# The Art of Short Story Writing---A Special Course

THE NEW ENGLAND WATCH CO.

San Francisco, Spreckels Building. FOR SALE BY ALL JEWELERS

37-39 Maiden Lane, N. Y. City.

131-137 Wabash Ave., Chicago.

THE Short Story is perhaps the most popular form of writing at the present time., There is a large demand and the highest prices are paid for good work in this line. Magazines and weekly and daily newspapers are all on the lookout for skilled writers of Short Stories. It is the writer's quickest door of entrance to the field of letters.

> MR. ALDEN, the Editor of HARPER'S, says: "Were it not for these new contributors the magazine would languish in all its fine tissues for lack of the infusion of new blood."

> LESLIE W. QUIRK, in his new book, says: "Today the literary beginner who succeeds is the one welcomes suggestions. He knows he cannot turn author on the instant, merely by wishing. He realizes that he must study the profession; must fit himself for the work.

The New York World of December 4, 1904, says there is just now almost a famine in good short stories—a condition that will continue for some months—and quotes a leading magazine editor as saying this year will be a particularly good time for new writers of short stories, as there are not enough of the well known and successful writers to go around.

If you have any literary aspirations, prepare yourself at once to reap your share of this harvest and win fame and success.

We offer you now our Special Course in Short Story Writing, embracing Ten Lessons or Sections, each Section containing one week's work-ten weeks' work and instruction-for only Ten Do!lars (\$10.00).

The Course is thorough, practical and complete, as has been proven by the many pleased and satisfied students who have taken it during the past few months.

NOW IS THE TIME TO BEGIN WORK. Send in your enrollment at once.

Catalogue of complete Journalism Course on request.

HARRY THURSTON PECK, Ph.D., L.H.D. Professor in Columbia University.

FRANK MOORE COLBY, M.A. Late Professor in New York University.

### Received the "GRAND PRIZE," the Highest Award at the Louisiana Purchase Exposition

"I don't know?" need not be your answer when friends, fellow workmen, business associates, ask questions of business, law, politics, science, history, art—anything. There is one place to seek the information—an encyclopædia; almost any encyclopædia, if you are not particular about the information; only one if you require what is latest, most accurate and complete, because there is one and only one complete, new Encyclopædia in the English language, newly written from beginning to end and written especially for American Readers, the only complete encyclopædia of the world's knowledge; of everything that has been learned right down into 1904, and that is

# The New International

There is no other as wholly new or complete, no other which carries with it the same stamp of authority. The older encyclopædias, whose sole merit is cheapness, are disappointing—they lack the latest information, which is hardest to get, but which is most wanted.

The work contains 16.339 pages, profusely illustrated with hundreds of full-page colored plates and maps, and over 7,000 other illustrations.

The entire work is complete and ready for delivery

The New International Encyclopaedia was begun years later and is ten years newer than any other encyclopædia in print today. Examine it, test it, compare it with others in your

Public Library or in the quiet of your own home and then decide about owning it.

AS SECOND-CLASS MATTER

Volume 6

DETROIT, MICH., JANUARY, 1905

F you could only have gone with us that night! It was in early February, and a recent thaw made farmers prophesy an early spring. We boys knew that the searching sun would wake the coons from their winter torpor and send them prowling through the woods and into the hen-roosts

A coon hunt is the real thing for sport. Even the men past forty were frequently the most enthusiastic to annihilate the marauders of the poultry

Our dog Tige, a strong fellow of no one knew what breed, was the best coon dog in all that country, and his reputation made us popular. It takes a sagacious dog to tree a coon and a lion to whip one, but Tige could do both: and he did enjoy it! When he pitched into a coon the battle would end in the end of the coon.

The night was not dark, and at times the moon peered through the light clouds from which there came an occasional drop of rain. Here and there lay patches of snow from the light shift of the night before. It was an ideal night for coons to run.

Dave and Bill Perry, boys eighteen and twenty; Sam Lehew, a droll farm hand of thirty, and Andy Trimmer, a keen hunter of forty-five, started with nie from the old wooden bridge, our meeting place, at eight o'clock. Dave carried a double-bitted ax. his brother held a lighted torch that had done service in the preceding presidential campaign, Andy's rifle swung from a strap on his shoulder, and I carried a double-barreled shotgun, a recent Christmas gift from a rich uncle. We were a formidable looking company.

Dogs know what's doing when the gun comes down from its place on the wall and the call-whistle of a neighbor boy rings out on the night air. Tige was never in better trim. His joyous bark as we started for the bridge was answered by the loud bay of Andy's hound.

A mile up the creek the big timber had not been felled by the saw-mill speculators, and it was among those grand old trees that we thought to start our quarry. At the word, Tige, his nose to the ground and eye and ear alert, led the hunt, and in fifteen minutes his cry told that he had found the scent. Is there greater joy than expectation! Tracks are not coons, but we were almost as elated as though the coon had been treed.

Dave was a braggart, and braggarts are, not infrequently, liars. I once heard an old gentleman say to one, "How do you know so much! Folks that talk so much must lie some!" He tried to throw cold water on our expectations by telling us that a good dog, like Tige, would run a scent two days old, and that he thought from the bay of the hound that the dogs were on a cold track. In fact, he told me that he had seen coon tracks two days before near the point where Tige had given his first signal. I recall vividly one instance of his lying to a dozen of us. We were in the field when Dave came walking rapidly down the road. One of the boys said, "Let's call Dave to stop and tell us a lie." pened that old Johnny Brooks had been dangerously ill and that the whole neighborhood were interested in his recovery. As Dave came within halling distance we yelled, "O Dave, stop and tell us a lie!" Without slackening his pace or appearing in the least disconcerted, he replied. "Hain't got time, boys. Old Johnny Brooks is dead and I'm going to town for the coffin." An hour later old Johnny came riding by and stopped to talk with us. Every one of us had believed Dave's story!

We could tell by the hound's cry that the coon had gone up the creek, and we went in that direction, being careful not to follow too near lest the scent he lost, for coons cross and re-cross their own trail, making it difficult to run. As we proceeded

an occasional coon track was seen in the snow, and at one place the tracks led to the water's edge. An old coon is as cunning as a fox. This one had gone into the creek and had waded or swam to make the dogs lose her trail. Tige had had that trick tried on him before, and he knew that she would land not many yards distant. He ran eyeing the water till he came upon the tell-tale wet spot on the bank.

Within another hour Tige's call, coming at shorter and shorter intervals, announced the shortening of the chase, and at ten o'clock his loud bark called us to the foot of a tall tree near the creek bank. Out from the trunk of the tree and up forty feet from the ground was a bunch like a knot. Andy's practiced eye saw it move. It was the coon! Tige would run to the tree, stand with his front paws high on the trunk, his eyes aglow, and his excited whine saying to me, "I've treed him; why don't you shake him down!" Clubs were thrown, rocks from the creek bank were hurled, but the coon only flattened on the limb and clung more closely. After twenty minutes of useless maneuvering. Andy said, "One of you boys'll have to climb and shake him down. There's no other way. Come, draw cuts to see who's to do it." The shotgun or the rifle might have made climbing unnecessary, but a coon was always entitled to a fighting chance for his life, and none of us would shoot if that chance could be given the game. The lot fell to Dave, who protested that he was lame from stumbling across a log an hour earlier and that he didn't believe he could "shin it." Sam blurted out, "Reckon you're not afeard o' that coon, air you. Dave?" "Well, if that's what you're thinking, I'll shake her down if I never walk another step. I've never seen the livin' thing yet I was afraid of! Here, gimme a boost!" He groaned a kind of suppressed moan, but went up quite rapidly for the first twenty-five feet. Then he stopped and declared the pain was so great he could go no farther. Sam's "Go ahead there, and stop your foolin'." started him on again. As he neared the coon he pretended exhaustion, his voice trembled, and his replies came in breathless whispers. Our talk, though, took effect, and he reached the limb upon which the coon lay stretched. Dave forgot his exhaustion and gave the limb a vigorous shaking but she did not move. Then Sam's "Git out there to that critter!" caused Dave to tremble harder than ever. It's an awful feeling to be thought a coward! Dave obeyed. The coon had evidently measured the distance to the ground and had counted the dogs there ready to pounce upon her, for she refused to jump or to let go!

Tige impatiently watched every move. At this juncture a queer movement in the tree caught Dave's eye and took his last breath of courage. No one had thought of more than one coon in that tree! Coon number two slid down along the trunk till it reached the crotch of the limb upon which were Dave and coon number one. They had treed Dave!

Forty feet above the earth, out on a limb, with two coons standing guard, with two pairs of fiery eyeballs glaring at him, required more nerve than Dave could muster! The coons had gone man-hunting! And Dave at that moment lost his love for hunting

He sat there a full minute as motionless as a statue. He feared to speak. The coons might hear, understand, and begin the attack! We did not dare throw or shoot. Throwing might put him into closer quarters. Tige, attracted by the new move in the tree, set up an expectant howl, and the coons stirred restlessly. Coon number two stood upright! Dave's hair was porcupine's bristles! He imagined the coon pointed at him, saying, "The murderer! Kill him!" Sam saw the animal and understood what was doing. He yelled, "Stand yer ground. Dave! You hain't never seen no livin' critter 'at you're afeard on! I'll cut the tree and make her lodge in them forks to your right! The jar'll knock that coon off'n there and you kin hold on where ye air!" Dave, already frantic, saw himself massacred and eaten by the two creatures he had come to kill, or his body mangled and lifeless from the fall of the tree! In his agony an incoherent shriek rent the air, and coon number two did just what Sam knew he'd do; he turned and walked up the tree trunk—and Dave lived! But he got down from that tree as though chased by a pack of howling wolves! No amount of guying on our part could restore his courage. I see him yet! His bloodless face, his eyes standing out on his cheeks, and his limp legs, all told the same story!

Did we get those coons! Well, I guess so! Andy went up that tree and the way he shook those chicken-thieves off made us roar-all but Dave!

Even the fall of forty feet didn't take the fight all out of those coons, for Tige carried the marks of that hunt to his dying day! And so will Dave!

### Every Boy Needs A Trade

Few boys take to tasks that require thought and persistent efforts. Yet skilled work is the only employment in demand.

Hodcarriers and common laborers glut the markets everywhere. The tradesmen and artisans are the ones that get the easiest jobs and the most money. The others are always hunting work.

Should they accidentally stumble upon a job they cannot hold it. A superficial knowledge will not do. It must be thorough.

Boys, learn a trade while young. After you are twenty years old few will be found who will take time and trouble to teach you one. When you are that old you will want a man's pay. If you don't know anything you don't get it. Know-nothings work at odd jobs and are paid the lowest scale.-

### Advice From The President

"Common sense is the most essential requisite in training a child," writes President Roosevelt to the Cak Park (III.) W. C. T. U., "and that faculty should be developed in the child. Teach him that character counts for more than money. Give him morality, firm courage and lofty purposes. It is not the nice people who want to sit at home, who would use futile efforts and confine themselves to passing resolutions that we shall need in the next generation, but people who icel a burning sense of indignation at corruption, at wrongs, at injustice and foul living; people who will go out to set the world aright. The mother should not be a cross between a housekeeper and a nurse. The father, too, should do his share in training the child. Self-control, love and confidence are essential to the training of womanly girls and manly boys."

THEY HAD TREED DAVE

# FOR THE MIKADO

### OR, A JAPANESE MIDDY IN ACTION & By KIRK MUNROE

Copyright, 1904, by Harper & Brothers

(BEGUN IN DECEMBER) CHAPTER III. FOR THE HONOR OF JAPAN.

NAKAHAKI had been an inmate of the Academy about ten days, when, one evening, just before supper call, as he was hurrying, alone, across the grounds, he was halted, and accosted by two "youngsters" or third classmen. One of them was a tall, heavily-built fellow, named Cyrus Snelling; while the other was a little chap, of about Takahaki's own size, who had cause for grievance against his parents in that they had burdened his life with the name Ezra Eliot Lloyd; the initials whereof constituted the obvious nickname that had clung to him from earliest boyhood. So Eel he had been, rel he was, and Eel he seemed destined to be to the end of his chapter. Nor did his physical characteristics belie this name: for not only was he so small as barely to have complied with the entrance requirement that candidates be five feet two inches tall; but he was active, slippery and hard to catch. He was the best boxer in his class, its swiftest run-

As these two confronted the lad from the far East, Lloyd sang out: "Hello, there, Jap? Why don't you salute your superiors?"

ner, its most artful dodger, and often was affection-

ately spoken of as its "Bantam Gamecock;" a title

that he much preferred to that of the class eel.

Takahaki's right hand, already partly raised towards his cap, suddenly dropped to his side, and he straightened himself stiffly.

"It is that I cannot permit one to say of me 'Jap.'" he replied firmly but courteously, and at the same time smiling pleasantly. "It is gradly permit to say of me 'Johnny Chopstick' or 'Takymat' or what you wish; but not the 'Jap.' If one say to me that bad name I may not sarute him, not even if he be Admirar. It is insurt to every Nippon man. It is insurt to my Mikado."

"Oh, come off!" broke in Snelling. "Such talk as that can't be allowed here, even by a foreigner who may not know any better. Third classmen reserve to themselves the right to call plebs what they please; and we cannot make an exception even in your case. So you will have to submit to be called Jap' whether you like it or not; and the more graceful you do so, the better it will be for you. Morcover, you will at once apologize for not having saluted us, and will make us a humble bow, or suffer the consequences."

For a moment Takahaki gazed defiantly in the face of the speaker. Then, without another word, but still smiling, he brushed past the "youngsters" and walked away, as though their presence were a matter of indifference to him.

"The impudence!" exclaimed Lloyd, with a motion as though to spring after the young Japanese. But Snelling laid a restraining hand on his arm.

"Hold on, Eel," he said, quietly. "This is neither the time nor place. Let him go now; but never you fear that his case won't be properly and thoroughly attended to."

"Suppose he makes a complaint that reaches the ears of the old man?"

"I don't believe even a Jap would dare do such a thing here, answered Snelling, his face darkening at the suggestion. "If he should he would be sent to Coventry by every man of every class in the Academy, and the place would be made too hot to hold

"I'll bet he does, though," said Lloyd, as the two, whose dignity had been so set at naught by a pleb, retired from the scene of their discomfiture.

In spite of this foreboding, Takahaki neither gave warning, nor made a complaint to anyone. Not even to his roommate did he mention the incident. Consequently Dunster had no intimation of what was about to take place, when, a few nights later, after lights had been extinguished, and the cadet officer in charge of that floor had made his final round of inspection, a gentle knock sounded on the door of the room occupied by our lads. Both of them still were awake; but before either could rise from his bed, a dozen dark figures slipped, noiselessly, into the room, closing the door after them.

"Dunster Brownleigh," whispered one of the in-

truders, "are you here?" "Yes. What's wanted?"

"Don't speak so loud," warned the other. "You have a Jap roommate, I believe?"

"Yes."

"Yes, sir, if you please."
"Yes, sir."

"Is he here?"

"Yes, sir."

"Then he is wanted, and so are you. We have a little business to settle with him, and desire you to come along as a witness that he is given fair play. While there are enough of us to compel you to go, we should prefer to have you come of your own accord, and under promise of silence. Will you do so? And will you make such a promise, for both yourself and your friend?

"Who are you and where do you want us to go?" asked Dunster, hesitatingly.

'We can give you no further information here." was the stern reply: "And you must make your decision at once, as there is no time to waste. What is it? Yes or no?"

"Yes, we will go with you," answered the pleb, realizing the futility of attempting to resist the numher opposed to them. "That is," he added hastily, "if my roommate agrees. Shall we go with these fellows,

"I do what you say, Dun Brown," calmly replied the Japanese lad, who already had slipped into his clothing.

"Good!" exclaimed the leader of the intruders. "Now come along, barefoot like us, if you please."

The door was gently opened, a cautious survey of the dimly-lighted corridor was taken, and then the little party stole noiselessly from the room, each of our lads escorted by one of the visitors marching on either side of him. Out of the building they went; and, always seeking the darkest shadows, made their way, swiftly, but in utter silence, to a boathouse that stood on the water's edge.

Knowing that this building was kept locked, except when used under official sanction, Dunster was surprised to see the door swing open at their approach. As they stepped inside, it was closed and locked behind them, and, from a few low-voiced questions and answers, our lads realized that their captors had joined forces with a number of comrades who here had awaited their coming.

A dark lantern flashed out, several others were lighted and hung in various corners of the room, and every window was carefully screened by blankets, co that no ray of light was visible from the outside. The two plebs now saw that they were surrounded by a score of masked figures, among whom they were unable to distinguish those who had brought them there from those who had awaited their coming.

"Not that we have any desire to conceal our identity from you," remarked a big man who stood near Dunster, and noted his glances from one to another of the masked figures. "But we thought it best, in case news of this meeting got out, that you and the Jap should be able truthfully to say that you did not recognize the features of a single person present.

"That was very considerate of you." replied Dunster. "And now, perhaps you will kindly tell us the meaning of this tomfoolery, why we have been dragged from our beds and brought to this place, and what you intend to do with us now that you have got us here?"

"This 'tomfoolery,' as you call it, is intended for a lesson to all plebs, and especially the one from Japan, who in spite of repeated warnings, has treated certain of his seniors with marked rudeness. In fact. we consider ourselves to have been insulted by him, and now demand the satisfaction usually accorded by gentlemen."

"I suppose," said Dunster, "you mean that he must apologize for whatever he has done?

"Exactly: and such quick discernment in a mere pleb, does you great credit."

"Supposing he refuses?"

"Then he must fight."

"How many of you?"

"Only one, of course; or at least only one at a time.

"But perhaps he does not know how to fight with his fists."

"That's his lookout, not ours."

"Would I be accepted as a substitute?"

"Certainly not. You are here merely as his second, and in a case of this kind, we must punish the offending party in person."

'But he is a light-weight, and small for his years." "All the more reason why he should not put on airs and defy us. At the same time, we have considered that feature of the situation, and have chosen the smallest man of our number to chastise him.'

"What do you say, Taki?" inquired Dunster, turning to his roommate, who had followed this conversa-tion with close attention. "Will you apologize to these gentlemen for whatever it is you have done to hurt their feelings?"

"No," answered the other, promptly. "They say to me 'Jap' and order me sarute. I say I am be grad to sarute if they do not say 'Jap,' but never can I sarute when they say to me that bad word. So now it is that they must first, what you say aporogize; then I, too, approgize and sarute many time.

"If you are bound to stick to that," said Dunster, dolefully, "I suppose there's nothing for it but to stand up and take your punishment. We'll fight," he added shortly, turning to the others who impatiently Takahaki's decision.

"Very well," replied the big man who acted as spokesman. "Step out, Little One, and give this pleb his much-needed lesson in politeness."

At this, one of the masked figures, of about the Japanese lad's own height, promptly moved to the

"Hold on a minute!" exclaimed the master of cere-"These beastly masks interfere somewhat monies. with seeing; so it seems to me only fair that your man should wear one of them as well as ours.

Dunster admitted the justice of this; and a strip of silk, having eye-holes cut in it, similar to those worn by the others, was bound about the face of the Japanese lad.

"Now," said the big man, stepping out of the ring that had been formed, "Pitch in! And may the best

The next instant, the young Japanese lay prone on the floor, to which he had been sent by a stinging left-hander, full in the face, that he had not attempted

"It's a shame!" protested Dunster, as he assisted his roommate to rise. "Why, he didn't even put up his fists! It's evident that he don't know any more about fighting than a kitten."

"Then let him apologize," answered the big man;

but ere the words were out of his mouth, Takahaki had flown at his opponent, and, unmindful of a body blow, against which he made no attempt to guard. struck out, simultaneously, with both right and left hands. He had not made fists, but using the flat edge of his open hands, he delivered his blows with incredible swiftness.

A yell of pain was forced from his surprised adver-

sary, both of whose arms dropped limp, and hung at his side, as useless as though broken. Nor did the young Japanese stop here; but turning his attention to the big man, he seized him by the left wrist and spun him around as though he had been shot. At the same moment the surprised "youngster" was impelled forward, with such velocity, that he dove head foremost into a group of his fellows. These were sent staggering in every direction, while the big man measured his length on the floor.

Even with this exploit, Takahaki did not pause; but darting with amazing swiftness among the remaining spectators, he administered a paralyzing grip here, a numbing blow from the edge of a hand, or from an equally effective bare heel, there, until he had the whole crowd wildly scrambling to avoid his bewildering attacks, which no one knew where to expect, or how to meet.

The building rang with shouts and yells of pain until suddenly the front door flew open, and above the bedlam, rose the shrill cry of "Ware hawk!" moment the lights went out, and a few seconds later, the boathouse was deserted of all its recent uproarious occupants, excepting only Takahaki, who panting, but triumphant, stood alone, wondering what was to happen next.

### CHAPTER IV.

### HAZING AT THE ACADEMY.

The alarm that had so suddenly terminated the strange fracas in the boathouse, was caused by the approach of the superintendent of the Academy, and a visiting friend, on their way home from the club. where they had been spending the evening. coming probably was most fortunate for Takahaki, who owed the success of his assault upon overwhelming numbers, to its unexpectedness, the swiftness of his movements, and the novelty of his methods. As "Eel" Lloyd afterwards explained:

"He had us so rattled, that we didn't know which way to look, besides having half of us paralyzed so that we couldn't wag a finger. He's a wonder! and there isn't a man in the Academy, nor any two together, for that matter, who would have a living show in a scrap with him. It was mighty lucky for him, though, that the scrimmage ended when it did; for there were enough of us to eat him, and we would have had him on the run in another minute. At the same time, as I said, he's a wonder, and we must get him on the team.'

So Takahaki was doubly fortunate, in having temporarily put to flight his assailants, and then in having them driven from the field just as they were about to overcome his peculiar tactics, by weight of numbers. He had not comprehended the significance of the warning cry that caused their sudden disappearance. Consequently he stood in the doorway, puzzling over it, and wondering what he ought to do, when the superintendent stepped briskly up, with the disconcerting inquiries:

"What is going on here, sir? Who are you? and what are you doing here at this time of night?"

As the officer spoke, he struck a match that lighted the scene with a momentary glare. "I am Takahaki Matsu," answered the Japanese

lad, standing stiffly at attention, with his hand raised in salute. "I am something not doing." "Do you mean that you are not doing anything?"

"Yes, sir. I am anything not doing."

"Why, then, are you here?

"Because some mans make me to come."

"Who were they?"

"I am not see any of his faces."

"Why are you wearing that mask?"

"The mans who make me to come, make me to wear him."

'What were you doing here just now?"

"We are have game, Japan game; name Jiu-jitsu." At this the superintendent's companion gave an audible chuckle.

"Were any of your classmates present?" asked the commanding officer.

Takahaki hesitated for a moment before answering: "Yes, sir. Dun Brown, who room I with, was come same time. Mans make him to come."

"Very well, sir! You may return to your room, where both you and Cadet Brownleigh will consider vourselves under arrest until I send for you in the morning. Also, you will report that fact to the cadet officer in charge of your hall. Good night.'

"It looks to me," said the superintendent to his friend, after Takahaki had disappeared, "as though something in the nature of hazing had been attempted; and I have no doubt that a number of third classmen are implicated. If I find out that such is the case, and can discover the offenders, it will go hard with them! for hazing is a form of brutality that I am determined to crush out, at any

"If any one, or any half-dozen, unsophisticated 'youngsters' attempted to haze that Jap, and he resisted with jiu-jitsu methods. I'd be willing to wager that he did not get the worst of the encounter," laughed the other, who was a naval officer just returned from a long tour of duty in the far East. "Recently, I have seen enough of jiu-jitsu in Japan to convince me that one skilled in its tricks can successfully defend himself against an apparently overwhelming number of opponents, physically stronger than he, but ignorant of his peculiar art of selfdefense. It is something that should be taught here, and if that young fellow proves an expert you couldn't do better than to appoint him jiu-jitsu instructor of his class." "Perhaps so," replied the superintendent. "At any

rate I will consider your suggestion."

In the meantime Takahaki had returned, unmolested, to his room, where, after reporting to the cadet officer in charge, he found Dunster already in bed, but awake and anxiously awaiting him.

"Awfully glad to see you, old man," said the latter in a low tone. "Was afraid you were nabbed. Did you find out who it was that gave us the scare? Someone said that it was the super himself."

"Yes," replied Takahaki. "Him superintendent, and say we are arrest."

'So he caught you, did he? But how did he know

that I was mixed up in the row? Did you tell him?" "Yes. Him ask if any preb in the boathouse, and I say not any but Dun Brown."

"The Dickens you did! Well! I must say I didn't think it of you! I suppose you gave him the names of all the others, too?"

No, I say cannot see face."

"But of course you did recognize certain men by their voices"

"Maybe so. Maybe I know—-

"Hold on! Don't give me any names. I don't want to know who they were, and if you know what's good for yourself, you won't remember any of them tomorrow, either. But, I say! That was great work you did, in downing those chaps. Where did you learn the trick? and how did you do it anyhow?"

"Him what Japan man name 'jiu-jitsu.' Everybody

in my country, know him."

"Well, nobody in this country does, so far as I know, and I'd like mighty well to learn the game. Will you teach me?"

"Yes, me be glad teach you, Dun Brown, everything what I know.

"That settles it: and I'm yours for lessons, every chance we get; for it's mighty well worth while to know how one man may handle a crowd, the way you did awhile ago. I'll bet those fellows feel sick over it, and I don't believe they'll tackle us again in a hurry, especially if you put me onto the game."

"Au right, Dun Brown, I teach you," and, satisfied with this promise, Midshipman Brownleigh went to sleep, without a care as to what the morrow might bring forth.

The next morning both lads were summoned to

the superintendent's office immediately after roll call. When that officer had listened with closest attention to Cadet Brownleigh's frank account of the boathouse affair, he abruptly asked:

"Who were the men who took you from your room?"

"As they were masked, gir, I could not identify them," replied the pich.

"Didn't you recognize any of their voices?"

"Not to swear to, sir."

"But you have your suspicions as to who they were?'

"Yes, gir, some of them."

"Who were they?

"I would rather not mention any names, sir." "What if I order you to do so?"

"I should be very sorry to disobey orders, sir."

"To do so would render you liable to severe punishment, probably to dismissal from the Academy.' "Yes, sir."

"And I am certain to discover the guilty parties, sooner or later."

"Not through me, sir."

"Perhaps through your roommate, then. How is it. Matsu? I suppose you have no objection to giving me the names of any whom you recognized among those who attempted to discipline you last

"Yes, sir." replied the Japanese lad, somewhat puz-

zled by the form of the question.

"You know, of course, who it was that struck you in the face?"

"Yes, sir."

"Who was it?"

"Honorable sic, I am not say."

"You mean you will not?"

"It is the same."

"Oh no, it isn't. If you cannot, on account of ignorance, then you are blameless, and not liable to any penalty; but if you will not, through obstinacy, then it is possible that you should be sent back. in disgrace, to your own country.

Takahaki's face became very grave.

'So, of course, under the circumstances, you will no longer hesitate to give me the name of the person who struck you in the face lest night. By so doing you not only will escape further unpleasant consequences, but you will relieve your roommate from the penalty he otherwise must pay for being mixed up in an affair that should concern you only.

"Honorable sir, I not can. In my country it is not custom; and now I find it not custom here. I am very sorry: but if I do such thing never more can I go back to my peop. No, honorable sir, I can not."

So evidently was this answer final, that there was no more to be said; and ten minutes later found both our lads in solitary confinement on board the Santee, digesting the information that they would thus remain until the real culprits should be discovered.

In a small community of few but intense interests. news of this kind cannot be kept from spreading. Thus, within an hour, it was known to every member of the Academy, cadets as well as officers, that two plebs were under arrest and threatened with dismissal for refusing to divulge the names of certain parties who had attempted to haze them the night before. Also it was known that one of them was the young Japanese whose recent advent into the Academy had occasioned so much speculation. It even was rumored that the entire party of would-be hazers had been whipped out of their boots, and put to flight, by the unaided efforts of this one little brown man from the far East; but of course this story was not believed.

In the meantime, third classmen Snelling and Lloyd had sought, and been granted, an interview with the superintendent; and after that, at various hours during the day, they were seen in earnest con-

versation with certain of their classmates. It was obvious that something important was on hand; but just what, no one seemed to know. Thus matters stood at the hour of dress parade, just before sunset. when the entire corps of cadets, together with every officer of the Academy and a large number of spectators, were assembled in the long shadows of the elms that border the grassy plain of the drill ground.

The parade was ended; the drill, both in manual and evolution, had been perfect, the superb Academy hand had completed its imposing march up and down the extended line of motionless cadets, officers had reported, and, apparently, the moment for dismissal had arrived; when the commandant stepped towards the waiting cadets with an expression on his face that betokened an occasion of grave importance. At the same moment appeared a squad of marines, incharge of a corporal, and guarding two prisoners. These advanced steadily, until within a few paces of the commandant, where they halted, and stood as though awaiting orders.

(To be continued.)

### How Fast Odors Travel

Experiments have been made recently to determine the speed with which odors travel. Ammonia was sprinkled into one end of a pipe about ten feet long, and it was found that the odor could not be perceived at the other end of the pipe until two hours had elapsed.

Sulphuric acid, camphor, and other similar materials, all having a powerful scent, were also tested. and it was found that the various odors required about the same length of time to traverse the pipe.

### Find Where The Diamonds Are

"Tell me what young men in the college at Oxford are thinking about and I will tell you how things will go for England in the next generation," said Lord Bacon. Tell me what the occasional boy who represents genius is doing and thinking on Sunday and I will tell you how things will go for my country in the realm of poetry, eloquence, liberty, art and invention. When God wants to bring in a new age he lends unique genius to an occasional youth, then this occasional Watt or Lincoln lifts the whole people to his level. The one thing for this Republic to do is to find out its occasional boys gifted with vision and then nourish their genius. Not many Phocians—one. Not many Luthers—one. Not many William the Silents-one, and no more. Not many great jurists or inventors. Society cannot create great men any more than it can create diamonds and gold. The only thing we can do is to find the diamond and uncover the gold. Sunday is a day when the occasional boy goes apart and broods. On this day Robert Burns tries his song and refines his hymn. Young Henry Clay discovers his power of speech. On this day John Howard nourishes his love of the poor. The great leaders of to-morrow are these poor boys of to-day. Fortunately the: have fifty-two days each year to dream and brood and build air castles and fashion their ambitions, to laugh and sing and weep and pray. If the Sunday with its opportunity for the imagination, should perish, farewell to that genius that makes for invention, commerce and wealth, and that scholarship that makes for poetry, art, music and eloquence.-Newell Dwight Hillis.

### SOME OF THE FAMOUS AMATEUR ATHLETES OF THE UNITED STATES AND GREAT BRITAIN

1. Alfred Kennedy, Newcastle, England, 100 and 220 yards sprinter, next to Jupp, the English champion, the best in Great Britain.

2. C. W. Roberts, Liverpool, a noted sprint handicap runner.

3. W. Roberts, Liverpool, mile runner, fast and plucky, but not strong enough for the game. He has dropped unconscious after several of his races this year.

4. Arthur F. Duffey, Boston, Mass., who was defeated by J. W. Morton for the English championship this year.

5. Ben Jones, Wigan, England, a collier who durraces. He has won over \$2,000 in value in amateur contests in the last few seasons.

6. Ernest Green, Liverpool, a successful handicap sprint runner.

7. Non-contestant.

8. Charles MacElroy, a Scotch sprinter of note.

9. A Scotch trainer.

10. W. Buchanan, member of the executive committee, Ayr Athletic Club.

11. William Murray, Dublin, brother of Dennis Murray, Irish sprint champion, winner of the Booth Hall Plate last year.

12. C. R. Murray, Glasgow, Scotch high jumping

champion, record 6.114. 13. W. Stark, Glasgow, Scotch 100 yards champion, the youngest champion in Great Britain. He has adopted the Yankee starting methods and is the fastest British starter. Should do evens if persuaded to give up cigarette smoking while in training, which he, in common with most athletes on the other side, have heretofore refused to do.

14. J. S. Benyon, Chester, British Empire cycle champion, a fremendously popular bicycle racer, and this season's heaviest winner.

15. W. Waring, Liverpool, a successful bicycle

handicap racer.

16. Dennis Horgan, Ireland, Irish shot putting champion, formerly holder of the world's record, somewhat past his prime now but still a formidable antagonist in any company

17. Thomas Nicholson, Glasgow, the Scotch, English, and Scotch-Irish hammer throwing champion. He defeated Shevlin, of Yale, at the English championships this year. He has thrown well over 160 feet, and is steadily improving.

18. D. MacDonald, a rather fair Scotch sprint runner.

19. C. Cherry, London, bicycle racer, who reappeared on British tracks this season after an absence of several years. He competed in the cycle championships at Montreal, Canada, some years ago.

20. A. Buchanan, member executive committee Ayr A. C.

21. J. S. Westney, ex-captain of the University of Pennsylvania track team, who has just returned to the States after a satisfactory season on the British cinderpath.

22. J. W. Morton, London, English 100-yards champion, formerly with the British army Africa.

23. Gavin Stevenson, secretary Ayr Athletic Club, one of the most popular and efficient club officials in Great Britain.

24. Harry Hyman, University of Pennsylvania. who broke the track record at Fallowfield, Manchester, in his first 220 on the other side, but enapped a tendon in two at Ayr, disabling himself for the remainder of the season.

25. Gordon Donald, member executive committee Ayr A C.

26. R. W. Thomas, Newcastle, winner of the Booth Hall Plate, the greatest amateur betting race in Great Britain, in 1902. Foster Sandford's backers are reputed to have won \$6,000 on this race the year Sandford won it. Hardly an American has competed in it since.

27. Dennis Murray, Dublin, the ever popular Irish 100 yards champion, holder of the native Irish record. Duffey holds the all-comers figures.

28. J. McGough, Scotch mile cnampion, who gave Alfred Shrubb the race of his life at the English championships this year. When right fit McGough is good for 1:20 for the mile.

29. J. B. Milne, Dundee, Scotch high jumper, one of the three who tied for the English high jumping championship this year. Milne has a private income of some thousands per year, and spends a considerable portion of it indulging his favorite hobby.

30. Alan MacDuff, member Ayr Athletic Club.

31. W. W. Taylor, Liverpool, a successful sprint handicap runner.

32. Daniel Western. Liverpool, one of the fastest quarter-milers in Great Britain.

### NEAR THE CLOSE OF THE GREAT BASEBALL SEASON OF 1904

F anyone asks what is the greatest of all American games it is safe to answer, baseball; for evidence see the picture on this page giving a panoramic view of the Boston American Baseball Grounds during the games played October 8th between New York and Boston American teams, and the one showing a small section of the left field bleachers when Boston took the lead in the fourth inning of the first game by making six runs. We doubt if better photographs of a great baseball crowd were ever taken than those reproduced on this page. But boys in our western cities and towns cannot comprehend, even when looking at these pictures, what it is to see a crowd of 35.000 people wildly enthusiastic over a ball game. The games referred to were played near the close of the season when the New York and Boston American teams were running a neck and neck race for the championship. The two games played on October 8th landed Boston in the lead. We have said that there were 35.000 people in this crowd. Exactly 28.040 paid to enter the gates, but competent judges say that from the housetops and roofs of adjacent buildings, from fences and telegraph poles, enough

more witnessed the games to make the total 35.000. Hundreds got in under and over the fences. It would have required five hundred policemer, to prevent the boys and men from entering the grounds without paying. It was a good-natured crowd and yelled itself hoarse not only for the good work done by the home team but in gallant appreciation of every good play made by the New Yorkers. The applause that greeted the magnificent playing could be heard nearly a mile. This was particularly true during the fourth inning of the first game, when, the score standing one to nothing in favor of New York, the Bostons went to bat and scored six runs. Hundreds of boys had brought cow-bells, dinner-bells, horns and every conceivable contrivance for making a noise, and the din during this inning was terrific. During the first game a loving cup was presented to James Collins, captain of the Boston team. It was given him by the Boston public. The cup was two feet high, and on its side was engraved: "Presented to Captain James Collins, October 8th, 1904. This cup, subscribed to through the Boston Journal, is intended as an evidence of the admiration of the Boston public for a great captain and a good fellow."

