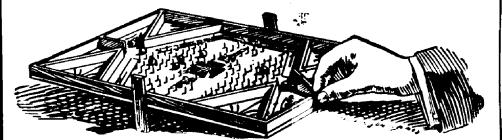

Parlor Football is the result of much patient continuous study in the endeavor to get a modification of the outdoor Rugby game which would be interesting indoors. The plan of the game is very simple, being merely the driving of a light ball by snapping a wire under it with a pointed stick, towards the goal or touchdown at opposite end of the game.

This is made exciting and interesting from the fact that the player's opponent is endeavoring to accomplish the same thing at the same time, thereby making it an exceedingly lively contest, with the odds in favor of the player who is the quickest and most alert.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for I new yearly aubscription and 50c. Price \$1.00, by express at receiver's expense.

# Sheep and Goats

This game has the most life, the most action, of all game boards. Requires quick sight, quicker decision, quickest action. Any number, anybody from grandma to grandpa, can play it. Can be adjusted to any degree of skill. Everybody in the room is interested and amused. Size 10x16. Requires

Given to "American Boy" subscribers for 1 new yearly subscription. Price

65c postpaid.

Wide Runner Skates

With Lever Clamps Length of top, 9, 10 or 11 inch.

With Straps

Length of top, 7, 8, 9 or 10 inch.

Specially designed for use on snow covered streets, walks and elsewhere and the most perfect article yet devised for coasting.

Made of special high quality steel, extra strong to resist hard usage and handsomely finished.

Price of either style, any size, \$1.25 per pair. We prepay the express to any office in the United States or Canada.

DO NOT FAIL TO STATE THE STYLE AND SIZE YOU DESIRE. Given to "American Boy" subscribers for 2 new yearly subscriptions, or for 1 new yearly subscription and 45c. Price \$1.25 postpaid.

# Flexible Flyer

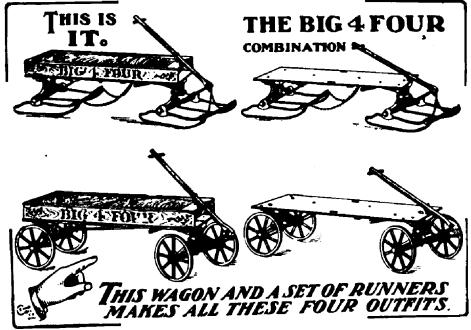

The Flexible Flyer is the invention of a grown-up boy. The device that makes it steer is patented, and no other sled is made that compares with it. Made of the finest materials, in a large and perfectly equipped factory, with spring steel in the runners, pressed steel supports, straight grained hardwood frame and seat. It is light, yet practically indestructible, and handsomely finished. It is lighter and at the same time much stronger than ordinary sleds, and the strictly parallel runners make it easier to pull and faster in coasting. Length, 40 in.; width, 13 in., and weight, 9½ lbs. Shipped from Philadelphia by express, the receiver to pay the express charges whether it is awarded as a premium or purchased. Manufacturers say shipping charges run from 50c to 75c, according to distance.

Given to "American Boy" subscribers for 5 new yearly subscriptions; or for 4 new yearly subscriptions and 50c; or for 3 new yearly subscriptions and \$1.00; or for 2 new yearly subscriptions and \$1.70; or for 1 new yearly subscription and \$2.00. Price \$2.50 by express, at receiver's expense.

# Coaster - Express

COASTING ON WHEELS. GREAT SPORT!!!

A SUMMER EXPRESS

A WINTER EXPRESS

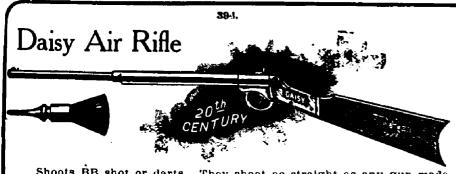

A SUMMER COASTER A WINTER COASTER

Handier than a wheelbar-row for most purposes round anybody's house, store, farm or factory, be-sides furnishing great sport for the youngsters.

For real healthy pleasure and practical usefulness we know of nothing that will give such unbounded satisfaction as a Coaster-Express. It has perfect Steering Mechanism and can be governed equally well with the Express Box on or off. Express Box can be removed or replaced in one minute. The White Ash Springboard Bottom is 36 in long and 14½ in. wide. Axies are Rock Maple, 1½x3½ in., having tapered Malleable Iron Thimble Skeins. The 11 in. Wheels have Iron Hubs, ¾ in. Rock Maple Spokes. Rock Elm Rims, ½x¾ in., bent in one piece. Steel Tires, ¾ in. wide and ¾ in. thick, welded and shrunk on. Malleable Iron Hounds, Rock Maple Pole, large and strong Iron Fifth Wheel, ¼ in. Kingbolt, strong Iron Braces on front and rear Axies. Made from selected stock throughout and attractively finished. Weight 30 lbs.

The prices quoted below do not include Runners. If a pair of Runners is wanted add \$1.50 to your remittance. The Runners are of round, flexible steel.

Given to "American Boy" subscribers for 6 new yearly subscriptions; or for 5 new yearly subscriptions and 50c; or for 4 new yearly subscriptions and \$1.00; or for 3 new yearly subscriptions and \$1.50; or for 2 new yearly subscriptions and \$2,00; or for 1 new yearly subscription and \$2.50. Price \$8.25 by express from Sheboygan Falls, Wis., express charges at receiver's expense.

Shoots BB shot or darts. They shoot as straight as any gun made, and are entirely free from danger, smoke and noise. With a little practice any boy can become a crack shot. Shoots BB shot or darts.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 35c; or for 1 new yearly subscription and 70c. Price \$1.25 postpaid.

# Hamilton Rifle

The Hamilton rifle is a perfect firearm, absolutely accurate, strong and durable, and weighs only two pounds. Take down, and length over all 221/2 inches. Automatic extractor. Adjustable rear peep sights. Shoots 22 calibre short or long-rim fire cartridges. Nothing better for all kinds of small game and target practice.

**39**5.

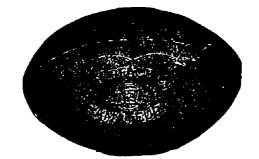

Given to "American Boy" subscribers for 4 new yearly subscriptions; or for 3 new yearly subscriptions and 50c; or for 2 new yearly subscriptions and \$1.00; or for 1 new yearly subscription and \$1.50. Price \$2.00. By express at receiver's expense.

# The Automatic Printer

A new invention. A boy's press built like a Big Newspaper Cylinder Press. An instructive, amusing toy and a practical press as well. Boys make money with it printing programs, circulars, paper bags, price lists, bills of fare, letter heads, etc., for grocers, druggists, churches

price lists, bills of fare, letter heads, etc., for grocers, druggists, churches and societies.

This press is entirely new this season. They represent the latest and best improvements that the manufacturers have been able to add to their previous line of presses. The merit of these improvements will be instantly recognized by the printer.

By the use of an ingenious locking device, they have been able to make the grooves in the type cylinder of this press independent and detachable and therefore grooves of varied sizes can be used and spaced on the cylinder at will. Thus the individual metal groove is held in the hand while that line of type is being set. It is then adjusted to the cylinder and a second line taken up and so on until the necessary number of lines are set up.

Two ink cylinders are also used—one to hold the supply and the other a standard composition cylinder to distribute over the type. A more uniform distribution of the ink is assured, and, consequently, better printing.

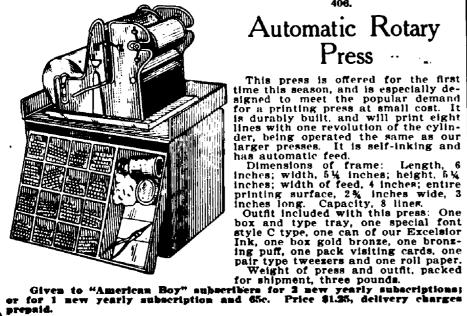

This press is also equipped with an automatic card gauge, insuring rapid and accurate feeding of cards, postals and other flat matter.

Dimensions of frame: Length, 14% inches; width, 10 inches; height, 8% inches: width of feed a inches.

Dimensions of frame: Length, 14% inches; width, 10 inches; height, 8% inches; width of feed, 9 inches. Entire printing surface 6% inches wide and 8 inches long. Capacity from 20 to 25 lines. Weight, 26 pounds.

The outfit consists of: One 4-tray type cabinet, one font style C type, one font style F type, one font style E type, one font style G type, one font style K type; one roll paper 9 inches wide, weight 3% lbs.; one combination can and distributor filled with our Excelsior black ink; one extra can of our Excelsior black ink; one box gold bronze; one box silver bronze; two packs visiting cards; one pack business cards; one pair type tweezers; one bronzing puff; eighteen No. 9X type grooves; four No. 9Y type grooves; three No. 9Z type grooves.

Given to "American Boy" subscriber for 15 new yearly subscriptions; or for 10 new yearly subscriptions and \$2.00; or for 5 new yearly subscriptions and \$4.00. Price \$9.00 by express or freight from Cincinnati, Ohio, at receiver's expense.

# Automatic Rotary Press -

This press is offered for the first time this season, and is especially designed to meet the popular demand for a printing press at small cost. It is durably built, and will print eight lines with one revolution of the cylinger where are our der, being operated the same as our larger presses. It is self-inking and has automatic feed.

Long Distance

# Telephone The Long Distance Tel-

The Long Distance Telephone is practical, and much enjoyment can be had by boys in connecting their homes with this Telephone, or it can be used by families for practical purposes, such as telephoning to their barn or store or neighbors. It is not a cheap toy, but a well constructed telephone, through ed telephone, through which you can hear the faintest whisper. The complete outfit consisting of two transmitters and receivers, insulating wire hanger insulators, book of instructions, etc., packed neatly in wooden

NO BATTERIES. NOTHING TO GET OUT OF ORDER.

15 NOT AFFECTED BY THE WEATHER. CAN BE PUT UP BY ANY ONE.

Given to "American Boy" subscribers for 2 new yearly subscriptions, or for 1 new yearly subscription and 50c. Price \$1.00 postpaid.

MAGNETO.

This machine has recently been improved, mounted on a polished base, brass parts nickeled, and presents a better appearance than when in a Cabinet. This Little Shocking Machine is a surprise in Mechanical perfection, finish and cheapness. Can be manipulated to make a giant tremble or not to injure a child.

Every boy wants one for instruction and experiment. It is a veritable Fun Factory and in a group, side splitting laughter is created by the many amusements and tricks the machine is capable of produc-

ing.

It strengthens the nervous system, costs nothing to run, can be applied without aid and supersedes Induction Coils and Medical Batteries.

Furnished complete with Hand Electrodes, Crank, multiplying gear, etc., etc.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 85c. Price \$1.00 postpaid.

Millions of these watches have been sold, and for six years the Ingersoll watch has been one of our most popular premiums. With each watch there goes the manufacturers' parchment guarantee, so that if anything goes wrong with the watch the manufacturers will make it good. In the great essential, timing quality, it is first-class, and because of its absolute simplicity in winding and setting, it is free from the llability to derangement that is common to stem winding watches.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for I new yearly subscription and 35c. Price \$1.00 postpaid.

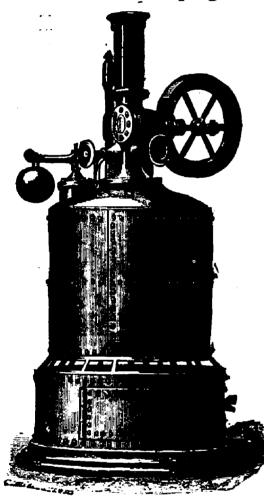

# The Little Hustler Motor

This motor has been greatly improved. This motor has been greatly improved. It is mounted on a neat and highly nolished base. Trimmings are nickel plated. The armature has three poles, causing motor to start without assistance when the current is applied. It will drive a five inch fan at a high rate of speed, and is fitted with a pulley for running toys, etc. Any battery from the cheapest up, that will run any motor, will drive the "Little Hustler."

3 new yearly subscriptions; or for 2 new yearly subscriptions; or for 2 new yearly subscriptions and 35c; or for 1 new yearly subscription and 70c. Price \$1.10 postpaid. Given to "American Boy" subscribers for

# Weeden Upright Engine

This Engine still retains its popularity, and still continues to be easily the best dollar engine in the market.

In construction it is simple and sensible, and in ail its parts strong and durable. Unlike other dollar engines it has no steam pipes to get filled with rust and dirt. The steam chest, steam and exhaust ports, whistle, whistle valve and throttle valve seats are all cast in one piece, and locked steam tight to top of boiler. It is made throughout of well tempered polished sheet brass. It exhausts

brass. It exhausts steam through the smoke stack as shown in cut; which no other engine does.

The safety valve is the lever and ball pattern. The valve seat is made large in order that the boiler may be the boiler may be easily filled easily through it.

Every engine is thoroughly tested before packing, and

All parts of the engine are interchangeable, and we have always on hand duplicate parts with which to supply our customers.

Each engine is packed securely in a wooden, locked-corner box suitable for mailing or expressing. Full directions for running the engine will be found in each box, with the price of duplicate parts.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price \$1.00 postpaid.

14k Solid Gold Diamond Point

# **Fountain** Pen

These pens are made of the very best quality hard rubber fitted with 14k guaranteed gold "Diamond Point" Pens, They are of the simplest construction and cannot get out of order, overflow or fail to write, as the feeds are made exactly the same as now used by all the standard Fountain Pen Manufacturers, having a deep ink channei, reinforced by two lateral slots, thereby keeping the ink always in contact with the contact with the point of the pen, and always wet and ready to write. This Fountain Pen is fully tain Pen is fully guaranteed, and in the event of its proving unsatisfactory in any particular, can be returned to the manufacturers and a new one will be a new one will be a new one will be sent. A printed guarantee slip will be found in every box. We firmly believe that this Pen will give better satisfaction then most \$100 than most \$1.00 and \$1.50 Pcus now on the market.

Given to "American Boy" subscribers for 1 new yearly subscription. Price 75e postpaid.

# Torpedo Steamboat

This Steamboat has a nicely modeled hull (torpedo type) well put together, and is very attractive in appearance. It has a polished brass boiler firmly secured to the thwarts; steam chest mounted on an inclined frame, to which the cylinder is adjusted.

Length of Hull, 151/2 inches; of Boiler, 33/4 inches.

A small balance wheel is connected to the cylinder and propeller shaft, and to the latter is fixed a three bladed

brass propeller.

The lamp is securely soldered in the bottom of the boat to prevent it sliding about while the boat is in motion.

The whole is finely decorated in colors, and each one is tested and guaranteed.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 40c; or for 1 new yearly subscription and 80c. Price \$1.25 postpaid.

# The Practical Typewriter--No. 2

This is a very complete machine, having key for each letter, roller feed, automatic inking and spacing, sight writing. Will take a small letter head, and can be easily and rapidly operated. By reversing the carriage the machine can be used for addressing packages or writing in books. Has feed roller as shown.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 45c; or for I new yearly subscription and 99c. Price \$1.70 postpold-

# Eureka Scroll Saw Outfit

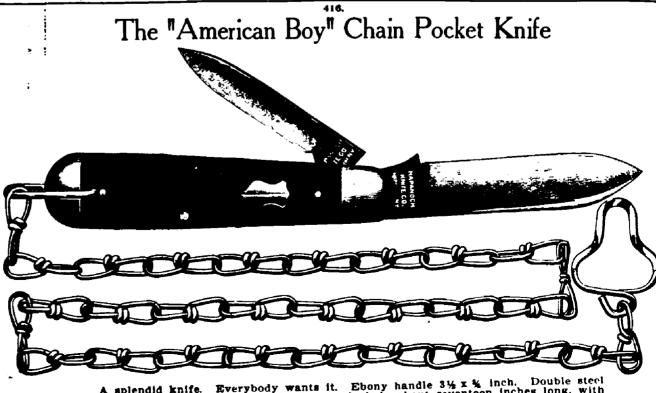

Just the thing for Boys and Girls. With this outfit any boy or girl can have endless amusement and

at the same time earn money by making and selling Brackets, Card Cases, Handkerchief Boxes, Jewel Cases, Easels, Photo Frames, Doll Furniture and hundreds. of other useful and ornamental articles out of cigar boxes or other thin boards. No experience or skill required. Anyone can use it.

You always know where your knife is Given to "American Boy" subscribers for 1 new yearly subscription. Price 50c postpaid.

A SPLENDID BOOK

# Three Boys in the Mountains"

HAMMONDS DICTORIAL ATLAS

WORLD

The story of Western Adventure—clean and inspiring—that ran in THE AMERICAN BOY

through the greater part of 1901, has been issued by The Sprague Publishing Company in book form. This story is one of the longest and best stories that has yet appeared in "THE AMERICAN BOY." Its author is the editor of "THE AMERI-CAN BOY," under the assumed name of Joe Cody. This is sufficient to indicate that it rings true in morals, and that nothing has been allowed to enter the story that will hurt a boy, but that everything is there that will give interest and dash to the narrative. It brings in the pleasures of the hunt, the chase and the camp, and deals with Indians and animals in plains and mountains. It is a good, healthy story that a parent will be glad to have in the hands of his boy.

HANDSOMELY BOUND IN CLOTH AND ILLUSTRATED.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price 75c postpaid.

# "On the Field of Honor"

Second of the Series of Books for American Boys, by Annah Robinson Watson.

Twenty-five sketches of young heroes make up this little volume of 226 pages, the heroes being those who displayed valor on the battlefields of the Civil War. Here are told true stories of daring and devotion to duty that may well stir the blood of old and young, and make each of us proud to say "These were my countrymen."

Mrs. Watson's style is of the very best-clear, plain, straightforward; there is no straining after effect, but there is pathos and soul-moving on every page. Her theme is a noble and lofty one, and she has been fully equal to every demand. "On the Field of Honor" is a book of inspiration for the young; a setting out of the glorious heritage that is shared alike by every Ameri-can. No praise is too high for it.

Given to "American Boy" subecribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 85c. Price 75c postpaid.

STORIES OF YOUNG

AMERICAN HEROES

THE NEWEST BY FIVE YEARS!!

# Hammond's Pictorial Atlas and Gazetteer of the World

A WEALTH OF FINE MAPS AND BEAUTIFUL PICTURES

Here is a new work of more than ordinary interest and value—an atlas and gazetteer, presenting so many distinctive features as to place it in a class entirely by itself. The publishers have just completed it at great labor and expense and now offer it with some pardonable pride.

In the first place, it is the only modern work of this type in five years. That is a long time in atlas making! The world has moved forward more swiftly in that time than in any previous decade, bringing changes of vital importance into our national life. A new work of this sort is therefore indispensable.

EVERYBODY NEEDS AN ATLAS. And it should be the very best obtainable. An out-of-date or mediocre work will not answer. This series of maps is not a rehash or revision; the censuses and other gazetteer data are absolutely the latest and most accurate in every instance. The volume is a marvel of compact, usable knowledge.

IN THE OFFICE, the careful business man needs to krow the size of towns as they are to-day. Thousands of new towns have sprung up within the last year, and it is essential for him to know about them. Not only do the maps in this work show railroads completed during the present year, but the marginal index gives towns in the order of their size, and the index-gazetteer shows all places in this country of over 500 inhabitants as well as the important foreign cities.

IN THE LIBRARY AND SCHOOL-ROOM, old maps which tell only half truths are worse than useless. For example, in looking up Panama, you want to find the exact limits of the new republic, and the canal as it stands jo-day. This Atlas alone, shows the latest work here; also the new cable lines in the Philippines, the new cable to Alaska, and many other of the most recent developments on the globe.

IN THE HOME, this splendid work will prove a constant delight to children. The multitude of fine half-tone illustrations, many of them quite large, will prove a constant incentive to study, while the work itself will answer a hundred and one questions which come up in the course of ordinary reading.

In a word, no matter what the need The Pictorial Atlas will meet it and will prove to be the Most Convenient, Compact and Recent of all!

TYPE AND BINDING.—The type throughout is large and clear; the bindings are both attractive and durable. The book measures 10 ½ x 13 ½ inches, contains two hundred and fifty-six pages, and will be found light and easy to handle, opening out flat. In brief, its whole appearance inside and out is both sumptuous and tasteful. Every feature of editing and manufacture has improved on past experience.

The Pictorial Atlan is a volume you will be proud to own. The regular price, bound in cloth, with embellished side stamps, is \$5.00, but by special arrangement we are able to sell it at \$2.50, delivered.

# Our Special Fishing Outfit

Consists of everything herewith described and illustrated. In adding this Fishing Outfit we felt sure of immediate success, and we have not been disappointed.

The articles in this Outfit were selected with great care and are good for regular fresh water fishing. This is what we supply: A three-piece Natural Wood Rod; 1 All-Brass Reel, strongly riveted; 9 Fishing Lines of assorted sizes; 6 Trout and Bass Flies, popular styles; ½ doz. Snelled Hooks; 2 doz. Kirby Hooks, assorted sizes; 1 Kidney Bait; 3 three-foot Leaders; 1 Float, 1% inches; 1 Patent Adjustable Sinker; 2 doz. Split Shot and 3 Swivels.

We send everything herewith set forth. Sent securely packed by mail.

Given to "American Boy" subscribers for 3 new yearly authoriptions; or for 2 new yearly authoriptions and 45c; or for 1 new yearly subscription and 90c. Price \$1.50 postpaid.

Given to "American Boy" subscribers for 5 new yearly subscriptions; or for 4 new yearly subscriptions and 50c; or for 3 new yearly subscriptions and \$1.00; or for 2 new yearly subscriptions and \$1.50; or for 1 new yearly subscription and \$2.00. Price \$2.50, delivery charges prepaid.

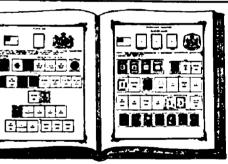

Standard Postage Stamp Catalogue

This is the edition for 1905-C and gives the date of issue, color, shape and value of every postage stamp that has ever been issued by any Government in the world, with illustrations of nearly every stamp, and giving the prices at which most of them can be purchased used or unused. It is the \$2d edition and thoroughly revised and corrected, and fully brought up to the day of going to press. It has 729 pages and is nicely bound in cloth.

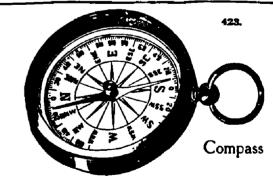

Given to "American Boy" subscribers for 1 new yearly subscription. Price, 50 cents, post-paid.

International Postage Stamp Album

This is the large 19th Century edition. Measures 9½x 12 inches, and has 680 pages. It contains spaces for all varieties of postage stamps issued in any country of the world during the 19th Century, also Portraits of the Ruiers, Flags and Arms of every Nation, together with full statistical information regarding their size, population, capitals, etc., etc. Illustrated with over 4,000 engravings and with maps of all countries of the world.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 50 cents; or for 1 new yearly subscription and \$1.06. Price, \$1.50, postpaid.

This Compass is open face, nickeled back with ring handle. Dial is 1% inches and very fine. Needle very sensitive, and it is guaranteed to be first-class in every partic

Given to "American Boy" subscribers for 1 new yearly subscription. 50c, postpaid.

We have made a contract with the publishers of "The American Boy March and Two-Step" and "The Jolly Student," two of the best pieces of music for American boys ever published, by which we have more than one thousand copies of each to sell to American boys. "The American Boy March and Two-Step" was composed especially for THE AMERICAN BOY, and has never been placed on the with "The Jolly Student." The editor of THE AMERICAN BOY was recently at a meeting of the Detroit Newsboys Association where were gathered together five hundred of the newsboys of Detroit. At this meeting the writer of the music, Harry Zickel, author of "Black America," played the accompaniment to the song "The Jolly Student," and it was sung by a prominent Detroit singer. The boys went wild over it, and by the time the third verse was sung they were joining in the chorus, spontaneously, and without invitation. "The American Boy March and Two-Step" is a piece of instrumental music, while the "Jolly Student" is a song. It is a song that is being adopted by the schools throughout the country as a patriotic song for boys, and it is bound to create a furore among old and young wherever it is heard. The price of each of these pieces of music is 25 cents. "The American Boy March and Two-Step" can only be purchased of THE AMERICAN BOY. We hope to have your order for one or both, and we guarantee that you will be pleased.

Both pieces given to "American Boy" subscribers for 1 new yearly subscription. Price for both 50c; or 25c for one, postpaid.

How to Send Money

There are four ways in which money can be sent at our risk—by Postoffice Money Order, Express Money Order, or by Bank Check or Draft;

and, when none of these can be procured, send Registered Letter. If you send money by mail in any other way, it must be at your own risk.

ORDER PREMIUMS BY

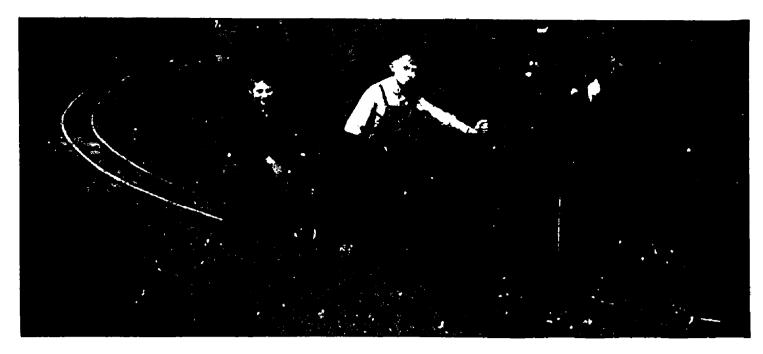

NUMBER. Any article can be purchased at the selling price as given above. We wish our friends "hustling American Boys" success. RE
MEMBER, WE DO NOT GIVE PREMIUMS ON YOUR OWN SUBSCRIPTION

# MELVINE HOWDEN'S BELT LINE

Here is Melvine Howden, son of Editor Judson Howden, of Fillmore, N. Y., sitting in his motor car which runs on a ten-inch track. The car is propelled by a one and one-quirter horse-power Barker marine gasoline engine, and was built for Melvine by William Foote, a machinist of Fillmore.

This auto-car or "locomotive" is four and one-half feet in length and twenty inches in width, the engine and the tanks for water and gasoline being on the front end. At the rear is the seat for the little engineer. Under the seat are the batteries that furnish the "spark;" the "switch" can be seen close to the upper part of the seat. The power is applied to the rear axie by means of two sets of sprocket wheels with chains connecting with the shaft of the motor, there being a clutch on the axie with which the "lever" is connected. The wheels are six inches in diameter, with a one and one-half inch face.

The track is made of planed oak strips, one by one and one-half inches in size, laid flat-ways and nailed to the ties, which are slabs of wood sixteen inches in length, taken from the woodpile at a sawmill. The railroad is three hundred feet in length, and circles the back yard and garden at Editor Howden's residence. There is also a "spur" or side-track of seventy-five feet, provided with a switch.

The car or "trailer" on which the other boy is sitting, is three feet long and sixteen inches wide; it will comfortably hold two small passengers. Melvine runs his "train" at about a six miles an hour speed, and has carried as many as five children at a time—three on the car and one beside him on the "engine."

At one place on the "Belt Line," as Melvine calls his railroad, there is a steep grade, and the curves are quite sharp, but the little "Barker" has no difficulty in propelling its trainload, except when the track is wet from rain, and then the rails have to be sanded to keep the drivers from slipping.

hatred of hypocrisy. He would not tell, neither would he listen to, an unclean story. His word too was conclusive. "Did Sam Grant say that? Well, if he said so, it's right," was the unanimous opinion of those who came in contact with him.

Grant graduated from West Point in June, 1843, number twenty-one in a class of thirty-nine, and became at once brevet second lieutenant of the Fourth U. S. Infantry. He had wished to join the cavalry, but before his number was reached the vacancies in that branch were filled up. The training at West Point had been of the utmost benefit; it had taught him obedience, attention, order and the laws of health.

of health.

After his ninety days furlough he was ordered to join his regiment at Jefferson Barracks near St. Louis. Soon thereafter war was declared against Mexico, and among those who marched into Texas was Second Lieutenant U. S. Grant to undergo his baptism of fire. Here, at the threshold of his career we leave him to follow out the path of duty, to endure many discouragements, to meet with many difficulties, but with simple earnestness and modesty, with patience and dogged determination, to overcome all obstacles and win a high and enduring place not only in history, but in the hearts of the American people.

#### SYNOPSIS OF GENERAL GRANT'S CAREER.

1847-Appointed first-lieutenant during Mex-

ican war. 1848—Married Miss Julia Dent of St. Louis. 1852—Made captain and ordered to Pacific Coast.

1854—Resigned commission and became farmer

1854—Resigned commission and became farmer and real estate dealer in St. Louis.
1860—Worked in his father's tannery at Galena, Ill.
1861—Returned to the army as mustering officer under Governor Yates. Made Colonel of 21st Illinois infantry. Brigadiergeneral of volunteers. Selzed Paducah and fought Confederates at Belmont.
1862—Forced capitulation of Fort Henry. Captured Fort Donelson. Major-general of volunteers. Fought at Shiloh. Captured Vicksburg. Major-general of regulars. Presented with gold medal by

Lincoln as Lieutenant-General, March | 9th. Battles of the Wilderness and | Cold Harbor. | 1865—Captured Petersburg and entered Rich-

Cold Hardor.

-Captured Petersburg and entered Richmond. Received General Lee's surrender at Appomattox, April 9th.

-Elected President of the United States.

-Alabama claims settled, Great Britain paid \$15,500,000 in settlement. Relected President.

-Sailed on tour round the world, visiting England and other countries and principal cities of Europe, also Egypt, Palestine, India, China and Japan, returning to America 1879.

-Settled in New York City. Entered into banking business. Dishonesty of partners almost ruined him. Wrote his memoirs to provide for his family.

-Died at Mount MacGregor, near Saratogs, July 23. Mausoleum, where his body now rests, on Riverside Drive, New York.

INSCRIPTION ON THE GRANT TABLET IN THE HALL OF FAME:

> ULYSSES SIMPSON GRANT. 1822-1885.

I determined, first, to use the greatest number of troops practicable; second, to hammer continuously against the enemy until by mere at-trition, if in no other way, there should be nothing left to him but submission.

Editor's Note: Next month will appear in this series The Boyhood of Admiral Farragut.

# Prompt Answer

A school inspector, explaining to his class that the land of the world was not continuous, said to the boy who happened to be standing nearest to him:
"Now, could your father walk around the world?"
"No, sir," was the prompt reply.
"Why not?"
"Because he's broken his leg," was the altogether unlooked for response.

# Jim's Hair

Wish there was a way to swim
That wouldn't wet your hair.
Us fellers can dry all the rest
Right out in the air.
But the folks look at our heads
And scream, "I do declare!
Hurry, father. Look at Jim!
He's been in to have a swim!"

"Optimism wins! Optimism always ins!" recently declared Chauncey wins! Depew.

Brown—"I am afraid my boy will never amount to much; he is always at the foot of his class."

Jones—"Oh, don't be alarmed. Why not make him a chiropodist?"

Every boy in America should have a copy of the Two-Dollar Book, "Scien-tific American Boy." Will

Absolutely Free

you be one of the 500 boys? For a limited time we will give this book away to new subscribers. The book contains over 300 pages and over 350 illustrations. It is substantially bound in cloth and well printed on good paper. We have not the room here to tell about its con-

tents. It is sufficient for us to say that full and and complete instructions are given on how to build tents, boats and canoes. Information is given on appliances is something of interest in this huge volume for every boy as well as the boy's grandfather. After its perusal you should be able to increase your income or earn extra money after school hours. It tells about bridge-building, cave houses, wig-wagging, telegraphing and many other subjects which are dear to the hearts of the representative American boy.

Where is there a boy, young or old, who would not like to be able to make railways, windmills, water wheels, tree houses, etc.? The fortunate possessor of one of these free books will be the envy and leader of the boys in his entire neighborhood. Remember, boys, we are giving this book away absolutely free.

SCIENTIFIC MEDICAN

Our proposition to you is as follows: SEND US THREE DOLLARS for one year's subscription to the Scientific American and we will send the book absolutely free by first train. Scientific American's subscription price is \$3.00 a year for fifty-two issues.

\$5.00 OFFER FOR \$3.00—If you act quick you can take advantage of this offer, which is limited to 500 boys.

It is almost unnecessary for us to tell you anything about the Scientific American. If you are an energetic and ambitious boy you will like the Scientific American. It has been published weekly for over sixty years. It tells all about the latest inventions and prints stories and scientific experiments in an interesting and understandable way.

SCIENTIFIC AMERICAN will help you in your ambition to become a "man." President Angell, of the University of Michigan, recently said: "I would trust any boy anywhere who reads the Scientisc

Your father will subscribe to the Scientific American if you ask him. He will be glad to get the paper. You get the book tree. It will be an easy matter and will not take more than five minutes of your time to get some one to subscribe for the Scientific American. The cost is but Three Dollars for one full year. The Two-Dollar Book is free. The book can be sent to one address and the Scientific American to another, if you wish. Tell your father you want this for a Christmas gift.

Boys, this is the greatest offer that was ever made to you. Send in your subscription by re-turn mail. Attend to this important matter at once. The edition of the book is limited. This offer is for new subscriptions only.

#### A FRENCH FROG AND A N FLEXIBLE FLYER The Steet that Steers

AN ENGLISH SCHOOL STORY—By E. S. TYLEE

BEGUN IN MARCH

CHAPTER XIII. A DUEL.

THE HOLIDAYS OVER we returned to good old Crosscombe in high spirits, very well satisfied with our vacation for we had indeed, as young Washington remarked, had "a bully time." The latter was more attached than ever to René, and the French boy had also succeeded in making a great friend of Mrs. Pickens, whom we had found to be an amiable but exceedingly nervous lady desperately afraid of a breath of fresh air and, consequently, a martyr to neuralgia. Her bolsterous son and her breezy, business-like husband were often too much for her weak nerves, but Briant, with his pretty speeches and finikin foreign ways, suited her exactly. She declared that he must spend some part of every future vacation at their house, and as Pizarro told me "Whatever momma says, goes."

Of course we found that the Pickens family lived in great state and splendior, and this more than anything reconciled me to returning to school. Some people, I believe, rather fancy having a tall footman behind their chairs. It gives me the jumps.

"A Bloater toasted at the school-room fire,

fire, A loaf of bread, a flask of currant wine, A faithful friend to touch his glass with mine; What more can Allah grant or boy de-

The lines are Crikey's, translated, he

rhe lines are Crikey's, translated, he says, from the works of a Persian poet with whom he has hobnobbed many a time in past years. The sentiment is one to which I heartily subscribe, though I think Crikey must be wrong about the author, for, if I remember rightly, he told me another time that the verse was by Homer. However it does not matter.

rightly, he told me another time that the verse was by Homer. However it does not matter.

We found no particular changes at Crosscombe after the summer holidays were over. Contrary to general expectation Ascott came back, his people having apparently found the necessary tin after all. This was a good thing for the school Rugger team, which could ill spare its heaviest forward. Now with all the last year's team available and a new three-quarter back with such a reputation as Anstruther, we could look forward with confidence to the coming season, and especially to the match with Yeobridge Town in the second week of term. The Yeobridge men were generally reckoned the most formidable team that we encountered, and to win our match with them was always taken as a sign that we were to be victorious in most of the remaining contests.

Now from time immemorial it had Now from time immemorial it had been the custom at Crosscombe to elect the new football captain at the beginning of the autumn term. For the last two seasons Carclough, the captain of the School, had had a walk-over, but on this occasion a strong opposition party had nominated Anstruther and were urging his claims with much party had nominated Anstruther and were urging his claims with much vigor. "We want new blood," declared Mainwaring, who had constituted himself Anstruther's Election Agent, at an influential and highly enthusiastic meeting in the gymnasium. "The captaincy of Crosscombe Football Club has been too long the appanage of an effete autocracy!" The sentiment was received with thunders of applause. Several fellows consulted me shortly afterwards as to its meaning.

with thunders of applause. Several fellows consulted me shortly afterwards as to its meaning.

The gymnasium had been liberally "billed" on behalf of the rival candidates. We do as we like there, subject to the periodical supervision of that smart non-com Flanagan. Thus Carclough's blue placards sentimentally pleaded with voters: "Electors of Crosscombe Football Club, stick to your old friends who have served you well. Carclough and Constitution." The red lines of Anstruther's posters took up a libelous attitude in reply: "Members of the C. F. C! Why these continual Deficits? Vote for Anstruther and Investigation. No more little Suppers to the Committee." This regrettable hostility on the part of the opposition was excused or palliated by the cynical audacity with which the other side had apparently sought the aid of corruntion; for one shy little notice announced "Free Sherbet at Poploy's, for all Friends of the Captain." Standing grievances were largely made use of: "Plump for Anstruther and Liberty for Juniors to punt about in Lower Field during Matches." "Vote for Carclough, and no more Selling of old Balls." It is worthy of observation that several of these placards were posted upside down, in order that free and independent vorthese placards were posted upside down, in order that free and independent voters might be able to peruse them while hanging head downwards (a posture doubtless most stimulating to the be-

wildered brain of a waverer) to the rings and horizontal bar.

The election was very good fun, but there seemed to be growing, in connection with it, a most deplorable division in the ranks of our hitherto united Gang. It was certainly not the captain's fault. Carclough was of far too generous a disposition to let any petty jealousy of the new-comer influence him against Anstruther. But it was evident that there was a strong and growing party who made the latter their leader, and whose watchword seemed to be distrust and hostillty against the two foreigners and especially René Briant, who was regarded as being the captain's favorite and protege.

An incident which occurred after drill on one of the first days of term brought this feeling to a head. We had justifished the usual ten minutes singlestick exercise, and as usual the fellows after the word to "disperse" had been given, proceeded to amuse themselves by engaging in a series of mock duels. Briant was standing idly watching one of these, in company with our wild shighlander Lamont. René had received

straint grinned good-humoredly at the control of the growing party who made the latter their leader, and whose watchword seemed to distinst and hostility against the two for-tigners and especially René Briant, on the combat came to a dramatic building favorite and protege.

detecting any unlawful copying. On the two or three occasions when he happened to be called away from the room for awhile he returned so hastily, and burst the door open with such awful suddenness, as to cause a temporary stoppage of the busy pens, while a dozen eyes were turned inquiringly upon him. The truth is that he has done the thing so often, buoyed up by the perpetual hope of discovering crime, that it has now become a habit; and if the king were to be such a flat as to invite him to Windsor Castle, he would do it there. We did not see much of Mr. Lane, the lecturer from Owens College, with the exception of one or two chance glimpses. He seemed to be a natty little man, very carefully dressed, and chiefly noticeable for the quantity of jewelry about him. He wore a diamond breast pin, several handsome rings, and a gold watch chain that looked massive enough to hold a yacht. He was in Henderson's rooms which Cuckoo had vacated in his favor, and dined with the doctor every evening.

Anstruther met Ascott as he was go-

vacated in his favor, and dined with the doctor every evening.

Anstruther met Ascott as he was going in for the afternoon paper.

"Well, how have you done, old man?" he asked, "Were you in form?"

'So, so," Ascott answered. "Not so well as I could wish, but better than I expected. But I have very little hope, all the same. Briant has been going strong for the whole morning, and as he is far ahead of me in the practical, there is not the ghost of a chance for me. I don't fancy that Postlethwaite has done much."

The last named joined them at that

The last named joined them at that moment wearing a despondent air.
"I am going to scratch," he said. "Did
you ever see a more rotten paper than
they gave us this morning? I don't believe I made one-third marks on it. And Briant says it suited him down to the ground!"

ground!"

"Oh! I vote we play the game out!" said Ascott. "The Doctor won't like it if we chuck the thing now. And perhaps you'll have better luck this afternoon."

Anstruther gave a sort of snort, for Briant approached the door of the annex looking aggressively radiant. In answer to his rivals' inquiries he agreed that he had thought the first paper "ver' nice," as if it were a jam tart. He would not admit, however, that he felt at all confident, and indeed, at the conclusion of the afternoon session it appeared, on the competitors again comparing notes, that Ascott had undoubtedly done slightly better than Briant on the second paper. The final result might still be regarded as a fairly open question.

still be regarded as a fairly open question.

But alas! in the rigid practical examination of the following day the English boys showed to very poor advantage by the side of the neat handed Frenchman, Postlethwaite, whom misfortune still pursued unrelenting, broke a test tube; and though no such disaster overtook Ascott, the latter's experiments compared very unfavorably with Rene's rapid and accurate work. It was easy to gather from Henderson's countenance which way his own decision would go, when he finally dismissed the boys and went to make his report to Dr. Hardress.

The School Debating Society was to meet on the following Friday evening, and Anstruther was to open the discussion. When first approached by Carclough the president, with a request that he would bring forward a motion Anstruther had excused himself with reasons that in number and variety resembled those of the famous Irishman who was sued for demograps a horrowed.

Anstruther had excused himself with reasons that in number and variety resembled those of the famous Irishman who was sued for damaging a borrowed lawn mower. The latter, it will be remembered, pleaded firstly, that the mower had been returned in perfectly good condition; secondly, that it was broken when he had it; and finally, instructed his counsel to establish an alibi. Even so Anstruther, in answer to Carclough's application, alleged in the first instance that he was utterly unable to make a speech, then that he lacked time to prepare one, and lastly that he had no subject and that debates were rot. It was with some surprise, therefore, that the president received the following note, on the day after the conclusion of the examination for the Pickens scholarship: scholarship:

"Dear Carclough:

"On second thoughts, I shall be pleased to open a debate on Friday, and to move the following resolution: That the constant immigration of greedy and destitute aliens is a source of danger and decay to the British Empire and its great and glorious constitution'

"Yours sincerely.

"Yours sincerely,
"AUSTIN BENTLEY ANSTRUTHER,

"P. S.—I suppose it is not against the rules of the society for me to read my speech."

Much disturbed by the truculent tone of the above missive, Carclough hastened to remonstrate with the writer. He found Anstruther in his study, surrounded by a sort of fortification of huge folios, including a volume of the Encyclopaedia Britannica, and steeped in ink to his very eyebrows. The student greeted his friend with enthusiasm. "Take a pew!" he cried, motioning Carclough to the best arm chair. "I've been stewing over this thing for the last six hours. Now listen and tell me how it goes!"

"Try it on a dog!" suggested the president. "Look he e, old man, it will never do to move that resolution of yours as it stands. Why it is a flush hit at Briant, and fearfully bad form considering that he is the only Frenchman among us."

"Thank goodness!" interposed Anstruther.

"Thank goodness!" interposed Anstruther.

struther.

"Besides..." the president continued,
"I don't believe you will get a seconder
among the seniors!"

"Oh, I have one already!" answered
Anstruther. "Adams agreed to support
it at once when I asked him."

"My word!" said Carclouth. "You'll
have weight on your side, at any rate.
I tell you what I shall do, if you insist on moving such a resolution as you
sent me. I'll get Crikey to oppose, and sist on moving such a resolution as you sent me. I'll get Crikey to oppose, and if he doesn't get you and Adams on toast, why I'm a greedy and destitute allen myself." And the captain swung out of the study in a greater state of ill-humor than he would have cared to confess

The events of Friday evening did not tend to render the trouble less acute. tend to render the trouble less acute. Carclough had insisted on modifying

Here is a New Optical Illusion

was longer than it was broad. As a matter of fact the horizontal measurement along the dotted line is about the same as that along the vertical dotted

Pictorial Riddle

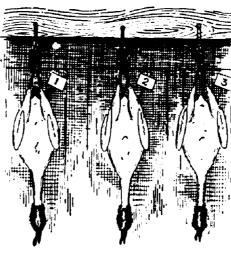

the terms of the motion, but even as it stood it was taken by the school generally as a direct challenge to the foreigner, and the friends of both parties assembled in strong force. There was a great deal of disorder among the juniors on the back benches, where blues and reds (for the partisans of Carclough and Anstruther mounted their colors for the occasion) punched and hustled each other with loyal enthusiasm. So but little was heard of Anstruther's speech, which was delivered in a series of short barks, for the great athlete was no orator, and it was only here and there one distinguished the phrases "glorious constitution," "alarming invasion," and "necessary precautions" As for Adams, he was guyed from the first, and getting into a personal altercation with one of his interrupters became abusive, was called to order by the chair, and sat down covered with ignominy. So that Crickhowell had an easy task; and though the reds kept up a steady booling during his speech, he had no difficulty in turning the arguments of his opponents into ridicule and compelling the laughter of even their own supporters. The motion was rejected by a large majority; but it was a fatal victory for the blues, for their exasperated rivals straightway commenced a campaign in the lower school which bid fair, at no distant date, to convert their minority into a majority. The delightful concord which formerly prevailed in the evening had completely disappeared, and the harmony of its meetings seriously disturbed. I forget what ancient Greek it was who declared that orators were the ruin of a State. Whoever it was he deserved a monument to his memory for saying such a sensible thing. the terms of the motion, but even as it

WHAT BUBBY DREAMED AFTER HIS THANKSGIVING DINNER

H. H. Seerley, President of the State Normal School of Iowa, gives the following as a recipe for success: Good preparation, hard work after being well prepared, and absolute adherence to some one plan; not trying one kind of work for awhile and then taking up another, and so on.

# Dog That Saved Thirty-four Lives Killed on Mt. St. Bernard

Word comes from Geneva that Barry II, the best dog ever owned by the St. Bernard Hospice, is dead from a fall. It was reported some time ago that Barry had been stolen, but he was really killed while in the performance of his duty. Three men who were climbing the Alps from the Italian side probably would have perished but for the appearance of Barry. He conducted them safely to within two hyndred words of the hear Barry. He conducted them safely to within two hundred yards of the hospice, when he slipped and fell sixty feet into a new opened crevice. His skull was crushed.

Barry saved thirty-four lives. Once he brought a baby in his mouth to the hospice and then returned to aid its parents, who were saved by his agency. He was twice swept away by avalanches. The monks sang a special Te Deum in his memory, and every person shed tears. tears.

In this connection boys will be interested in reading the following:

#### SONG OF THE TRAVELERS OVER THE GREAT ST. BERNARD.

St. Bernard is a mountain grand As any there is in Switzerland; And many a legend of it is told, How Hannibal with his legions bold Came over its pass in the days of old. But what care we for that bygone age. For better subjects our hearts engage in the noble monks of St. Bernard, Who o'er the snow region keep watch and ward.

#### Chorus.

Then hurrah! hurrah for the noble monks.

And the dogs of St. Bernard, Who over the regions of ice and snow Keep vigilant watch and ward.

St. Bernard owns a convent old, Its prior and monks are as good as gold. Nine hundred years or more it has stood, And noble the deeds of its brotherhood, And noble the deeds of its servants good—

Its servants, the grand old dogs whose

All over the world is known to fame. Whose service asks no greater reward. Than the love of the monks of St. Bernard.

# Chorus.

Then hurrah! hurrah for the noble

monks,
And the dogs of St. Bernard,
Who over the regions of ice and snow
Keep vigilant watch and ward.

# A Warm Heart in a Dirty Jacket

A man who sells cut flowers at a stand downtown was waiting for trade the other afternoon, when a newsboy, dirty and ragged.

afternoon, when a newsboy, dirty and ragged. came running up.
"Say," said the boy, "whot's the price uf them red flowers?"
"Those carnations, you mean? They're two cents aplece," said the man.
"I'll trade you a paper for one," said the boy. The flower seller accepted the offer and the boy ran away with his carnation. A few minutes later he returned.
"Say," he said, "I just sold a paper. Gimme another uf them red flowers. Here's the two cents."

ents." The man at the stand handed him another ernation and accepted the pennies with a ranation and accepted the pennies with a smile. As the boy started away the man became curious. "Say, kid." he said, "what you going to do with those flowers?"

The boy took a better hold on his papers "Give 'em to the ol' lady," he said, "She's sick in bed."

sick in bed."

Then he left on the run, yelling: "Pape! Pape! All about—"."—Kansas City Times.

We hope that boy will live a hundred years and get everything that ought to and generally does come to the fellow whose heart is in the right place.

# To a Broader Field

Farmer Blank's son had left school barely a year when he began to chafe under the irksome routine of farm life. "Father." he cried, pausing in the act of rendering assistance in the cabbage-patch, "not a day passes but I feel the need of a change from the limitations we mark under here to one of the more expense. tensive scope—to a broader field of la-

"We-ell, I guess I can find it fer ye," observed his practical old father. "We're goin' ter begin on th' hay in thet twenty-acre field next week."

# Higher Education

The teacher was trying to draw from the pupils some of the uses to which ivery is put. She asked, "Now, who can tell me what is made of ivery?"

Up went a score of little hands.
"You may tell, Glen."

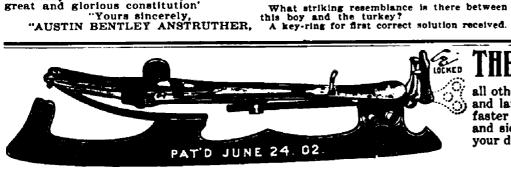

And Glen confidently shouted, "Soap!"

Is there a man living who would not have done the same thing? God forbid'

#### THE BROWNIE SPRING SKATES are fast becoming popular for fancy and pleasure skating. The BROWNIE has merit over

all other skates in its new Lock Lever Clamp and SPRING. The spring prevents soreness and lame ankles; makes skating a greater pleasure; produces longer stroke, therefore faster and with less effort than one gets from the common or rigid skate. Made in Hockey and side lever styles, ladies or gents, in 2 nickel, satin and polished bright finishes. If your dealer will not supply you, send direct to

BROWN SPRING ICE SKATE COMPANY, Webster City, Iowa

ELLO, Bluecoat! Blong to the Regulars?"
"My Pa is needin'
a row-boat; reckon I
could trade for those
shoes?"

"Cow feed is mighty high this fail; I hear the price of shucks is way

An applauding guffaw greeted these sallies.
The boy from Poplar
Cove pulled his shuck hat down a little lower, set his broganned Cove pulled his shuck hat down a little lower, set his broganned feet fiercely into the gravel walk of the campus, but that was all. He had not walked twenty miles to be present at the opening of Ridgedale Boys' School to be deterred by jibes and jeers. Yet he was stung to the quick. He had felt so proud of his new suit of blue jeans, woven and made by his mother's hands, and now the glamour was all dispelled. He realized that his clothes were as different from the clothes worn by these boys as the log house where he had spent the sixteen years of his life was different from the modern homes he saw about him. He realized that his trousers were either too short or too long—he was not quite certain which; that his shoes were hig and clumsy, and that his shock hat was suggestive of "cow-feed."

But beneath the tingling mortification and indignant pangs of hurt pride, he realized a something which could not be reached by jibes and jeers; a sense of power to make these well-groomed boys feel him, Erastus Martin! He did not know whether the feeling was mental or physical—he only knew it was there and must be worked out.

"I'll make 'em duck, if I have to lick the whole gang o' dudes to do it," he told himself, as, in answer to the bell, the fifty or sixty boys filed into the academy.

Most of them were old pupils, and

academy.

Most of them were old pupils, and their classification was an easy matter. When it came to Erastus' turn the principal asked:

"Where were you in school last year?"
"Nowheres," was the answer; "I steddied at home of nights, an' between crappin' seasons."
"Let me see your books."
Erastus drew forth a blue-back speller, a geography and an arithmetic, on the fly-leaf of which was written a girl's name and dated twenty years before

name and dated twenty years before.
"Whose were these?" asked the teacher, trying to hide a kindly smile that had crept to his lips at sight of these time-worn relics.

"Mam's—mother's," the boy corrected himself hastily.
"I shall have to ask you a few questions so as to be able to classify you, Erastus."

Erastus.

Erastus."

"All right," answered Erastus, wholly unconscious that his words would scarcely be considered respectful from pupil to teacher in this tallor-made world where he found himself.

The old pupils began to nudge each other and whisper.

"Now the fun will begin."
But smiles and nudges turned to looks of respectful attention as the jeans-clad boy stood up and passed such an examination in his three books as not one of them would have dared to hope for in his own case.

his own case.
"That's fine, Erastus; you may take your seat. I will give you a list of books you will need at recess," and, as the principal's eye swept over the school-room it said as plainly as words: "There's something better than his clothes about

After school was over the principal detained Erastus upon the plea of arranging his list of books. Gradually he drew the boy out to speak of his hopes and

"I've got twenty dollars," said Erastus. "I've got twenty dollars," said Erastus, proudly drawing a wallet from his pocket; "I lowed to stay as long as that would keep me. I thought mebbe I could sorter work my way, somehow. I've heard o' boys doin' that."

"Have you a boarding place?"
"No, sir; I just got in this mornin' in time for school."

time for school."
"How did you come? There's no railroad to Poplar Cove."

Meanwhile, he tried to remember all he had learned from the old books while grasping the secrets of the new, as well as those other things that can only be "Oh, I just walked; it ain't much of a step; not more'n twenty mile, I reckon." The teacher smiled. What would most of his pupils think of a "step" of twenty miles!

How would you like to take care of schoolroom, Erastus? We usually the schoolroom, Erastus? give some boy his tuition for that.

.. I'm a "I'd like that, master, well. I'm a pretty good sweeper; mother taught me

"Very good; we'll consider that set-tled. I have a friend that told me the other day to look out for a smart boy to help around the place out of school hours, for his board. Maybe you would like that, too."

"Now, wouldn't I? Then mebbe I could send the twenty dollars back to mother." "Send the twenty dollars back?"

"Well, you see, mother she 'lowed there warn't no use in 'spectin' to get ahead on craps—the land is that poor around the Cove; an' she were bent on my comin' here this year. So she sold Blossom—she's a powerful good cow, Blos- as the time for final examinations drew som is; mother raised 'er from a calf. near every student was on his mettle. The man 'at bought 'er said he'd give us "I tell you, fellows," said Ralph Basix months to buy 'er back in. Wouldn't con, president of the Kappa Phi, as he

it be fine of I could send the twenty dollars back, an' let 'em have Blossom through the winter? The children are plum foolish after milk."

As in a magic mirror, all the struggle and self-denial that stood behind this boy's coming to school showed itself to Professor Doggett. How many boys in his school thought it a hardship to get an education when the path was made smooth for them!

Inch by inch the boy from Poplar Cove gained ground in the school. The ath-

gained ground in the school. The athletic students soon found that there was not a boy among them who could run and swim and box like 'Ras Martin, and there is nothing that so soon wins among boys as courage and muscle. When Erastus had given a sound drubbing to the school bully for imposing on a smaller boy, he was at once made gained ground in the school. a smaller boy, he was at once made captain of the baseball team. And when, at the end of the quarter his name was read out in chapel as having the best grade in school, the very boys who had laughed at his shuck hat and brogan shoes were stirred into genuine enthusiasm.

Of course, there were purse-proud and blood-proud students who still stood aloof from the boy who swept and made fires for his tuition, and did odd jobs out of school hours for his board. A out of school hours for his board. A school is only a little world, after all, and a world without bigots or snobs would be no world. Yet, altogether, the boy from Poplar Cove was happy and full of courage. He was young and strong—he had love and hope with him, and many whom the world calls "rich" cannot boast so much.

A WOMAN CAME TO THE DOOR

he told that comforting other self with whom it is such joy to share our day dreams; "an' Sissy shall take music lessons, an' when I get real rich, mebbe have a peanner."

ing, to the student who made the highest grade in his studies, and had, in addition, "never been guilty of dishonorable conduct." To win this scholarship was considered the highest honor a slu-

dent could attain; for it was not only a test of industry and intellect, but of character and manly worth. For two successive years it had been won by a member of the Kappa Phi, a fraternity

member of the Kappa Phi, a fraternity which, in the opinion of its members, represented all that was "tiptop" in school life. Its president was the son of a wealthy banker, and all its members were boys of good birth and social standing. It was not because they needed the scholarship, but because they wanted the honor for their "frat" that every Kappa Phi felt the deepest interest

every Kappa Phi felt the deepest interest in the outcome. Month by month they kept tally of all the leading boys, and,

learned from contact with our kind. At the close of every school year the directors of Ridgedale Academy offered a free scholarship, with board and cloth-

and a bevy of students stood on the campus discussing school matters one afternoon in April, "something has got to be done or we're going to lose out this year. Shelby, our best man, has an average of 96 and 'Cow Feed' has 97½, the best I can figure it."

"He may lose out on the final exams," suggested a student.
"Of course, he may, and then again he

"Of course, he may, and then again he may not. Dick Curtis, where 'Ras boards, says he sits up till twelve o'clock every night studying. I'm afraid that's more than you are doing, eh, Shel?"

"It would be a perfect shame for a country hoosler like old 'Cow Feed' to come here and get the highest honor in the school—snatch it bodily from the Kappa Phis, too! Boys, we must rustle around and do something to prevent it."

'How about that question of character; that's got to come in, too," said another; "surely as between the two nobody would give it to 'Cow Feed' over Shelby."

Well, there's this about it, fellows, well, there's this about it, lenows, said Guy Roberts, sturdily, "of course we wouldn't look at 'Ras when Shelby was on deck; but it's not a question of good clothes, or even good manners, in this contest. It's a question of plain

in this contest. It's a question of plain honor—just being straight goods, you know, and you're all bound to admit that old Poplar Cove is as square as a brick, if he is a clodhopper."

"That's a fact," they all admitted, as the group dispersed.

A few weeks before the close of school several members of the advanced class in several members of the advanced class in geology went on a three days' walking tour into the "Ridges." Shelby, the Kappa Phi champion, was in the party. In his enthusiasm for "specimens" he wandered away from the others, and tried in vain to rejoin them. No answering "Halloo!" responded to his call. Nightfall was coming on, and zigzag lightning in the sky showed that one of those sharp thunder

in the sky showed that one of those sharp thunder storms of spring was impending. As he plodded along in the gloom Shelby suddenly heard the bark of a dog, then a door opened, and he realized that he was near a dwelling. A thrill of relief passed over him, for the prospect of spending the night out of doors, in a thunder storm, too, was not cheering. In answer to Shelby's knock a woman came to the door, screening a tal-low candle from the wind with her hand. When he told her his plight and asked for a night's lodging she said, without a moment's hesita-

"Sartainly; we're not very well fixed to keep strangers; but I couldn't turn a person off to sleep in the woods a night like this—and ther's not another house in miles." It was only a log cabin, but everything was as neat as a pin; and there was about the woman's face and manner something that seemed different from—above—her surroundings. After a supper of fried bacon and corn bread, which Sheland corn bread, which Shel-by ate with unalloyed relish, he chanced to mention Ridgedale School. His hos-tess started, and exclaimed with enthusiasm:

"Why, my boy is there! Erastus Martin - do you

Nature 1 of you know him?"

Of course he knew him, and Shelby's heart warmed to the eager pride in the mother's face, and he found himself telling with generous truthfulness all the good things that he knew of Erastus.

His mother wrote that the twenty dollars had bought Blossom back, and that the children were "peart"—so the thought of his home brought him only pleasure. He built sunny castles of the time when he, Erastus Martin, should lift the heavy load from his mother's shoulders, and give to the younger children advantages he had never had. "Tilly shall wear shoes all the year round, that she shall, and mother shall have a new alpacker dress whenever she wants it," he told that comforting other self with "Yes, he's a good boy, is 'Rassy; and if I can manage to keep him at his books a few years he'll be a credit to us all." Shelby knew he was not mistaken in thinking the mother sighed. The next morning, when he insisted upon paying

morning, when he insisted upon paying for his night's lodging, it was refused with perfect simplicity, but firmness:
"Pay? Why, I couldn't look my own boy in the face if I took pay for a little thing like this, and especially from one of his friends and schoolmates. I am sure you are just as welcome as can be, and we're glad to have had you. Tell Rassy howdy for us all."
Shelby felt himself hot from head to

Shelby felt himself hot from head to bot at thought of how little "friend-nip" he and others like him had bestowed upon the struggling boy.

On his way home he met a searching party in quest of the lost geologist, and together they returned merrily to Ridge-

The last week of school had come The final examinations were ove the boys breathed freely again. thing—perhaps it was over-a over-spriety caused Erastus to drop back a trifle on the final test; so that, in the summing up, he and Shelby stood exactly together, with an average grade of 97.

"A fine grade, and I am proud of you both," said Professor Doggett, when he announced the grades, and that the two boys would draw for the scholarship.
"Hurrah for the Kappa Phis!" shout-

ed the fraternity boys.
"Three cheers and a winner for Poplar Cove gave back the champions of Eras tus Martin.

During the two days of commencement the Kappa Phis were in a fever of excitement lest their representative should not win in the final outcome

ISN'T THIS A LOAD TO MAKE A BOY'S HEART GLAD?

#### THE BOY FROM POPLAR COVE

(Continued from page 20.)

"Here's a rabbit foot for you, old fel,"

"Here's a rabbit foot for you, old fel," said one of them, slipping the emblem of good luck into Shelby's pocket.

"Got a horseshoe over your door. Shel?" called another. But the champion was passing through a contest yet more vital, although unseen. The glimpse he had had into that cabin home, of the poverty, the self-denial, yet cleanliness and self-respect, had stirred all that was genuine and manly in the breast of the boy. To him the scholarship meant naught but the gratification of personal boy. To him the scholarship meant naught but the gratification of personal and fraternity pride; to this other boy it probably meant the unfolding of all

it probably meant the unfolding of all his future.
"I tell you, boys, I feel as mean as a dog about this business," he confessed to his fraternity fellows; "if you had seen the face of that boy's mother when I told her how well 'Ras stood in school, you'd think it was worth giving up this scholarship to put that chap on his feet for a year."

scholarship to put that chap on his feet for a year."

"Give up nothing!" came in quick response; "what's one country Jake to the honor of old Kappa Phi? Brace up, Shel; you're getting too, too soft in your diaphragm! Don't let us hear any more of such Sunday school talk! A fellow's entitled to his winnings, and you're no Kappa Phi if you don't take all the honor that comes your way."

It was the last day, and the last hour of commencement. The orations were all over and, flower-laden, the speakers had retired, feeling that they had covered themselves with glory. Professor Doggett arose and said:

"There are two of our pupils who

"There are two of our pupils who have won exactly the same grade, so they will have to draw for the trustees' scholarship, which is deemed the highest honor we can bestow. Mr. Richard

Shelby and Erastus Martin will please step to the front."

There was rapturous applause from the There was rapturous applause from the Kappa Phis, but their champion sat motionless with a pale, resolute face, while Erastus went bashfully forward.

"Please come to the front, Mr. Shelby," reiterated Professor Doggett.

"Kappa Phi! Kappa Phi! Shelby! Shelby!" cried the fraternity boys, unmindful of discipline.

The young man rose and stood for an instant, then said in a somewhat unsteady voice:

"Professor, may I say a few words?"

"Certainly," was the principal's reply, with a surprised look.

with a surprised look.
"Professor, schoolfellows," Shelby went
on, his voice growing firmer, and a look
of fine resolution marking his handsome or nne resolution marking his handsome young face, "as I understand it, this scholarship is to go to the fellow that not only wins the highest marks in class, but is the best all-around man. Professor, all my life things have come my way; I have had opportunities and advantages fairly thrust upon me, and I would have been a chump if I had not tried to be something. But the fellow that struggles through hardships and difficulties and wins, is more of a man than the one who has never known a want or a care. So I say that 97 for Martin means a hundred times more of krit and real stuff than 97 for Shelby. I refuse to draw for this scholarship. Martin has won it, and I want him to have it:"

have it!"

For an instant there was a pause—a hush, and over the faces of the Kappa Phis swept a cloud of chagrin and disappointment. But the real heart of boys is always in the right place, and before the disappointment found utterance the fruth that sometimes renunciation is grander than attainment flashed upon them. Uproarious cheers for "Shelby," for "Martin," for "Kappa Phi," mingled in triumphant chorus, and to the resounding echoes of "Three cheers for Poplar Cove." Erastus Martin was awarded the scholarship that was to open for him new doors of possibility.

# A Boy's Composition That Pleased the President

When a train bearing President Roosevelt passed through Wooster, Ohio, last May, the pupils of the schools of the city were at the depot to see the chief magistrate. Later the school children were were at the depot to see the trate. Later the school children were naked by their teachers to write compositions descriptive of the event. Dominic Lucci wrote the following letter, which was forwarded to the President:

"There was a presidential went thru on a train he was a white man he was a soldier his name was President Roosea soldier his name was President Roosevelt he was out on the Rockie Mountings. He was in Chicago to strike the teamsters six men was killed and some injered. The President to see about such things. The President is strong when he was a little boy he was week once he runned out west and was a ruff rider. Finely he was tamed down and got to be vice pres. It was 9 o'clock when the passenger came a past when Teddy went thru he laff and show his Teddy went thru he laff and show his teef they was white and shinnie he look just like the pitcher in the paper. He was standin on the tale end of the car was washed up in gold so it would look was washed up in gold so it would look nice. He had his specs on his face en he looked just the same. The kids was glad when the President was a coming to Wooster, O. The pres. is a good man, the people was a crowd they wave and holler when Teddy come thrue. The President had his handchieft wavin and laffin. There was 4 cars full of Secreturies, the butler of the car was a colored man. The Pres. will not get off at Wooster, O., he will get off in Washington then he will go to his office when Mr. Roos would want to work in his office he would work on when he would want a vacashun he would have one. The Pres. like the children, he lots of hoys in his house, one of them is a girl this is all

this is all the end Wooster. Ohio, May, 1905.
Dominic Lucci."

On receipt of this letter President Roosevelt wrote to the gentleman who forwarded it to him, "Not many of the letters that come in my mail amuse me as much as the enclosure contained in yours. I am really obliged to you for sending it to me. Good for Dominic Lucci."

The Ravenswood. Chicago, Epworth League recently debated the following: "Resolved, That a City Boy in the Coun-try is Greener than a Country Boy in the City.'

# Horses Taught to Swim

"Just like the men, our cavalry horses are taught to swim," remarked an officer in a mounted regiment. "And, as is the case with the riders, some horses soon become quite at home in the water, whilst others always swim with difficulty and dislike the work thoroughly. Provided, however, you can get two or three horses to take to the water without hesitation, the others will be sure to follow, and it is a peculiar fact that horses can be got more quickly across a river if there be a man on the other side sounding calls on a hugh. sounding calls on a bugle.

"How are they taught to swim? From a boat, one at a time, and with a line attached to them. It is well always to do this teaching in deep water, because, as long as he can, the pupil keeps on his legs, dropping his back legs down and down, till at last he is standing up in the water, going along on his hind hoofs.

"Some horses naturally swim with their bodies approaching the perpendic-ular; the best swimmers, however, are those that keep fairly level with the water, and whose backs are only parti-

ally submerged.
"When the horse has learned to swim When the horse has learned to swim by himself, he is taught to do so with a soldier on his back, both with and with-out a saddle. The training all through is gentle and kind; the whip would soon make a horse so fearful of the sight of water that he would be useless as a soldier's mount.

"The men are practiced in swimming with the horses, grasping the mane with one hand. In this way also swimming horses take over men who cannot swim

harness, saddle, etc., a good horse say, thrown overboard in a calm sea, may be able to swim even seven or eight miles to get to land."

and who, floating as much as possible on the water, are towed behind.
"I have never tested the accuracy of the fact, but it is currently reported that, without a rider and unimpeded by

BROWN HAS JIU-JITSUED HIS MAN IN GOOD STYLE, BUT HAS FORGOTTEN WHAT HE SHOULD DO NEXT

# AMATEUR JOURNAL-ISM DEPARTMENT # Edited by W. R. MURPHY &

# Current Doings in Amateurdom

An Atlantic Coast Amateur Press Association has been organized to promote the publication of amateur papers in the region designated. The first convention will be held on New Year's Day next at Baitimore, Md. Foremost in the organization of the new association are C. Albert Haugh, Baltimore; Vincent Haggerty, Bridgeport, Conn.; W. B. Dillon, Jersey City; D. A. Newton, Newark, N. J. C. H. Russell, Philadelphia; M. Beulah Ferguson. Baltimore, and Hilda Doyle, New York. This association ought to be able to accomplish great good.

Baltimore, and Hilda Doyle, New York. This association ought to be able to accomplish great good.

The St. Louis Amateur Journalists' Club has sent out a fine "Year Book," containing contributions by the club members. This shows enterprise; it is said that the club will publish several papers as well.

The dissatisfaction at several so-called unconstitutional acts at the Kansas City convention of the United Amateur Press Association, culminated in a new election by mail, at which about two-thirds of the actual members voted. The officers elected are: President, John W. Smith (Amateurist), Philadelphia, Vice-President, Harry E. Martin (The Fairy Amateur), Shadyside, O.; Secretary, Cornelius M. Smith (Commentator), Baltimore, Md. Treasurer, Paul H. Appleby (The Chum), Sedalia, Mo.; Official Editor, Lee B. Chase (Amateur World), Chicago; Historian, Vincent Haggerty (Pilgrim), Bridgeport, Conn.; E. Manuscript Manager, A. M. Hamilton (The Southerner), Newport News, Va. W. Manuscript Manager, Louis G. Brechler (The Coyote), Fennimore, Wis.; Directors, W. R. Murphy (Ploneer), Philadciphia; J. A. Clerkik (Conspictus), Jersey City; F. D. Murphy (Liberal), Brantford, Ontario. The next convention seat will be New York City.

On September 13th the annual convention of the International Amateur Press Association was held at Albany, N. Y.

On September 13th the annual convention of the International Amateur Press Association was held at Albany, N. Y. The Amateurs are "getting busy" after the pleasures and rest of the summer vacation, and a good year's work is looked for from all.

#### The Interstate Amateur Press Association

The third annual convention of the Inter-

Association

The third annual convention of the Interstate Amateur Press Association, held on Labor Day at the Hailem Central Hotel, New York, N. Y., was a brilliant and successful meeting. Despite the youth of the organization, its convention compared favorably in attendance, enthusiasm and achievement, with the gatherings of the older societies.

The day before the convention the delegates made a pilgrimage to the grave of Washington Irving at Tarrytown, where the Gotham Press I'lub held a meeting, at which papers and poems relating to the famous author formed the program. The gathering was representative, fifty per cent of the members being in attendance. The following were present at one or more sessions of the convention: Boston, Mass., Walter H. Sharpe, Chas. A. A. Parker (Literary Gem), Edith Miniter (Aftermath): Philadelphia, Pa., W. R. Murphy (Ploneer), J. Ray Spink (Ploneer), Chas. H. Russell (Good Things), John W. Smith (The Amateurist); Washington, D. C., Eleanor H. Dowden; Perth Amboy, N. J., Lester M. Ayres (Amateur Arena); Jersey City, N. J., Walter B. Dillon (Le Diable); Newark, N. J., Harry M. Konwiser (Bomb), James C. Bresnahan (Caprice); Newburgh, N. Y., Will R. Moscow (East); Brooklyn, N. Y., A. M. Adams, Harold Pratt, Eleanor Keating (Home); Washington, Jas. F. Morton, Jr.; New York, N. Y., C. Fred Crosby, Alice M. Heins, Millie Gregory, Rose Kempner, Earl H. Shinn, Louis Perlomski, Charles M. Heins, Edwin B. Swift, Franklin M. Ayres, Robert R. Gregory, Louis Kempner, W. A. Ogilvie, A. H. Delano.

The Interstate Amateur Press Association is noted for the harmony which exists in its ranks. There was no political strife in the election of officers. The following were elected: President, Edwin Booth Swift, New York, N. Y.; Vice-President, John J. Cleary, Boston; Treasurer, J. Ray Spink, Philadelphia; Official Editor, Edith Miniter, Boston.

The Interstate Association is very strenuous in its literary and activity requirements; so

Seat.
The Interstate Association is very strenuous The Interstate Association is very strenuous in its literary and activity requirements; so the membership is limited. A. M. Adams, Alice M. Heins and Robert R. Gregory were elected to membership, and W. R. V. Moscow was proposed, subject to action of the next convention. Several members who had not contributed the requisite number of articles to the Amateur Press during the preceding year, were dropped from the rolls.

Since the organization of the Interstate, it has been asserted that it was antisconistic to the old established National, but most of the Interstate members affiliated with the National showed their loyalty by steady and enthusi-

nas been asserted that it was antigonistic to the linerstate members affiliated with the National showed their loyalty by steady and enthusiastic work, and five Interstate members were elected to office at the recent Cleveland convention of the National. To allay reports of disloyalty, some members tried to pass amendments to the Interstate constitution, making membership therein contingent on membership in the National. Their amendments were defeated, but resolutions showing the Interstate sympathy and faithfulness were adopted. The new president is a former executive of the National Amateur Press Association. Past President W. R. Murphy conducted the convention deliberations. The Gotham Press Club acted as entertainers.

The convention was notable for three banquets. The first, held at a station restaurant, took place after the trip to Sleepy Hollow. The second was a dinner between the sessions, and the third was the formal closing banquet. After a choice menu had been discussed, oratory of an eloquent and an entertaining order was delivered in response to the following toasts: "Reminiscences," C. Fred Croshy; "Our Authors," W. R. Murphy; "The Gentlemen," Alice M. Heins; "Tales Out of School," Edith Miniter; "The Politician," Charles M. Heins; "The I. A. P. A.," John W. Smith: "Philadelphia, 1906," J. Ray Spink; "The Ladies," A. M. Adams; "Local Clubs," Robert R. Gregory, and "Our Talkers," Jas. F. Morton, Jr. Edwin B. Swift acted as toastmaster.

ward and Prince Albert, aged eight and seven years, are to enter this naval school for their enter this naval school for their education and training, and although Prince Edward is to be one day King of England and Emperor of India, he will be treated just like any of the common boys who attend. He will be shown no favor whatever, and will come out as "hard as nails," as they say in England.

THE GYMNASIUM

The life in this naval college is pre-eminently healthy, both for mind and body. The embryo officer is turned out of bed at 6:30 and his first duty is to bathe. Unless he can swim sixty yards he is not allowed to use about and any this is so of the a boat, and, as this is one of the ambitions of the Osborn boy, the radets soon master the feat. There is a routine of sports. football, hockey and cricket, hesides the drills in the elaborately fitted

rymnasium.
They begin with things that pertain to the common sailor's knowledge, and are taught the most humble things per-taining to a life on the ocean wave. They splice ropes, sew sails, mend their stockings and clothing, wash down decks and do all the other mental tasks that make up a sail-or's life at sea. Then later come

Then later come the finishing touches that belong with gold lace and an officer's cap.

It is very wise of the Prince of Wales to send his sons to such a finely disci-plined school. They will be well trained to be leaders of a great kingdom. Kings nowadays are like presidents, and must be taught to understand what hardship

stand what hardship and work are, and to be great they must be sturdy and understand the life of those they rule.

The two princes are very enthusiastic about their new life, and talk of it incessantly. They are fine, healthy boys, who love outdoor sports, and they will not flinch at anything that belongs to the life at Osborn.

They will sleep in a large dormitory with lots of other

#### A Long Fight With Wolves

By LIDDALL ARMITAGE

A CRITICAL MOMENT

THAT ANCIENT ENEMY of man, the wolf, against whose ravages our early forefathers were compelled to combine to protect themselves, air families, flocks, and herds, has, although the fastnesses of the slath mountains afforded these savage asts shelter for some time after Engral that been cleared of their welcome presence. Everybody knows the way in which elr extinction was brought about in a principality during the reign of Ed-HAT ANCIENT ENEMY of man, the wolf, against whose ravages our early forefathers were compelled to combine to protect themselves, their families, flocks, and herds, has, fortunately, long been extinct in these islands, although the fastnesses of the Welsh mountains afforded these savage beasts shelter for some time after England itself had been cleared of their unwelcome presence.

Everybody knows the way in which their extinction was brought about in the principality during the reign of Edward I. through the long exacted annual tribute of three hundred wolves' heads. In Scotland the last wolf was killed in 1680 by Cameron of Lochiel.

But still, in our days, every severe winter brings them, in packs, ranging across the European continent, over the frozen rivers, from Russia and the Carpathians, even to the forests of the Ardennes and Fontainebleau.

In the disastrous retreat of the French, under Napoleon, from Moscow, immense packs of wolves followed the routed forces into Italy and France. Having once tasted human flesh they preferred it to any other.

In North America the cattle and sheep of ranch-holders in mountainous districts suffer severely.

The recorded stories of wolf adventures would fill books, but the subject of our illustration, "A Long Fight with Wolves," is an actual experience with these demons of the woods which stands apart from any other; indeed, few men could expect to come unharmed through the terrible ordeal undergone by Mr. M. A. Mahoney, of Fairbanks, Alaska, near Dawson City, on the Yukon River.

The ex-mayor of Seattle died at Fairbanks, having previously expressed a

The ex-mayor of Seattle died at Fairbanks, having previously expressed a wish to be buried at Seattle, and with this object Mr. Mahoney undertook to transport the body to that place.

Accordingly, with a sledge drawn by

BOOKS REVIEWED HERE MAY BE

ten dogs, he commenced, unaccompanied, his courageous journey by the Valdes trail.

For the first day he traveled his lonely way unmolested, the soft, regular sound of the sledge skidding over the frozen snow ever in his ears, and the howling of wolves in the adjoining thickets alone breaking the monotony of the dreary

journey.

These ominous distant noises kept him These ominous distant noises kept him alert and watchful, and with good reason, for hardly had he prepared for the night by kindling a big fire, when the wolves, now assembled in force, began a persistent attack upon the little camp as darkness fell. Keeping the fire well replenished, he seated himself as close to its blaze as possible, and commenced a vigil lasting through all the long hours of the wintry night, watching intently the slinking forms of the wolves against the shadowy background, their eyes gleaming savagely in the firelight, which helped to keep them at bay.

When morning broke he harnessed up, and resumed the lonely road, not meeting with a single person throughout his long journey, the trail being but little frequented in summer, and still less in winter.

in winter.

All day his determined enemies, the truculent wolves, followed the trail, hovering on either side, every now and then attempting an attack upon the dogs or himself. With nightfall, his camp being pitched again and a blazing fire set going, the ordeal he had to face was still worse than the preceding night; for the savage heasts, exasperated by repeated

when several wolves came at him at once and it proved the beginning of a hand-to-hand fight with the whole horde, lasting the night. Once, during a lull in the combat, he tried to take some food; but while sipping some tea from a pannikin the wolves renewed the attack, and he was obliged to leave his supper unfinished.

Life itself depended upon keeping awake, though sleep almost overcame the exhausted man even as he stood fighting his determined enemies with the resinous, flaming branches, one in each hand, stabbing at the eyes, and thrusting in the throats of the foremost and most reckless of his foes. The burnt and blinded creatures drew back while other; sprang on in their place.

hile others sprang on in their place.
Dawn at last dispelled the seemingly Dawn at last dispelled the seemingly endless night; with daylight the wolves became less threatening, and Mr. Mahoney was able once more to harness up and resume his journey. He reached Valdez by noon, ready to collapse from utter exhaustion; and his three days' continuous fight was ended. Here in safety he slept for eighteen hours, after which he seemed none the worse for his dangerous adventure, except that his hair had turned grey from the prolonged strain.

PURCHASED OF THE AMERICAN BOY

HOW TO BE SELF-SUPPORTING AT COL-LEGE, by J. Melvin Lee. The boy or young man who is desirous of a college education, but for lack of the necessary funds is hesi-tating and doubtful as to accomplishing his object will find much to encourage him in this little booklet. Mr. Lee speaks with authority and experience. The almost num-berless sources by the help of which one can work his way through college and often graduate in better financial circumstances than when he entered are concisely set forth. The booklet is handsomely gotten up. 33 pages. Thomas Y. Crowell & Co. EXCURSIONS AND LESSONS IN HOME

33 pages. Thomas Y. Crowell & Co.

EXCURSIONS AND LESSONS IN HOME GEOGRAPHY, by Charles A. McMurry, Ph. D. Teachers of grades from the third to the eighth will find this book of inestimable value in teaching the geography of the district around the school. From a necessarily hasty reading we find it covers a very wide variety of subjects. Among the excursions treated are: Local Scenery and Views; Excursions to Shops and Factories; Commercial Topics; Garden, Farm and Dairy, and Government, including the various City Departments. 152 pages. Price 75 cents net. The Macmillan Co.

Marian W. Wildman. A nice little book for younger folks. Father and mother called away, the hired girl's mother sick at a distance and requiring her attention, four young people resolve to row to an island, which they name Loyalty Island in honor of a boy chum. The drifting away of their boat and their adventures on the Island form a pleasing story for mother to read aloud just before bed time. The book is prettily illustrated. 30 pages. Price 50 cents. L. C. Page & Co.

ISAAC PITMAN'S SHORTHAND INSTRUCT-OR—20th Century Edition (revised). In this work there is presented the results of sixty years' experience and continual improvement in Pitman's system of shorthand. This system is the one which is mostly used in shorthand instruction in the United States, and the present work will be found of the greatest use to the beginner, and prove of service to the expert shorthand writer as well. The diligent study of this work and the necessary practice will enable one to become a stenographer without the aid of a teacher, and as shorthand has become a necessity of business life this book should have a wide circulation. 276 pages. Price \$1.50. Isaac Pitman & Sons.

Price \$1.50. Isaac Pitman & Sons.

LITTLE PAUL—Famous Children of Literature Series, edited by Frederic Lawrence Knowles. Of all the child characters which Charles Dickens so realistically portrayed in his books, probably not one appeals so strongly to the sympathles of the reader as that of Little Paul in "Dombey & Son." There is such a blending of humor and pathos, smiles and tears with, to some the pathos and tears predominating, that the young reader cannot fail to be delighted in reading about the little quiet, old-fashioned boy who during his young life did so much good. The young reader also cannot fail to receive lessons of kindness, courtesy and sacrifice for others so characteristic of the little hero. The illustrations which increase the reader's interest are by Bertha G. Davidson. 144 pages. Price, \$1.00. Dana Estes & Co.

SPALDING'S ASSOCIATION FOOTBALL

& Co.

SPALDING'S ASSOCIATION FOOTBALL GUIDE, SPALDING'S OFFICIAL FOOTBALL GUIDE, SPALDING'S OFFICIAL FOOTBALL GUIDE, SPALDING'S OFFICIAL FOOTBALL GUIDE FOR 1905. These little books are a continuation of Spalding's Athletic library, and they contain the latest and thoroughly reliable information and instruction as to the game of football. Newly revised playing rules, chapters by the most prominent players and authorities, pictures of principal teams and players throughout the U.S. and Canada, schedules of college games for 1905, with names of captains of the leading college teams, and a history of the game. Association and Rugby, make these volumes indispensable as reference works. Price of each volume, paper cover, 10 cents. American Sports Publishing Co. THE PHYSICAL CULTURE LIFE, by H. Irv-

works. Price of each volume, paper cover, 10 cents. American Sports Publishing Co. THE PHYSICAL CULTURE LIFE, by H. Irving Hancock, author of a number of useful bnoks on the Japanese method of physical training. The aim of the author in the present volume is: "To present a treatise that shall explain all the essential and ascertained facts of physical culture, and to induce every reader to begin to be his own safe physical custodian." In the sixteen chapters of this book Mr. Hancock sets forth fully and piainly without unnecessary verbiage simple and sensible rules whereby one can find and continue in the possession of normal health. We believe that to the student, office worker or those engaged in sedentary pusuits this book should be invaluable, and the boy by the application of the rules here laid down may not only ward off disease, but build up a strong, sturdy manhood. The illustrations will help the reader greatly in understanding the various forms of exercise. 229 pages. Price, \$1.25 net. G. P. Putnam's Sons.

forms of exercise. 229 pages. Price, \$1.25 net. G. P. Putnam's Sons.

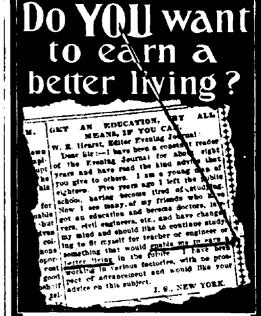

HOMOPHONIC VOCABULARY, compiled by Charles B. Walte, A. M. This book contains over 2,000 words having a like sound and like signification in ten languages. The preface states that: "The question of a common language is of the greatest importance to the human race, and is now more than ever engaging the attention of the civilized world." and the purpose of the book is to "show that a vast body of words are common to nearly all of the Indo-Germanic languages" in sound and signification, and that these words must form the root words for any common language to these people. In addition to the vocabulary, there is an article fully setting forth the views of the compiler as to the steps to be taken in the preparation of a common language. Altogether it is a work showing great research and a clear, intelligent grasp of an important subject. 162 pages. Price, \$2.00 net. C. V. Waite & Co.

TOR, A STREET BOY OF JERUSALEM, by FOR, A STREET BOY OF JERUSALEM, by Florence Morse Kingsley. For the children's library in the home and the Sunday school library this will prove an interesting book. It is a vivid description of a little street boy in Jerusalem in the time of our Savior, and it also makes very real to the boy or girl reader the events which took place in the last days of the Master's sojourn on earth, from the triumphal entry into Jerusalem until the ascension. From cover to cover it is worth reading. The illustrations by F. A. Eckman add to the general attractiveness of the little volume. 190 pages. Price \$1.00. The "VANISHING SWEDE" A Tale of

THE "VANISHING SWEDE," A Tale of Adventure and Pluck in the Pine Forests of Oregon, by Mary Hamilton O'Connor. This is a well-written, breezy tale of the Northwest. Two young folk take up a clain and Jack and Gerrie Lewis go to visit them. Incidentally Jack Lewis is to become a government surveyor. The party have all sorts of adventures from frustrating the efforts of a claim jumper to finding the much-soughtafter "Vanishing Swede" silver mine. The story is nicely told and the boy reader will find it extremely interesting. 209 pages Robert Gries Cooke.

Robert Gries Cooke.

A LITTLE COOK BOOK FOR A LITTLE GIRL, by the author of "Gala Day Luncheons." The boy who does not love cookies and cakes and ples and jellies and preserves and all the other good things to eat, is a curious freak of a boy. This little book ought to interest the boy so much, that even from a selfish motive, he will tell his sister about it, then she is bound to get it. The little girl in the book wanted, like all little girls, to be a little housekeeper and she wanted to learn to cook. She tried very hard, but her efforts only resulted in burningers, holes in dresses and unsightly hard, but her efforts only resulted in burnt fingers, holes in dresses and unsightly messes. Finally her mother, her grand-mother and her aunts came to her rescue and helped her. On her birthday she received all the things necessary for her kitchen and she began at once to cook. The dishes she cooked for breakfast, luncheon, dinner and supper are all set forth so plainly that any other little girl can after reading make them herself. Mothers who like to help, their little girls do things for themselves will find this little volume a delightful assistant, 179 pages. Price 75 cents. Dana Estes & Co.

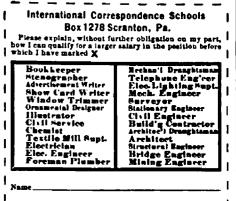

This letter from a young man to the editor of the New York Evening Journal voices the need of thousands upon thousands just like him. Fortunately there IS a way for this man or any other man, no matter how apparently helpless his lot, to get a special training and carm a comfortable, yes, even a luxurious living in his chosen line of work.

It was to help such men that the International Correspondence Schools were founded 14 years ago. It was to give such men every facility for self-advancement that \$5,000,000 has been invested in buildings, equipment and text-books. It is to answer that vital question "How can I carm a better living" that the coupon here shown is provided.

Mark on the coupon the occupation you prefer and mail it to the I. C.S. It will cost you nothing. In return they will show you how thousands just like you have been helped to succeed and how you, too, can become just as much of a success as you

Every boy who is a boy wants a Foot Ball, a complete Foot Ball Suit, a Sweater, a Head Harness, a pair of Boxing Gloves, a Punching Bag, a Watch, a Pair of Skates and a Sled. ANY OR ALL OF THESE GIVEN TO WIDE-AWAKE BOYS.

All we ask is that you give us some of your spare time after school and on Saturuays selling our staple household stricles—teas, coffees, soaps, baking powder, extracts, etc. In addition to securing these prizes you can easily build up a nice-paying business—easy plan. Full particulars telling how to get started, and catalogue of sporting goods premiums sent on request. Only two or three-boys wanted in each town.

JONES MANUFACTURING CO., 1843 Washington Soulevard, CHICAGO.

HEN THE king made Edward Percival a knight of his court—that is to say, when the senior partner formally promoted Ned Percival to be a traveler, or, in the picturesque phrase, a Knight of the Gripsack, in the service of Rice, Barton & Rice, Teddy Purcell nearly shook his hand off when he marched upstairs from the office, swelling with the sense of his new importance. Then Percival forgot his dignity, and danced an amazing measure among the counters of printed cloths and many-colored calicoes, aided and abetted by Teddy (whose full name was Edmund, but whom nobody ever called so). HEN THE king made Edward Per-

Edmund, but whom nobody ever called so).

"Good, good for you, Ned, good enough, old man!" cried Teddy. "I knew you'd get it this time, I was sure of it! What did the qld man say to you?"

Percival repeated, with a carelessness and with a matter-of-fact air palpably forced, the complimentary phrases used by the Old Man when informing him of his promotion. The Old Man was the senior partner. He was also a United States Senator. He seldom troubled the settled routine of his business, from the active management of which he had long ago retired, but he made a point of personally announcing all changes and appointments among the large staff of employees, giving such affairs a flavor of old time ceremony that materially heightened the pleasure of those upon whom preferment fell.

Rice, Barton & Rice was an old, rich, strongly established and conservative concern. They paid low wages until you showed your value and then you received payment for the whole worth of it. There were few vacancles with them. You entered their service as a boy and ran errands or looked after the stock, and stayed with them if you were able to climb; if not you made way for some other boy, for Rice, Barton & Rice wanted none but those that were climbers.

"Well, Ned, you've certainly got your

ers.
"Well, Ned, you've certainly got your chance now," went on the delighted Teddy. "You'll show the old hands how to get orders!"

Teddy. "You'll show the old hands how to get orders!"

But this rather sobered young Percival, and brought back the thought of the veterans and proved men in the sample room upstairs. He had won his spurs, sure enough, but he felt that he should have to ply them vigorously to keep up with his new companions. This, however, was but a fleeting impression, as glimpses of truth are often apt to be. "Good-by for a time, Teddy," he said blithely; "I must get up to the sample room and look over my trunks. I make my first trip next week."

Throwing out his chest, which rather gave him the air of a proud little bantam, for he was but a scant five foot four, Percival marched upstairs, whilst Teddy, suddenly sobered, turned to his work amongst the calicoes.

The excitement of unaffectedly rejoicing over his friend's success faded away, and the thought of his own defeat, as really Percival's promotion meant to him, had room to enter his mind, and somehow Percival himself had now opened the door for this thought to enter, and it was an uncomfortable tenant. He was not envious of Percival, indeed he was sincerely glad for his sake; but he could not help but remember that in length of service they were equal and was sincerely glad for his sake; but he could not help but remember that in length of service they were equal and that Percival had been chosen for promotion, proving that in their value to their employers they were not equal.

And the thought stung him deeply, and it mocked his deep-seated ambition.

and it mocked his deep-seated ambition. Somehow, deep in his heart, he had considered himself a better workman than his chum. Percival was very clever, alert and lively, but he was, Teddy thought, somewhat erratic; he was like a runner upon whom you could not always rely to do his best, who often lagged indifferently behind, and as often surprised you with some brilliant spurt. Well, he had certainly spurted ahead now and won the race for the coveted preferment. And Teddy felt that somehow Percival had not behaved altogether fairly towards him, that is, altogether fairly towards him, that is, that he had not seemed to give thought to his, Teddy's, natural disappointment. Probably had Percival acted a somewhat different part in the little scene of congratulation, he would not have, as I have put it, opened the door for the thought of his own defeat to enter Teddy's mind and spoil all the pleasure of the event for him.

the event for him.

Teddy was a young man of imagination. He had the faculty of pleasingly anticipating events in thought, living them, mentally, before they occurred—it must be added that his anticipations very often were wrong. When he had waited by the stairway for Percival's return from the office he had rehearsed, in this imaginative way of his, the coming scene of congratulation. And the imaginary dialogue would end, he had felt sure, with Percival saying something to this effect

"Well, Teddy, you'll be on the road yourself before long, you know; an-

other vacancy will soon arrive for you, and I shall not have much of a start, now you see!"

Unfortunately, it had not occurred to Percival to speak so, and Teddy chafed at the thought of the little, significant neglect, and for a while the big sunny room, as bright and as bizarre in effect as some oriental market-place

chafed at the thought of the little, significant neglect, and for a while the big sunny room, as bright and as bizarre in effect as some oriental market-place with the great heaps of many-colored cotton cloths, seemed very cheerless to him, and very lonely.

Percival, our rueful young man thought, was clear of the monotonous stock-room duties now; dusting and arranging goods, opening and emptying bales and cases, waiting upon minor customers: and he himself was still tied to them; soon, no doubt, he would be picking out goods to fill Percival's orders—Percival a traveler and he still a stock-room clerk.

The sound of the electric call bell broke into Teddy's ruminations; it rang three times, a signal that his presence was required in the office. He hastened down stairs in obedience. "Mr. Rice wants you," said a clerk and Teddy entered the private office of the Senator, the retired great head of the firm.

"Ah, so this is Mr. Purcell, eh?" said the dignified old gentleman. smiling. "Sit down, sir." Teddy complied, wondering what was coming. He was not kept long in suspense.

"Mr. Purcell," said the Senator, "I am pieased to inform you that you have by your consistent and faithful good work shown that you are worthy of advancement in the service of this house, which is, as you no doubt know, one of the oldest and most honorable in America—it is my cherished design, sir, to execute, when public labors relax sufficiently, a monograph devoted to the history of the house, which will show, Mr. Purcell, how long and how intimately its rise and progress have been associated with that of our beloved country." A dignified

#### WHY I AM PROUD OF MY STATE

To the Massachusetts boy who sends us before November 15th the best letter of not over five hundred words telling us why he is proud of his state — Massachusetts, we will give \$5.00; in addition, we will print his letter in an early number of The American Boy.

gesture lent emphasis to the words, and Teddy fancied that the oid Senator had difficulty in keeping "Mr. Speaker," out of his rolling sentences; however, he now came to the point.

"As you are aware." he said, "a vacancy has been caused by the death of a member of our traveling staff, and after due consideration of the claims of all the juniors, you have been chosen, and to the post, sir, I now appoint you. I trust, sir——"

and to the post, sir, a now and trust, sir—"

Teddy did not hear, at least to understand, a word of the sonorous little speech of congratulation and admonition that followed—his mind was flooded with pieasure, and surprise, and hewilderment. What did all this mean? Had Percival made a mistake; or was one being made now; or were they both appointed to the traveling staff? Surely the latter must be the case, and the thought sent reloicing through him.

The Senator's next words brought him

The Senator's next words brought him to attention with a shock.

"When you report in the sample room will you please to ask Mr. Edward Percival to come to me? I have an unpleasant duty to perform. I—I—made a little mistake——" Here the rotund old gentleman reddened a little, he was not accustomed to making little mistakes; it would appear. "From the similarity in names between you and Mr. Percival I, who am kept by my senatorial duties in names between you and Mr. Percival I, who am kept by my senatorial duties from as close a knowledge with the doings of the firm as I could wish for, fell into an error, and confounded his name with the one chosen by my active associates for promotion."

Teddy struggled hard to suitably express his thanks and sense of apprecia-

press his thanks and sense of apprecia-tion of his preferment, and doubtless succeeded well enough, for the Senator succeeded well enough, for the Senator was smiling cordially as he bowed him out, but within, our friend was in no happy frame of mind. He walked slowly upstairs. Poor, poor Ned, he thought, what a fall from his high estate, to be raised to it only to be dashed down again in what, to Percival's sensitive spirit, would be a humiliating fashion. It would hurt him, too; he would feel it so keenly; and it might conceivably do him irreparable mischief, knock his ambition out of him. Reduced thus to the him irreparable mischief, knock his ambition out of him. Reduced thus to the ranks, Teddy felt, Percival might abandon further effort, or show his resentment so plainly as to lose all prestige with his superiors. Teddy knew his friend's lovable, yet mutable nature. On the other hand, given his present flattering advance he was capable of pushing ing advance he was capable of pushing

enthusiastically ahead in his encourage-

ment.

He had reached his own floor now, and
the sample room. He had reached his own floor now, and paused on his ascent to the sample room. He looked about the big room. No more need he dust and arrange and pick out orders; Percival and the others would do that; it was over for him—and would his friendship for Ned be over, too? Ah, it was very, very possible! "Oh, how am I going to tell him and make him understand!" Teddy almost groaned, and suddenly he realized completely that he could do neither, and he turned his back and shut his mouth tight and his long legs carried him downstairs again three steps at a time.

long legs carried him downstairs again three steps at a time.

He strode up to the Senator's door and knocked, and was told to enter. In he marched, with his head up—you would have thought the genial Senator's snug office a fortress which this big young man had orders to assault and carry. The rubicund old gentleman peered over his spectacles in surprise.

A precise relation of the interview was never made public by either party to it, so, this being a true tale, I cannot set it forth; but it is common knowledge that as Teddy left the office the Senator took and grasped his hand and said, "It shall be as you wished, Mr. Purcell."

senator took and grasped his hand and said, "It shall be as you wished, Mr. Purcell."

Then the Senator called his partners and said to them, in his finest, that is to say, his most combative senatorial manner, as though to drown all opposition before it showed head: "I have decided to keep Mr. Percival in the position I mistakenly appointed him to."

Then in another tone he said: "Keep your eyes on that young Purcell—he will go far, or I am much mistaken."

Teddy marched resolutely upstairs, and as resolutely refrained from further thought. He plunged like a race horse at his work.

A piece of dimity was doubled up in an unseemly way under a huge pile of others as some careless salesman had left it—it was one of Teddy's pet grievances, this careless treatment of his goods. He stooped and lifted the whole heavy mass in one great armful and straightened out the misused piece. Teddy was a stalwart athlete, the pride of the militia gymnasium.

"What muscle you have, Ted," said Percival's somewhat wistful voice from the staircase. He was feeling a bit lonely after his first dip into his new environment, and in his heart he was already missing his friend. He leaned across the banister.

"Teddy," he said, "do get a move on, will you? And get into the sample room with me—and I bet you soon will, too."

The words were as some cordial to Teddy, they warmed and cheered and

The words were as some cordial to reddy, they warmed and cheered and revivified him. They were just what he had imagined, just what he knew Ned Percival thought, after all. He jumped to the stairs, and the two young men

shook hands.

I have only to add that the Senator's prophecy was true prophecy—Teddy did "go far"—he went to a partnership with the Senator, in time.

He Lost His Cocoanut

Little Monk-Boo-hoo! I've lost my cokernut! 'Ave you seen it about?

Mr. Ostrich-Cokernut? No, sonny, no!

Will start you right

#### MONEY BAG THE LOST

FROM THE WRITINGS OF GEORGE ELIOT

to steal the money which Silas Marner had hoarded during the fifteen years of his life in Raveloe.