# Just Between Gurselves

ETWEEN twenty-five and fifty thousand persons will read this number of Tue Boy who have heretofore been strangers to it. I want to introduce myself to them. The quarter of a million to whom I have been talking on this page for the year just passed need not listen, as what I wish to say may prove to them an old story.

At this season of the year 1 am accustomed to making new friends at the rate of hundreds a day. You think it is remarkable if you make one new acquaintance a day. What would you think if you made not one but hundreds? I deem myself fortunate in that I am not only able to make acquaintances so fast but that these acquaintances become very soon good friends-and there is a great deal of difference between an acquaintance and a friend.

I have long felt that I had about the most responsible position, so far as affects the making of boy character, of any man in the world. That is saying a good deal, isn't it? But where is the man who talks every month to more boys than I do in this personal way?

I have had parents write me that their boys, to use an old expression, "put great store by" what I say; so I must be careful. I know enough about boys to know that they will often take the advice of a stranger quicker than they will the advice of a parent. Of course that is wrong in the majority of cases, for a parent who knows his boy may be assumed to know more nearly what is best for him than does one who does not know him personally.

Occupying as I do a position that makes me a sort of "father confessor" or advisor to a good many thousand boys, whether I want to be or not, I feel that I must be very sincere and very true in all that

To the great company, amounting to an army of boys, who are now reading THE AMERICAN Boy for the first time I wish to say:

In the first place, this paper is for you—for American boys. But who are American boys? I have had the question asked me many times. Have the boys of the United States the right to call themselves American boys to the exclusion of all other boys of the world? Why, yes, you say; and yet Canadian boys call themselves American boys; a Mexican boy claims a right to call himself an American boy; a Brazilian boy claims the same right. The United States is only a part of North America; and there is Central America and South America Why has one small part of North America the right to assume that it only is American? No, if the publishers of THE AMERICAN BOY had wanted to limit its circulation and sphere of influence to the United States only they would have called their magazine "The United States Boy," or "The United States of America Boy."

THE AMERICAN BOY has many Canadian subscribers and some in Central America and in South America. These boys are as much entitled to be known as American boys as are the boys of the United States. Boys can be patriotic without being selfish, and we are in danger of becoming selfish if we assume that we of the United States are the only Americans on earth. Of course, every boy in the United States believes that the United States is the greatest country on the face of the globe; he ought to think so. But then every Canadian boy thinks that the British Empire is the greatest empire the sun shines on, and he ought to think so.

You boys of the United States should give the boys of Canada the same privilege of enthusiastic loyalty for country that you claim for yourselves. What would you think if the boys of Canada were to set up the claim that they were the only American boys? and yet they have the same right to do so that you

Loyalty is a thing to be despised when it reaches a point that it reached recently in the heart of a little boy in California. That boy was of Canadian parentad taken his family with him to His father southern California, had made a home there under the Stars and Stripes, and was sending his boy to the public school, to be educated at the public's expense. It was the custom at that school to raise the United States flag to the top of the flagstaff on the schoolhouse every school morning. This was done in the presence of the school, and every boy and every girl was expected to salute the flag as it rose and floated in the breeze. This little boy of Canadian parentage refused to salute the flag. He was reprimanded by the teacher, and again refused. Then he was warned, and he still refused. Later he was told by the school board that he could not attend the school. Then his father patted him on the head and called him a good boy. In my opinion, here was a mistaken idea of loyalty. That a Canadian boy, or that a boy of any other nation on the face of the globe, should leave his native country and make a new home for himself under another flag, enjoy the blessings of that flag, and refuse to pay it due respect is to be more than foolish—it is to be discourteous, unfair and even wicked. If any boy of my country should go to Canada and make a home there, I should expect him to revere the flag that floats over him and protects his home and gives him the blessings, the benefits of which he has left his own country to gain.

Not long ago I had the privilege of making a trip through the British Isles. I fell in with some Americans, and was gratified to find that the great majority of them were respectful, as I was myself, to everything British. But at least once I found a man who never lost an opportunity of openly boasting of his own country's superiority over things British and making it unpleasant for the people about him,

mannered talk.

I stood in a great crowd when King Edward VII, preceded by his life guards, a splendid body of horsemen, rode in a carriage with his Queen to Euston Station to take the train that was to carry him over the first stages of his recent journey to Ireland. As the King appeared I lifted my hat. In doing that I was paying the respect due a great empire, and I deemed myself no whit less loyal to the Stars and Stripes in doing so.

These things I feel impelled to say in order that the many thousands of boys who have become readers of The American Boy within the past thirty days and who live outside the borders of the United States may understand how I feel regarding them. Naturally, THE AMERICAN Boy, being published and printed in the United States and the great bulk of its subscribers owning allegiance to the Stars and Stripes, these pages are mainly gotten up with a view to meeting the needs and the expectations of the boys of the United States. Yet in nearly every number our readers will find some matter that shows that THE AMERICAN BOY is anything but selfish; but on the contrary is liberal and cosmopolitan. For instance, in this number is a portrait of famous amateur athletes of the United States and Great Britain, taken in Scotland. Out of the thirty-two figures in the picture there are but three boys from the United States. We also give a picture of the handicap sprinting race at Abergavenney, Wales, August 4th last, and a short sketch of Colonel Edward Younghusband, who recently achieved a notable victory for Great Britain in the far east. The series of articles entitled "The Drawing Room Magician" that has been running in THE AMERICAN BOY is by an English author, and the exciting story on page 82 has a Scottish boy as its hero. But enough of this. You now understand our position in this matter.

Second, I wish to get as near to the boy's viewpoint as I can in editing THE AMERICAN BOY. It is a difficult thing for a man engrossed in the affairs of business, with the serious problems of life confronting him, to get into the boy spirit and atmosphere. That is the reason so few men are able to edit successfully a paper for boys. The greater number succeed only in making their publications either silly and childish or pompous and overgrown. To strike the golden mean, that is to hit the average boy just right, is an exceedingly difficult problem.

There are many boys' papers in England that have

# Renew Framptly Boys will do me a personal favor if, this month

particularly, they renew

promptly their subscriptions where they have expired. I do not want any to miss the splendid Washington Birthday Num-Very truly yours. The Editor. ber I am preparing.

been conducted successfully for years, and some of them are edited by gray-haired men. I had the privilege of calling on some of these editors during the summer of 1903 in their offices. They were truly boys, though old boys. As I have said before, the average Englishman keeps his boy nature longer than does the average man who has lived long in the United States. The strenuous lives we on this side the water are accustomed to, knocks all the boy out of a man early in life. On the other hand, it is not an unusual thing in the various parts of the British Isles to see cricket games in which many of the players are old men, and if the old men are not playing they are umpiring or are excited spectators. It is hard to get men on this side of the great ocean, living in the fierce contest of business life-unless it be in Canada—to give any time to being a boy. They simply can't do it. That is the reason why it is so nearly impossible to find good writers of boys' stories in the United States.

Third, we are spending our best thought in the endeavor to give to our boys the most interesting and the most helpful boy literature that it is possible to obtain, judiciously mingling instruction with entertainment and covering, so far as we can in 32 pages, every phase of boy life. We have not yet succeeded in doing what we set out to do. Our paper is not yet our ideal, but is yet far from it. it is rapidly approaching a state of perfection in the character of its contents we thoroughly believe. Improvement is always the order of the day in the office of THE AMERICAN BOY. We want the best things. We will not buy a name unless what is written over that name is what we deem suited to our readers, nor will we buy or accept matter simply because it is cheap. We are jealous of our columns and we try to scrutinize with the best care everything that enters them. So far as we can recall, there has not a word appeared in the reading columns of THE AMER-ICAN Boy since its first issue, over five years ago, that we would now recall if we could. Isn't that a remarkable record?

Fourth, THE AMERICAN BOY is for American boys, and yet we know there are hundreds and thousands of girls who read its pages with interest. We have ahundant evidence of it in letters from girls to that effect. Surely, no boy will begrudge his sister the privilege of reading and liking his paper. Our paper is not edited for children, and yet we know that thousands of little fingers turn over the pages of this paper to see the pictures. It is not edited for mature men and women, and yet we know that thousands of fathers and mothers and grown-up brothers and

most of whom were not in sympathy with his ill- sisters read it for themselves. We are not guessing at this; our mail abounds in evidence. We are not editing THE AMERICAN Boy for the grandfathers and grandmothers, and yet we have had some beautiful evidence, in the way of letters from old people, some of them almost pathetic in tone, in which it is plainly evident that THE AMERICAN BOY is read through spectacles, and that these old people deplore the fact that when they were young nothing like THE AMERICAN BOY came into their lives.

> That the boys themselves read THE AMERICAN BOY goes without saying. No paper could gain and retain a circulation running close to 125,000 actual subscribers in five years' time that has not won the hearts of its readers.

> Fifth and last, and then this little talk is at an end: I want you to recognize me as your friend. ready to do for you whatever I can to make your life happy and successful. Sometimes boys ask me to do things that I cannot do, but such cases are exceptional. I want you to be free to write me, and tell me about your play, your work, your successes, your failures, your aspirations. Do not treat me as if I were a great man standing on a pedestal some place and that you have to approach me very deferentially. Not so; I am a very ordinary man and want to be treated by you boys as one you can easily reach. Ask any of the boys that know me personally, and they will tell you that I am easy to approach.

> Three or four weeks ago I took a trip to Saginaw. Mich., and on invitation of the Y. M. C. A. of that city talked to a mass meeting of boys one Sunday afternoon. Of course you could not know what a good time we had, but if you had been there you would have said that you would not be afraid to write me a letter. A week later I was talking to an auditorium full of boys in Grand Rapids, under the auspices of the Grand Rapids Y. M. C. A. I talked to the boys for an hour about "The Importance of Beginnings," and when the talk was over the chairman of the meeting remarked that perhaps some of the boys would like to shake hands with the speaker. While I never played a game of football in my life, although I have often watched a game, I could imagine that night how a man feels in a football game at an exciting point where all the players are on his back and grinding him into the earth. I was not exactly down on my stomach, but I was in the midst of a mob of boys, trying to shake hands with forty at a time, so that I wondered if football could be any worse. The boys at Grand Rapids didn't seem to be a bit afraid of me. This I say in order that you may know that the Editor of THE AMER-ICAN Boy is your friend and that when you want to say anything to him all you have to do is to say it.

Of course, the Editor may not always print everything that you want him to print, and sometimes you may see some things in THE AMERICAN Boy that you think might just as well be left out or better filled by something else. You will bear in mind that the Editor has a hard proposition before him-the filling of 32 pages with matter that will interest and please all kinds of people. There are some boys who would not give a snap of the finger for the page devoted to stamps and coins, and yet there are thousands of boys that think more of that page than of any other page in the paper. There are some people who would not have a story in THE AMERICAN BOY that had a gun in it, and they would cut out all the hunting stories, war stories, Indian stories-indeed. nine tenths of the stories that boys take to naturally.

There are some people who would not have a word in the paper about war, cutting out everything regarding the army and the navy, army and navy schools, and stories of boy heroes in battle, biographical sketches of warriors, historical sketches of wars and battles.

There are others who would have me cut out every story in which there is the talk of the street boythe peculiar patois of the boy on the street who blacks boots and sells newspapers—a perfectly inno cent sort of talk but not good English, thus cutting out all of that interesting class of matter that has to do with the life of so many thousands of poor but plucky boys in our great cities. And so it goes. If I edited the paper to meet the views of all sorts of people I would edit THE AMERICAN BOY out of existence entirely. You can see the point.

In conclusion, then, I ask you to have patience with me, and where you can, help me. Criticise the paper all that you can. Criticism helps almost more than flattery. Make suggestions where suggestions occur to you, but do not feel bad if in the Editor's view your suggestions can not be carried out. Send us items of interest, but do not feel had if we can not publish them, as there does not begin to be room enough in 32 pages of The American Boy to print all that we receive; we must select only the best. But we are grateful for all.

This thing you may be sure of, and so may your parents, that nothing will ever appear in THE AMER ICAN Boy that will injure your morals or make you less manly as a boy, or hinder your success in life. Rather than do this I would resign my position at once, though it is the best position of which at this moment I can conceive, if we measure its advantages by the opportunities for doing good that fall in its

Yours Sincerely,

M-6 Sprague

Aunt Betsy Bennett.' If a giant firecracker had suddenly exploded in the office of the Bald Eagle, it could not have produced more consternation than the news. The managing editor tumbled from his perch on the window sill, where he had been sitting crosswise, his knees drawn up tent-like, mending a broken stamp. It was an important article, that stamp. On every copy of the Eagle sent out it stamped the magic legend, "All subscriptions due weekly."

THE door flew

bang,

Hope entered. "The

queen's dead," she exclaim-

ed, breathlessly, "and so's

open with a

an d

The remainder of the staff was standing at the old hand press over near the window, and at Hope's words promptly deserted his task and lay down on the floor at full length.

"You goose, Dan," said Hope, taking her favorite seat on the edge of the editorial table. "It isn't anything to be funny over. It's dreadful. The Star is going to have the whole front page leaded, and Cliff Ames has a two-column cut of her-the queen, I mean. I just met him over at the library, and he gloated over me."

"The vil-yun," groaned Dan, kicking one heel in feeble protest. "And after that, here you go and get huffy just because I lay me down and give up the ghost. There's nothing else to do, unless we suspend publication and drape Hope's big black apron across the window.

The society editor and reportorial staff of the Bald Eagle turned her back upon him, and appealed to the 'supreme court":

Jack, please say something. Whatever are we going to do?"

The managing editor scratched his nead doubtfully, thereby dislodging a demoralized looking penholder that looked as if it had been through the wars.

"Where did Cliff get that cut?" he asked.
"Why, he's had it planted ever since the queen was taken sick. He says that's the way the big papers do. Just the minute anybody who is somebody has a headache they get cuts and sketches all ready for fear they'll die. And that's what Cliff did. Got it somewhere in the city, he says, and maybe he'll run a line at the top, 'Special London Correspondence.'

Did you ever?" "No, I never," responded Dan, heartily. "Again I say that our worthy and honored opponent is a

Jack was thinking deeply.

'What's our sub. list, now?" he asked, and riope figured quickly in her mind.

'Fifty eight, not counting Mrs. Diggs' potatoes and Mr. Johnson's milk," she replied. "Since the Star started up, we've lost twenty two subscriptions, and they've even got old Mr. Peabody's corn meal.'

Glad of it," interrupted Dan, sitting up hastily. "I don't like corn meal any more. Haven't had anything to eat but corn meal for three months, ever since Mr. Peabody exchanged with us. I didn't know you could make so many different things with corn meal. Hope's stuffed us on corn meal mush, corn meal pancakes, corn meal pudding, fried corn meal,

Johnny cake, corn meal pie——"
"I've got it!" cried Jack jubilantly. "I've got an idea."

"Tack it down," counseled Dan. "What is it?"

Jack leaned forward with solemn portent.

"Which do you suppose Bennett's Junction is most interested in," he asked slowly, "the death of the queen or of old Aunt Betsy?"

There was a deep silence while his meaning dawned in all its possibilities on the other two. Hope spoke

"Jack, you're a wonder. Some day you'll twirl around in one of those whirl-i-gig chairs at a roll top desk and dictate to a typewriter, see if you don't, and thrill the world."

'Shouldn't wonder," assented the managing editor. cheerfully. "In the meantime, let's thrill Bennett's Junction.

All day long the editor of the Star kept one eye on the office of the Bald Eagle for signs of distress and of hopeless envy, but all he saw was Hope trotting serenely down Elm street towards the modest white cottage where Aunt Betsy had lived for so many years no one could remember when she moved in. Later in the afternoon he saw Jack and Dan making a call on old Mr. Warren, the wood carver and cabinet maker.

"Going to run an extra?" Cliff called to them genially from the open window. "We are."

"Maybe, if the press holds out," laughed Jack, and Cliff wondered what was up.

For three months the Star had run in opposition to the Bald Eagle. Bennett's Junction could not boast of a regular newspaper. It was only a dot of a place, squeezed down between the Wisconsin hills, with a little red depot at one end, and a postoffice, public library, feed store and grocery all in one at the other.

The Kitsons had started the Bald Eagle, for fun at first. It had been published fitfully, at odd moments

Kitson died, and the immediate need arose of more

treasure in the family coffers, the Eagle seemed to offer the best opportunities, and all three children had pitched in and worked it up with a good will for the invalid mother's dear sake.

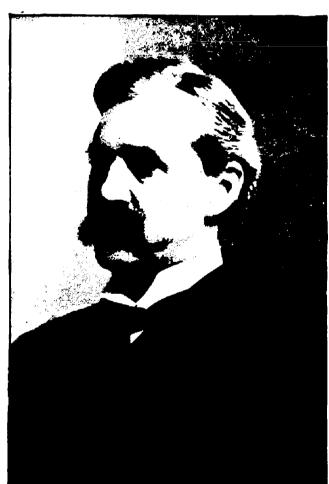

Jack was seventeen, and next came Hope a year younger, and Dan just rounding the last curve from fourteen. It was a formidable staff, and Bennett's Junction took its efforts seriously and lent hearty support to the little four page sheet, with its wavering print and uncertain proofreading. And then, all at once, the Star had appeared, and there was a division of subscribers.

The Star was certainly the better printed paper of the two. Clifford Ames was the editor and general manager, and had the support which the Kitsons lacked. Mr. Ames was a gentleman with money, who was trying to locate a mineral spring around the Junction, so he could turn it into a summer resort for invalids.

Rumor had been quick to spread the story of the scoop, and when the Star came out the next afternoon, the copies sold like hot cakes. Dan brought one up to the office, where the other two awaited him. The three were tired and heavy eyed, but jubilant. Nearly all night the big kerosene lamp had burned in the office, while Jack and Dan took turns at the press, and Hope addressed and stamped such copies as were to go by mail. And now there they stood, in stacks on the table, the extras of the Bald Eagle, all ready for distribution.

### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 5-From Governor Cummins of Iowa

EXECUTIVE OFFICE ---My doar Sir.

fowa City, Iowa, June 13, 1904.

I congratulate you most heartily upon the privilege of presiding over the meeting of American Boys, to be held at the St Louis Exposition, July 5th. Please say to them for me that from the bottom of my heart I envy them has never lacked in opportunity, but the gates which open into the field of successful labor were never so numerous and so invitingly open as in the year of our Lord, 1904 The world needs faithful, persistent, work more than in any age of the past, and it will reward honest industry more righly than ever before

I compress all the advice I have to give into a single mentence Select the thing you want to do, and then resolve to do it better than anybody else ever did it

Albert A. ammun

William C. Sprague, Req., Editor The American Boy, Detroit, Mich.

"Hold them back," Jack had said. "Let Cliff fire all his bullets, and when he's all done we'll start our cannon booming."

It was a credit to Bennett's Junction, that extra edition of the Star. The borders of the front page were heavily leaded, and the headlines were bold and regular. In the centre of the page was the famous two column cut, and it made a fine half-tone portrait of the great, good queen who had passed away in the isle across the sea.

"It's splendid," said Hope softly. "She doesn't look one bit like a queen. I mean like Marie Antoinette and all the rest with their hair in crazy curlycues. and their stiff necks. She just looks like a mother you could love."

Dan was at the window watching.

"Cliff's happy as a clam," he said. "He's grown two inches in the last half hour, and Mr. Peabody's shaking hands with him before everybody on the postoffice steps."

"I think," remarked Jack, resolutely, "that it's about time to spring the enterprise of the Bald Eagle.

In fifteen minutes Main street was astir. In every house and store for half a mile, the boys had left the new extras. They were certainly startling. Work was suspended and Stars laid aside while everyone scanned the Eagle, for its front page dealt with a subject dear to the hearts of all, the passing away of Aunt Betsy, as she was called, and there was the whole story told in Hope's best style.

How, years and years ago, Aunt Betsy and old Uncle Jim Bennett had come to the Wisconsin woods all the way from Connecticut, up Quinnebago way. How they had camped in the hollow of the hills, and the first trees were felled, and the little rough log house built there on the very site of the white cottage on Elm street. Then little David had come, the first pioneer baby in the Chippewa country. He was six feet tall now, and ran the sawmill. How other settiers came, and the log houses gave way to shingles and plaster, and the forest line shrank back farther and farther, and the cry of the wildcat was heard no more in the deep pine woods at night. The whole story of the Bennetts was told, and their history was the history of the Junction as well, for half the inhabitants were Bennetts, and the other half related to them by marriage. And, most wonderful of all, in the center of the page was a two column woodcut portrait of Aunt Betsy at ninety two.

Only Mr. Warren and the Kitsons knew the secret of that portrait. Hope had secured a photograph of Aunt Betsy taken over in Chippewa Falls. With Mr. Warren's help, a tracing had been made of it on tissue paper and transferred to a wood block, after which Mr. Warren had engraved it in the wood.

An hour after the papers were put into circulation, the editors met in the office. An overwhelming victory was theirs, and it was sweet.

"The whole edition is sold," gasped Dan, coming in last. "And they want more. Every Bennett in town's buying two copies so as to send one to every Bennett down in Connecticut.'

"And Mr. Peabody wants to trade us corn meal again," said Hope.

"And I have fifteen new subscriptions and three ads," concluded the managing editor. "For the first time in the history of the Bald Eagle, faithful and well beloved colleagues, there is a call for a second edition. We will hustle like sixty and get it out, and I think we had better increase the price to ten cents instead of five. I have heard that is the custom. Oh, and one thing more," he stopped and leaned out of the window to take a look at the groups of people standing on the corners and in doorways, reading of Aunt Betsy, before he added, gravely, "I understand that our worthy and honored opponent, the editor of the Star, has gone home with a bad

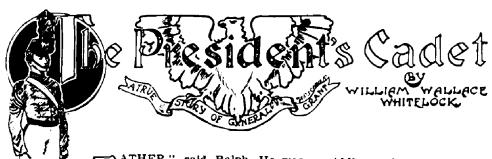

"Scooped!" cried Dan. "He needs a good long rest, and we think he'll get it. The Star declines unto the west, and—and-

headache."

"And the Eagle soars on high," concluded Hope, as the three shook hands solemnly across the empty table where the first edition had lain in state.

### The Earning Power of an Education

One of the latter day philosophers writes as fol-"How many of the boys who read this column realize the value of an education in cold dollars and cents, to say nothing of the many advantages? Statistics show that the average salary of an educated man is \$1,000 per year. He works on an average forty years and receives a total of \$40,-000. The average wages of an uneducated man is \$1.50 per day, and he works 300 days in the year, so in forty years he earns \$18,000. The educated man gets \$40,000 and the uneducated man gets \$18,-000, and the \$22,000 difference is the true value of the education. To acquire a good education takes about twelve years of the early life of a boy, and they are the happiest years of his life. In twelve years there are 2,160 school days, and these days bring to the boys who improve them \$22,000, or a little more than \$10 per day for each day spent in school. Now, boys, for each day you miss school, just charge yourself up \$10 lost."—The American High School.

position as ticket-chapper on the Elevated Railroad."

You've got what?" cried "You've got what?" cried Colonel Andrews, turning sharply in his chair, and letting fall the newspaper. "A position as ticket-"A position as teket-chopper," repeated Ralph, and his voice trembled rehearing of the scene

beforehand.

"As ticket-chopper! Why, Ralph, what do you mean? I can never allow you to take such a position, you know. What do you want the place for, anyhow?"
"Well, sir, it's the only thing I could get, and I need the money."
"What do you need the money for, my boy?"

To pay for instruction; I intend to go

to West Point."
"You intend to go to West Point!" cried

"You intend to go to West Point!" cried the old soldier, even more astonished than before. "Why, Ralph, you couldn't get into West Point to save your life." "Still I'm going to try, sir."
"My boy, my boy," and the Colonel shook his head, "you're wasting your energy; it's useless. You'll find only disappointment and heartburning, as I have done. There's no use; give up the idea, my boy, give up the idea." "I'm sorry, sir, not to do as you wish; but unless you forbid me I'd like to try

but unless you forbid me I'd like to try anyhow.

"No, no, I don't forbid you, Ralph; only warn you that there's no use. want to spare you the disappointment, that's all."

"You're very kind, sir, but I think I'll try, just the same. I want to be a soldier."

The Colonel looked steadily at his son without speaking. Then he shook his head and sighed, and took up his paper. "I only wish I could help you, Ralph, but I can't. However, go ahead, if you've a mind to; there's no harm in trying."

There was a honeless note in the Col-

There was a hopeless note in the Colonel's voice. He was a northern man, and had been in General Grant's class at West Point, and had afterwards served in the regular army. But at the outbreak of the Civil War he had thrown in his of the Civil War he had thrown in his lot with the confederacy, and at the end of the struggle he saw himself rulned in fortune and prospects. How was he to support his family? In the north no one would employ him, and in the south no employment was to be had. At last, however, he settled in New York and managed to eke out a miserable existence as draughtsman to architects and patent managed to eke out a miserable existence as draughtsman to architects and patent lawyers, who build him half the worth of his work. The other half went into their own pockets. The slights that his former associates felt called upon to offer him, "to show their patriotism," cut him to the quick, although he bravely concealed his feelings.

At the time Ralph announced his in-tention of going to West Point General Grant was President of the United States.

The next morning at a very early hour Ralph commenced his duties as ticket-chopper, and then for three months he worked early and late in his efforts to earn the money needed. To be sure, his position was often very embarrassing when brought face to face with former acquaintances, but on such occupations he acquaintances, but on such occasions he would fix his eyes on the machine and seem lost in the wonders of its mechanism. Sympathy and explanation were alike distasteful to him, and he had no intention of giving anyone the chance to "cut" him. It was hard work, but he held out until he had sayed fifty dollars. Then he threw up the Job and commenced to prepare himself for the examinations. For the next two months he studied twelve hours daily. At the end of the two months the money was exhausted, but Ralph felt that he could pass the examinations. Since that first day his father had not referred to West Point beyond an occasional inquiry as to Point beyond an occasional inquiry as to

Ralph's progress in his studies.

Now came the great question, how was the appointment to be obtained?

Any effort of his father's would, of course, be useless, and Ralph knew no course, be useless, and Ralph knew no one who could help him. However, he did not despair: he would succeed despite everything. Hopeful and buoyant, he started out on the quest, only to find discouragement in every direction. Congressmen laughed at him when they learned his name. One man, more kindly than the rest, stopped to explain the situation to him, and offered to help him in any other line if possible. Ralph's eves any other line if possible. Ralph's eyes filled with tears at this unwonted friend-liness, but he still doggedly refused to acknowledge himself beaten.

For several days after this Ralph did not leave his home, wandering restlessly from room to room, and speaking to no one. A resolution was taking shape in

one. A resolution was taking shape in the boy's mind. Dare he do it? What would his father say? For a long time he hesitated, but at last one day he suddenly struck his thigh, and his face lighted up.

"I'll do it!" he cried: "I'll do it, any-

Snatching up his hat, he hurried from the house and went directly to the head-quarters of the Pennsylvania Railroad. Is the superintendent in?" he inquired the house and went directly to the headquarters of the Pennsylvania Raliroad.
Is the superintendent in?" he inquired of an employe, and then knocked at the door indicated. His heart beat so loudly that he falled to hear the "come in." At last he knocked again, and entered in response to the impatient command. A man was sitting at a desk, with his back toward him, but he did not turn around. Ralph stood twisting his hat in his had and trying to swallow the lump in his throat.

At last the superintendent wheeled around in his chair and looked at him.

Now the White House came in sight, and his heart beat faster. He entered the gate and walked up the curving drive. A man was standing at the door. It was growing dark. Ralph mounted the steps. "Good evening." he said; "I would like to see the President."

"Well, you can't see him now," replied the man gruffly; he's at dinner. Besides, have you an appointment?"

"No-o." Ralph admitted unwillingly, "but I've come all the way from New York to see him."

"Well, you might try your luck tomor-

ATHER." said Ralph
Andrews one evening. "I have got a position as ticket
Well, what can I do for you?" he rie was a middle-aged man, with an cisive eye and a square jaw. His moments were quick and energetic.
"Well, what can I do for you?" asked in a short business-like tone. His move-

'l-I came to ask a favor," Ralph stam-

mered.

"Like a good many other people." the superintendent said, and there was the faint suspicion of a smile about his mouth. "Well, what is it you want?"

"I want a pass from New York to Washington and back, sir."

"What do you want that for?"

"I want to see the President, and I mered.

"I want to see the President, and I haven't any money."

"What do you want to see the President about?"

Raiph was unprepared for this question, and for a moment he hesitated.
"I—I want an appointment to West Point."

"Oh, you want an appointment to West Point, do you? Well now, my boy, I'll save you the trouble of going all the way to Washington. The President couldn't give you the appointment even if he wished to; he has used up all the vacancles at his disposal twice over. He always keeps more men at the Point than he has a right to. But what's your name?"

Ralph Andrews: I'm a son of Colonel

Of Confederate fame?"

"Yes, sir."
The superintendent gave a low whistle

and smiled.
"Why, my boy, you're going on a fool's errand. General Grant wouldn't dare appoint your father's son to West Point."
For a while Ralph made no reply; his

face was very pale.
"I don't know," he said, at last, "General Grant's a generous man; I should like to see him, anyhow."

He spoke more to himself than to the superintendent. The latter sat looking at him intently, the ends of his fingers together

"Does your father know of your plan?"

"Oh, no, sir! My father would never allow me to do it. He'd die first before he'd put himself in such a position."
"Humph!" grunted the official, and for

a time he remained silent.
"Well, Mr. Andrews." he said at last,
"I've decided to give you the pass if you want it. But I think we're both fools,
nevertheless." Ralph's face went all aglow with joy

and gratitude.

"Oh, sir, you're very kind!" was all that he could say. The tears sprang to his eyes now as they had never done from is positional magnate turned to his

desk and wrote out the pass.
"Well, there it is," he said, handing the precious paper to Ralph, "but I'm afrild it won't do you much good."
""" thouk you sig" Bulph, gold."

afrild it won't do you much good."
"Oh, thank you, sir!" Ralph said:
"thanks, ever so much!"
"All right, my boy, all right," he replied, moved despite himself. Goodby, and success to you."
He gave Ralph his hand, and then watched his manly figure as he strode toward the door.
"By the way," he called after him, "you might drop in and let me hear about your visit when you come back."
When Ralph stood in the street he was in a whirl of excitement. This was the first real encouragement he had regeived.

first real encouragement he had received, and it seemed disproportionately great. Surely the main difficulties were over now! He could have laughed aloud with He was going to be a soldier, after

Ralph's first move was to get a time-table. A train would leave for the south in half an hour, he found. If he took that train he would reach Washington at six o'clock in the evening, and then he would catch the return train that got to New York at one in the morning. This would allow ample time to see the President. It did not occur to him that in

ident. It did not occur to nim that in all probability the President would refuse to see him.

Entering a telegraph office, he sent a message to his father to the effect that he would not be home that night. He did not say where he was going. After did not say where he was going. After paying for the telegram there remained

praying for the telegram there remained twenty three cents in his pocketbook. To Ralph it was a long, long journey from New York to Washington. How slowly the train moved' He planned a thousand times just what he would say to the President, the latter's part in the conversation being merely acquiescent. Ralph forgot that General Grant might have a will of his own, and views divergent from his. Would they never reach Washington? The train seemed to stand still. He would have liked very much to buy a newspaper to help pass the time with, but he could not afford the outlay. Perhaps it would be necessary to fee an official. official.

But at last Washington was reached, and Ralph hurried out of the station and inquired the way to the White House. Ah, it was close at hand! He had had nothing to eat since breakfast, but he was not hungry.

Ralph hurried up Pennsylvania avenue.

hardly seeing the people who passed him. Now the White House came in sight, and

The man looked at him doubtfully. My business is very important," urged Ralph.

"What is it?"
"I can't tell you; it's confidential. Oh, won't you just tell him that I'm here? That's all I ask. I can't stay any longer. I've only got twenty three cents, but you're welcome to it. Here, take it." He pressed it into the weally resisting

hand. No, no, keep your money, boy; I don't want it.

want it."
But Ralph insisted.
"Well, now, it's disobedience of orders to interrupt the General at dinner time; I don't know whether I dare do it."
"Tell him that you couldn't get rid of me any other way." urged Ralph.
"Well, I'll risk it," cried the goodnatured old soldier. The old man's sort o' easy, anyhow, so I guess it'll be all right. But still, I don't hardly believe he'll see you. You can wait inside."

he'll see you. You can wait inside."
Ralph followed him into the big square room into which the entrance door opens, and then the man left him and disappeared through another door.

At last the great moment had come; he was to see the President face to face. Ralph's knees began to tremble and his hands grew moist. How stiffing the room was! He looked for a chair, but there was none. He walked to the window and leaned against the sill for support. The perspiration stood in beads on his forehead. What would General Grant think of him? And his father? The audacity of his errand suddenly came over him as never before. He longed to fly, and looked at the door with a half intention of running away before it was too late. But suddenly the door through which the footman had vanished opened, and a man in a loose military Jacket appeared. Henry Ralph knew that it was the President. His heart stood still. General Grant advanced toward him with an inquiring look. He did not appear displeased, and Ralph took courage. "You wanted to gee more or a reactive to the look of the light."

with an industrial rook, the united appear displeased, and Ralph took courage.

"You wanted to see me on pressing business, James tells me. What is it you

want?"
"Oh, I'm afraid I've disturbed you, General!" Ralph stammered; "but I couldn't wait in Washington until tomorrow. I haven't the money."
"Well, no matter about disturbing me, my boy." Grant said kindly. "Don't be afraid to tell me your business; it wou't burt anybody. I guess."

He smiled encouragingly, and Ralph's

He smiled encouragingly, and Ralph's

fear hegan to leave him.
"I want an appointment to West Point, and I can't got one; I thought maybe you'd help me. General." he blurted out

without a pause.

The President smiled

"I'm sorry, but I couldn't give you one
if you were my own son; congress has
raised a row already about my making more appointments than I had a right to. So you see, I'm powerless."
Ralph's face fell; he had falled, after

"What is your name?" Grant suddenly of

asked. Ralph flushed as he answered:

"I'm a son of Colonel Andrews, sir; he was with you at West Point."
"Oh!" ejaculated the soldier, and his eves opened wide, and he sucked in his cheeks. But there was an amused look about the corners of his eyes. "So you're a son of Bob Andrews, are you?"

"Yes, sir."
"Humph! Well, yes, I see, Bob looked something like you at your age, only he wasn't quite so tall. How old are you?"
"Ylneteen."