WHEN Dunstan Cass turned his back on the cottage, Silas Marner was not more than a hundred yards away from it, plodding along from the village with a sack thrown round his shoulders as an overcoat, and with a horn lantern in his hand. His legs were weary, but his mind was at ease, free from the presentment of change. The sense of security more frequently springs from habit than from conviction, and for this reason it often subsists after such a change in the conditions as might have been expected to suggest alarm. \* \* This influence of habit was necessarily strong in a man whose life was so monotonous as Marner's—who saw no new people and heard of no new events to keep alive in him the idea of the unexpected and the changeful; and it explains simply enough why his mind could be at ease, though he had left his house and his treasure more defenseless than usual. Silas was thinking with double complacency of his supper; first, because it would be hot and savory; and secondly, because it would cost him nothing. For the little bit of pork was a present from that excellent housewife, Miss Priscilla Lammeter, to whom he had this day carried home a handsome piece of linen; and it was only on occusion of a present like this, that Silas indulged himself with roast meat. Supper was his favorite meal, because it came at his time of revelry, when his heart warmed over his gold; whenever he had roast meat, he always chose to have it for supper. But this evening, he had no sooner ingeniously knotted his string fast around his bit of pork, twisted the string according to rule over his doorkey, passed it through the handle, and made it fast on the hanger, than he remembered that a piece of very line twine was indispensable to his "setting up a new biece of work in his loom early in made it fast on the hanger, than he remembered that a piece of very line twine was indispensable to his "setting up onew piece of work in his loom early in the morning. It had slipped his memory, because, in coming from Mr. Lammeter's he had not had to pass through the village; but to lose time by going on errands in the morning was out of the question. It was a nasty fog to turn out into, but there were things Slias loved better than his own comfort; so, drawing his pork to the extremity of the hanger, and arming himself with his lantern and his old sack, he set out on what in ordinary weather would have here a twenty minutes errand. He could not have locked his door without undoing his well-knotted string and retarding his supper; it was not worth his while to make that sacrifice.

He reached his door in much satisfa

Dunstan Cass is Squire Cass' worthless son His reckless life and numerous debts lead him to steal the money which Silas Marner had hoarded during the fifteen years of his life in Raveloe.

WHEN Dunstan Cass turned his back on the cottage, Silas Marner was not more than a hundred yards away from it, plodding along from the village with a sack thrown round his shoulders as an overcoat, and with a horn lantern in his hand. His legs were weary, but his mind was at ease, free from the presentment of change. The sense of security more frequently springs from habit than from conviction, and for this died to the the hole and examined it curiousing to think it possible that his eyes had deceived him; then he held the candle in the hole and examined it curiously, trembling more and more. At last he shook so violently that he let fall the candle, and lifted his hands to his head trying to steady himself, that he night think. Had he put his gold somewhere else, by a sudden resolution last night, and then forgotten it? A man failing into dark waters seeks a momentary footing even on sliding stones; and Silasby acting as if he believed in false hopes, warded off the moment of despair. He searched in every corner, he turned his bed over, and shook it and kneaded it, he looked in his brick oven where he laid his sticks. When there was no other place to be searched, he kneeled dow; again and felt once more all round the hole. There was no untried refuge left for a moment's shelter from the terrible truth.

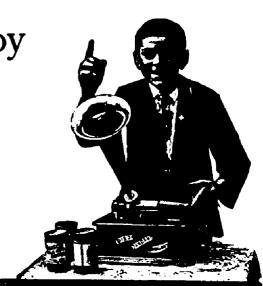

truth.

Yes, there was a sort of refuge which always comes with the prostration of thought under an overpowering pussion, it was that expectation of impossibilities, that belief in contradictory images, which is still distinct from madness, because it is capable of being dissipated by the external fact. Silas got up from his knees trembling, and looked round at the table; didn't the gold lie there after all? The table was bare. Then he turned and looked behind him—looked all round his dwelling, seeming to strain all round his dwelling, seeming to strain his brown eyes after some possible ap-pearance of the bags where he had al-ready sought them in vain. He could see every object in his cottage—and his

He reached his door in much satisfaction that his errand was done; he opened it, and to his short-sighted eyes everything remained as he had left it, except that the fire sent out a welcome increase of heat. He trod about the floor while jutting by his lantern and throwing aside his hat and sack, so as to merge the marks of Dunstan's feet on the sand in the marks of his own nailed boots. Then he moved his pork nearer to the fire, and sat down to the agreeable business of tending the meat and warming himself at the same time.

As soon as he was warm he began to think it would be a long while to wait till after supper to draw out his guineas, and it would be pleasant to see them

Why Every Boy Needs an **EDISON** Phonograph

Because it provides more fun and music than any other automatic entertainer at any cost-yet

It talks, sings, and plays. It is a money-maker for any bright boy, and keeps him happy all the year 'round. He can give Phonograph concerts in his home or in the barn, and fill his pockets with nickels. Parents should buy one for the boy, and let him repay the cost as he earns it.

is on every genuine Edison Phono-The signature of the inventor, graph and Gold Moulded Record. The Phonographs cost from \$10 up; Records 35c. each. remarks, or asked any questions which he might now regard as a ground of sus-picion. There was Jem Rodney, a known poacher, and otherwise disreputable; he had often met Marner in his journeys across the fields, and had said something icetingly about the weaver's money; hay. across the fields, and had said something jestingly about the weaver's money; nay, he had once irritated Marner, by lingering at the fire when he called to light his pipe, instead of going about his business. Jem Rodney was the man—there was ease in the thought. Jem could be found and made to restore the money.

\* \* He rushed out in the rain, under the stimulus of this hope, forgetting to cover his head, not caring to fasten his door; for he felt as if he had nothing left to lose.

#### UNDER NELSON'S FLAG

(Continued from page 15.)

ant, clapping the mouth of a flask betwixt lack's lips. "You wonder how we got here, eh? Well, round the headland the Never Despair struck on a reef of rocks. So did the frigate. We escaped in our boats to the shore, for the brig was sinking, but the frigate is still on the rocks, her crew working like mad to get her off again. We were making for Palermo when we heard your shout, and here we are."

"Yes, 'ere we are, Master Jack," said Parker, "and thank 'eaven, I've found something to eat," and he flourished the carcass of a fat fowl which the brigands had been roasting over their fire.

carcass of a fat fowl which the brigands had been roasting over their fire.

"Pick up Mr. Salt," cried Merryweather, "and we'll go on to Palermo."

The English merchant at Palermo was a true Briton. He smuggled the crew of the Never Despair, dressed as Sicilians, aboard one of his trading ships, and away they sailed for Malta. Here they all went aboard the Admiral's ship, and next day, as ordered by his dispatches Collingwood set sail for Toulon, capturing on the way not only the French frigate, which had got off from the reef without much damage, but also the corvette and a line-o'-battle ship, all three of which went as prizes to Lord Nelson see every object in his cottage—and his gold was not there.

Again he put his trembling hands to his head, and gave a wild, ringing scream, the cry of desolation. For a few moments after, he stood motionless, but the cry had relieved him from the first maddening pressure of the truth. He turned, and tottered towards his loom, and got into the seat where he worked, insvinctively seeking this as the strongest assura ce of reality.

And now the all his false hopes had vanished, and the first shock of certainty was past, the idea of a thief began to present itself, and he entertained it eagerly, because a thief might be caught and made to restore the gold. The thought brought some new strength with

brought me all the credit that I 'oped for!

President Roosevelt is a great believer in open-air life, and thinks that every American father should take his sons out, if possible, at least once a year to camp in the woods or country. He sets a good example in this respect, and not lorg ago went on a camping expedition with his sons and three boy friends of They started off by boat, the theirs. President steering, and landed in the woods, where they did their own cooking, and slept in blankets.

K.—Stamped envelopes are worthless when cut round, and are best when the entire envelope is saved with them.

#### New S. A. Issue

To commemorate the visit of the British Association to Rhodesia, and also the opening of the bridge across the Zambesi river, the Chartered Company of British South Africa have issued a special series of stamps, illustrating the famous Victoria Falls. There are six values, as follows: 1d., brick red; 2½d., blue, 5d., lake; 1s., green; 2s. 6d., black; and 5s., purple. It is certain that these new additions to British South Africa's list will not elicit a very warm welcome from philatelists. There can be no sort of excuse for producing a set of stamps of the total face value of 9s. 2½d. as a celebration even of such im-

portant events as those mentioned above. The late President Kruger, of whom so many hard things were said, would not allow the issue of more than a single penny stamp at the time of the opening of the Transvaai Railway in 1895, and it would have better become the B. S. A. authorities to observe equal moderation. As it is, the many philatelists who collect British colonial stamps in unused condition will find themselves called upon either to contribute 9s. 2½d. to the funds of the Chartered Company, or to ignore the issue altogether.—Hobbies. portant events as those mentioned above.

#### The Stamps of Tonga

There is talk of a new issue for Tonga. Certainly the present series has enjoyed a fairly long run. Issued in 1897, the stamps have remained in use until the present day without any alteration or modification whatever. An interesting error, perhaps the most interesting in a country remarkable for its many postage stamp errors, is the 7½d. stamp of the current series with the head of King George of Tonga turned topsy-turvy. The 3d. stamp of the same series shows a picture of what may be called the Stonehenge of Tonga. This is situated at the eastern part of the principal situated at the eastern part of the principal

island, and consists of two huge upright stones, surmounted by another as a crossplece. It appears that the Tongans, like the Maoris, have Maul as one of their delties, and credit the delty with carrying the stones and placing them where they are found. The spot is known as "Roohamoga o Maul." The natives have a tradition that they were brought in a large double canoe from an island called Uvea (Wallis Island), about 400 miles distant from Nukualofa. The stones are of coral formation. The whole issue, in fact, is one of the most interesting of the world's pictorial postage stamp sets. The watermark of turties is appropriate, too, for the coasts of Tongatabu swarm with these curious amphibians at certain seasons of the year.

But, handsome as they are, the Tongan island, and consists of two huge upright

if he were a busy man, he would speedily become as full of gum as a healthy plum tree. If, however, new stamps are to be supplied, it the horizontal period and the supplied, it is becomes an interesting question what design they will bear, for it is generally understood that the Friendly Islands—another name for Tongatabu—have been formally annexed to Great Britain; and it would seem the only fitcircat Britain; and it would seem the only fitting course that the archipelago should be placed under crown colony government and supplied with stamps bearing the head of King Edward VII. There is still nominally a king in Tonga, however, and one who is generally credited with taking himself and his kingship very seriously.—Hobbles.

#### The Eagle on the Dollar

The figure of the eagle on the dollars of 1836, 1838 and 1839 are exact portraits of a famous American eagle. "Peter, the mint bird," he was called by everybody in Philadelphia, and during his life his fame was equally as great as that of "Old Abe," the Wisconsin war eagle, the latter being really a spring chicken when compared with Peter. Peter was the pet of the Philadelphia mint for many years. Finally he was caught in some coining machinery and had the life jerked out of his body in a jiffy. The figure on the coins named above is an exact reproduction of a portrait taken of Peter after he had been stuffed and placed in a glass case in the mint cabinet.

#### Of Interest to Stamp Collectors

Stamp collectors will profit by the separation of Norway from Sweden. All the stamps that hear the portrait of King Oscar ceased to be valid on July 30.

A palæolithic flint arrow-head in good preservation has just been found by a London tourist upon the cliffs at Poldhu, Cornwall, near the Marconi wireless telegraphic station.

A coin bearing the date 858, and identified as of the reign of Ethelwuif, son of Egbert, first king of England, was recently found at Casterton, New Zealand, by a navvy engaged road-making

# The Boy Photographer are to be mixed in the order given, the vanadium chloride being previously dissolved in 1 ounce of 25-per-cent hydrochloric acid for color: Saturated solution of oxalic acid 120 minims, ferric chloride 1 gr., ferric oxalite 1 each fifty grains of sait. The stem and leaves —that is, the blacker or unioned parts of the print—now change to a bluish-green, and the

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve mouths in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographic in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

#### Too Late

A number of Brownie photographs reached us too late for consideration in the special contest that closed September 1. But it may afford some consolation to those who sent them to know that they did not contain any print that was superior to the photographs to which the prizes were awarded.

#### The Letter Box

Carl V. Eddy—Your photograph of the solar eclipse of August 30th is exceedingly interesting, but cannot be reproduced on account of its small size. We would advise you to have an enlargement made by one of the professional photographers of your city and to submit it to the editor of the Scientific American, New York.

ALLEE SAMEE MELICAN MAN oond Prize Photograph, by Howard Mulhall, Dorchester, Mass.

#### Later. Feats of the Photographer

Photography has caught the fastest express train in motion by means of the cinematograph, and it also shows the growth of a flower. A bud which bursts into bloom in, say, 16 days, is exposed to a camera every 15 minutes during the 16 days, and when the pictures developed from the films are assembled in order in the moving picture machine the observer may see to his delight, all in a minute or two, the gradual breaking of the bud—the blossoms open, close by night, and reopen in the morning, the leaves grow under the eye, the stamens peep from cover, and, finally, the full-blown flower.—Ex. Photography has caught the fastest express

#### "Little Miss Wise"

Under the above title Thomas Bradley, an Ohio boy, submits a photograph of the front-door o. his home, showing a cat in the act of ringing the electric bell by touching the button with one of her forepaws, while standing with her hind legs upon a chair. We regret that the photograph is not suitable for half-tone reproduction, but hope he may submit a larger one in one of our coming contests. In the letter that accompanied the print, the photographer says: "This cat learned the use of the bell herself. I think it was by watching people ring the bell, when we would let them in. So the cat thought, if she rang it, we would let her in, too. If we do not come at once, she rings again."

Julius Potter Jr., Elvin Boydstun, J. Alfred Lynd, Kurt Stolberg, Charles Miller, Mervyn Michael, Jos. Harbison, Roland Bachman, Carl E. Ericson, Lee Sanborn, David J. McGrath, and Miner C. Purdy.

#### Our Prize Pictures

"The Young Electrician," to which first prize was awarded, was taken by Don Walter Dunkle, of Washington, Pa., who is 15 years of age. Unfortunately he has given us no particulars in regard to either the print or the negative, although we have repeatedly requested competitors to do so. "Allee Samee Melican Man" is the work of Howard Mulhall, a Dorchester, Mass., lad. He, too, has neglected to give us the information desired, enabling us to inform our readers of particulars that would be of interest to them. Hereafte, we must insist upon a memorandum on the lack of every print entered in our contests gi 'in; the name of camera, plate, and developer used, length of exposure and stop empleyet, and name of paper print was made on.

#### A Valuable Hint

Ernest Stifel, one of our subscribers in the Keystone state, writes: "A few days ago, I made eight prints on developing paper. When I put them in the water to wash, they were all right, but when I took them out to dry I noticed they were covered with blisters. I did not like to throw them away, so I thought for a while and concluded that the blisters were caused by air or water getting under the emulsion and I did not see why I could not take them out. So I put the prints face down upon a piece of clean glass, took a towel and formed it into a sort of a ball and pressed the places where the blisters were. I then examined the other side of the pane to see if all the blisters had disappeared. They had. After drying, the prints were as good as if they never had blisters."

#### Current Comments

Current Comments

Arthur Pirsons—If you had confined yourself to the tree and had not attempted to take in so much of the surrounding field, your picture would have been very much improved B. J. Olsi; ord—Your photograph of an apple orchard in bloom shows the folly of attempting such a large subject with so small a camera; a single tree, or better yet, a single spray of blossoms, would have been far more pleasing. Leon H. Beach—In your "Where Earth Meets Sky and Water" you have sacrificed detail in the landscape to the cloud effects. In order to produce a satisfactory photograph of this character, it should be taken with a ray filter. H. S.—Generally anonymous communications go into the waste basket, but we will make an exception in your case. It is impossible to tell what is wrong with your film. Closely follow the printed directions that come with every package and you will have no trouble. Red and orange light does not affect plates, because it is non-actinic.

#### Coloring Stereoscopic Views

Coloring Stereoscopic Views

A good way to obtain the best results in coloring stereoscopic views is first not to make the print quite as dark as usual; when the color is applied it strengthens the print and brings the view up to the proper shade. Always color both views at the same time; for instance, if there was a barn in the distance and you wanted to color it a faint red, mix plenty of color so you don't run short and have to mix arain; then color both views at the same time, and so on. In this way you get an even shade of color, which otherwise would be harder to accomplish. In putting on flesh tints care must be taken to keep your color very weak, for if you get your color too strong you will soon spoil the print. It is much easier to strengthen the color than it is to take it off after too much has been applied. The materials that are most necessary in coloring photographs are as follows: Camel's hair brushes. Nos. 3 and 5; sheet of blotting paper, small sponge, piece of clean, white cloth; cake of Chinese white, a divided slant or rest of small dishes for holding the color when mixed, box of transparent liquid water colors, stick of India ink, box of pumice stone, and two tumblers of water.

#### Bromide Toning

In an instructive article on the toning of bromide prints in the "Bromide Monthly," directions are given for toning in different colors the various parts of a single print. The image is first bleached into chloride or bromide of silver, and re-developed as far as possible with a metol-hydroquinone developer, allowing five minutes! immersion after developer. Nothing pleases "ye editor" of this department so much as a large mail, for it evinces the interest his boy friends throughout the world are taking in photography. This month's letter pile was rather large and contained many photographs of excellence, which accounts for the fact that the following roll of honor is rather longer than usual: M. P. Stiles, Ralph S. Brothers, Spenser Hunter, Irwin Jervis, R. A. Rogers, W. J. Glichrist, Verne W. Mackay, Albert Gardner, Donald V. Williamson, David J. McGrath, E. R. Walker,

THE YOUNG ELECTRICIAN First Prize Photograph, by Don Walter Dunkle, Washington, Pa.

BALANCED ROCK IN COLORADO Photograph by Arthur A. Beach, Blackwell, Okla-

action is stopped when the proper color is obtained, and the print washed until the bluish tint is removed; further washing will change the green to an oilve tint, and later still will remove it altogether. We shall now have a reddish-brown flower with green leaves, etc., and these colors will be permanent if dried at the proper stage.

Questions relating to Mechanics and Electricity will, so far as space permits and where asked by hoys, be answered in these columns.

Edited by Robt. G. Griswold

#### Experimental Lessons in Electricity

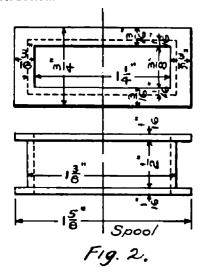

Lesson VI-Voltmeter and Ammeter

P TO this point we have constructed only apparatus for the generation of the electric current, but in this lesson we will take up the construction of two measuring instruments, with which the strength and pressure struction of two measuring instruments, with which the strength and pressure of the current may be measured. These instruments are known as the voltmeter, an instrument for registering the pressure of the current in volts, and the other an ammeter, an instrument for measuring the strength of the current in suppress. in amperes.

in amperes.

These two instruments have many different forms, but they all depend on the same principle of action, that of the attraction and repulsion between two magnetic bodies. And at this point it may be well to state that every electrical measuring instrument in practical use, with very few exceptions, operates upon the same principle. The instruments described in this chapter are very sensitive, accurate, but exceedingly simple in construction.

ment may be leveled and the spear brought to zero.

Over the entire instrument is placed a glass case to prevent draughts of air affecting the readings. This case is made of five pieces of common window glass, fastened together at the edges by strips of black paper glued to them. The strips of paper used for making passe partouts are excellent for this purpose as they come already gummed.

A wood column c is fitted into the base by making a tenon to fit in the hole provided and gluing the end before it is driven in. To the top of this column is secured by gluing, the hobbin d. This hobbin or spool is shown in detail in Fig. 2, and is cut from a piece of cherry or mahogany.

or mahogany This hobbin is wound with No. 36 double silk-covered magnet wire, of which it will require less than an ounce. This wire should be wound carefully and in even layers so that the outer layer will

even layers so that the outer layer will present a neat appearance. Enough wire is left on either end of the winding to pass down through the base and to the binding posts outside the glass case.

Inside the bobbin two bearing strips are secured as shown in Fig. 3, A, one on each side. These are made of thin sheet brass bent as shown, and a small V is filed in the upper edge of each to prevent the knife edge slipping about. These two strips are fastened in place by shellac varnish, which, when dry cements them securely to the wood. The bobbin is then secured in place at the top of the column by a liberal coat of glue and allowed to become thoroughly dry. The free ends of the wire are then led down behind the column through holes in the base to the binding screw

washers, to which they should be sol-

washers, to which they should be soldered.

Now for the moving part of the voltmeter. The armature is mounted on a knife-edge journal shown in Fig. 3 B which is cut from a piece of steel wire and the ends are filed to a sharp knife edge. It is this fine edge that allows the spear to swing freely without friction, and considerable care should be used to make this edge perfect.

The armature shown in Fig. 3 C is made of a piece of flat steel about 1-16" thick, 1" long and 4" wide. After a hole is drilled through its center that will just fit the journal, it is heated to a red heat and dropped into a glass of water, after which it is magnetized as described in Lesson 1. If one piece of steel of the size given cannot be obtained, two thin pieces cut from a corset steel may be used and mounted side by side.

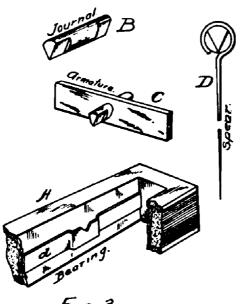

The spear D. Fig. 3 is made of a

The spear D, Fig. 3, is made of a piece of brass wire, or better still a piece of No. 18 aluminum wire, the end of which is filed to a long, tapering point. The upper end is bent into an eye which is slipped over the journal and owing to its spring grips it very firmly, doing away with the necessity of soldering. This is shown very clearly in Fig. 3 D. The journal should be about 11-32" long so as not to touch the sides of the bobbin which would affect its swinging. A very thin square of mica is fastened to the lower end of the spear by a drop of shellac to form a damping vane. This vane prevents the spear swinging to and fro for a long time, and causes it to

of shellac to form a damping vane. This vane prevents the spear swinging to and fro for a long time, and causes it to come to rest at its reading quickly. The scale shown in Fig. 1 is cut from a piece of cardboard and glued to a small block, also glued to the foot of the column. The graduations are marked on this scale after the instrument is made and callbrated (pronounced cal-e-bra-ted). All voltmeters are callbrated by comparing them with standard instruments and if the reader had another standard voltmeter with which to compare this one, it would be an easy matter, but as many of you will not have such an instrument at hand, a method will be described which will give you an approximately accurate scale, but of course its accuracy could only be determined by comparing it with the readings. This base stands upon three leveling screws bbb, one of which, however in the rear, may be a stationary point such as a brass nail. The two front screws should be round headed brass screws with the point filed flat so as not to mar the table upon which the instrument stands. By screwing these in or out the instrument ment may be leveled and the spear brought to zero.

Over the entire instrument is placed

voltmeter, which means to mark the scale divisions so that when we measure another current we may read off the value directly from the scale readings. If we were comparing it with a standard voltmeter, all we would have to do would be to connect the two instruments in parallel between two points with wires

of exactly the same size and length, as shown in Fig. 4. Then as we switched one or more cells into the circuit by the switch a, the various readings shown on the scale of the standard instrument b could be marked on the blank scale of the instrument c. Now this is exactly the method we will pursue with the exception that we will use a cell that gives almost a constant known voltage instead of the second voltneter.

Now the cell that we made in Lesson No. 4, out of a strip of copper and one of zinc when sulphuric acid is used for the electrolyte, generates about .9 volt (nine-tenths of a volt). This electromotive force is fairly constant and we may therefore use it in this work.

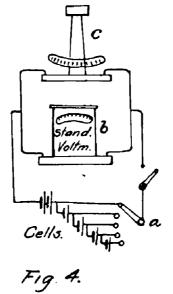

Cut from a sheet of zinc eight (8) strips 1" wide by 4" in length, and a similar number of strips of the same size from a sheet of copper. Amalgamate the strips of zinc as directed in Lesson 5. Then secure eight ordinary glass tumblers and mix sufficient solution to fill each about two-thirds full. This solution is made by mixing one part of sulphuric acid with five parts of water. While this cell polarizes rapidly, there, is so little current used that it will not materially affect the readings.

Now solder a stout copper wire, say No. 14, to one end of a copper and zinc

will not materially affect the readings.

Now solder a stout copper wire, say No. 14, to one end of a copper and zinc strip with which to connect the cell to the voltmeter, and then solder the remaining seven pairs of strips together as shown in Fig. 5, having the edges of a copper and a zinc strip fastened together so as to make one pair. They may be soldered together while flat and bent into the U shape afterwards.

Now have all your tumblers in readiness with the solution in them. Place one tumbler in front of the voltmeter which has been leveled, making sure that the spear swings freely, and connect one of the wires to the binding post, say that leading from the copper strip. Do not have these wires longer than necessary or convenient, about twelve or fifteen inches being ample. Now have a pencil

sharpened to a fine point and mark the position of the end of the spear on the scale with a fine line. Then place the copper and zinc strips in a tumbler, and while touching the free binding post with the wire from the zinc (that from the copper having been connected securely to one post) mark the point to which the spear springs and comes to rest on the scale. Try this several times to make sure that the deflection is correctly marked. This deflection is caused by the E. M. F. (electromotive force) of one cell which is very nearly nine-tenths (.9) of a volt.

(.9) of a volt. Then place another tumbler beside the first, remove the zinc from the first tumbler and place it in the second, and then place one of the U shaped pairs over the adjoining edges of the tumblers with the zinc end dipping into the first tumbler containing the copper strip. first tumbler containing the copper strip, and the copper end dipping into the second tumbler. We then have two cells connected and the voltage of these two cells will be about 1.8 volts, just twice that of a single cell. After marking the deflection caused by this pressure on the scale, add the third tumbler and su on, repeating the process until the entire eight cells have been used. The succesthe scale markings will then represent the following voltages: .9 1.8, 2.7, 3.6 4.5, 5.4, 6.3 and 7.2 and we will want the scale divided still further so as to be able to read any of the intermediate

On another sheet of paper carefully lay off the divisions marked on the scale and divide each division into exactly nine and divide each division into exactly nine parts, each part representing one-tenth of a volt. The scale may now be removed from the voltmeter, after carefully marking the exact position so that it may be replaced in exactly the same spot, and the divisions laid off on it. Make the small divisions about 1-16" long, and the fifth division \( \frac{1}{2} \)" long. Then every tenth division should be 3-16" long and this will give a scale that can Then every tenth division should be 3-16" long and this will give a scale that can be very easily read. Now mark every tenth or long division as shown in Fig. 1, starting with the middle one as 0 and following in consecutive order, 1, 2, 3, 4, 5, 6, 7. 8. The same divisions may then be laid off on the other side of the 0 mark as the spear should swing just as far to one side of the 0 as the other with the same pressure.

Replace the Scale, cover the instrument with the glass case, carefully leveling it so that the spear stands exactly over the 0, and your instrument is ready for work. If this calibration has been carefully performed, the instrument should be fairly correct but there is always an element of doubt exists, so that whenever a standard instrument.

that whenever a standard instrument can be procured it will be well to re-cali-brate your own, when you will feel

Our Electrical Novelties are not toys—but are practical, useful and durable and just the things you need every day. Our handrome illustrated catalog describes over 100 novel and useful electrical articles, such as Carriage Lamps. Door bells, Electric Railway, Electric Pocket Light, Private Teisphone and many others. Send for it to-day—it's free.

THE "MAGIC" POCKET ELECTRIC LIGHT, shown in THE "MASIC" POCKET ELECTRIC LIGHT, shown in illustration above, is very useful for physicians, farmers, plumbers, miners, policemen, bankers, hunters, travelers—in the home—in fact, everywhere a bright, safe light is wanted. No heat, matches nor chemicals. Operated by dry batteries. Does not break-lasts for years. Prices, Ec. \$1.00 and \$1.00 postpaid. Many other styles. ELECTRIC CLOVES—guod time-keepers, landsome, ornamental, all styles and prices from \$3.75 up.
MOTORS and DYNANOS in every style, size and price from 75c up.

MOTORN and DYNAMOS in every style, size and price from 75c up.

ELECTRIC LOCOMOTIVES, trains and trolleys, with tracks, switches, bridges, etc. No better plaything can be found for your chiel, From \$3.25 ut.

LEARN TELEGRAPHY. Complete outle, high grade telegraph key, sounder, battery, wire and complete instructions for learning. Only \$2.00 complete or ing and talk a distance of 1,000 feet, including 100 feet of wire, screws, staples, two complete instruments and instructions for installing. Only \$1.00.

OUR NEW CATALOG illustrates and describes over 100 other novel and useful electricul novelites ranging in price from 76c to \$30.00. We want you to see it. Sent free on request. Write to-day.

reasonably sure that it is correct. The shall be glad to hear more of his except of this instrument is of high resistance so that very little current passes, being in the neighborhood of 75 tory of Master Willie Caldwell, which is

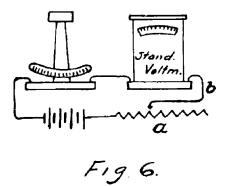

ohms.

The ammeter is made exactly the same in every particular with the exception of the coil, which is made of much larger wire and less turns. When building the voltmeter make every part in duplicate so that you will have two instruments. The coil of the ammeter is wrapped with three layers of No. 16 double cotton covered magnet wire, of which it will require about nine (9) feet having a resistance of about .041 ohms.

Owing to certain difficulties that would the met by the novice in calibrating an ammeter until he was better equipped we will leave the description of this work until a later chapter in which we describe the construction of the Wheatdescribe the construction of the Wheat-stone Bridge and the measurement of re-sistance. If, however, it is possible to secure an ammeter, the reader may cali-brate his instrument by the comparison method, exactly as in the case of the voltmeter. In Fig. 6 is given a sketch of the method of connecting the instru-ments in series with a variable resist-

ance a consisting of a long coil of fine iron wire, contact with any turn of which is made by the free end of the wire b. Contact is made at various points and the readings of the standard instrument marked on the scale of the new instrument.

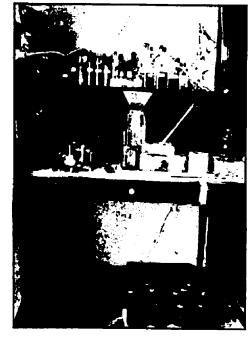

#### The Prize Award

Dear American Boys:

experimenter.

Two others especially appeal to me and to Master Johnson I would accord "Honorable Mention." His work is certainly of a very high order and shows considerable skill. For a boy of thirteen he is doing remarkable work and we

And the other is the chemical labora-tory of Master Willie Caldwell, which is of especial interest as we have never heard from any of our friends interested

WILLIE CALDWELL'S LABORATORY

in chemistry. Perhaps there are many of you and if so we shall be glad to hear from you. This department is open to all boys interested in technical subjects, and if you would like an occasional

talk on some chemical experiments, we shall be glad to please you.

Three letters were received withouthe photographs mentioned, but every letter was original and interesting. We ture. Very sincerely yours,
ROBERT G. GRISWOLD,
Department Editor.

BOYS! Big bargains in Electrical goods may be had from us. We carry a full line of Motors, Bells, Telephones, Tele graph instruments, Flash Lights, etc. If it's Electrical we have it. Write for free catalogue. Davies Brothers, have it. Write for free catalogue. Davi 3133 Ellis Ave., Chicago, Ills.

sult in serious trouble. All of the wires are iniaid in the bottom of the baseboard. My relay contains two miles of No. 36 E & S. magnet wire, and the action of the relay is very fine. I sendem have to look for any tro-ble when I am sending a message over my wireless telegraph, but what trouble does occur is mostly in my decherer or tapper. This is generally caused by too many batteries being connected on the coherer circuit. My wireless apparatus will send a message 15 miles and more.

A battery box is very necessary for every boy's shop, including a switch. I have one, in which I can turn on from I to 100 cells at will.

I also have a telephone from my mother's kitchen to my shop, so that she can call me by pressing a button.

I also am building an X-Ray apparatus, but it is not yet complete.

A. BEAUMONT JOHNSON, Age 13.

table, and to a two-candle power lamp above the table. The switch and push button are connected in shunt. The wires leading to the light run into an electric light receptacle and this is connected by means of an attachment plug and flexible cord with the light. If the current is wanted on the table, all that is wanted is to unscrew the light plug and insert another. I also have a gas light above my table.

In my chemical apparatus I have most of the common chemicals, glass apparatus, Bunsen burner, etc. Back of the table I have a shelf, and on this I keep my chemicals, test tubes, glass tubing rubber tubing and scales. I made a Bunsen burner from an old gas burner. I have not been able to find any store that sells glass retorts, so I use bottles. In the picture I have a still fixed up for refining crude petroleum. In the five small vials sitting in front of my other chemicals are samples of two grades of gasoline, one of benzine, and two of kerosene that I made with this still. I have made a large zinc tray and I always disgasoline, one of benzine, and two of kerosene that I made with this still. I have made a large zinc tray and I always distill things over this so that if the retort should break it could not do much damage. I make a good many of the chemicals I use myself.

WILLIE CALDWELL, Age 16.

# Dear American Boys: Seldom have I had a more difficult task to perform than the selection of the prize winner of this contest from the number of photographs and articles received. This is partly because I know that you have tried to do your best and if possible, I should like to reward each one with a prize. As stated in the conditions of the contest, only the display of mechanical ingenuity and inventive skill would determine the winner. Master Henry K. Plumb, the successful contestant, has shown in his picture considerable mechanical skill and his electric instruments display great interest in experimental work. And while not at all "firsy" there is a certain neatness about the arrangement of his tools and apparatus that marks him as a careful experimenter. Two others especially appeal to me and to Master Johnson I would accord and the server of the prize window shown, containing a combined volt- and ammeter, a line the large window shown consists of a board carry-frame from lead. The telegraph instrument is one of the light run into an electric from tead. The telegraph instrument is one of the light run into an electric from tead. ing a combined volt- and ammeter, a rheostat or regulator, a cut-out, four single pole switches, one main single-pole switch, and wiring.

The volt-am-meter has a magnetized

HARRY PLUMB AT WORK

frame from lead.

The telegraph instrument is one of four instruments on a line. Two of the instruments are at my end of the line, one in the house and one in the shop, the latter being of my own construction. It is copied from another instrument, some of the castings being in lead and others in brass. The two gravity cells shown help to operate the line.

The Ajax motor mounted on top of the ammeter drives a six inch fan. It is one of my inseparable companions. My tool rack is shown in the foreground and set of drills by the window. I have many other things that cannot be described in this short article.

HENRY K. PLUMB, Age 17.

#### HONORABLE MENTION.

My mother gave me a room on the third floor for my workshop. It is the most interesting place I can find when I have any spare time. All of my experiments in this shop are with electricity, and my tools are all arranged and numbered so that I can reach them at

any time.

THE AMERICAN BOY has given me a

number of ideas and experiments to try. all of which have been quite interesting and valuable to me in my work.

My induction coil was the first real hard task. It took me several weeks to make it, as I worked on it only after school hours. The baseboard is of black walnut, polished and shellacked. It has two and a half miles of wire and will throw a spark 2½ inches. The coil is 3½ inches in diameter, and all of the terminals of the primary and secondary coils are taken down through the head of the coil instead of the hare wires coming directly through. The bare wires coming through the head sometimes reing directly through. The bare wires coming through the head sometimes re-

#### Bound Volumes of The American Boy

#### New Tangles

THANKSGIVING HISTORY.

Write the names of nine states vertically from the top downward, to fill the squares, one letter in a square. The letters that will appear on the numbered squares, in numerical order, from 1 to 13, will spell the name of that one of the American colonies in the people first observed Thanksgiving.

The name of the town in this colony in which Thanksgiving was first kept can be found by taking letters from the state names as follows: From (a), letters 1, 7 and 6; from (h), letters 4 and 5; from (f), letters 5 and 4; from (l), letter 4.

The name of the Governor of this colony at that time can be found by taking the following letters: From (g), letter 4; from (h), letter 3; from (g), letter 5; from (h), letter 4; from (c), letters 5, 6 and 7; from (l), letter 2.

S. John McCarthy.

#### CONCEALED ACROSTIC. 11

Find one five-letter word in each line. The central letters in order will spell a November

holiday. How often I dream of the days that are gone. When mother the holiday feast would prepare. I can hear the brisk tone that her voice

dish and spoon rattled in mixing the

What dainties appeared; how she'd bake, roast and baste: No cross word nor hasty would drop from her

am sure that I never again shall enjoy Such pastry and cake, such spices and cream. But who no remembrance now holds of the boy Has naught in his nature to second my theme. —Sidney Wilkinson.

#### TANGLERS' TOWNS.

Take one letter from each town where these prize-winning Tanglers dwell, in the order here given, and obtain the most widely known city of the United States. The number following each name indicates which letter is to be taken from that Tangler's town.

1. Joseph M. Heinen (6). 2. Harry Dinges (5). 3. Ralph Herbert Cowdery (1). 4. Dud-

THANKSGIVING T.

Write the defined words on the T in the order indicated. All of the 50 numbered letters about the rim of this big T are then to be written in a circle, in numerical order from 1 to 50, thus bringing letter number 1 and letter number 50 side by side. Then commencing at the letter on number 1 in the circle and taking every third letter around to the right until all the letters are used once only, find seven dainties, all of which are common Thanksgiving fare on American tables.

The words making up the T are thus defined: 46 to 7, the usual title for addressing any gentleman. 24 to 34, to mar. 49 to 35, chubby. 47 to 17, a common fruit. 22 to x. a mythological many-headed monster. 36 to y, a city of Delaware, New Hampshire and New Jersey. 4 to z, customary. 10 to 16, tangled, like a negro's hair. 43 to 26, coalition. 11 to 37, a variety of apple. 20 to 45, an unmarried woman. 17 to 16, in good season. 50 to 41, unbind. 9 to 12, men's hose. 28 to 2, a small stream 3 to 40, a disease of children. 21 to 42, a living former vice-president's Christian name. 27 to 18, soil below the surface soil. 30 to 48, a turkey's method of eating. (The latter may be divided and defined thus: 30 to 31, a fraction of a bushel; 31 to 48, the title of a monarch).

—Vernor Lovett.

#### THANKSGIVING ACROSTIC.

All words of uniform length. The central letters read downwards spell a certain historical landing place associated with Thanks-

torical landing place associated with Thanks-giving.

1. A German city where Napoleon was defeated in October, 1813. 2. A character in the Merchant of Venice.

3. A western Mexican seaport.

4. A country of Europe, whose present ruler has an English mother.

5. The present king of Spain.

6. A noted bridge of Virginia.

7. A French prison that was stormed in 1789.

8. The given name of one of the most celebrated Italian painters, whose surname was Santi, but who is universally known, and well-known to you, by the name here required.

9. A Federal general of the civil war, who began the war as a colonel, and was made commander of the army to succeed Grant, in 1869.

10. The first settlement in Oregon.

11. The large American city whose motto is "I Will."

12. The middle one of the nine Presidents to be elected for two terms.

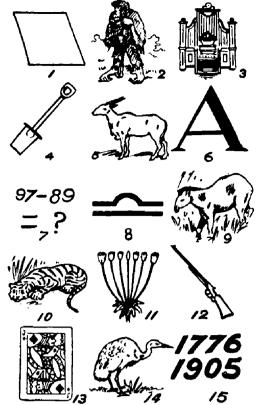

#### PICTURED PRIMALS.

The pictures are to be interpreted by words of uniform length. Their initials in numerical order will spell the surname of the man who will issue the proclamation setting apart Thanksgiving day this year, and also the name of a certain fowl usually associated with the day. with the day.

\*\*

FING

DE

AMERICAN BOY CORRESPONDENCE PUZZLE CLUB.

For 50 cts, a year you may be a member of this club and get into correspondence with boy puzzlers everywhere.

Is different from all other dentifrices. Zodenta has the peculiar and special property of dissolving all injurious deposits. These deposits discolor and destroy the delicate enamel and cause what we know as "decayed teeth." It also prevents the formation of tartar and its antiseptic and germicidal properties destroy all poisons and germs which cause softened and diseased

It has taken years of exhaustive clinical research to produce this perfect dentifrice. Zodenta keeps the teeth young and sound, is absolutely harmless. It can and should be used with a child's first teeth.

Tooth powders by friction often scratch the enamel. The ordinary pastes are simply mixtures of powdered chalk and glycerine, while the majority of "washes are just flavored liquids often containing injurious acids.

Every druggist carries dozens of different dentifrices in stock, some afford more profit than others, but don't accept any substitute for Zodenta. Your druggist can get it from his johber, or from us. Remember the name-Zodenta-it commences with the last letter of the alphabet and ends with the first.

The genuine is an emulsified cream, white in color, and is packed in a green enameled tube, with an eyelet placed in the end by which it may be hung up. The lettering is printed on the tube itself. Beware of imitations in tin or lead tubes with paper labels.

Price 25c. at all druggists, or sent postpaid on receipt of price.

Send us the name of your druggist and we will mail you a half-ounce sample and an individual tooth brush holder free.

F. F. INGRAM & CO. 53 Tenth Street, : Detroit, Mich.

#### MY FOUR YEARS AT WEST POINT

(Continued from page 10.)

his name on the list, it was safe to conclude that he was found.

clude that he was found.

The cadet next to me in ranks was an "immortal" in math, and with good cause feared that his furlough would be an indefinite one. Still, when his name did not appear in the math list he trembled like a leaf, and leaned heavily against me for support. Poor fellow! He had prayed for months, but his prayers were not answered as he hoped. as he hoped.

as he hoped.

If this unfortunate cadet had only listened to the advice of his roommate, he might have fared betier. This counsel, although sounding rather sacrilegious, had a grain of solid sense in it. "Now, Jones, if you will pray less and study more you may get through. God has little to do with the deliberation of the Academic Board, but helps those that help themselves."

With true Christian resignation, Jones said with a sigh, "Perhaps it is all for the best," and to comfort him, Silkins told him that there was no doubt of it.

I came out of the "exams" unscathed, while Silkins and Fletcher emerged very near the top.

near the top.

The graduating exercises were held the

next day, and when the battalion had been formed in front of barracks, after the exer-cises, we found that three of my class-mates had to stay behind from one to three days for having more than two hundred de-merits during the two years. When the roster of officers for the new year was published. I found that Silkins had been "made" a first sergeant, Fletcher a high ranking line sergeant, and I was doomed

to another year in the ranks.

After breaking ranks, we all made a rush to our rooms and jumped into our "cits" as quickly as possible. There was the usual untouched dinner, the good-bys, and then the hour or so of waiting at the dock. The time geomed almost interminable to us imtime seemed almost interminable, to us impatient yearlings, before we boarded the day-boat and were looking back at the riding-hall with sighs that were surely not of

Almost the whole class went down on the hoat, although most of the graduates took the train. Every cadet on board sported a cane, and high silk hats bloomed everywhere. The yearlings gathered on the upper deck, cheered themselves hoarse, and gave the riding-hall three deep groans as it

disappeared from view.

It soon appeared that two members of the class had composed West Point versions of popular college songs, and had memorized verse after verse of the endless "Benny Havens" and of "Army Blue." One of these geniuses demonstrated that the words of "Mary's Lamb" could be injected into many songs dear to the heart of every

Then the member of the duet who had no idea of music, but whose natural timidity vanished in the fumes of a strong Henry Clay, led the rest of the class in singing. Quite a crowd of passengers gathered around, and the cadets entered into the sport heart and soul.

Some one proposed a dress parade. We prevailed upon a first-classman to act as officer-in-charge, and the rest of us fell in. We used canes for muskets, and had a real military parade, with several minor exceptions such as smoking and talking in ranks. Leaving the boat at last, we separated for the different hotels, but all met in the evening at the —— house for a class supper. All the members were present including the "found" ones.

It would be hard to describe our complacent pleasure as we sat down at the table

cent pleasure as we sat down at the table and gazed about the banquet hall. Every-thing was ahead except study and worry, and they were left far behind. We could and they were left far behind. We could rise in the morning at any hour we pleased and were on our way to meet friends and the loved ones at home, not to mention the "nearer and dearer ones." Immediately before us was a pleasant evening in the company of our classmates, with a feast of soul and wit. Toasts were drunk to the Alma Mater, the ladies, the class of '8—, furlough, the found men, etc., etc.

There was nothing to mar the happiness of the occasion except the presence of the

of the occasion except the presence of the occasion except the presence of the "found" men, but we applauded and treated them with every consideration, and strove to make them forget their sorrow for the time. After all, it is much easier to bear the trials of our friends than our

We separated the next morning for our homes. Although the days that followed were among the happiest of my lite, they cannot be of interest to the reader, so I will pass them over until we, after our return, began assembling at the hotel where

we held our class supper.

By general agreement, when we parted in June, we went back to the Point on the 9 a. m. boat from New York. The men who had raised embryo mustaches had to be on the alert to prevent the crowd, that had armed itself with a pair of scissors, shaving off the down without ceremony. Then, too, there was an ambition for smashing stiff hats. Only one man escaped, and he was a muscular fellow who held his silk tile over the railing where the eager canes could not reach it.

When the riding-hall rose to view, a sudden hush fell on the boisterous proceedings. For the moment, no one seemed to know whether to greet the sight with a cheer or a groan, until the musical genius of the class began to sing the favorite funeral march, when every one joined in.

We landed at North Dock about noon, and fell in line preparatory to our march up the hill. We were a rather dilapidated crowd, with dusty clothes and smashed hats. Several first-classmen were stationed at the summit, at the very verge of cadet limits, as a kind of vanguard. The first cadet we could reach was hugged and rolled on the grass until he looked as for-lorn as the rest of us. We received the usual cordial welcome from the corps on

our arrival in camp.

As soon as possible, we "shed" our "cits" and donned the gray and white, and marched to dinner with the battalion. Nearly the whole class attended the furlough hop that night, and it proved to be a lough hop that night, and it proved to be a

President ROOSEVELT Strongly Endorses Rifle Practise oys and Girls

From MEW YORK HERALD August 26 1905

Mr. Roosevelt Accepts the Vice Presidency of Public Schools Athletic League.

#### PRAISES TARGET WORK

Fully Approves of the Clean Methods Employed in Training the Young Men of America.,

GIRLS NEED EXERCISE, TOO

OTSTER BAY, L. I., Friday.-President Reconveit has accepted the office of honorary vice president of the Public Schools Athletic League, with headquarters in New York city. In Ms letter to General George W. Wingate, president of the league, President Roosevelt expresses his cordial approval of the objects of the league.

Following is President Roosevelt's letter accepting the tender of the honorary vice presidency:-

"OYSTER BAY, August 19, 1905. "My dear GENERAL WINGATE:-In answering your letter I beg to say that it will give me the greatest pleasure to accept the office of honorary vice president of the Public Schools Athletic League of which you are President.

Praises Rifle Practice.

"I am glad that you have installed in each of four high schools a sub target rifle practice and are teaching the boys to shoot with the Krag, and I am pleased with the great success that you have met in this effort.

in this effort.

"I'm also particularly pleased that you are about to organize a woman's auxiliary branch, for the girls need exercise quite as much as do the boys.

"The demands such a movement make upon the time and the money of those engaged therein are very heavy. You are doing one of the greatest and most patriotic services that can be done, and you are entitled to the heartlest backing in every way from all who appreciate the vital need of having the rising generation of Americans sound in body, mind and soul. Sincerely yours.

"THEODORD ROOSEVELT."

change from the freedom of furiough to the constraint of cadet life.

The course of study before us for the ensuing term was as follows: Michie's Mechanics, Bloxam's Chemistry, Tillman's Elementary Lessons in Heat, Chemical Philosophy, Brown's Eclectic Physiology (this last with particular reference to the baneful effect of stimulants), and Drawing

It was customary for the professors in the chemical and the philosophical de-partment to give lectures from time to time, and we were required to write up the lecture in philosophy. The announcement that we were to have a lecture was an occasion for general rejoicing, especially to those men who did not know the lesson for the day any too well. Philosophy was the first recitation of the day, and the sol-dier in charge of the "Phil" Academy dier in charge of the "Phil" Academy generally came over at about 7:30 a.m., to notify the officer of the day of a lecture, but he never reached the guardhouse without being observed by some watchful second-classman, who immediately pro-claimed that "Rinkleman had just gone

claimed that "Rinkleman had just gone into the guardhouse."

Then, before the O. D. had a chance to get around through the divisions with his shout of: "Second class philosophy turn out at 9:30," the second-classmen began to "celebrate. Some stood around in the area and chaffed each other, while a few hilarious spirits gathered in one of the hilarious required by chemical and were required by chemical and were required by chemical and were required by chemical great success.

"celebrate. Some stood around in the alogy, and Thompson's Electricity.

The next day we began moving into bar- area and chaffed each other, while a few racks. Then came two or three days be- bilarious spirits gathered in one of the fore recitations began. I was in "con" as rooms, and made the day hideous with minerals and were required by chemical an inspired writer's word.

Chemistry and Geology by Data & Minerals & Mi

was my room-mate Canville, and two their yells and songs. Perhaps a wash-bluer men never lived. It was a striking bowl was filled with commissary bay rum, change from the freedom of furlough to the match applied, and a wild fetich dance the match applied, and a wild fetich dance inaugurated. One cadet was stationed at the door whose business it was to "drag in" any second-classman who passed that in" any second-classman who passed that way. One of our members was a Jerseyman, remarkable for his dignity. He used to say that he did not approve of such childish proceedings, and that we were not boys any more, but men. It was one of our chief delights to send a detachment out after "Old Dignity," bring him and the continuous form a ring around him and ment out after "Old Dignity, bring film in a captive, form a ring around him, and dance in time to a grotesque song, dedi-cated to "Old Dig." by our musical prod-igy. The captive, overwhelmed by num-bers, could do nothing but submit.

bers, could do nothing but submit.

I recall one occasion when we were out in force "celebrating." We were singing "Mary's Lamb." to the tune of "Army Blue." Just as we turned a corner, we came face to face with the instructor of the "goats." The song died away simultaneously on every one's lips, and "Old Dignity," who happened to be playing the role of "Old Dog Tray," declared that he would now be "found" beyond all question. tion.

tests and inspection to determine what

they were.

Wave motion, mathematically treated, is one of the most difficult and intricate subjects that modern science furnishes. It

jects that modern science furnishes. It deals with the nature of sound and light and the method of their propagation.

The philosophical department possesses a complete and costly set of apparatus, and many of the experiments in sound an light are as wonderful as they are delicate and instructive.