"Nineteen. Well, that's a fine age; I'd

row morning," said the major-domo less severely; "it's just possible he'll see you then."

"But I shan't be here tomorrow; I've got to leave tonight. Oh, I must see what I can do for you; I wish I did. But you see, there are various reasons why I am unable to appoint you."

"That's just what the superintendent of the Pennsylvania Railroad said when I asked him for a mass."

of the Fennsylvania Railroad said when I asked him for a pass."
"What was that?" asked Grant quickly.
"He said to me, 'Mr. Andrews, General Grant wouldn't dare appoint your father's son to West Point."
"What?" cried the President, and his face flushed; 'say that again."
Railin reneated his words, frightened

Ralph repeated his words, frightened y their effect

by their effect.
"He said that of me, did he? "He said that of me, did ne. Is that the kind of a man people think I am? Well, now, they're mightily mistaken. I'll show them how much I am afraid." Grant had let his napkin drop to the floor; all the languor had left his manner. Ralph was too frightened to say ner. Ral

"I'll show them if I'm afraid," he said. "TII show them if I'm afraid," he said, and he put his hand into his breast pocket and drew out an old crumpled envelope. He took out the letter and began to search through his clothes for a pencil. At last he found the remains of one; it was blunt, and the reverse end showed the effects of chewing. The President walked to the window, and, placing the envelope on the sill, he commenced to write. Balph looked at his face, and he understood why men called him great. He watched him with throbbing heart; frightened by his own work "What's your first name?" Grant asked without looking up "Ralph, sir."

"Ralph, sir."
"Residence?"
"New York city.

In a moment the President had finished, and he handed the envelope to Ralph

without a word.
"Shall I read it. sir?"
"Yes."

Ralph read:

I hereby appoint Ralph Andrews, of New York city, as second alternate to Henry Osborne, an appointee at large to the examination for West Point, to be held in June, 1872. U. S. Grant, Pres-

Ralph looked up with beaming face "Oh. General how can I thank you?" Grant's face had relaxed from its ten-

Grant's face had relaxed from its tension, and he now smiled.
"Well, you needn't mind about the thanks, 'cause I don't know whether you'll even have a chance for the examination. You see, you're only second alternate; there are two others ahead of you on the appointment. However of you on the appointment. However, there's no telling; you might get a shot after all. By the way, when you get back home ask your father if he remembers the time he and I hooked out of bounds. Yes, he was remarkably like you in those days."

you in those days."

Grant walked to the door with Ralph and shook hands with him. The boy hardly dared trust himself to speak When he had closed the door the great commander picked up his napkin and went back to his unfinished meal.

"A fine fellow," he muttered to himself: "a fine fellow, poor old Andrews' But I'm afraid he won't get in, just the same,"

But the President was mistaken. The other two boys failed in the examination, and Ralph passed with credit.

### OUR WASHINGTON BIRTHDAY NUMBER

Splendid stories, interesting and informing history, and a large assortment of illustrated matter touching boy life will appear next month in The American Boy.

open with a and "The bang, Hope entered. queen's dead," she exclaimed, breathlessly, "and so's Aunt Betsy Bennett." If a giant firecracker

→ HE door flew

had suddenly exploded in the office of the Bald Eagle, it could not have produced more consternation than the news. The managing editor tumbled from his perch on the window sill, where he had been sitting crosswise, his knees drawn up tent-like, mending a broken stamp. It was an important article, that stamp. On every copy of the Eagle sent out it stamped the magic legend, "All subscriptions due weekly."

The remainder of the staff was standing at the old hand press over near the window, and at Hope's words promptly deserted his task and lay down on

the floor at full length.

"You goose, Dan." said Hope, taking her favorite seat on the edge of the editorial table. "It isn't anything to be funny over. It's dreadful. The Star is going to have the whole front page leaded, and Cliff Ames has a two-column cut of her-the queen, I mean. I just met him over at the library, and he gloated over me."

"The vil-yun," groaned Dan, kicking one heel in feeble protest. "And after that, here you go and get huffy just because I lay me down and give up the ghost. There's nothing else to do, unless we suspend publication and drape Hope's big black apron across the window.

The society editor and reportorial staff of the Bald Eagle turned her back upon him, and appealed to the "supreme court":

"Jack, please say something. Whatever are we going to do?"

The managing editor scratched his nead doubtfully, thereby dislodging a demoralized looking penholder that looked as if it had been through the wars.

'Where did Cliff get that cut?" he asked.

"Why, he's had it planted ever since the queen was taken sick. He says that's the way the big papers do. Just the minute anybody who is somebody has a headache they get cuts and sketches all ready for fear they'll die. And that's what Cliff did. Got it somewhere in the city, he says, and maybe he'll run a line at the top, 'Special London Correspondence.' Did you ever?"

"No, I never," responded Dan, heartily. "Again I say that our worthy and honored opponent is a

Jack was thinking deeply.

"What's our sub. list, now?" he asked, and Hope

figured quickly in her mind.

'Fifty eight, not counting Mrs. Diggs' potatoes and Mr. Johnson's milk," she replied. "Since the Star started up, we've lost twenty two subscriptions, and they've even got old Mr. Peabody's corn meal."
"Glad of it," interrupted Dan, sitting up hastily.

"I don't like corn meal any more. Haven't had anything to eat but corn meal for three months, ever since Mr. Peabody exchanged with us. I didn't know you could make so many different things with corn meal. Hope's stuffed us on corn meal mush, corn meal pancakes, corn meal pudding, fried corn meal, Johnny cake, corn meal pie-

"I've got it!" cried Jack jubilantly. "I've got an

"Tack it down," counseled Dan. "What is it?"

Jack leaned forward with solemn portent.

"Which do you suppose Bennett's Junction is most interested in," he asked slowly, "the death of the

queen or of old Aunt Betsy?" There was a deep silence while his meaning dawned in all its possibilities on the other two. Hope spoke

"Jack, you're a wonder. Some day you'll twirl around in one of those whirl-i-gig chairs at a roll top desk and dictate to a typewriter, see if you don't, and thrill the world."

"Shouldn't wonder." assented the managing editor. cheerfully. "In the meantime, let's thrill Bennett's

All day long the editor of the Star kept one eye on the office of the Bald Eagle for signs of distress and of hopeless envy, but all he saw was Hope trotting serenely down Elm street towards the modest white cottage where Aunt Betsy had lived for so many years no one could remember when she moved in. Later in the afternoon he saw Jack and Dan making a call on old Mr. Warren, the wood carver and cabinet maker.

"Going to run an extra?" Cliff called to them genially from the open window. "We are." "Maybe, if the press holds out," laughed Jack, and

Cliff wondered what was up.

For three months the Star had run in opposition to the Bald Eagle. Bennett's Junction could not boast of a regular newspaper. It was only a dot of a place. squeezed down between the Wisconsin hills, with a little red depot at one end, and a postoffice, public library, feed store and grocery all in one at the other.

The Kitsons had started the Bald Eagle, for fun at first. It had been published fitfully, at odd moments

Kitson died, and the immediate need arose of more

treasure in the family coffers, the Eagle seemed to offer the best opportunities, and all three children had pitched in and worked it up with a good will for the invalid mother's dear sake.

Jack was seventeen, and next came Hope a year younger, and Dan just rounding the last curve from fourteen. It was a formidable staff, and Bennett's Junction took its efforts seriously and lent hearty support to the little four page sheet, with its wavering print and uncertain proofreading. And then, all at once, the Star had appeared, and there was a division of subscribers.

The Star was certainly the better printed paper of the two. Clifford Ames was the editor and general manager, and had the support which the Kitsons lacked. Mr. Ames was a gentleman with money, who was trying to locate a mineral spring around the Junction, so he could turn it into a summer resort for invalids.

Rumor had been quick to spread the story of the scoop, and when the Star came out the next afternoon, the copies sold like hot cakes. Dan brought one up to the office, where the other two awaited him, The three were tired and heavy eyed, but jubilant. Nearly all night the big kerosene lamp had burned in the office, while Jack and Dan took turns at the press, and Hope addressed and stamped such copies as were to go by mail. And now there they stood, in stacks on the table, the extras of the Bald Eagle, all ready for distribution.

No. 5-From Governor Cummins of Iowa

Iowa City, Iowa, June 13, 1904.

I congratulate you most heartily upon the privilege of presiding over the meeting of American Boys, to be held at the St Louis Exposition, July 5th. Please say to them for me that from the bottom of my heart I envy then Life has never lacked in opportunity, but the gates which open into the field of successful labor were never so numerous and so invitingly open as in the year of our Lord. 1904 The world needs faithful, persistent, work more than in any age of the past, and it will reward honest industry more richly than ever before

I compress all the advice I have to give into a single sentence Select the thing you want to do, and then resolve to do it better than anybody else ever did it Yours very truly,

Albert A. ammun, William C. Sprague, Esq., Editor The American Boy,

Detroit, Mah.

all his bullets, and when he's all done we'll start our cannon booming.'

It was a credit to Bennett's Junction, that extra edition of the Star. The borders of the front page were heavily leaded, and the headlines were bold and regular. In the centre of the page was the famous two column cut, and it made a fine half-tone portrait of the great, good queen who had passed away in the isle across the sea.

"It's splendid." said Hope softly. "She doesn't look one bit like a queen. I mean like Marie Antoinette and all the rest with their hair in crazy curlycues, and their stiff necks. She just looks like a mother you could love.

Dan was at the window watching.

"Cliff's happy as a clam," he said. "He's grown two inches in the last half hour, and Mr. Peabody's shaking hands with him before everybody on the postoffice steps."

"I think," remarked Jack, resolutely, "that it's

about time to spring the enterprise of the Bald Eagle. Let her fly.'

In fifteen minutes Main street was astir. In every house and store for half a mile, the boys had left the new extras. They were certainly startling. Work was suspended and Stars laid aside while everyone scanned the Eagle, for its front page dealt with a subject dear to the hearts of all, the passing away of Aunt Betsy, as she was called, and there was the whole story told in Hope's best style.

How, years and years ago, Aunt Betsy and old Uncle Jim Bennett had come to the Wisconsin woods all the way from Connecticut, up Quinnebago way. How they had camped in the hollow of the hills, and the first trees were felled, and the little rough log louse built there on the very site of the white cottage on Elm street. Then little David had come, the first pioneer baby in the Chippewa country. He was six feet tall now, and ran the sawmill. How other settlers came, and the log houses gave way to shingles and plaster, and the forest line shrank back farther and farther, and the cry of the wildcat was heard no more in the deep pine woods at night. The whole story of the Bennetts was told, and their history was the history of the Junction as well, for half the inhabitants were Bennetts, and the other half related to them by marriage. And, most wonderful of all, in the center of the page was a two column woodcut portrait of Aunt Betsy at ninety two.

Only Mr. Warren and the Kitsons knew the secret of that portrait. Hope had secured a photograph of Aunt Betsy taken over in Chippewa Falls. With Mr. Warren's help, a tracing had been made of it on tissue paper and transferred to a wood block, after which Mr. Warren had engraved it in the wood.

An hour after the papers were put into circulation, the editors met in the office. An overwhelming victory was theirs, and it was sweet.

The whole edition is sold," gasped Dan, coming in last. "And they want more. Every Bennett in town's buying two copies so as to send one to every Bennett down in Connecticut."

"And Mr. Peabody wants to trade us corn meal again," said Hope.

'And I have fifteen new subscriptions and three ads," concluded the managing editor. "For the first time in the history of the Bald Eagle, faithful and well beloved colleagues, there is a call for a second edition. We will hustle like sixty and get it out, and I think we had better increase the price to ten cents instead of five. I have heard that is the custom. Oh, and one thing more," he stopped and leaned out of the window to take a look at the groups of people standing on the corners and in doorways. reading of Aunt Betsy, before he added, gravely, "I understand that our worthy and honored opponent, the editor of the Star, has gone home with a bad beadache.'

"Scooped!" cried Dan. "He needs a good long rest, and we think he'll get it. The Star declines unto the west, and-and-

"And the Eagle soars on high," concluded Hope, as the three shook hands solemnly across the empty table where the first edition had lain in state.

### The Earning Power of an Education

One of the latter day philosophers writes as follows: "How many of the boys who read this column realize the value of an education in cold dollars and cents, to say nothing of the many advantages? Statistics show that the average salary of an educated man is \$1,000 per year. He works on an average forty years and receives a total of \$40,-000. The average wages of an uneducated man is \$1.50 per day, and he works 300 days in the year, so in forty years he earns \$18,000. The educated man gets \$40,000 and the uneducated man gets \$18,-000, and the \$22,000 difference is the true value of the education. To acquire a good education takes about twelve years of the early life of a boy, and they are the happiest years of his life. In twelve years there are 2,160 school days, and these days bring to the boys who improve them \$22,000, or a little more than \$10 per day for each day spent in school. Now, boys, for each day you miss school, just charge yourself up \$10 lost."—The American High School.

You've got what?" cried mered. Colonel Andrews, turning sharply in his chair, and letting fall the newspaper. "A position as chopper," repeated chopper," repeated Ralph, and his voice trembled rehearsing of the scene trembled

beforehand.

"As ticket-chopper! Why, Ralph, what do you mean? I can never allow you to take such a position, you know. What do you want the place for, anyhow?"
"Well, sir, it's the only thing I could

get, and I need the money."
"What do you need the money for, my

To pay for instruction; I intend to go to West Point."
"You intend to go to West Point!" cried

"You intend to go to West Point!" cried the old soldier, even more astonished than before. "Why, Ralph, you couldn't get into West Point to save your life." "Still I'm going to try, sir." "My boy, my boy," and the Colonel shook his head, "you're wasting your energy: it's useless. You'll find only disappointment and heartburning, as I have done. There's no use: give up the idea, my boy, give up the idea." "I'm sorry, sir, not to do as you wish; but unless you forbid me I'd like to try

but unless you forbid me I'd like to try anyhow.

No, no, I don't forbid you, Ralph; warn you that there's no use want to spare you the disappointment, that's all."

"You're very kind, sir, but I think I'll try, just the same. I want to be a sol-

The Colonel looked steadily at his son without speaking. Then he shook his head and sighed, and took up his paper. "I only wish I could help you, Ralph, but I can't. However, go ahead, if you've a mind to: there's no harm in trying."

There was a hopeless note in the Colonel's voice. He was a northern man, and had been in General Grant's class at West Point and had afterwards served.

West Point, and had afterwards served in the regular army. But at the outbreak in the regular army. But at the outbreak of the Civil War he had thrown in his lot with the confederacy, and at the end of the struggle he saw himself ruined in fortune and prospects. How was he to support his family? In the north no one would employ him, and in the south no employment was to be had. At last, however, he settled in New York and managed to eke out a miserable existence as draughtsman to architects and patent as draughtsman to architects and patent lawyers, who paid him half the worth of his work. The other half went into their own pockets. The slights that his former associates felt called upon to offer him. "to show their patriotism," cut him to the quick, although he bravely

concealed his feelings.

At the time Ralph announced his intention of going to West Point General Grant was President of the United

States. The next morning at a very early hour Ralph commenced his duties as ticket-chopper, and then for three months he worked early and late in his efforts to earn the money needed. To be sure, his position was often very embarrassing when brought face to face with former acquaintances, but on such occasions he would fix his eyes on the machine and seem lost in the wonders of its mechseem lost in the wonders of its mechanism. Sympathy and explanation were anism. Sympathy and explanation were alike distasteful to him, and he had no intention of giving anyone the chance to "cut" him. It was hard work, but he held out until he had saved fifty dollars. Then he threw up the job and commenced to prepare himself for the examinations. For the next two months he studied twelve hours daily. At the end of twelve hours daily. At the end of the two months the money was ex-hausted, but Raiph felt that he could pass the examinations. Since that first day his father had not referred to West Point beyond an occasional inquiry as to Raiph's progress in his studies.

Point beyond an occasional inquiry as to Ralph's progress in his studies.

Now came the great question, how was the appointment to be obtained? Any effort of his father's would, of course, be useless, and Ralph knew no one who could help him. However, he did not despair; he would succeed despite everything. Hopeful and buoyant, he started out on the quest, only to find discouragement in every direction. Condiscouragement in every direction. Con-gressmen hughed at him when they learned his name. One man, more kindly than the rest, stopped to explain the sit-uation to him, and offered to help him in any other line if possible. Ralph's eyes filled with tears at this unwonted friendliness, but he still doggedly refused to

acknowledge himself beaten.
For several days after this Ralph did not leave his home, wandering restlessly from room to room, and speaking to no one. A resolution was taking shape in the boy's mind. Dare he do it? What would his father say? For a long time he hesitated, but at last one day he sud-denly struck his thigh, and his face lighted up.
"I'll do it!" he cried: "I'll do it, any-

now:
Snatching up his hat, he hurried from
the house and went directly to the headquarters of the Pennsylvania Railroad.
Is the superintendent in?" he inquired of an employe, and then knocked at the door indicated. His heart beat so loudly that he failed to hear the "come in." At last he knocked again, and entered in response to the impatient command. A man was sitting at a desk, with his back toward him, but he did not turn around. Ralph stood twisting his hat in his hands and trying to swallow the lump in

his throat.

At last the superintendent wheeled around in his chair and looked at him.

'l-I came to ask a favor," Ralph stam-

"Like a good many other people," superintendent said, and there was the faint suspicion of a smile about his mouth. "Well, what is it you want?" mouth. "Well, what is it you want?"
"I want a pass from New York to Washington and back, sir."
"What do you want that for?"
"I want to see the President, and I haven't any money."

haven't any money."
"What do you want to see the President about?"

Ralph was unprepared for this question, and for a moment he hesitated.
"1—1 want an appointment to West Point."

"Oh, you want an appointment to West Point, do you? Well now, my boy, I'll save you the trouble of going all the way to Washington. The President couldn't The President couldn't give you the appointment even if he wished to; he has used up all the vacancies at his disposal twice over. cays keeps more men at the Point than e has a right to. But what's your he has a right to.

"Yes, sir."
The superintendent gave a low whistle and smiled.

"Why, my boy, you're going on a fool's errand. General Grant wouldn't dare appoint your father's son to West Point."

For a while Ralph made no reply; his

face was very pale.
"I don't know," he said, at last, "General Grant's a generous man; I should like to see him, anyhow."

He spoke more to himself than to the superintendent. The latter sat looking at him intently, the ends of his fingers

"Does your father know of your plan?"
he asked suddenly.
"Oh, no, sir! My father would never allow me to do it. He'd die first before hear began to leave him. he'd put himself in such a position."
"Humph!" grunted the official, and for

"Well. Mr. Andrews." he said at last, "I've decided to give you the pass if you want it. But I think we're both fools, hevertheless."

Ralph's face went all aglow with joy and gratitude.

"Oh, sir, you're very kind!" was all that he could say. The tears sprang to his eyes now as they had never done from all. The rallroad magnate turned to his asked

The railroad magnate turned to his desk and wrote out the pass.

"Well, there it is," he said, handing the precious paper to Ralph, "but I'm afraid it won't do you much good,"

"Oh, thank you, sir," Ralph said; "thanks, ever so much,"

"All right, my boy, all right," he replied, moved despite himself. Goodby, and success to you."

and success to you."

He gave Ralph his hand, and then

watched his manly figure as he strode toward the door. "By the way," he called after him, "you

"By the way," he called after him, "you might drop in and let me hear about your visit when you come back."

When Ralph stood in the street he was in a whirl of excitement. This was the first real encouragement he had received, and it seemed disproportionately great. Surely the main difficulties were over now! He could have laughed aloud with loy. He was going to be a soldier, after

joy. He was going to be a soldier, after Ralph's first move was to get a time table. A train would leave for the south in half an hour, he found. If he took that train he would reach Washington at

six o'clock in the evening, and then he would catch the return train that got to New York at one in the morning. This would allow ample time to see the President. It did not occur to him that in all probability the President would refuse to see him. all probability the first to see him.

Entering a telegraph office, he sent a message to his father to the effect that he would not be home that night. He

he would not be home that night. He did not say where he was going. After paying for the telegram there remained twenty three cents in his pocketbook. To Ralph it was a long, long journey from New York to Washington. How slowly the train moved! He planned a thousand times just what he would say to the President, the latter's part in the conversation, being merely acquisecent. conversation being merely acquiescent. Ralph forgot that General Grant might have a will of his own, and views divergent from his. Would they never reach Washington? The train seemed to stand still. He would have liked very much to buy a newspaper to help pass the time with, but he could not afford the outlay. Perhaps it would be necessary to fee an official.

But at last Washington was reached But at last Washington was reached, and Ralph hurried out of the station and inquired the way to the White House. Ah, it was close at hand! He had had nothing to eat since breakfast, but he was not hungry.

Ralph hurried up Pennsylvania avenue.

hardly seeing the people who passed him. Now the White House came in sight, and his heart beat faster. He entered the gate and walked up the curving drive. A man was standing at the door. It was a man was standing at the door. It was growing dark. Ralph mounted the steps. The man was in livery.
"Good evening." he said; "I would like to see the President."

"Well, you can't see him now," replied the man gruffly; he's at dinner. Besides, have you an appointment?"
"No-o." Raiph admitted unwillingly, "but I've come all the way from New York to see him."
"Well you might the man had to be a see him."

Well, you might try your luck tomor-

him!"
The man looked at him doubtfully. "My business is very important," urged

What is it

"What is it?"
"I can't tell you; it's confidential. On, won't you just tell him that I'm here? That's all I ask. I can't stay any longer. I've only got twenty three cents, but you're welcome to it. Here, take it."
He pressed it into the weakly resisting hand.

"No, no, keep your money, boy; I don't want it.

But Ralph insisted.

But Ralph insisted.

"Well, now, it's disobedience of orders to interrupt the General at dinner time: I don't know whether I dare do it."

"Tell him that you couldn't get rid of me any other way," urged Ralph.

"Well, I'll risk it," cried the goodnatured old soldier. The old man's sort o' easy, anyhow, so I guess it'll be all right. But still, I don't hardly believe he'll see you. You can wait inside."

he'll see you. You can wait inside."
Ralph followed him into the big square room into which the entrance door opens, and then the man left him and disap-

and then the man left him and disappeared through another door.

At last the great moment had come; he was to see the President face to face. Ralph's knees began to tremble and his hands grew moist. How stifling the room was! He looked for a chair, but there was none. He walked to the window and leaved against the still far gunwart. The was none. He walked to the window and leaned against the sill for support. The perspiration stood in beads on his forehead. What would General Grant think of him? And his father? The audacity of his errand suddenly came over him as never before. He longed to fly, and looked at the door with a half intention of running away before it was too late.

"Ralph Andrews: I'm a son of Colonel addrews."
"Of Confederate fame?"
"Yes, sir."
The superintendent gave a low whistle addrement of smiled.

"In the footman had vanished opened, and a man in a loose military jacket appeared. Ralph knew that it was the President.

Ralph knew that it was the respect.

His heart stood still.

General Grant advanced toward him with an inquiring look. He did not appear displeased, and Ralph took courage.

"You wanted to see me on pressing business I amountelly me. What is it you sion. business, James tells me. What is it you

"Oh, I'm afraid I've disturbed you, General" Ralph stammered; "but I couldn't wait in Washington until tomorrow. I

wait in washington until the haven't the money."

"Well, no matter about disturbing me, my boy." Grant said kindly. "Don't be afraid to tell me your business; it won't

hurt anybody, I guess."

He smiled encouragingly, and Ralph's

"I want an appointment to West Point, and I can't get one: I thought maybe you'd help me. General," he blurted out without a pause.

The President smiled.

"I'm sorry, but I couldn't give you one you were my own son; congress has raised a row already about my making more appointments than I had a right to. So you see, I'm powerless."

Ralph's face fell; he had failed, after

What is your name?" Grant suddenly

Ralph flushed as he answered:

"I'm a son of Colonel Andrews, sir; he was with you at West Point."
"Oh!" ejaculated the soldier, and his "Nos you're a son of Bob Andrews, are you?"

"Yes, sir."
"Humph: Well, yes, I see, Bob looked something like you at your age, only he wasn't quite so tall. How old are you?"
"Nineteen."

"Nineteen. Well, that's a fine age: I'd

row morning," said the major-domo less severely; "it's just possible he'll see you then."

"But I shan't be here tomorrow; I've got to leave tonight. Oh, I must see him before I go away! Please let me see him!"

"The more looked at him doubtfully."

"The more looked at him doubtfully."

I asked him for a mass."

or the Pennsylvania Railroad said when I asked him for a pass."
"What was that?" asked Grant quickly.
"He said to me. 'Mr. Andrews, General Grant wouldn't dare appoint your father's son to West Point."
"What?" cried the President, and his

son to West Point."
"What?" cried the President, and his face flushed; "say that again."
Ralph repeated his words, frightened by their effect.
"He said that of me, did he? Is that the bind of a man beenle think I am?

the kind of a man people think I am? Well, now, they're mightily mistaken. I'll show them how much I am afraid." Grant had let his napkin drop to the floor; all the languor had left his manner. Ralph was too frightened to say

anything.
"I'll show them if I'm afraid," he said. and he put his hand into his breast pocket and drew out an old crumpled envelope. He took out the letter and beenvelope. He took out the letter and began to search through his clothes for a pencil. At last he found the remains of one; it was blunt, and the reverse end showed the effects of chewing. The President walked to the window, and, placing the envelope on the sill, he commenced to write. Ralph looked at his face, and he understood why men called him great. He watched him with throbbing heart; frightened by bis own work "What's your first name?" Grant asked without looking up "Ralph, sir."

"Ralph, sir." "Residence?"

"New York city

In a moment the President had finished and he handed the envelope to Ralph

without a word.
"Shall I read it, sir?"
"Yes."

Ralph read:

I hereby appoint Ralph Andrews, of New York city, as second alternate to Henry Osborne, an appointee at large, to the examination for West Point, to be held in June, 1872. U. S. Grant, Pres-

Ralph looked up with beaming face "Oh, General, how can I thank you?"
Grant's face had relaxed from its tension, and he now smiled.
"Well, you needn't mind about the thanks, 'cause I don't know whether you'll even have a change for the even." thanks, 'cause I don't know whether you'll even have a chance for the examination. You see, you're only second alternate; there are two others ahead of you on the appointment. However, there's no telling; you might get a shot after all. By the way, when you get back home ask your father if he remembers the time he and I hooked out of bounds. Yes, he was remarkably like you in those days."

Grant walked to the door with Ralph and shook hands with him. The boy hardly dared trust himself to speak When he had closed the door the great commander picked up his napkin and

commander picked up his napkin and went back to his unfinished meal "A fine fellow," he muttered to him-self: "a fine fellow, poor old Andrews' But I'm afraid he won't get in, just the same.

But the President was mistaken, other two boys failed in the exact tion, and Raiph passed with credit,

### OUR WASHINGTON BIRTHDAY NUMBER

Splendid stories, interesting and informing history, and a large assortment of illustrated matter touching boy life will appear next month in The American Boy.

Nickel-Plated 5 Inches

tale was connected with it, and curiosity

led me to ask the question.

"Yes." said Sydney Heller, as he lifted it from its hook and handed it to me to examine, "there is a story connected with that head piece. It recalls the most stirring episode of my adventurous life. That sombrero once belonged to the celebrated outlaw, Pablo Mariscal, and the bullet that tore through the crown, came from my trusty Winchester. Ten years bullet that tore through the crown, came from my trusty Winchester. Ten years ago, as you may remember, I was residing in Southern Arizona, and my brief residence in that part of the country resulted in my being elected sheriff—a high tribute to my popularity, I confess, but by no means an honor that I desired. Why that office was an unenviable one you will see further on.

"Pablo Mariscal was at that time the

Why that office was an unenviable one you will see further on.

"Pablo Mariscal was at that time the terror of the neighborhood. He was a treacherous, passionate Mexican who thought no more of testroying human life than you or I would of shooting a rabbit. If a traveller was found murdered on the plains under mysterious circumstances, people shook their heads and whispered—'Pablo Mariscal.'

"Yet the scamp was a wary fellow, and took good care to permit no crime to be traced home to him. Fresh outrages kept cropping up continually to keep his name before the public, but they never happened to come under my jurisdiction, and to tell the truth I was glad of it. I had no desire to run against Pablo Mariscal. Pablo Mariscal.

of it. I had no desire to run against Pablo Mariscal.

During that summer business called me away to a distant town, and on my return, in order to avoid the intense heat, and the sand winds that blow in the daytime, I travelled very early in the morning, and late at night—much later in fact than I should have done. On the third night, I stopped at a small settlement, and started away again very early in the morning, hoping to end my journey before the heat of the day came on. At sunrise I was riding over a vast mesa or plain. The sandy soil was studded with thorny cactus plants, and the only living creatures in sight were big lizards that slipped from under my horse's feet. I was so deeply interested in the sun glow that was lighting up the distant peaks of a mountain range, that I role to the top of a slight crest, without observing what was before me. Then I lowered my eyes to encounter a striking scene.

"Twenty yards distant lay a dead horse

"Twenty yards distant lay a dead horse and beside him on the sand was stretched the body of a man, evidently dead. Half a dozen yards beyond was one of those gullies or washouts that are so common in Arizona, and on the bank of this was another man, bending over with his back. another man, bending over with his back toward me. What he was about I could not see.

not see.

"My approach through the soft sand had not made the slightest noise, but now my horse gave a slight whinny, and the stranger wheeled instantly, revealing the swarthy features of—Pablo Mariscal. The rascal's own rifle was lying beside the dead stranger, and his horse was picketed some yards off. With a sharp cry, partly of surprise, partly of anger, he snatched a revolver from his belt and leveled it at me before I could unstrap my Winchester. My sudden appearance had unnerved him. Bangl Hang! one bullet whizzed by my ear, the

DIRTY, faded sombrero, with the trail of a bullet made diametrically through the crown, hanging on the wall over my friend's desk. Not a very attractive object in liself, but from lise peculiar location, I felt that some interesting hit, and curiosity tion.

Ieller, as he lifted anded it to me to bry connected with recalls the most vadventurous life, longed to the celemariscal, and the hether the crown, came hester. Ten years mber, I was residence, and my brief to of the country elected sheriff—a

him, and it behooved me to keep it. The minutes passed slowly enough and the strain was beginning to tell on my nerves when I suddenly espied the tiny muzzle of a revolver peeping from a corner of the bowlder. This flashed an idea into my mind. I had done some pretty fair rifle shooting in my time—though I must confess I had made several ignominious failures a few moments before—and here was a change to test my fore-and here was a chance to test my

"Taking a careful aim I pulled the trigger, and to my inexpressible satisfaction saw Mariscal's weapon go splnning up against the side of the gully, where it was impossible for him to reach it without exposing himself to my fire. My delight was short-lived, however, as I reflected that he no doubt had another

I reflected that he no doubt had another weapon in his belt.

"Ten minutes more passed and then the miscreant's sombrero appeared over the top of the rock as though he were trying to obtain a peep at me.

"Whether it was a trick on his part or a careless error, I don't know to this day. Not caring to take any chances though I blazed away, and the hat went spinning into the air pierced through the crown. After this all was silence again for a long time. Mariscal made not the slightest move and I concluded that he probably intended to tire me out, or compel me to show my hand. Meanwhile the sum was creeping higher and higher, and presently its sweltering rays found their way into the gully, and began to make things decidedly uncomfortable. The very ground grew warm and my rifle barrel was hot to the touch.

began to make things decidedly uncomfortable. The very ground grew warm and my rifle barrel was hot to the touch. "Suddenly I fancied I saw a slight movement on the right side of the rock, and as I fixed my gaze on the spot Mariscal's head appeared for one brief second on just the opposite side and a revolver ball ploughed into the horse not an inch from my ear. An involuntary jerk of the head was all that had saved me, Mariscal's elever ruse had nearly succeeded. He was back behind shelter before I could get a shot, and I determined to be more watchful in future.

"The sun's rays grew hotter and hotter, and after enduring them with what

"The sun's rays grew hotter and hotter, and after enduring them with what patience I could summon for some minutes longer, I concluded it was high time for the farce to end. I was on the point of rising boldly and moving forward in hopes of getting the first shot, when a plan flashed into my mind that offered more security and better chance of success." of success.

of success.

"Not ten yards to the rear of my position the gully made a rather sharp bend to the right, and I felt pretty sure that the body of my horse concealed the nearest angle from Mariscal's view. If I could crawl stealthily away, keeping the horse constantly between the range of the Mexican's vision I might get round the head ungoop of the multithe stands are stand and stand of the stands are stands and stands and stands are stands and stands and stands are stands and stands and stands are stands and stands are stands

ing, and I at once prepared to carry it out. I had a revolver in my belt—a big 44-calibre—and I placed this on the body of the dead horse in such a way that the muzzle only could be seen from the rock. It was a poor imitation of the bore of my Winchester. I knew, but I trusted that the distance would prevent Mariscal from discovering the ruse. All Mariscal from discovering the ruse. All the while, of course, I held my eye on the rifle and on the rock.

the rifle and on the rock.

"Everything was now in readiness, and, dropping on hands and knees. I began to crawl slowly backward. As I receded from the horse the top of the rock came in sight, and I had to get down still lower until I was fairly squirming like a serpent. The suspense of those few moments may be imagined. Inch by inch I crept toward the coveted angle, peering over my shoulder occasionally to get my bearings. The rifle I held, cocked. get my bearings. The rifle I held, cocked, in one hand, hoping to have still a chance for life if the miscreant should discover

for life if the miscreant should discover my stratagem, and attempt to get the drop on me.

"The last couple of yards I grew so nervous that I was afraid to look round, and I actually brought up against the side of the gully. A glance showed me that the angle was close at hand, and a few more wriggling motions brought me to the turn. Rising cautiously on hands and knees I could see the top of the rock distinctly. So far all was well.

"I turned deliberately and scuttled

turned deliberately and scuttled

"I turned deliberately and scuttled round the bend.
"When I looked again the horse and the rock were both out of sight.
"Overjoyed at my present success I rose fearlessly and looked over the edge of the gully. The coast was clear, and, clambering up the side as fast as I could, I bent low and scurried over the plain. I bent low and scurried over the plain, making a wide detour to avoid the spot where the Mexican was lurking.

"Then with guarded step I approached the gully again, heading as accurately as I could judge for a spot ten yards in the rear of my foe. The horse picketed on the opposite side helped me in my

estimate,
"As I advanced foot by foot and bending down as much as possible, I suddenly spied the crest of the bowlder peeping over the brink of the gully, and a second glimpse, as I slowly raised my head, brought Mariscal into plain view. He was stretched flat behind the rock in the broiling sun, his revolver clutched in one hand and his head pressed against the hand and his head pressed against the sand at one corner of the bowlder. Not the slightest suspicion of my escape

the slightest suspicion of my escape could have entered his mind.
"So absorbed was his attitude that I advanced to the very brink of the gully, my Winchester sighted on his head, of course. For a second or two I enjoyed the silent tableau, and then I shouted in a loud, stern voice. 'Drop your weapon and surrender, Pablo! I have you this time.'

"He jerked himself half upright, the most surprised and angry Mexican ever seen, but my Winchester was staring into his eyes at a distance of five yards, and with a bitter imprecation he lowered the weapon he had half raised.
"Throw it away." I commanded, and he tossed the revolver across the gully, grapping his black even at me furiously.

he tossed the revolver across the gully, snapping his black eyes at me furiously. Then I made him rise to his feet, holding his arms above his head in obedience to the command, 'Arriba las manas!' At this point I was sorely puzzled to know what to do with my captive. I dared not lower the weapon for a single second, and I had about concluded to march him ahead of me across the sun-baked plain. and I had about concluded to march him ahead of me across the sun-baked plain, when, to my great relief, a small body of horsemen appeared on the crest of a slight ridge, less than a quarter of a mile away, and a shout speedily drew them to the spot.

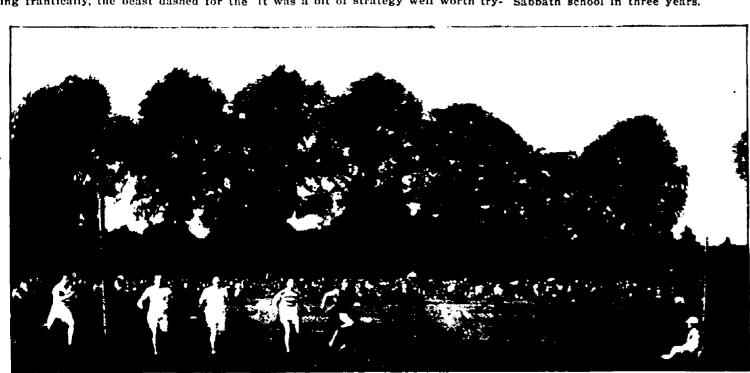

"They proved to be in search of Mariscal's victim, who lay dead across the gully. The poor fellow was a merchant from a neighboring town who was expected home early that morning, and, becoming alarmed at his absence, his friends had started out to look for him. "Mariscal narrowly escaped lynching, but my wiser counsel prevailed, and he was spared to pay the legal penalty for his crime a few months later.

"The sombrero I afterward claimed;

"The sombrero I afterward claimed; and, as no person had a better right to it, it became my property. Do you wonder that I regard it as an interesting memento?"

"No, said I, as I placed it back upon its hook, "I most assuredly do not."

ROBERT H. FULTON, WASHINGTON, Pa. age fifteen, captain of the first year baseball team in his school. Received the highest grades in each study for the

FINISH OF THE 100 YARDS INTERNATIONAL INVITATION HANDICAP RACE AT ABERGAVENNEY, WALES, AUGUST 4, 1904.

The order at the finish was as follows: J. S. Westney, Philadelphia, Pa., winner, first on the right. He is wearing a dark sweater. The second man is C. Dibbins, wearing striped sweater. The third is C. Miller, the Welsh champion, to Dibbins' right. The fourth is M. W. Morton, the English champion and the fifth E. R. Cooper of Birmingham, Eng., on the far left. The time record was 9 4-5 seconds. The running was on the grass and against the wind. The prize was a ten guinea watch. In this race Morton started at scratch; Westney was given two yards; Dibbins seven; Miller three and three-fourths, and Cooper three.

# LITTLE BIOGRAPHIES

DURHAM WHITE STEVENS

### Number 1

In 1873 a boy of nineteen named Stevens, Durham White Stevens,—left his home in Durham White Stevens,—left his home in Washington city to accept the post of Under-Secretary at the American Legation in Tokio, Japan. He had been a hard student and a bright one, and had already been admitted to practice law, and he eagerly caught at this early chance to study all things Japanese at first hand. He became interested in the land and the people of the Mikado, and made up his mind to learn all he could of them,—to know one thing thoroughly well,—and because he succeeded in that he has succeeded in life.

He stayed in Japan ten years. In that time he so mastered the difficult language and the picturesque customs of the land; so sanely solved the problems to be met by East and West there where those two

COLONEL JOHN S. MOSBY

of the few noted leaders left on either side of the few noted leaders left on either side of those who took part in the world's greatest civil war. Handsome as a Roman senator in his white-haired seventies, this new Assistant Attorney of the Department of Justice still has the keen eye and firm lips of the man who in his early thirties could command with a hand of iron the wildest cavalry troop which ever raided a supply train.

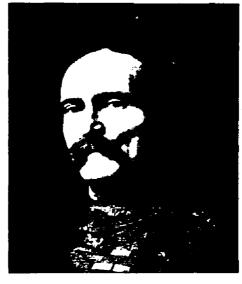

The "Partizan Bangers."—"Mosby's Guer-

The "Partizan Rangers,"—"Mosby's Guerrillas" the country called them,-were comand the picturesque customs of the land; so sanely solved the problems to be met by East and West there where those two great streams of civilization were coming together, that today he has become practically indispensable to the Japanese officials.

In 1883 he resigned from the United States service to become English Secretary and Counsellor to the Mikado's Legation in Washington, and, having served Japan for ten years, here and in China, in Korea and at Honolulu, he has now been named Diplomatic Advisor to the Emperor of Korea. He will be "the Power Behind the Throne" in the "Hermit Kingdom."—will this American of fifty who saw that it was worth while to know one thing well.

Number 2

There is living today in Washington a man whose presence in that capital would once have meant a bloody tragedy. Colonel John Singleton Mosby is in many ways a national "character," for he is one posed of daring enthusiasts in the cause of

COLONEL EDWARD YOUNGHUSBAND

### Number 3

When Edward Younghusband joined Eng-When Edward Younghusband joined England's army he had no particular aim in life. He was healthy, active and ambitious, but it had not occurred to him that to know one thing well would be to increase his usefulness tenfold. He had not long worn the crimson uniform, however, when he was assigned to the East Indian Staff Corps. That gave him his chance,—and he took it. Today no one knows more of Asia's peoples, nor has any other achieved a more hazardous piece of work than that which Younghusband has just carried through to success in mysterious chan that which Younghusband has just carried through to success in mysterious Thibet.

Thibet.

"I must know all there is to know about Asia," has been the man's thought for fifteen years. So he lived several months in Manchuria, where the Japs and Russians are now fighting. He traveled horse-back from Pekin to Calcutta, crossing the robber-infested steppes with a single companion. He held decidedly unsafe posts among the native peoples of out-of-theway corners of the land. And so it happened that it was he who was given charge of the settlement of the difficulty which sprung up recently between Thibet and the Indian government.

sprung up recently between Thibet and the Indian government.

What he has since done reads more like some adventure of Raleigh's or Drake's than like history in the day of "the wireless." It seemed best to send a military expedition into Thibet and Younghusband took command. He had 4,000 men behind him, and in front an unexplored country and two million barbarous natives. He marched through passes higher than the peaks of the Rockies; he endured cold registering sometimes sixty below zero; he fought with enemies concealed above the roads he followed,—but he reached Lhassa, Thibet's capital, and that treaty was signed which opens to commerce and civilization the last of "the closed lands."

We have been known for years as the builder of the best and most successful bicycle. It always was and is to-day.

You will never know all the delights of cycling until you have used the Pierce Cushion Frame which takes all of the jar of the road off the rider.

This is the famous wheel upon which Frank L. Kramer has made his great records. In the National Championship Contest of 1904 he was first thirteen times, second once and fourth once.

THE AMERICAN BOY

# "WYCK", the New York Police Department's Trick Horse

It is safe to say that Wyck will stay in the park catching runaways and amusing children to the end of his days and that Ferguson will stay with his horse. The Sun tells the following interesting

incident:

A year ago last March, when the drives and bridle paths in the park were slippery and sloppy, a girl was riding a big, powerful roan in the bridle path near the sheepfold. The girl knew how to ride, and knew also that the mouth of a horse was somewhat tenderer than a piece of sole leather, but she did not know, it seemed, that the roan had a mortal terror of automobiles.

mobiles.
One came chug-chugging along the drive-way. Opposite the trembling, fretting

In high spirits and great confidence they set about the test. Earl's house and the nearest point in the fence were connected;

make it go through, sure. Now, mother, we will call you again in thirty minutes listen for you," called back Mrs. Gerry cheerily.

Thus they tested the wire by appointment from time to time. With enthusiasm at a high pitch, they worked energetically. The wire was carried over cross-roads and gates by means of forked poles set on either side and high enough to keep the wire out of harm's way. Contact with live trees was avoided by using dry wood or a piece of an old rubber boot for insulation. When the boys failed to hear distinctly Mrs. Gerry's cheery "Hello, Earl," they retraced their steps and made good the faulty connection. Sometimes they used to sounded all alone the line and the news is sounded all alone the line. The daughter of one of the farmers married and moved to town, three miles away She visits daily over the 'phone with he folks and old neighbors, and thus avoids in large measure at least, being compelled to give up old home pleasures while making a home for herself.

This rural telephone saves much time and labor by enabling the farmers to arrange for the exchange of work, collections, etc., without hardly stirring from their chairs after supper. The telephone saves many a wild goose chase. Without its use it is often necessary for the farmer with the long than here of one of the farmers and the news is sounded all alone the line. Mrs. Gerry's cheery "Hello, Earl," they retraced their steps and made good the faulty connection. Sometimes they used the fence around three sides of a field to save stretching the wire across one end By the close of that rainy afternoon, the homes of Walter and Earl, two miles apart, were connected by a wire-fence telephone in perfect working condition.

Walter's father had been skeptical all the time the experiment was going on. But when Mr. Mason recognized his neighbor's voice through the telephone, he said: "That beats me. Well, I'll give it up. The boys have won out this time. I guess you and I are a little behind the times. It does beat all what notions our boys do get into their heads at these high schools."

do get into their heads at these high schools."

That night the boys, each at his own home, one on his lawn and the other on his wood plie, holding the simple 'phones in their hands, visited over the barbed-wire fence until eleven o'clock.

The boys were triumphant and happy; the parents, so doubtful and indifferent before, were now perfectly amazed, but thoroughly convinced.

Earl and Walter had a mutual friend. Guy Thorn, who lived five miles away, and he, from the first establishment of the line, had been anxious to have it extended to his home. But the doubtful ones constantly repeated, "It is all right for two miles, but it will never work for five miles, they extended the line five miles to Guy's home, and it worked perfectly. The success of this system soon became well known in that section and many farmers asked for telephone privileges. The longest continuous line is thirteen miles. For this distance conversation can the carried on with perfect ease, whatever the climatic conditions.

A stranger, driving through this locality

A stranger, driving through this locality

ALTER MASON and Earl Gerry were neighbor boys living two miles apart and some five miles from town. They had been chums from babyhool. A well-worn path showed that their visits were frequent. Having studied the principles of the telephone in the town school, they made up their minds the town school, they made up their minds that it was entirely unnecessary for either dot them to walk two miles every time they wanted to talk over affairs together. There was the barbed wire fence extending in a zigzag line across the farms from a zigzag line across the farms from home to home. Why not attach a simple telephone to each end of the wire fence and do their visiting in a decidedly "citi-fluctification of the wire fence and do their visiting in a decidedly "citi-fluctification." The necessity for such a convenience led them to investigate. They consulted their professor of physics. He told them that their plan was impracticable, as the wire professor of physics. He told them that their plan was impracticable, as the wire swould scatter and radiate the energy etc. But the boys with the true spirit of successful inventors, persisted in the idea and resolved upon making a thorough test. They met other obstacles. Their fathers arguing, as boys will, until one rainy afternoon, when there was little else to do, their fathers consented to their making the experiment.

In high spirits and great confidence they set about the test. Earl's house and the town in the vinite mind in the evening the marking to the country. It is difficult to say whether the telephone in this rural community is prized the fathers purposes. The farmers' wives and that to say whether the telephone in this rural community is prized the fathers out of the country. It is difficult to say whether the telephone in this rural community is prized the form of the wear wives and their substitute in the social pleasures than for business purposes. The farmers' wives and their social pleasures than for business purposes. In the substruct of said substruct to socia

it hardly seems necessary to be at the social gatherings to enjoy the pleasures. The music, the conversation, the jokes and laughter of the happy throng, can be quite fully enjoyed at all stations on the line. A lady, compelled to stay at home from a party, said: "I got the good out of attentions on the property of the stay at the stations of the stay at the stay

the experiment.

In high spirits and great confidence they set about the text. Early about the text. Early about the set. Early about the text and the program of the strong wire was attached to the well about the text. Early about an experiment of the strong wire was attached to the well pipe; and a battery and a "watch-case" the strong and a "watch-case" the stro

to spend a day and take a team out of the field to make these arrangements. Stock buyers hardly know whether the barbed wire fence telephone is an advantage to them or not. Regardless of bad roads or stormy weather or distance, they close many a bargain and summon farmers in with stock at the desired time for shipment. But when buyers are inspecting and pricing stock in this region, the farmers are posted on prices all along the line and are prepared to drive good bargains. The farmers as well as the city brothers find it a great convenience to transact business by telephone.

A doctor in the neighboring town is on the circuit. In sickness, when life is trembling in the balance, there are no long and anxious delays. Many in the region of this crude telephone system, although they have no 'phones of their own, frequently make use of their neighbor's instruments, especially in case of sickness. A man, living seven miles from town, was suddenly taken very sick. On horseback a boy went two miles to the hoar est in process of the patient who was apparently dying.

The advantages of this system have been the doctor was on his way to see the patient who was apparently dying.

The davantages of this system have been the doctor was on his way to see the patient who was apparently dying.

to see the patient who was apparently dying.

The advantages of this system have been so many and so great that it is being constantly extended, and new systems are being established. The occasional annoyance caused by wires being broken by stock or by disinterested farmers making gaps in the fences on the line, has led, in many places, to the erection of regular telephone lines with special poies and wires. The farmers could not be induced to give up this modern convenience for many times what it cost them.

Summing up the advantages of the telephone system started by Walter Mason and her son Earl, Mrs. Gerry said: "I know of no article used that we prize more highly, considering cost, than we do our telephone. One of the worst features of farm life is isolation—separation of houses and neighbors—aggravated

features of farm life is isolation—separa-tion of houses and neighbors—aggravated often by bad weather and impassable roads, and the consequent feeling of lone-liness and despondency for lack of com-pany. The telephone does away with all this. It adds immensely to the enjoyment of farm life, and, besides the business ad-vantages, the sociability is worth all and more than it cost."

A SERIES BY MINNIE I REYNOLDS No. VI-"STREET ARABS"

"STREET ARABS" OF NAPLES PLAYING THE FAVORITE STREET GAMBLING GAME. "INLOVINGLLO"

The boys so far described are all honest working boys, but the streets of Naples swarm with an astonishing number of street Arabs, called scugnizzi by the Neapolitans. This is not an Italian word, but belongs to the Neapolitan dialect; and it expresses to every Neapolitan a particular type, peculiar to Naples, and not to be found elsewhere. The scugnizzo never works unless driven to it by hunger; then he gathers garbage or cigar stubs. But the moment he has a penny he stops to gamble. The gambling game of the scugnizzi is called "Indovinello,"—"The Guesser." It is simply guessins how many pebbles are concealed under a hat or the hand. The little scamps play it all day long, for the Neapolitan Arab is the most inveterate gambler in the world. He is not to be blamed for that, though, for the government teaches him to gamble by conducting a state lottery; and every grown-up he knows plays the lottery every week.

The boat is manned by a pilot and his boy. Her cruising ground is between the Naze and the Skaw—prominent land marks for vessels bound to Norwegian ports or harbors in the Baltic or Gulf of Finland. The pilot boat is run alongside the ship, the pilot jumps aboard and the boy trims sheet and steers for his home port which may be as far north as Stavanger.

The sail is long and lonely, but the boy contrives to navigate thither, blow high or blow low. He seems to have the homing instinct of the pigeon, as the only ald to navigation that he has is a chart and a compass. An easterly gale often blows him far off his course.

Some of these boys are only thirteen or

Some of these boys are only thirteen or

WHEN THE VESSEL APPROACHES HE LIGHTS A FLARE-UP

fourteen years old. They are the youngest navigators on any sea. Flaxen of hair, with blue eyes and rosy cheeks, they are brave and sturdy sailors. Their diet is chiefly sait fish and sea biscuit when affoat, but sometimes the vessel that takes the pilot will throw the youngster a chunk of cooked sait beef or salt pork, and sometimes a hunk of plum duff for his own private consumption; but these cases are comparatively rare, and the boy generally has to depend upon the narrow resources of his own larder.

His little craft carries no side lights. Whenever a vessel approaches him, he lights a flare-up signal—a torch of oakum sonked in tar or kerosene.

On his solitary vovage to his home port he sleeps in the day time, his boat steering herself. In this way he prepares for the vigil of the night.

The dangers he encounters are many and great, but he takes them in a matter-of-fact way highly creditable to him. It is strange that so few of these boats are lost. The truth is that their model is such as to withstand just the sort of weather they meet. In their principal features they resemble the viking ships of old, which in their adventurous voyages weathered the heaviest Atlantic gales and ravaged the British and Irish sea coasts in many a hostile and bloody raid.

The young Norwegian after his training in the pilot boats or mackerel boats mans trading ships of every country.

Lars or Nils or Oscar has one ideal, and that is to ship obserd any amender weather.

trading ships of every country. Lars or Nils or Oscar has one ideal, and that is to ship aboard an American yacht, preferably a steam craft, where he lives a happy life, well fed and well treated. He is a frugal, thrifty sailor, and his earnings, with but few deductions, are sent home to gladden many a Scandinavian freeside.

fireside.

He gets on an average \$30 a month on a yacht, an amount which looks very big to him in comparison with the scanty wages paid to sailors under the Norwegian

### The Football Harvest

The football season this past year was directly responsible for 11 deaths and 121 serious injuries. The game ranks away ahead of boxing as a dangerous sport. Of the 11 deaths only one was that of a trained athlete, two were schoolboys, and the remaining eight belonged to minor or unattached clubs which were unable to-have the assistance of a physical instructor. Not an athlete on any of the big eastern or western elevens was injured to any serious extent. Last year there were 12 deaths and 70 serious injuries.

### A Brief Correspondence

A coal operator in West Virginia tele-graphed his son in New York concerning a shipment of coal. He wrote the following: "Jim:-

DAD."

In a few days the following answer was sent:—

"New York, October 23, 1904.

"Dad:-

What do you suppose they said? Guess; then look in next month's AMERICAN BOY to see if you are right.

# BOYS AS MONEY MAKERS

How One Boy Earned Money

Billy was ten years old. He had two brothers, each a little older, and these brothers were very proud of the fact that they had secured places to work through vacation; one in a dry goods store, and the other in a grocery. They were to receive three dollars and two dollars and fifty cents respectively. The first Saturday night, when they came home and displayed their earnings they were warmly congratulated by their parents. Billy was very sad. lated by their parents. Billy was very sad. He, too, wanted to earn money. He was agonizing to purchase a bicycle. Every one said: "O, Billy, you are too young, you are not large enough, not strong enough. You must wait a year or two. Your time will come. There is really nothing a little fellow like you can do to good to good

"Yes, there is, too,—lots and lots of things I could do if I had a chance. I don't want to wait forever, and I do so want a wheel."

The sturdy little chap would listen to no preparent, so he went at it with degreed.

want a wheel."

The sturdy little chap would listen to no argument, so he went at it with dogged persistence trying to get something to do. People treated him kindly, but insisted that he was too small. Some said: "You are made of the right sturf, Billy; wait till you are older." Any boy with less grit would have yielded. Billy just would not yield. One entire forenon he was missing from home; his mother supposed he was at play with other boys of the neighborhood, announg we would not yield. One entire forenon he posed he was at play with other boys of the neighborhood, announg we would not yield. One entire forenon he posed he was at play with other boys of the neighborhood, announg we would not yield. One entire forenon he posed he was at play with other boys of the neighborhood, announg we would not yield. One entire forenon he was missing from home; his mother supposed he was at play with other boys of the neighborhood, announg we would not yield. One entire forenon he was missing from home; bit mothers with the neighborhood, announg we will be possible. The checks are also listed individually announg we will be provided to the work. He had been doing that forenoon. He had seen great head as best to the doing the forenoon. He had been doing the forenoon. He had been doing the forenoon. He had be weeks he earned more than both his olier brothers combined; others not so much, for in some cases it took much longer to haul a load than in others. Where the heaps were large and not too far from the dump, he could sometimes earn a dollar a day; where they were quite small and the distance was much longer his profits were small. Hardly a day passed throughout that summer that Billy and his gang of "hired men," were not tugging away at their work, dirty, perspiring, and full of business. They did not mind the dirt; they were in business! Before the summer closed Billy was the proud owner of a wheel, purchased with the money he had carned. His co-workers each had more cash than ever he had dreamed of having. After the wheel was secured, the "con-

### How to do Business With a Bank

Wishing to deposit money in a bank you will first receive an introduction to the bank officials to whom you will express your desire to open an account. You will then be requested to write your name in a book called the signature book exactly as

On a deposit slip with which the receiving teller supplies you to record your deposit, write your name, the date, amount of gold, of currency, of sliver and of checks. The checks are also listed individually in a space for that purpose, the deposit slip upon being footed up is passed to the receiving teller, together with the money, and the teller after entering the amount on the left page of a small book called the bank pass book, hands the book to you. This book serves as a receipt,

The receiving teller supplies you with a check book. A check is a written order directing the bank to pay on demand a specified sum of money to a person designated. The checks are partially printed, and it is only necessary to fill in the date, the amount of the check, the name of the person to whom the check is payable, and your signature. When a check is torn out of the book the stub remains, and should bear the following record: Date of check, for what given, number of check, in whose favor, amount of check and also a place for money deposited.

If you desire to draw money from the bank for your own use, you may make the check payable to your own name, and then endorse it, or you may make the check payable to your own name, and then endorse it, or you may make the check payable to the order of "Cash" or "Self" instead of your name, in which case endorsement will not be necessary.

The balance amount of your bank account is easily determined by subtracting the checks from the balance as shown on each preceding stub.

Before the paying teller will cash a check you must endorse it by writing your name across the back of the check at the left hand end. You leave the check with him as a receipt.

Once a month your bank book should be left with the receiving teller to be bal-

across the back of the check at the left hand end. You leave the check with him as a receipt.

Once a month your bank book should be left with the receiving teller to be balanced. All checks that you have given that have been cashed by different persons will be returned to you with the pass book. On examining these checks you will find them all stamped "Paid," and will further note that the sum of these checks is placed upon the right-hand page of the pass book. The difference between the two sides of the pass book is entered in red ink on the smaller side and represents the balance in the bank. After properly ruling up the book it is said to be balanced.

Some Important Points.—In endorsing a check spell your name just as it appears upon the face. If, for example, the check is made payable to "James King," do not endorse it "J. King."

If your name is misspelled on the check

WHEN JONES RECITES

# BOYS you need n't do this!

Don't beg for every cent you need. Don't growl because you never have a penny of your own. Get to work and earn your own spending money, as six thousand other boys are doing it, selling

# The Saturday Evening Post

after school hours. No, it isn't hard work. It leaves you plenty playtime. A few hours' work a week and money you've earned will be jingling in your pocket, to spend as you please. Now don't let anybody say you haven't the grit and spunk of other boys. Sitright down and write

us a letter to send you the complete outfit. It's free, and includes to copies of The Post. Sell these at 5c the copy, and

with those 50c you can buy more copies at wholesale prices. All of our boys started this way—some are making \$15 a week now. What's to stop you from making

at least one, two or three dollars a week? Now don't put this off.

### The earlier you start the more you make as you go along. \$250 in Extra Cash Prizes

each month to boys who do good work. The Curtis Publishing Company, 1000 Arch Street, Philadelphia, Pa.

or-town check. This amount is called exchange.

The drawer of a check has the right to stop payment upon it by notifying the bank.

The holder of a check who loses it cannot compel the bank to stop payment upon it. He should request the drawer to order payment stopped.

Should you write a check in such a way that the sum is easily altered to a larger amount, and the bank pays the check, you are the loser.

If you take a check that is dated ahead you cannot force the bank to pay it till due. Should the drawer withdraw his funds, or die, or become bankrupt or make an assignment before the holder cashes it the bank is not responsible, and in the first case only can the drawer.—Ohio School Journal.

### Fortunes Realized From Inventions

"Little things" have brought fortunes to many an inventor. The once popular toy known as "Dancing Jimmy" yielded its inventor a \$75,000 income yearly. The sale of another toy, "John Gilpin," brought its inventor \$100,000 a year. Mr. Plimpton, the inventor of the roller skates, made \$1,000,000 out of his idea. When Harvey Kennedy introduced the shoe lace he made \$2,500,000 and the ordinary umbrella benefited six people by as much as \$10,000,000. The inventor of the Howard patent for bolling sugar in vacuo realized an income of \$250,000 per annum. The millions Sir Josiah Mason realized from the improved steel pen he gave to English charities on his death. The patentee of the pen for shading in different colors made \$200,000 a year out of it. The wooden ball with an elastic attachment brought \$50,000 a year to its inventor. The metal plates formerly used for protecting the soles and heels of shoes from wear made \$1,150,000 in a year. The woman who invented the modern baby carriage made \$50,000. A young woman living in Port Elizabeth, South Africh, yet realizes \$500 a year from the invention of the Mary Anderson curling iron. The wife of a clergyman made a fortune from the invention of the modern woman's corset. A little girl who invented the screw-pointed gimlet made millions. Miss Knight, who invented the machine for making paper bags, refused \$50,000 for it shortly after taking out the patent, and realized a princely fortune for the exceptional ingenuity her conception reveals. known as "Dancing Jimmy" yielded its inventor a \$75,000 income yearly. The sale

### Be Sure To Read It

Boys, do not fail to read Kirk Munroe's story-"For The Mikado," now running in The American Boy. It is the greatest story we have ever pub-

endorse it the same way and then correctly below.

When the amount in words and the amount in figures on a check disagree, the amount in words is paid.

Never endorse a check before going to the bank. The finder of a check endorsed in blank might manage to cash it.

Banks frequently refuse to cash a check for a person they do not know. One wishing to cash a check must be identified otherwise a finder or a thief might cash a check to which he had no claim.

A check drawn on one bank may be cashed at another, the banks again settling among themselves.

A person not a depositor is usually charged a small sum for cashing an out-of-town check. This amount is called exchange.

# The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS Under the Auspices of "The American Boy"

Object:--The Cultivation of Manliness in Muscle, Mind and Morals.

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness, and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing Directions. It is sent for a 2-cent stamp.

MASSABOIT CO. No. 87, ROCKFORD, 1LL.

Felck, Capt.; Fred Kindl, Lieut.; Harold Hoeveler, S. A.; Frank Jacques, Corpl.

### 1905 a Banner Year for the O. A. B.

To stimulate the companies to work for increasing their membership, we have decided to award during 1905 twelve prizes, viz: four first prizes, four second prizes and four thir! prizes, under the following conditions:

To the company sending us the largest number of subscriptions for new members between January 1st and March 31st, we will give one of our handsome O. A. B. pennants, a good book for boys and a fine picture of "Ohl Abe," the famous war eagle.

for loys and a line picture of the Ave. the famous war cagle.

To the company sending us the second largest number of subscriptions during the same period, an O. A. E. pennant and a good book.

To the company sending us the third largest number of subscriptions during the same period, a good book or a picture of "Old Abe" or a

n gown mone or a picture of 'Old Abe' or a pennant, as desired.

The same prizes will be awarded each three months during 1965, the dates of closing the contests being March 31st, June 30th, September 30th, and December 31st.

Each month's company letter will contain a list of the ten companies which stand highest in the contests. In scading us subscriptions in these contests,

the sender must be careful to state that the boy for whom the subscription is sent is to be a member of a company, as otherwise our records cannot show this.

Remember that these special prizes are given

in addition to the usual commissions and premiums for obtaining new subscribers.

This gives each compnay a splendid chance descrite its club room and add to its library colendid chance to

### December Company Letter

Detroit, December 6th, 1904. Detroit, December 6th, 1906.

My Dear Captains and Brothers of Our Order:
The last month of the year is regarded by many merchants as stock-taking month, when they go over their hooks and accounts and stock in hand, and find out what amount of business they have made a profit or experienced a loss in the past months.

It might be of benefit to all the members of The Order of The American Boy to stop for a minute and go over the things that we have

done during the past year, and see how and in what manner we have employed our time. So far as Headquarters is concerned, I think every promise made has been fulfilled. A letter has been written and sent to you specially each month, and suggestions for monthly programs have been sent, except during the months of varation, when many of you were enjoying yourselves away from home and engaged in other sports and pastimes. The most important event concerning our Order was, of course, American Hoy Day at the St. Louis Exposition on July 5th, one of the largest and most successful meetings held at the Exposition. So great an enthusiasm has been agoused by American Hoy Day that it has been determined to make it a permanent institution. stitution.

stitution.

Every month there has been a page of THE AMERICAN BOY given over to the Order in which have been chronicled your meetings, entertainments, games, etc., also pictures of all Crmpanies received have been so far as possible, reproduced in THE AMERICAN BOY.

These things have been done ungrudgingly at very considerable expense of time, labor and money, in order that The Order of The American Boy should live up to its motto of "Manliness in muscle, mind and morals," and the members be helpful to each other, as members of the same organization ought and should be.

Now while Headquarters has been doing and is doing everything possible to make our Order the

doing everything possible to make our Order the grandest and best of all societies for boys, it has come to the point where your assistance in the work must be called in question. Letters have been received of late which show that the have been received of late which show that the members of some companies are not so harmonious in their relations toward each other as they ought. Now, nothing will so surely break up any society as misunderstandings and contentions, and if these are continued there can be little hope of a company's prosperity. Let me counsel you to try to uphold the dignity of our Order by becoming reconciled to each other, even if it requires some little sacrifice on some one's part to do so, and the month of December, with its joyous Christmastide, is the best time in the year to forget and forgive, and start the New Year with the determination that you shall do whatsoever lies in your power to live in harmony and kindliness with your brothers of the Order. the Order.
I have a

in harmony and kindliness with your brothers of the Order.

I have a further grievance which I want to air at the present time in connection with American Boy Day. While many are showing interest and enthusiasm in the idea of having a permanent American Boy Day, there seems to be among others a kind of indifference, if I may take your silence on the subject as indifference. It seems to me that every American boy worthy the name should hail such a proposition with delight. To have one day in the year as their own in which they could show to their friends and grownups that they were able to do something more than play ball or run races, should call forth every boy's greatest effort in planning for such a day.

Now while I am doing my utmost to make this day a red-letter day in the calendar of every boy in America. I cannot do everything: I must rely upon your assistance to make it a success.

There are, I am sure, in every town, however small, men and women interested in boys, who, if you only place the matter before them, would be willing to give you all the help you

need. Have you told your pastors your superintendent of schools, your teachers, your Sunday
school superintendents, your Y. M. C. A. secretaries, or other grownups, about the matter? If
you have not, do so at once, as the time is
short, and ask them to write to me and I will
gladly send them free coples of American Bay
Day pamphlet and explain to them how with
very little effort on their part. American Boy
Day in their town can be made a splendid occasion for the boys. Don't delay this matter;
you, captains, should take it upon yourselves to
see some of these grownups at once and enlist
their services.

Headquarters has lately been examining the
records of the companies and members, and finds
that there are many names on the roster of companies whose subscriptions to THE AMERICAN
BOY have expired. As every member of a company must be a yearly subscriber to the macazine, except where there are two brothers, when
only one need be a subscriber, you, captains
should look carefully into the matter and where
a member has allowed his subscription to run
out, have his renewal sent to headquarters at
once, with a letter stating that such a subscriber desires to renew his membership in your
Company.

One word more: In order to stimulate mem-

once, with a letter stating that such a subscriber desires to renew his membership in your Company.

One word more: In order to stimulate members of companies to increase their efforts in obtaining new members in 1905. I have resolved to offer four first prizes, four second prizes, and four third prizes to the companies having the largest increase in membership, the prizes to be distributed every three months. The prizes will consist of O. A. B. pennants, books, pictures, etc. My monthly letter will keep you posted as to the increase in the companies each month. This contest will begin January 1st, 1905, and the first of the prizes will be awarded April 1st, the second on July 1st, the third on October 1st, and the fourth on January 1st, 1906. For particula s, see the January American Boy. Now ket to work.

Christmas is the season of giving, and I should like to have you write me, for the Company News, how the Companies of our Order have helped to give foy and gladness to the poor and needy of their communities.

Wishing you all the gladness and good cheer of theirtmas and a very happy and prosperous New-Year.

Yours for M. M. M. M.

E. SPRAGUE,

Pesident General.

WM. C. SPRAGUE. P esident General.

### A Word of Importance

A Word of Importance

My business associates and myself think this is a good time to obtain (and we have set out to do it) 50,000 new subscribers before January 1st, 1966, and we particularly want the brothers of our Order to assist us. You know the paper and you appreciate the fact that it has helped and is helping you in countless ways. The stories and articles which it contains each month are clean, helpful and inspiring, such as you need not be ashamed to read anywhere. Now, why not help us to secure this increase by obtaining new members for your own companies and organizing new companies? You will be helping other boys at the same time yon are helping yourselves. Remember, also, the substantial rewards in the form of handsome and useful premiums which we give to those who thus assist us. Now let every brother pitch in and work for new members and let our motto be, "50,000 by January 1st, 1906."

I have received quite a large number of letters from members and their adult friends relating to American Boy Day, and the interest which seems to be taken regarding it is most gratifying. In order to impress the idea firmly upon your minds, however, and to urge the co-operation of every one of you, let me repeat what I said to you in my October letter, as it is specially to the brothers of our Order that I depend upon to make American Boy Day. 1905, the success it ought to be:

I urged upon you the duty of making a special point to see and talk with your pastors, school tenchers, Sunday school superintendents, secretaries of Y. M. C. A. branches and others, ladies or gentlemen, who are interested in you and will assist you in arranging for American Boy Day; and when you get them interested ask them to write me and I will send them a special account in pamphlet form of the proceedings of our American Boy Day at the fully understand and get in sympathy with the plan. This pamphlet is gotten up in most attractive form with portraits of the boys and others who took part in the

the plan. This pamphlet is gotten up in most attractive form with portraits of the

most attractive form with portraits of the boys and others who took part in the celebration, and any of you who desire to have a copy as a souvenir can get it for the small sum of ten cents.

Now this work of interesting your adult friends must not be delayed, as the time will soon come around, and a great deal of work requires to be done. Those ladies and gentlemen who are willing to help will only be required to choose the boys best qualified to take part, obtain a hall or suitable place for such a meeting and act suitable place for such a meeting and act as chairmen and advisers; I shall make up and attend to the printing and sending out and attend to the printing and sending out of the program, and I need not say that it will be the finest and most suitable to be obtained. I hope that I have made it plain that very little work will be required of these adult friends, as everything so far as possible will be done at headquarters. Anyway urge them to write me about it, and also let me hear from you with any suggestions was may have as to the carrying estions you may have as to the carrying

gestions you may have as to the carrying out of our plan.

This is a good time to decorate your clubroom or den with one of our O. A. B. pennants, and you should not delay in getting one. It is made of the best materials and the price—50 cents delivered—is only slightly above actual cost; or if you send us \$100 for a new subscription we will send you one free. for a new subscription one free.

Yours for M. M. M. M. T. Yours for M. M. M. M. T. SPRAGI

WM. C. SPRAGUE, President General.

Any reader of THE AMERICAN BOY who writes to the Harrington & Richardson Arms Company, Worcester, Mass., will receive free of charge—while the supply lasts—one of their 1995 calendars, provided that in asking for it he mentions THE AMERICAN BOY in his application.

# HOCKEY By E. J. GIANNINI, Physical Director New York Athletic Club

HE most important points for the hockey player to master are dribbling, passing, shooting and lifting the puck.

To dribble well is essential for every man

on the team, but especially for the for-

wards.