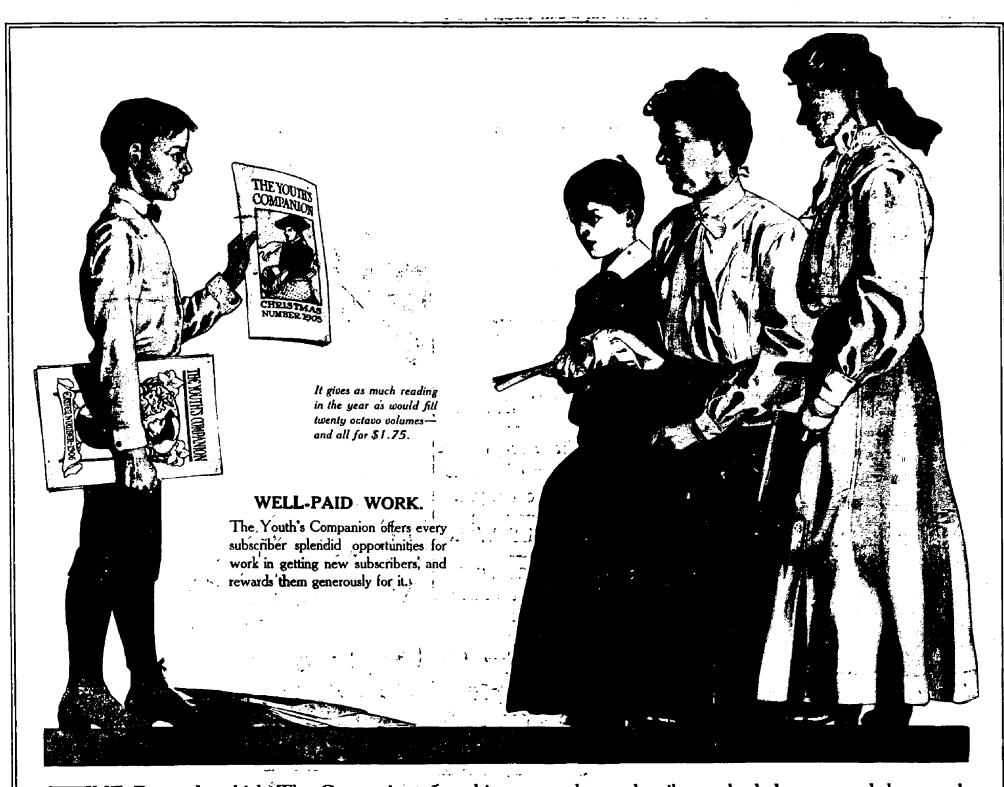

As for drills, we kept up our riding until June. In May, we drilled with the firstclassmen on the cavalry plain, and each Saturday we were given a "ride" on the

roe J."
In October, we drilled at the immense sea-coast guns or attended pontoon-bridge building with the first-classmen. The drills in April were the same as those in

And so the year glided away much sooner than I had anticipated, and, almost before I realized it, the examination had passed, the graduating parade and the graduation exercises were over, and I found myself at last a first-classman.

Of course the day on which two impatient and happy classes left us was rather blue for those who staved behind but

hlue for those who stayed behind, but there was the usual amount of fun at dress parade for us fellows in ranks who watched the new cadet officers "tie it up."

THE Rewards which The Companion offers this year to those subscribers who help to extend the paper's circulation are of greater value than ever before. But in order to represent the paper as a worker you must become one of The Companion's Family—a subscriber. See Special Offer below. If, being yourself a subscriber, you send us before July 1, 1906, five other new subscriptions, you will share as follows in

# The Youth's Companion's Fall Offer to Workers.

**NEW SUBSCRIPTIONS** YOU TO:

#### 1. Five Costly Premiums

(one for each new subscription) a choice from nearly 300 different articles — books, mechanical toys, games, athletic goods, wearing apparel, tools, jewelry, etc., and in addition

#### One Perseverance Reward

A choice of 28 different rewards, including either a gold-filled lady's or gentleman's watch, or a quadruple silver-plated tea-set, or a jeweled solid gold ring, or a lady's fur set, or a camera, or a parlor clock, or an arts and crafts tool set, and also in addition

#### 3. A Share in \$12,000 Cash

to be divided equally among all subscribers who secure five new subscriptions (besides their own) before July 1, 1906.

FIRST SUBSCRIBE FOR YOURSELF, then every Thursday from now until January 1, 1907, you will enjoy the best of reading — reading which increases your useful knowledge, amuses, suggests ideas of value to the industrious and ambitious. In The Companion the subscriber gets the equivalent of a magazine for the wife, a weekly review for the husband, a story paper for the boy and another for the girl.

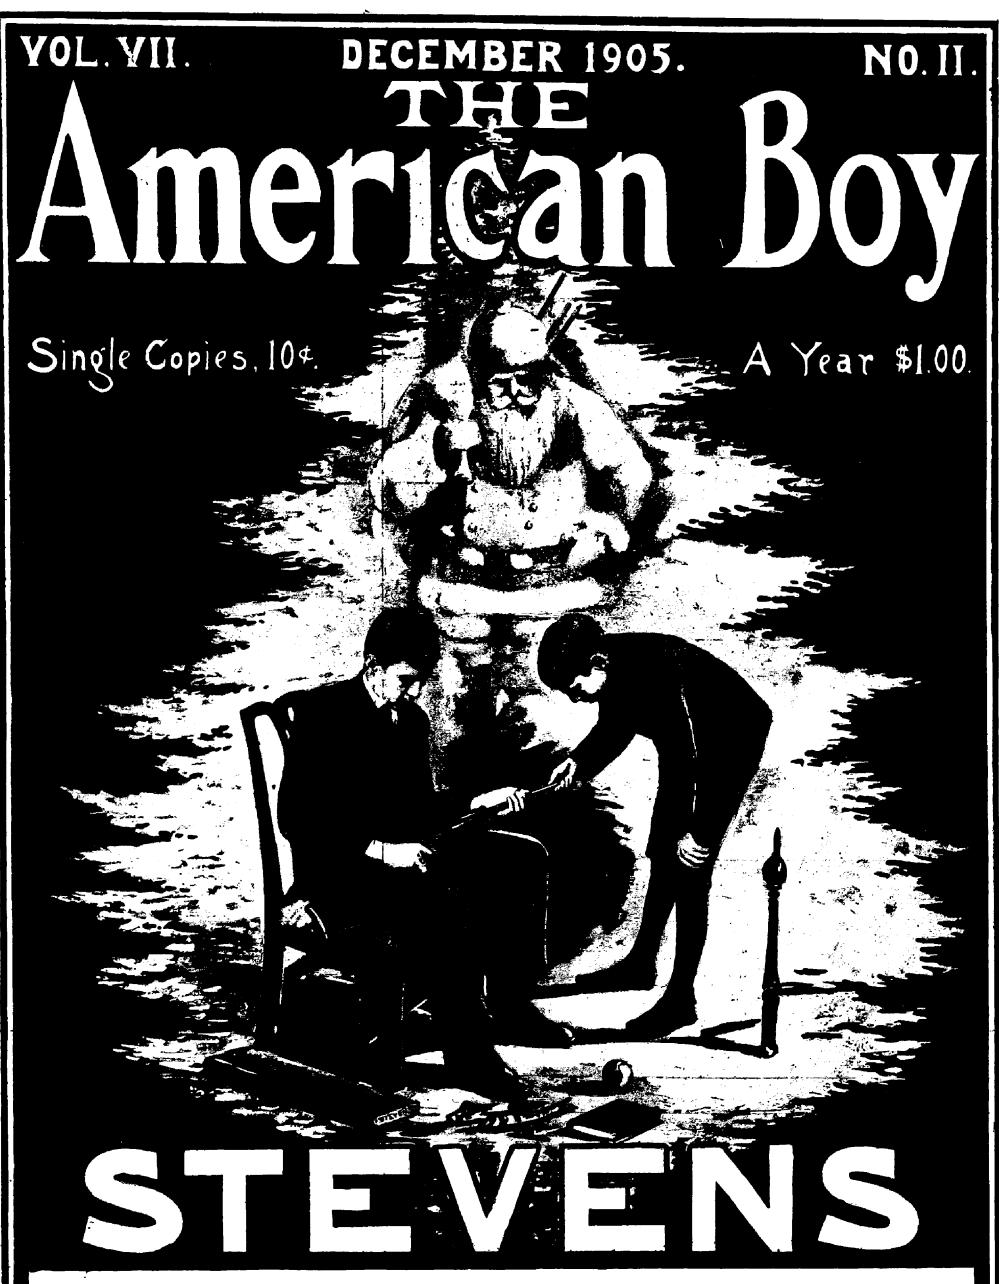

#### **EVERY NEW SUBSCRIBER**

Who at once cuts out and sends this slip (or the name of this publication) with \$1.75 for The Companion for the fifty-two weeks of 1906 will receive

ALL THE ISSUES OF THE COMPANION FOR THE REMAINING WEEKS OF 1905.

NUMBER 2

VERY SPRING the meadows at the eastern side of the mountain where the tripod fox made his headquarters were covered with water. The river at the foot of the mountain being swollen, then Reynard would indulge in his most exciting sport, which was duck hunting.

He would sit upon a convenient point about twenty rods up the side of the mountain, and watch the waters below, until he was able to mark down some ducks in a position, that suited his purpose. He wanted them near shore, preferably with some point or bush that would cover his approach, then he would slip swiftly down the mountain side and enter the water twenty rods or so from the game.

If he could keep a floating tree, or some other object, between himself and the feeding ducks, so much the better. Otherwise he would have to swim very slowly, with just the point of his nose showing above the water. He had to be careful not to make ripples, for the ducks were wary.

When he had reached the bush or point as near as he could get, with the greatest caution, he would stop a few seconds to get a good deep breath, for the final swim took good lung power, and he might have to hold his nose entirely under water for the last two or three rods.

The ducks were usually busy feeding, diving and bobbing about, so that when one of their number suddenly went under they thought nothing of it if there was no splash or squawk, and Reynard took care that there should not be. Once under water he crushed the life out of his victim with a powerful crunch of his jaws, and went noiselessly away to the point to hide the first kill and return for another. He rarely got the second duck, but it was worth the try, for the tripod fox was a hunter, and delighted in the chase. Besides losing his right fore paw in the trap, the tripod fox had two other trying experiences during this eventful autumn, both of which tended to confirm him in the cynicism that was rapidly growing upon him. The first of these events was as follows:

One evening just at dusk Reynard came to a spring which was his favorite drinking place. The water was always cold and fresh, and never tasted swampy as some springs did.

He was hungry as well as thirsty. The rabbit plague had done its deadly work among the cottontails the year before, and they would not be very plentiful again until the second or third year after the plague. Reynard did not know this, but he knew that rabbits were scarce, and it was not as easy hunting them as it would be after the deep snows came.

This evening he found both meat and drink at the spring, for there were several generous pieces of meat strewed about, but his suspicions were at once aroused. The meat had not been there the night before, and it was quite strong of man scent. He could also see where each piece had been slit, and here the scent was strongest. There was also another rank odor at each of the slits.

With his trap experience so fresh in his mind he would have passed the alluring feast by had he not been so hungry. For a while he considered, nosing the pieces of meat about. Then he selected the one which had the least taint about it, ate it and went quickly away as though he dared not trust himself longer near the meat.

He had no sooner swallowed the tempting bit than he was filled with misgivings. There did not seem to be any immediate injury from it, but he felt instinctively that some subtle danger lurked near anything that had man scent about it.

He knew of a pungent plant that would cause him to throw up the meat if he could only find some of it, but he searched the woods in vain.

He could find it any day when he did not want it,

but now it seemed to have suddenly disappeared.

By this time an hour had elapsed since tasting the forbidden fruit, and he began to feel sick.

The meat was burning him up, and making him dizzy. He then knew that his cunning enemy man had again got him in his clutches.

He rushed hurriedly to the brook and drank until he could hold no more. His thirst could not be satisfied, and the deadly sickness grew upon him.

Then by some good fortune or inspiration he thought of a very old remedy, and began eating grass ravenously.

The relief was not immediate, but this simple emetic took effect in half an hour, and the brook water and the meat came up, but enough of the poison had gotten into his system to make him thoroughly sick for the rest of the day, which he spent quietly lying under a bush.

But this was one more of the hard lessons he was learning, never again would he touch meat with man scent upon it, not even if he starved.

The other experience from which he learned new caution, was not so much his fault, but merely one of those accidents that will frequently come into the best ordered life of a fox.

He was crossing a laurel swamp one morning. The snows had come and bushes and boughs were bending under their load. He was following a rabbit path, which was the rabbits' principal highway through the swamp, their main traveled road, as one might say, with lesser thoroughfares branching out in every direction. Reynard was quite absorbed in the rabbit scent which was fresh, and was not exercising his usual precaution, for not even a fox can be interested in several things at a time.

Presently he got a whiff of man scent, that made his nerves start, but he kept very quiet. The scent came to him from down the wind, the object scented must be very near, or he could not notice it against the wind.

Then the woods was startled by a roar that echoed again and again, and a score of horness stung the tripod fox in as many places. There was no need of keeping quiet any longer when such noises were abroad, and the fox broke cover running for his life.

Again the roar resounded through the woods, and again the hornets stung him, but not so freely as before.

Over and under bushes he sprang, running and jumping in a manner that would have done credit to a four-legged fox and soon left the swamp far behind, but he did not stop running until he reached a ledge near the mountain top, where he holed.

This was his first experience with the deadly thunder stick, man's long arm with which he reaches out for the wild things that he cannot catch in any other way.

The hornet stings in his coat continued to smart for the rest of the day, and his hide was sore for some time, but the tripod fox felt that he was lucky to escape even with this inconvenience, and did not mind.

I ater on in the day he heard a strange wild noise like the cry of some animal down in the laurei swamp, but it was faint and far away and as the ledge was close at hand he did not fear it, but he was very cautious for the rest of the winter, when he went into the laurel swamp.

The following year he learned that the weird sounds were the cry of an animal with which men chased both foxes and rabbits, and that the resounding roar was man's voice, with which he said to will creatures: "Stop! I want your hide; it does not belong to you, it is mine."

The hunter had spoken just as loudly to the tripod fox on this occasion as he ever spoke, but the shot had been intended for rabbits instead of foxes, and as they were not large enough to break bones or

pierce his vitals, Reynard had escaped with a score of little pellets in his coat. Had the gun been loaded with number four shot instead of sevens, the eventful life of the tripod fox would probably have been cut short at that time, and the fox club in the village beyond the river saved many a futile chase.

The three-legged fox was always at a disadvantage in a straightaway race for life, and this he never attempted, unless there was a crust just hard enough to bear him, and let the hounds through.

No one who has not seen Reynard divested of his fine reddish yellow overcoat, knows what a slight fellow he is. The leanest greyhound is fat compared with him. His legs are not larger than those of a cat, while his body at the largest girth, is not much larger around than a man's fore arm. Seeing him with his coat on, the novice estimates the Fox's weight from twenty to thirty pounds, while really it ranges from eight to twelve pounds.

The closest call that the tripod fox ever had and one that was long talked of by the club, happened in this way.

There was a heavy snow on the ground, and the three-legged fox was down in the valley prowling about some corn stacks that had been left out by a shiftless farmer. He had found mice very plenty there all the fall, and he wanted one for breakfast.

The club was out, too, this morning, and the pack took his track at the foot of the mountains and came on across the field at full cry. The cunning fellow usually would have put for the mountain and holed in one of half-a-dozen ledges that he had selected carefully during his residence there.

Ledges where he could not be dug out and was comparatively safe, but to day the pack was between him and the mountain and he was gradually pressed farther and farther from his stronghold.

The snow was deep and moist making his coat heavy and his one forepaw slumped badly. He was getting winded and all the time the pack was gaining on him. At last he reached some spruces covering an acre or two of pasture. He might snarl the track a bit here, and gain a few rods, so he gave it some of his most scientific twists, and came out of the other side just as the pack entered, thirty rods behind him.

He stopped a moment to consider. There was safety in the mountain a mile away. He could never reach it in this snow without being caught.

Then there was a noise in the road, and he slunk back behind a bush, but all the time the cries of the hounds came nearer.

While he stood uncertain and desperate, a log team passed in the road, within a rod or two of him. This was the noise he had heard.

There was one log at the bottom of the load longer than the rest, making just such a seat as boys like to ride to school on without having the driver, who is perched high on the load at the front, know they are there.

The desperate fox saw his chance and took it.

He sprang into the road behind the team and three or four of his three-legged jumps landed him on the long log. There he crouched, his reddish coat matching the color of the spruce log nicely.

Just as the pack of hounds broke into the open the log team rounded a bend in the road, and a moment later the air was filled with perplexed howls from the baffled pack.

A small boy, dinner pail in hand, was trudging to school, and came into the road behind the log team from a cross path. He saw what he thought to be a collie dog, riding upon the log at the back of the load. Almost at the same instant the dog raised his head and saw the boy. Then he jumped lightly off and disappeared in the bushes and the boy saw that the collie was a fox.

It was not until his fifth year that the tripod fox met Fuzzy, the one oasis in his desert life.

He had not mated up to that time, as his crippled condition made him an outcast in the fox family, and this was another thing that made him morose.

Fuzzy was three years old, and she too had never mated before. She was under size, weighing only seven pounds as the fox club ascertained later.

Their litter of four kit foxes came in March, and the tripod fox was the proudest sire for many miles around.

He made longer excursions into the valley than he ever had before, for he had to hunt for the family, and many a henhouse paid tribute to the little fox family up in the mountain.

One of the young foxes died during its kittenhood, but the rest grew finely and were well favored young foxes when the first frosts toughened their hides and made them fit for the fox club's taking.

It happened about the first of November, on the occasion of the annual fox hunt which was followed by a banquet in the evening.

A horseman with a bugle had awakened the fox hunters at four o'clock that morning, and the men and the pack were off at five.

Fuzzy and the youngsters had gone into the meadows, to look for quail that morning at about three o'clock. They could occasionally find a bevy where they had spent the night, sleeping in a cute bunch,

and they had made several good meals this autumn that way.

They trailed the quail, but the pack trailed them and at five thirty the hounds were in full cry.

In some way the young foxes got separated from their mother, and ran recklessly about without any other purpose than to keep out of reach of the noisy pack. As the club said, "they were just old enough to play nicely."

By seven o'clock two of their pelts were dangling from the pockets of lucky hunters, and the third, who had also been shot at, bolted the country and the hounds went out of hearing. They came back after about two hours, for a pack will not follow a fox as far straight across country as a single hound. But the young fox, who had been badly scared, was never seen in that part of the country again.

Once more the tripod fox felt himself an Ishmaelite in the land of his fathers, and something of his old moroseness came back to him. But he still had Fuzzy and she alone was the joy of his lonely life.

December and January crawled by. It was a very hard winter, and the fox family had all they could do to keep down the pangs of hunger that gnawed at their vitals

Rabbits were scarce, and there were no sudden thaws and freezes that caught partridges under the crust, where the foxes could find and dig them out,

They did occasionally get one that had plunged under the soft snow to keep warm, some bitter night, but one partridge would not keep a couple of hungry foves long

They were finally obliged to go to neighboring farmhouses more frequently than they liked to.

There they would occasionally find a dead hen that had been thrown upon a compost heap or a calf that had been dragged into the lots for the crows and foxes.

By the first of February there was again promise of a litter of foxes in the spring, and the tripod fox forgot his loss in the new hope.

About this time came the January thaw which was late, and after it a hard freeze, and a fine crust.

One morning Fuzzy went into the meadows to feast upon a dead horse. She was heavy with young, and this made her ravenous with hunger.

The fox club had drawn the dead horse into the meadows as a decoy, where they could start a fox without so much trouble as they would otherwise have to take.

The club got an early start the same morning that Fuzzy made her trip to the dead horse, and the pack at once took her track.

Seven members of the fox club were out, each posted at some crossroad, or likely spot for a fox to cross, so they patrolled the meadows thoroughly.

It was a cold, crisp morning, and each hunter had stamped out a spot two or

three feet square to stand in, and kicked the snow off his feet to keep them from getting cold. They wore fur caps and gloves and carried shot guns. They all waited impatiently for the cry of the pack, and whenever it came near a waiting hunter he would draw the glove from his right hand, and cock his gun.

Halfway back to the mountain Fuzzy ran upon one of the hunters, and had a close call. Her coming had not been announced by the pack, and he was not ready for her. His glove fumbled the trigger, and as the fox was on low ground he shot over her but the roar of the gun rolled across the meadows, and echoed from hilltop to hilltop. The tripod fox heard it on the mountainside and was anxious, so came out at the top of the cliff under a small spruce to watch and listen.

Presently he heard the pack in full cry and saw a small yellow speck coming straight for the mountain about half a mile away.

It was Fuzzy. She was running well, and the pack were fifty rods behind. She would make the mountains nicely if no unseen hunter intervened.

The tripod fox strained every nerve to watch the race of his mate for life. The pack did not gain upon her and he felt sure that she would make it. It was fine running for both dog and fox and the pack swept

across the meadows like the wind.

Fuzzy was now within a quarter of a mile of the foot of the mountain. Her mate from his hiding place under the spruce saw nothing but clear fields before her and smiled broadly at the thought of her triumph. Then he saw a team driving rapidly across the meadows, the horses going at a gallop. On the seat beside the driver was a tall, gaunt hound that

the tripod fox did not remember seeing before.

The team was driving to head off the pack where it would cross the road forty rods from the foot of the mountain. The man was holding the hound by the collar, and it was straining and tugging to get

Then the pack crossed the road just ahead of the team and the man let go the bound.

With great bounds that ate up distance like an express train he came after the pack, overtook them and drew nearer and nearer to the flying fox. The tripod fox saw the new danger, and gritted his teeth and strained his sight that no movement might escape him.

Fuzzy redoubled her efforts, and drew away from the pack, but the gaunt hound drew rapidly in upon her. Only four or five rods now separated them.

The watching fox cast caution to the wind and came out of his cover and peered over the cliff to see how it ended, for he felt sure that it would end in a few seconds.

Twice Fuzzy doubled and the gaunt monster ran by her, but the third time he reached over and closed his lank jaws upon her back and threw her over backwards. There she lay limp upon the snow. She

did not rise again for her back had been broken as though it had been a reed.

The team came up just in time to save the fox pelt from the pack that came thundering up to congratulate the greyhound on his quick run and brilliant finish.

All were glad but the red fox on the mountain who went sullenly back to his den, which henceforth should know no litter of small foxes.

Four times during the same week the tripod for witnessed the same tragedy in the valley below, that he had seen this morning. The pack in full cry, the flying fox, and the hideous monster that came in at the finish and picked up the fox with ease.

The hunter who carried the tall hound in the team lived at the end of the tunnel over the river. The watching fox saw them go there each day after the hunt. It was something to know where his enemy lived, for he could be on the lookout for him.

About the last of February the tripod fox found some small pieces of meat strewed about a spring. It was very strong of man scent, and he knew it would not be good for him to eat it. He had never forgotten the lesson of the meat that made him sick. But after considering for a while he carefully took two of the largest pieces and trotted off through the dark.

He skirted the river until he came to the long dark tunnel that man always used in crossing. Ordinarily he would not have dreamed of crossing in this way, but would have crossed on the ice, but tonight he was filled with a reckless daring, and a wild exultation that feared nothing.

He trotted across the bridge to the house at the farther end, where the great hound lived.

he he had he he had he

He had reconnoitred the premises a few nights before when the moon was up, and knew the lay of the land. He even knew where his enemy slept.

There was a little house under an open sned. It had a swing door and the chain rattled when the hound moved. The wary fox had found out all this by standing upon the wall across the road and giving a couple of sharp barks. The door in the little house had suddenly been pushed up, and the head of the lank hound thrust out, while the chain rattled. This was all the fox wanted to know so he had gone quietly away.

Tonight he crept carefully into the shed and laid the two pieces of meat that he had carried so gingerly, as near the dog house as he dared to.

He went so near that he could even hear his enemy breathing. He was quite aware of the risk he ran, but did not care. It would be as well to die, in a hazardous enterprise, as to be picked up on the meadows some morning where there was no chance

When he had placed the meat by the door of the kennel, he went back into the road and gave two or three sharp barks as he had done before.

He heard the door of the little house come up with a bang and the chain rattle, but it was so dark that he could not see anything of his enemy.

he could not see anything of his enemy.

He had done all he could, and so trotted quietly away, this time crossing on the ice, instead of by the

The greyhound was never seen again in the chase upon the plains, and with him went all the good luck that the club had known this season. They had

taken fifteen foxes, of which he had caught twelve.

He had only failed in one instance to catch the fox when he got sight of him and this one had gone under the ice at an open spot in the river and did not

come out again.

The tripod fox saw from his mountain cliff that the greyhound was missing at the next hunt, and

smiled broadly and licked his chops. He also saw the pursued fox scurry away across the meadow, and go out of hearing with the pack in full pursuit. It gave him delight to know that if the greyhound had been there the fox would have been picked up in the open. Now, he would escape.

This revenge was very sweet to the three-legged fox, and he wanted more of it. They had not paid the price of Fuzzy's death yet, so he schemed and bided his time.

The first of March was exceptionally warm, and brought rain, and then a sharp freeze, which left a crust as glare as ice. This was what the tripod fox was waiting for. So he went into the valley early one morning and left his trail in all the likely places and then came back to the foot of the mountain and waited. One hour, two hours went by, and still he sat there upon his haunches waiting.

Just as the sun was peeping over the eastern hills he heard the cry of the pack and again that broad smile overspread his crafty countenance.

It was to be the last hunt of the season, so the club had planned, and there would be a great banquet in the evening to wind up the year's hunt.

The club was out for pelts today. The red fox sitting on his haunches at the foot of the mountain was also out for business.

He waited until the pack got within twenty or thirty rods of him, then slowly began the ascent, the hounds slipping, sliding on the crust, but the fox picked out the best path up the mountainside that he could find for them. By keeping under the trees, where icicles had fallen and frozen to the crust and where the rain had not fallen so freely, he found them very good footing. Up, up, they went, the fox leading a few rods ahead, and the pack following

eagerly. Occasionally the hounds caught sight of the fox leisurely climbing a few rods ahead of them and the valley below echoed with their full-throated cry. The walting hunters on the cross roads wondered. A fox had never taken the dogs up into the mountain in that way before, and they wondered how they could follow him, up the steep mountain on such a crust.

Halfway up Reynard stopped and waited, to give the pack a good look at him, and to encourage them in the ascent.

This time he let them get within four or five rods of him. He did not climb any higher, but ran along the side of the mountain, for a short distance.

Just opposite a small scrub spruce by which he marked the place, he stopped and again waited for the pack. From where he sat he could not see what was beyond the little spruce, but half a mile away was the meadow and the broad river.

On came the pack bellowing wildly, but the red fox sat quietly waiting their coming. The climb had been slow and the pack were nicely together and swept along the mountain side to the waiting fox, almost in a bunch.

There he sat like a statue, grimly inviting them on. With yelps and snarls of eagerness they rushed upon him but aluded them glipping and gliding just

he barely eluded them, slipping and sliding just ahead of them toward the scrub spruce, the pack following him excitedly, in fact they could do nothing else, once they were started slipping and sliding down this toboggan chute.

One of the hunters in the valley below who was nearer the mountain than the rest, saw the pack following along the side of the mountain, but just at the scrub spruce, which looked like a bush from that distance, he lost sight of them and waited for their reappearance.

Although he could not see the dogs he knew by their cries that they were close upon the fox and he fully expected them to catch him if he did not hole, which foxes occasionally did in the mountains.

nd. He even knew where his enemy slept.

There was a little house under an open shed. It and a swing door and the chain rattled when the bound moved. The wary fox had found out all this cliff, and fell three hundred feet, upon the rock below.

It was still in the air, when a white object much larger followed it. This had not struck when a black and white form fell. The hunter gasped, but was too thunderstruck to speak. Then two more dogs shot over the cliff simultaneously, a fifth followed and a second later the entire pack, of five dogs, valued by the valley fox hunters' league at two hundred dollars, was lying upon the rocks, most of them too mangled to even kick in their death moments.

The reddish yellow pelt of the tripod fox was among the black and white of the pack, but never before had a paltry dollar and a half pelt cost such an astonishing price as that which the fox league paid for the life of the tripod fox.

#### Denny, a Mule Driver

Next month we print the first chapter of "Denny, a Mule Driver," a new continued story different in its nature from any that has heretofore appeared in the pages of The American Boy. It is a story of the Pennsylvania coal mines. It illustrates what a boy can do amid the most discouraging conditions, and how the faithfulness and heroism of a humble life may teach a lesson that affects a whole community for good. The story also strikingly illustrates how kindness to animals does more in making them docile, ob-dient, and willing servants of man than do harshness and cruelty. The story will run through three or four numbers of The American Boy, and is just the kind of a story that hoys will like and profit by.

HAD ALWAYS been

school teacher, who was

a hero in my eyes (because he had fought in the Civil War from '61 to '65 and had seen many great battles which he loved to tell about)—I had been told by these good people and by numerous Sunday-school books that it was not good for me to associate with "bad boys." I half believed that these good and wellmeaning advisers were prejudiced, and unjust to a lot of good fellows who only had bad habits. It always seemed to me, too, that the bad boys had a much better time than the good ones. When I was dressed till I was stiff, marching reluctantly to church with my good father, who was a constant and regular attendant at all church services, where, at the end of the pew flanked by his entire family, he dozed happily through every sermon, I often met the bad boys going barefooted to the river to fish and swim, or with ball bats across their shoulders, wending their way to the commons for a game of ball.

It seemed to me that somehow or other my parents misunderstood bad boys and that I was the sufferer thereby. I am sure I didn't understand the preacher, wide-awake as I was, any more than father did, asleep as he was. My feet scarcely touched the floor and the hard board seat with its straight back did not fit my youthful anatomy. My younger brother and I were separated by the width of my good mother, so that congenial companionship was out of the question. We sat so far forward I couldn't see anything but the preacher, who stood in so high a

I WENT ANGRY AND DIRTY TO BED

pulpit I had to look up to see him and he wasn't much to look at anyway. And if I dared turn around I looked square into the face of a big, frowning woman who appeared always as if she were dying to choke little boys.

No wonder. then, my mind ran off out the windows beyond the hard. frozen stillness

of the sanctuary to the beautiful river with its shady nooks where fishes bite, and its swimming holes with smooth rock bottom, and to the green sward of the public com-

mons where nature called with a million voices right into my listening, longing ears. No wonder, I say, that I thought God loved the bad boys and shut the good boys up in prison.

The time came finally when I rebelled. I would no longer be checked. I was as much entitled to enjoy life as anybody, and I proposed to exercise my right.

Of course, I selected a time for declaring my independence when my father was away from home. It was too much to expect me to conquer both father and mother at one and the same time. Mother was the weaker, and I would try her first. Once I got her broken to the new order of things I could tackle father; but not the two together.

Father was to be gone over Sunday. So Sunday was to see my emancipation. Saturday night was tub night. A big tub of lukewarm water and an all over bath from me, the oldest, to the little sister, the youngest.

I intended to go walnutting the next morning-Sunday morning—and whoever heard of a fellow taking a bath to go walnutting!

I rebelled against the bath and went angry and dirty to bed. I had overcome in the preliminary skir-

It was all arranged. Hank Jennings-bad Hankof bad family, bad name, bad morals, bad everything -but Hank Jennings, good ball player, good swimmer, good diver, good fisherman, had suggested that we go walnutting up the river some six miles where his uncle had a farm and a dandy lot of walnut trees just raining walnuts. It was then I made my declaration of independence. I was flattered by being asked by Hank Jennings. He and I didn't associate regularly. I was so good he didn't like me much, and he was so bad I stood in sort of awe of him. But he must have read my mind that Saturday. Maybe I looked sort of wistful when he talked about his uncle's walnuts and maybe he suggested Sunday to scare me. Anyway, I boldly accepted his offer, recalling that father was not at home and the only

opposition would be that of a sweet, pure-faced, little mother who was not nearly so big or strong as I was. Hank was to get a boat-borrow one, he said, though I think he really knew where he could get one more easily than by borrowing.

Sunday morning I was awake early, ate my breakfast bravely, replied haughtily to my mother's anxious question as to why I had not put on my clean clothes, all spread so nicely on the chair at the foot of my bed as usual Sunday mornings, by saying that I hated clean clothes and anyhow I could put them on later; then I stalked out of the dining-room, out of the back door into the yard, and thence to the alley by which I made a bee-line for Hank Jennings' home in the lower part of town on the bank of the

It was a beautiful morning. The town was quiet, so early. I was glad of it, for brave as I was I didn't care particularly to be seen walking down the alley to the river in my week-day clothes on Sunday morning-I. who always went to Sunday-school and church in the morning and the cemetery in the afternoon and then to call on my dear old grandmothernever quite so dear as when in after years I look back on her aged, wrinkled face, her withered hands, her helpless form propped in pillows, surrounded by her children and grandchildren who met regularly every Sunday evening in her room to hear her few words of affectionate greeting and carry away into their lives the benediction of her smiles-I, who was counted a good boy. No, I wasn't quite up to being seen just yet in my new character. But I would grow into it.

Hank was ready, and together we found the boat. Hank had to break a lock to get it, for someone had locked it to a stake, and Hank was put to some inconvenience, for, as he said with a grin, the owner forgot to give him the key.

It was a long row up the river. I did the most of the rowing. I preferred to. It was an honor to row Hank. He sprawled in the stern of the boat and told lies; I can't call them anything else—just plain lies about himself and other fellows of his set. I was interested. I didn't know then that they were lies. Hank chewed and smoked. I did neither. He offered to teach me but I wasn't equal to that yet.

Listening to Hank and handling the oars kept me busy, but we hadn't got a half-mile up the river ere I heard the church bells ringing for Sunday school. But Hank was in the middle of telling how his gang cleaned up the gang in the town across the river in a fight on the bridge, and the bells just gave me a little glimpse of mother and my younger brother and little sister starting for Sunday-school all spick and span and wondering and perhaps worrying over me, and then the story got exciting and I forgot them.

Out of sight, out of mind. The town was now far away around a bend in the beautiful old river and I was pulling hard against its strong current where, compressed between high hills, its waters piled deep. The farther we went the more rugged grew the scenery, the stronger the current, the harder the pull; then Hank took the oars, rolled up his dirty sleeves, bared his knotted arms, and fairly lifted the boat over the waters. How big and strong he was! How powerful to overcome things! How different from me with my pale skin, my thin, weak muscles, my limp, tired body. It was all because Hank did as he pleased and I did as the Sundayschool books told me all good boys must do-go to bed early never use tobacco, never use profane language, observe the Sabbath day to keep it holy, mind your parents, be good.

But now it was over! I could from this time on lead a life of independence, come and go as I liked, grow tough and strong and know things like Hank Jennings. I was tired of being good. From now on I would be-not exactly bad, but bad enough to be worthy of Hank Jennings' friendship and esteem.

By noon we sighted Hank's uncle's farm, stretching along the river bottom and up over the hills. It was near noon and I

our dinner, Hank?" asked timidly for somehow my voice sounded to me like I was inviting myself to Hank's uncle's dinner table.
"Dun know," said Hank, with a grin.
"Won't your uncle take us in?" I asked, a little sur-

"Where shall we get

"Not on your life," said Hank. "The old man's no friend of mine. If he catches us on his premises, look out for dogs.

"But he's your uncle, Hank. Surely your uncle wouldn't treat you like that."

"Uncle! Say, kid, let's drop the uncle. I hain't got no uncle. I was just stringin' you."
"But the walnuts! Whose are they?" I asked, be-

ginning to catch the drift of things.

They're ours, if we get 'em," said Hank. "Must we steal them?" I whispered, for I had not

yet become brave enough to steal. "No, of course not, you ninny. Walnuts isn't prop-

If they was hangin' on the trees and you knocked 'em it would be stealin', but if you picked 'en up off the ground it wouldn't. If you was going 'long over a man's land and you picked up a stone and put it in your pocket it wouldn't be stealin.' would it?" "No, I suppose not," I said feebly.

"Well, walnuts on the ground is no better'n stones. Old man Cooley don't use 'em. They're goin' to

"Then, why not ask for them?" I inquired, seeing a way out.

"Well, if you want them walnuts you'd better not ask. Jest go and take 'em. I tell you right now if you want to back out, just say so, and you set in the boat and say your prayers and I'll get the walnuts, but remember there ain't none of 'em your'n. If I'd known you'd turn chicken liver I'd come alone, or got some other feller. There's lots of 'em that'd been glad to come. But I always kinder liked you. I thought you had stuff in you. I always stood up for you when the fellows was for leavin' you out of things and I said you was all right only your old man was down on you. I picked you out for a winner against the odds. Now, you're goin' back on me."

"I am not going back on you, Hank. I am kind of kept down. This is new business to me; but I'll get used to it. I'll show your friends you didn't make any mistake. I am a good fellow, all right, and I'm with you now and for good. I'll shake hands with you on that."

"All right, pard," replied Hank, not stopping his rowing to take my outstretched hand. "I'll take your word. A word between two gentlemen is as good as a writin'."

We were now at the lower edge of the farm. The farm house was hidden behind an orchard. The walnut trees were halfway up the hill back of the house.

Carrying each an empty coffee sack Hank and I sneaked along a fence that ran up the hill, then crawled among the bushes till we reached the trees. Hank knew the spot well. He had been there before, and on one occasion had left as a souvenir with one

of Farmer Cooley's dogs a piece of his trousers. So Hank was cautious. His story of his race with the dog and his ignominious surrender of a part of his trousers and a little of his leg made me cautious,

An hour we spent in hulling the dead ripe fruit that lay in prodigal abundance about us, and piling them in little hillocks ready for the sacks.

All this time we had not had a bite to eat, though the excitement of the adventure and the glorious abundance of the "game" for a time made us forget

To drag the heavy sacks among the bushes and down the hill to the boat was no easy job, but it was accomplished without our being discovered. Two trips to the trees resulted in our boat, which was a small flat-bottomed affair, being filled half to the rim, so that when I took my seat at the rudder and Hank shoved her off into deep water and leaped on to the bow, she settled to within a few inches of the edge and for a moment I thought she was going down.

"Sit still and she'll float all right," called Hank exultingly, as he clambered to the oar seat and with a few vigorous but careful strokes sent the boat bow first into and down the current.

It was now the middle of the afternoon. sun set early in the valley, for the hills rose high from near the water's edge, and already dark shadows lay across the stream, warning us that, with six miles to go and a heavy boat, we had work before us if we would reach town by nighttail.

For a time Hank and I were silent. The shadows rapidly deepened on the water. The dead silence of nature, save for the measured stroke of Hank's oars. the spectral outlines of trees on the ridges of the hills, the chill in the evening air, and the gradual sinking of our heavily laden boat as the water seeped through her deep-sunk sides, oppressed me. Hank's silence was ominous, but I laid it to his being tired. as I was. I tried to whistle but my lips refused to pucker. I shifted my position and a little water splashed in over the rim of the boat.

"Sit still, you fool. Don't you see we're almost under water now?"

Yes, I did see it and it scared me speechless. From that moment I scarcely moved a muscle—I feared to breathe hard.

"Sit over that way. You're not in the middle of the boat. If you want to get home to your mother, quit loppin' over to one side," yelled Hank.

No soldier ever stood stiffer and straighter than I sat for the next half hour.

It was now quite dark. Only by peering intently could I make out the shore on either side. Hank had stopped rowing, for the motion of rowing endangered our safety; we were just drifting.

"How many of these walnuts do you think you're goin' to get?" asked Hank after a long silence.

I had been asking myself that question. Nothing had been said up to that time about a division. I didn't know, and said so.

"I'll leave it to you, Hank," I said humbly.
"Then you won't get any," he replied shortly.
"Oh, I guess I will." This was my reply in words but my tone of voice meant that I hoped I would or that surely Hank wouldn't be mean enough to keep them all.

"Well, you'd better guess again, for you're wrong. I've been sittin' here thinkin'. I proposed this trip, I found the boat, I did most o' the rowin', I found the walnuts, I made you pick 'em, and as far as I see you didn't do nothin' but grumble, and now you're sittin' here thinkin' as how you made Hank Jennings steal for you, and tomorrow you won't speak to me.

"Why, Hank-" I began.

"Thunderation! What's that!" broke in Hank before I had time to say another word.

For a moment each of us held his breath. Our boat was slowly circling around, as on a pivot.
"We're on a snag!" whispered Hank. "Quick, or

she'll go down. Out with the load, lighten her.'

The walnuts had been emptied from the sacks into the bed of the boat more than half filling her. Try as we could with two pairs of hands it was slow work throwing the nuts overboard, and every movement of our bodies caused her to ship water. Then to add horror to horror, for both of us were now badly frightened, the measured chug! chug! of a stern wheeler could be heard coming down the river. Then it occurred to Hank and to me at the same moment that it was the time for the night packet.

It took no prophet to tell us that no boat like ours

could live in the big boat's waves.

'Can you swim?" asked Hank, after a futile effort to lighten the boat in which I joined with an eagerness born of of desperation.

"Yes," I said feebly, "but not much. How far is it to land?"

"We're opposite Brokaw's farm as near as I can tell, but I don't know which bank is the nearest. We may be nearer one side than the other and a fellow is as likely to strike out for the one that's farthest off. It's a good quarter-mile to shore, prob'bly."

Hank was taking off his shoes. His coat had been laid aside at starting.

"Come, get ready, you ninny," he cried, seeing me stting helpless and making no move to save myself. "Get off your duds. We're in for it. It's sink or

"But I can't swim that far," I wailed. I knew it. for I had tried. I had never been a good swimmer. "Then stay with the walnuts. You can have 'em all," was Hank's reply.

The steamboat was now rounding the bend above. Her chug! chug! as now a fearful choo! choo! I could hear the swash of waters at her bow and the blow of her paddles and a moment later the lashing of the waves against the shores. "Good bye, little boy," shouted Hank, "I'll tell your

mother you'll be along some day," and with this he threw himself overboard and struck out for shore.

"Hank! Hank!" I called. "Save me, Hank, come back. I can't swim. Hank! Hank!"

I thought I heard an answer as I listened with my heart in my throat, but it was only a laugh that came back to me over the water.

Then I turned my attention to the steamer which seemed to be bearing down directly on me. Her furnace doors were thrown open. I could hear men shoveling coal and see two great blazes of light as if from two monster flery eyes. I had read that when the first steamboat went down the Mississippi the little pickaninnies on the shore thought it was the devil coming, and ran and hid themselves. They couldn't have been more frightened than I was just

In the alarm I felt I had not noticed that my boat, relieved of part of its load by Hank's jumping overboard, had swung off the snag and was drifting. It was not till jumping for one of the oars (for Hank had taken the other) and preparing to leap into the water that I noticed the boat give a lunge as if free. I knew now that it was only left for me to seize the oar and paddle for all that was in me out of the path of the oncoming steamer.

Throwing myself on to the stern seat I paddled first on one side and then on the other, my eyes fixed on the big engine of destruction that was drawing near-To my immense relief I saw the steamer bearing off to one side and felt that now I should not be run down. But the waves! Often 1 had rowed out behind the stern-wheelers in a stout skiff and had had the fun of bobbing up and down in the trough of the waves from the big stern-wheel, but this was different. My boat was half full of water and nuts. I had but one oar. It was inky dark. I was tired and weak from excitement and an empty stomach, not to speak of the labors of the long day.

In a moment I felt the swell lift the boat and then she sank into the hollow of the big, bow wave. Up she came again and then down, taking in at the same time, it seemed to me, a half a barrel of water. Another such deluge would sink her. I shouted.

"Hello! Hello! Help! Help!" but no help came. The steamer kept on her way, for a moment lighting up the river about me and giving me a glimpse of t. e shore, fifty yards away. The sight gave me courage. If worst came to worst I could swim that distance, but I would stick to the boat as long as she floated.

The stern-wheel of the steamer plowed deep into the water and sent away to either shore a succession of big waves into which I now plunged. There was no use of my rowing now. My weakened strength could not hold the bow across the crest of the waves. So rolling sideways into the first trough and then lifted to be plunged again my sinking craft obeyed her own sweet will, while I waited ready to leap, should she sink. It was a wait of but a moment when with a plunge she failed to mount an oncoming wave and I was knee-deep, then waist-deep in the water. I had taken everything off but my shirt and trousers, so grasping my oar in one hand I threw myself into the water and made a dash for shore. The water was cold, my teeth chattered, my arms and legs seemed numb and lifeless, the oar scarce floated its own weight and could not bear mine in addition. Was I then to drown?

Then it was I saw myself a coward. I had been afraid of my father's displeasure, but I had been

#### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 15- From the Governor of South Dakota

HON, CHARLES N. HERREID GOVERNOR OF SOUTH DAEOTA

The American boy, God bless him! He is the best specimen of the twentieth century civilization. He is the sentinel guarding the cross roads of human progress and in him centers the hopes of our country's future. Charles V. Herreid

ready to break my mother's heart because she was weak and a woman, and alone. I had been afraid of Hank Jennings because he was big and had no one to boss him. I had been afraid to stand up for what I knew was right when it came to a question of how to get the walnuts. I had been afraid to stand up for my father against the evil words of this young bully. I had been afraid to claim my share of the walnuts because it was Hank Jennings that disputed my right. I was a miserable coward and deserved to drown right there and then. But I would like to see my mother once more and my brother and sister. I would like to ask their forgiveness. But it could not be. I was going down-down in the black waters. then my feet touched bottom and I walked-rather tumbled, splashed, and floundered like a frightened animal, till I stood dripping on the shore and shivering like one with a bad attack of the ague.

The rest is soon told. How far I was from home I did not know, but I knew the river road and the direction. There was no moon and no stars, but for this I cared nothing. I was safe and soon I would be home.

I had gone some two miles when a lantern shone in the distance, and then came the sound of wheels.

The alarm had been given. My distracted mother had waited for me at dinner and then her Sunday tea had gone untasted. Neighbors had come in to inquire and go out wondering to search for me. Such a thing was hard to understand, "for I was such a good boy." Night fell and the whole town refused to go to bed till some explanation of my disappearance could be had and some relief brought to a distracted household. A telegram was sent my father and he was hastening home. Then Hank Jennings brought his story to town. I had been drowned! The news was kept from my mother. Men made ready to go by road and river to search for me. The men with the lantern I now met were some of the searchers.

Another hour and I was in my home. My mother lay prostrate on her bed. Kind women were minis tering to her. My little brother and sister had long before cried themselves to sleep.

It was the dearest, best home a boy ever had. I had gone out of it in the morning a rebel against all that is best and dearest in life, and had come back to it at night taught by bitter experience that a good father and a good mother are better masters of a boy's life than any Hank Jennings the world ever saw, and that, after all, a good boy doesn't have such a hard time of it as he sometimes imagines he does.

#### YOU OWE THIS TO YOUR MOTHER

To consult her and ask her advice in regard to whatever you are about to do, even though you have no doubt as to what your course should be.

To be on the lookout for every occasion to make whatever return you can for her years of sacrifice and planning for your happiness and well-being.

To defer to her opinions and treat them with respect, even if they seem antiquated to you in all the smart up-to-dateness of your college education

To do your best to keep her youthful in appearance, as well as in spirit, by taking pains with her dress and the little accessories and details of her

Not to shock or pain her by making fun of her religious prejudices if they happen to be at variance with yours, or if they seem narrow to your advanced views.

To introduce all your young friends to her and to enlist her sympathies in youthful projects, hopes and plans, so that she may carry her own youth into old age.

To talk to her about your work, your studies, your friends, your amusements, the books you read. the places you visit, for everything that concerns you is of interest to her.

If she is no longer able to take her accustomed part in the household duties, not to let her feel that she is superannuated or has lost any of her importance as the central factor in the family.

The boy who endeavors to pay back what he owes his mother is the one who will be most sought after by the people who are worth while, and be apt to make the most successful life.-- "Success."

#### YOUR SISTER

One can generally tell what a boy is by the way he treats his sister. It does a lad no good to tease his little sister, and it often does her much harm. especially if she is a nervous child. Perhaps you say: "I like her just the same, even if I do tease her." Then try and like her so much better than you already do that you will not care to tease her at all.

An objectionable paper once came to a boy. He glanced at it, and seeing the firm from which it came, was about to throw it into the stove. "Let me see it?" asked his sister. "I'll not let you see that," he said, and the paper was soon in flames.

Most boys are anxious to have their sisters appear ladylike, even if they are not always gentlemanly themselves. Some girls were behaving rather rudely at a church social and a boy was heard to observe, "I am glad that my sister was not one of them."

George Eliot has said in one of her poems: "And were another childhood's world my share,

I would be born a little sister there." Such a verse from the world's greatest literary woman speaks well for the young brothers-does it

not? I know of a lad who had his sister leave the yard in which the boys who were playing with him were talking in an improper manner.

Do you want to show your appreciation of THE AMERICAN BOY? Then try to get some one of your acquaintances to subscribe, or give him THE AMERICAN Boy as a Christmas present this year.

#### A BOY'S CHRISTMAS GIFT

By IDA LUCELIA BROOKS

Miss Leonard had consented the last day of school, to the children's earnest request, for a Christmas box on the plan of the Valentine box.

There were many whispered confidences, subject to frequent interruptions upon the arrival of the favorites, chief among whom was Nellie Owens, whose sweet disposition was her passport to general admiration.

Dexter Harland, the little newsboy, could not be induced to divulge his intentions. Joe Conners, who had bought a five-cent silk handkerchief for Miss Nellie, said he was stingy. The fact of the matter was this: There was another Nellie in the class who was just about as friendless as a child can be. She took offense readily, and her poverty was continually calling forth the taunts of her schoolmates. On this account she early developed into a "spitfire" and refused all advances. It was this little girl whom Dexter intended trying to make a little happler at the festive season.

Often, as he passed with his papers, he noticed how fondly she tended the few plants in her flower bed. Sometimes, unobserved, he dropped a slip of carnation or geranium over the fence, and saw it planted the following day; so he had decided to buy her a pot of freesias.

He made his purchase early on the morning of the last day at school, and as he was leaving the

store, he met Joe Conners. "What y' got?" asked Joe.

"What business is it of yours?" Dexter was angry at having encountered Joe, when he was trying to avoid everybody.

"Oh! it's for Nellie, is it?" the boy continued maliciously, catching sight of the writing on a slip of paper. Dexter turned it quickly before Joe saw the last name.

Before they reached the schoolhouse a number of boys joined them, thanks to Joe's efforts, and Dexter's face was flushed with vexation.

When two o'clock came and the gift box was placed upon the teacher's deak with Dexter's flowerpot beside it, there was not a boy or girl in the room who had not been informed that it was Dexter's and that Nellie Owens was to receive it. The presents were mostly inexpensive and, in many cases, chosen with little regard to taste.

Nellie Owens received all of hers with a pretty grace, from Joe's silk handkerchief to a dainty handpainted glove case. Yet, like the rest, she was impatient for the presentation of the potted plant.

At last, Miss Leonard took it into her hand Nellie involuntarily put her little foot into the aisle. "And this is for Nellie Marshall."

Every face was a study. A prolonged "Oh!" breathed from forty individual throats, added to the little girl's confusion as she walked to the front of

the room. Before she regained her seat, her face was crimson beneath the gaze of forty pairs of eyes, few of them expressing real pleasure in her goodfortune. Dexter was staring out of the window. Nellie Owens showed less disappointment than the rest, and before long felt real satisfaction in the turn affairs had taken.

Nellie set the flowerpot on her desk, opened the wrapper at the top, looked in, then, closing it, settled back in her seat, looking straight ahead with her mouth set defiantly as usual but with an undefinable something in the depths of her eyes.

That evening Dexter had his papers to deliver as usual. He encountered many gibes along the way, but occasionally he would meet a boy who would tell him that he was a "brick" or a "trump" or some other one of those curious names that boys like to he called by. Nellie Owens was in the garden and smiled sweetly as she took the paper.

Dexter had determined to go out of his way to avoid seeing the little girl for whose pleasure he had undergone so much, but, by some boyish impulse, he suddenly decided to take his customary route. He whistled in order to appear at ease, but stopped suddenly, realizing that she might think he was whistling to bring her out. He put his hand in his pocket, then took it out and, for the life of him, could not tell what to do with it.

Nellie was at the gate when at last he reached it. Involuntarily he raised his eyes and instead of dropping them he held them fixed on her face. He had never before seen such a happy expression there.

"Dexter," said the little girl, who seemed almost a woman now, "they are beautiful. I've seen them in the windows and wanted them so often, but I didn't have any idea that they were so sweet."

"I'm glad you like them," the boy replied, fumbling at his remaining papers and starting to move

"I've always liked you better than the other boys," Nellie continued frankly, "but I didn't suppose a boy could be as kind as this."

"It wasn't anything," he said, with an effort to appear indifferent.

"Yes it was. There isn't another boy around that would have put up with what I know you have had to, today-that is, not for me."

"The florist says not to give it much water," Dexter remarked, and hurried on for fear he would say something silly.

#### HIS MANUAL TRAINING

Dr. Andrew Wheatly Edson, one of the associate superintendents of the New York city schools, stepped into one of the manual training rooms of the city schools the other day. He saw the boys working with such vigor and vim that he could not resist the temptation of saying these very encouraging words:

"At your age, my young friends, I, too, had a course in manual training, but not with such pleasant surroundings. My father was my teacher, the tools I worked with were a bucksaw, a sawbuck and a slice of bacon rind. The material I worked on was the cordwood yearly piled in the cellar. I was not always as interested or as happy as you are here, but I can safely say that transforming those rough sticks into firewood gave my brain and muscles a training which has always helped me. I congratulate you upon your privileges."

#### TWO FACTS ABOUT THE **HOME**

There are two facts about the home that distinguish it, educationally, from every other social institution: the amount of time during which it exerts its educative influence, and the necessarily unprofessional character of those who constitute, so to speak, its educative corps.

In the first place, out of the first fifteen years of life, five are usually spent wholly at home, and out of the 8,760 hours which the children have to spend each year of the remainder, 7,760 are normally spent by them under the care and guidance of home; fewer than 1,000 hours being usually spent in school. In the second place, parents, as parents, are neither learned, nor professionally trained; generally speak ing, if they are skilled in imparting instruction they are self-taught, or "natural born" teachers. These facts help us to answer the question, What is the special responsibility or function of the home as an educational institution? It is clear that upon the home there rests a heavy and unshirkable responsibility for education. It is also clear that this education will have to do with superstructures. and with morality, taste, and religion rather than with intellectual training and knowledge; that the influence of home will for the most part be exerted through the activities and companionships of home life, and through the "unnoticed pressure of a moral world" which the home brings to bear on the boy, and to which the boy responds, in great part, by unconscious imitation, by forming tastes and habits, and in some degree also by consciously trying and willing to "improve," to "remember" or to obey. More briefly, the home accomplishes its ends, educationally, not mainly by preaching, still less by setting lessons, but simply by giving old and young a chance to live and learn together.

From this analysis it follows that that type of home will have the greatest educative efficiency which provides a home life which is rich, and moral, and real. To be rich, home life must be full of activities and interests; to be moral, it must be organized: to be real, it must be vital, personal, and sincere,-it must be life, and not merely something

wearing the look of life

# THE JOY CLAIM A STORY OF THE NEUTRAL LANDS FOR CHRISTMAS CIFTS AWARDED FOR CHRISTMAS

YE DON'T MEAN Clay County, Missoury, I reckon," said Simp-kins, in a changed

In Three Parts 🕸 Part II

"That's what I do."
"Why, thar's where I'm from," responded Simpkins. "Didn't know old Colonel Simpkins uv Oak Ridge, I reck-

on?" Like a book. He's one uv the best lawyers in the state. Won a lawsuit fer me that I had with old Ben Holden over a cow."

"He's an uncle of Roger Simpkins, cap-tain uv the Green Valley League," re-plied Simpkins with an air of pride. "You don't say so?"
"That's a fact. Did ye know Amos

"Thet lived on Soup Creek?"
"Yes."

"Know him? Stayed at his house many a night when I was runnin' a freightin' team. Do ye remember the big log rollin' he had about ten years ago?"

"Wal, I war thar. Mebby ye remember thar bein' a big fightin' bully thar by the name uv Samson Chuggs?"

by the name uv Samson Chuggs?"
"Saw him oncet at the county fair."
"I'm the feller that gave him the whippin at the log-rollin, and throwed him into Soup Creek."
"You surprise me, by gosh, ye do."
"I surprised Samson Chuggs, I reckon," chuckled Babbett. "Ye didn't know the Fikes, did ye?"
"What, Bud an Jake?"
"Them's the fellers."
"Yas; Bud uster live only a mile from

"Yas; Bud uster live only a mile from e. He war a powerful man to swap

"Powerful! He swapped me a horse oncet that war blind as a mole, an' I didn't find it out till the beast walked inter a gully with me, an' broke my colar bone. But Bud was a good neighbor."

bor."
"Thar warn't a better one in Clay

county."

"I'm perlite, by gosh, I am," said Mr. Babbett. "Bin keepin' ye standin' out thar. Jist come in an' take a cha. And quickly unbarring the door, he threw it open to admit his visitor.

"Thank ye," replied Simpkins. "Jist gimme a cheer out hyar by the door an' I'll have a little chat with ye."

Mr. Babbett brought a chair and after hynding it to his visitor seated himself.

handing it to his visitor, seated himself in the door.

The two men resumed their conversa-tion, and the minutes slipped away un-noticed till a quarter of an hour had

Presently Pete Davis and three of the leaguers dismounted and approached the

"Hallo, thar! What aire ye doin', Simp-kins?" asked Peter Davis as he came up. "Jist settin' hyar taikin'," replied

"Jist settin hyar tarkin, replied Simpkins.
"Has he surrendered?" asked Davis.
"Thar ain't no surrenderin' ter do," replied Simpkins.
"We'd like ter know the reason thar ain't," returned Davis.
"That's whatever," sanctioned one of the men

the men.

"Gentlemen," said Simpkins, rising and confronting the four men. "This gentleman is from Clay County, Missoury."

"What's that got ter do with our business with him?" asked Davis.

"It's got a good deal ter do with it, I low I'm from Clay County, an' I want ye ter distinctly understand it."

"We war sent hyar by the league ter arrest him."

"Yas, but you warn't got also."

arrest him."

"Yas, but you warn't sent along ter give advice. I reckon I'm the boss uv this committy, ain't 1?"

"You bet," sanctioned Jack Baggs, coming forward. "I ain't in fer harmin' a man as long as he ain't done nothin'. Mr. Babbett hain't contracted with ole Joy yit, an' we don't know that he intends to."

"That's right." spoke up Henry Rab-

"That's right," spoke up Henry Bab-bett. "I jist claim the right ter do as I please with my own business, an' the rest uv ye can do the same."

The men remained silent, looking to their leader.

their leader.

"Fellows," said Roger Simpkins, "I am captain uv this League, an' command ye ter all mount yer hosses an' ride home. I'll take care uv the business regardin' Mr. Babbett."

"That'll suit me." responded Baggs, moving away, followed by the other three.

"We'll hold you responsible for him

"We'll hold you responsible for him." said Peter Davis, as he mounted his horse, "and I shall call on the league termake an' investigation uv yer actions." "Mebbe ye'd better do the investigation now," said Simpkins, in a bantering tone. "I think I could explain matters ter ye

in about two minutes."

Peter Davis made no reply to this, but muttering something under his breath, he galloped away, followed by his companions

Seating himself by the door Simpkins again fell to conversing with his new-made acquaintance from Clay County, and it was far into the night before he took his leave.

The days wore slowly away at the Babbett cabin without its inmates being further molested by any member of the league. It was evident that Simpkins had used his influence to bring the leaguers to desist from further troubling the Babbetts, for the present at least

"We'll jist let matters rest as they re," said Mr. Babbett to his wife one aire.' aire," said Mr. Babbett to his wife one evening as they sat in the shadow of the cabin. "I don't want ter contract with ole Joy for the land if I ken help it, so we'll wait, an matters will be settled before long, I reckon, an then we'll know what ter do."

"I do hope the lond question will be

"I do hope the land question will be settled soon," replied Mrs. Babbett. "It's mighty disagreeable ter live in a place where the neighbors aire all set against a person." a person.

"I reckon they ain't goin' ter bother us much, now that they know they hain't got no child ter deal with. Some say the land question won't be settled till next symmer. That will give us a better chance ter pay fer the claim. The three

league had decided at its last meeting not to molest the Babbetts as long as they remained neutral on the land ques-

they remained neutral on the land question.

"We orter all stick tergether an' fight ole Joy to the last," he said, "but if a man thinks different, I ain't in favor uv tryin' ter drive him inter believin' as I do."

"Usin' force ain't a goin' ter do no good," observed Mr. Babbett, reflectively. "As I understand it, the Neutral Lands have already been sold ter Joy—except the claims that was took before the 10th uv June, an' unless Congress decides that the sale war illegal, thar ain't

except the claims that was took before the 10th uv June, an' unless Congress decides that the sale war illegal, thar ain't no remedy but ter submit. I tell ye Congress has got ter settle it, an' not the settlers."

"Mebby ye're right, but we're goin' ter keep on opposin' uv the measure givin' Joy the land as long as we kin."

And this was the sentiment of a large number of the settlers, their object being to agitate the matter in such a manner as to influence Congress to decide the question in their favor.

And so matters went on, and leagues were rapidly organized throughout the counties of Crawford and Cherokee.

Meantime the claim-holders were busily engaged in making improvements, building fences, and fixing up their cabins for the coming winter.

ins for the coming winter.

Most of the settlers had come too late to put in a crop, so feed for all kinds of stock threatened to be scarce. Mr. Babbett had some eight or ten head of

Babbett had some eight or ten head of horses and cattle, and he at once set to work to provide feed to last them through the winter months.

He spent two weeks in cutting the luxuriant grass that grew on the prairie, and as fast as it cured in the sun, raked and stacked it, while Martha assisted him as far as she was able. Joey also made himself useful by carrying water from the spring to the hayfield. Mrs. Babbett attended to the stock, milked the cows and performed the household duties. duties.

After the hay had been stacked, the

Martha urged her horse into a gallop as the darkness deepened, a strange feeling of loneliness coming over her as she found herself alone in the night on the

found herself alone in the night on the broad plain.

An indefinable feeling of fear took possession of her as she drew farther and farther away from home. The scream of a night bird came from a dark ravine, and over a swell in the prairie the barking of a coyote sounded sharp and distinct on the evening air. But the feverflushed face of her father rose before her, and setting all dangers that might lurk in her path at defiance, she urged her horse onward.

It was almost midnight when she returned with the doctor. Her father had

turned with the doctor. Her father had fallen into a feverish sleep, in which he muttered incoherently, and tossed rest-

lessly upon his pillow.

The doctor examined the patient and gravely shook his head.

"It's a bad case of malarial fever," he id, "and he must have the very best said. of care.

He remained till daylight, watching over the sick man and administering the medicine with his own hands. Then he took his leave, promising to return on the following day.

In the evening Roger Simpkins came over. He was much surprised to find Mr. Babbett so ill, and he remained at the cabin all night, watching by the sick man's side. From that time on he or Jack Baggs was at the cabin every night and rendered all the help in their power. And so the days wore on. In spite of the doctor's skill Mr. Babbett grew gradually worse, and it was soon evident that ually worse, and it was soon evident that he could not last many days longer. Mrs. Babbett moved about the place

Mrs. Babbett moved about the place as one in a dream, scarcely daring to think of the dark future.

Every morning Martha brought some fresh wild flowers from the prairie, and placed them on the table near the bed. Then she would take her station by her father's side, and faithfully administer to his wants. to his wants.

He was restless, and talked in a

AS THE DARKNESS DEEPENED, MARTHA URGED HER HORSE TO A GALLOP

It was five miles to the nearest body of timber on Can Creek, and the labor of cutting and hauling it from such a distance was an item of no little consequence.

Mr. Babbett cut the wood, while Martha and Joey drove the team and hauled it to their home. They could only make two trips in a day, and it was over two weeks after beginning the work before it was completed.

A corral for the stock was next built, with a long shed on the north, covered with hay to protect the horses and cat-tle from the rain and snow.

"It ain't much uv a stable for the hosses," said Mr. Babbett, "but it's the best that we ken do now.

He next set to work to fence a patch of ground south of the cabin, but before he had fairly begun the work he was stricken down with a fever. He grew steadily worse from the first, and it was soon evident that the service of a physician was necessary.

"We must git some one ter go ter Newtral City fer the doctor," said Mrs. Babbett. "Mebby we could git Mr. Simp-Babbett. "Mebl kins ter go if-

"Never mind, I'll go, mother," said Martha. "I know the way, and I shan't be gone long," and she began to make preparations for starting on her journey. Newtral City lay ten miles away, across a strip of sparsely settled prairie, and as the sun was already near the western horizon, Martha knew that the larger portion of her journey would have

to be made in the night.

The sun had gone down and darkness was fast settling over the broad prairie

supply of winter wood was the next to strange, incoherent manner at times, be looked after. which brought the tears to the eyes of his child.

Sometimes he would talk as if in conversation with the leaguers. "I ain't goin', Peter Davis," he would say. "Thar ain't no law ter drive an innocent man are the bound of the cutter bear unless the bound. from his home. Get outer hyar unless ye want ter git inter trouble! A man that's fit four years in the war ain't goin' ter run at the barkin' uv a kiote!"

Then he would talk about the claim. always displaying a child-like faith that the Government would eventually ad-

the Government would eventually ad-just the matter to the good of the set-

just the matter to the good of the settler.

"It's got ter be argied," he would say, resignedly. "It takes a long time ter argy anything in Congress; but they ain't goin' back on a man that's fit four years in the war. Congress'il settle it—Congress'il settle it." And so he would go on, always confident, even in his delirious moments, that the Government would make everything right in the end. One evening the fever went down, and the little family, gathered about the bed, saw that the sick man was fast sinking into his last sleep. He opened his eyes, and spoke in a feeble whisper. He was perfectly conscious now, and the watch ers leaned forward to catch the words that he might utter.

"Im goin', Nancy," he said, addressing his grief-stricken wife, "an' I've got ter leave ye hyar alone with the two childer—but stay on the claim—don't give it up—the Government ain't goin' ter he hard on ye—if ye let 'em know I fit in the war. They ain't goin' ter take the claim from ye, Nancy—it'll all be right yit. It's got ter be argied—but—but Congress'll settle it."

He closed his eyes, and for a long time

PLEASE MENTION THE AMERICAN BOY WHEN ANSWERING ADVERTISEMENTS

It was a week later. On a grassy knoll north of the little prairie shanty, is a new-made grave—the last-resting place of Henry Babbett.

Gathered in that desolate home, the grief-stricken little family, seeing only a dark future before them, "take up the burden of life again."

"Heaven only knows what we're goin' to do to get along now," said the sorrow-crushed widow. "We can't work the claim—an' if we could we hain't got nothin' to live on till a crop could be raised next summer. Thar's nothin' fer us to do but to move to some town an' live—where we can git work at sewin', cookin' or somethin' of the kind."

A sob escaped Martha's lips.

"I—I don't want to leave the claim," she said in a choking voice. "I can do the work—and—and—we'll get along somehow."

But Mrs. Babbett shook her head, and could only see the dark side of the fine

But Mrs. Babbett shook her head, and could only see the dark side of the fu-

But Mrs. Babbett shook her head, and could only see the dark side of the future.

"I don't see what we can do, child," she said despondingly. "Thar ain't much work that we can do on the claim, an it's a mighty pore out we'll make a' tryin' to run a farm."

But Martha was of a different turn of mind, and although the doctor's bill and the funeral expenses had left them almost penniless, she did not despair, and at once set to work to devise some plan by which she might earn a little money, so as to enable them to remain on the claim. To abandon it now would be an irreparable loss. That they would be unable to pay for the claim seemed almost certain, yet if they could only hold if a little while, they might be able to sell their right to it for a good sum. Then there was the three hundred dollars which they could get by the next summer. This would go a long way toward paying for the claim, and if they could only succeed in raising a crop the next year Martha felt hopeful of being able to pay for the claim if given a little time.

Among the things which Mr. Babbett

Among the things which Mr. Babbett had brought with him from Missouri was a small cast-iron sorghum cane mili, rightly thinking that it would be of good service in the new country he was

rightly thinking that it would be of good service in the new country he was coming to.

One day while moving some lumber that was stacked under the horse shed, she came across this mill, and in a moment a plan for putting it to use came into her head.

"Mother," she said, on returning to the house, "nearly all the oldest settlers about here have patches of sorghum cane, but there isn't a mill in the neighborhood, except ours. Now why couldn't we make up their cane on the shares—half for half—as old Blodgett used to do in Missouri?"

"Why, child, how could we with no one to help us? and we have nothing to pay any one to help us git it started."

"I have studied the matter over and think we can manage it," replied Martha. "You know father made up our sorghum in Missouri with only you and me to help him, and I don't see why we couldn't go on with the business with a little aid. Now, there is Mr. Williamson; he has a large patch of cane and three boys that are doing nothing most of the time, and I think we can get one or two of them to help us through the season. You see by the time they work out what will be due us for making up much." this cane, we won't have to pay them

out what will be due us for making up this cane, we won't have to pay them much."

"Why, Martha," answered Mrs. Babbett. "you orter be a man, I'll declare you ort, you've got sich a good head fer plannin' out things. Mebby we can do as you say, and if we can it will be a power of help to us."

"We'll do the best we can, anyhow," said Martha, cheerfully, "and I don't see why we can't get along some way."

Martha at once set to work to carry out her plan. She visited every claim in the neighborhod where they had cane, and soon had enough work engaged to keep the little sorghum mill running till cold weather. She also visited Mr. Williamson, and found him only too glad to allow two of his boys to assist at the mill as payment for making up his cane. Roger Simpkins and Jack Baggs came over and aided in setting up the mill, and in less than a week it was in operation.

The venture proved a success beyond

The venture proved a success beyond either Mrs. Babbett's or Martha's expectation. The fame of the Babbett sorghum mill spread to other neighborhoods, and many settlers who had come, came from a long distance to have it made into molasses; but owing to the limited force at work at the mill, they would have been turned away had they not volunteered their services with the work. So it happened that the little mill was kept going night and day throughout the season.

When at last the season's work was completed the Babbetts found that they had over two hundred and fifty gallons of sorghum after their expenses for help had been paid, and as it was selling at from fifty to sixty cents per gallon at the nearest town the sum realized by its sale seemed quite a fortune to the little family. hoods, and many settlers who had come,

family. "I reckon I'll jist have ter turn all the managin' of the place over ter you, Martha," said Mrs. Babbett. "You seem ter know jist what ter do an' how ter

do it And Martha accepted the situation, and And Martha accepted the situation, and it was surprising to all the neighbors to witness the amount of work she accomplished. During the winter that followed, she managed to find some profitable employment while many others were idle. She did not look for something at which she could make a large sum of money at a bound, but was content with small results, always seeing great possibilities in the humblest occupation. She did hauling and odd jobs with her team for claim holders who had no team, and seeing that there was a large amount of travel on the old military road between Fort Scott and Baxter Springs, she conceived the idea of running a huckster's wagon and selling articles of provisions and feed to the immigrants, and had soon established a profitable little business that lasted through the winter.

With spring came a flood of immigrawas surprising to all the neighbors

he lay as if asleep. Then as the sun threw its last golden blaze across the level plain, he breathed his last.

It was a week later. On a grassy knoll, north of the little prairie shanty, is a new-made grave—the last-resting place of Henry Babbett.

Gathered in that desolate home, the great-stricken little family seelers only minent.

tion, and the unsettled portions of the Neutral Lands were rapidly taken up by eager claim hunters. As spring advanced, the counties were rapidly settled up, the strife between the settlers and the anti-Joy Leaguers increased to an alarming extent. The greatest agitation prevailed throughout Crawford and Cherokee counties, and a bloody warfare between the opposing factions was imminent. minent.

So intense was the excitement, and so frequent the deeds of violence, that the Governor of the State was compelled to take steps to quell the hostilities, and on the 31st of May, 1869, the following proclamation was issued:

on the 31st of May, 1869, the following proclamation was issued:

Topeka, May 31, 1869.

Whereas, Official information has been received at this office from the local authorities of the counties of Crawford and Cherokee, to the effect that the execution of the law is impeded, and that personal security and private property are endangered by the acts, and the public peace disturbed by the threats of lawless men in said counties,

"Now, therefore, I, James M. Harvey, Governor of the State of Kansas, and charged by the Constitution to see that the laws are faithfully executed, do issue this my proclamation, enjoining each and all the people within the counties aforesaid, to yield due obedience to the officers of the law, to cease all acts of violence and lawlessness, and to look to the properly constituted authorities for the redress of grievances and the determination of legal rights.

"JAMES M. HARVEY."

Shortly after the Governor's proclamation bad heer issued on the contained and the determination of legal rights.

Shortly after the Governor's proclamation had been issued a company of troops was sent to the Neutral Lands and quartered at Fort Scott, and, later on, three other companies of infantry and a detachment of artillery, equipped as cavalry, were sent to assist in quelling the disturbance.

To the leaguers the presence of the

To the leaguers the presence of the troops was especially galling, and they were loud in their denunciation of the Governor and the President of the United States for the action they had taken Governor and the President of the United States for the action they had taken in the matter. But the presence of the soldiers served to check the impending warfare, and much of the taik indulged in by the leaguers was mere bombast and empty boasting. It was soon discovered that while they were keeping up a pretended war with the Joy faction, many of them were secretly contracting with Joy for their claims.

After the death of Mr. Babbet, the family had not been molested by the leaguers. During the spring months Martha broke twenty acres of soil which she and her mother planted in corn. As corn when planted on soil needs no cultivating Martha found time to make some improvements about the house and sheds.

Just east of the Babbett cabin was a

house and sheds.

Just east of the Babbett cabin was a small ravine, skirted by a chain of low flint hills, with here and there a stunted oak and a scattering growth of small sassafras bushes. In this ravine was a small spring which furnished a supply of excellent cool water. But during the dry season in the latter part of the summer the spring had dried up. This was mer the spring had dried up. This was a serious matter to the little family, as that was the only place where water could be obtained on the place without going to the slough nearly half a mile

away.
"Mother," said Martha, when she found

"Mother," said Martha, when she found that the spring had ceased to flow, "I am going to sink a hole in the bed of the spring. I think there is water a little way down, and we must find some water nearer than the slough."

"I do hope we can do so," responded her mother, "fer goodness knows ter bring it from the slough would be a power of work."

The next morning by sunrise Martha was busily engaged with pick and shovel digging in the dry bed of the little spring. By noon she had sunk the hole full three feet, and was rewarded by seeing small quantities of water oozing from the sides of the well.

"I think I can finish it this evening," she said to her mother cheerfully, when she returned to the cabin for dinner.

As soon as she had eaten a hurried meal, she returned to work. She found quite a pool of water had collected in the hole in her absence, and after bailing it out with a small tin bucket, she set to work with a will.

The earth through which she was digning was of a blush-gray, mixed with a shelly flint that yielded readily to the pick.

The evening sun was low in the horizon, and she had sunk the well to a depth of nearly six feet when her eyes caught the gleam of some dull, bright substance

eyes caught the gleam of some dull, bright substance which her pick had brought up from the bottom. Stooping, she picked up what ap-peared to be a small grayish rock, but it was of such weight as to cause a look of

as to cause a look of astonishment to cross her face. Turning it over, she saw where the pick had chipped off a piece, re-vealing a bright lead-colored

ore.
"Why, it's a piece of lead,"
she said in surprise. "I wonder how it came to be so deep in the ground.

in the ground."

She struck it with her pick, but instead of receiving a dent as she supposed it would, it flew into a dozen pieces, breaking into little cubes that gleamed like silver.

The pick fell from her hand and for several moments she

The pick fell from her hand and for several moments she stood gazing in silence at the strange pieces of ore. Then she climbed out of the hole. "Maybe I've found a silver mine," she muttered, trembling with excitement. "I wonder if mother would know what it is—"
"Hallo! what have yer got thar, sissy?"
She started at the sound of the voice near her, and look-

the voice near her, and looking up, beheld Peter Davis standing before her, his eyes fixed upon the ore in her hand.

#### President Roosevelt and School Athletics

The President Approves of Their Promotion in Connection with Deportment.

tion in Connection with Deportment.

American boys are greatly interested in an Associated Press dispatch to the effect that President Roosevelt has accepted the honorary vice-presidency of the Public Schools Athletic League.

In accepting this office, the President has written the president of the association, Gen. G. W. Wingate, expression of his approval of "the promotion of athletics among school children," which is the object of the organization.

He is quoted as saying: "I feel that in promoting athletics among school children along the sane and healthy lines it has followed a service of the utmost importance is being followed. I see that you allow no boy to compete in your games who is not up to the average in studies and deportment, and that you seek to impress upon them the fact that part of the character of every honorable athlete is to despise all that is mean or base. It is a great dist.dvantage to a boy to be unable to play games and every boy who knows how to play baseball or football, to box or to wrestle has, by just so much, fitted h'mself to be a better citizen." has, by just so much, fitted himself to be a better citizen."

It is said it will require 1,500,000 freight cars, or a train 12,286 miles long, to haul the grain crop to market this

the promise he didn't know there was going to be such good fun at the store. When old Day told stories time always went quickly, and the boys in

always went quickly, and the boys in the store were sure to forget. When Jimmy Williams came out of the store and found it was dark he was sur-prised. He thought it was little more than sunset. His home lay just three miles away, and directly across the wide marsh. During the afternoon a yellow, October haze had settled over the hun-dreds of leave and hovertocks. dreds of barns and haystacks, but just about sunset this had been driven back over the hills by a keen breeze from

about sunset this had been driven back over the hills by a keen breeze from the sea.

"It's blowin' stiff, Jim," said one of the boys who came out of the store with Jimmy. "Better come up with me an' stay all night. Wouldn't wonder but there'll be a big tide tonight, too."

Jimmy hesitated a moment.

"I'm not scared," he said, "an' as for the dykes, they've stood the tide for thirty years, an' they're not likely to go down tonight."

Parts of eastern Canada are much like Holland. The sea must be kept out by dykes. The marshes, in some parts, are ten miles wide. Of course a break in any part of the dyke means the flooding of hundreds of acres of hay land. The people live on the higher lands, to be out of the reach of these floods.

As Jimmy said good-night to the other boys and start d toward the march he was not sure but that there had been times when he felt braver. It is certain he wished he had started for home earl-

was not sure but that there had been times when he felt braver. It is certain he wished he had started for home earlier. He saw the wind was rapidly increasing, and before he had gone the quarter mile that brought him to the edge of the great meadow, there were times when the hierce gusts that pushed against him, brought him to a standstill. He remembered, too, that it was full moon and high tides now. The night before when there was no storm, considerable water had lapped over the dyke in places. Now the wind was roaring in from the bay and the tide was sure to be higher. But it was full ten miles around by the highland road, and to go that way would show that he was a coward. All the boys at school would laugh if they found it out.

ard. All the boys at school would laugh if they found it out.

"I'll be over before it's high water anyway." Jimmy said to himself. Then he broke into a run.

But to run against a gale of wind sweeping in from the sea is not easy. In ten minutes Jimmy was warm and panting. He found that to run was impossible, that is, to run steadily. The wind, finding little else on the marsh to obstruct it, seemed to put all its force upon him. But Jimmy bent forward and met every onset bravely. In the lulls he made good broggess; at other times it met every onset bravely. In the lulls he made good progress; at other times it took all his strength to enable him to hold his own. But he was strong and stout, and the thought never once came

stout, and the through. The stronger and to him to go back. The stronger and louder the wind the greater his determination. He must get home. He had promised to come and they would be anxious about him. Of course his mind was mainly on the flerce storm about him, but now and then other thoughts him, but now and then other thoughts drowned." So if Jimmy suffered, he also learned.

erowded in.
"Why didn't you do as you said you would and so home early?" a sharp, taunting voice seemed to say now and

He had been on the marsh perhaps half an hour when he came to something that surprised him. Jimmy knew there were no barns near the road across the marsh, yet he suddenly came upon one. A group of cattle had gathered in the lea of it shop in the village where he lived, learn-

of cattle had gathe for protection. It flashed on Jinmy's mind that he was lost. In the hurry and dark he had missed the road. What was he to do? He felt his heart pound fiercely in his breast, then he was off again. was off again.

To get home, and To get home, and soon, was the one thought that possessed him. Every rush of wind had before given force to the voice that chided him from within; the new discovery that he had

within; the new dis-covery that he had lost his way gave double keenness to its meaning.

It was only a few moments after he had left the barn, when above the when, above the

ing to his knees, then above them, and a moment later to his armpits.

Just as he was losing his footing something swept against him. He clutched at it desperately. For a moment it seemed to elude and pass him. There was nothing now upon which his hands could fasten. Then something like a partly raveled rope swished across his face. The next instant he was gripping something firmly, with both hands.

Some moments passed before Jimmy realized what had happened. But the situation was soon full upon him. Even on a dark night, one can see for a little distance on the water. Peering shead he saw two great curving horns above the water, and nothing more; then a big wave passed over them and he knew he had hold of the tail of a cow.

Jimmy's position was a strange one.

Jimmy's position was a strange one.

He could not think it possible. Where was he? How long would his strange pilot be able to hold out? Was she on a proper course? Would she reach land or be carried to sea?

He was well aware that cows had been

He was well aware that cows had been known to swim long distances, and that they had saved themselves by swimming when the dykes went down. But it was not at night, nor in a storm. And the distance to high ground, too, might be great. Then there was the fierce set of

distance to high ground, too, might be great. Then there was the flerce set of the current. Might not the very next wave be the one that would end the flerce, brave struggle for life.

Jimmy Williams was young and strong; he had never been sick a day in his life. He had never thought of death. But there, with the angry waves about him, came to Jimmy Williams thoughts, the most serious he had ever had, and most of all was the thought of his failure to keep his promise. Was he fit to die?

At times he felt he was to be saved,

times he felt he was to be saved, that the cow's uncrring instinct would take her safely to land. Then again would come the thought of the peril he was in. Then, raising his voice, he shouted, but the wind savagely snatched

was in. Then, raising his voice, he shouted, but the wind savagely snatched away the sound so that he scarce heard it himself. The waves blinded him; the salt, muddy water choked him and clogged his ears. He could hear the strong, steady pound of the cow's feet in the water. He felt at times like shouting to her, "Courage!"

The waves now were rising higher There was a longer roll to the swell. Ho had hoped the rush of water was bearing them up the marsh. Why, then, was the swell increasing? He feared his strange ship was going down; what if she should sink? Suddenly his feet swung forward, and, joy unspeakable, they touched ground. The next moment he was by the cow's side. He felt her sway and quiver; the next instant with a great groan she lurched backward and an oncoming wave hid her from sight.

from sight.

Jimmy Williams still lives in a house on the slope above the wide, Canadian marsh. But he has new views of right

roar of the wind Jimmy became sure he heard another sound. He stopped, and at that instant a new terror shot into his mind. The dyke was down and the sea was coming!

For a moment Jimmy stood riveted to the spot. Then the rush of cold sea water a bout his feet nerved him to ac-

#### A Word for Parents

The Board of Health of New York City has discovered that out of fourteen thounas discovered that out of tourteen thou-sand school children examined by doc-tors, six thousand had something the matter with them. Almost four thou-sand were deficient in eyesight; nearly as many had bad teeth, and a very big percentage showed deformities, skin dis-eases, pulmonary troubles, and acute ner-yousness.

eases, pulmonary troubles, and acute nervousness.

Doctors, school teachers, and mothers generally agree that the school hours are long enough, and that there should be no extra study hour required of the child after school closes. The strain of the home study hour is too hard on a child who is ambitious for school honors, excitable, or nervous. Quiet is almost impossible in the ordinary home. Parents very seldom trouble themselves about the light by which their children study; desks and chairs at home are not proportioned to the size of the child. Parents are inordinately proud of the precoclous, bookworm habits of their small son. They permit him to read and study because they think he is a sort of genius when he ought to be turned out of doors and made to run and to breathe fresh air.

#### The American Boy Legion of Honor (Open to all Boys Everywhere)

The American Boy Legion of Honor Badge is awarded (1) to boys who do heroic acts, (2) to boys who, in any term of school, ending on a date since Sep-tember 1st, 1905, have received the highest average term grade in their classes in all studies and (3) to boys of ten years of age or over whose record for school attendance is perfect for the time they have been in school, or for the last five years.

LEGION OF HONOR ROLL.

#### BOYS AS MONEY MAKERS

#### Do This, Boys

You see a great many things in THE AMERICAN BOY about how boys can make money. Some of these things you make money. Some of these things you think not practical. Sometimes the directions require that you invest some money; sometimes the directions are only applicable to boys in certain circumstances. Here is a scheme that any boy or set of boys can work, unless perchance they live in a wilderness where there are no neighbors.

Two boys in the town of Wilmette Illi-

there are no neighbors.

Two boys in the town of Wilmette, Illinois, made up their minds that every family, particularly at certain seasons of the year, as in the fall and spring, had a call for men or boys to do odd jobs. Every householder knows that there is often a demand for someone to do tinkering, or running errands, or fixing up the yard. Sometimes it is hard to get anyone to do this kind of work. These two boys determined that they would advertise themselves as in the business of "odd jobs." They went about it in a businesslike way by having printed a card two by three and a half inches, reading as follows:

E. Panushka Tel 1510

H. R. Kramer Tel. 502

ODD JOBS

WILMETTE.

P. O. Box 35 or 172

ILLINOIS.

These cards were circulated from house to house with the result that the boys had all they could do out of school hours and people were relieved of the necessity of hunting for help of this kind.

Many of you boys wonder how you are going to get your dollar to renew your AMERICAN BOY subscription. If you can't make your dollar out of this kind of business in a short time, then you are poor sticks.

The information regarding this scheme was sent us by one who signs himself as "An old-time friend of THE AMERICAN BOY," Mr. A. L. Warner, of Chicago.

#### How Willie Made Money

Little Willie Jones' mother had been in the habit of giving him spending money every day. One day mother told Willie that he was getting too old and big a boy to be spending money for candy, and if he wanted any more money he would have to earn it himself. But Willie semed to be more prosperous day after day. One day his mother noticed a lot of children yelling and shricking in the back yard. Upon investigation she found Willie surrounded by the admiring children and this sign upon the playhouse:

"Willie Jones Will Eat

1 small green worm for 1 cent. green worm for 2 cents, 1 small fuzzy worm for 3 cents, 1 large fuzzy worm for 4 cents, 1 small green toad, 10 cents. 1 large green toad, 25 cents."

#### Young Poet and Photographer

Clay D. Woodcock, Maria, Pa.. age 15, sends us the accompanying picture, which he entitles "Deeply Interested." Clay is the photographer who took the picture. He sends us also some of his own verses entitled "Autumn." We quote three verses as samples of the whole, and our readers will agree with us that the boy is something of a genius.

> "The birds are going southward.
> The corn is turning brown,
> And the gaunt old forest trees Their fruits are dropping down.

And early in the autumn,
The children we can see
As on their way to school they go,
To learn their A B C.

By all of these pretty signs The lovely days are here,
With summer's best of beauty,
And autumn's best of cheer."

#### For the Business Boy

Here are some rules which appear in a circular issued by one of the largest establishments in Chicago. They are full of stimulating suggestiveness to the young man who is determined to push along on the highway of life, and to make a success of his journey:

Be courteous.
Be an example. Eliminate errors.

Develop resources.

Master circumstances. Master circumstances.
Anticipate requirements.
Recognize no impediments.
Work for the love of the work.
Know both sides of the question.
Act from reason rather than rule. Be satisfied with nothing short of perfection.

Do some things better than they were ever done before.

Do the right thing, at the right time,

in the right way.

#### Among the Boys

Clayton T, Rogers, Asheville, North Carolina, writes: I have seen a great many things in THE AMERICAN BOY that have helped me, and I think every boy ought to read it. I made the safe I saw in the August number of THE AMERICAN BOY with some changes in the interior of it. By the way, as I was lacing my football the other day I found that with a can opener, the kind that comes on chipped beef or sardine boxes, with the curved part straightened out, one can easily lace a football."

Geneseo, Illinois, Frank Lundell. writes an enthusiastic letter. Frank is interested in the stories and in all the departments, but most of all in the Boy Mechanic and Electrician department. He has made the simple telegraph instru-ment described in a recent number of the paper, and is now working on the battery described in the October number. Frank has taken the paper for four years and says that he has saved every copy of it.

Willie R! Schoenberger of Upper Sandusky. Ohio, writes a congratulatory letter. "You should be proud," he says, "of producing such a paper, as it fills the wants of all the boys in this great country of ours."

One of the subscribers to THE AMERI-CAN BOY, enrolled within the last thirty days, is All Haldar, son of the Minister of Turkey to the United States. He is of Turkey to the United States. He is a boy of about twelve, speaks three languages, Turkish, French and English, and plays football just like an American boy.

And Willie mamma wisely said, For Willie they will do,"

And then she cut those trousers down to make them Willie's size,

And shaped them here and shaped them

Chester McAlexander, Mack, Miss., sends the editor samples of cotton bolls which prove of interest in the far north Chester where no cotton fields ever meet the eye.

Raymond M. Evans, Columbia, Ky., reads THE AMERICAN BOY in the library of the Lindsay-Wilson Training School, which he attends. He thinks THE AMERICAN BOY the best literature that a boy can get anywhere. He is fifteen years of age, and expects to go to the Vanderbilt University soon. With considerable pride Raymond tells us that his father, who is not now living, to his father, who is not now living, to help encourage him, left a provision in his will whereby he and his brothers and nis will whereby he and his prothers and sisters were to have an education, and then he adds, "I intend to have one if work will get it, and I think THE AMERICAN BOY will help me." THE

EARL BARTON IN HIS AUTO

#### Made His Own Automobile

Patience and perseverance go hand in hand and are nearly always rewarded with success. At least such was the case with Earl Barton, a fifteen-year-old "American Boy" of Big Rapids, Mich. For three years Earl spent nearly all his spare time studying automobile journals and catalogues, in drawing plans for the building of one for himself, and in earning the money to carry out these plans.

The accompanying picture shows the successful Earl with his machine. The auto has but three wheels, two in front and one behind. The steering gear connects with the back wheel and works much the same as does that on an ice-boat. The frame work of the machine is made from brass, wood and gas pipe; the springs are from a wagon, the wheels and forks from bicycles, and the steering wheel from a sewing machine. The motor is from a March motorcycle; Earl obtained it by buying a discarded water motor from one of the printing offices. This he advertised for trade march motorcycle, Earl obtained it by styling a discarded water motor from one of the printing offices. This he advertised for trade in the "Cycle and Automobile Trade Journal," with the result that he was successful in obtaining the motor he needed.

Earl thoroughly understands the mechanism of his machine and is justly proud of his accomplishment.

accomplishment.

#### A Picture Post Card Correspondence Club

At the suggestion of one of our friends in California, we have concluded to organize, as one of the correspondence clubs now being conducted by THE AMERICAN BOY, a new one under the title, The Picture Post Card Correspondence Club. Boys interested in picture post cards who wish to exchange with other boys and correspond regarding the subject will be admitted to this club on the payment of fifty cents. The fifty cents will entitle him who sends it to membership for a year. Every month, on or about the first, we will send to every member of the club a list of all the members. As many of our readers live in countries foreign to one another, there will no doubt be an opportunity for boys to obtain unique post cards through membership in this club. Fifty cents a year pays for all the advantages. We hope to hear from many boys.

Yours very truly,

THE AMERICAN BOY.

Yours very truly, THE AMERICAN BOY.

#### A CHRISTMAS SILHOUETTE

A GOOD BOYS' BOOK FOR THE FIRST CORRECT SOLUTION.

Most boys know what a silhouette is, so that little explanation is needed. In a true silhouette the figures (or objects) are cut out of black paper by means of a sharp knife or pair of scissors; these are then pasted upon a card and any additional lines needed are put in by means of pen and ink. The example we give lilustrates the American boy on Christmas Day—now we should like our readers to picture him the day after. All attempts should be cut out of black paper and mounted upon a white card. Address: Prize Puzzle Department, THE AMERICAN BOY, Detroit, Michigan.

#### Bill's Idea of a Proper World

If I could make the world, I would Not make a salty sea. I'd fill it up with lemonade And let in children free.

On every mountain, cape and stream, I'd print its name, so we Would never have to study them In a geography.

Addition and division I Would not have made at all.

I wouldn't have a thing but games
For children that are small.

I guess if I made such a world, It would be fine to see,
And all the children that there are
Would say "Hurrah" for me.
—Herald and Presbyter.

#### Novel Chari-

ROBABLY the most irresistible collectors in a good cause to be found anywhere in England are the collecting dogs of the London and South-Western Railway Servants' Orphanage. There are ten of these dogs at work-their portraits are given here with the names of their respective owners. The dogs collected over £350 for the orphanage during 1904.

London Jack I., the predecessor of the present collecting dog at Waterloo Station, who died some time ago, also collected some £25. He is now in a stuffed condition, and continues his good work

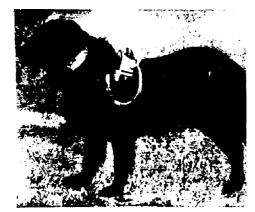

Southampton West Jack. Owned by Mr. E. West, ticket collector at Southampton West Station.

Bournemouth Gip. Owned by Mr J. Walbridge, shunter at Bournemouth Central Station.

Eastleigh Rover. Owned by Messrs. W. H. Clewer and R. Gillingham, Eastleigh Station (Clewer is an old boy of the London and South-Western Railway Orphanage).

The Champion Collector-London Jack II. Owned by Mr. and Mrs. W. D. Wickens. Mr. Wickens is a mechanic at Nine Elms Station and a member of the Orphanage Board of Management.

Holsworthy Lassie Owned by Mr. W. G. Found, clerk at Holsworthy

Southampton Gyp. Owned by Mr. E. May, booking clerk at Southampton Station.

Teddington Jack. Owned by Mr. J. F. Hayes, clerk at Nine Elms Station (a member of the Orphanage Board of Mauagement).

# ty Collectors

in a glass case at Waterloo, to which is attached a money slot.

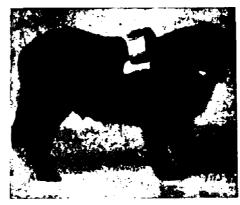

In addition to these ten dogs at present collecting, there are two others in course of training. One is Basingstoke Jack, and the other Fratton Jim; both will be at work shortly. Sometimes, if there is a gathering near their stations, the dogs gather much grist for the orphanage, which was founded in 1885 to feed, clothe and educate the fatherless children of men who at the time of their death were in the service of the South-Western Railway. The orphanage is managed by a working committee composed entirely of railway men.

Owned by Mr. G. Smith, pumper at Fullerton Station.

Barnstaple Vic. Owned by Mr. E. C. Watkins, stationmaster, Barustaple Town Station

Wimbledon Nell. Owned by Mr. G. Brockwell, mechanic at Nine Elms Station (a member of the Ornhange Roard of Station (a member of the Orphanage Board of Management).

#### A Grateful Stork

This story of a stork is told by a German paper. About the end of March. 1891, a pair of storks took up their abode on the roof of the schoolhouse in the village of Poppenhofen. One of the birds appeared to be exhausted by its long journey and the bad weather it had passed through. On the morning after its arrival the bird was found by the schoolmaster lying on the ground before the schoolhouse door. The man, who, like all Germans, considered it a piece of good luck to have the stork's nest on his house, picked up the bird and took it indoors. He nursed it carefully and when it was convalescent used every morning to carry it to the fields a short This story of a stork is told by a Germorning to carry it to the fields a short distance from the house, where its mate appeared regularly at the same hour to supply it with food. The stork is now cured; and every evening it flies down from the roof and bravely walks by the side of its friend from the schoolhouse to the meadows, accompanied by a won-dering crowd of children.

#### In the Morning

[Burges Johnson, in Success Magazine.]

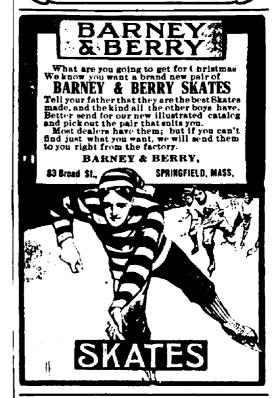

Reggalerly, every day,
When my poppa's gotten up, I can see him far away
Mixin' sumpin' in a cup;
I can hear him slappy-slap
With a knife against a strap.

He is such a funny sight In the mirror on the shelf, With his chin all blobby white, Makin' faces at himself! But I mustn't laugh, or he Comes and rubs it off on me!

Poppa says, when I'm growed up, With some troubles an a wife, I can have a mixer-cup An' a shiny, crooked knife; But he says I must begin Gettin' prickers on my chin.

Patentees and Manufacturers.

Black bears are not, under normal con-Black bears are not, under normal conditions, formidable brutes. If they do charge and get home they may maul a man severely, and there are a number of instances on record in which they have killed men. Ordinarily, however, a black bear will not charge home, though he may bluster a good deal. I once shot one very close up which made a most he may bluster a good deal. I once shot one very close up which made a most lamentable outcry, and seemed to lose its head, its efforts to escape resulting in its bouncing about among the trees with such heedless hurry that I was easily able to kill it. Another black bear which I also shot at close quarters, came straight for my companions and myself, and almost ran over the white hunter who was with me. This bear made no sound whatever when I first hit it, and I do not think it was charging. I believe it was simply dazed, and by accident ran the wrong way, and so almost came into collision with us. However, when it found itself face to face with the white hunter, and only four or five feet away, it prepared for hostilities, and I think would have mauled him if I had not brained it with another bulties, and I think would have mauled him if I had not brained it with another bullet; for I was myself standing but six feet or so to one side of it. None of the hears shot on this Colorado trip made a sound when hit: they all died silently, like so many wolves.

Ordinarily, my experience has been that bears were not flurried when I suddenly came upon them. They impressed me as if they were always keeping in mind the place toward which they wished to retreat in the event of danger, and for

to retreat in the event of danger, and for this place, which was invariably a piece of rough ground or dense timber, they made off with all possible speed, not seeming to lose their heads.

Frequently I have been able to watch bears for some time while myself unobserved. With other game I have very often done this even when within close Dirange, not wishing to kill creatures needlessly, or without a good object; but with hears, my experience has been that zen.

President Roosevelt Says Black
Bears are not Very Formidable

# Boys, Take Care of Your Teeth

By J. A. BUCKNALL, D. D. S.

OYS, are you taking care of your

B teeth?
Do you know what it means to you to scrub them with a tooth brush, inside and outside as well as away back all over the big ones? It actually means all over the big ones? It actually means freedom from pain, fine faces, and good health when you are men. Just cleaning will prevent decay, and decay means toothache, and of such a bad kind that your dentist may tell you he can't save it, the tooth; then it will have to be pulled. That hurts! To lose a tooth is like removing a brick from an arch—it lets the other bricks fall away. The teeth being built against each other in the form of an arch, lose their proper support and separate, when one or more is pulled.

the form of an arch, lose their proper support and separate, when one or more is pulled.

Every person gets two sets of teeth. Some get a third,—a false set that is never as good as a real one. The first set of teeth comes when we are bables. The second, or permanent set, begins when we are six years old; it begins with four new big teeth (molars) at the back of all the baby teeth. People often think these belong to the baby set and will some day come out like the baby teeth but that is not so. These should receive care, or great black holes will soon come in them, and then one night when you are about ten years old you will have an awful toothache, and they will take you the next day to a man they call the dentist. He says "What a pity to let those nice teeth get so bad." You wonder what he means because you do not know you were letting them get bad. You blame something, anything, even the poor dentist who tries to help you,—everything but the right thing, which was a tooth brush that had not been used. Scrubbing those new teeth, one scrub every day, would have saved you all that pain. But you soon forget it,—

all but the fear of the dentist brought

all but the fear of the dentist brought about by that first bad tooth.