This is accomplished by carrying the puck well in front on the ice and passing it from side to side with alternate sides of the stick as the player advances.

The angle at which the puck is advanced would depend on the speed of the player at the time. When intercepted, pass quickly to any of the other players on your side who has the least interference. Don't delay till it is too late to do so with safety, and so give possession to your opponents.

Pass so the puck will slide along the ite not toward the man's skates, but just in front of him.

Pass so the puck will slide along the ise not toward the man's skates, but just in front of him.

Supposing the player to be competent in dribbling and passing, he must learn to shoot, which is the usual method of scoring goals. This is done by placing the heel of the stick against the puck and snapping the stick with a turn of the wrist. It is necessary to learn this from either the left side or the right, and to do it without hesitation and in tight corners. The best goal shot is one with a slight lift to knee high, which is the most difficult for a goal keeper to stop. It is too high for him to get in his stick effectively, and just too low for the use of his body.

The lifting of the puck must be learned next, especially if playing in a defensive position. This is accomplished by placing the middle of the butt of the stick against the lower half of the puck and scooping with an upward movement. With practice it can be lifted high over the opponents heads, so that it cannot be reached by their sticks while in progress.

CORRECT POSITION OF HANDS BEFORE EXECUTING A STROKE. BEGINNERS PLACE THEIR HANDS TOO LOW

The various points of individual play hav-

There is one matter which every player should remember, and that is that a certain position has been assigned to him, and he should keep it and not wander around. There are two reasons for the strictest observance of this rule. One is that in very rapid plays it is not always possible to look for a conferre to pass the puck to, and if he is in his allotted place, the knowledge obtained from practice will obliterate all guess work. Another reason is that each player

CORRECT POSITION FOR A LEFT HAND STROKE (ENGLISH HOCKEY BULES)

Keep cool at all times. This is an attribute all hockey players should cultivate.

There are many points and combinations on which it would be possible to enlarge, but these can only be learned by practice in application.

but these can only be learned by practice in combination.

Training is essential if one is to excel at hockey, as strength of limb and good wind cannot be dispensed with if a play r expects to last out a game in good shape.

While it is not necessary to regulate the food to any extent, pastry of all kinds is a good thing to avoid. If boys wish to keep their wind, tobacco in any form is best left alone; but eigarettes are most injurious, and must be kept away from.

One matter that boys are ofttimes careless over should especially have their attention when playing hockey, and that is the danger of getting a chill. Whether the game is played in a rink or on the outside, the temperature is necessarily very low, and the rapidity of movement is bound to cause free perspiration. Always have an extra sweater or overcont to put on after playing, and don't stand around.

Many a good player has been put out of commission by such carelessness for the rest of the season, seriously imperilling the chances of his team in their engagements.

of the season, seriously imperilling the chances of his team in their engagements.

Start in right, observing the few points here offered and you will be on the roal to future success in the game of hockey.

### The Compass

The Compass

What an admirable invention, and a wonderful little instrument is the compass! How lost the sailor would be in the midst of the ocean if he had no commass! What is a compass, did you say? That is very easy to answer. It is, simply, a needle, which always points toward the North Star—or very nearly so—a pivot to balance the needle, and a card. But perhaps you want to know wha makes it always point in the same direction. Then I will have to introduce to you a sort of iron called the magnet, or "load stone." It is found in iron mines in many parts of the world. It is of a dark gray color and looks like iron, except that! is more glossy. The magnet has wonderful properties. It attracts to it steel, iron and other metals, and imparts to them is certain portion of its attracting properties—a mystery which no man has yet been able to unravel. And what is more wonderful about it, the smaller the magnet the more power it generally has. Sir Isaac Newton, it is said, had a magnet set in a finger ring which could lift a piece of iron more than two hundred times its own weight.

But what about the compass? Well, it is nothing more than a steel needle, which, after being rubbed against a magnet in a certain manner, is balanced on a pivot and inclosed in a box. But there are com-The various points of individual play having been mastered, their use in team work remains to be studied and practiced. This combination of the players is the great feature of hockey, without which no team can ever rise above mediocrity.

Not only is it the road to success in scoring, but it makes less hard work for the men, who will be much fresher at the end than if they had gone in for individual and grandstand plays.

The first thing to do on securing the puck is to look for the politions of the other members of the team, and as soon as confronted pass to the one who appears to be in the most advantageous position. Don't be selfish. It is unscientific, and, although once in a while success may crown the individual play of a fast forward, the efforts of such work will quickly play him out. The only exception to this rule is when the should either be lifted out of danger or got away to the side as quickly as possible, when it is then safe to resume passing tactics.

There is one matter which every player should remember, and that is that a certain position has been assigned to him, and he companded on a pivot and south with as much exactness as any commanded to him, and he companded in the work of in the same revision. Then I will have to introduce to you as sort of iron called the magnet, or "load-stone" it is found in from mines in many table to introduce to you as sort of iron called the magnet, or "load-stone" it is found in from mines in many parts of the world. It is of a dark gray color and looks like iron, except that is more glossy. The magnet has wonderful about it, the smaller the magnet its a more power it generally has. Sir lease—a mystery which no man has yet wonderful about it, the smaller the magnet it wonderful about it, the smaller the magnet is soined. And what is more been able to unravel. And what is more the most advantageous position. Don't it said that a magnet in a finger ring which could life a piece of iron more than two hundred times it sown weight.

But what about the compass? Wel

against a magnet, and su pend it in the middle by a string, it will point north and south with as much exactness as any compass ever made. Or if the same needle be fastened in a straw or piece of wood, so that it will float upon a saucer of water, it will, also, point toward the north. That would be a curious compass, did you say? Curious, or not the very best compass now in use is made upon this very principle. The needle is not inclosed in a straw or piece of wood, of course, but in a thin, round case of metal.

No one knows who invented the compass, but it is supposed to have been invented by Gioia, a mathematician, at Naples, about the year 1300. The Chinese lay claim to the honor of this invention. Before its discovery, the sailor rarely ever ventured out of sight of land; but since he needed no longer to creep timidly along the shore lie to whenever a mist hung over his dependent landmarks, or when clouds velled the sky and steered boldly into the deep, guided by his remarkable over his dependent landmarks, or when clouds velled the sky and steered boldly into the deep, guided by his remarkable little instrument, the compass. Numerous stories have been related with regard to the discovery of the magnet and the invention of the compass, but we doubt whether those fabulous story-tellers ever had anything to do with the invention or the discovery of either the magnet or the compass.

### Girls Buying Boys' Books

A London correspondent of the Chicago inter-Ocean says that girls are refusing to buy and read the sort of books that have buy and read the sort of books that have heretofore been considered as suited to their literary palate and that they are buying boys' books instead. The books that appear to boys seem more suited to the strong-limbed, hockey-playing, cycle-riding girls of today than the meek and mild literature that is still published for them but seldom sold to them.

By A GRADUATE

CAMP.

WAS awakened the next morning by the reveille gun which sounded much louder than in barracks, as it stood quite near the guard-tent in front of the camp. Immediately thereafter the band at a distance struck up "Yankee Doodle," "Hall Columbia" and "America" followed, for it was the glorious Fourth.

At the discharge of the gun, we bounded to our feet and hastily began dressing, for we did not want to start in with any "lates." Every pleb was astir, but all the racket seemed to have no effect on the first-classmen opposite. To all appearances, they were still sleeping soundly. It was a misty morning, and the fog rested heavily on the neighboring mountains. The sun was barely up, and shone yellow and dim through the morning mists, It was quite chilly at this early hour (5:15), and it was hard to abandon our warm, if not comfortable, beds.

As we were hurriedly emerging from the WASawakened the next morning by the

As we were hurriedly emerging from the tent. I observed two or three yearlings with brooms at the foot of the company street. What could they want with those implements?

Implements?

The mental question was immediately answered, for a third-classman shouted:
"What's the matter with you plebs anyway? You've got bushels of time before roll-call. Turn out with brooms all of you, and join the procession! If you haven't brooms enough at your own tent, hunt around anywhere till you find one! Step out lively! The band's almost here!"

I grasped the situation. I saw that there was to be a broom procession, and made a rush for our broom, leaving Silkins and Corp to find two more wherever they could. I brought the implement to a "right shoul-

ed with his broom, and commanded "order arms" and "parade rest." After I had come to this last position, the cadet told me, that since I was the first "pleb" on the ground by would detail me to see that the ground, he would detail me to see that all my classmates, as they arrived, came to a "parade rest" in a military manner. My gun was now a sword, and as each pleb plunged down the street, I halted him and put him through a little manual drill. Sliput firm through a little manual drill. Sil-kins was the first to come, and when I commanded "order arms," he looked at me and remarked that I was crazier than usual. A brief argument convinced him, however, and he went through it all quite satisfactorily.
There were little squads of "broomers"

in all the company streets, and they fell in behind the band, as it passed them, on its march through camp. When it come our turn to fall in, we formed a rather imposing procession. I noticed, as the musicians went by, that the drum-major was much amused, and several of the players were laughing rather than blowing through their

A soon as we had taken our places in A soon as we had taken our places in the column, the hilarious yearling who had ordered us out, strode to our front, and assumed the role of drum-major. In this style we marched through camp amid great enthusiasm, reinforcements falling in from time to time. When the band reached the general parade ground, in front of camp, the cadets all broke ranks and made for their respective company grounds.

This diversion seemed to have put every

This diversion seemed to have put every one in good humor except the Colonel. I overheard this sullen gentleman remark. as he sat up in bed and rubbed his eyes, that we were a lot of blank monkeys.

Immediately after reveille, we piled our hedding, that is, Corp and I did, for Silkins was performing his first task as "special

THE MORNING OF THE FOURTH IN dutyman" in arranging the Colonel's bedding for him. This must have been a conding for him. This must have been a considerable undertaking, for Olcott used as much bedding for a mattress as our whole tent contained. Still Slikins finished in time to turn out for police call, with his broom in hand, and his right shoulder higher than his left, which defect our captain corrected in his usual rigorous manner.

Between reveille and the first call for breakfast (5:55), many of the upper-classmen came out into the company street and exercised with Indian clubs. In fact, nearly all the first-classmen were exercising, except the Colonel, who, after finishing his ablutions, sat in his tent and scowled at everything.

Guard-mounting was interesting. Every cadet looked neat and trim, particularly the plebs, who, however, appeared somewhat

cadet looked neat and trim, particularly the plebs, who, however, appeared somewhat stiff. The Adjutant inspected them with unsparing rigor. The slightest flaw could not escape his keen vision. Although every one had spent hours in getting himself into the best possible form, it seemed as if each had overlooked some trifling detail. One man's shoulder-belt was not properly adjusted; a second did not have his waist-plate at the right place, and a tug at the cartridge-box of another indicated that his shoulder-belt was too short; and so on down the line.

and so on down the line.

When the ceremony was over, the new guard relieved the old, and I soon had the leasure of seeing a pleb sentinel on "Num-er 2." His self-satisfaction was apparent to every one. Not a leaf moved in the gentle morning breeze that he did not see; not a sparrow chirped that he did not hear. He seemed weighed down by the whole re-

respect the situation. I saw that there was to be a broom procession, and made a rush for our broom, leaving Slikins and. Corp to find two more wherever they could. I brought the implement to a "right shoulder," and double-timed down the company street to join in the fun. I halted at the foot of the avenue, raised my broom to a carry, and stood at attention, shoulders back, head up, chin in, and my left hand squarely to the front. I wonder whether I looked as military as I believed at the time! While standing in this position, awaiting further developments, an old cadet came up, took position directly in front of me, saluted with his broom, and commanded "order arms" and "parade rest." After I had Number two renewed his shouting, but the classes of today accept it with philosophiladies seemed to be so interested in some- cal good nature, and the husky youths who thing up the river, that they could not had just entered and who testified that they

hear him.

Finally, the sentinel yelled for the Corporal of the Guard. On the arrival of the latter, the sentinel was so rattled that he gave him a "present arms," and forgot to come to "arms port" when he communicated the startling fact that a number of young ladies had captured the parapet. The first thing the corporal said was, "What do you mean by not coming to arms port when you talk to me SIR?"

port, when you talk to me, SIR?"

I did not witness the rest of the exhibition, for I was interrupted by the voice of a yearling, suggesting that it would be well for me to "sneak." Reaching our tent, I was thunderstruck to learn that Silkins was in arrest

The first pleb in arrest! The news spread like wildfire. Crowds of classmates came around to inquire about it, and to envy and admire him.

and admire him.

The number of visitors continually grew, until the Colonel, who was reading his "Herald," opposite, wanted to know what we were "celebrating," adding at the same time that the sight of so many plebs annoyed him, and he would take it as a personal favor if the meeting would adjourn sine die, which was done sine delay.

Olcott then called me over, and asked the same of the ricture proceedings. When

the cause of the riotous proceedings. When he had learned all, he sauntered to our tent, and said, "Mr. Silkins, I am disappointed in you. It makes me sad to have

pany street and one's own tent, unless it becomes necessary to leave for some au-thorized purpose. Silkins had been down thorized purpose. Silkins had been down to see one of the tactical officers by permission. On his return, he had innocently stopped to talk to a classmate. The Commandant, happening to pass at the time, saw him, and suspecting that Silkins was in "con," called him, inquired whether such was the fact, and forthwith placed him in arrest.

Arrest is confinement on honor, and always follows serious offenses. It means restriction to one's own quarters, until re-

leased.

Silkins took it very philisophically, but Corp and I were anxious, dreading all sorts of fearful penalties, such as trial by court-martial, light-prison, dismissal, etc.

Our misgivings were cut short by the first call for the exercises, which we had forgotten in our excitement. I leaped for my belt cought up my gue and stated on

my belt, caught up my gun, and started on a run for the assembly place, desperately resolved to escape being late.

### HAZING AT WEST POINT.

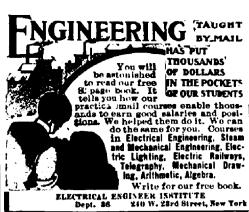

It would be idle for the most loyal friend of the Military Academy to deny that haz-ing has in some instances been carried to ing has in some instances been carried to an unjustifiable extreme in that institution. The rigid investigation made by the authorities in 1900 proved the fact; but as one who has been through the trying ordeal, including also the testimony of the thousands who preceded me and of all who have followed, I maintain that with the exceptions named, it is less severe than in our leading colleges and that in no instance did permanent injury result to the cadet.

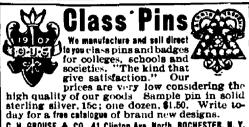

passed through all of which complaint made would have considered themselves guilty of childishness had they made complaint. In more than one of our leading colleges, students have suffered lasting intury and state the suffered lasting incolleges, students have surered insting injury, and even death has resulted in some
instances, but nothing of the kind has
ever occurred at West Point. A thorough
investigation of the case of the young
man who died a long time after leaving
the Academy showed from the highest medical testimony that his death was not due
to the rough usage he underwent while at to the rough usage he underwent while at West Point. I assert that never in the his-tory of the institution has a cadet been tory of the institution has a cadet been permanently harmed nor has his death been attributable to hazing. There may be some who will dispute this assertion, but it is made upon as accurate knowledge as can be obtained, including the experience of myself and classmates, as well as members of other classes and the investigation

bers of other classes and the investigation to which I have already made reference. It is a consummation devoutly to be wished, that hazing in every form could be abolished, for the practice is brutalizing. unmanly and a clear invasion of one's personal rights; but so long as human nature remains what it is, it will exist to a greater or less extent in all educational institutions. As I write these lines, I have before me an account of a fight in one of the leading universities of our country, in which clubs, stones and bricks were freely used: noses were smashed, faces laid open. a special dutyman of mine show so little used; noses were smashed, faces laid open, respect for the regulations." This speech having been delivered, the Colonel with-drew to his own tent.

Nothing of that disgraceful nature every technique of that disgraceful nature every technique. having been delivered, the Colonel withdrew to his own tent.

Slikins was in confinement for making a
breach of "con," that was all. Confinement in camp means restriction to the com-

IN THE DINING HALL

and puts his things in order for Sunday in-spection. No contract is made, no papers

spection. No contract is made, no papers signed, but the pleb is often the recipient of discarded white trousers, and when a yearling or even another first-classman wants his services, the man informs him that he is a certain cadet's special dutyman and that generally ends the matter. Possibly the reader has wondered why such plebs as Slikins, who was of immense proportions and possessed so enormous strength submitted to these petty persecutions. He did so because there was no help for it. Had he resisted he would have been obliged to fight not his immediate persefor it. Had he resisted he would have been went all tobliged to fight not his immediate persecutor, but some member of the upper class, amused at nearest his stature and skill. Had Silkins vanquished him, he would have had to accordance take the rest of the class in turn, until the circuit was completed, and it was inevitable that before that was accomplished he would have suffered disastrous defeat. In the investigation of 1900 it was stated that replied. would have suffered disastrous defeat. In the investigation of 1900 it was stated that a sturdy pleb, who had specially trained himself for the ordeal, whipped eight or nine classmen in one day. I remember the incident well, but the account omitted another fact, which was that this puglisstic pleb received the worst trouncing of his life before he faced all the members of the upper class.

"I did have my heels together, sir," Corp replied.

"Well, keep them together, sir. Now—left about face!"

And we all made a revolution in the other direction.

This exercise was something new in the way of "pleb-deviling." for nearly the whole company turned out to enjoy the entertainment.

the Academy have done their utmost to persecution whatever?" To a certain expurge it of the hazing abuse and have succeeded to the fullest possible extent. It is safe to say that no complaint will ever again be heard unless it be from some youth who has been dropped for incompetency, and is unwilling to admit the truth to his friends.

Now as to my own experience: I recall that a yearling asked me, when he saw me laughing at Silkins my roommate, who was pretending to sit upon the point of a bayonet, whether I thought the perform-

routh to his friends.

Now as to my own experience: I recall that a yearling asked me, when he saw me laughing at Silkins my roommate, who was pretending to sit upon the point of a bayonet, whether I thought the performance was funny. I answered, "Yes, sir."

"Well, then smile by numbers."

"At the command, 'one,' smile on the right side of the mouth; at the command 'three' smile all over."

I did my best to obey and afforded more amusement than did my roommate.

Silkins who could not sing a note was ordered to carol a popular song. The exhibition I need hardly say was entertaining. A crowd quickly gathered and he was close of the Colonel who came up near the close of the Song, relaxed. He informed to be done but to take up the bed and restrant and might come this right come the street that it would be impossible for nim to retain at the Academy.

The first drum for tattoo at 9:20 was heard and when I reached my own tent tattoo itself was sounding. The drummer and the roll was called. I took pains to be on the ground two or three minutes ahead of time and the roll was called. I took pains to be on the ground two or three minutes ahead of time and the roll was called. I took pains to be on the ground two or three will was one of peace, for it was too dark to ese whether we were bracing and the cadet officers appeared only in time to escape a "late." When the roll call was over, we went back to our respective tents.

I was tired and set to work to make my satisfically as one pillow, one blanket, and one comforter would permit, when coupled the whole floor and nothing was close of the Song, relaxed. He informed to be done but to take up the bed and re-

ing. A crowd quickly gathered and he was encored again and again. Even the stern face of the Colonel who came up near the close of the song, relaxed. He informed to be done but to take up the bed and rethe singer that henceforward he might consider himself Mr. Weiden's "special dutyman."

I suspect my roommate was quite glad to receive this appointment because the position of "special dutyman" while entalling considerable work, is not without its advantages. The pleb who has a task of this nature is really his superior's assistant. He helps him in his toilet at times, and puts his things in order for Sunday in-

one of the yearlings of the company appeared at the door of the tent and asked if we were up on the facings, "right face," "left face," "right about face," etc. Our orderly acted as spokesman and mildly replied, "Yes, sir."
"Well," continued the vession

plied, "Yes, sir."

"Well," continued the yearling, "you need not stand at attention, but at the command you will obey, lying down, keeping the heels together and the eye to your own front. Now-right about face!"

We all flopped over together. The one who was lying on his back, turned around to the right and ended by lying again on his back; the one lying on his right side went all the way round, finishing on his right side. The yearling evidently was much amused at this feat, but must have had some doubt that it was executed in strict accordance with tactics, for he said:

"Mr. Fletcher, I want to see you keep your heels together when you execute this movement."

"I did have my heels together, sir," Corp

tunately I had forgotten that the Colonel Tufts College ELMER H. CAPEN, D. LL. lived in the tent opposite and that he was lived in the tent opposite and that he was sitting there reading his paper by candic

I walked across the street embarrassed

and frightened.
"Now get up there in the left-hand corner of the tent and laugh."

I meekly suggested that I saw nothing

to laugh at. "You don't, eh? Well, I'll give you some

"You don't, eh? Well, I'll give you something to laugh at. If you know what's healthy for you, you'll laugh at once."

I went to the corner, pressed my head against the tent wall and gave the best imitation of a laugh at my command. When I stopped the Colonel ordered me to continue and I kept it up for several minutes. Then as I paused, he asked:

"Well, are you sick of that laugh yet?"

"Yes, sir."

"You can go. Young man you need a little salt and are not through with me yet."

As I passed out of the tent, I heard one of my pleb neighbors laughing at my performance. The Colonel heard it too, called the pleb over and made him give as vig-orous an exhibition of forced merriment as I had done. A few minutes later, three taps of a drum sounded. Some one cried. "Lights out!" a cadet ran along with a lantern, inquired whether all were in and receiving the reply, "All in, sir," went on to the next tent.

the next tent.

Recalling my farther experience in being hazed. I was once compelled to catch all the flies in a yearling's tent. More properly, I was compelled to make the effort. On another occasion I was obliged to make love to an imaginary being, while the yearling criticised my efforts. All this of course was undignified and afforded plenty of enjoyment to the master of ceremonies, but none of us suffered any physical or mental none of us suffered any physical or mental harm. We took it philosophically and advise all plebs to do the same. Since those days I have laughed with many of those who hazed us and so you will do in the "sweet by and by," to which we all look forward. forward.

Col. Albert L. Mills, superintendent of West Point, has the following to say regarding hazing in his report for 1901:
"While the evidence adduced before the

"While the evidence adduced before the military court of inquiry and the Congressional committee last winter showed that the allegations in the case which led to the inquiries were not true, the evidence laid bare the full extent of the practice as it had existed, and thereby resulted in much good by the public condemnation it evoked and also by the wise legislation that followed the Congressional committee's report.

"The question of the further continuance of any form of hazing was definitely settled in May last. Notwithstanding the lessons of the winter's searching inquiries, it was evident, when in March the candidates for admission appeared to take their commission. examination, that some members of the fourth class felt that attention, other than fourth class felt that attention, other than that exercised by authority, should be given to these prospective newcomers, and one of that class was severely punished for what under other circumstances would have been but a small departure from proper conduct. Shortly thereafter two members of the second class (at that time the senior class at the academy) but helps the serior class at the academy), both being cadet officers, were also punished for offenses connected with hazing.

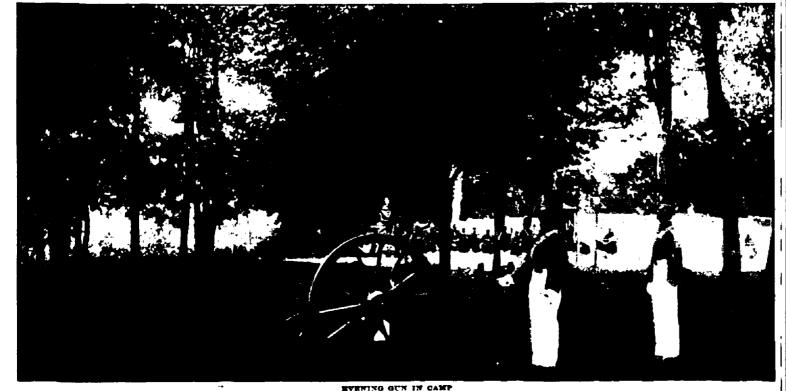

"On April 16 a number of cadets engaged

in an insubordinate demonstration, directed at the superintendent. This demonstration was the outcome of the three punishments above referred to, and was incited by a group of insubordinate cadets of the second group of insubordinate cadets of the seconiclass, who resented the attitude of authority in enforcing to the letter the law forbidding hazing. The instigators of the demonstration were dismissed, the leading participants in it were suspended for a year, and the lesser ones punished according to the degrees of their offense. Regrettable as it was to have to take such drastic measures as dismissals and suspension, no other course was open, as all lesser measures. other course was open, as all lesser measures had failed to secure the desired end."

(To be Continued,)

pleb received the worst trouncing of his life before he faced all the members of the upper class.

But you say, "Why does he not refuse to obey his presecutors and then refuse to fight those who challenge him? He cannot be compelled to fight if he does not wish to and would he not then be relieved of all the members of the whole company turned out to enjoy the whole compa

lived in the tent opposite and that he was sitting there reading his paper by candle light and probably waiting for this very opportunity, for he called out immediately:

"You, man with the horse laugh, come over here and laugh a few lines for me."

There was nothing to do but to rise, dress and enter the lion's den. I began hurriedly robing when the Colonel shouted:

"Never mind dressing; come as you are."

# INDIAN BOYS AT CARLISLE SCHOOL

THE CARLISLE INDIAN SCHOOL BASEBALL TEAM

day in the schoolroom poring over books

THE ambition of the American boy to make something of himself, to work and win his way in the world is rapidly becoming the ambition of the Indian boy also. This may be a surprise to some of our readers for history pictures the "braves" of the red race as strongly inclined to laziness; willing enough to spend their time in hunting and fishing but showing little interest in what the white man regards as real work. The change that is noticeable in a considerable portion of the younger generation of Indians is due in a large measure to the training they receive at the famous Carlisle Indian School, located at the town of Carlisle in the State of Pennsylvania.

As most boys know the United States gov-

self-help is the keyto be self-reliant and independent and to
to be self-reliant and independent and to
to be self-reliant and independent and to

the possibly can.

The toil of the Indian boys in the workshops at Carlisle in of the State of Pennsylvania.

As most boys know the United States government regards the Indians who are left
in this country as its wards, that is subjects for its care and protection, and so the
government provides schools for the education of the Indian boys and girls who are
growing up. Many of these schools
are located on the Indian reservations or tracts of lands in the west
which Unice Sam has set aside as
permanent homes for the last of
the race which once roamed over
our entire country, and at most
such as they will need in
their every-day life on the
Western plains. At one
school, however, that at Carlisic, the Indian poys who go to
the framous institution at
Carlisle are taught first of
all to speak English and
given a primary education Just such as they

its results. Take for instance the case of the printing office. Here the boys who are
its results. Take for instance the case of the printing office. Here the boys done in mere play either in
the print public school; but yet more important, perhaps, is the fact that they are also given a systematic training to enable them to take their places beside the "pale faces" this increase and most famous of indian monograding. It is in this respect that this largest and most famous of indian monograding. It is in this respect that this largest and most famous of indian and practical industres of some common and practical industres of some common and practical industres of the solution of the constant of the cons

to take their places beside the "pale faces" in moneymaking. It is in this respect that this largest and most famous of Indian schools differs from all other schools for educating the children of the forest. Its main object is to give each pupil knowledge of some common and practical industry so that he will always have some means of support among civilized people.

An Indian boy entering Carlisle may fit himself for almost any occupation to which he feels attracted. Among the other pursuits taught are printing, blacksmithing, shoemaking, harness-making, tailoring, wagon-making, carpentering, painting and tinning as well as farming and the care of stock. Each boy at Carlisle devotes half of each day to work and the remaining half to study. That is, he spends half of the

**TOUNG CARPENTERS** 

summer for all the boys who wish to earn money for the ensuing year. At first the owners of shops and farms were afraid to trust the Indian boys and places could be found for only about a dozen of them, but they proved so quiet and respectful in manner and such good workers that it was only a few years until employers were eager to secure their services at vacation time. Now between three hundred and four hundred of the Indian boys go from Carlist to take vacation positions each summer, and places could easily be found for twice as many boys so great is the demand. The boys as a whole earn from \$10,000 to \$15,000 each summer and fully one-half of this amount is deposited in the school savings bank, each lad putting away more or less of his earnings for future use.

of his earnings for future use.

The average Indian boy spends about ten years at the Carlisle School. He arrives wearing a blanket, paint and feathers, but when he leaves he looks so much like a typical, healthy American boy that he would scarce attract attention on the street. Formerly the boys graduated after passing through the grammar grades but now the graduation point is fixed midway in the High School course. Of late years the Indian boys at Carlisle have been going in strong for athletics. They have a splendid gymnasium and their baseball and football teams have made a good showing against the teams from leading American colleges. The boys also have a glee club and a mili-The boys also have a glee club and a mili-

tary band of thirty pieces which plays for all the drills and parades of the school day in the schoolroom poring over books just as does any schoolboy of his age, while the remaining hours of the day are spent in one or another of the workshops learning to work with his hands. Self-help is the keynote in this work and the boy must learn to be self-reliant and independent and to work out things for himself in so far as he possibly can.

### One of The Most Glorious Deeds Ever Done by a Boy By GEORGE A. WADE

The British boy of the great public schools will take some beating in most things. He has long been one of my favorites. He wants knowing, but when you do understand him he is one of the finest fel-lows in the world! He may be active or

lows in the world! He may be active or indolent; brilliant or slow; a plodder or a lazy-bones. He may be shy or impudently forward; he may be in the first form or in the sixth; he may be always grumbling at the grub or buying tuck at the shop; he may be a duffer at cricket or the hero of athletic feats of note.

Whatever he is in the above respects, he is always one thing—he is alert enough and ready when you try to make out that any rival school is better than his! He soon gets his back up if you suggest that Wellington, Harrow, or Westminster, Eton, Rugby or Winchester, whichever he may belong to, is any whit behind its compeers in any respects. He is all for his own school out-and-out, You never yet found any Winchester youth who shouted for Eton's team—except sarcastically!—in the annual cricket match, nor did you ever find a Carthusian who would admit that Westminster was superior to his own school team in football.

And this is just as it should be. The average British youth of the schools is a

team in football.

And this is just as it should be. The average British youth of the schools is a fine specimen, indeed. He goes in to win; he goes in tooth and nall for his own side; his motto is not personal glory, but "The School." And so I take off my hat to him, and he has always my best wishes, whether he be one of the coat-tailed fraternity of Harrow's sixth, or wears the yellow stockings of Christ's Hospital, or dons the pink jacket of Westminster, or plays football in the striped jersey of Marlborough! Here's to the brave, whole-hearted, manly British schoolboy!

of the stirring tales of the nineteenth century to show you what this lad did.

The Birkenhead, a celebrated troopship, left England with soldiers for the East at the beginning of the year 1852. Off the coast of Africa she struck a hidden rock and immediately began to sink. It was impossible to rescue even a tithe of the women and children on board by means of the boats, let alone the soldiers and crew, and they all knew it. Then you will recollect how the officers formed the brave troops into line on deck, how they all stood motionless, watching the ship sink lower, watching their loved ones carried weeping away in the boats. You know how, as the vessel gave a last plunge, the men all saluted their officers, and went gloriously and heroically to the terrible deaths that awaited them from the fierce waters and the still flercer sharks that swam round in greedy anticipation of the coming orgic. But most of you who read this do not know what a tremendous thrill of sorrow, mingled with a still greater feeling of pride, passed through the breast of every Briton that morning when he read the story in his newspaper. There was hardly a living Englishman that day who did not feel his pulses beat quicker; for was he not one of this splendid race that had thus shown the world how to die nobly? The grand old Kalser William I. of Prussia issued an order that the inspiring tale should be read aloud to every regiment as it stood on parade, so that German soldiers might learn what discipline, obedience, and true heroism really meant!

As the boats were about to leave the doomed ship the captain of the Birkenhead ordered a how officer of the Tith Herbley.

learn what discipline, obedience, and true heroism really meant!

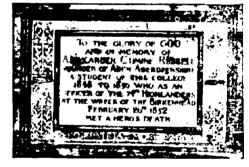

As the boats were about to leave the doomed ship the captain of the Birkenhead ordered a boy officer of the 74th Highlanders, who was in one of them, to commanit till it should reach land, if necessary. He was but seventeen, this youthful Scottish Highlander of the gallant 74th; he had only just previously left the Glenalmond School. He was a quiet, unassuming lad, and his name was Alexander Cumine Russell.

What did he think as the soldiers rowed off, and he sat there in the bow of the boat? He watched the ship sinking fast; he discerned the terrible forms of those monsters of the deep waiting for their prey; he heard the snap as their teeth met in the bodies of ill-fated men who were already overboard. Did he think of the old school and of the old boys? Did he see his old home at Aden, Aberdeenshire, and hear the prayers of his mother, the unspoken words of his father, for their boy, who was then, though unknown to them, so deeply "in peril on the sea"?

We cannot say; but doubtless the mind of Alexander Rus ell wandered far in those awful minutes. He recollected that he, at any rate, would probably be saved, as he waved his hand sadly in farewell to his brother-officers and men on the sinking vessel.

brother-officers and men on the sinking vessel.

The boat was crowded so full that there was not room for a single soul more. As it was, she floated deep in the water owing to her weight. Then as the Birkenhead sank in the swirl, there came a terrible sight, and those on the boat closed their eyes to shut it out. But a despairing cry

TABLET ERECTED AT GLENALMOND COLLEGE TO THE MEMORY OF ALEXANDER CUMINE RUSSELL

aroused them, and they saw the appealing eyes of a drowning sallor as he put out his hand to grasp the side of their boat.

In vain! Their hearts bled for him; his beseeching look cut them to the quick. But what could they do? To take him in meant certain sinking of the craft. Some one gently pushed that grasping hand away. Then a woman's shrick rang on the air. It was that of a mother in the boat, who held a child huddled to her, and wept bitterly.

who held a child nuoned to net, bitterly.

"Oh, save him! Save him!" she cried in agony. "Save him! It is my husband!"

Alexander Cumine Russell glanced round. No! No room in that boat even for one soul more! He looked at the sailor drowning before his eyes; he looked at the dreaded sharks circling nearer each minute; he looked at the woman and her child.

Then he rose, slowly, and, with the simple words "God bless you all!" he sprang into the raging sea, helped the drowning man

words "God bless you all!" he sprang into the raging sea, helped the drowning man into what had been his own place and safety, and turned from the boat.

Strong men wept as they saw one of the noblest deeds that ever schoolboy did. Women cried out "God bless you, sir!" and went almost delirious in their excitement. The calmer ones prayed for the no-(Continued on page 83.)

### A BRUSH WITH CHINESE PIRATES.

"In '57 I shipped as mate aboard the Boston bark 'Cedar' bound from Newport to Hong Kong. At that time lots of Chinese pirates used to put out in junks, pretending they were honest traders or fishermen. and wait for the ships expected at Hong Kong.
"We sighted three of these craft when we

lay becalmed about a hundred miles from port. Their decks simply swarmed with men, and they had lots of the queerest looking guns you ever saw, with mouths just like grinning dragons.

dragons.

"We lay there, unable to move, and the Chinamen came down on us mighty quick, rowling with long sweeps. Two of them attacked us on the starboard quarter, and the third held off for a few minutes to see where she could do us the most harm.

most harm.
"In those days merchant ships that did business in the China seas used to go well twis necessary. We had two husiness in the China seas used to go well armed. It was necessary. We had two eighteen-pounders aft, and we poured shot from them on the decks of the two junks as they came un on our starboard quarter. We let them come close, and simply swept their crowded decks. Scores of Chinamen fell dead or dying, and there was the greatest confusion on both of the junks. Half the men at the sweeps were killed, and it was some time before they could get under way again and sheer off out of range.