Now I will tell you many things which will interest you: How the teeth are made, grow up through the gum, and fall into place like a company of soldiers. Proper care of the health will make better soldiers and more perfect organization. The little Japs are an instance. A sick soldier weakens the whole army and leaves less chance to win. Nature's way of making your teeth is one of the wonders of the human body, but nature needs help to keep everything in good working order—your help, your co-operation. If you neglect this, the penalty has to be paid. People used to think, and many do now, that when a tooth gives trouble it should be pulled out, but in the past few years dentists have discovered many things one of which is a way to save a tooth rather than pull it, and, best of all, a way of doing it without hurting.

The two pictures show you the baby teeth in a skull at six years of age. The last ones at the back are the new molars that I mentioned. They have not all their roots yet. Above and below the baby teeth you will see the permanent teeth, called lower centrals (because they are in the lower jaw and at the centre), have pushed the two baby centrals out, and have taken their place. It is wise to get acquainted with some good dentist and ask him to take care of your teeth. If he likes boys, and you show a desire to appreciate what he can do for you, you will have a real friend But by all means scrub your teeth the first thing in the morning and the last thing at night till the gums are pink and firm. Do this, dentist or no dentist.

(To be continued.)

## The Misfit Boy

To business that we love, we rise be- sert your line of talent. Be what nature times, And go to with delight."

And go to with delight."

WANT to tell you, boys, that one reason why the shores of time are so strewn with the wrecks of men who have made failures of their lives is because they have been misfits in life. They have unwisely chosen, or some force of circumstances has compelled them to choose avocations for which they have been unfitted. A man came to my house yesterday canvassing for a book I did not want, but I felt compelled to buy it to "help the man along," for he had a wife and several children to support, and this was his only way of earning money. Now, that man was going from door to door in middle life selling books for the reason that he had chosen to be a minister in his young manhood and time showed that he was a misfit in the ministry. He should never have tried to be a minister. I know another man who is to-day trying to support his family by selling patent washing machines, and who spent a number of years and all of a small inheritance he had studying law, only to find that he was a sad misfit as a lawyer. Nature never intended him for a lawyer. I once heard him say that he "never liked the law very much," but he tried to become a lawyer "because there was money in it."

Now, a man should not be moved solely by the desire to get money when he

"never liked the law very much," but he tried to become a lawyer "because there was money in it."

Now, a man should not be moved solely by the desire to get money when he chooses his life occupation. He should be moved first by a wish to make the most and the best of his talents, and he will never make a success of an uncongenial occupation nor of one not suited to his ability. I know a third-rate machinist who would have made a successful farmer, and I know a poor farmer who once told me that the great wish of his life had been to be a machinist, but his father had on his dying bed exacted a promise from his son that he would stay on the old farm, and he was true to that promise.

A boy of eighteen now in his second year at Harvard University told me but yesterday that his father wanted him to be a minister, but that he was very anxious to become a civil engineer. If the father's influence prevails there will probably be another misfit minister in the world in the years to come and the engineering world will perhaps have lost a man who would have been a great credit to it. Many a boy regarded as a good-for-nothing in middle life has achieved that unfortunate and deserved reputation because he did not find his proper place, his proper work in the world in early life.

It is a great thing for a boy to find out just what his "bent" in life is, and o then concentrate all his energy on developing the talent God has given him. Sydney Smith knew what he was writ-

veloping the talent God has given him. Sydney Smith knew what he was writ-ing about when he wrote: "Whatever you are by nuture, keep to it; never de-

sert your line of talent. Be what nature intended you for, and you will succeed; be anything else and you will be ten thousand times worse than nothing."

It is said that a young man who had decided to study for the ministry once had the privilege of preaching before Phillips Brooks, and later he said in an off-hand way to the great preacher:

"Well, bishop, do you forbid me preaching any more?"

"No, I do not," replied the bishop frankly; "but nature does."

Nature forbids many a boy to do the thing the boy wants to do, and when he persists in the face of nature the result is sure to be a misfit writer or minister, or artist, or musician, or whatever the boy has unwisely chosen to be.

sert your line of talent. Be what nature intended you for, and you will succeed; be anything else and you will succeed; be anything else and you will be ten thousand times worse than nothing."

It is said that a young man who had decided to study for the ministry once had the privilege of preaching before Phillips Brooks, and later he said in an off-hand way to the great preacher:

"Well, bishop, do you forbid me preaching any more?"

"No, I do not," replied the bishop frankly; "but nature does."

Nature forbids many a boy to do the thing the boy wants to do, and when he persists in the face of nature the result is sure to be a misfit writer or minister, or artist, or musician, or whatever the boy has unwisely chosen to be.

Another thing, boys: Don't dissipate your energies by trying to be too many

FOR WHOM ARE THE PRESENTS?

There seems to be a general mix-up here—all the Christmas presents appear to have got into wrong hands. Can you help straighten matters out? There are just twelve presents and the same number of persons, and each present was sent by somebody to one of the twelve people shown. The presents are all numbered and the persons all named, so there can be no material transfer that the persons are all numbered and the persons all named.

people shown. The presents are all numbered and the persons all named, so there can be no misunderstanding.

Write your figures down from 1—12 and after each number place the name of the person you think it is intended for. A good boys book for the first correct solution received. Date limit, Dec. 10th. Address: Prise Pussle Department, THE AMERICAN BOY, Detroit. Mich.

one of the charter members leaving the town, the company gave him a surprise party, at which an enjoyable time was had and a present of a knife made to the member leaving. BUSTER BROWN COMPANY No. 35 has 90 cents in the treasury and a gym outfit consisting of a punching bag, boxing gloves, etc., and it has organized a polo team. Meetings are held every two weeks and dues are 20 cents a month. WORTH BAGLEY COMPANY No. 3, Concord, N. C., writes acknowledging receipt of the third prize in the special company contest for increase in membership, and says: "Some of us are going to try to win the prize for the best composition on our state when it comes to dear old North Carolina." Good enough, boys; nothing like trying. The capitain hopes that American B by Day 1907 will be specially celebrated at the Jamestown Exposition, as it is in his neighboring state and he and others intend to be present. MOVILLE HAWKEYE COMPANY No. 59, Moville, Ia., recently elected the following officers: William Knutz, Capt.; Jay R. Dewey, Secty. It has provided the members with a new game board, also the game of Flinch. We hope to have further good reports from this company.

#### American Boy Day, 1906

American Boy Day, 1906

There is every prospect that San Francisco will celebrate American Boy Day, 1906, on a scale not heretofore surpassed, even at the St. Louis exposition, which up to date holds the record for the largest attendance at one of these celebrations.

A. H. Hutchinson, manager of the Rooseveit Boys' Clubs, of San Francisco, is in charge of arrangements for the day. The date has 'already been set for July 5th. Schools are being visited, and leading citizens of the city interested in making the day thoroughly "boy" and thoroughly American. A thousand celluiold badges with the words "American Boy Day Celebration, July 5, 1906," about the outer rim and enclosing an American eagle bearing a flag in its talons, are being distributed among the boys of the schools. Five thousand circulars are being printed to be distributed among the boys of the city.

A little paper published by the Roosevelt Boys' Clubs, entitled "Our Junior Citizens," will push the enterprise along. In a recent number of this little paper Mr. Hutchinson says: "Why should this country be behind Japan? In that land there is a day set aside for the boys of all ages, and the pleasure and ceremonles of the day are, if not in the hands of the boys themselves, entirely in their interests.

"There is a movement on foot to establish

ure and ceremonies of the day are, if not in the hands of the boys themselves, entirely in their interests.

'There is a movement on foot to establish a day for the American boy, and that day has been almost universally fixed on as the fifth day of July.

'San Francisco boys are invited this coming year to celebrate the day, and, as San Francisco celebrations are never equaled by the celebrations of other cities, it is expected that the celebration of American Boy Day in this city next July will be the finest that has occurred in the United States.

'Yor this reason we must prepare for the day a long time ahead, and this notice is sent to the boys of the city to call upon them to take some part in the great celebration.

'It is designed to have the celebration in three parts:

three parts:

I.—Literary and musical.
II.—Military and public.
III.—Athletic.

III.—Athletic.

"For the first there must be essays, orations and choruses, with vocal and instrumental solos. These require preparation, and, where there are so many talented boys in the city, the performers must be chosen beforehand by competition.

"In the second it is expected to include every organization of boys that will take part in a grand parade, where only boy bands and drum and bugle corps will furnish the music. All military organizations will be especially desired to participate and this will require much drill and preparation.

"The athletic part of the celebration is one that could not be so well included in any celebration outside San Francisco, on account of the heat prevalent at that time of year elsewhere. Here, however, it will be possible to have an athletic exhibition such as the city has never seen before. Contests are to be limited to boys under eighteen, and to those who have not participated in high school contests. A number of preliminary school contests. A number of preliminary contests will have to be held in order to select the contestants for the finals on the day of the celebration, and no athletic event will be barred for which a sufficient number of contestants can be secured.

光次水果 对某九 光光光 光水分次水片 产光外之水 产之品 外 不不分分式 方方式无术方方 方径径 大文人子 不是不是不不不不不不不不不不不不不不不不不不不不 中央中央 10th A COCO BOYS' BOOK FOR THE FIRST CORRECT SOLUTION RECEIVED. DATE LIMIT, DECEMBER 10TH.

Here we have a simple cipher, expressing the good wishes of the Editor towards his many readers. Each character represents a letter, the slight breaks between them show the ending of the various words. The puzzle is not so difficult as it may appear at first sight.

There are many boys probably who will appreciate a few hints. First prepare a rough draft of the puzzle, but instead of using the characters given, just place dots in their respective positions. Now look for a one-letter word, (if one appears)—this must be one of two or three letters at most. Decide which is most probable—then fill in this letter in your dotted draft, wherever it appears in the cipher. Now take a three-letter word, and with the aid of that already found, see whether you cannot go a step further and find out one or two other letters. Then fill these in your dummy and you will quickly see whether you are on the right track or whether you have gone wrong. Address: Prize Puzzle Department, THE AMERICAN BOY. Detrom. Michigan. BOY, Detroit, Michigan

HAD READ of the beach automobiles bleycle with the fork left on. The axle used on the Florida coast; they were like an ice boat with a sail, except they had wheels instead of runners. So I set to work to make something to take me over the country roads.

Twenty cents Twenty cents was all I spent, the take me over the country roads. take me over the country roads.

I found and used seven fence pickets

I found and used seven fence pickets for the frame work, and other things as they were needed. I spliced two rake handles together for the mast, winding the ends where they came together with wire. A single piece would be better if you can get one long enough. The gaff which is the stick to which the upper end of the sail is fastened, is a broomstick. The boom, the stick at the bottom of the sail, was made of a rake handle with a broomstick spliced to make it long enough. Mother let me have a sheet, which I put down on the floor and cut in the shape of a mainsail. The wind was the cheapest power to be found, thus it was utilized; the three wheels were cast-off bicycle wheels.

I steer with the front wheel, which was a front wheel of an old

SAILOMOBILE BUILT BY PRANK MULFORD, SHILOH, N. J.

#### Benny's Logging Experience

The Connecticut River was full of spruce logs, rolling and pushing on their way to the foot of Mt. Tom, where they would wait until the sawmills sang them to sleep in the protecting folds of the booms. Benny stood by the bridge at Windsor and saw the boats of the log drivers go by at sunset, the French-Canadian songs rolling up from the smooth water behind with a romantic beauty that called to his restless young nature. There was something better, it seemed to him, than hoeing corn for Silas Weatherhed.

A lumber wagon came along, and Silas stopped the team to pick him up and take him home for supper. The Connecticut River was full of spruce

known tongue as the dusk crept on across the shores.

With the break of day the men began to move the logs out from the shore into midstream. At eight came a second hreakfast, at noon dinner, and at dusk the final meal. All day the heavy pike-pole was in the boy's hands, and the sound of the men's chaffing in his ears. The sun tanned him with a deeper dye than the corn fields had given, his feet were always wet, and he often fell into the river.

There was a great jam at Bellow's Falls, and the river murmured under a mile of solid logs. Here the explosives came into use.

When the last of the mass was plunging over the rocks Benny waited too long, and the great log he was riding started after them at a rapid rate. There were cries of warning and a boat came swiftly

rest I found.

A saw, hammer, and brace and bit were the tools used. Slats made the seat and a cushion from the house made it com-

fortable, and in a week everything was ready for sailing.

Once it was started with only my little cousin in it and I had to run fast to catch up.—Popular Mechanics.

down upon him, rowed by a crew of Canadians, but it was too late. No boat could save him; the roar of the water warned the men to save themselves.

From the factory on the bank scores of men and girls looked out, and from the railroad bridge a little group watched for his final struggle.

Some one blew the factory whistle, and a crowd began to gather by the Falls, some trying to reach him with ropes.

The boy stooped and loosed his shoes. They were heavy with spiked bottoms, and he did not want them then. Nor did he want the log in that fight for life. He sprang from it, and a moment later went over, feet first.

For a half minute he did not reappear.

HOW TO MAKE A SAILOMOBILE

By Frank Mulford

THAD BYAD of the beach materials and the beach materials and the sank softly down and went to sleep.

and he sank solity down and went to sleep.

The boss arose from the sitting position he had suddenly assumed, and the men stopped staggering and rushed forward.

"No one hurt but the boy. Tough day for him," he remarked.

"Bad welt over the ear," said another, "but he is coming round all right."

"Look here, young feller," said his employer as he sat up, "you have charged against you a pair of blankets, a pair of shoes, a good boat and half a pound of glant powder and a few explosion caps; but if you quit right now I will pay you your wages in full and give you my blessin'. You are too lively for me."

"Wal, see ye got back," said Silas Weatherhed, as he came in from work next day, "Have 'er good time?"

day. "Have 'er good time?"
"Well, it was kinder different, but you see I was afraid you would need me, so I came back. Guess those potatoes are about ready to dig anyway. Supper smells good."

#### A Trip Up the Lakes

By Wm. T. Nellis, One of Our Boy Readers.

One July I found myself on a fine ride across Lake Michigan, the third in size of the five great fresh-water lakes of America, and the only one lying entirely within the United States. It separates the states of Illinois and Wisconsin from Michigan, the upper portion of the lake dividing the state of Michigan into two parts. Lake Michigan is 335 miles long and from fifty to eighty-eight miles wide, and covers 22,450 square miles. Its shores are crowded with summer hotels and fishing resorts, and it was at one of these fishing resorts on an island in Lake Michigan that I found myself, fully equipped with fishing tackle, ready for my most loved sport.

Father and mother were along, so we spent a few days catching perch, a fresh-water fish having long, sharp dorsal fins. Its upper parts are of a greenish-brown color and its lower ones a golden yellow. It is about eighteen inches in length.

The third morning, however, we started out after pike. The pike is a well-known fresh-water fish. The body is long and covered with cycloid scales, the mouth is large, its color is olive. The pike with pale spots. There are four or five species and all are valuable as food fishes. It is claimed that pike has been known to attain the age of 250 years. The most characteristic quality of the pike is its voracity.

Thoreau describes the pike as the "swiftest, correct and most rearrows of fights" thills. By Wm. T. Nellis, One of Our Boy Readers.

food fishes. It is claimed that pike has been known to attain the age of 250 years. The most characteristic quality of the pike is its voracity.

Thoreau describes the pike as the "swiftest, coarsest and most ravenous of fishes," while Josselyn calls it the "river wolf."

The guide and I started out in the morning in a small boat, and trolled all the morning and part of the afternoon, and only had caught one pike about elghteen inches long We had despaired of catching any pike and had taken our poles to try our luck with perch. We had caught quite a number when my pole gave a crack and broke as if hit by a cannon ball. At the same instan; a dark object shot under the boat. I, knowing it to be a large fish, was almost afraid, but my fear gave way to courage and I pulled, but I pulfed too soon, my reel, which was still on the broken part of my pole, let out several yards of line, as the boat went somewhat lopsided at the same time. The guide fearing it would upset, offered to take my line, but I preferred to pull it in myself, so putting all the skill that I knew, finally succeeded in pulling him alongside the boat, when the guide grabbed him and broke his neck. He measured three feet two inches in length, and had a head as hard as a shell and three rows of teeth.

The cook at the hotel baked him the following morning for our breakfast.

Winter is a great time in this part of the country, the lakes being frozen from one island to the other. The hunters come in great numbers at this time of the year, deer, bear, fox, polecats and other game being found here in abundance. This time of the year also large numbers of Indians live and cook in their wild ways in this part of the country.

year. Interpreted a ship has come to port loaded from stem to stern with toy animals from Germany. Horrors, many of them are. So strangely formed are the cows and the horses and the soldiers that even the smallest American boy or girl takes even the smallest American boy or girl takes offense at the appearance of the present. Wagons like no conveyances ever seen on American streets, fire engines that do not look like those of America, soldiers that wear a uniform entirely foreign to the American idea, "Dutchy" combinations of figures that are different altogether from the scenes on this side of the water, cause the American child to wonder greatly.

All this is rapidly be-

All this is rapidly being changed. American toys for American chil-dren is the new order of

dren is the new order of things. Instead of the funny looking fire engines from Germany, we now make hook and ladder and fire engine toys true to the American pattern, and so large and able-bodied that they can actually be used by older boys in extinguishing miniature fires. The solid wooden horses of the Fatherland are replaced by up-to-date toy horses of the American kind,

AMARTER THAN THE REAL THING

with movable limbs and so many imwith movable limbs and so many improvements that it can do almost anything but jump fences. Instead of the ridiculous toy farm, with milkwomen wearing wooden shoes and impossible "hired men" in outlandish costumes, we now have combinations of toy figures that resemble the real thing as closely as the art of the American toy maker them.

can make them.

Naturally Naturally the American toymaker has given that great source of delight to the little men and women of this country, the toy circus. German toymakers never could be expected to give us a miniature American circus.

circus. most remark-The able thing about the rise of the toy industry in America is that we are actually shipping these play-things to Europe and cutting in on the trade of the German toymaker himself. This strange fact is explained by one of

the toy exporters in this way:

For generations the toy trade has been in the hands of the villagers of Ger-many. Men, women many. Men, women and children have had a hand in the making of the toys; but the villager has never entertained the idea of changing his models. As he was taught by his father

MINIATURE Noah's Ark Arrives" to make toys so he has continued to in every line does, he gives time to de-is a favorite headliner in the make them, and so his son and vising something new and original, and newspapers at this time of the his daughter will continue to make makes it solid and strong, year. Interpreted, it means that them. American boys and girls, like Strength is most desirable in the toy,

for if the toy, for if the toy, for if the toy is breakable the youngster will break it before it has lost its newness to him. We make toys that do not break easily, and for this reason among others we are finding our way into the markets of Europe and even are sending toys to the Kaiser's little subjects. Then again our toys

sending toys to the Kaiser's little subjects.

Then again our toys are not mere playthings for an hour. They are practical things. The imported boats made by those who never saw the sea, will not float. The yachts "turn turtle" as soon as the child tries it on one of our lakes. Our yachts are built to scale and are made to sail. They are as accurately designed as a cup defender and as carefully fitted with their salls as the model yachts of the clubs. Our supremacy in the sailing world has created a demand for the Americal

and demand for the American toy yacht, and it is safe to say that in a few years the boy who sails a toy boat on the lakes of European parks will be envied by his playmates if he can proudly point to his little craft and say: "Mine was made in America."

new, do not appeal to the exacting American boy. He not only wants a Bureau of Education shows that a boy new toy, but a new kind of toy. The with a common school education has American toy maker gives it to him. He practically one chance in nine thousand

WHICH ARE ALIVE?

# The Chances of the Educated

The recent report of the United States

and usefulness. This does not seem very encouraging. Yet the same report shows that a high school education increases that boy's chance of such success by about twenty-two times, while a college education gives a young man about ten times the probability of success and advancement possessed by the high school grad-uate, and about two hundred times the hundred times the opportunity open to a boy with only a common school education. When you hear men talking against a college advention education, remember this. It is not the opinion of someone opinion of someone who may be biased in his judgment, but a report of the National Bureau having in charge the gathering of statistics and the publishing of its reports for the advantage of the people at large.

on his musical education. The young artist recently gave a farewell concert at Bioomington, where the people of that city regretfully parted with one of their most talented boys.

#### Why I am Proud of My State

Wisconsin Prize Essay

Wisconsin Prize Essay

John Roberts, Racine, Wisconsin, wins the prize (\$5) for the best essay on the subject "Why I Am Proud of My State" (Wisconsin). The following is the essay: I am very proud of Wisconsin, and I think I have just cause to be so. Wisconsin was loved by the ancient Mound builders, for in no other State in the Union did they leave such beautiful mounds. The Indians also loved Wisconsin, and many of their village sites, trails, and battle grounds may still be seen, while relies of these former inhabitants may be picked up in any part of the State.

Wisconsin was settled by strong, hardy men. Many of them came from the Atlantic Coast in prairie schooners. They overcame great obstacles and endured numerous hardships before they reached the soil of that country for which they had struggled so long, and for which many of them died.

Although Wisconsin has not yet had the honor of furnishing the Union with a President, she has furnished one of the greatest political parties, the Republican Party. Ryan, Wisconsin, is the birthplace of this great party.

While Wisconsin was not one of the Thir-

Wisconsin, is the birthplace of this great party.
While Wisconsin was not one of the Thirteen original colonies that fought for and obtained liberty from an overbearing sovereign, she was one of the first to answer President Lincoln's urgent appeal to defend that Constitution for which our forefathers sacrificed their lives. Eleven thousand brave sons of Wisconsin never returned to their homes when peace was declared.
Wisconsin's Iron Brigade was one of the bravest in the Civil War. General McClellan, during the Battle of South Mountain, was standing in a position where he could witness one of their many brilliant charges. General Hooker came dashing up to him.
McClellan said, "What troops are these advancing under that murderous fire?"
"That's Glibbon's brigade from Wisconsin and Indiana," said Hooker.
"They must be made of iron," said General McClellan.
"By the Eternal, they are made of iron"

famous war eagle, came. This bird went un-harmed through thirty-six battles and skir-

mishes.

Wisconsin's sons of today are just as brave

This was proved by

Wisconsin's sons of today are just as brave as were their fathers. This was proved by their conduct in the recent Spanish War.

Not only am I proud of Wisconsin's history, but I am proud of her brooks and trout streams, the great lake which bounds her on the east, the mighty river on the west, and her many magnificent forests, in some of which roam the wild deer.

I am also proud of Wisconsin's sister State, Michigan, the birthplace of "THE AMERICAN BOY."

Other good easays were received from

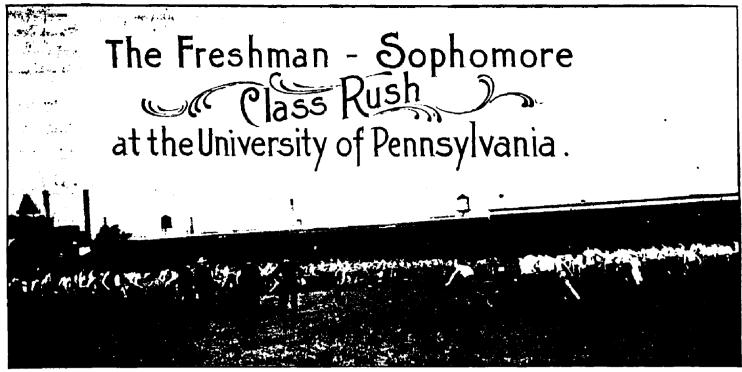

Other good essays were received from Wisconsin boys. Among them were the following: Charles Ford, Westfield; Louie J. Nelson, Racine; Fred Ruckweed, Cedar Grove; Paul Cochran, Merrimack; Albert Brager, Mt. Horeb, and Herbert Magney, Amery. All the essays showed a spirit of great loyalty.

or great loyalty.

The contest now on is confined to boys in Texas. Five dollars goes for the best essay of not more than five hundred words, received by us on or before December 10th, on the subject, "Why I Am Proud of Texas."

THE KIND THAT PLEASES THE AMERICAN BOY

THE BEGINNING OF THE 1905 CLASS RUSH OF THE U. OF P. BALL SEEN IN THE AIR

An innovation in class rushes was tried with great success by the freshmen and sophomores of the University of Pennsylvania recently. Instead of the senseless fight in the basement of College Hall, in which many students have in affair in Franklin field. As another improvement it was arranged for the fracas, the seniors decided this time to have the gigantic scale and a free-for-all pushing scramble.

Sophomores and freshmen lined up on opposite sides of Franklin field, while the senior who floor-managed the affair stood in the centre with a football. Each side was instructed that the game was to carry the ball down behind the goal posts as at football. No rules were made for the rush. The sole object was to get the ball back of the goal posts. Any tactics short of murdering an opponent would be deemed fair. All class rushes are governed by this basic understanding. When both sides were ready, the students stripped to the waist and thirsting for victory, the ball was thrown into the air and the opposing squads came together with a crash. Thenceforth it was a squirming, struggling bunch of boys with a football somewhere in the center of the mass, where, no one knew or seemed to care.

The most sensational incident of this new class rush was the sudden appearance from the rim of the struggling circle of a scared and battered football. Only one boy of the half-naked contestants saw the ball. The rest were too intent on the struggle to notice that the object of the fight had made its escape between the feet of the students. The one boy who happened to see the ball making its coy way to freedom, grabbed it and held it in his hands uncertainly for a moment.

one boy who happened to see the pair making its coy may a moment.

"Run with it," yelled a hundred voices, as the astonished spectators saw what had happened.

The boy with the ball ran, with the entire aggregation of students after him. But he had a clear field and no one could stop him short of the goal line. He made a clean touchdown. But alas for the futility of human endeavor—he had rushed the ball behind his opponents' goal, scoring one victory for the freshmen. Emerging as he did from the fracas, with his head swimming and both sides of the field alike to him, the unfortunate sophomore had made the unpardonable mistake of running with the ball in the wrong direction.

The spectators in the stands complained that they could not see what was going on, so next year a push ball will be substituted for the football. The new style rush was so successful that it will become a permanent feature of student life at Old Penn.

#### Not Afraid of Big Things

Eugene Carlson, of New York City, according to the New York World, is a boy who is not afraid of big things. If the following story is true, in all probability young Carlson will grow to be the sort of a man that makes a big success of his

or a man that makes a oig success of his life.

Readers of THE AMERICAN BOY have seen some account in its pages of the Baltic, the largest steamship alloat. The story is that Eugene Carlson held up the Baltic for fifteen minutes while he delivered a message to a passenger on board. If you could once see the Baltic as she lies in the water, 735 feet in length, with a tonnage of 23,876 tons, and could understand the precision with which this tremendous floating palace, for such it is, must move in order to accomplish its ends, you would not wonder that a great New York newspaper gave two columns to an account of how a fourteen-year-old boy caused fifteen minutes' delay of the great steamer in order to do his duty in

to an account of how a fourteen-year-old boy caused fifteen minutes' delay of the great steamer in order to do his duty in delivering a message.

Eugene was a messenger in the employ of the American District Telegraph Company. One day he received a message for delivery to a passenger on board the Baltic. When the message was put into Eugene's hands it was within three minutes of the time for the Baltic to sail. The passenger had gone on board. When the messenger reached the dock he knew that any moment the big ship might slide out of her berth for the long trip across the Atlantic, but careless of the risk he was running, and only thinking of what he was told to do, he sprang aboard and began the search among the hundreds of passengers for the one to whom he must deliver the message.

On starting to leave the boat he found that it was slowly creeping away from the dock. It was too far to jump and he was not a swimmer so he could not dive. It is an unusual thing for an Atlantic liner to back up and start over again, but this is substantially what the Baltic did for fourteen-year-old Eugene Carlson.

When he was about to cave the dock the officer on the deck shouted to him that hereafter he must leave the boat alone.

to him that hereafter he must leave the boat alone.

the boat alone.
"I wasn't running off with your boat," said Eugene, "your boat was running off with me."

A boy with such pluck and with a mind single to doing his duty notwithstanding its hazards has the making of a successful man in him. Eugene was left at the age of three

Eugene was left at the age of three without a father, and he is now the support of his mother and the little

Through a change that took place in the telegraph office Eugene was shortly afterwards thrown out of a job. Somebody remembered this story about the boy, and that someone was Frederick Thompson of the Hippo-drome, who at once gave him a posi-

#### President Eliot's Advice to Freshmen

On October 3rd, President Charles W. Ellot of Harvard, addressed the incoming freshman class on "Durable Satisfactions of Life." He said in

part:
"The foundation of all durable satisfactions in life is that each man be a clean, wholesome, vigorous animal. This means that drunkenness, licentiousness and dirt of all kinds must

be avoided.
"But this is not enough. It is the

#### WHY I AM PROUD STATE OFΜY

To the Texas boy who sends us before December 15th the best letter of not over five hundred words telling us why he is proud of his state — Texas, we will give \$5.00; in addition, we will print his letter in an early number of The American Boy.

intellectual life that gives the educated man the real satisfaction that endures. The cultivation of vigorous, intense men-tal work each day is bound to furnish one of the greatest and most lasting sat-isfactions that come in life. Don't take three minutes to do what might just as string three minutes to do what might just as saltic well be done in two minutes. Don't take e on four years in college to do what might do the be done just as well in three years.

"The third great source of satisfaction but cure this be a man of honor. Act toward

#### To Explore Central Africa

The picture shows Prof. Frederick Starr and his Mexican lad, Manuel Gonzales, of the Chicago University, who sailed from New York City, September 23, to explore the new fork City, september 23, to expire the unknown regions of Central Africa, to make a special study of the Batwa pygmies in the interest of the Anthropological Department of the University.

women as though you were going to marry some pure woman inside of a month. Be honest to all, and, more than this, be generous, especially to those less powerful and poorer than yourself."

#### It Cured the Headache

We have had expressions favorable to THE AMERICAN BOY from hundreds of boys and these expressions have been in myriad form. One from a boy at Hen-nessey, Oklahoma, Roy Baines, beats them all. His AMERICAN BOY cured the headache. He says this was brought them all. His AMERICAN BOY cured the headache. He says this was brought about by putting into practice what he learned regarding methods of taking exercise. He has been studying the articles by athletes that appear from time to time and trying to profit by them. Says he, "Before I took THF 'MERICAN BOY I had a headache nearly every day, and since I have taken the paper I have followed the rules of running and jumping and I do not now know what a headache is. I am fourteen years of age and in the eighth grade. I pay for my paper out of my own pocket. I recommend THE AMERICAN BOY to any boy who has bad habits or is sick. If any hoy wants to save the doctor's bill, let him invest in THE AMERICAN BOY: that will be the best doctor he can get." That sounds very much like a patent medicine recommendation. In the case of this testimonial, however, we are sure that the testimony is sincere; we are not always sure of that in the case of the flamboyant medical testimonials.

#### Mother's Letter

My boy, how long has it been since you wrote to mother? Several weeks? Do you ever stop to think how much uneasiness your neglect is causing her? Do you know she listens every time she hears the whistle and wonders if that train is bringing a letter from you? Of course you think of her every day in the old home going about her humble duties, but that doesn't do her any good. She frets and wonders if you are well. She is afraid something has happened to uneasiness your neglect causing afraid something has happened

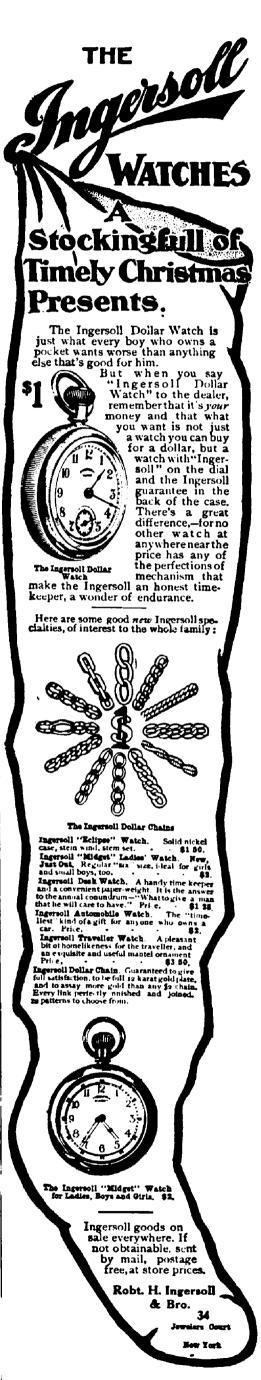

you.

If you could see the look of satisfaction that spreads over her face when she has finished reading a letwhen she has hished reading a let-ter from you, you would write every day. Mother would rather have one letter from you than forty presents from some one else. She has lots of peculiar ideas about you that other eople haven't, and you mustn't judge er by them. Mother's greatest grief in this world

Mother's greatest grief in this world is the thought that she is forgotten by her children. Better turn over a new leaf and write to her every week. The world is always charitable to the boy who is good to his mother.—Osborne Farmer.

#### Bound Volumes of The American Boy

We have bound volumes of THE AMERICAN BOY (Nov., 1904, to Oct., 1905, inclusive). It makes a book of 384 pages and contains as fine a lot of reading matter for a boy as can be gathered together between covers. Fully 1,000 illustrations. It would make a pleasing Christmas present for some boy. Price (while they last) \$2.00 per volume, delivered. The Sprague Publishing Co., Detroit, Mich.

rings, the village storekeeper and barber, and a dozen or more pushing, noisy boys, who were evidently just from school. The minister and doctor were discussing some need of the village, the farmers were exchanging crop experiences, and the boys for the most part, were peeping through the boxes at the busy man behind and making audible remarks about the slowness of the mail.

It was a very small postofice, with

It was a very small postoffice, with not more than forty or fifty boxes, and hardly standing room for those who were waiting. But the boys wiggled in and out, back and forth, always with one eye on the boxes.

on the boxes.

"There goes your paper, Tom," one of them called, suddenly. "He's done up the letters now and is on the papers.

The window'll soon be open."

"Huh; I got our paper over to the printing office last night," spoke up another boy, loftly; "I read the news all up before I started to school this morning."

of which a woman could be seen washing.

"Oh, Mrs. Smith," he called, "here's your paper. How's Tony?"

The woman wiped her hands and approached the fence.

"Tony ain't very well this morning," she said. "He's in consider'ble pain. He won't git up today. I do hope if he goes to that city place he'll be helped." ing. ing. ''Oh,

"Oh, well; I guess the news wasn't anything much," said a third, indiffer-

"You just wait and see. It's got the most particular news I've read in it for

most particular news I've read in it for a long time. And say, I'm going to try and win it myself."

"Win what?" asked a dozen voices.

"Wait and see. I'll show you the place soon's the mail opens up."

The air was full of mystery.

Quickly the village papers were distributed, until nearly every box contained one—indeed, the majority of the boxes contained no other mail. Then the window was thrown open with a sharp click, and the boy who was going to win something, wiggled in front of the doctor and began to open and shut his fingers in front of the aperture.

"Tom William's mail," he called shrilly; "and Ed Brown's mail, and Bill Sam's—no, I mean Bill Potter's mail. and Sam—"
"Cone at a time."

"Gree at a time."

"Going to try doctor wouldn't dare to try, and that Tony ought to go just as quick's he could. We're savin' up for it, an' Tony's almost countin' the hours till we can git enough. But money comes slow, though Tony's earned three dollars himself. I believe the boy'd suffer anything to git his hip cured."

"Oh, he'll git it cured all right. Tony's too fine a boy to go lame all his life. How's his spider?"

"Just about the same, only the web is gettin' biggern heavier every day. I feel so ashamed when visitors come. But it's company for Tony, so I let it stay.

Sam—"
"One at a time,"
from inside the window.
"Well, Tom Williams' mail," defi-

antly.

A paper handed out. "Now, Brown's." Εd "Look here,

can get my own mail," from a boy who had wiggled in just behind

in the school essays, I wish to offer a vacation prize of some outdoor books for the best essay on any subject of natural history, based upon personal observation. The papers may be sent to my address, and, as I am almost a stranger here, my decision will be unblased. The offer is not made to the school children alone, but to any young lovers of nature who care to compete, and is open for four weeks. The prize will be ten of the best recent works on natural history, selected by me. Send the essays to me unsigned. I will announce the winning one through this paper four weeks from today.

by a stream; and outside of these a half dozen farm houses at irregular intervals in the distance.

In the distance.

The boys talked eagerly, in a tumultuous, eddying knot, which broke as they began to separate for their respective homes. Halfway down the street the boy who had called for the papers stopped in front of a house at the end of which a woman could be seen washing.

your paper. How's Tony?"

The woman wiped her hands and approached the fence.

"Tony ain't very well this morning," she said. "He's in consider'ble pain. He won't git up today. I do hope if he goes to that city place he'll be helped."

"Dr. Payne said he'd be cured, didn't he?"

he?"
"Said he thought so. He said the great doctors there could do things a country doctor wouldn't dare to try, and that Tony ought to go just as quick's he could. We're savin' up for it, an' Tony's almost countin' the hours till we can git enough. But money comes slow, though Tony's earned three dollars himself. I believe the boy'd suffer anything to git his hip cured."

The first mornin' Tony wanted me to leave it so he could watch the spider an' he's been wantin' to watch it ever since. It's been there a month if it has a day, aper with a flourish that tore one of a two small sheets halfway down, "just ou read that," tapping a certain place clumphantly.

Three or four faces crowded in front f his, and three or four voices began to ead aloud:

"Having been very much interested in the spider and his family, and how they real funy when he sets out to be. I'm ever so much obliged to you for bring-in' the general same and the spider and his family, and how they real funy when he sets out to be. I'm ever so much obliged to you for bring-in' the paper."

'Oh, that's all right. But I guess I "Oh, that's all right. But I guess I won't go in and see Tony, if he's achin'—and say, there's a prize offer in the paper that he might like to try. Of course he couldn't get it, for he don't run round through the woods, nor have pigeons and rabbits an' things, like some of us boys; but it might keep him busy, and help the spider to keep him from and help the spider to keep him from thinking about his aches. John Withrow, Box 29, is the man who's boarding up to the Jenkins farm. He's all right. He gave Tom Williams ten cents the other day for just going to the mail. Well,

During the next four weeks there was an ever increasing excitement among the boys and girls, which gradually spread boys and girls, which grauss, to the older people. Essays were written in secret and talked about in public, and added to and gloated over. Never, perhaps, had dogs and cats and pigeons and rabbits been fed more laviably or watched more closely. When

through it carelessly before taking it in to Tony. One line, however, escaped her notice. It was "Home Life in a Web" takes the prize. Call for it. John Withrow." But that was the first thing Tony

Twenty minutes later Mrs. Smith was hurriedly arraying herself in her best dress, and twenty minutes after that she was at the Jenkins farm house, being ushered into the presence of a nice looking, gray-haired gentleman, by one of the servants. He was scated at a table writing, a number of books and papers scattered upon the table in front of him. He arose and bowed inquiringly.

"I've come about the hooks, sir—the rize, you know," Mrs. Smith began hesitatingly.

itatingly.

"Ah, yes, I understand." Mr. Withrow took up one of the books and came toward her, but with disappointment plainly written on his face. "I was hoping to see the writer of the essay, and have a long talk. This book is about spiders and other insects, and I have been looking forward to an interesting conversation with him, or her—which is it, a boy or girl?"

"A boy, sir; but he's in bed an' can't come."

"In bed—ill? Too bad! too bad! Tell

come."

'In bed—ill? Too bad! too bad! Tell me all about it," and he drew a chair in front of her and sat down.

In a few words Mrs. Smith told him the story of Tony's life and hopes. He listened attentively.

"How old is Tony?" he asked.

"Fifteen, sir."

"Fifteen, and most of the time in bed and write an article like that? Why, I felt sure he must be a young man of eighteen or twenty at least."
"Tony's read an' studied a good deal."

eighteen or twenty at least."

"Tony's read an' studied a good deal," said his mother apologetically; "an' he watches things. Why, sir," a sudden flush coming to her face, "he wrote a mess about birds for a boy's paper last month, an' got three dollars for it—three dollars in money, sir. He's put it with the rest toward gettin' cured."

"He expects to get cured, then?"

"He hopes to, sir. Our doctor here thinks he can if he don't wait too long."

An odd look had been coming into Mr. Withrow's face. He arose suddenly.

"Get my hat and cane, please," he said to a servant. Then to Mrs. Smith, "Get cured, of course he will. I'll go right down and examine him now. You see, I'm a surgeon and know something about hip troubles. I came out here in the country for a little rest, but shall return to the city next week. I'll take Tony back with me. Only fifteen, and write an article like that! Of course, we'll cure him!"

And they did.

And they did.

# Training Methods of Boy Athletes "A cape is land extending into the water." SOME OF THE RULES ARE SURPRISING "A guif is water extending into the "A guif is water extending into the land." TOUTHS who take up athletics in "Good Christopher" to a small concern.

OUTHS who take up athletics in some form or other often do so in a most determined manner. Like the boy who, entering for his school hurdle race, printed the motto, "Conquer or die!" in four different colored quer or die!" in four different colored inks inside his racing jersey, some take these matters very seriously indeed. Of course, if you do get heaten in your school "hurdles" there is positively no reason whatever why you should not continue to exist and grow up and become an adult and useful citizen. That will be obvious to anyone, but for the moment let it pass.

It is in the matter of training for ath-

will be obvious to anyone, but for the moment let it pass.

It is in the matter of training for athletics that not a few youths are especially thorough-going. This, in the opinion of one teacher, "is occasioned by the circumstance that boys naturally fit and well of course, really require very little of such preparation at all." Still, as one trainer, and evidently, philosopher, says: "They seem to enjoy it; I see that they don't do themselves any harm, and it's all good for trade."

"Always keep in a cheerful frame of mind" is a very old and sound training maxim. "I know how," said one wouldbe successful quarter-miler. He purchased comic literature of all kinds, stuffed his pockets full of it, and spent all his odd time either training or chuckling. His appearance soon became exceedingly genial; but he did not win the quarter. "Still, he ought to have done so," observed a spectator, "for his smile was so broad as he came down the straight that the other competitors could heardly got nest it." straight that the other competitors could hardly get past it."

"JOHN WITHROW, Box 29."

"Say, fellows, you can come over to my house four weeks and four hours from now, and I'll show you them books," said the holder of the paper, as he thrust it unfoided toward its owner. "No use for any of you to compete."

"You don't say so," retorted another; "but you're always bragging like that. I kness we can write essays, too."

"Maybe," witheringly; "but didn't I know the composition prize last year and win the composition prize last year and indeed to mad klonted over. Never, perhaps, had dogs and cats and pigeons and rabbits been fed more lavelance is hardly get past it."

Another young fellow became fired with ambition to qualify as a pedestrian. He read that going up and downstrian. He read that going up and downstrian. He read that going up and downstrian is hardly get past it."

Another young fellow became fired with ambition to qualify as a pedestrian. He read that going up and downstrian. He read that going up and downstrian is hardly get past it."

Another young fellow became fired with ambition to qualify as a pedestrian. He read that going up and downstrian is true. He read that going up and downstrian is was fine exercise, and he adopted to the stairs was fine exercise, and he adopted with ambition to qualify as a pedestrian. He read that going up and downstrian is was fine exercise, and he adopted with ambition to qualify as a pedestrian. He read that going up and downstrian is was fine exercise, and he adopted with ambition to qualify as a pedestrian. He read that going up and downstrian is was fine exercise, and he adopted with ambition to qualify as a pedestrian. He read that going up and downstrian is was fine exercise, and he adopted with ambition to qualify as a pedestrian is provided. He read that going up and downstrian is provided. He read that going up and downstrian is was fine exercise, and he adopted with ambition to qualify as a pedestrian is provided. He read that going up and downstrian is provided with ambition to qualify as a pedestrian is provided. H

son did not desire, as we may say, to train on his money-box, so he abandoned indoor "toe and heel."

To "make themselves hardy" some young athletes foolishly have slept on the floor. As a splendid draught comes under most doors this is a first-rate recipe for taking cold. One lad believed in the old "ped's" notion of running on the road in easy attire, hatless, and with half a lemon in each hand by way of refreshment. He gave this up, however, because one hot Saturday afternoon, when thus picturesquely equipped, he met a waggonette full of his nicely dressed male and female friends going to a "strawberry feed." "Strawberries are no good to train on," they told him. "so we need not ask you to join us." Sad to relate, he threw the two half lemons after them.

A good tip, by the way, for the run-

Said to relate, he threw the two half lemons after them.

A good tip, by the way, for the running man is to get someone to gently pace him on a cycle during his training spins. The work thus becomes much less monotonous, and there are usually "good sportsmen" in every neighborhood who enjoy thus "taking a man along."

"Practice whenever and wherever you can" is a rule with some, perhaps, budding champions. "I am going in for high jumping, and for training to jump any kind of obstacle I meet with," one youth told his father. The father said, "Oh, yes!" and suggested that they walk out and see how the new house being built was getting on. "Here's a fine jump, exclaimed the young fellow, eyeing the unfinished garden wall of the new premises, and he topped it like a bird. "Well jumped, sir," cried his father, enthusiastically; but, as the youth looked round with a somewhat strange expression on his face, the father peeped over the wall. His son was standing waist-deep in a heap of newly mixed mortar.

#### Whence Cometh the Wind?

Prof Flippe-From whence cometh the

Yalevard-From windmills!

Prof. Flippe—Very good. And the air we breathe, is that also manufactured in windmills?

Yalevard—Certainly not, sir; that comes from airshafts.—Chicago Journal.

#### Cat Takes Hen's Nest

Finding her nest invaded, a bantam hen, owned by George Old's children, raised the echoes and the sleepers in that vicinity this morning.

An investigation revealed the fact that a cat, with a litter of kittens, had taken possession of the nest and retained it despite the racket raised by the chickens. The hen's patience finally became exhausted, and in she marched and took a reserved seat on the cat's back. She laid her egg and then left the feline family in possession of the den.

While the hen was trying to oust the cat the din was terrific.—St. Augustine Record.

"Jimmy," said the teacher, "what's a

Good. Christopher," to a small, eagerin looking boy, "can you tell us what is a ke mountain?"

Christopher shot up from his seat so suddenly as to startle the visitor, and promptly responded: "A mountain is land extending into the air."—Youth's Companion.

#### Drawing Five-Pointed Stars

One of the easiest methods of making a five-pointed star by the use of the steel square is to describe a circle of a given diameter, then divide up the circumference by indicating chords equal to seven-twelfths of the diameter. The five points where the chords intersect the circum-ference will be the points of the star, says the Metal Worker.

Another good way is to divide 360 by Another good way is to divide 350 by the number of points the star is to have, which will give the distance between points in degrees. Then get the angle on the bevel square with the protractor, and using any diameter as the base line, the points may soon be obtained. This operation is illustrated in Fig. 1, while Fig. 2 shows the star with points joined.—Popular Mechanics. Popular Mechanics.

dy w.cogar simpson.

HE LITTLE village of "Famine" was well named. Especially fitting was it when the biting winds of December 18— swept over it, piling the snow in impassable barriers on road and field; for then, famine indeed closely stared its dwellers in the face. With shortened rations came pestilence, and with pestilence, death, until of a band of ninety souls but twelve remained.

Storms had followed so closely, one upon another, that there had been no opportunity to send a courier; and, once started, the pestilence spread with such frightful rapidity that unless relief came soon none would be needed.

Michael Tarbin, the younger, was best HE LITTLE village of "Famine" was

came soon none would be needed.

Michael Tarbin, the younger, was best fitted by nature to brave the dangers atending every inch of the journey for relief; and it was he who volunteered. He fitted his snowshoes carefully to his feet, and slung his skis over his shoulder, after wrapping several folds of sailcloth about his person and securing it with stout cod line. Then he took his pikestaff in hand.

Four men and seven women, the sole

it with stout cod line. Then he took his pikestaff in hand.

Four men and seven women, the sole survivors of the pestilence, watched him prepare for his journey, his father and mother being the most anxious members of the little group.

"Better take a gun," one suggested.

"Twould hinder more than help," Tarbin replied.

"A sheath knife!" another said, forcing one into his hand.

Tarbin took it, and fastened it securely in his belt. Then he strode over the hill, leaving marks in his wake that, an hour later, were lost by drift.

Kepenkeck, where dwelt the only doctor in a radius of eighty miles, lay thirty-nine miles inland. This man was but an herbalist; a descendant of the aboriginal Indian. He was, however, skHled in the use of simples to an amazing degree; the beams of his little tilt were thickly festooned with the dried herbs which lent their fragrance to that of the burning hirch logs. He had driven the pestilence from other villages in years gone by; so to him Tarbin journeyed.

"Ush! Where from?" was the gruff

Tarbin journeyed.

"Ugh! Where from?" was the gruff greeting Tarbin received when, four days later, the lad entered his tilt at

dusk.
"Famine'—Plague!" was all Tarbin

"Tamine'—Plague!" was all Tarbin had strength to stammer.

With tribal stolidity, the half-breed moved about the room, plucking a handful of herbs from this, or that, bunch and laying them on the earth floor, muttering to himself as he dld so. He had brushed the embers of the fire together on the entrance of the lad. Now, Tarbin, having delivered his message, stretched his weary body beside them and slept the sleep of exhaustion. At break of day he awoke, to find the half-breed bending over him, holding a cup breed bending over him, holding a cup vile-smelling liquid beneath his nos-

Ugh! Heap sleep. Drink!" he said

Tarbin did as he was bidden; and the cralding hot liquid set him coughing and spluttering, to the disgust of the Indian, who seemed to regard his actions almost with contempt. The lad soon found that strength came to his limbs.

and he sat up.
"What pay?" queried the half-breed,

eyeing him narrowly.

Tarbin produced a battered shilling from his pocket, and placed it in his

hand.

"Ugh! 'Tis little," the man muttered. fondling a package which he took from the table, securely baled within a wrapper of the inner bark of the birch tree.