"Meanwhile, the third junk tried to cre-

"Meanwhile, the third junk tried to create a diversion and give them a better chance to get away. Her skipper noticed chance to get away. Her skipper noticed that both of our eighteen-pounders were aft, and he figured that we had no guns forward, so he tried to run his junk across our hows. But we had two old six-pounders there which we had not fired, and we raked him with them, until he also was obliged to sheer off.

"The Chinamen's guns were of little use. They were jingals, loaded with rusty nails, stones and any old thing that came handy. But, like nearly all guns in China, they had been kept in wretched condition, and were more dangerous to those who fired them than they were to us. One of them hurst on the deck of the junk that crossed our bows, and killed a num-

and killed a num-ber of men. Only two of our crew were wounded, and most of the enemy's shot went high and simply tore holes in our sails, that were flapping idly in the

breeze.
"The junks soon

man, and sighted the three junks after he had cruised about for five days. They crept upon him, and he allowed them to come within a few cables' length before he opened fire. He let them have all his guns at once, and the marines poured in a murderous fire with their muskets. Two of the junks, struck below the water line, sunk almost immediately. The other was captured, after more than half of her crew had been killed."

Another old skipper told of cruising off the coasts of Sumatra and Java when krakatoa blew up in 1883. He was seven hundred miles from the volcano at the time, but the deck of his vessel was covered with volcanic dust and ashes, and she was nearly submerged by a terrific tidal wave. "It seemed as if all the water in the ocean was standing up on end and balancing us on the ton" he said

seemed as if all the water in the ocean was standing up on end and balancing us on pelivered anywhere in the united states \$250 the top," he said.

### THE CHEESE THAT WON A BATTLE.

A forgotten naval war—quite possibly a hypothetical one—between Argentina and Uruguay formed the theme of a tough old mariner who boasted that he had seen service in half a dozen South American navies. "I was serving on the Buenos Ayres frigate," he said, "and the Monte Video captain had only a small brig. We didn't talk of Argentina and Uruguay in those days: it was Buenos Ayres and Monte Video. We thought our frigate had an easy job finishing off their little brig, and for a time we hammered 'em good and plenty at short range.

range.

"After a time, their fire slackened, and then their gunnery lootenant goes up to their skipper and he says:

"'Cap'en, there ain't no more ammunition—not a cannon ball in the ship.'

"'Any powder?' asks the skipper.

"'Plenty,' says the mate.

"The skipper thinks a minute, and then remembers a lot of Dutch cheeses which they took off a galliout they cantured the

# Such a one was an old Scandinavian mate A RULER OF 130,000,000 SUBJECTS who told an exciting story of Chinese A RULER OF 130,000,000 SUBJECTS

HE Czar of Russia is at once the wealthlest and wealthiest and the mightiest monarch from a personal point of view in the world. He has under his sway some one hundred and thirty million subjects, and of no other Christian ruler can it be said that his word is law. The Czar's word is law, no matter what it may be. He stands on a pedestal absolutely by himself, an autocrat in every sense. In him is vested nothing short of the entire power of Russia.

As regards wealth

of the entire power of Russia.

As regards wealth, the weight of the Czar's purse cannot be estimated with any pretense to strict accuracy. It

As regards wealth, the weight of the Czar's purse cannot be estimated with any pretense to strict accuracy. It may not be boundless, but his yearly income must run into several millions sterling—three at the least. The Crown domains consist of over a million square miles of cultivated land and forests. On this vast tract are several gold mines, and every penny that they produce goes direct into the Czar's private property is regarded as belonging exclusively to the monarch.

Exar's twhereabouts in the room.

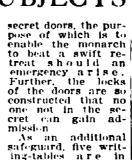

There are probably scores of fanatics who are ready to take the Czar's life, yet his Majesty personally is one of the most humane of men, gentle, patient, and charlitable. In times of famine he contributes thousands to the sufferers, while as a most duce goes direct into the Czar's private almost the whole morning wading through the budget, for the simple reason that the property is regarded as belonging exclusively to the monarch.

rarely free from melancholy. The shadow of the assassin is ever present before the monarch's eyes. Since 1762 four rulers of Russia have met with violent ends—Peter III. in 1762, Ivan VI. in 1764, Paul in 1801, and Alexander II. in 1881.

Nicholas II. himself has narrowly escaped death on more than one occasion. Once

death on more than one occasion. Once when he was traveling by train he was all but blown up by a gang of Nihilists, and again when he was visiting Japan he was attacked by a funatical policeman. No one knows better than the Czar the dangers to which he is exposed. Keeneyed criminal trackers patrol the royal residences, and so widespread is the fear of danger on the part of those whose duty of danger on the part of those whose duty it is to watch over the Czar that even this precaution is not considered sufficient.

The servants in the royal household themselves are not above suspicion. In order to render protection doubly certain the Czar passes the major portion of his working days in an assassin-proof chamber. The walls of his study are lined with "The junks soon The walls of his study are lined with had enough of it sheets of steel, and the room has several

As an additional safeguard, five writing-tables are in the Czar's study. These the monarch uses by turns the object of this maneuver being to prevent persons not in the royal confidence from having the slightest inkling as to his Majesty's exact whereabouts in the room.

sively to the monarch.

The Russian Court is perhaps the most splendid in Europe. The entertainments are unsurpassed the world over; money flows like water; yet the central figure is rarely free from melancholy. The shoater is the state documents that do not filter through the hands of the Czar, but no matter what demands are made upon his time by his ministers he always readily and cheerfully responds. Even perhaps the shoater it is to be shoater than the shoa number thousands in Russia—he reads through himself. The Czar may be a despot, but he does

not always exercise his rights as one. Peace, quietude, and the society of children are what he loves best, and it is in the bosom of his family that he finds the only rest from the care and anxiety arising from the war in the Far East.

He is not much of an athlete or sports-man, but he is a fair oarsman. When he was in England as Czarewitch he frequentwent down to the Thames and hired an ordinary rowing boat to indulge in a little sculling.

The Emperor is an omnivorous reader. He is a fine linguist, and can both read and speak English, French, Italian, and German with as much fluency as he can Russian. Of medium height, rale, delicate, and wearing a short beard, he resembles his cousin the Prince of Wales to a remarkable degree. Both he and the Czarina favor English methods, particularly in regard to cooking and the bringing up of children. children.

Mention This Paper When Answering Ads.

And on the other hand nothing will make and our own broad, free country is than a conjourn of some months in the old lands on the other side of the Atlantic Ocean.

I was a freshman at Pennsylvania theyear of the Paris Exposition, and how i worked to get on the team which the Unitarian Exposition to comprete in the track and field games there. But it was of no avail; I was not good enough, so the team sailed off without me; but I then and there resolved to see the other side of the ocean even though I had to go alone. After two more years at Penn I was able to do evens in the hundred yards and better in the two-twenty, thanks to the excellent training I had received, so in the summer of 1902 two other track athletes from Penn and myself sailed away to try our luck against this ritishers. We had rough luck at first We settled in Manchester to get into shape, and it just seemed to rain every day. I will not forget my first race on British soil very soon, I was beaten about eight yards in the century dash. But clearer weather came on eventually, and we all "Kot going" in something like our real style, until after a stay of over two months we had quite a store of watches, clocks, siverware, rinus, leather goods, and almost everything else thinkable.

The summer of 1903 found me over again alone, but I did not get so lonely, in spare time I wrote articles for the Philadelphia newspapers (for which there is always a ready welcome and good pay if one is sufficiently versed in athletics to comment to centrast and to correspond). I frequented the public libraries where the newspapers from all over the United Kingdom were on file fresh daily, or visited historic old eastles, well stored museums, art galleries, asked innumerable questions of all kinds of people as to how they did things, and incidentally accumulated another trunk load of valuable prizes to take home with me in September.

After the courts closed this last summer I went out into the counties within a radius of forty miles of Philadelphia, not a few days wa

for American farms, secured a good responsible agent in each of over a dozen cities, and furnished them descriptions of the farms I had for sale. I took note also of articles which sell in Great Britain for prices on what is asked considerably in excess of what is asked for the same article in America; for instance, tomatoes sell for as much as sixpence per pound, in Philadelphia they are worth about twenty-five cents per half bushel in about twenty-five cents per half bushel in season, so to satisfy my own curlosity I wrote my partner in Philadelphia to send me over a bushel, picked in three stages of ripeness, some green, some just turning yellow, and some turning red. They arrived in Manchester in good condition, in fact could have been picked much riper, and I had no difficulty in disposing of them. The only adverse comment I received on them over there was that they were so large (and they were beauties) that a small storekeeper would be unable to sell a half pound of them.

There is a fine market in

pound of them.
There is a fine market in England for American anples; they sell at fabulous prices, and anyone having an oversupply could dispose of all he had by communicatin; with the mayor of any British city asking to be referred to a responsible commission mersion merchant, and simply ship them to him. met a gen-le man on

the steamer the steamer coming back who told me that in his section (near Seattle), the buyers for

buyers for big British houses pay \$1.50 per half the LITTLE BROTHER OF THE bushel box for "king pippins." With a dozen projective trees to the acre that beats growing wheat "all bullow"

hollow As to my races this summer. I managed to defeat nearly every British sprinter of note. The British are not quite as fast as americans over the hundred, though they are terrors at long distance races. I found that my sedentary occupation of practicing law was a whole lot different from being trained from the Christmas holidays until June, for when I left the office this summer and did my first training of the season on the other side it took no end of work to get "fit;" indeed a considerable portion of the season passed before I could do anything like respectable times. Finally however I got down to something like condition, and my last race, at Abertillery. Wales, was quite fast. It was a 100 yards international invitation race. Duffey had entered but did not come down. E. R. Cooper of Birmingham was on 2 yards, and all the other competitors on the five As to my races this summer. I managed to and all the other competitors on the five yard mark, excepting myself at scratch. There were five heats, three of which were run in 10 seconds flat, so I knew I would have to step pretty lively to win. In the final we all got off like a covey of quail at the pistol. I caught the bunch at fifty

27, 4 guinea watch chain, first prize in 120 yards handleap race, seventy competitors, conceding 10 yards to the limit men. Wednesday, Aug. 24th, 10 guinea watch, first prize, 100 yards invitation scratch race at Rochdale. Arthur Duffey, the famous American sprinter, competed, but after taking a flyer in the final heat refused to run the race over, so we ran it off without him at the direction of the officials of

THE LITTLE BROTHER OF THE GREAT SPRINTER, J. S. WESTNEY, WEARING THE LATTER'S CHAMPIONSHIP BADGES WON IN THE UNITED STATES AND GREAT BRITAIN

the meet. Morton, the English champion, was present but did no compete.
Tuesday, August 23d, 3 guinea watch, Bolton Wanderers' sports, at Bolton, 100 yards seguited range agents. Thesday, August 23d, 3 guinea watch, Bolton Wanderers' sports, at Bolton, 100 yards scratch race, second prize. Morton was awarded first place. Concerning this race Mr. J. Knight, the official handicapper of the Northern Counties Athletic Association, says: "In the matter of placings, however. I would say that I was in a direct line with the tape near the judges, and have no hesitation in expressing my confident opinion that Westney won by a good six inches, and think Morton, had he been asked, would have said the same." Morton claimed to have a bad leg at the time. I was rather sorry to lose that decision as I had defeated Arthur Duffey in a scratch race in Glasgow earlier in the season (Duffey is not going as fast as he used to (Duffey is not going as fast as he used to do), and had defeated every other champion in the islands with the exception of Morton.

However, better luck next time, and the world does not like a bad loser anyway.

In conclusion if you want to kill two birds with one stone arrange with a few newspapers to supply them with sporting or other news while over, then travel about competing in the open amateur games and

There are thousands of young men in the United States who ought to take a course of instruction in some reliable correspondence school. The fact is there are a great many young men who left school without completing the course of study. They now see their mistake. The best way to rectify it is to devote their evenings to study, to self-improvement. These young men are up against the problem of life without the ability to analyze it, much less to solve it; but they can yet avoid failure by self culture.

### This Will Surprise You

for you would most likely never even think of the country in question, because you hardly ever hear of it except as a joke. It is the fat, little, rich, exclusive Grand Duchy of Luxemburg. And after Luxemburg comes little Denmark. And then comes Switzerland. The big fellows follow for helping.

ow far behind.

Do you know what country has the most railroad tracks in proportion to its area." Now please, please don't say Russia, because you would be 'way off the track. Russia is second from the foot. Norway sits at the foot of the class. The country that leads is Belgium. Luxemburg comes next

Young Smith, there, who always jumps at conclusions, we just ask you what country has the least miles of railroad in Europe, not in proportion to area or population, but just the least total length of railroad track. Just as we thought! Young Smith jumps at the cinclusion that it's Turkey. That's necause Smith has heard so much about the "sick man of Europe." Smith, Smith, you must look before you leap. Turkey is a good nine away from the foot, and that is farther than young Smith will be if he keeps on guessing at things.

Greece is the country that has the least railroads, except Servia, and we can hard-live count that for Servia is only toes.

rairoads, except Servia, and we can hardly count that, for Servia is only just beginning to do business in a modern way. Fortugal is away down near the foot too

In The Old Country

Note: The Ol

THE VILLAGE CHAMPION, by W. O. Stod-THE VILLAGE CHAMPION, by W. O. Stordard. A stirring, wholesome, entertaining story of schoolboy life in a small New England town. Barnaby Vernon freed from the tolls of the wicked Major Montague and sent with Val Manning to Dr. Dryer's academy at Oglethorpe, shows himself to be bright, energetic and full of life. He early becomes the leader of the boys and takes them into all kinds of mischief, but ever shows himself their friend and champion, and proves himself a faithful, loyal ally at all times. The author has written a book which any healthy, fun-loying boy will not fail in pronouncing as one of the best. The lills trations are good and apt. 394 pages Price, \$1.00 net. George W. Jacobs & Co.

Price, \$1.00 net. George W. Jacobs & Co.

ON THE TRAIL OF PONTIAC, by Edward Stratemeyer. With this volume Mr. Stratemeyer completes the fourth of his "Colonial Series." The time of this story is shortly after the fall of Montreal, which ended the var between the British and French. The indux of white plones s, hunters, trappes and backwoodsmen to the country waviewed with anger by the Indians whose hunting grounds were taken possession of bithe invaders, and this hatred was fanned by the jealousy of the Frenchmen against their English conquerors. The principal character of the story are our old friends, Sam Barringford, sturdy old hero; Henry Morris and his cousin Dave. White Buffalo, the frandly Delaware and the villian, Jean Bevoir. Threader also gets acquainted with the celebrated Indian chief, Pontiac, and his efforts in organizing the great Indian uprising against the whites, known as Pontiac's Conspiracy. Not only the book, but those older will enjoy the book for the historical facts which it contains. Besides, it is a real Indian story with plenty of fighting, hunting, trapping, and narrow escapes from man and wild heast; and where is the boy who does not enjoy such. It will make a nice Christmas gift. Illustrations by A. B. Shute. 31 pages. Price, \$1.25. Lee & Shepard.

TWO YOUNG INVENTORS, by Alvah Milton Kerr. This is a story of excitement and

TWO YOUNG INVENTORS, by Alvah Milton Kerr. This is a story of excitement and thrills. A Minnesota cyclone is the means of bringing Dannie Dool and Thad Mandon together. Both have the faculty for invention Together they invent the New Marvel, a beat which both skims the water and files in the air. Their adventures on Lake Supe for with the flying boat are varied and exciting, but the climax is reached when they capture a train robber and bring a number of people safely three and increase in the Minnesota cyclone which affected his speech and memory, and his recovery is a not uninteresting part of the story. Mr. Kerr's long experience in railroading enables him to give the reader quite a lot of technical information in a delightful way. No parent will object to seeing this book in his boy's hands. The pictures are by G. W. Picknell. 312 pages. Price, \$1.25 Lee & Shepard. WO YOUNG INVENTORS, by Alvah Milton

Lee & Shepard. Lee & Shepard.

MY PAINTED TREE AND OTHER POEMS, by Allen Ayrault Green. A dainty little book of dainty verse. The poems are mostly intended for the little folks to be read by the "little mother" when the evening shadows have fallen, and both the reader and the listeners will get much enjoyment in the reading. The many pictures by the author, which adorn the pages, are works of art. The printing and get up of the book give evidence also of the author's versatility as well as artistic taste.

well as artistic taste.

TWENTIETH CENTURY FABLES, by Lamar Strickland Payne. It may be that Mr. Payne's effort in enforcing useful, wholesome truths and satirizing modern society fads and frailties by means of fables, may probably have a better effect than if conveyed in plainer language. The humor and good nature which the author exhibits throughout will be keenly enjoyed, altho', perhaps, we might deprecate the too liberal use of slang. The numerous illustrations by O'Malley help the text. 64 pages. B:oadway Publishing Co.

A BOY ON A FARM, by Jacob Abbott, edited by Clifton Johnson with an Introduction by Dr. Lyman Abbott. The boys and girls of the third school year will find this little volume easy to read and understand. Like all of Abbott's books for young people, lesall of Abbott's books for young people, lessons of gentieness, kindness, sympathy and helpfulness are taught by the simple stories. The book is one of the Eclectic School Readings and is nicely illustrated. 182 pages. Price, 45 cents. American Book Co.

The book is one of the Ectectic School Readings and is nicely illustrated. 182 pages. Price, 45 cents. American Book Co. THE MYSTERIOUS BEACON LIGHT, by George E. Walsh. The good ship, "Morning Star," New Bedford for Newfoundland, has among her crew Louis Pendleton, son of the captain and owner, and his three school chums. Frank Williston, Harold Bambri'ge and Warren Pitt. Eager to make close acquaintance with an iceberg, the four boys leave the ship while on the Labrador coast, and land on one. Here their troubles begin. A storm arises and they are unable to return to the ship, but after much difficulty they succeed in reaching land not far distant. Exciting adventures with wreckers, and the destruction of a false beacon light lead to further flight, winding up with the finding of a lost ship and their return to the "Morning Star." There is plenty of action, and excitement enough to please any boy. The illustrations are by Arthur E. Becher. 35: pages. Price, \$1.50. Little, Brown & Co.
BOYS OF THE STREET. HOW TO WIN THEM, by Charles Strizle, Mr. Stelzle ha had over twenty years' experience with an I among hoys, and what he advocates on their behalf is worthy of serious thought by those having the good of the boy at heart. The author does not pretend to set forth an infallible recipe for leading the boy away from the street and its down dragging tendencies; but simply records some of the roeans which have been tested and found successful. The contents of this little volume consist of tenchanters, the titles of which are: "Wh'. Boys' Work is Needed." "The Object of the Work." "Various Kinds of Clubs," "Some Thinss That a Club May Do," "A Boys' Club. Constitution." "The Headouarters of the Some General Observations." So pages. Price 50 cents, net. Fleming H. Revell Co.

Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns.

### How Two Boys Built Wireless Telegraph Instruments

By ROBT. G. GRISWOLD

Oh, that is easy enough. Fasten the support to the floor, first spreading lots support to the floor, first spreading lots of newspapers down to catch any drops of oil. Then pass a string around one flange and then around the fly-wheel of mother's sewing machine. One of you can guide the wire while the other turns." "That's bully!"

"Now as you wind each layer of the primary, give it a coat of shellac varnish and after the last layer is wound and the end passed through the hole in the flange, bake it again."

"Why is so much baking necessary. Uncle

This space filled with Ill layers Stake h showing method of bringing ours and throw out from and layer to the mant.

trow man and set shout one-and-a-quarter pounds of soft iron wire such as they use for putting up pipe. It is about No. Straighted ungets to make a next cylindrical pile one inch in diameter. Make a next cylindrical pile one inch in diameter. Make a next cylindrical pile one inch in diameter. Make a next cylindrical pile one inch in diameter. Make the such these wires into a nout bundle and bind the such that for under the bundle in a small frough made of a piece of sheet from and the such that for under two hours. The process anneals the wire and end of the manual trough made of a piece of sheet from and the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that for under the hours are not about the such that the such that the hours are not about the such that the suc

the outside.

"Your coil will now he ready for winding the primary which is composed of four layers of No. 16 double cotton covered magnet wire. Then make a support upon which it can turn, by nailing two upright pieces to the ends of a hoard seven-and-ahalf inches long and drive an eight-penny wire nail through the upper end of each. These will enter the little holes already drilled in the core ends and enable the core to be turned easily for winding."

"Rut Track Henry, how shall we turn the core? We have no lathe."

when the winding is initial, but the wire out through a small hole in the flange opposite to that through which the wire started."

"Suppose we break the wire, it is so yery fine?"

wery fine?"
"Well, then you must solder it together very carefully and continue the wrapping as before. And over the last layer must be wrapped at least an eighth of an inch of oiled paper or cloth, because the spark is likely to jump back to this layer if not thus prevented.

"Now we have finished the hardest part of the whole construction, and the coil is ready for mounting; I think you had better put both the sending and receiving instruments on the one board. Make it of well-seasoned white pine about twelve inches wide and eighteen inches long. Give it two coats of shellac varnish on both sides after heating it for a day or so in the oven. I am giving you this precaution because a damp baseboard has been

"Say, Paul, let's ask Uncle Henry to show us how to build a set of wireless telegraph instruments. If we can make them, we can telegraph to one another across the river."

"Good, Lynn, I'm with you! When will Uncle Henry be home?"

"He got home from San Francisco last evening. You know he was inspecting a wireless installation near there."

"Do you think, Paul, a set of instruments that we could build would be capable of sending a message from your home to mine? It is over a mile."

"I think so. Anyway, Uncle Henry can fix that for us. There he is in his study now. Let us ask him at once.

Bursting into the study they both exclaimed, "Uncle Henry we want to build a wireless; will you show us how?"

"Well, you su the study they both exclaimed, "Uncle Henry want to become young Marconis, do you? Very well."

"Well; solve want to become young Marconis, do you? Very well."

"Well, solve want to become young Marconis, do you? Very well."

"Well, you want to become young Marconis, do you? Very well."

"Well, you want to become young Marconis, do you? Very well."

"Well, you want me to make a sketch of them? All right.

"But why couldn't all this baking be done at once. Uncle Henry." after the capacity of the first place you will have just a little; jaring the most place of the first place you will have just a little; jaring the most place of the first place you will have just a little; jaring the most place of the first place you will have just a little; jaring the most place of the first place you will have just a little; jaring the most place of the first place you will have you have to make a sketch of them? All right.

"But why couldn't all this baking be done at once, Uncle Henry." after the corn, after the corn, after the last layer of the large of the corn in the surface of water. If this was now to corn the for charge of water, if this must now be very thoroughly insulated because the very high good tools can be had at nearly every hardware store or general store in the capacity of linen souked in a brite and country.

For ordinary work you will require a good rip and crosseut saw, with twenty and twenty-four inch blades respectively, a claw hammer and a smaller one, a wooden mallet for chisels and to knock the lap joints of wood together, a jack and a smoothing plane, a compass saw, a brace and several sizes of bats ranging from a quarter to one inch in diameter, a draw knife, square, awls, pilers, rule, several chisels, a screwdriver and a few other tools that will become useful at times, but which can be added as they are required.—St. Nicholas.

### Great Talent in the Rough

A letter sent us by a friend in Hillsdale. Mich., will prove of interest to every one who likes to read about boys who early display talent in the line of mechanics and electricity. The letter reads as follows:

and electricity. The letter reads as follows:

In the July number we notice the account of a little locomotive eagine to be seen at the St. Louis fair, made by Frank C. Newell. It had a great interest for us, largely perhaps because it was here at our own college that ition J. Arnold, while a student, constructed his first engine, although his was a real engine. He had it cast of iron, and in his room constructed a track of iron rails on which the little engine ran, propelled by real steam. The college and people of Hillsdale are very proud of Mr. Arnold, as it was here that his genius first manifested itself. This fact, perhaps, gives us added keenness to notice others of like tendencies.

Jesse Spence, a little son of Dr. F. H. Spence, of this city, has shown marked machine in the house, with device attached to start and stop machine at will; also

# The Drawing-Room Magician For Preceding Chapters See December, 1903, January, :: February, August and Octtober, 1904, Numbers:: which is performed with the aid of either of the two larger wooden boxes, according to the size of the rabbit. As this illusion is something like one we have had before, it is not recommended that it be given in the same programme with the other; it will instead make a nice variation. Boys Who Wrote Famous Books By G. A. WADE.

Chapter VI.—The Box Trick—The ing care, however, as to the minner in which you tie it up. Disappearing Handkerchief

The Bisappearing Handkerchief.

As an opening trick I have often seen the following go very well. The magician, having made a few appropriate remarks, produces a small red silk (by the method largely to a modern illusionist, Mr. Arthur R. Bullivant, who has done a deal to simplify the working of many old and established tricks. In this particular case—as in the feat of watch shooting, mentioned in a previous chapter—both an assistant and the magic pistol are requisite; the only other necessaries are three wooden hoves a feat and the magic pistol are requisite;

sistant and the magic pistol are requisite; the only other necessaries are three wooden boxes, a foot or two of tape, and a piece of sealing-wax.

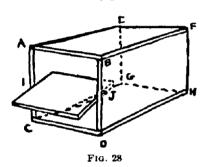

The performer brings forward three plain boxes of white wood, the smallest of which measures roughly 8 in. by 4 in. by 4 in., the other two being proportionately larger, so that the third will fit easily into the second and the second easily into the first. Each is shown to be empty, and to prove there are no false bottoms in either of the boxes any member of the audience is invited to make whatever measurements

of the boxes any member of the audience is invited to make whatever measurements he likes. In full view of the spectators the smallest box, A. is placed within B, and B is then put in C, which is tigh ly tied up and sealed.

A watch is then borrowed, placed in the pistol, and fired. On their being opened, the watch is found in the smallest of the three boxes. This bewildering feat is done on very simple lines. The use and construction of the magic pistol have already been explained, so but little more will need to be said concerning them; all that calls for attention is the boxes.

calls for attention is the boxes.

As I propose to explain later how the largest of these may be utilized for the rabbit trick—in fact the next size might well be used with a pigeon—I suggest that

both of them should have two or three holes bored in the lids to enable the animal when inside to breathe; but at present I wish to draw your attention to the modus operandi of the box trick alone. Boxes 1 and 2 are quite ordinary, but No. 3, the smallest, has a specialty, and it is this, that even if it is tied up and sealed—but not being put within the larger boxes—small articles can be inserted or extracted, as necessity may require, at the will of the performer. He is enabled to do this by means of one of the ends being "faked," for, instead of having it nailed like the other sides, it is only kept in place by two nails, one in each side, at the middle, so that when either the top or the bottom of the end so made is pushed the hand may be thrust into the box (see fig. 28)—i. e., this end practically works on a pivot. Experience has taught me that one of the smaller sides so treated is preferable, though, by having one of the larger on this principle, bigger articles may be put in the box.

As I have described the trick you will

on this principle, bigger articles may be put in the box.

As I have described the trick you will remember in this case the little box is not even tied, but while on the subject of "tying" I may as well give you a wrinkle as to the hest manner in which to do it. As the side moves inward and outwards (see above illustration) you will in tying it run the tape round as in fig. 20, for to the it up at right angles to the axis on which the piece of wood turns would render insertion and extraction of articles an impossibility.

When does the conjurer put the watch in the small box? I have said that first of

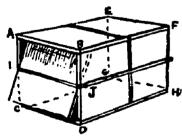

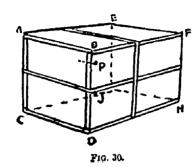

Fig. 29.

all he shows the three to be empty, and there they remain empty on the table even till they are tied and sealed. Now, to the back of the table has been fixed the servante. The conjurer obtains possession of the watch by "palming" the cup in which it is from the pistol (see, Watch-shooting Trick), and then places it on the servante whilst engaged in sealing the tape. He then walks away a few paces, fires the pistol and proceeds to undo the boxes.

Having broken the wax he pulls out box No. 2, puts it in front of the largest, then takes out the smallestwhich he sets down on top of the largest, one small end facing the audience and the movable end nearest to him. Whilst talking about the impossibility of his having been able to put anything inside, owing to the fact that the fastenings were intact, he pushes in the top part of the movable side, thus allowing for the insertion of the watch, which he places inside, presses the side flush, and then walks towards the spectators with the small box, still closed you will notice, in his hand. Raising the lid he discloses within the borrowed chronemeter. Should the magician fear there is any liability of the moving end being discovered, he can obviate this by boring a little hole through the side of the box, and having handy a tiny pin or nail push this into the hole, thus keeping the side fixed. (See fig. 30.)

Should you prefer it you can perform the

Should you prefer it you can perform the same trick using this small box alone, tak-

red handkerchief, which now is in full

red handkerchief which now is in full view of the spectators.

Over each end of the glass he puts a hand; then, holding the cylinder horizontally, he moves it upwards and downwards a foot or two, counting as he does so "One! Two! Three!" Immediately the word "Three!" is said, the handkerchief disappears from the tube, the conjurer turns back both sleeves and hands the cylinder round for examination.

No expense whatever is attached to this trick except the cost of the glass cylinder, which must be perfectly straight, and may be purchased from any lamp stor for ten cents. The only other piece of apparatus required is a length of elistic measuring from 18 to 20 inches, according to the length of the performer's arm. One end of this elastic is sewn to the center of a red silk, the other end is attached to the magician's braces, the whole piece then bassing down the right sleeve so that the handkerchief can be easily got at by the left hand.

Having produced the red silk the conleft hand.

Having produced the red silk the con-jurer walks towards the audience showing that it is quite a disconnected little arthat it is quite a disconnected little article, but on turning round to walk back he stuffs it up his waistcoat, and quic' ly pulls down with his left hand the connected one up the sleeve, placing it between the finger and thumb of the right hand. He again faces the spectators, picks up the glass cylinder, and pushes in the red handkerchief with his wand. Having done this much the silk is kept from flying out by the pressure on the right hand end of the cylinder. At the word "Three!" the right hand relaxes somewhat and the handkerchief passes instantaneously up the sleeve, so far in fact that you may turn it back with perfect safety.

The Rabblt Trick.

Just one more and I must bring this series to a close. This last is a trick

tion.

As before, a watch is borrowed and recourse is again had to that ever-useful piece of apparatus, the magic pistol. A box corded and sealed is put on the table, the watch is fired at the box, which, on being opened, is found to contain a live rabbit with the timepiece tied round its neck. Of all tricks I have previously mentioned, this perhaps is one of the most tioned, this perhaps is one of the most simple to perform, yet none produces greater surprise, for but a few seconds in-tervene between the placing of the watch in the pistol and its detachment from the animal's neck.

animal's neck.

Inside the box is a rabbit (be sure there are plenty of holes in the lid so that it can breathe freely) and round its neck is a small piece of ribbon to which is attached another piece about three inches long having a swivel at the end. When doing up the box this is left hanging out, reaching an inch or so down the side nearest the entertainer. (See fig. 31.)

Having placed the watch in the pistol and obtained possession of the same in the usual manner, the article is abstracted from the palmed cup, either whilst the assistant brings forward the scaled box or as you turn round, and placed on the servante behind the table; better still, if you can manage, retain it palmed in the right hand.

To fix it on the swivel whilst untying the tapes or cords is the work of a second, and Mr. Bunny is brought out with the watch hanging from the ribbon round the pack

I hardly think it is necessary for me to add much to what has already been said. Equipped with the tricks I have explained, and provided with a dexterous and facile manner, the young student of conjuring. If he applies himself assiduously to the art, will, before long, fall naturally into the ways of the accomplished magician. I do not mean to say that he will become a Houdin or a Beautier de Kolta all at once, but, in legerdemain as in everything else, patience and practice bring their sure reward. I hardly think it is necessary for me to

patience and practice bring their sure reward.

Again referring to the "passes," these will require considerable practice before absolute perfection is attained, but once thoroughly mastered, the student will have done more towards making a successful illusionist than any amount of elaborate and expensive apparatus will ever do. It is a good plan at first to have on your table a clearly marked list of the tricks in your programme, as it is more difficult to remember exactly the order in which each one comes than the uninitiated would imagine, for it is to be borne in mind that whilst playing the role of entertainer every eye is fixed on the performer, and I never yet have met an audience which was not inclined to be more or less critical.

Bear in mind that you must work out your programme and "patter" to suit adults, juveniles, and both combined. What will be successful with one lot won't always go so well with another. Don't be afraid of meeting that ever-present individual who "knows everything;" you will find, in nine cases out of ten, that those who profess to understand most about the conjurer's methods really know least.

[THE END.]

By G. A. WADE

The precocity of literary boys has perhaps been hardly as well marked as that of boy musicians and boy artists. There is, it is true, hardly a single classic work that was written by a youth under the age of twenty-one. Yet there have been several famous books, nevertheless, whose authors were considerably below that age when they penned the works that were to gain such renown.

The two most noted cases in point are undoubtedly those of Alexander Pope and Thomas Babington Macaulay. Pope was only twelve years old when he wrote the splendid "Ode to Solitude," a marvelous composition for a boy of that age, even when particularly precocious. This fine poem was soon followed by the equally splendid "Ode to Silence," at the age of fourteen; and thus the juvenile satirist and poet achieved a fame which many of his rivals never attained after long decades of industrious versifying and scribbling.

Macaulay, the future brilliant historian and essayist, was only twelve years old when he published his first volume, the "Primitiæ," which took the literary world of his day by storm, as being evidently the production of one who would go far in literature. What the critics thought when they learned that the author had not yet reached his teens can best be imagined!

At the age of twelve, too, Abraham Cowley had written his celebrated poem of

they learned that the author had not yet reached his teens can best be imagined!

At the age of twelve, too, Abraham Cowley had written his celebrated poem of "Pyramus and Thisbe," a work of extraordinary ability for a writer of such youthful age and of such scanty experience as this boy of twelve must have had at that time. There was much of Cowley's later work that became famous which was far from being as excellent in many ways as was his first work, "Pyramus and Thisbe."

The noted actor, John O'Keefe, whose ability as actor and dramatist every Irishman is proud of, proclaimed himself author of the very successful play entitled "Tony Lumpkin" whilst he was yet short of his sixteenth birthday. Considering how successful this drama was in its day, and how it proved the forerunner of many themes and characters similar to those it dealt with, it may be doubted whether any boy has ever written a play with such pronounced success as this of the fifteen-year-old O'Keefe's.

Sixteen years of age has proved the time when more than one literary light burst on the world with phenomenal blaze. The celebrated "Rinaldo" of Tasso appeared whilst its author was yet a boy of that age. And a young Frenchman, or rather boy, at the same age published a work that gained much favorable comment, a volume of poems, amongst which was "Irtamene." The author's name was unknown to Frenchmen generally when the work appeared, but his success was assured. And for many years after that first of all French romantic writers came Victor Hugo, the young man who had written those poems at sixteen. At that same age of its however the process. French romantic writers came Victor Hugo, the young man who had written those poems at sixteen. At that same age of its boy-author was published a volume of poems by an English youth whose fame was to become immortal. He died at seventeen, but what student of literature does not know the name of Thomas Chatterton, the "marvellous boy" whose beautiful "Od to Liberty" and "Minstrel's Song" appeared in that volume of his sixteen-year-old publishing?

The celebrated Spanish writer, Lope does not seem to see the second seem of the second second seem of the second second seem of the second secon

The celebrated Spanish writer, Lope de Vega, was seventeen when he gave to the wondering Spaniards his famous "Arcadia,"

Vega, was seventeen when he gave to the wondering Spanlards his famous "Arcadia," with its rippling music. Seventeen also was the noted humorist, Theodore Hook, when his "Soldler's Return," a drama of great power, took London by storm, and madhim a name, whilst yet a mere boy, as a writer of far more than average merit.

The most brilliant production of any youth of eighteen was certainly Shelley's "Queen Mab." Even in our own day this poem is considered an extraordinarily finplece of literary work, apart altogether from the merits or demerits of its theme and of the opinions expressed in it. Percy Bysshe Shelley wrote many fine things whilst yet under age, but none of them excelled the celebrated "Queen Mab."

Close upon the heels of this work, however, as a wonder of "eighteen," may fairly be put Disraeli's well-known novel wilst its author was in his nineteenth year, and was published before he actually attained his twentieth birthday. "Vivian Grey" is certainly the most famous novel ever written by a boy. And for a novel of its class, too, it suggests extraordinary insight, thought, and precocity on the part of its writer to have been able to tackle such a subject whilst yet at an age of comparative inexperience in the world that he portrayed in his story.

Three boys, however, at the age of nineteen, produced books that were destined to

partitive meable the the world that he portrayed in his story.

Three boys, however, at the age of nineteen, produced books that were destined to be reckoned more or less famous, though all of these productions were poems. At nineteen Voltaire wrote his well-known "Œdipe"; at the same age Southey published his fine poem, "Joan of Arc"; and whilst yet nineteen. Philip James Bailey wrote that noble work—almost a classic some years back—"Festus." It may be fairly decided, I think, that "Festus" is the finest of these. Some of its passages are nearly worthy of the immortal Shakespeare, and bear a kind of resemblance to his style of thought and writing. Bailey died not long ago, having survived to an age that had nearly forgotten the wonderment and delight of the liferary world of his youth when it learned that the author of the splendid new work "Festus" was a boy of nineteen.

We can just bring in one more actual "hov" that is a writer who was not more

or the spiendid new work "restus" was a boy of nineteen.

We can just bring in one more actual "boy"—that is, a writer who was not more than twenty-one when he wrote a famous book And, strangely enough, this was probably the most famous of all hooks we have mentioned as written by boys, and it has truly become a "classic" in literature. The boy was a brilliant youth indeed for his name was George Gordon, Lord Byron, And his famous book was also brilliant, for it was the well-known "English Bards and Scotch Reviewers." That a youth of his age should have been able to produce a slashing piece of critical, sarcastic writing like this; such splendid passages and style; such effective thrusts and retorts—must ever remain the marvel, to be ranked with Pope's "Ode to Solitude" at the age of twelve.

# MONG THE BIRDS \$5,000 A SERIES BY GRAIG S. THOMS. No. 3 THE CHEWINK.

BIRD, whose acquaintance is not the easiest to form, but which wins admiration the more it is known, is the chewink, called also marshrobin and towhee bunting.

When I began the study of birds in earnest many years ago, my first work was done in northwestern Colorado, where the arctle and green-tailed towhees are plentiful. After returning to my home in central lowa, upon taking a stroll in the woods one day, what was my delight, while passing through a piece of low underbrush, to see scratching ameng the leaves a bird which I at first mistook for one of my mountain towhee frends, but which, as I afterwards learned, was the chewink, a near relative of the arctle and green-tailed towhees, but a resident of the eastern United States.

The chewink is about the size of the catbird, and gives somewhat the same impression of being sleek and well-kept. The male has head, neck, and upper parts of rich, glossy black. The belly, wing-mirkings, outer margins of outer tail-feathers, and the ends of outer tail-feathers, and the ends of outer tail-feathers, and the ends of outer tail-feathers are white. The sides of the body are chestnut. In the female the black of the male is replaced with rich brown.

The one word which characterizes the chewinks is, self-mastery. They are birds of the cowbird's eggs was the first to hatch, but later the young bird was found dead in the nest was not sunk far beneath the surface. The cowbird's had dead in the nest was not sunk far beneath the surface. The cowbird's had dead in the nest was not sunk far beneath the surface. The cowbird's had dead in the nest was not sunk far beneath the surface. The cowbird's eggs was the first to hatch, but later the young bird was found dead in the nest wound to be about biff

of magnificent spirit, alert, active, and puss assed of considerable cunning. Their flower than the lamp of the most before the puning to the several bursts. A chewink as the form any develings. I have known them to nest in a tangle of bushes near a farm from any develings where everything war the farm and the form any develings where everything war the farther end of the field. Now how the substant is among low tree who the first seep you are heard coming toward her through the brush, she some distance from the nest, for the point at which she is first seen may be seen first on the ground before appearing above the bushes. When you come into the woods where the nest is placed, the mast will be about an interest will be about an interest and the first seep you he is apt to drop headlong from his perch to the ground as though shot. He may be seen first on few moments filting about the pushes. When you come into the woods where the nest is placed, the male will be short the nest is placed, the male will be short the nest is placed, the male will be more than the first seep you he is apt to drop headlong from his perch to the ground as though shot. He may be seen first one few moments filting about the bushes. When you come into the woods where the nest is placed, the male will be short the nest is placed, the male will be presented to the property and the first seed to the property and the first seed to the property and the property and the first seed to the property and the property and the property and the first seed to the property and the property and the first seed to the property and the property

if you are not too near and keep perfectly quiet, the female may dart into the bushes some distance from her nest and go to her egrs by hopping upon the ground.

These birds are as much at home upon the ground as in the trees. Much of their time is spent scratching among the leaves for insects. In doing this their actions are not unlike those of tame chickens, and they will often continue their work while you are in plain sight. I was one day searching for the nest of a pair that clung tenaciously to a particular locality in the underbrush, when, by the actions of the male, I thought he seemed to be trying to lead me away from the place where I was standing. He would scratch away unconcernedly for insects, and every moment or two utter his full song to apprise me of his presence. I moved slowly te-

what seemed two songs were two parts of the same one. The first note is a clear, short whistle, well represented by the syllable, tow. After this there is a comparatively long pause, and this is followed by a clear and somewhat ecstatic trill, which is very inadequately represented by the prolonged syllable, hee. I once listened to one of these birds which, in addition to the regular notes gave a short, sharp click at the end. It is quite common to hear some seemingly foreign note in a bird's song. A Baltimore oriole that sung in the trees about our home one May had in the middle of its strain three notes, loud, clear, and very marked, which at once distinguished its song from all others in the neighborhood. vhat seemed two\_songs were two parts

The very young towhees do not look like

either parent. They are a mixed dusky and brown. When they are a little older the color becomes similar to that of the catbird, but they gradually change to become like the parents.

I was walking in a patch of underbrsuh one day when a young towhee was observed perched upon a bush. It could not have been long out of the nest, for I took it in my hand without difficulty. In answer to its chirps the old birds soon came with worms, and showed deep concern for the safety of their nestling. After photographing the young bird, I endeavored, by its help, to secure a photograph of the parents, but all efforts failed. It seemed easy enough. At a distance of about twelve feet the camera was focused on a convenient perch where the birds had repeatedly lit in enswer to the calls of their young. But after the camera was placed and all was in readiness for a snapshot, they would alight anywhere else rather than before the glaring eye of the lens. I have never known these birds to return either to their eggs or young while the camera was placed for their photograph.

When at last I let the young bird go that it might be fed, it sat a little distance from me in the bushes and uttered a chirp at regular intervals until the parents came. While I held it gently in my band it had remained perfectly quiet, whether through fear or the effect of the warm hand, I cannot say. I have not el unon other occasions and with other birds this regularity in the chirps of the hungry young. I was one day sitting beside a wild gooseberry bush when these regular chirps were heard. It was almost as though some great clock were ticking them off at comparatively long intervals. The sound was exceedingly difficult to becate, seeming to possess a ventriloquial quality. At last, almost at my elbow, not over four feat away, a young brown thrasher was seen perched in the gooseberry bush crying for food.

The chewink's nest is made of leaves, grusses, and often dried vines or other fibrous materials. The eggs are useally four, while, well spettled with re

The chewink's nest is made of leaves, grusses, and often dried vines or other fibrous materials. The eggs are usually four, white, well spotted with reddish brown. The bird is found in all the states cast of the Missouri river. It winters in the southern states, and though not one of the advance guard, like the robin and meadow lark, it is among the first to arrive in the spring. I have seen it in central Iowa as early as the eleventh of April. It also ctays late, taking its departure for the south usually in October.

### Swimming as an Exercise

F. J. Sullivan, the swimming instructor of the Central Y. M. C. A., Chicago, declares that swimming is the ideal form of exercise. He calls attention to the fact that swimming as generally practiced is violent exercise, but that when intelligently followed is conducive to the very best results. He says there are men who at the Central Y. M. C. A. spend two or three hours a day in the water and gain strength and weight by it. Swimming, he says, is a medicine for all ills; it is a spring tonic, a hair renewer, a revitalizer, and an exercise. It cleans the skin opens the lungs, regulates the howels and strengthens the throat and masal passages. It puts flesh on the lean man and removes it from the stout man; furthermore it builds muscle. The blood of the habitual swimmer is far richer and stronger than that of the ordinary athlete. For men of sedentary habits it is the ideal For men of sedentary habits it is the idea

### Some Health Hints

In the morning, immediately after rising and in the evening, before dinner or just before going to bed, are the best times in which to take daily exercise.

At least twenty minutes should intervene between the taking of exercise and the taking of food.

taking of food.

It is a good plan to take your exercise standing before a mirror.

In taking exercise within doors at least one window should be wide open at the time so that the air may be fresh and pure. When one has finished or is resting the window should be closed. pure. When one has finished the window should be closed,

### Always Finds a Welcome

Mt. Horch Wis. Nov. 21st, 1904.
Wm. C. Sprague, Detroit, Mich.
Dear Sir.—Allow me to congratulate you on publishing such a good paper for boys, and I don't know of any criticism to make on it "THE AMERICAN POV" will always find a welcome in my home. It's not only myself in the family that likes it, but my parents are also very much interested in it. Your monthly talk to boys is great. Very truly yours.

ALBERT BRAGER.

### The Family Cow as a Pet

Although the family cow is not noted for its intelligence, it is possible to train it to do many little things of interest. Teople interested in animals learn to love their cows as they would a pet dog or a faithful horse and can see in them a devotion to their owners. I remember distinctly an old Jersey cow that used to come every morning to a particular fence corner, where she was used to receiving from the hand of her benefactor a handful of salt, and if the salt was not forthcoming at once she would stand and bellow as for her missing calf. The boy who loves animals can find much to admire in any of them and, with the exception of a bull, will find much genuine enjoyment in teaching them not only to obey his voice, but to perform numerous entertaining feats. People interested in animals learn to love

A small boy when asked where he lived said, "In the closet mostly."

There are said to be twelve million American boys under the age of fourteen.

NE day in Old Home Week at East-ville had been set apart for games, races and athletic contests. Every races and athletic contests. Every boy in town who owned a wheel or who had the least pretension to physical strength or endurance, had entered his name for one or the other of them. Joyce Thatcher, who lived in that part of Eastville known as the Corners, was to run in the foot race, and take part in the jumping contests. Joyce had taken a great interest in physical culture long before Eastville had even thought of having an Old Home Week. He said it was a fellow's business to make himself as strong and healthy as he could. His conthusiasm had spread to the other boys in the neighborhood, and a club had been formed, the members pledging themselves to abstain from using tea, coffee, alcoholic drinks and tobacco; to eat no hot bread, pastry, or food fried in fat; to be in bed every night at nine o'clock, unless they had company or went to a boy in town who owned a wheel to be in bed every night at nine o'clock, unless they had company or went to a party; to sleep with their windows open summer and winter; and to practice certain exercises for at least half an hour every day. In consequence of this club, all the Corner boys became noted, after a time, for their strength, good looks and creet way of carrying themselves. Incidentally, Jimmie Baily got rid of his cough—everybody had said he was in consumption; Al Fisk's shoulders became even—one had been higher than the other; and Ned Bartlett got rid of his headaches.

even—one had been higher than the other; and Nod Bartlett got rid of his headaches.

Everybody liked Joyce, though they could hardly have told why. He was rather quiet, let the other boys do most of the talking, and he never bragged about what he had done or was going to do. He was called good natured, but one had only to abuse an animal, or pick on a little boy, or to speak slightingly of a girl, to find he had a temper, and a guick one, too, though he tried to keep it in hand, and was ashamed when he lost it. When there was any good time offort, like fishing, or a pichic, or a bicycle trip, or coasting or skating, or mutting. Joyce was always in demand, for they seemed somehow to have a great deal better time when he was of the party. But it wasn't often they could not him. Fred Dodge sald he believed loyce's father lay awake nights thinking up ways to keep Joyce in work, so he couldn't go anywhere. Nearly everybody thought his father was pretty hard on him, but they never hinted as much to Joyce; somehow they didn't just dare to. Joyce himself never complained, though he looked pretty soler sometimes. But it happened this time that his father had given a full and free consent to his going to the park on the day of the Old Home Week games and races, and the Corner boys were jubliant. "He'll win everything he tries for," they boasted among themselves. "There isn't a fellow at the center, or north, or down in the swamp or on the hill that can touch him when it comes to running and jumping."

Jimmle and Al were to race on their bicycles, and Ned Bartlett, whose father was wealthy, was to be in the motor-cycle contest. Tom Everson, who liked fun, was to take part in the tub race, the wheelbarrow race, and games like that. Terry Wayne was the only Corner boy who would come in competition with Joyce.

The night before the great day, the hovs all went over to Joyce's after sup-

The night before the great day, the The night before the great day, the hoys all went over to Joyce's after support. Joyce was giving the cows a last feed of hay before shutting up the barn. Before they had been with him five minutes they felt that something was wrong. He was very glum, and when they asked him questions he gave short answers. "Will you go on the electrics, or will wour father take you over?" Tom asked, lie could see no one about. The farm appeared to be descrted, lie knew there of the barn door.

he answered gruffly. "I'm not going at all."

"Not going?" they cried in chorus.

"What's the reason you're not?"

"Oh. — you know father was drawn on the jury?"

"Yes, but he said he wouldn't have to go till next week."

"He made a mistake in his reckoning. Tomorrow is the day, and I've got to stay at home and see to things."

"Why, what could happen?" Fred demanded impatiently.

"Oh, a dozen things. Something might spontaneously combust, or a burglar might come around, or that breechy cow we bought the other day might get into the neighbors' fields and do all sort of damage."

damage."
"Couldn't Mary stay at home instead of you?" Ned asked.
"She offered to, but since that tramp scared those women down in the swamp we don't think it's just safe to leave a young girl here alone all day."
"Davie, then."

"He's too young. And mother is on the committee of entertainment tomor-

the committee of entertainment tomorrow, so she's got to be there."

"It's too coufounded bad." Terry exclaimed feelingly. "Blest if I wouldn't almost rather stay at home myself."

"Well, there's no use crying over split milk." said Joyce philosophically, his spirits rising as those of the others fell. "You fellows will go and come home and tell me all about it—be almost as much fun as going myself." he added with a dry laugh.

There didn't seem to be much to say.

There didn't seem to be much to say, so after standing around for a few minutes the boys took themselves off.
"Isn't it a mean shame." Ned exclaimed, when they were out of hearing. "I don't suppose Joyce's father is to blame for it, but somehow." but somehow it almost seems as if he

I had a sort of feeling all along was.

was. I had a sort of feeling all along that something or other would come up to prevent his going."

"Some fellows in his place would wait till their father was gone, then quietly light out and go to the park," said Jimmie.

"Joyce Thatcher isn't built that way," Terry spoke up quickly. "There's nothing of the sneak about him. He's square and above board wherever you put him."

"Don't you think I know that?" Jimmie retorted. "You needn't be so huffy."

The next day was all that could be desired in the weather line—clear, cool, dry, with the lightest of breezes. The farm seemed strangely quiet and lonely to Joyce, after the family had all gone. There was no big job of work on hand and Joyce's father had told him to take things easy. He attended to a few cocks of hay, the last of the haying; did some weeding his mother had wanted done in the flower garden; went over the vegetable garden with the wheel hoe; fed the horse, hens and pigs, and kept an eye on the cows.

At first he felt his disappointment very

horse, hens and pigs, and kept an eye on the cows.

At first he felt his disappointment very keenly, but after a little while he pulled himself together. "I guess it's about time to stop whining over what can't be helped." he said to himself. "Probably I'm not the only person in the world who has had to give up something he or she had set their heart on. Spreading this hay is my business just at the present time, and I'd better 'tend to it and do it right. Supposing I did give a lot of practice to running and jumping. I guess it hasn't hurt me any, even if I don't ever make any use of it. And I had all the fun of imagining the big things I was going to do."

was going to do."
Thinking thus, Joyce put his mind on his work, and tried to do everything in the very best way it could be done, and so for the time being almost forgot what was going on at the park and that he

was not there.
In the latter part of the afternoon there was nothing that particularly needed doing, and taking a book he went to a clump of oaks in the pasture, his favorite spot on the farm, and sitting down on the grass with his back against the trunk of a tree, prepared to read. It was a high piece of ground, and he could overlook not only the pasture, but much of the surrounding country. Rebind him were the farm buildings of his father's farm: off to the left he could see the was not there.

bind him were the farm buildings of his father's farm; off to the left he could see the steam railroad, with fields and woods between; to the left, on the north, the pasture sloped down to the highway, and on the west were isolated farm houses surrounded by fertile fields and trees and bits of woodland.

Joyce forgot his book in the delight of gazing down on the landscape, which, owing to the celebration at the park, seemed strangely quiet—and almost deserted.

serted.

He was just about to turn his attention He was just about to turn his attention to his reading when his gaze was suddenly arrested, and dropping his book he started to his feet. Down in front of him, directly west, was the Freeman farm. Mr. Freeman, a city man, had bought it a few years before, remodeled the house and barn, laid out the grounds, and put up a brooder house, incubator house, several hen houses and a windmill. It was one of the buildings on this farm that had attracted Joyce's attention.

vour father take you over? Tom asked, as they watched him fasten the padlock of the barn door.

The key seemed to stick a little, and he did not answer for a moment. Then he turned and faced them. "Neither," he answered gruffly. "I'm not going at all."

"Not going?" they cried in chorus. "What's the reason you're not?"

"Oh. —— you know father was drawn on the jury?"

"Yes, but he said he wouldn't have to go till next week."

"He made a mistake in his reckoning. Tomorrow is the day, and I've got to stay at home and see to things."

"Why, what could happen?" Fred demanded impatiently.

"Oh. a dozen things. Something might come around, or that breechy cow was a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to wish a wooden fence that extended from one corner of the burning building to the burning few feet of a shed that joined the barn. And if the barn sake the burning few feet of a shed that joined the burning few feet of a shed that joined the burning few feet of a shed that joined the burning few feet of a shed that joined the burning few feet of a shed that joined the burning few few feet of a shed that joined the burning few feet of a shed that joined the burning few few led the burning few few few that joined the burning few few fe to leap the high wire fence that bounded the pasture.

This decision was made in far less time

This decision was made in far less time than it takes to tell it, and Joyce was running with all his speed toward the fence. As he approached it, it seemed very high—higher than he had ever attempted to jump. But he must make it. To fail meant the loss of all the time it would take to go around the fence, through thick underbrush and other obstructions.

He was very near it now. He made the supreme effort of his life. Ah! he had cleared it, and was in the highway. Then how he ran!

As he sped along he was planning just what he would do. Mr. Freeman had purposely placed the tank of his windmill very high, so that a stream of water could be thrown on the barn roof in case could be thrown on the barn roof in case of fire. The hose was usually kept in the carriage house, and Joyce could get it by breaking a window. If they only kept it there still, there would be but little time lost.

But if the barn should catch before he could get there, full as it was of hay, and everything as dry as tinder! Joyce ran as he had never run before.

A fringe of trees along the roadside

brooder house was one sheet of flame rising high in the air. As he came nearer he perceived to his horror that the shed was already afire in several places, and that there was one tiny flame on the roof of the barn.

hid the buildings from view till he was the place alone, and he was wishing nearly there, and when at last they came someone would come so he could go home in sight he saw that the roof of the long and attend to his chores, when, to his someone would come so he could go home and attend to his chores, when, to his great surprise, he saw the back door of the house open slowly, and Mr. Freeman's father-in-law appear.

brooder house was one sheet of fame rising high in the air. As he came nearer he perceived to his horror that the shed was already afire in several places, and that there was one tiny flame on the roof of the barn.

Joyce had raised his fist to break in the carriage house window when glancing toward the windmill. Somebody had evidently used it earlier in the day to water the lawn, and had not carried it away. Joyce sprang toward it, and to his intense relief, found that it was still connected with the tank, so that all he had to do was to turn on the water. For awhile there was considerable doubt in Joyce's mind as to whether he would be able to save than affre. But at last he conquered it, for the time being, though it was continually catching afterward, the wind being ithat way.

For the next twenty minutes Joyce was as busy as a person could well be. The end of the brooder house was burning now, and had set fire to the end of the board fence; Joyce found an axe and horoke down the other end, next the shed. It was so hot there that he had to retreat more than once. Then one of the hen houses got affre, and a spark caught on the includator house.

The sides and ends of the brooder house was burning now. Soon there was nothing left of the time being. The sides and ends of the brooder house got affre, and a spark caught on the includator house.

Even when the danger seemed to be past. Joyce did not quite like to leave

# Race With a Stampede

By H. ERVAN

BOI'T half the time you can tell what stampedes cattle and half the time you can't. Sometimes a herd will be lying fast asleep on a quiet night. Suddenly a steer jumps up, sends out a great, snorting puff from his nostrils, and races off into the darkness.

And behind him may race two thousand of his companions, all going for dear life and apparently scared out of their wits.

A very slight thing will start a herd going. One night I saw a herd stampeded by the lighting of a cigarette. The cattle were sleeping peacefully when one of the Mexican herders, riding slowly on his pony around the outskirts of the herd, rolled bimself a cigarette, took out the flint and steel, an ancient way of striking a light which we ranchmen have, and proceeded to light up.

At the very first sharn click of the steel

light up.

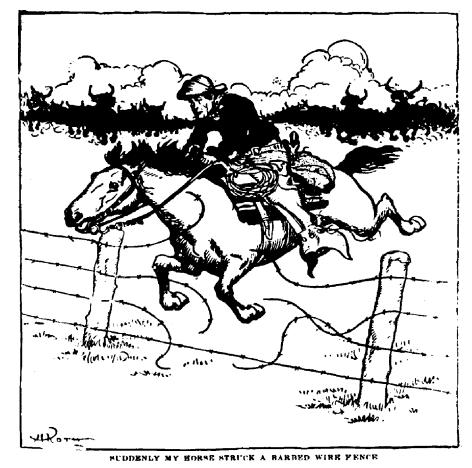

At the very first sharp click of the steel

when I drew rein, my poor horse was nearly dead; not, as I had expecte!, from hi-wounds, but from sheer exhaustion.

At the very first sharp click of the steel against the flint a big steer jumped to his feet with a snort; and before you could say Jack Robinson every other one of those two thousand head of cattle was careering wildly over the plain, rushing with frantic, blind terror and a great thunder of hoofs which fairly shook the ground, into the dark night.

Men could no more have stopped that stampede than a man could hold a steam engine with one hand. It took us ten days to get the herd together again.

Another time I saw a herd stampeded by a min removing his slicker from his saddle.

The night was intensely dark and it had begun to sprinkle. A cowboy started to put on his slicker—such a coat as fishermen and saliors call an oil-skin coat. It stuck to the saddle where he had it strapped, and as he pulled it free, it made a crackling sound. In an instant the sleeping herd was awake and off like the wind over the plains.

I happened to be on my horse right in the path of the stampeded cattle, and there was nothing for it but to ride for life.

Away we went across the midnight plains, my horse straining every nerve and sinew. The night was intensely dark and it had

my horse straining every nerve and sinew, and I urging him forward with the certain knowledge that if he stumbled, the terrified animals behind me would trample us into

the carriage house, and Joyce could get to breaking a window. If they only kept it there still, there would be but thit time lost.

But if the barn should catch before he could get there full as it was of hay, and everything as dry as tinder! Joyce ran is he had never run before.

A fringe of trees along the roadside mud.

There is nothing left of a horse or rider when a herd of two thousand cattle has passed over them. They are literally stamped out of existence.

The only thing to do under such circumstances is to keep going and trying to keep out of the way if you can. Suddenly in the darkness my horse atruck a barbed wire fence. It was a fence of my own, and

Sometimes it does not even take the striking of steel against flint, or the crackling of a slicker, to stampede a herd. The animals break out apparently from sheer nerv-

mais break out apparently from sneer nervous hysteria.
Cattle are queer creatures, and even we who live all the time among them do not understand them thoroughly.

taking care of the horses.

firmly fixed in the Senator's mind, and which he recalls with the greatest pleasure, was when his uncle presented him with a fine muzzle-loading rifle, which is still refine muzzle-loading rifle, which is still retained and sometimes used by the distinguished statesman. Young Fairbanks was not yet twelve years old when this much coveted firearm was given him. It is a heavy rifle and was considerable of a load for a lad of his age. His muscles, however, were well developed by farm work and he soon acquired the knack of handling the gun with ease. He practiced constantly and became one of the best shots in the neighborhood.

### HIS TRUSTY RIFLE.

When a boy Mr. Fairbanks developed an intense fondness for out-of-door sports, but none of them was more attractive than hunting with his rifle. He was a sure shot within the range of his gun, and his favorite recreation was hunting squirrels. He became so expert that he could "bark" a squirrel—that is, send a bullet so near the squirrel is head that the little animal would be stupped by the shock and killed by the be stunned by the shock and killed by the fall to the ground without the skin being broken.

### HIS COLLEGE CAREER.

The pluck and strength with which Charles Fairbanks, at three years of age, extricated himself from dangerous surroundings were a fair indication of his sturdy country frame and mind. He was well adapted for the tasks which fall to the lot of little boys in the country, and by the time he was six years old he could trudge across plowed fields, and drop corn and pumpkin seeds, could drive the cows to pasture, feed the chickens, hunt the eggs, chop "kindlings," and do all the light chores that are usually put off on the younger members of a farmer's family. The foundation of an education that has served Although owning an extensive farm, Senator Fairbanks' father was by no means a wealthy man, and Charles, being the oldest of the children, felt that it was his duty to contribute as much as possible to his own support and education. At the age of thirteen he went to Columbus to attend an academy, and while there resided with his uncle, who held a local public office. As Charles was anxious to pay his own way, his uncle procured him some clerical work, which assisted in meeting his expenses. At fifteen he attended a preparatory school for college and soon entered the Ohio Wesleyan University at Delaware, Ohio. He did not exactly work his own way through college, but he contributed materially toward it. When he reached the university he was not the dignified, well poised person he now is, but is remembered as a long, lank stripling about six feet tall, his appearance being extremely suggestive of the rural districts. There was an appreci-Although owning an extensive farm. Senyounger members of a farmer's family. The foundation of an education that has served to land him in the Vice-Presidential chair was laid at the district school, a short distance from his home.

When he was ten years of age a tremendous event occurred in his life. He was taken from the district school and sent for the winter to a higher institution in Woodstock, a nearby town. This enlarged the boy's vision of the world and was an important experience in his life. He was an earnest boy, but not dull and averse to fun. In fact, he extracted about as much enjoy-

appearance being extremely suggestive of the rural districts. There was an appreciable hiatus between the bottom of his trousers and the tops of his shoes, but the young student was oblivious to this incon-

gruity.

A neighbor lad, equally ambitious for a college education, attended the university with Fairbanks, and the two boys conceived the idea that if they could join their ceived the idea that if they could join their forces it would make the burden easier for each of them. They rented a room in the town of Delaware and set up housekeeping for the term. Their parents contributed some furniture, and as often as they had opportunity, sent them supplies and provisions. They got along economically.

To help meet his expenses young Fairbanks, who had learned how to use the tools of a carpenter on the farm, frequently secured jobs of carpentering and repairing. He says now that he would have made quite as good a carpenter as he has a law-

quite as good a carpenter as he has a law-yer, and if he had stuck to the trade might have been a great contractor and builder

have been a great contractor and builder by this time.
"Fairbanks first attends to the business he is here for." was the remark of one of his college mates, "and if he has any spare time he goes in for pleasure and sports." That very well describes the life of the future Vice-President while at college. During his course there he took no prizes for scholarships worthy of mention, but made and kept his averages and gradu-ated with the respect of faculty and class-mates.

mates.
There is no doubt that the tenderest memories of Senator Fairbanks' life cluster about the last two years of his college course. During that time he was editor of the college paper, and his assistant was Miss Cornella Cole, daughter of Judge Cole, of Marysville, Ohio, also a student at the Wesleyan University. Their association in college editorial work developed the romance which culminated in their marriage in 1872.

hausted and calmed down. The coolness exhibited by the future Vice-President when a baby had this time saved his own life and that of his brother.

The event in his boyhood which is most

legiate course this taste was gratified, and he manifested abilities at mock trials in the college fraternities that in after years brought him fame and wealth. It was characteristic of him even in early life always to have some definite pur-pose in view. He never shouldered his rifle for an aimless stroll in the woods, but always with the idea of shooting game. To this day he does not care to does not care to start on a walk or a ride without a defi-nite object or place in view. His whole course of life has been shaped on this policy. policy. Leaving college,

Leaving college, he began his own living, but still with a definited to the bar. He accepted the position of agent of the Associated Press at Pittsburg. Pa., the appointment having been given him by his uncle, the late William Henry Smith, then at the head of this news gathering and distributing agency. The Senator often laughingly refers to his experience in news gathering in the Smoky City. "As I recollect it, the most important of my duties was to report the state of the weather and the stage of water in the Allegheny and Monongahela rivers," he recently said.

He had plenty of time to devote to the study of law, which he took up with a prominent attorney in Pittsburg, but when he sought admission to the bar he was refused because he had not been for three years a resident in the state, which was a requirement for admission. Thereupon he went to Cleveland, Ohio, and was admitted and shortly afterwards married and opened his first law office in the city of Indianap-

olis. This was in 1874.

The business and political career of the sturdy Ohio boy, who escaped being burned to death, worked on his father's farm, hunted squirrels and rabbits and was flogged for "goin' in swimmin'," is familiar to everyone interested in public characters.

### A Well Invested Dollar

I believe that I have never invested a dollar better than when I subscribed to THE AMERICAN BOY,
HARRY W. SMITH,
Brooklyn, N. Y.

### Jack Harkaway

Jack Harkaway! Jack Harkaway!
It's many years alack,
Since we were joyous kids and read
The chronicles of Jack.
The merry pranks he played at school,
And jolly larks he had,
Endeared the handsome English boy
To every Yankee lad,
But mostly for his fistic skill
And that "sledgehammer blow"
With which he tapped the bully's nose
And laid the coward low,
And for his brave and dauntless front
To plunge into the fray,
And fight against tremendous odds,
We loved Jack Harkaway!

Jack Harkaway! Jack Harkaway! Where'er his course might tend, Dick Harvey was his bosom chum And ever falthful friend; And ever faithful friend;
And there was blue eyed Emily,
Of whom he was the beau,
And Hunston of the evil eye,
His rival and his foe,
And Monday, the devoted black,
And old Professor Mole,
Whose amiable weakness lay
In swigging of the bowl,
And flerce Barboni of the hills,
The bandit brought to bay
Beneath the blue Italian skies
By bold Jack Harkaway!

Jack Harkaway! Jack Harkaway! Oh, how at noon we tore

Each Wednesday for the boys and girls
To Cyrus Tooley's store!

Nor have I ever met the man
Who was an urchin then

And did not read the masterpiece Of that entrancing pen. But many a mother's hostile frown Condemned her hungry boy

In sneaky woodsheds to devour
The interdicted joy.
And many a tyke the teacher caught,
And made him rue the day
He tried to rend beneath his desk Of brave Jack Harkaway

Jack Harkaway! Jack Harkaway! The author's heart lies still, The author's heart lies still,
And voiceless now this many a year
His gallant English quill:
And nowhere on the starry peaks
And pinnacles of fame
Has time a proud memorial raised
To Bracebridge Hemyng's name;
But could each boy that he endeared
To that lone grave repair.
In fond reilembrance plously
To drop one blossom there,
A mountain beautiful and sweet
Of flowers would hide the clay
Where moulders in the dust the hand
That wrote Jack Harkaway!

—John Ludlow in the New York Herald.

Boys should be real boys, manly boys, and hence a Stevens arm is absolutely essential for their development. Safety - security - ac curacy are emphasized in the Stevens.

One of the first essentials of success in home-study is continuity and perseverance. Spasmodic efforts are worse than useless, for they not merely fail in their object, but they weaken will-power as well, and diminish instead of strengthen the force and group of the intellectual faculties. grasp of the intellectual faculties.

Parents must be able to command themselves before expecting to command their children.

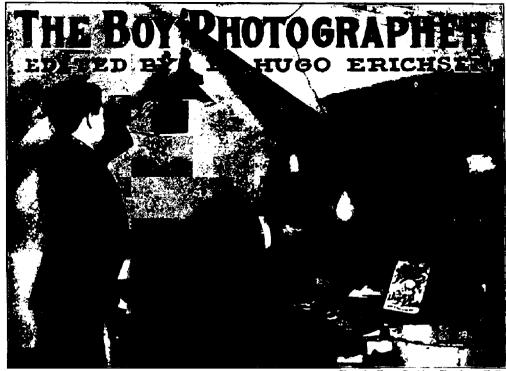

Photo by Harry Buckley, Plattsburg, N. Y.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve mouths in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and lifty cents will be paid for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

### The Practical Photographer

All who are interested in Architectural Photography should not fail to get the November issue of the "Practical Photographer" (Boston: Photo-Era Publishing Co.). It contains many illustrations, the pictorial work of Arthur Burchett being a special feature.

### Suggestions Wanted

We do not edit this department of "THE AMERICAN BOY" to please ourselves, but to entertain and instruct our readers. Any suggestion, therefore, that will help us to accomplish our object and add to the interest of this page will be eagerly welcomed.—The Editor.

### The Letter-Box

D. C. Sutherland, Sekamah, Nebr.-The editor uses the same plate you do and yet never ex-periences the trouble of which you complain For one thing you wash your plates too long; half an hour in running water is long enough

LONGFELLOW'S HOME, CAMBRIDGE, MASS.

If you will only follow the printed directions you will find in every box of plates, you will have no difficulty in obtaining good negatives. Thanks for your kind commendation of this department.

### A Bath Recipe

A bath that has given more satisfaction than any other, and more permanent prints, and that is especially suitable for toning and fixing gelatino-chloride prints (on Sollo paper, for instance) is that given by W. K. Burton. It is made up

### Our Prize Pictures

R. Von Nieda's first prize photograph is a good representation of a remarkable automobile that accommodates nearly fifty passengers. It is used to carry New York sightseers to Grant's tomb and picturesque Chinatown Von Nieda is a resident of Ephrata, Pa. "Reflections," by Peter C. Whyte, of Carbondale, Pa., is a clever portrait of three girls in a mirror, that was made by pointing the camera at a looking-glass in which the merry maidens were reflect-

ADMIRAL DEWEY'S DOG

ed. The photograph was made with a Pocucamera, exposure ½ second, stop 64. This will give our readers a new idea in regard to home portraiture

### A Good Paste

If a paste that will stick and will keep for a year with reasonable care offers any inducements, the amateur is welcome to this formula:

A. Wheat flour, 3<sup>1</sup>/<sub>4</sub> ounces.
 Water, 8 ounces.
 B. Water, 12 ounces,
 Salicylic acid, 15 grains.

Salicylic acid, 15 grains.

The flour should be stirred up with the Sounces of cold water as smooth as possible. The 12 ounces of water are set to boiling, and the salicylic acid is added. Then the flour and water mixture are best strained through a good-sized wire tea-strainer to get rid of lumps. Remove solution B from fire and add solution A, stirring all the time. When thickness of mass suits, add 30 drops oil of cloves and stir in.—

Exchange Exchange.

### Hints on Making a Passe-Partout From Spoiled Negatives

"Wash off the film, using warm water and soap. Clean the glass with a little French chalk, Cut a piece of paper the size of the picture intended to be mounted and paste it in the middle of the glass. Paint the clear edges of the glass with black paint, and when dry soak off the piece of paper and place the print in position, fastening it at the corners with a bit of paste." Our correspondent suggests using another negative for the backing, but it is just as well to use a piece of pasteboard and save the glass for another print. The print and the backing are bound together with passe-partout binding, which comes already gummed for use, as does the hanger by which the picture is suspended.—Photo-Era.

### Photographing Without a Camera

An outing trip may be made delightful and profitable by a simple method of photographing without a camera. The outilt needed is very simple; a photographer's printing frame and a clear glass to fit it, sheets of photo paper of the size to fit the glass, and a bag to carry the outilt in and protect the paper from the light. Select the best leaves of a plant, or any leaves you wish to photograph, or the petals of a flower, and lay them (under side up) on the glass in the frame, then lay the photo paper over, having the prepared surface against the leaves, and put paper or felt backing over all, and fasten down the frame back as in ordinary printing. A little practice will determine the proper length of exposure. These leaves or parts of the flower are in reality negatives through which the sun prints all the delicate parts of the leaf on the paper. The results to be attained are oftentimes surregisting to be attained are leaf on the paper. The results to be attained are often-times surprisingly beautiful. Of course, often-times surprisingly beautiful. Of course, the printed paper must be toned and fixed as if printed from a negative.—John W. Sanborn.

### The Roll of Honor

This month the number of contestants whose photographs have been above the average has been unusually large, so large in fact that the choice of prize winners was by no means an easy task. This explains why the following list of those entitled to honorable mention is more extensive than usual, but detracts in no wise of those entitled to honorable mention is more extensive than usual, but detracts in no wise from the prestige conferred by the distinction: Wm. H. Johnson, Manchester, N. Y.; Fred. J. Mauer, Roscoe, N. Y.; R. Krebs, Watertown, Wis.; Wm. Norwood, Spencer, Mass.; W. E. Elliott, Buffalo, N. Y.; A. M. Goehring, Key West, Fla.; C. A. Maniey, Tacoma, Wash.; H. E. Fry. Philadelphia, Pa.; H. T. Johnson, Hartford, Conn.; Wm. B. Wrenn, Jr., Highland Park, Ill.; H. E. Bartlett, Oconomowoc, Wis.; Nick Bruehl, Sherwood, Wis.; F. Pfeffer, Gainesville, Ga.; M. H. Taidy, Birmingham, Ala.; J. E. Hall, Nashua, N. H.; E. E. Trumbull, Plattsburgh, N. Y. In conclusion, it might be well to say that the arrangement of names is not in accordance with the merits of the photographs submitted and that it is immaterial, therefore, whether a competitor appears first or last on the roll.

### Hand Camera Exposures

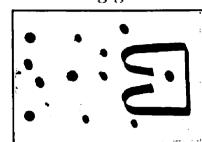

This will bring out rapidly all the detail in the plate, and if overexposure is feared, dilute with an equal quantity of water to restrain the action. In another dish have the following re-developer to impart density to the plates as they become ready for the operation, or to successfully deal with any which are found to have been considerably overexposed, and upon which the first developer is acting too vigorously. No. 1.

Hydroquinone, ¼ ounce; Sodium Sulphite, 2 unces; Potassium Bromide, ¼ ounce; and boilounces; Potassium Broing water, 12 ounces.

HE other night the Missionary Society met at our house. The new preacher, Mr. McComble was there, and we had ice cream and three kinds of cake. I didn't feel much like eatin', and I knew it wouldn't be amy fun to sit around and watch other folks, se I concluded I'd leave early.

After Mrs. Weatherbee had read her report, I began to feel sleepy and made a break for upstairs just as Mr. McCombie started on his talk about "Our Duty Toward Foreign Missions."

Mother came after me and caught me in the back entry way before I could get past, and pinched my arm hard and whispered that it wasn't nice for me to leave just when Mr. McComble commenced to talk.

talk.

She sort of eased up a bit when I told her I didn't want anything to eat, and thought I had better go to bed. She didn't know why I wasn't hungry, because the ones I tasted were cut already and you wouldn't notice anything unless your attention was called to it. The ice cream was way down in a big freezer so that a little off the top didn't show. I never do feel well after I eat her kind of cake. Is uppose it's because she makes so much at a time.

cause she makes so much at a time.

I really intended to go to bed, but when I looked out of the window, I could see Ike Hoover, Mort Simms, and the rest of the fellows down under the electric light, havin a fine time playin' Gray Wolf. If you never played this game, of course you don't know how much fun it is. It's a great deal nicer than Hide, and more excitin'.

It wasn't very

goin' home if he had to be the Gray Wolf again all by himself. Of course I didn't want him to do that. I always liked little Mose, and we all felt kind of bad to think that his folks were goin' to move away from town the very next day, and we might never see him again.

It was while I was hid'n' behind Skyles' barn that I first noticed the peculiar light in the sky. All at once great long streaks began to rise up from behind the convent, and march across toward the railroad bridge. At first it looked flickery and dim. but pretty soon it got plainer till it seemed like ghosts of soldiers with tall hats that reached nearly to the north star, and all the time they kept marchin', marchin', in a solemn procession that didn't have any end to it. Then everything got quiet, and it sort of made you feel creepy, bein' alone that way.

By this time Ike and little Mose and Mort had noticed it too, so we called the rest of the boys and climbed up on Skyles' chicken house to watch.

Ike Hoover sald it was the 'Rora Boralis', or somethin', and that he had seen pictures of it in the geography. I'd seen that too, but I knew this wasn't it. They only have that where it's awful cold, and where there's bears and leebergs, and it shines out slantin' like you see sunbeams do in pictures. What we saw was straight up and down, but all at once it seemed to bunch up together in the shape of a cross, and then I knew for certain it was a sign. Ike didn't know it was a sign, and Mort didn't either until I reminded him what we had read one time at Sunday school. When I began to tell the rest of them that this was the kind of things that would happen when the end of the world was near, Ike Hoover just laughed. But I noticed he kept mighty quiet after that, and went home before long.

The other fellows hadn't thought much about how it would be when the end of the world came but I had and I'd read lose.

The other fellows hadn't thought much about how it would be when the end of the world came, but I had, and I'd read lots about it too, so I told them what I knew. First there would be wars. That part

fellows how short their time was, so I did. Mose didn't seem to realize that he could keep the end of the world from comin' if it wanted to come, and we had to explain all over again how it was, but I had to promise to give him my

had to stuff my handkerchief in his mouth.

We got him in the corn crib finally, but we had to tie him, and it took the six of us a long while to do it. He certainly is strong for such a little kid.

Mort and Hop and Fred got scared thinkin' what Mose's father would do if he caught them, and after they had tried to make some excuses sneaked off home. Bob and Ed Ward knew how important prophecy is, so they stayed with me. They thought I ought to go and tell Mr. Mehad to stuff my handkerchief in his mouth. We got him in the corn crib finally, but we had to the him, and it took the six of us a long while to do it. He certainly is strong for such a little kid.

Mort and Hop and Fred got scared thinkin' what Mose's father would do if he caught them, and after they had tried to make some excuses sneaked off home. Bob and Ed Ward knew how important prophecy is, so they stayed with me. They thought I ought to go and tell Mr. Me-

was true, for you can read about wars every day in the newspaper. It counts if you fust hear about them. I don't think you fust hear about them. I don't think and they have to be in the United States, but Mort said they did. Then there would be signs in the sky. Even Mort finally said that this what we saw might he a sign. Most of the boys were pretty scared by this time, and I thought it was my duty to try to comfort them. I told them what Mr. McComble had said in his sermon the work combined and that he though the Scriptures clerity showed that before the Berlptures clerity showed that before the end of the work came all the chosen people will be come all the chosen people. Because my mother had told me so.

Then I happened to remember that little Mose and his folks were chosen people, because my mother had told me so.

Then I happened to remember that little Mose and his folks were goin' to move away the next day, but I didn't let on for fear of scarlin' the other fellows too much. I got Mose over to the far edge of the roof, and pretended to be showin' him how far I could jump, but really I was ask'n' him where he was goin' to move to the far edge of the roof, and pretended to be showin' him how what that meant, and I knew I ought to tell the other fellows how short the what that meant, and I knew I ought to tell the other fellows how short their time was, so I did. Mose did, Mose did the was bearn off the place exactive that the could keep the end of the world from comin' the end of the world from comin' the world from comin' the world from comin' the was goin' to move to the far edge of the roof, and only the solders stayed and kept didn't seem to remember the name of the place exactive the could be continued to the could b

they don't appreciate it.

I MHARL A MOISE DOWN STAIRS

like I wanted her to, and then he let up

lke I wanted her to, and then he let up on my arm.
When she leaned over and said: "Thomas, tell mother, did you really do these awful things?" I gulped and nodded, and then I knew I was into it for sure. Father said, "You get your clothes on, sir, in about two shakes and come with me," and she said "Oh, Robert!" but I knew that wouldn't be enough to do any good.

me," and she said "Oh, Robert!" but I knew that wouldn't be enough to do any good.

Down stairs Mose's father and Mr. McComble and four of the missionary ladles were all in the parlor. Mose's father started up, and I thought he was goin' to hit me, but he only said, "And is this the young bully?" Father said, "Just wait a minute: I don't think he's that, but we'll find out pretty shortly. Now young man you can explain your part in this outrageous affair."

Then I told them about the sign, and how we were afraid it was the end of the world, and tried to tell what Mr. McCmble had said in his sermon that Sunday about prophecy. As soon as I started on that Mr. McComble began to laugh, and laughed so hard I thought he would hurt himself. But Mose's father only looked mad and said, "I do not understand yet, why this lawless assault has been made on my son."

I explained to him that little Mose mas one of the chosen people, and that I didn't want to burt him et all but their want to burt him et all but their want to burt him et all the transite.

I explained to him that little Mose "as one of the chosen people, and that I didn't want to hurt him at all, but just wanted to keep the end of the world from comin'so soon. He began to see too, after a while, and laughed a little on the inside light along.

It was just like I thought it was. When he went to Hop's and Ike's house they got scared and told him where we had hid Mose, and said I was the one that did the most, and because I didn't come right back, Bob and Ed began to be scared too, and let Mose go, after he promised he wouldn't move to Palestine with his folk. Mr. McCombie stopped laughin' at last and said, "Well, my boy, you made a brave but vain effort to save us all. Mr. Jacobs tells me that he and his family are going to move to Parkersburg tom rrow, and not to Palestine, as you supposed."

I didn't get out of it as easy as I at

I didn't get out of it as easy as I at

### Didn't Want to Worry God

There is a young boy in a near-by city aged eight, and named Todd. He is wholly human, and he has a careful and religious mother who strives constantly to bring him within speaking distance of her ideal of what a boy should be. To this end he is admonished to pray every night that he be a better boy. One night recently he climbed into bed without saying his prayers. His mother asked him if he had forgotten to say them, and he answered that he had not forgotten, but that he did not intend to pray that night. His mother inquired the reason for his determination. Todd, from his comfortable pillow, made answer: "Well, mother," soid he, "I'll get up and say my old prayers if you want me to, but I don't want to do it a bit. Here I've been asking and asking God to make me a good boy and I think I've done it enough. God will attend to it when he gets 'round to it, and I don't think it's nice for me to make a nuisance of myself. I've pretty near worried the life out of him about it already."—Chicago Chronicle.

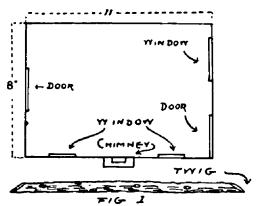

### Good Reading

Hawthorne, Ruskin, Whittier, Longfellow, Franklin, Scott, Kipling, Lewis Carroll, Dickens, George Eliot, Stevenson, Holmes, Charles Lamb, John Burroughs, Edward Everett Hale, Robert Burns, Mathew Arnold, Oliver Goldsmith, Jane Andrews, Irving, Charles Kingsley, Shakespeare, are some of the authors a part of whose writings is suitable for the use of boys from the third grade to the ninth. A generous supply of such authors should be in the home.

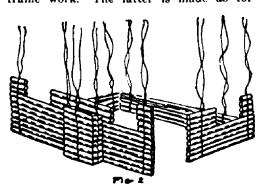

### CLEVER WORK WITH THE POCKET KNIFE JOHN L. DOUGHENY

No. 6—The Miniature Log Cabin

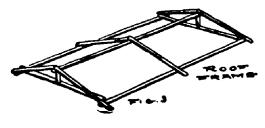

HUS far we have confined our endeavors to designs that could be made from one piece of wood. This had a good deal to do with making the work difficult, and, in whittling difficulty is fascination. This month's subject calls for a great number of pieces, but that fact does not make it less interesting. It is a subject we all know well,—the little log cabin. Who does not revere the primitive abode of our forefathers and who does not wish to perpetuate it by a beautiful miniature. Apart from the sentiment of the design, there are other points in its favor; first, the material is easily obtainable anywhere; second, the design is simple, original and beautiful. The first thing we need is a base to build on. A flat square board of any size, exceeding 12x12 will do. You can sacrifice a parlor stand for this purpose, but it is not

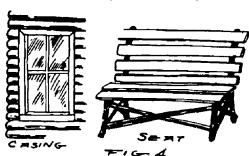

necessary. The larger the base-board, the more space you will have in which to work in detail. Our plan calls for a cabin 11 inches long and 8 inches wide. You can vary these dimensions if you wish, but it is best to preserve the proportion. If you add or subtract an inch to the length, do the same to the width and so on. The twigs used should be as near one size as it is possible to find them. The ends arecut to fit in nicely where they join at corners. Simply shave them off with a knife, the length of the flat portion being equivalent to the diameter of the twig. Fig. 1 shows a floor plan of the cabin and a twig correctly prepared. Note the space for chimney. Inasmuch as there are to be doors in the front and rear, the ends of the twigs abutting at these points are left round. The first course is tacked to the baseboard with small brads. The others are lashed to it with fine wire. The wire should be placed in its proper position on the board before the first layer is put down. Three strands are needed for the front, three for the chimney and the same for each of the two sides and back. Use enough wire to make the house soild. It is simply laced back and forth as the separate layers go on. Fig. 2 is a picture of the partly completed cabin and illustrates the method of putting together. Note that the ends of twigs at doors and windows are left round. The front door is at the extreme right corner; three inches to its left is a window. The right side of the cabin has two small windows, between which is the chimney. There is also a door in the rear. The bottoms of the doors are one-half inch above the baseboard so as to leave room for steps. The roof of the cabin is a common one point gable. When the side walls have reached their uitimate height (8 inches), shave the wire ends loose until we have laid on the roof frame work. The latter is made as folnecessary. The larger the baseboard, the

blocks whittled into the right shape. One block can be made to resemble a step built of several pieces; the top surface

extending slightly over the sides. It is well to use wood that has the appearance of age. The door and window frames can be made of twigs or dressed lumber. The ends that join are cut at an agle of forty-five degrees. In front of the cabin to the left of the doorway we will put an old rustic bench. The framework is made of rough twigs; the seat and back of twigs whittled flat. The doors of the cabin are small blocks whittled roughly to resemble panels. Small bits of ru-set leather will answer for hinges. The window frame and bench are shown in Fig. 4. Lest prowling wolves sneak in to steal our provender we will put a fence around the cabin. Not the neat, straight board fence of the city, that would be out of keeping. Ours will be made of split rails. There will be no nalls used and only two posts for the gate. The rails are laid in a zigzag row, ends crossing each other. For the front gateposts bore holes two inches apart, pour in a little hot glue and insert posts. Fig. 5 illustrates the method of fence building and shows

the gate complete. To increase the do-mesticity of the miniature you may put in outbuildings and walks leading to them. outbuildings and walks leading to them. A good effect is produced by placing soil to the depth of one quarter inch around the cabin. Then too you might add the cattle trough, the old fashioned sweep well or the windmill. I would like to describthe windmill, but it is quite another topic and space forbids it. The idea is to put in all the detail you can to make the scene lifelike and natural. To cover the window spaces you can use small swinging doors. If you prefer glass follow these directions: After making the frame and putting in the square piece of glass, paste upon the glass wooden strips at right angles to each other and crossing at the centers. This will give the appearance of

### With the Boys

BEN MONTGOMERY, Petersburg, Ill., lives BEN MONTGOMERY, Petersburg, III., lives two and a half miles from Old Balem, where Lincoin landed his flat boat and built a mill, and where he wooed and won his first love, Ann Rutledge.—ELMER H. ### AMATEUR JOURNAL-ISM DEPARTMENT

Edited by W. R. MURPHY

### Selecting a Small Printing Outfit WILL S. KNOX.

WILL S. KNOX.

Most boys seem to be under the impression that all that is required for the formation of a small printing plant is a printing press and "some type." While, of course, "some type" is an actual necessity, there are also numerous other articles and implements without which the mechanical act of printing would be very difficult, if not an impossibility.

Almost every boy, whether he knows much about printing or not, is aware that the printer's "trade-mark" is the "composing stick" and "rule"—two of the most important and useful implements of his trade. But there are others (no slang intended), without which no printing office, no matter how small, would be complete—furniture, quoins, leads, slugs, quads, imposing stone, chase, cases, galleys, etc., etc.

All these things "cost money," and one will be surprised at the number of things required and the expense necessary for the fitting up of even one of the smaller printing plants, such as a boy would require for printing a small paper and doing common, simple varieties of job printing. It may be interesting to many readers to know just what materials and implements are required to furnish a small printing office complete—a plant that will permit of the execution of just as excellent work (to the limit of its resources), too, as the faster, more expensive shops of the professional printer.

There are quite a number of reliable firms who make a specialty of supplying printing outfits to amateur printers (some of the strangent of the strangent of the supplying printing outfits to amateur printers (some of the strangent of the strangent of the strangent of the supplying printing outfits to amateur printers (some of the strangent of the strangent of the strangent of the strangent of the supplying printing outfits to amateur printers (some of the strangent of the strangent of the supplying printing outfits to amateur printers.

### Harmony in the Amateur World

Harmony in the Amateur World

One of the criticisms urged against amateur journalism has been that those who are active in the work have been too prone to quarrel, and that much unnecessary warfare has been carriel on between the associations. There has at times been some justice in this complaint, though on the whole those who have made it have been outsiders who falled to appreciate the real comradeship and helpfulness of amateur journalism and commented only on the things that appeared on the surface. THE AMERICAN BOY is happy to chronicle the fact that a larger harmony than ever before prevails now in the amateur ranks, and that an era of general good feeling has set in together with a literary revival. One association now concedes the reason for existence of the others and accords ready recognition of their good purposes as well as useful achievements. A striking illustration of this pleasing state of affalis is revealed in the visit of Edward M. Lind, the recently elected president of the National Amateur Press Association to Ira E. Seymour ex-president and now official editor of the Unitee State. Amateur Press Association on his return home to San Francisco after his trans-continental tour. Another example of the tendency to harmony lies in the fact that many amateurs are members of at least two of the national associations, and some even belong to the Interstate, National and United. A third proof is evidenced in the fact that the editor of this department is ex-President and Treasurer of the first, Secretary of Publicity and an official critic of the second, and Chairman of the Directors of the last named. All of these evidences clearly demonstrate the existence of a harmonious and cordial feeling which ought to produce excellent results in the amateur world.

### A Young Business Man

Percy S. Morris, of Rodney, Ont., who from his picture does

Ont., who from his picture does not appear to be over ten or eleven years old, styles himself "Manager of the Rodney Newspaper Agency." out of which he says he makes quite a little sum weekly. He has made a "merry-go-round" that will really go and he is able to make something by selling tickets for rides. When he was eight years old he was the editor of a little paper called "The Rodney News."

Amateur journals to the number of about two hundred are published in the United States. Nearly all of these journals are represented in amateur journalists associations or local amateur press clubs. These associations and clubs bring about mutual criticism, exchange of ideas and products. s well as develop literary ability and concourage efforts to do better work.

Amateur papers sent to the office of THE AMERICAN BOY will be reviewed, so far as space permits, in such a way as to be fair and helpful.

### MANDOLIN LESSONS

Next month we give the first of a series of mandolin lessons for boys. The mandolin is a popular musical instrument with school boys, and many will welcome the opportunity thus given to master it.

### The Type Told a Fib

In the advertisement of Geo. B. Doan & Co., which appeared on page 52 of the December number of this paper, a typocember number of this paper, a typo-graphical error occurred by which it was made to appear that with each one of their games, ordered direct, "a five dollar atlas of the world" would be given. The sentence should have rend "a fine dollar atlas." After about forty thousand copies of the issue had been run off the error was noticed and corrected, but to those of our readers who may have received the atlas and felt that too high a value was placed upon it we wish to explain that no deception was intended by the advertisers, they were giving away a one-dollar atlas and did not mean to value it higher in their offer.

### Please Notice

Will our readers kindly turn the pages of this number of THE AMERICAN BOY and note the amount and the variety of reading matter that it contains? Not only that, will they also note the character of the matter? We feel proud of this number of THE AMERICAN BOY, with its fourteen stories, its leading articles on sport, money making, journalism, history, books, magic, electricity, biography, photography, mechanics, etc., and its scores of pictures of boy life. We want to call attention to the fact that our departments, namely, photography, stamps, coins, book reviews, mechanics, electricity, amateur journalism and puzzles, are edited by experts—not by persons who know a smattering of their subjects, but by persons who know them thoroughly. We want you to note how interesting and profitable are such articles as "Clever Work With the Drawing Room Magician" series, and "The Drawing Room Magician" series, and how informing are such articles as those regarding the Indian boys of Carlisle School, the experiences of Westney, the sprinter, in his old world campaigns. Note, too, the good advice under "Boys as Money Makers," and the words of our Editor in "Just Between Ourselves." The story entitled "For the Mikado," now running in the paper, when finished will be published by Harper & Brothers in book form and sold at one dollar and a half, fifty cents more than an annual subscribtion to THE AMERICAN BOY, and yet our boys are privileged to read the story for one dollar's worth in the pages of this paper in twelve months must be hard to please; and that parent who wishes for his boy better mental stimulant than these columns give will look a long time before he finds it. Will our readers kindly turn the pages of this number of THE AMERICAN BOY

### Our New Department

Perhaps no request in our office has been more frequent than that we should make room in THE AMERICAN BOY for a room in THE AMERICAN BOY for a department devoted to mechanics and electricity. For several years we have been endeavoring to find a man who could properly conduct it—that is, a man who is a practical mechanic and electrician and is at the same time possessed of sufficient literary ability to produce matter on which we could safely depend as being both accurate and readable. Then, too, we had to find a man who could write in such a way as that the boys might understand him. You will see from this that such a man has been hard to find.

After many months of waiting we have finally succeeded in finding a man who, we believe, fills the bill, and we take pleasure in Introducing to our readers Mr. ROBERT G. GRISWOLD, who will from this time on talk to the boys about mechanics and electricity, and answer through these columns such questions as they may ask, in so far as our space will permit.

As a starter, Mr. Griswold has written a two-part story, beginning in this number, that gives accurate and full instructions as to how to make and install a wireless telegraph apparatus. Our readers will see by glancing over the first installment of this story that what Mr. Griswold wants the boys to know is how to install such a wireless system as will really do the work, and not be some mere plaything or some cheap substitute that will prove a disappointment. To the ordinary reader there is a good deal of "Greek" in Mr. Griswold's directions, but the "ordinary reader" does not even know the a, b, c's of mechanics, and it would be utterly impossible for an electrician to give him not only the directions but also the "genius" for doing the thing. There are thousands of boys that have the "genius," and it is these boys who will take advantage of Mr. Griswold's instruction. You will see right away that Mr. Griswold is not going to play with his department, but is going to play with his department, but is going to edit it in a serious, business-like way, and that what he says can be depended upon in every particular.

We congratulate ourselves as well as our boys—and adults, too, upon our success in finding a man to edit this department; from now on we expect it to be one of the best in the paper.

### A Peep Into Our Next Number

We are sure that every boy whose subscription is just now expiring, will want to renew promptly and be sure to receive the February number when we give him a peep into the probable contents of that number. February being the birthday number. February being the birthday month of two of the greatest Americans, the February number will be full of matter of a patriotic nature. There will be a lively sketch, with handsome illustrations, of the son of the man who keeps the old building at Valley Forge, which was Washington's headquarters during that awful winter of which every boy has read, that so severely tested the metal of our forefathers in 1777-78. "Washington and the Flag" will prove of interest in that it tells of the birth of our national emblem. the Flag" will prove of interest in that it tells of the birth of our national emblem. An interesting story will appear entitled, "How Lincoln's Life was Saved," with pictures of the log cabin in which Presi-

dent Lincoln was born and some views of the Lincoln farm. A fine biographical sketch of General Francis Marino—another Revolutionary hero, will appear. Then we shall have an interesting item regarding the boy whose grandfather was the keeper of Old Abe, the war eagle. There will also be an extract from a sketch by the noted editor, Henry Watterson, on "The Inspiration of Lincoln," a tale of the experiences of two young men on a thousand-mile cruise in a small boat built by themselves; A Boy's Success in Raising Angora Goats, A Plea for the Boy's Room, an interesting story of how a boy captured a pair of condors and got one hundred dollars from the Smithsonian Institute, a young middent Lincoln was born and some views the Smithsonian Institute, a young mid-shipman's adventure, a twelve-year-old Erooklyn boy who won first prize in the

### LOOK AT YOUR LABEL

A LITTLE GERMAND BOY WHO LERNT TOO MANY LESSONS

boys' automobile race. These with a half a hundred other items, big and little, and all the Departments full of interest will make the February number noteworthy.

### How Two Boys Built Wireless Telegraph Instruments

Continued from page 85.)

the cause of many failures in instruments where high tension currents are used.

"Bend a piece of sheet brass two inches square to a right angle and drill four holes for screws. By means of these clips the coil may be held firmly in place, as I am showing you in this sketch.

"Do you remember, boys, the little motor they had at the exhibition to operate the make-and-break, or contact maker?"

"Yes, and the little point that went up and down into the mercury?"

"Well, some such device as that is generally used with an induction coil for this

"Yes, and the little point that went up and down into the mercury?"

"Well, some such device as that is generally used with an induction coil for this work since it is more reliable than the ordinary vibrator, but the old form of vibrator will answer our purpose quite as well. You see I have shown a very simple one here. It is simply an armature of soft iron, about one-eighth inch thick and one inch in diameter, soldered to one end of a piece of one-thirty-second inch spring brass bent as I have shown here, and screwed down to the base. The flat disk should stand clear of the end of the core by about one-sixteenth of an inch. Cut out a support for the adjusting screw, which is simply a three-sixteenths inch round head brass machine screw. from a piece of hard wood or fibre. Drill a hole for the adjusting screw, also that holding the support to the base. File the end of the adjusting screw to a blunt point and screw it through the wood. I have shown a small spring held under the base screw and which is pressing on the under side of the head of the adjusting screw; to this spring is soldered one of the wires leading under the base to a b'inding screw, and the tension of the spring insures a good contact on the adjusting screw. This is simpler than passing the screw through a nut, I think."

"Don't they generally use platinum contact points, Uncle Henry?"

"Yes, but this is not necessary unless very heavy currents are used. Now I have shown you here how to make the connections, and you remember how I told you to make binding screws by soldering a strip of brass into the slot of a round head brass wood screw? The ends of the wires leading to these screws should be soldered to the under side of a brass or copper washer, through which the screw passes, and by screwing it down a wire may be held very firmly between the screw-head and the washer."

"Don't we have to place two balls on the rods above the coil for the sparks to jump between?"

the adjusting screw to a blunt point and screw it through the wood. I have shown a small spring held under the base screw and and which is pressing on the under side of the head of the adjusting screw; to this spring is soldered one of the wires leading under the base to a binding screw, and the tension of the spring insures a good contact on the adjusting screw. This is to contact on the adjusting screw, this is not necessary unless very heavy currents are used. Now I have shown you here how to make the connections, and you remember how I told you to make binding screws by soldering a strip of brass into the slot of a round head brass wood screw? The ends of the screw-head and the washer."

"Yes, I was just coming to that. It is not necessary the screw-head and the washer."

"Yes, I was just coming to that. It is not necessary to have balls on the rods, but they always give heavier?

"Yes, I was just coming to that. It is not necessary to have balls on the screw-head and the washer."

"Yes, I was just coming to that. It is not necessary to have balls on the screw-head and the washer."

"Yes, I was just coming to that. It is not necessary to have balls on the screw-head and the washer."

"Yes, I was just coming to that. It is not necessary to have balls on the screw-head and the washer."

"Yes, I was just coming to that. It is not necessary to have balls on the screw head and the washer."

"Yes, I was just coming to that. It is not necessary to have balls on the screw-head and the washer."

"Yes, I was just coming to that. It is not necessary to have balls on the screw-head and the washer."

"Yes, I was just coming to that. It is not necessary to have balls on the screw-head and the washer."

"Yes, I was just coming to that. It is not necessary to have balls on the screw-head and the policy have the costs more than that two thousand the policy have the costs more than that two thousand the policy have the policy have the cost another hundred to have the policy have the policy have the policy have the policy hav a diameter that it will hug the eighth-inch rod tightly, and solder a piece of this coil, not over one-half inch in length, to each support directly over the hole. Thus coil, not over one-half inch in length, to each support directly over the hole. Thus you see, the rods may be moved to and fro and still be held firmly in any position. Then bend the end of the rods into a small ring about three-quarters of an inch in diameter and pollsh the faces of the rings that approach as smoothly as possible. That will practically finish the coil."

possible. That will practically finish the coll."

"That does not seem so very hard, does it, Paul? I thought we would have all sorts of trouble, but Uncle Henry has shown us how to build it without a bit of machine work."

"Ha! Ha! well, boys, I could have made you a great deal of work but your Address THE AMERICAN BOY.

Any book reviewed in our Book Review column or any boy's book anywhere published can be purchased of us at publishers' prices.

We still have left copies of the illustrated pamphlet descriptive of American Boy Day at the St. Louis Exposition. Price, 10 cts.

coil would not have been very much better, considering its size."

"Now you will need a condenser."

"You see when a coil of any considerable size is working there is always a spark between the contact points of the vibrator, and when very heavy will rapidly eat through the spring and destroy the point. The condenser is a device designed to take care of this surplus energy and store it up for the next impulse. When properly adjusted to the size of the coil and the amount of current used, there will be no spark at these points upon breaking. Large condensers are often made by laying up alternate sheets of tinfoil and paraffined paper, but that is very tedious, and you can make a very good one in this manner.

"Get mother to give you three or four glass preserving jars of the pint size, wash them perfectly clean inside and out, and dry well. Be sure that there are no little cracks anywhere in them; then go to the tobacco store and ask for several sheets of the tinfoil that is used to pack plug tobacco in. Smooth this out evenly and cut into strips about four inches wide and long enough to go around the jar. Roll the foil around a small round stick, and, after giving the inside of the jar a very thin coat of shellac, roll the foil around a small round stick, and, after giving the inside of the jar avery thin coat of shellac, roll the foil around the inside of the jar allowing the lower edge to reach to the bottom. Press it down as smoothly as possible, and then put another circular piece over the bottom in the same wavy, being rure that the two pieces come in contact. Where these two pieces join, the contact should be between bare metal, so do not put shellac on these edges. Then cover the outside of the jar for about four inches from the bottom in the same manner.

"Make a wood cover for each jar, dry thoroughly and varnish. Through the center of this cover pass a stout brass wire, and that it will press against the bare foil on the bottom of the jar and insure good contact. The wood cover should be made somewhat

"All right, Uncle a thousand times, get right to work, stove store first."
"Good-bye, Uncle "Good bye, boys. Good lunk to you."

(To be continued.)

### The Cost of a Boy

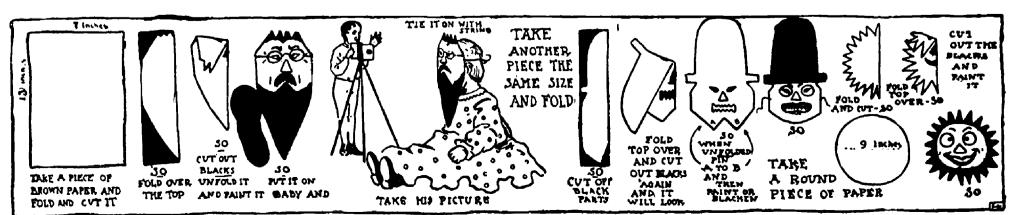

I read the other day that it cost nearly a thousand pounds to bring up a London boy and educate and dress him well I sald to myselt: "That is because every-

of ourselves, they will be poor indeed; but if we make good citizens and substantial men and women, they will feel as though they had good pay for bringing us up."

Boys, what are you worth to your parents?—In Children's Friend, written by

a boy.

### For Sale

The instructions on this picture explain everything that needs to be done to produce the funny masks shown. The only articles needed are a pair of scissors, a few sheets of stiff paper and some pins. If you have paints, they will add to the queerness and grotesqueness of the faces. If you have none, the markings can be put on with a soft lead pencil, either black, purple or red, or the faces can be made extra funny by making them of differently colored papers and pasting them on.

Address all communications for this department, Uncle Tangler, care American Boy, Detroit, Mich. Ruies to be observed: Write in ink and on but one side of the paper. Sign your name to every page. Write your address in full on one page. Send answers with all new puzzles to be printed. Send original puzzles only. We cannot undertake to return rejected puzzles nor to reply personally to letters.

deorge C. Nespital, 115 Wells St., Chicago, Ill., wins the prize for the best list of answers to November Tangles, J. Klahr Huddle, "An American Boy," Bloomville, O., wins the prize for best lot of original puzzles.

Hunorable mention

ville, O., wins the prize for best lot of original puzzles.

Honorable mention is accorded the following for excellence: M. Gray, Old Poser, Nels W. Kindgren, Richard Rundell, G. W. Repp. Lynn J. Coon, L. Roy Engle, Nora B. Wallace, H. H. Voelker, Mary S. Baker, Edward Wesley Romer. Dana G. Coe, Geo. W. Blakemore, Dolphis Zabolio, Helen E. Voorhees, Orvai Hadley, Fred R. Henkelman, J. Horace Trumbull, Win, Harding, William, Oliver and Annie McAdams, Geo. L. Harrinkton, D. Waldo Brown, John Falge, Floyd Clark, William B. Kirk, Vattel Ebert Daniel, Eugene Marius Stewart, Ray Blore, S. Ward