"Tis all I have. More will come, if ye stop the plague. 'Tis sore pressed Famine is—"

Famine is—"
"Ugh! 'Tis enuff," said the halfbreed. "Brew on fire of withy-twigs
at dawn, facing east. Give cup to each
at sunrise, and sunset. The evil will
sweat out. No more is needed. Winter will break eight days, and floods will

The sun was shining brightly as Taron set out on his return. At some time during the night a soft wind had arisen and now the snow was covered with an icy crust. Reaching the top of the hill, the lad stopped, removed his snowshoes

ing of the coming of another storm; so he journeyed on. Heavy masses of clouds rolled across

Heavy masses of clouds rolled across the sky, through which a brightly gleaming moon flashed a ray now and then of great brilliancy, while the ever present northern lights festooned them with a fringe of brilliant coloring. Suddenly he heard a long drawn howl, ending in a sharp barking note; another and another followed, then fear lent strength to his efforts. Forms dotted the snow covering the tops of the banks, and it needed no second thought to and it needed no second thought to learn that he had been scented by the savage, black wolves of the north, and that they were close upon his track.

The gale was now increasing in force, and Tarbin found he needed to make but and Tarbin found he needed to make but little effort except to keep his tired limbs in a rigid position to keep his pace. But this pace was not swift enough to carry him beyond the reach of his pursuers. He must increase it, to save himself; and in his safety lay that of the dwellers in Famine.

The wolves had descended to his level now but in so doing, had lost distance

The wolves had descended to his level now, but in so doing, had lost distance. But when thus well ahead of them an overhanging branch of a tree halted him with such violence that it broke; grasping it in his hands, he sped onward.

""Tis my only hope," he muttered a moment later and stouning."

fast to his pikepole and the other to the branch of the tree which he still held in his hands. Bringing the ends of the pole and branch together he tied them with the line, and raised aloft a rude sail which the gale struck full upon, forcing him ahead with tremendous speed. But he noted that the slight delay had served to lessen the distance between himself and those foam-flecked jaws and glinting eyes. irg eyes.

Glancing at the bank as he sped by, he saw that one or two of the pack had sought the softer footing on the snow bank and were now ahead of him. Just at this point the river widened abruptly, so, shifting his sail, he steered past them just as they ran toward him and, savagely snapping, missed his legs by a few

when he veered his sail so as to carry him to one side and thus escaped it. Any of the pack, had they not

and adjusted his skis. Setting his feet firmly together, he flew, with the velocity of the wind, down the declivity, across the leebound river, and halfway up the opposite slope before he stopped. Then he glanced about him. He well knew that the river he had just crossed flowed to the sea, and that, near its mouth, lay his home.

On his coming he had journeyed across the land, because of the softness of the snow; but now, as he looked at the surface of the river, he saw a course to return far easier than that by which he had arrived. He could ski on the crust, provided it held cold; so, turning, he slid downward to the ley surface of the river. Then with rapid strokes he forged ahead, until at sundown he had covered a good ten miles of the distance. Then he stopped to rest, chafing his weary limbs with his hands, and flinging his arms around to restore the circulation. He would have liked to sleep, had he not known well the danger. Besides, the gale which had arisen was sweeping through the canon formed by the high banks bounding the river, telling of the coming of another storm; so he journeyed on.

been cowards, might have leaped ahead in the land on the lad's back. But the land con the lad's back. But the land on the lad's back. But the land in the land in the river all he felt his strength land, and the land of him, voices sounding led ahead of him, voices sounding led ahead of him, voices sounding led ahead of him, voices sounding the report of a riffer all, his efforts were to be defeated. Suddenly, lights twink-led ahead of him, voices sounding it was a land

limb from limb.

The brave lad was safe now. The lights ahead were in the windows of the tilts at Famine, and, as he reached the shore, willing but weak hands unbound his skis and helped him home. His pluck and endurance had saved his parents and the little band of survivors of that terrible winter.

Today about the tilt fires, the tale of Michael Tarbin's trip to Kepenkeck, is still a bit of folk-lore, of which the dwellers in Famine never tire in the telling.

#### Results of the November Prize Contests

The following are the correct solutions The following are the correct solutions and the prize winners in the several puzzle and riddle contests in the November number, outside of Uncle Tangler's page.

The answer to the Pictorial Riddle is: The answer to the Pictorial Riddle 1s: Both are gobblers, or, both gobble. The prize, a key ring, goes to Harry Becker, 623 St. Ann's Ave., New York City. New York. Some laughable replies were to be expected. One says, "Neither is thinking of the future"; another, "Both are very fat"; another, "Both will be stuffed soon."

very fat"; another, "Both will be stuffed soon."

The answer to "What Do They Weigh?" on page 19 is as follows: Number one weights 19 pounds; number two weighs 19½ pounds; number three weighs 19½ pounds. The prize, a pocket knife, goes to George E. Simpson, 433 Winthrop Ave., Chicago, Ill.

The answer to the Pie puzzle on page 7 is as follows: The number of raisins totals 391: 391 is seventeen times twenty-three. The pie, then, might have been cut into seventeen pieces, each containing twenty-three raisins. The first correct solution came in without a name attached to it. After that three came together. The names of the boys sending these are Milton McAllister, 319 Goliad St., San Antonio, Texas; Wm. G. Nyce, Vernfield, Pa., and Nelson McCarney, 231 University Ave., Kingston, Ont. As a matter of fact, no one of the three is entitled to the prize, but we are going As a matter of fact, no one of the three is entitled to the prize, but we are going to send it to the one who lives farthest away, namely, Milton McAllister, 319 Gollad St., San Antonio, Texas. The prize is a good boys' book.

The answer to the Pictorial Proverh A, page 25, is "A little knowledge is a dangerous thing." The prize, a boys' book, goes to Perry Harris, Alto, Michigan.

A Christmas Card: No better or more acceptable Christmas present can be given a boy than a year's subscription to The American Boy. It lasts him a whole year. We furnish on request, a handsome Christmas Card which tells the boy who gave him The American Boy. If the request too is made, we can mail the Christmas number so that it will reach him on or near Christmas morning.

(BEGUN IN SEPTEMBER, 1904)

XXII.

"CLOSING UP."

FTER THE USUAL number of days spent in loitering about barracks and roaming around Flirtation Walk, we moved into camp for the last time. There were only two classes, and as we were now on the top round of the ladder, we had a great deal of leisure on our hands, leaving all the drudgery to the yearlings.

There were at present, a number of young ladies in the Post, who were visiting officer's wives, or staying at the hotel on the reservation. Many of these were old cadet girls, and the first class, as a matter of course, had the pick. We had not been in camp more than a week, before several desperate cases were under way.

orator, and a classmate to read the Declaration of Independence. The orator was promptiness, at 8 o'clock. It was a beautine smallest man in the class, but what he lacked in stature he made up in originality and dry humor. His effort was received of with loud applause, especially from the girls, who all agreed in voting him the cutest cadet in the corps." The Declaration of Independence was read by a gentleman of more imposing stature and dignified bearing, who delivered his words in a manner that would have made oil King George tremble on his throne.

On the fifth of July we began a new series of drill, and were kept busy every morning little groups of the series of family and the scene was land the scene. The superintendent and commoning during the rest of camp. The superintendent and commoning during the rest of camp. The superintendent in the discussion of these drills, as we had to dismount and anount the immense pleecs in Fort Clinton. We had some work in practical astronomy, and nettings were drills. Mechanical maneuvers were the most laborious of these drills, as we had to dismount and mount the immense pleecs in Fort Clinton. We had some work in practical astronomy in the evenings, when star-gazing was studied in a more practical astronomy in the evenings, when star-gazing was studied in a more practical astronomy in the evenings, when star-gazing was studied in a more practical astronomy in the evenings, when star-gazing was studied in a more practical astronomy in the evenings, when star-gazing was studied in a more practical astronomy in the evenings, when star-gazing was studied in a more practical astronomy in the evenings, when star-gazing was studied in a more practical astronomy and acting the practical astronomy in the evenings, when star-gazing was studied in a more practical astronomy and acting the practical astronomy and acting the process practical astronomy and acting the process practical astronomy in the evenings was studied in a more practical astronomy and acting the process of the p

rhe plebs must have been a particularly dull class, for they did not come into camp until the middle of July, and it was not until the first of August that our class stopped walking guard. Two first-class privates were detailed every day to act as officers of the guard, and a tour of this kind, coming only once in two weeks, was more

homeward trip. Everything went smoothly until we were within about fifty yards of the nearest land, when Sam, who was at the rear, cried out that he was seized

trates how military training together with regular discipline can save a man in an emergency in which, without these ad-vantages, he would be very apt to lose his self-possession.

By A GRADUATE

About the first week in August, we began our preparations for the color-line entertainment, which was appointed for the night of August 27. A committee was selected to prepare grinds and songs for the occasion, and to find out any musical or literary talent that might be dormant in the fourth class. One of my mates, who was a quondam playwright, prepared a drama for the occasion, adapted from a popular opera. Not only did this genius adapt a play, but painted the escenery, which was both artistic and appropriate. One of our "military fiends" selected a squad, composed of first-classmen and yearlings, who were particularly expert in squad, composed of first-classmen and yearlings, who were particularly expert in the manual of arms, and drilled them in the "silent manual." All cadets were invited to contribute jokes and songs.

not been in camp more than a week, before several desperate cases were under way.

As a result of our new status, we were allowed many privileges. Among these were cadet limits from 5 a. m. until retreat, and permission to wander about the reservation during band concerts, so long as we kept within hearing of the music. The bass drum is a deep-toned instrument, whose taps can be plainly heard in many a sheltered nook and recess about the grin old library and ivy-clad chapel.

The Fourth of July was observed in the regulation manner. At a class meeting in previous January, we had selected a class orator, and a classmate to read the Declation of Independence. The orator was reading of Independence. The orator was reading of the smallest man in the class, but what he lacked in stature he made up in originality and dry humor. His effort was received with loud applause, especially from the girls, who all agreed in voting him the

POSTER TACKARD

the following studies: Military Law, Military Engineering, Field Fortifications, Permanent Fortifications, the Art of War, Spanish, Ordnance and Gunnery. Spanish took the place of History, in the schedule of studies.

The next event of any importance was "The Hundredth Night" entertainment, which was as brilliant a success as was that of the "Color-line."

"The Howitzer" which was read on this occasion was an unusually good one; for Silkins had been appointed editor. He was a well-known wit, and every one in the class received one or more keen hits. This event was also celebrated by one of

This event was also celebrated by one of the largest germans ever held at the Point,

the largest germans ever held at the Point, the souvenirs being beautiful cards, tied with ribbons of the class colors. The '8-girls came back in full force, proving their loyalty to the class.

One hundred days to June! From this time on, we began to count the time with feverish impatience; but, almost before we realized it, the snow of winter had vanished, and the spring drills were inaugurated by the tedious company drill of the latter part of March.

#### XXVIII.

CONCLUSION.

West Point can never present a more beautiful appearance than it did during the last two months that I spent there. By the early part of May, the plains, the hills and slopes were all one mass of verdure, and the air was balmy and fragrant with bursting hild and blossom.

the air was balmy and fragrant with bursting bud and hlossom.

The day on which we began general review in the last study marked an epoch in our lives. No more advance lessons: We had more leisure now on our hands, and every morning little groups of first-classmen could be seen wandering over the reservation, and speculating about their future. After supper, in the twilight, we were accustomed to meet at Kosciusko's monument in Fort Clinton.

low and subdued, and was mostly confined to the discussion of plans for the future. These brief meetings were always abruptly terminated by the familiar "call to quarters," when we wandered back to barracks in little groups of twos and threes. On repairing to his quarters, each cadet made an heroic effort to "get down to boning," but in most cases, owing to the nearness of graduation, the effort was futile.

futile.
The final examinations were mostly over, and the Acade-mic Board depended

of the guard, and tour of this kind, coming only once in two weeks, was more of a novelty than a bore. We generally had the afternoons and evenings to ourselves, the form the plain, to our the pleb swimming ground, near farget Hill, the plet of the agent of the plain to the pleb swimming ground, near farget Hill, the plet of the agent of the pleb swimming ground, near farget Hill, the plet of the pleb swimming ground, near farget Hill, the plet of the pleb swimming ground, near farget Hill, the plet of the pleb swimming ground, near farget Hill, the plet of the pleb swimming ground, near farget Hill, the plet of the pleb swimming ground, near farget Hill, the plet of the plet my long cherished hope was realized, and Silkins (who was now "first" captain), and I were once more together.

Two or three days of idleness, and we

of four feet. As a result of this reckless riding, we always had one or more men laid up with broken or sprained limbs.

The January examination was quite an ordeal for us, as we had gone over so much ground during the previous term. However, we passed the crisis in safety, without the loss of a single man. they lined both sides of the plain, leaving a clear field for the action of the troopers without the loss of a single man.

No ropes or policemen were necessary to hold the crowd back, for a fear of being Advertise in The American Boy for Results

did, broke into a trot. Again the bugle sounded "gallop," and the line move i forward at an increased gait. The sagacious animals knew what was coming next, and animals knew what was coming next, and sniffing the excitement, we had great difficulty in restraining them. Finally the inspiriting call of "charge," echoed across the plain, and at the first note each horse gave a bound that nearly unseated his rider, however ready and alert the latter may have been may have been.

Each cadet drove his spurs into his steed, let out a Comanche-like yell, and flung his reins on his charger's neck. Sabres were flashing on the air, and every one was flercely cutting right and left at imaginary foes. The horses needed no urging to do their best, for they were as eager to hold the lead as were their riders—but we "did" urge them by every conceivable method at command. The charge was a wild, head-long race on a dead run, the winner to be the first to strike the road in front of the botal. hotel.

I need hardly say that our last charge was not executed according to tactics, which prescribes that it shall be made with the troopers closed boot to boot, so as to secure the effect of the combined shock upon coming in collision with the enemy. However, the formation was by grace called a "charge," and when we selected our horses a few days before, we chose them with special reference to speed them with special reference to speed.
We thundered across the plain in a cloud

We thundered across the plain in a cloud of dust, but, long before the road was reached, the race was settled. Silkins, who secured by lot the first choice, selected as a matter of course the speediest animal in the stable, and won with case.

We were going too fast to stop on striking the road in front of the hotel. Many of the horses dashed into the hotel yard and around the path in front of the building. The majority, however, turned to

and around the path in front of the building. The majority, however, turned to the right and formed in the grass plot between the cavalry plain and Fort Clinton. In the course of a few minutes, we all reformed here, with two exceptions. One of these exceptions was striving to bring his horse down to a trot, but the most he could do was to pull with both hands on one rein, in an effort to circle the beast around the grass plain in front of the superintendent's quarters, and then the him out. The other, a light-weight, who was riding the fron-mouthed equine demon was riding the iron-mouthed equine demon Mason, was being carried at a dead run along the river road toward Highland Falls. This cadet was late at suppor that night, and we were all rather anxious as to his fate, until he showed up in the messhall, when he was received with a "still" (a universal silence).

He said afterwards he didn't mind it at all, having had a delightful ride in the cool evening air, besides "dead-beating" parade. On the succeeding day (the eleventh), there were no examinations for any of the classes, except the unfortunates turned out

classes, except the unfortunates turned out for a written. Among these was the average number of plebs, yearlings, second-classmen and three of my classmates. Two graduates were "turned out" in ordnance and one in engineering.

One of my classmates had been given the following subject: "Draw a horse and represent the present method of attaching artillery harness." The cadet spent the whole time in trying to draw a horse and whole time in trying to draw a horse, and when the poor fellow was called upon to recite, he had nothing on the blackboard except his name, and a diminutive picture of some animal as yet unknown to zoologists. This cadet was turned out.

On the afternoon of this day, we were ordered to report at the adjutants office to draw for vacancies. To explain—every graduate of the Academy enters the army as a second lieutenant, and takes rank according to his class standing. Legislation by Congress has varied somewhat, but since 1886 the law provides that every graduate shall enter the army according to the recommendation of the Academic Board and the order the army godet for whom his own choice. his own choice. Every cadet for whom there is no vacancy shall be attached to a second lieutenant, to take rank as second lieutenant when the vacancy occurs in the arm to which he is attached.

Attached sang additional her—I forget how many times.

After the opera, we "adjoined" to one of New York's swell hotels, and sat down to our final supper. Every cadet (no—

arm to which he is attached.

A cadet upon graduating may, according to his standing, enter the Corps of Engineers, the Artillery, the Cavalry, or Infantry. The usage varies, but it is generally customary for the Academic Board to recommend as follows: the first five cadets for the Engineers; Ordnance, Artillery, Cavalry and Infantry, from 6 to 12 inclusive for all arms except the Engineers; from 13 to 24 inclusive for the Artillery, Cavalry, and Infantry, and Infantry or the Cavalry and Infantry and Infantry.

Infantry, and the rest of the class for Cavalry and Infantry.

A cadet cannot "graduate into" the Ordnance branch of the service. The lowest ranking officer of the Ordnance is a first lieutenant, and when a vacancy occurs, it is filled by competitive examination. Any officer of the line who has been in the service for four years, and who has been recommended for the Ordnance, can enter the examination.

As graduation approached we all devoted much time to studying the Official Army Register, the army journals, and the Army Intelligence news in the various papers.

When we were called down to the Adjustant's office we found a sheet of paper on

tant's office, we found a sheet of paper on which were printed our standings and the recommendations of the Academic Board. Each cadet, in turn, according to his class standing, wrote his first preference, his second preference, and in some cases his second preference, and in some cases his second preference, and in some cases his second preference. second preference, and in some cases his third choice, naming in each case the regiment and arm which he desired to enter. This paper was forwarded to the Adjutant-General's office, everything was taken into consideration, and we were afterward assigned to regiments accordingly. In the evening at 6:30 the graduating parade took place. It was about the same as the one I have already described. We were the principal actors, and the "formation" was of much more interest to me than it formerly was. The music never

than it formerly was. The music never

run down by some of the prancing steeds kept the lookers-on at a respectable distance.

Having devoted about an hour to company and battalion evolutions, we were drawn up in line at the south end of the plain. The instructor gave the command "dismount," and told us to see that our saddle-girths were secure. The command "mount," and told us to see that our saddle-girths were secure. The command "mount," and told us to see that our saddle-girths were secure. The command "mount," and told us to see that our saddle-girths were secure. The command "mount," and told us to see that our saddle-girths were secure. The command "mount," and told us to see that our saddle-girths were secure. The command "mount," and told us to see that our saddle-girths were secure. The command "pulled through." There was not a cade. In the class who had not either relatives or sweetheart in the large assemblage in iront of us, and they, too, listened with breathless interest.

And now the class in solid line is marching to the front. We halt, raise our hats and listen to the words of counsel that the commandant is addressing to us with the capture attention that I gave to the final standing of our class, and my joy on findence and my providers with the capture attention that I gave to the final standing of our class, and my joy on findence attention that I gave to the final standing of our class, and my joy on findence attention that I gave to the final standing of our class, and my joy on findence attention that I gave to the final standing of our class, and my joy on findence attention that I gave to the final standing of our class, and my joy on findence attention that I gave to the final standing of our class, and my joy on findence attention that I gave to the final standing of our class, and my joy on findence attention that I gave to the final standing of our class, and my joy on findence attention that I gave to the final standing of our class, and my joy on findence attention that I gave to the final standing of our class, and my

And now the class in solid line is marching to the front. We halt, raise our hats and listen to the words of counsel that the commandant is addressing to us. We break ranks and walk slowly back to barracks, but we halt again and form in line as the companies march past. The band is playing "Benny Havens, O," our heads are bare to the evening breeze, and each first sergeant, as he arrives opposite to us, brings his company to a "carry" and salutes. As the color company passes the color-sergeant dips the colors, and that is the corps' farewell to us.

is the corps' farewell to us.

At nine o'clock, the graduation hop begins. The mess-hall is so densely crowded that dancing is almost an impossibility. It all seems like a dream as I look back upon all seems like a dream as I look back upon it, too sweet ever to have been a reality. The hands of the clock are pointing at 1:55, the orchestra is playing "Benny Havens O"; it all ends too soon. Then comes "Home, Sweet Home," the last waltz of the evening. Oh that the minutes were only hours! But it is half a minute to two, the instruments are sighing lower, sweeter, and slower, until the last sigh comes. The drum sounds the recall, and our last hop is over. our last hop is over.
It was rather hard to leap out of bed at

6 o'clock and hurry down to reveille, but there was some compensation in the thought that it was the last time. The next morning we would get up at any time we chose. We were all busy packing and marking our things until 10 o'clock. A short breathing spell, and we fell in ranks at 10:30 for the graduation exercises. As at parade the day before, the battalion was formed in single rank, and the first class privates marched in the line of fileclosers.

The exercises were opened by prayer: followed by an appropriate selection by the band. General Sherman then delivered an address, and told many laughable anecdotes of his cadet days. Next came an address from the President of the Board of Visitors. The superintendent followed with some kind words of advice to the graduates. General Sherman, the last of the three great war horses called us to the three great war heroes, called us up in turn, according to class rank, and delivered our well-earned diplomas to us, with an encouraging expression for each of us. "Are you the son of Colonel— of the cavalry? I knew him well; you look just like him, too."—"High private in the front rank eh?—well you are as good as just like hlm, too."—"High private in the front rank, eh?—well, you are as good as any of them now"—"Don't let the cock-roaches eat it up," were some of the remarks I overheard.

The band played "My Country," and that concluded the exercises. We fell into the line of file-closers, stacks were broken and we marched back to barracks, with our "sheepskins" in our hands. The battallon

and we marched back to barraens, with and we marched back to barraens, with the battalion was formed in front of barracks and the orders about leaves of absence and the new makes were published. We broke ranks, and "bade farewell football with rushed to our rooms, and "bade farewell to cadet gray" and played football with our dress hats,

Perhaps the reader, accustomed to high-school and college "commencements," is school and college "commencements," is wondering what has become of the Spanish salutatory, the tedious orations on great military heroes, the still more tiresome theses on abstract military science, and the pathetic valedictory. They were advertently omitted.

In a few minutes we had donned our "cits" and were out in front of barracks receiving the congratulations of our friends—perhaps a few of us found time to take a last stroll down on Flirtation.

At one o'clock, I sauntered down to dinner; found uffor testing the sound that

At one o'clock, I sauntered down to dinner; found, after tasting the soup, that I had no appetite, and started on the round of the mess-hall to say good-by to the comrades I left behind.

We reached New York in various ways, some by the West Shore, some by the Hudson River Railway, and still others by the day-boat. At any rate, we all assembled at the opera, appropriated two rows to our own use, applauded everybody and everything, and when the star actress appeared with a cadet cap fauntily set upon her with a cadet cap jauntily set upon her head, and sang a topical song, we encored

officer) in the class made a speech; every cadet, as well as the girls, the alma mater, the United States, the "turn-backs," and the popular officers at the Point were toasted. It was long after midnight when separated, and the last farewell was spoken.

The Great Indoor Game. Latest and greatest thing out. A strenuous contest. Most fascinating. Write for information concerning our great combination offer consisting of Football and three other good games.

WAY UP to the north of Manila, where the flat rice country ends and the sugar land begins; up beyond the great Candaba marsh, where the foothills of Mount Arayat billow down to the muddy banks of the Rio Grande, in the heart of Pampanga province, lies the old Spanish town of San Fernando, City of the Silver Church.

Some seventeen hundred yards north of the town stood an old sugar mill, and near it a clump of bamboo drooped above a creek which winds across the fields.

a creek which winds across the fields.

of the town stood an old sugar min, and near it a clump of bamboo drooped above a creek which winds across the fields.

Late one hot May afternoon a party of American soldiers, about five hundred of them, came to San Fernando; came in by the side door, so to speak, with an accompaniment of popping Mausers and banging Springfields. They slept in a square that night, with their cheeks on the stocks of their rifles.

The next morning a number of their friends arrived, and the whole party proceeded to make themselves at home. In order that they might not be inconvenienced by unlooked-for callers certain small parties were sent to watch at various points without the city.

So it happened that E Company came to the sugar mill. Running swiftly and low, with dust and sand leaping about them in little jets and fountains, they had reached the spot without mishap, driving out in haste a scattering troop of the natives. Then E Company resolved itself into a Cossack outpost and sought the shade to cool off.

Naturally enough, after the brown men left E Company supposed it had the sugar mill to itself, hence it was distinctly surprised in the early evening to hear Sergeant McCabe, from the shade of the bamboo clump, say: "Well, I'll be shot! Fellows, see here."

But when a dozen men hurried to his side there was nothing at all to see. Some suggested that the heat had af-

But when a dozen men hurried to his side there was nothing at all to see. Some suggested that the heat had affected the sergeant's eyes. Others demanded his blood for fooling them.

McCabe merely remarked: "Wait, now and be quiet. Do you expect any wild thing to sit still while you come charging up like a herd of carabao?"

Presently a little black-gray head was thrust from a burrow among the roots of the bamboo and a dozen hands leaped for as many hips. In that land when little heads pop up from the ground men jump and grab for things to shoot with. By a motion McCabe indicated that this was no case for "boom-boom" and the crowd let fall its hands and watched the head.

It eyed the onlookers narrowly, but as proposed the start of the search of the search carage and come

watched the head.

It eyed the onlookers narrowly, but as no one stirred it took courage and came out of the burrow, followed by a foot and a half of fur-covered body, light mottled gray in color and more graceful than a ferret.

With a peculiarly sinuous, gliding motion the little creature ran from the bamboo to the creek, where it drank hastily and disappeared among the reeds.

"What is it?" asked the men. "A Fili-"What is it?" asked the men. pino weasel?"

Feng Ling, the Chinese cook, said:
"Thatee mongoose. He good. He killee um snake. Nobody hurtee mongoose! Him velly good filend."
"Sure thing," said the men. "We'll not hurtee him. We'll treat him like a gentleman and try to get better acquainted."
Next morning a salmon tin with a few scraps of the fish in it was placed near the bamboo clump. The new and delicious odor quickly communicated itself to the nostrils of Sir Mongoose and he came cautiously forth to investigate. His bright, brown little eyes shot a coquettish glance at the watchers as he proceeded to sample the canned goods He found them to his liking and began a hurried breakfast; but when somebody laughed at his manners he vanished like a streak of gray mist.

Through all his feasting on canned dainties, however, he did not forego the pleasures of the chase. Frequently the men would see him stalk a foot-long lize ard and carefully eat the breast and heart. More than this he was never seen to touch, although it is possible that by reason of much pampering he had be-come something of an epicure. One day some of the men, loitering

along the creek, came upon a snake of the viper species and by skillful man-euvering and prodding with long bam boos, induced his snakeship to lay his course for the thicket where the mon-

course for the thicket where the mongoose was taking his slesta.

Not for anything would the company have allowed that reptile to approach their quarters save the hope of seeing how the mongoose kills a snake.

They saw, but the sight very nearly cost the life of the mongoose.

On account of the poking and prodding necessary to herd the snake into the enemy's country he had been roused to a pitch of fury that was not nice to see. His neck spread out as broad as a baby's hand, and he struck at everything baby's hand, and he struck at everything

near him.

He was in the ugliest, most watchful mood possible when he neared the bam-boo clump, and, at the first flash of gray when the mongoose appeared on the scene, he whipped his length into a coll and his venom-laden throat hissed forth

a horrid menace.

This was bad, for the whole secret of the mongoose's success as a serpent-destroyer lies in his ability to disable the snake before it can gather itself to

strike.

Mongoose appreciated the situation but he gamely advanced to the attack He feinted a rush and the snake struck viciously. It missed, of course, and the furry little warrior sprang too close. He miscalculated in some way and the snake struck home on his shoulder.

Desperately then the little hero fought until he succeeded in so crippling the snake that it could not escape. Then he darted away to the creek and hunted frantically up and down until he found a low cress-like plant, the leaves of which he ate hastily. Snatching a hurrled drink he returned to the fight with such fury that in a moment he had the such fury that in a moment he had the snake torn to shreds.

No sooner had he finished his work than he returned to his healing plant and there remained all night, alternately eating the leaves and drinking deeply at

eating the leaves and drinking deeply at the creek.

It was a very badly used-up mongoose indeed that crept up the bank in the morning. He ate greedily of the salmon given him and offered no objection when one of the men picked him up and gently stroked his bedraggled fur.

For days after the light he was unwell from the effects of the poison, and seemed more and more to seek the companionship of the men of the picket.

It was in consequence of this increased familiarity that the men shortened his name from mongoose to Goosle

creased familiarity that the men shortoned his name from mongoose to Goosle
and he learned to come at the word.

The weeks passed and the rainy season came. Goosle abandoned his burrow
under the bamboos and moved into the
sugar mill with his friends. He was
now as tame as a house-cat and as full
of play as a kitten. His antics with a
Springfield cartridge would keep the
picket laughing by the hour, and the
smell of sugar would send him scrambling all over the man who had the
sweet.

merely turning his eyes to see what meant the heaviness on his legs. Great drops of cold perspiration started on his face as, startled by some involuntary twitching of his muscles, a four-foot cobra reared its threatening hood and swayed in anger at the disturbance. Out in the center of the big shed Goosie was playing with a cartridge, surrounded by a group of admiring spectators, who, fortunately for the boy in the corner, were conversing quietly. Suddenly Goosie dropped his cartridge and with ears erect and nose sniffing the air, he flattened himself on the ground. The group about him watched silently as he stole from their midst toward the corner where Lisle lay.

At the same instant a man's voice, harsh with fear, whispered: "God help him! Look! Lisle!"

Then men froze to statues, their eyes fastened on the horror in the corner—all but McCabe. His hand shook as he drew his revolver, but his voice was steady when he spoke: "Lisle. Steady. old man. I'm going to knock off his block!"

But he was forty feet away and that swaying neck would have been a worthy mark for nerves unshaken. McCabe knew it and he knew, too, that a miss meant death for the boy, so he began creeping nearer. For a brief second, when his approach was discovered the snake would hold motionless. That was his chance and he must not fail. Lisle lay with his eyes fixed on the hideous spectacled hood that swung above him. He felt the folds of the reptile's body tighten for a spring and his over-wrought nerves gave way. Mercifully, he fainted.

McCabe raised his revolver and as suddenly lowered it. For the snake had struck—not at the helpless boy, but at a flittering gray shadow that shot toward it.

struck—not at the helpless boy, but at a flittering gray shadow that shot toward it.

The blow missed and in a flash Goosle's teeth were fastened in the cobra's neck just back of the swelling hood, and his sharp little claws were ripping the squirming snake to tatters.

In the reaction that followed, the men hugged one another and shouted insanely. Lisle staggered to his feet and, picking up the wondering Goosle, kissed

picking up the wondering Goosie, kissed him square on his bloody little nose. From that day forth, when Goosie passed, men stood "tention" and sa-

At last there came a day when E Company was ordered down to Manila to prepare for the voyage home. A troop of cavalry stood at the sugar mill to take over the outpost, and E Company waited with their blanket rolls for ne final order. Lisle stood with Goosie in his arms.

Lisle stood with Goosie in his arms. There had been much talk concerning the little fellow's fate, now that his friends were leaving. Lisle wanted badly to take him back to the States, but the regimental bandmaster, who had played with Hagenbeck, said: "No. They die of pneumonia there in the winter;" so Goosie must be left.

He knew that something unusual was happening. So many strange faces disturbed him and he kept close to his friends. From the refuge of Lisle's arms he squeaked his dislike for the cavalrymen.

#### THE GREAT FOOT BALL STORY OF THE YEAR

#### In the Line

By A. T. DUDLEY

Author of Following the Ball Making the Nine

> Illustrated **\$1.25**

As "Following the Ball" gave the fortunes of a player in the back field in connection with his general school life, so "In the Line" tells how a stalwart young student won his position at guard and developed manliness at the same time. The fine points of the game are brought out as only an expert can, and the story is a good and folly one. story is a good and jolly one.

"As in the case of the former books of this series, the boys will like it for its good fellowship and accurate presentation of athletic information, and their older friends will approve of it for the inherent manliness which is never lacking in Mr. Dudley's books."

# HOME-MADE A. Neely Hall. THE BOY CRAFTSMAN

PATTERNS FOR HOME-MADE CHRISTMAS GIFTS

better appreciated by friends and relatives than anything he can buy. Such a piece of work, as a Christmas gift, speaks for itself. In receiving a store article from a boy, a ceiving a store article from a boy, a person might naturally imagine that the parent had given him the money with which to make the purchase, or that he had had nothing to do with the affair; but in a home-made present the whole-hearted spirit of the young giver is easily understood by evidence of the time and labor he has expended in making it.

There are so many articles that a boy rinere are so many articles that a boy can make, articles that will be useful gifts, that he should have little trouble in making suitable selections. The illustrations in this page show several ideas for gifts that are

to carry The draw-give the easv ings ings give the shapes and sizes of the various pieces necessary to make up the articles and with these and the text as a guide, no as a guide, no trouble should be experienced in performing the work. Fig. 1 shows a

Fig. 1 shows a handy article, r Whiskbroom Holder, something anyone will appreciate for his or her room. The backpiece is shown in Fig. 2, together with its principal dimensions. This as well

as the other pieces of the holder, should be cut out of three-eighths inch stuff. In order to get the two sides of the back piece alike, first draw a center-line upon the piece of wood, as shown in the illustration (see Fig. 2). Then lay off the dimensions upon either side of this line. Draw the curve, as shown, upon one side, and then reproduce it upon the other side at an equal distance from the cen-ter-line, tracing it off with a piece of side at an equal distance from the center-line, tracing it off with a piece of tracing paper to get the curves alike. The front piece of the holder should be cut the shape of the lower portion of the back piece (that portion below the dotted line, Fig. 2). The two side pieces (see Fig. 1) should be cut an inch and one-half wide by the height of the front piece (four inches). With the pieces prepared, nall them together in their proper places with one-inch wire brads. The holder should then be finished as described in general for all the work in the latter portion of the article.

A Clock Bracket or Shelf, such as shown in Fig. 3, makes a neat gift if the work upon it has been carefully done. The top portion should be laid out the shape of Fig. 4, and the two brackets similar to Fig. 5. After cutting out these pieces, bevel the upper edges of the brockets. His plane to do this

of the top piece and the two long edges of the brackets. Use a plane to do this work, first marking the depth and width work, first marking the depth and width of the bevel around the edge of the board to enable you to keep the sides straight. Make the bevels on the brackets the same as that on the top piece of the shelf. Fasten the brackets in place two inches from the ends of the top piece, using inch and one-half fingering reside for the purpose. ishing nails for the purpose. Fig. 6 the wall. shows a back view of the shelf and the In Fig. means by which it is hung upon the Tries. snows a back view of the shelf and the means by which it is hung upon the wall, consisting of a screw-eye screwed into the under side of the top piece, next to each bracket. These eyes are to slip over two nails driven into the wall in positions corresponding to them, and will prevent the shelf from slipping off the nails.

BOY'S OWN handiwork is always Rack similar to that shown in Fig. 7, better appreciated by friends and procure a piece of seven-eighths inch relatives than anything he can buy, board six inches wide out of which to cut the end pieces, and a piece of seven-eighths inch grooved-and-tongued board four inches wide for the base.

As shown in the illustration, the base can be extended or pushed together, as a book is added or removed from the rack, piece A sliding between strips B and C. Cut a piece seven and one-half inches long from the tongued-and-grooved board for A. This will measure about three and three-quarters of an inch wide, as dressed material runs from one-eighth to one-nuarter inch narrower

about three and three-quarters of an inch wide, as dressed material runs from one-cighth to one-quarter inch narrower than what it is sold for. Cut strips B and C from the remainder of the tongued-and-grooved board, making them eight and one-half inches long by five-eighths of an inch wide. Rip B from the grooved edge of the board and C from the tongued edge (see Fig. 7).

Lay out the end pieces after the pattern of Fig. 8. These pieces may be nailed directly to the base, but it is better to attach them with hinges as by doing so the ends can be folded flat and the rack packed away conveniently in a small space. Purchase two pair of brass hinges about an inch long and half an inch wide, and attach them to the pieces as shown in Figs. 7 and 9. The hinges are set into the pieces, the wood being cut away enough so they come flush with the surface of the wood when screwed in place. This will be seen in Fig. 9. Use five-eighths inch brass screws for the hinges. Strip A can be hinged directly to its end piece end, but it is necessary to cut a block an inch wide and of a length equal to the width of A, to fit between strips B and C (D in Fig. 7), to which to attach the other end piece. B and C should be nailed firmly to the ends of this block. Rub down the tongues on the base pieces with sandpaper so they will fit loosely enough in the grooves to make the rack open and of the rack from scratching any surface

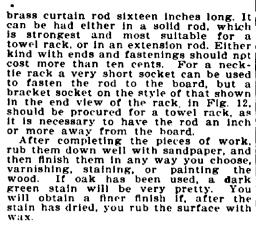

As a means of preventing the bottom As a means of preventing the bottom of the rack from scratching any surface upon which it is placed, a strip of felt should be cut and glued to the bottom of each end piece and several round buttons of the same material should be cut and glued to the under side of the base

apart and parallel with the side edges of the board, to get the hooks in line with one another, and mark off upthem places for the hooks, begin-ning at the center of the board and spacing them two inches apart. Place screweyes in the top of the board (one at either end as shown in Fig. 10) by which y which to the rack upon

the wall.

In Fig. 12 we have a scheme that may be used either for a Towel Rack or Necktie Rack. Cut the back out of a three-eighths and bracket. These eyes are to slip to sitions corresponding to them, and cositions corresponding to them, and the nalls.

For the making of an extension Book the walls, on sition and solutions are selected at any household furnishing store. Ask for a

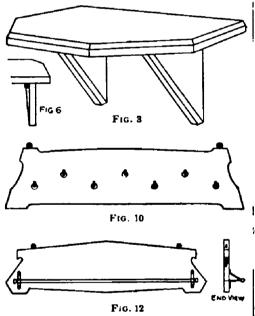

#### Big Maltese Tolled Church

William Baker's big Maltese cat created some excitement yesterday morning when it tolled the bell on the Wesleyan Methodist church, on Flax Hill, a suburb of this city. The bell is about the size of an ordinary dinner bell, with a clapper that weighs less than a pound. "Little Willie," as the cat is called, likes sparrows, and went hunting to the belfry of the little church yesterday morning about 4 o'clock. A sparrow must have been in the bell to start with, and when the cat made a jump for it the bell tolled.

belt tolled.

belt tolled.

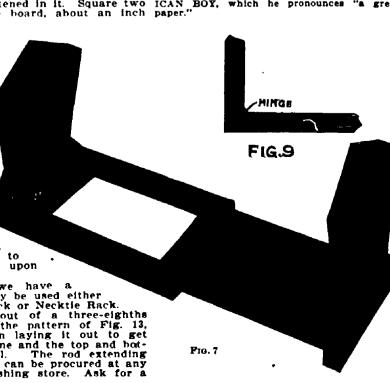

The swinging clapper then attracted the attention of the cat more than did the sparrow, and "Little Willie" began to play with it. The bell sounded several times, and the people living near by seered through their windows to see what was happening. Some thought there was to be an early morning service, while others supposed that some one was in trouble. Mr. Baker investigated, and found his pet cat in the belfry playing with the bell clapper.—Indianapolis News.

#### From a Canadian Boy

We have received from Harold L. Parker, of We have received from Haroid L. Parker, or Scottstown, Quebec, Canada, samples of asbes-tos as taken from the ground and as prepared for the market. Haroid is 15 years old and he has been working as an "engineer" with an asbestos company located at Black Lake. He says the product of the mill is called "cotton." Before it goes into the mill it is called "waste." because only a few years ago it was strips.

A Necktie Board is a very simple article to make. The one shown in Fig. 10 consists of a three-eighths inch board cut the shape of Fig. 11, with seven brass screw-hooks fastened in it. Square two lines across the board, about an inch apart and

#### Merry Christmas

You can make it merry for some boy by giving him an annual subscription to THE AMERICAN BOY.

heifer. Impatient at the chase she had caused him, the boy rushed forward and struck the reclining animal a sharp blow upon the ribs with thehoe.

Instantly there was a low, surly growl, and then there rose up to confront the lad, not the missing heifer, but the tall, menacing form of a huge black hear, whose jaws were besmeared with blood.

Jerry was scared; he could feet here. N THE eastern part of New Hampshire, well down in the southern half of the state, there is a long, low range of hills, the highest of which is known as Blue Hill or Croydon Mountain.

This neak is nearly three with blood.

Jerry was scared; he could feel his hair stiffen under his ragged fur cap, and his legs trembling beneath him. But he had the pluck of a Yankee boy, and he was angry at the loss of his favorite heifer. Stepping back a pace or two, he levelled his heavy hoe full at the black, bloodstained muzzle, and struck with all his might. But the bear warded it off as easily as a boxer might, and the next moment Jerry felt his weapon snatched from his grasp.

Hill or Croydon Mountain.

This peak is nearly three thousand feet in height, and towers in friendly rivairy to its neighbor, the historic Kearsarge, not thirty miles away. Nearly the whole of the mountain is included in the famous Corbin Park, a tract of 28,000 acres inclosed as a game preserve by the late Austin Corbin, and probably one of

acres inclosed as a game preserve by the late Austin Corbin, and probably one of the largest in the United States.

A large portion is heavily wooded and, until within a few years, was the haunt of animals as wild and savage as any that now roam the wilderness. As late as 1867 a wolf was shot on this mountain, and bears have been seen there even since that date

tain, and bears have been seen there even since that date.

In the autumn of the opening year of the last century the people of all the towns around Croydon Mountain joined in a great hunt for a bear that had caused them much trouble. Scarcely a farmer in the whole section but had suffered a loss in his sheepfold, pigpen or barnyard, so it was determined to hunt bruin to the death. The bear was believed to be an unusually large and ferocious animal, hence the feeling against him was aggravated quite as much by fear as by the desire to punish him.

much by fear as by the desire to punish him.

The party organized at the foot of the mountain, forming a great circle of men, boys and dogs. The signal horn was sounded for starting and continued around the whole circle, a signal that was to be repeated every half hour until all arrived at the top of the mountain. All that clear October day the sound of horns and the barking of dogs echoed over the wooded hills. People in the valleys heard the repeated signalling, but their listening ears could distinguish nothing to indicate the success of the hunters.

High up on the eastern slope of the mountain was the Andrews homestead, which comprised an ordinary sixty-acre lot, with the farm buildings erected by a Mr. Andrews. The settler had died a year or two before, and the farm had been cared for by Jerry, a boy of fifteen, sturdy, freckled-faced, and somewhat large for his years. Jerry had not gone with the hunters, the sowing of a piece of rye compelling him to remain at home.

The ploneer boy was, however, to

The pioneer boy was, however, to meet with an adventure much more exciting than any that befell the hunters. Jerry finished sowing his rye late in the afternoon, and as the sun was still an hour or two high, he went across lots to visit several traps he had set for mink in the upper pasture. He examined his traps, finding an imprisoned mink in one, and started homeward just as dusk was beginning to creep down the mountain

the mountain.

He walked through the lower pasthe mountain.

He walked through the lower pasture, wherein was inclosed the farm stock, which had been shut off from ranging the higher pasture since the depredations of bruin had become so alarming. He could hear the familiar ting-a-ling of the cow-bell as he hurried toward the cattle in the thickening gloom. He found them grouped in a bunch, tossing their horns and acting in a strange manner. Jerry's first thought was of the presence of a bear, and he hurriedly looked over the herd to find whether any were missing. To his dismay he could not find a favorite yearling.

Jerry was no coward, but he had no weapon with him, nor anything that would answer for one except the heavy hoe which he had used to dig around the stumps in the rye field.

With this in his hand he started off in search of the heifer.

He tried to think that

heifer. He tried to think that perhaps the creature had wandered away by herself, wandered away by herself, and this idea was strengthened when he found some tracks which he thought were hers near a piece of marshy ground that bordered the woods. The tracks led directly into the forest, and the ploneer lad, thinking only of discovering the missing yearling, plunged into the undergrowth.

In the rapidly increasing

In the rapidly increasing darkness Jerry could not see objects distinctly; but

Now the bear was very near him; he could feel the brute's warm, sickening breath in his face. Supporting himself with one hand, he struck forward a strong, quick blow with his right. He aimed directly for the eyes, but, instead, the sharp blade cut a deep, ugly gash in the great, black snout.

That portion of the brute's anatomy is always more or less sensitive and bruin's was peculiarly so. The suddenness of the attack upset him, and sniffling fiercely, the beast drew back. In changing its positon it chanced to throw its weight upon a decayed limb, which snapped like a pipestem, and the heavy carcass shot down through the branches and struck the ground below with a heavy thud.

Waiting a few moments to see if the bear stirred, and hearing nothing but a low groan, Jerry carefully slid down the tree. His first act was to secure his hoe. Then he approached the bear, and finding that the animal could not stir, having apparently broken its back by the fall, he speedily put an end to its life.

The plucky boy had hardly struck his

its life.

The plucky boy had hardly struck his last blow when a dog barked close at hand, and a few moments afterward half a dozen men walked up to the spot. They were a party of the hunters returning, and Jerry knew several of them

the next moment Jerry feit his weapon snatched from his grasp.

The lad now thought discretion the better part of valor, and making out a low bough before him, he selzed hold of it and swung himself up into a tree, hoping the bear would not follow him, but he was disappointed. With a snort and a growl, the enraged beast shambled to the tree and began slowly to climb its trunk.

As it happened the tree was an immense oak, and Jerry hurriedly clambered to the topmost branch, where, clinging to the fork of the limb, he awaited the approach of the enemy.

The bear worked his way up among "Well, my lad, you have beaten us all," said one of the men, after he had heard the boy's story. "We have hunted all day for this fellow, and couldn't find hair nor claw of him. You deserve farm, Jerry for I imagine our barnyards and pigpens will be safe enough now."

now."

They found the mangled carcass of the young heifer a few rods away, but bruin's skin and the bounty paid by the state more than compensated Jerry for the loss. For many a year afterward he was the hero of that region, and old men now living can remember having him pointed out to them as the boy who beat the hunters. beat the hunters.

#### Cat Adopts Young Squirrels

and nearer.

Jerry scarcely dared to breathe. He had a huge jackknife in his pocket that the village blacksmith at the "Corner" had made for him that very season, for use in skinning minks and muskrats. The boy now drew this and, opening the long, keen blade, prepared to defend himself as best he could. He was all grit and had not a thought of surrender in his mind. William Deubel of River street, Danbury, has a cat which is nursing a family of five little gray squirrels. A few days ago the cat gave birth to five kittens, but as cats were numerous they were taken away and drowned.

The next day Mr. Deubel's son found an orphaned family of little gray squirrels in a hollow tree in the woods. As the mother was nowhere to be seen, he brought the squirrels home, and as an experiment they were given to the old cat for adoption, as she was still mourning the loss of her kittens. The old cat looks with wonderment on the strange manners of her new family, but she guards the little fellows jealously, and there is already a real affection between the orphans and their foster mother.—Hartford Courant.

#### Youg Wildcats at Play

As H. D. Fletcher was at work on the mountain back of Butternut hill, Johnson, he came upon a couple of young wildcats about as large as common house cats.

They were sleek and handsome and were playing and frisking like ordinary butterns. Having no weapons with him.

kittens. Having no weapons with him and being accompanied by his little son, . Fletcher decided not to meddle with them, fearing an encounter with the mother, who was probably not far away. -St. Albans Messenger.

#### Rat Adopted Into Cat Family

We are told a cat and rat story that is worth publishing as something very

unusual.
Charles Farnsworth of Saybrook has a cat that is the mother of a family or small kittens. Recently the mother cat went to the barn and found a young rat, which she took in her mouth and carried to the nest of kittens, and has since nursed and cared for it as one of her own family.—Warren Mirror.

#### Inhospitality

"Two small boys, whose home is in Louisville, went recently to visit their grandparents in Cincinnati," says the Louisville Courier-Journal. "One was nine years old and the other eleven. They arrived at grandma's all right, but in half an hour had disappeared. Later in the day their absence caused alarm, and a search was begun for them. They were found that evening on the Kentucky side of the river, resting after a long foot of the river, resting after a long foot journey toward home.

""Why, Harry," complained grandma "what did you run away from me for?" "Because," said Harry, with dignity and firmness, "we do not visit at houses where the cooky box is kept locked up," "Grandma promptly removed the offending padlock, and amicable relations were restored."

were restored."

#### **ASK FOR AN EDISON PHONOGRAPH FOR CHRISTMAS**

T is the best gift for any boy, any girl, or any grown person. Everybody is fond of fun and music; hence, the Phonograph gives as much pleasure to the rest of the family as to the user. The bear worked his way up among the branches with the skill of a sailor in the shrouds. He seemed determined in his advances, and Jerry began to edge off as far as he dared, for the limb to which he was clinging began to bend under his weight. Bruin crawled nearer and nearer.

HE AIMED DIRECTLY FOR THE EYES

#### "THE KING OF THE FAIRIES"

DESIGNS CUT FROM PAPER BY HANS ANDERSEN.

Some interesting things are told about this man, whom all children have come to love, in the "Girl's Realm," an English magazine.

Hans was the son of a poor shoemaker in Odense, a village of Denmark. When he was but a lad his father used to read to him during the long winter evenings stories from the Arabian Nights. Doubtless it was this that put it into young

stories from the Arabian Nights. Doubt-less it was this that put it into young Andersen's head to write stories himself. At the age of fourteen, the future story writer left his home with a few crowns in his pocket. As is the case with most boys who leave home at an early age to make their way in the world, this boy had his struggles and his hardships. fortunately, for him, his early literary talents were recognized by an eminent man, a Mr. Collin, who took him under his protection and educated him. He first tried to get an engagement in the

first tried to get an engagement in the ballet at Copenhagen, but his face was so homely that he was not wanted.

Hans seemed to know that he was homely, for he wrote the story of "The Ugly Duckling," which was in reality his own life story. It is said that he was always kind to ugly people and would single them out for special notice.

He was fond of flowers and when he He was fond of flowers and when he had a party at the villa where he made his home in his later years, he always arranged a buttonhole bouquet for each guest, picking the flowers and arranging them with his own hands.

Another characteristic of Hans Andersen, was his habit of losing his temper, but, as is the case with people who are petulant by nature, his anger soon subsided, and then he was always ready with a peace-offering.

subsided, and then he was always ready with a peace-offering.

He was a splendid conversationalist and very ready at repartee. Once when dining with King Frederick the Seventh and drinking at oast to the King, he filled his glass with water. "You should not drink to your King with water," said the sovereign. "When I drink to my King, water becomes wine," replied Andersen.

dersen.

He was simple and childlike in his ways, though he has been accused of vanity. Perhaps his vanity was more a liking of appreciation; for a word of praise was very dear to him. Perhaps the fact that he had his hair curled every day and was very particular about his appearance had something to do with the report of his being vair. the report of his being vain.

ANOTHER OF ANDERSEN'S FUNNY DRAWINGS.

While father is about to shave What's he doing, the little knave? Upsetting the ink and making a mes He deserves a slap and nothing less.

One of his peculiarities was that when-ever he dined out he liked to have his health proposed in a toast. The funny thing about it was that he always pre-tended to be surprised on such occa-sions.

Strange enough, it has been said that he was not fond of children. This is only true to the extent that he did not like the silly kind of children, nor did he like to have them climb all over him; he liked sensible, well behaved children, and delighted in conversing with them. For them he was accustomed to cut out strange paper pictures, write rhymes and stories; often he wrote and illustrated long manuscript books for them.

Hans Andersen lived to be an old man. His death took place August 4, 1875.

"The beautiful and the good will never be forgotten; they live in legend and song," he wrote at the end of "The Old Gravestone," one of his writings.

Years have passed yet his stories are

Years have passed yet his stories are ever green. They are the embodiment of the good and the beautiful, they will never die while there are children and grown-ups who are "children in heart."

PURCHASED OF THE AMERICAN BOY

THE CABIN IN THE BIG WOODS, by James THE CABIN IN THE BIG WOODS, by James Ball Naylor. Three care-free, healthy, funloving boys, passionately fond of hunting, fishing and all other sports, a log cabin away in the woods fitted up as a camping place where they spend the happiest, joiliest time of their lives, in doing everything that country boys will do. Incidentally there is a love story which will in no way detract from the enjoyment of reading the book. A good, healthy, clean story with apt illustrations. 239 pages. Price \$1.00. The Saaifield Publishing Co.

"THERE IS NO LOVE LIKE THE OLD LOVE.

One of Hans Andersen's drawings for Charlotte's picture book.

SHIPWRECKED IN GREENLAND, by Arthur R. Thompson. A story which will interest and delight the young reader. A party of boys with an old sea captain spending their vacation at Breakheart Point. Newfoundland, discover a deserted and drifting steamer. The finding of a letter on board informs them that the passengers and crew are ashore somewhere on the bleak and ice-bound coast of Greenland. The story tells of the many adventures, laughable and thrilling, which Captain Ayre and his courageous young companions had in finding the owners of the lost steamer. Boys will not only like the story, but will obtain considerable instruction as to the far northern countries of Lahrador and Greenland and their Eskimo inhabitants. The illustrations, which are from original photographs, are good. 310 pages. Price \$1.59. Little, Brown & Co.
THE BOY FISHERMAN, by Frank E. Kellogg. This is the book boys will love to read. It is a story of pluck and determination. Jack Barden's father, a fisherman, dies leaving his family nothing except a little cottage and a fisherman's boat and nets. The boy takes up the work to provide for his mother and sister and with the help of another boy. Tom Burley, manages to make both ends meet. They have an enemy who does them all the evil he can, but, of course, they triumph and everything comes right at last. The book is

everything comes right at last. The book is nicely illustrated. 288 pages. Price \$1.00. The Saaifield Publishing Co.

WHAT A YOUNG BOY OUGHT TO KNOW, by Sylvanus Stall, D. D. It is a fact that young boys are warned against every evil except the one which we might say is universal, and so this little volume, stating facts and truths in a plain yet delicate manner, a\* Dr. Cuyler says, "ought to be in every home where there is a boy." The

ARNOLD'S SOHRAB AND RUSTUM, AND OTHER POEMS, with introduction and notes edited by Justus Collins Castleman. The publishers have done well in issuing this great epic poem of Matthew Arnold as one of their Pocket American and English Classics. The price will enable every one who loves poetry of the highest class to become a possessor of a masterplece. The introductory sketch of the author and the estimates of his work as well as the notes at the end of the book will greatly aid in the enjoyment of reading the book. 219 pages. Price 25 cents. The Macmillan Co.

HER FIANCE, by Josephine Daskam. While this book is intended more especially as a hook for girls, the boy who picks it up will read it. The four stories which the book contains tells about girls who are live, healthy, happy and natural, and we have read it with considerable pleasure. The illustrations are the work of Elizabeth Shippen Green. 164 pages, good paper and clear type. Henry Altemus Co.

THE FIREMAN'S GUIDE. A handbook on the care of bollers. This book is intended for firemen and engineers, and those in charge of bollers, its chapter headings are: Firing and Economy of Fuel; Feed and Wa-ter Line; Low Water and Foaming or Prim-ing; Steam Pressure; Cleaning and Blowing.

ing: Steam Pressure: Cleaning and Blowing: Out, and General Directions. Price 50 cents. Spon & Chamberlain.

MILTON BLAIRLEE AND THE GREEN MOUNTAIN BOYS, by Willard Goss Davenport. Stories of Revolutionary days have a fascination for boys which increases as the years roll on, and this story of the stirring times of Ethan Allen and the Green Mountain Boys, when they stood boldly in defense of their homesteads against the injustice of the Governor of New York, is bound to be a strong favorite with its readers. There are plenty of thrilling incidents to keep up the hoys' interest from cover to cover. The book is finely illustrated by Fanny Knights Ide. and the mechanical make-up leaves nothing to be desired. 304 pages. Price, \$1.50. The Grafton Press.

#### Answers to Inquiries

A. S. D.—The best way to tell the difference between the stamps of Japan is to look them up in Scott's 1995 Catalogue where you will find them listed correctly. C. E. K.—The "Perfect Hinge" are very good, and you will find them at most any stamp company. R. W. B.—Your stamps should be soaked in warm water, but not hot water, as it will spoil the stamps. Of the 2c carmine stamps the triangle No. 1 of the 1894 issue is the most common.

#### Stamp News

Keneta on Hawaiian stamps means cents. Eina Keneta significs \$.02.

The German government is receiving daily from the pictorial postal cards which pass through the mail, \$20,000. The average daily number is 1,446,938.

According to the Standard catalogue of the Postage Stamps of the World, the total number of known varieties of postage stamps issued by all the governments of the world up to the present time is 19.212.

Of this number 205 were issued by Great Britain and 5,711 in the various British colonies. This leaving the balance for all the rest of the world.

Dividing the totals among the continents, they are as follows:

Europe. 4,089 Asia 3,628 Africa 4,005 America and West Indies. 6,095 Africa

Salvador has issued more varieties of post-age stamps than any other country, the num-ber being 450. Poland, Wadhwan, and Tierra del Fuego have each found a solitary speci-men to suffice for their postal wants.

#### New Issues

Jaipur-Indian Native State. Has a new issue of engraved postage and official stamps.

Danish West Indies-There is a new set both adhesive and postage due stamps on the

Belgium—We note the issue of three more values of the new series. The \$.50 gray green, 1 fr. orange, 2 fr. violet.

Indore—Indian Native State. The  $\frac{1}{2}$  annulake of the current issue of officials has appeared with the surcharge inverted.

Guadeloupe-Has issued a new series of postage stamps which are similar in design and size to the new French, above the \$.10.

Dominican Republic—The 2c surcharged on the postage due stamp has been reported as being seen with the surcharge inverted.

Bulgaria—The 5s on 3s has been seen with the surcharge inverted. The 10s on 15s (1893 issue), has appeared with a double surcharge.

Nyassa—The 150 r. of the 1901 Issue with the inverted center are very rare as only 50 stamps were issued and most of them were Switzerland—A copy of the 10c blue of the 1862 issue has been discovered with the cor-

numerals doubly printed, one impression heing upside down.

Chile—This country has issued a new set of postage stamps, and so far they consist of the following values:
3c brown.
5c blue.

20c orange-brown and black.

#### Cuba's Stamp History

The distressful island of Cuba, the "Ireland of Spain" as it was once described, takes up a great deal of room in the philatelist's album. Its postal issues have been many and most varied, from the first issue of 1855, with head of Queen Isabella of Spain, down to the present time. Cuba, of course, was one of the discoveries of Christopher Columbus, and thus fell under the sovereignty of the country of his adoption, Spain. In common with all other Spanish dependencies, however, the country grew discontented and rebellious; and throughout the latter half of the nineteenth century the history of Cuba was one long story of internal dissension. When America came to its rescue in 1898, some of the leading patriots of rescue in 1898, some of the leading patriots of

Cuba accepted their "liberation" from the yoke of Spain somewhat sulkily, viewing their American champions with no small degree of suspicion. In the hearts of the Cuban race, where the hope of absolute national independence had been nourished for generations, there

# A Rare Philippine Bolo Knife Carved from Carabao Horn, special price, only \$2.00

followed by the over-lordship of the stars and stripes, and Cubans had no wish to see their country become a mere colony of the United States. Fortunately, the good sense of the American nation overcame the ambitious schemes of the Jingo party, and in 1940 it was finally settled that Cuba should enjoy the full freedom of an independent nation subject to the merely nominal suzerainty of America in regard to her external affairs. Thus to all intents and purposes Cuba is a free republic, and as she has contrived to exist until the present time without a single revolution, and without even killing a President, it is fair to assume that this hitherto unhappy island has entered upon an era of peace and prosperity. These facts have little connection with the study of Cuba's stamps, yet they tend to show what a fund of historical interest attaches to the subject.

The Numismatic Sphinx

Ruby H. Shuil: Your drawing is from a 10-kopeck piece of Russia, Nicholas I. (1825-55), 1832. It sells for half a dollar. Willie E. Tillman: The cent of 1834 is worth ten cents; the English penny of 1875, five cents. Donaid l'addock: The Columbian half dollar of 1892 sells for seventy-live cents. C. G. Chamberlain: The nickel cents of 1857, 1858 and 1859 seil at the dealers, if in fine condition, for five cents each. The 1851 copper cent is worth the same. Frank McIntosh: We cannot make out your coin without fuller information. Charles A. Price: The coin you wish to know about, and which "has been handed down through the generations," is an English crown of Charles II. (1660-85), 1677. It sells for about \$2.50. Clarence F. Drake: (1) Common English half-penny of 1861. (2) Spanish real of no particular value. A. G. Herman: Only the 20-cent pieces of 1877 and 1878 are rare. They bring about \$3.00 each. H. G. P., Wisconsin: Your 4-skilling piece is from Denmark. As a rule the United States silver dimes, quarters and halves with arrow points by the date are only worth face value. The halves and quarters of 1853 without these arrow heads are rather rare. The coins you mention are all comparatively common, worth but little over face value. Paul Manton: The 1852 dollar, when in good condition, sells at the dealers' for about fifty dollars. C. E. Bramble, Jr.: Your rubbing is from a Spanish dollar, Mexico mint, 1819. These Spanish and Mexican silver coins formed a large part of our silver circulation for about fifty years after the revolutionary war, and have always been very common since that time. Unless these pieces are in fine condition they will Beautiful Souvenir Post Cards of Florida, 200 different cards, black and white, or in colors, including Jacksonville, St. Augustine, Palatka, Daytons, Pulm Beach, Tampa, Crescent City, San Mattee, and most all Florida cities and towns. # How 500 Boys

Readers of The American Boy, can get this

#### 300-Page Book **Absolutely FREE**

VERY boy in America should have a copy of the Two-Dollar Book. "Scientific America Sould have a copy of the Two-Dollar Book, "Scientific American Boy." Will you be one of the 500 boys?

For a limited time we will give this book away to new subscribers. The book contains over 300 pages and over 350 illustrations. It is substantially bound in cloth and well printed on good paper. We have not the room here to tell about its contents. It is sufficient for us to say that full and complete instructions are given on how to build tents, boats and canoes. Information is given on appliances for summer and winter sports. There is something of interest in this huge volume for every boy as well as the boy's grandfather. After its perusal you should be able to increase your income or earn extra money after school hours. It tells about bridge-building, cave houses, wig-wagging, telegraphing and many other subjects which are dear to the heart of the representative American Boy.

Where is there a boy, young or old, who would not like to be able to make railways, windmills, water wheels, tree houses, etc.? The fortunate possessor of one of these free books will be the envy and leader of the boys in his entire neighborhood. Remember, boys, we are giving this book away absolutely free.

Our proposition to you is as follows: Send us three dollars for one year's

subscription to the Scientific American and we will send the book absolutely free by first train. Scientific American's subscription price is \$3.00 a year for fifty-two issues.

\$5.00 Offer for \$3.00 If you act quick you can take advantage of this offer, which is limited to 500 boys. It is almost unnecessary for us to tell you anything about the Scientific American. If you are an energetic and ambitious boy you will like the Scientific American. It has been published weekly for over sixty years. It tells all about the latest inventions, and prints stories and scientific experiments in an interesting and understandable way.

Scientific American will help you in your ambition to become a "man." President Angell, of the University of Michigan, recently said: "I would trust any bey anywhere who reads the Scientific American."

Your father will subscribe to the Scientific American if you ask him. He will be glad to get the paper. You get the book free. It will be an easy matter and will not take more than five minutes of your time to get some one to subscribe for the Scientific American. The co.t is but three dollars for one full year. The Two-Dollar Book is free. The book can be sent to one address and the Scientific American to another, if you wish. Tell your father you want this for a Christmas gift.

Boys, this is the greatest offer that was ever made to you. Send in your subscription by return mail. Attend to this important matter at once. The edition of the book is limited. This offer is for new subscriptions only. MUNN & CO., Publishers Scientific American, 379 Broadway, New York City

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

#### Our Prize Pictures

Nick Bruehl's "Water Carriers" is not only a creditable pictorial photograph, but also a good example of artistic composition that richly deserves the first prize herewith award-ed to it. Tom Alvord's "Three Little Maids ed to it.

"THREE LETTLE MAIDS FROM SCHOOL" Second Prize Photo, by Tom Alvord, Livenia, N. Y

From School." on the other hand, scores not so much on account of composition, but because it is an excellent illustration of outdoor portraiture and shows considerable technical

#### Current Comments

H. H. Phillips—Your efforts at artistic mounting are commendable, but not entirely successful. We would advise you to get No. 1 of the Practical Photographer, published by the Photo-Era Co., of Boston, at 25 cents, and devoted to trimming, mounting and framing. It will prove of assistance to you. It. V. Packard—Your "Old Nancy's Part, etc." is a failure, because the forepart of the horse

The following single solution is given by one of our exchanges as a satisfactory intensifier for negatives. Half an ounce of potassium iodide is dissolved in two ounces of water, and a hundred grains of mercuric chloride in sixteen ounces of water. The iodide solution is added to the chloride, and ten grains of hypo are added to the mixture, which is then diluted with its own bulk of water, and is ready for use.

#### Honorable Mention

A Useful Hint

A Philadelphia subscriber writes: "I take a great interect in the photographic department of your paper. I cut out the articles and paste them in a book, where I can look them over. They have been a great help to me." Those of our readers who do not preserve their copies of THE AMERICAN BOY by filing them or having them bound, may find this suggestion of service.

Honorable Mention

In a late number of the Photographic Exchange, of San Francisco, attention is called to the fact that the above distinction was conferred by us upon a certain amateur, which was a very gratifying evidence of appreciation. It proved that the honor was estimated at its true value and that it is highly regarded by the recipients. This month it is conferred upon: Jos. Harbison, H. R. Goodwin, H. H. Phillips, S. C. Jones, H. A. Packand, W. H. Hill, J. L. Hopper, Ralph Gingard, W. H. Hill, J. L. Hopper, Ralph Gingard, W. M. Snedecor, M. H. Tardy, W. J. Juengert, A. C. Ripley, J. H. Paine, C. A. Goodwin and W. L. Conner.

#### The Letter Box

The Letter Box

F. J. Fisher, New York—There was no mistake. The information, as given, was entirely correct. Several pictures that were similar to the prize winner were entered. C. L. Woodrow—We cannot enter into correspondence concerning the particulars of our competitions; you will find them on this page. Wm. R. Workman—Ordinary postals will do; exposure depends upon extent of light. Wm. R. Workman—Velox postals may be procured from any dealer in photographic supplies; they are already sensitized. Complete directions enclosed in every package. Rodinol is a patented developer marketed by a German company. I have used it, but prefer either pyro or metol. Wm. H. Perry—A good starch mountant may be prepared as follows: Mix two ounces of pure starch with two ounces of water and pour on about is ounces of boiling water, into which has been discontinuation. of boiling water, into which has been dis-solved about 50 grains of powdered alum and 12 drops of carbolic acid.

#### A Winter Developer

A Winter IJeveloper
Ortol is a developer which is less susceptible
to lowness of temperature than are any other
re-agents, and it also is remarkably free
from staining properties—two characteristics
which specially fit it for winter work. The
following is a very good formula: A. Water,
20 ozs.; metabisulphite of potash, 475 grs.;
ortol, 150 grs. Solution B. Water, 20 ozs.,
carbonate of sodium crystals, 3% ozs.; soda
sulphite crystals, 2% ozs. Take 1 part A..
1 part B., and 1 part of water, and add from
1% to 2 grains of potassium bromide to the
ounce of mixed developer.—Photographic
Times.

The Boy Photographer

Edited by HUGO ERICHSEN

The Modern Way In Picture Making. Rochester, N. Y.: Eastman Kodak Co. Cloth, \$1. Although intended primarily for those who work by the Kodak system, this useful little book will commend itself to every amateur photographer. It is condensed, yet complete. The useless discussion of theories has been fiven to topic the front.

A Single-Solution Intensifier

A Single-Solution Intensifier

The following single solution is given by one of our exchanges as a satisfactory intensifier to photograph. The contest is open to subscribt the photograph that the first the photograph is the photograph that the first the photograph is the photograph that the photograph is open to subscribt the photograph that the photograph is photograph to those who work by the Kodak system. This useful little state in the state i

The Camera in the Field, by F. C. Snell, New York: A. Wessels Company. Cloth. This volume will prove of interest to anyone desiring to combine photography with nature study. The book is divided into five parts, as follows: The camera and dark room, photographing birds and birds' nests, photographing reptiles and animals, photographing insects, and photographing plants and flowers. Only subjects are described in these pages that are within reach of the average worker in town and country. The numerous illustrations are not only fine but helpful and the in town and country. The numerous illustra-tions are not only fine but helpful and the typographical appearance of the book is ex-

Either of the above named books may be procured through THE AMERICAN BOY.

" WATER CARRIERS First Prize Photo, by Nick Bruchl, Sherwood, Wis.

# The Boy Mechanic and Electrician

A Permanent Department

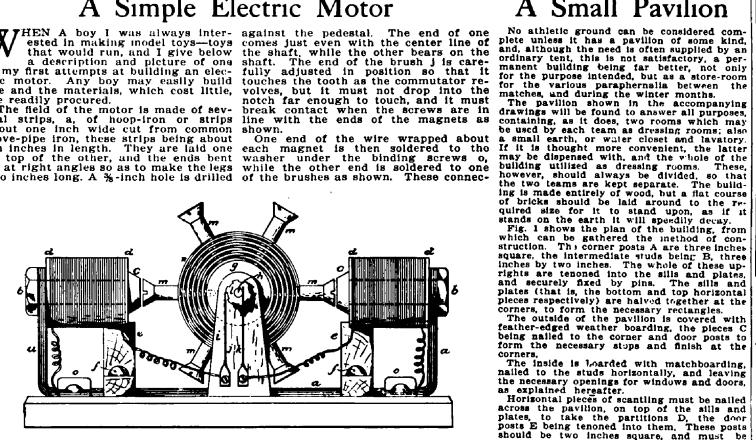

Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boya, be answered in these columns.

Edited by Robt. G. Griswold

#### A Simple Electric Motor

A description and picture of one of my first attempts at building an electric motor. Any boy may easily build one and the materials, which cost little, are readily procured.

The field of the motor is made of several strips, a, of hoop-iron or strips about one inch wide cut from common stove-pipe iron, these strips being about ten inches in length. They are laid one on top of the other, and the ends bent up at right angles so as to make the legs two inches long. A %-inch hole is drilled

through the ends to receive the magnet tions must be made so that the current cores b.

These magnets are made of two %" short carriage bolts c. Each bolt is provided with two washers or collars d cut from cardboard, and the space between wrapped with 1% ounces of No. 18 single covered magnet wire. When the wrapping of the wire is finished, the coils are given two or three coats of shellac which binds the outer layers firmly together.

firmly together.

These magnets are secured to the field strips by passing the threaded end through the hole and setting up on the nut. The strips are then fastened to the base by two wooden bridges e which set down over them, the screws f serving to bind them firmly in position.

The armature core g is made of a short piece of wood, 1" in diameter, such as might be cut from a broomstick. Through the center of this piece is driven a piece

the center of this piece is driven a piece of %" iron wire to act as an axle, shown at h. Then six small holes, equally spaced, are drilled into the periphery of the spool g and into these holes six heavy 1\%" flat-head iron-wood screws m

the spool g and into these holes six heavy 1½" flat-head iron-wood screws m are driven, standing out as shown in the cut, Fig. 1. Use the heaviest screws of this length that you can get. Brass screws will not do, of course, as they cannot be attracted by the magnets.

To make the magnetic circuit still more perfect, a piece of No. 18 iron wire, such as is used for hanging stove-pipes, is woven in and out between the screws, until it has filled up the threaded portions of the screws as shown at n.

Two bearing pedestals are then made as shown by i and secured to the base, holes being drilled in the top of each for the shaft h. The bearings will be better if made by pouring melted lead into the holes and drilling them out afterwards to fit the shaft, also drilling small oil holes through from the top. After the armature shaft is placed in position and the pedestals i firmly secured to the base, a small commutator I is then filed out of a small piece of copper as shown, having six teeth equally spaced and of the same width as the spaces. The hole in the center of this commutator is made a tight fit over the shaft so that it can be driven into place and the friction will hold it securely.

Two brushes are then cut from a sheet

tions must be made so that the current will travel around the magnet cores in the same direction as shown in the small sketch, Fig. 2, and this makes the head of one magnet a north pole and the head of the opposite magnet a south pole. The lines of magnetism will then travel through one core, through the screw in front, around the iron wires n, through the opposite screw, through the core of the opposite magnet and through the iron strips back to the first magnet, making an almost complete magnetic circuit. cuit.

The action of the motor is this; the current passes through the coils making the bolts powerful magnets. They immediately attract the screws nearest them, causing the armature to revolve, but just as soon as these screws are in front of the magnets, the tooth of the commutator slips off the brush j breaking the circuit and the momentum of

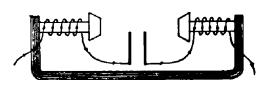

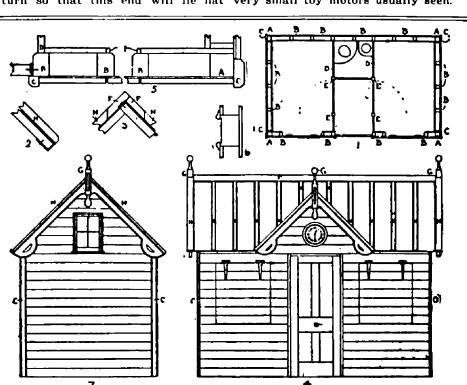

Fig 2.

the armature carries the screws past the magnets. But as soon as they have passed half their distance apart past the head of the magnets, the brush again makes contact with a tooth on the com-mutator and the magnets again attract mutator and the magnets again attract the two advancing screws towards them, only to have the current broken and the process repeated. This rapid intermittent attraction of the magnets causes the armature to revolve at a very high rate of speed, and with two or three cells of any good battery this motor will develop a very high speed and sufficient power to operate small mechanical toys, for which purpose a small pulley may be placed on the end of the shaft opposite the commutator.

hold it securely.

Two brushes are then cut from a sheet of copper or brass, 3-16" wide and about 1½" long. The lower ends, which are provided with holes to admit small round headed brass screws, are twisted a quarter turn so that this end will lie flat

PLAN AND DETAILS OF PAVILION

#### A Small Pavilion

form the necessary stops and finish at the corners.

The inside is loarded with matchboarding, nailed to the studs horizontally, and leaving the necessary openings for windows and doors, as explained hereafter.

Horizontal pieces of scantling must be nailed across the pavilion, on top of the sills and plates, to take the partitions D, the door posts E being tenoned into them. These posts should be two inches square, and must be grooved at the side where they come to the partition, so that the boards fit into the grooves. This also applies to the top horizontal pieces. At the bottom, strips should be nailed on to form stops for the boards. These latter must be one inch matchboarding, fixed vertically, the three doors leading into the two dressing rooms and the lavatory being formed from the same boards.

The roof is formed by putting on rafters in the usual way, and matchboarding on them, the face side of the boarding to be on the inside. The outside is covered with waterproof paper, cut to narrow widths, so that they lap over each other at the rafters. The paper should be tacked at intervals of about twelve inches down the sides, and should also be neatly folded under the boards at the eaves, and tacked underneath, as in Fig. 2. At the ridge, one piece should be brought level with the top, and that on the opposite side lapped over it, as in Fig. 3. The ridge boards F will then cover these laps and make it quite watertight at this point.

Before fixing the ridge boards, the pumacles

the top, and that on the opposite side lapped over it, as in Fig. 3. The ridge boards F will then cover these laps and make it quite watertight at this point.

Before fixing the ridge boards, the pumacles G must be fixed to the end rafters; these should then be trenched slightly so that the ridge boards fit into them. If this is not done, there is just a chance that the wet may find its way in at these points.

The front gable over the door is formed after the main roof is boarded, by nailing the rafter to the boards. It is then boarded in the same way, and also covered with the water-proof paper.

We omitted to state that when papering the roof, the outside strips of paper must be folded round the boarding and tacked to the rafters, the ornamental large boards will then nail on to the latter and fix both the paper and themselves at the same time.

Thin strips H must be firmly nailed over each of the joints in the paper, the nails entering the rafters below. These strips will fit up to the ridge boards as in Fig. 3, these being leveled at the bottom edges to make the fitting easier. The finish of the strips at the bottom ends is shown in Fig. 2.

A window is fixed in each end of the pavilion, and it is as well to have this hinged on pivots, so as to have a certain amount of ventilation though the building, being high up, no inconvenience will be found from the draughts. The doors inside should be hinged to open as shown by the dotted circles in Fig 1; as shown, the front and lavatory doors will clash if opened both at once. This may be avoided, if wished, by making the front door in two parts, forming folding doors. This is a little more trouble and expense, but will really be an improvement.

At the front, the weather-boarding is cut away to form shutters, as shown in the elevation, Fig. 4. These are hinged at the top, so that when open they form shade from the sun and shelter from the rain. They are held up by iron stays fixed on the inside, which, when the shutters are down, also form fastenings. The matchbo

up by iron stays fixed on the inside, which, when the shutters are down, also form fastenings. The matchboarding on the inside will, of course, be omitted at the shutter openings, being finished round as at I, Fig 5.

The pavilion, as shown, is without a floor, but undoubtedly a floor is an improvement, but adds to the expense. It can easly be added by laying the joists on the sills, and boarding with one-inch matched flooring. It is best if this is done before the inside is boarded, as the flooring boards will not be so much trouble to fit, but it may be done after if the expense is a consideration.

The clock in the front gable is an improvement to the pavilion, and need not cost much. One of the small drum clocks is all that is needed. To fix, cut a circular hole in the weather-boarding, so that the clock will enter, and finish with a circular moulding, as in section, Fig 6. If the clock is not the right depth to fit back to the inside boarding as shown, a block may be put in front to butt against, or if too deep the inside boards may be cut away. In any case, an opening must be made on the inside, so as to allow of winding and regulating the clock.

The whole building, including the paper on

ing and regulating the clock.

The whole building, including the paper on the roof, should be well painted, and if this is renewed yearly, there is no reason why the pavilion should not be in use for a great number of years.

EXPLANATION OF DRAWINGS.

Plan of pavilion.
Detail of paper roof at eaves.
Detail of roof at ridge.
Front elevation of pavilion.
Sectional detail of front of pavilion.

#### CLEVER WORK WITH THE POCKET KNIFE

By JOHN L. DOUCHENY

No. 11—The Monogram

Every boy who uses a knife with any degree of skill wants to whittle out his monogram. It is a simple thing to do if you go about it properly. The boy who has artistic tastes will naturally

excel in a design of this character, but any intelligent lad can work out the plan given here. First get your wood. A block of white pine or basswood six inches square and about an inch thick is the size to begin on. After making it square and smoothing the surface, place it on a bench or table. The laying out of the monogram is done by intertwining the three letter patterns until they take up only a little more space than is ordinarily occupied by one letter. It is a simple matter to draw out the plain Gothic characters shown in Fig. 1. Some patience of course, is required to get the letters proportionately correct. Use a ruler for all the straight lines, no matter how short, measure all your dister how short, measure all your distances, and you will be surprised at the neat looking initials you can turn out. Draw each separately on heavy paper and then cut out. Lay the first down,

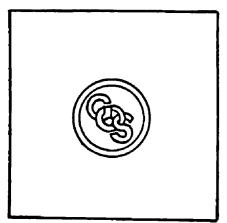

FIG. 2

then the second on top of the first, then then the second on top of the first, then the last. Intertwine the letters in order to hold them securely together and heighten the effect. It is best to have the first letter of the initial a little bit higher and to the left of the others so it will strike the eye first and be read in its natural order.

If you wish to attempt fancy frills these same directions hold good. Ordinarily it is best not to do so. If you have at hand a calendar poster or any

narily it is best not to do so. If you have at hand a calendar poster or any printed matter that contains your initials in large fancy type you can, of course, cut them out and save the trouble of drafting a set. A pretty effect is sometimes obtained by having the middle letter small and plain and the other two larger and more complicated in de-

sign. Fig. I shows the kind of characters you should be able to draw, intertwined and pasted on the center of the block. Carefully mark the outline of your monogram with knife point. Enclose them in a circle drawn with pencil. The circle should be one-fourth of an inch away from the extremities of the monogram. Outside the first inscribe a second, one-fourth of an inch larger in diameter. This will leave the initials enclosed in a circular belt one-eighth of an inch wide, as shown in Fig. 2. Remove the paper pattern and lay it aside just as it is so you can constantly refer to it when giving the wood the intertwined appearance. You may now confine your exertions to the letters and keep working on them until they stand out in relief at least one-quarter of an inch. Be careful not to cut outside the circle and also to leave four retaining bars connecting the latter with the design. If you begin work on a piece of wood six inches square, the monogram should be one and a half inches square, and the larger diameter of the circular belt about one and three-quarters. Outside the ring we are to draw a five-point star. The easiest way to do this is to side the ring we are to draw a five-point star. The easiest way to do this is to cut out a triangular pattern and draw the five divisions of the star with it. A five-point star consists of five triangles of equal size and a central portion which we omit here, as it has nothing to do with our calculations. The base of the triangle we use in this case is one inch

long, its altitude or upright height is a little over two inches. No mark is drawn long, its altitude or upright height is a little over two inches. No mark is drawn with the base or shortest side of the pattern. It is made to just touch the inside ring. In drawing the star mark a point at each of the bottom corners to guide you in getting the divisions uniform. According to the same directions, but with a different pattern, draw a second star a little smaller than the first. All of this is clearly shown in Fig. 3. Cut off all the shaded parts of Fig. 3 and your design is complete. It must now be smoothed with glass or sandpaper. The body of the star, circle and little ring are cylindrical, that is like a lead pencil, only somewhat smaller in diameter. If you have patience with the finishing part of the work you will produce a very pretty and ornamental article. After you have removed all stains and discolorations, soak it in linseed oil for about a week. Keep it immersed by tying on a small weight. Mounting it is a matter best left to your own judgment. One good way is to hang it on a wall with a background of black velvet. Fig. 4 shows the finished monogram.

Fig. 4

#### QUERY $\mathbf{B} \mathbf{O} \mathbf{X}$

1. How is the mixture in a gasoline engine cylinder ignited? 2. How is the spark regulated with reference to the flow of gasoline?—J. S., Ford City, Pa.

Ans. 1. The mixture of gasoline va-Ans. 1. The mixture of gasoline vapor and air in the cylinder is generally ignited by an electric spark, although there are other methods, such as the naked flame and hot tube. In the electric spark method, which is the most convenient, the spark occurs between two points inside the cylinder and at such a period that the mixture will be ignited about the time the piston starts on its downward stroke. 2. Your question is not exactly clear but we presume you mean to ask how the timing of the spark is accomplished. The spark is regulated with reference to the piston position, and the composition of the charge of gasoline vapor is kept as nearly as possible the same. This timing is accomplished by a commutator operated by the engine crank-shaft.

1. If by accident one should receive a shock from the induction coil described in the January issue, would it cause any harm? 2. Is it necessary to have condensers? 3. Could single cotton-covered magnet wire No. 36 he used in the secondary coil if each layer was thoroughly shellacked?—D. W., Chicago, Ill.

Ans. 1. No, nothing more than a temporary shock. 2. Yes. 3. Yes, but owing to the time required to thoroughly dry the shellac and the chances of its not being perfectly dry when the next layer is wound, it would be better to use either linseed oil or paraffin.

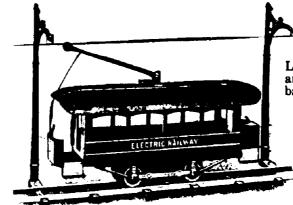

Please tell me how I may recharge a dry battery after it has run down?—M. R., Newark, N. J.

Ans. Attempts have been made to "recharge" dry cells after they have become exhausted by passing a current through them in the opposite direction to that in which it flows from them; that is a current is made to pass in at the carbon or cathode, and out at the zinc terminals, or anode. The passage of

this current through the mass decomposes the salts of zinc formed therein and liberates the active elements which are again free to attack the zinc. This method is not, however, very satisfactory, as the mass forming the electrolyte soon becomes saturated with products that reduce the efficiency of the cell.

At an expense of only twelve dollars, four Massachusetts boys, James F. Mc-William, Fred A. McWilliam, John Cunningham and Charles H. Smith, built a house boat which has given them an immense amount of satisfaction during their summer vacation. The platform is 12x20 feet and rests on a dozen empty oil barrels, which give the craft its buoyancy. The Cabin is roomy and is covered with tarred paper. The house boat is pushed from place to place by poles around the board where it is located. with tarred paper. The hous the pond where it is located.

1. How does the amperage of a battery affect the E. M. F.? 2. Why are telephone lines connected at intervals of a few poles?
3. Do the terms "watt" and "ampere" differ from the terms "watt-hour" and "amperehour"?—C. F., Portland, Mich.

Ans. 1. The amperage of a battery, by which is meant the output in amperes, does not affect the E. M. F.? On the other hand, it is the E. M. F., or pressure in volts, together with the internal resistance of the cell that determines the output of the cell in amperes.

2. Telephone lines are not connected at

mines the output of the cell in amperes.

Telephone lines are not connected at intervals of a few poles. What you probably refer to is the apparent connection at frequent intervals between the two parallel wires in complete metallic circuits. This is not a connection but merely a transposition of the wires so that they do not run parallel for any great distance. This is done to obviate cross-talk which is so trouble-some in long parallel lines. By thus crossing the wires at frequent intervals, the effect of magnetic induction is overcome. 3. The term "watt" refers to the output of a cell or dynamo and is the product of "volts x amperes," while the term "watt-hour" and "ampere-hour" refer to the amount of current that is consumed in one hour, meaning that one watt or one ampere is consumed per hour.

1. Why does not a 110-volt alternating current operate an induction coil when placed in series with a 16 c. p. lamp? 2. When the same current is sent through a telegraph sounder connected in series with a 16 c. p. lamp, a loud buzzing is heard in the instrument. Please explain. 3. Will not the aerial wires of wireless telegraph instruments attract lightning? If so, how could connections be made so that lightning would be grounded if the wire was struck? 4. Could an electromagnet be used in a telephone receiver in stead of a bar magnet with a coil of wire on one pole? 5. Please tell the gauge and resistance per foot of the German silver wirenclosed? 6. What is the resistance per 100 feet of No. 18 copper wire? 7. Of No. 12?—R. R. B. Washington, D. C.

Ans. 1. Alternating currents will oper-

per hour.

"Toffee Trimmed"

Santa Claus has a brand new idea for trimming trees this year—and it's a good one. The idea is to use the pretty red and green 10c size pack-ages of MACKINTOSH'S TOPPEE, instead of the old-

fashioned cornucopies and bags of candy.

Loss much beter—just the right colors—very inexpensive—and, best of all, MACKINTOSH S TOFFEE is the ideal candy for Christmas—or any other time you want candy that is delicious, inexpensive and not injurious.

Appropriate for Hunday-schools, Hospitals and other large "public" trees, as well as for the HOME TREE.

MACKINTOSH'S TOFFEE—the famous English

candy—is like the good, old-fashioned. "taffy" grandmother made in days gone by. Its superiority over every other candy is due to its purity and delicious taste. It's more ish. Give the children all they want; they can't over-indulge or get sick. A 4-lb. tin of

Mackintosh's Toffee contains 16 quarter-pound packages—sufficient to dress a good-sized tree. All dealers sell the 4-lb, tims or 160 packages. If yours does not, send us his name and \$1.60, and we will see that

ou are supplied,

My face is on every box and package—of

it im't the genuine.

Ask your dealer for MACKINTOSH'S TOFFEE. If he has not got it in stock, fill out this order blank and we will see that you are supplied. JOHN MACKINTOSH, Dept. 43, 78 Hudson Street, New York.

THE HALL OF FAME FOR GREAT AMERICANS

¶ EDITOR'S NOTE-For purpose and plan of this series, see our November number. No. I of the Series treated of Ulysses Simpson Grant

## No. II--David Glasgow Farragut

T IS SELDOM that the boys of today begin their life work before they reach the age of fourteen; most boys are still in school at that age. But I am going to tell you something about a boy who began his career at the age of ninc—a career that began and ended on the sea. Life at sea is not one of ease cabin, where he awoke the captain and and comfort today; much less was it at the beginning of the nineteenth century. David Glasgow Farragut was born at the beginning of the nineteenth century. David Glasgow Farragut was born at Campbell's Station, a little place near Knoxville, East Tennessee, on July 5th, 1861. His father, George Farragut, had come to America from the island of Minorca, in the Mediterranean Sea, as a young man, and had married Elizabeth Shine of North Carolina. He had followed many occupations. We read that he had been a sailing master in the lowed many occupations. We read that he had been a sailing master in the State of Tennessee, and finally a farmer in that state. Farming, however, was not to his liking. He was always at heart a sallor, and with his children, in a little pirogue (a kind of canoe made of two pieces of wood lashed together) he would sail across Lake Pontchartrain in the teeth of the heaviest gale, always maintaining when the risk of such adventures to his children was pointed out, that "now is the time to conquer their fears." Thus David almost from infancy was accustomed to danger on the water. Farragut's early entrance on his career the prizes—the Barclay—to Valparaiso, of the Farragut's early entrance on his career they are prizes—the Barclay—to Valparaiso, of the prizes—the Barclay—to Valparaiso, of the prizes—the Barclay—to Valparaiso, of the crew of the Easex to take one of the crew of the Easex to take one of the crew of the Easex to take one of the crew of the Easex to take one of the crew of the Easex to take one of the crew of the Easex to take one of the crew of the Easex to take one of the crew of the Easex to take one of the crew of the Easex to take one of the cre

fears." Thus David almost from infancy was accustomed to danger on the water. Farragut's early entrance on his career was due to Commodore (then Commander) David Porter, who, in gratitude for the care which the Farragut family had showed his father during his final illness, proposed to adopt one of the family. Young David, then eight years old, was chosen. The thought of being chosen. The thought of being a sailor and seeing strange lands, of being on a great warlands, of being on a great warship, and of wearing a splendid
uniform and a glittering sword,
caused a quick acceptance of
the proposal on the part of the
boy.

At this time Porter was in
command of the Naval Station
at New Orleans. Soon thereafter he was relieved and pro-

at New Orleans. Soon thereafter he was relieved and proceeded to his home at Chester, Pennsylvania, where young Farragut became a member of his family and was sent to school. It may be here said that at every release from his duties the boy became a schoolboy, bright and quick to learn. Languages were his delight, and afterwards in his many cruises to different lands, and while still a boy, he acquired a good knowledge of French, Italian and Spanish.

When just a little over nine

When just a little over nine years old David Farragut received his midshipman's warrant, the document being dated December 17th, 1810. In August of the following year Porter took command of the United State frigate Essex and Mid-shipman Farragut began his duties in the naval service.

snipman Farragut began his duties in the naval service.

It was not long after that he had his first experience with the perils of the sea. Early on Christmas morning, 1811, when at anchor at Newport, Rhode Island, a storm arose which developed into a hurricane of wind, snow and sleet. Four anchors were not sufficient to hold the vessel and she was driven upon the beach, two of her masts going by the board. Lying heeled over at a dangerous angle the only resource was to cut away the remaining masts, and sailors with axes stood ready at the command. Fortunately the storm abated and the ship was rescued from her perilous position. The cold was so intense that a seaman was found frozen to death in his hammock. This was a rough beginning for the young middy but it was in his hammock. This was a rough be-ginning for the young middy, but it was the learning of lessons from just such experiences that finally promoted the young reefer to be the first Admiral of the American navy.

the American navy.

On the declaration of war with Great Britain on June 18th, 1812, the frigate Essex was one of the warships despatched to do as much damage as possible to the ships flying the British Union Jack, and none was more active or successful in the work. Captain Porter was a thorough believer in discipline and training. By continual drilling he soon brought his crew to a high state of efficiency. An incident which took place at clency. An incident which took place at this time showed the effect of this trainthis time showed the effect of this train-ing. The Essex had quite a large num-her of British prisoners on hoard and made his report to Captain Downes, and

DAVID GLASGOW PARRAGUT

in company with the Essex Jr., another captured vessel which Captain Porter had renamed, and which was under command of Captain Downes. The captain of the Barclay, a gruff, hot-tempered old sea dog, was ordered to go with Farragut as navigator, which he was very unwilling navigator, which he was very unwilling to do; expressing his contempt for the young commander, he declared that he would find himself off New Zealand in the morning. Young Farragut was in a most trying situation, but, young as he was, not yet being in his teens, he was determined to carry out his orders, and gave command that the maintopsail be filled away that they might join the Essex Jr. The surly old sailor, with an oath, shouted that he would shoot any oath, shouted that he would shoot any man who dared to touch a rope and that he would not be ordered "by a little nutmeg." Calling one of his own sailors, Farragut ordered him to have the maintopsail filled away, which was answered by a cheerful "Aye, Aye, Sir." Seeing that his commands were obeyed, the middy at once told the old captain, who had gone below for his pistol, that if he

Essex was the first vessel to hoist the American pennant so far away from home.

On March 28th, 1814, occurred the famous battle between the Essex and the British men-o'-war Phoebe and Cherub. off the harbor of Valparaiso, in which, after the most heroic resistance, the battle lasting nearly three hours, with over 150 officers and men killed, wounded and missing, brave Captain Porter was compelled to lower his colors to an enemy much superior in numbers and armament. It was Midshipman Farragut's first battle, and although somewhat shaken at his first sight of a man killed, the performance of his duties speedily settled his nerves. He says that he was captain's aide, quarter gunner, powder monkey, and anything else he was told to be. Going below for gun primers a sailor, killed by a cannon shot, fell on him and both went headlong to the bottom. Farragut was rendered unconscious, but speedily recovering, clambered on deck bespattered with blood. Captain Porter, seeing his appearance, asked if he was hurt, and he replied in the negative, "Then," demanded the captain, "where are the primers?" which at once brought the boy fully to his senses, the primers were soon forthcoming. Although continually in the midst of the fight, the young middy escaped without injury, his only mishaps being bruises from his fall, and the loss of his coattail which was carried away by a shot that also took off the leg of another sailor. After the battle Farragut, at his own request, was allowed to assist the surgeons in caring for the wounded. Captain Porter and the survivors among his officers and crew were shortly thereafter allowed to sail for New York where they arrived safely, receiving a splendid welcome from its citizens for the gallantry they had displayed.

Later, Farragut accompanied Captain Porter again to Chester where he was sent to school until ordered to join the birg Spark under command of Captain Porter again to Chester where he was sent to school until ordered to join the birg Spark under command of Captain Porter of hi

in resisting the temptations thrust upon him, but strict attention and faithfulness to duty and the good advice of the first lieutenant enabled him to steer clear of trouble.

bon in killing seals.

During the voyage the Essex captured a number of British whaters, many of them fitted out as privateers. Midshipman Farragut was detailed with several of the crew of the Essex to take one of the prizes—the Barclay—to Valparaiso, tention to the pirates of Algiers whose attacks upon American merchant ships were causing great attacks upon American mer-chant ships were causing great

annoyance and loss to American commerce. Farragut was order-ed to the Independence, which

commerce. Farragut was ordered to the Independence, which sailed for the Mediterranean. but arrived only to find that Commodore Decatur had punished the pirates and forced the Dey to make terms of peace.

During 1816 and part of 1817 Midshipman Farragut sailed on various cruises to foreign lands, obtaining an intimate knowledge of the countries, taking part in social functions, and gaining a thorough knowledge of his profession. His manly hearing, happy disposition, freedom from the foilies of most of the other young officers and his unfailing attention to duty, gained him many friends. He spent part of 1817 and 1818 with Mr. Folsom, U. S. Consulat Tunis, with whom he pursued the study of languages, English literature and mathematics.

After this long spell on shore

After this long spell on shore, Farragut returned to duty, joining the Franklin at Messina, Sielly. While there the officers and crews indulged in athermalic and the state of the s letic sports in which young Farragut was able to hold his

Promotion to the rank of act-

ing lieutenant came to him when he wan only eighteen years old, but he had earned it; not through influence or "pull," but by doing his duty.

This sketch of Farragut's boyhood has been necessarily brief, but the reader can see that his subsequent advancement to the highest position in the American naval service was only achieved through long, arduous and heroic work. long, arduous and heroic work SYNOPSIS OF ADMIRAL FARRAGUT'S

SUBSEQUENT CAREER:

-Visited the Gulf of Mexico. 1825—Promoted to be Lieutenant.
1833—In Charleston during nullification troubles.
1841—Promoted to Commander.
1854—Sailed to the Pacific. Fitted out

Mare Island Navy yard.

Mare Island Navy yard.

1860-1861—Served on retiring board.

1862—Sailed for New Orleans. Destroyed confederate fleet causing surrender of New Orleans. Promoted to Rearder of No Admiral.

1863—Aided in obtaining surrender of Port Hudson.

Port Hudson.

1864—Sailed through torpedo defences of Mobile Bay and caused confederate ram, Tennessee, to surrender. Received a gift of \$50,000 from the City of New York. Promoted to Vice-Admiral.

1866—Sailed in Franklin on tour of European waters and received everywhere the greatest honors.

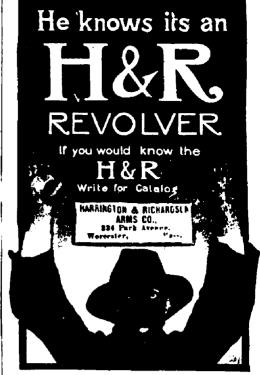

1870—Died at Portsmouth, N. H., August 14th and buried in Woodlawn Cemetery, New York.

Cemetery, New York.

NEXT MONTH BENJAMIN FRANKLIN

on being questioned the ex-captain declared he only wanted to frighten the boy. "Well, sir," said the boy. "Do you think you succeeded?" Captain Downes reprimanded the man and the matter was allowed to rest, but the incident shows that the same spirit in the man who entered Mobile bay amid the storm of shot and shell from both sea and land was also in the boy who dared fearlessly to obey orders in face of every odds.

Once more on board the Essex the next place visited was the Marquesas islands where the captain refitted and took in provisions. These islands are situated away in the South Pacific ocean. The Essex was the first vessel to hoist the American pennant so far away from home.

# U. S. REBULATION CA

These are the genuine U. S. Regulation Light Cavalry Sabres used by U. S. tmops during the Civil War; 34-inch forged steel blade, leather grip, brass wire bound. These sabres make appropriate decorations for club halls and dens. Weight, with scabbard, 4 lbs, Price, with steel scabbard, \$1.50; without scabbard, 95c. Catalog mailed on request.

CHAS. J. GODFREY CO., 4 Warren St., New York.

#### **BOYS AND GIRLS**

This is the month you can sell games for X mas.
GIRLS—25 Hop Scotch games sold by you for as at only 10 cts each entitles you to a beautiful dully sent at once on receipt of our money, all express charges paid BOYS—The same to you only your present will be a remarkably fine engine, which will run small mills, man sawing word, etc., at high rate of speed. # Secure Your Future

To earn more money - to secure your future-to succeed in life-cut out, fill in and mail to the International Correspondence Schools the above coupon. They will show you how you can fit yourself easily and quickly in your spare time to get more money in your present position, or change to a more congenial and better paying occupation.

Mind, the sending of this coupon does not obligate you to pay one cent. It simply gives the I. C.S. the opportunity of proving how easy it is you to improve your condition right at home without neglecting your present work. No risk to run. No books to buy

The I. C. S. is an institution with an invested capital of over \$5,000,000, and a reputation of 14 years' successful work. It has taken a day laborer and qualified him as an electrician with a salary of \$3000 a year. It has taken a bricklaver and qualified him to become a building contractor with a business of his own of \$200,000 annually. It has taken a sailor and qualified him to establish of his own a yearly business of \$200,000 It has taken tens of thousands of men and women of every age and in every walk of life, and in a few months qualified them to double, triple, quadruple their salary. To learn who they are; how it was done; how you can do the same, fill in the coupon and mail it to-day.
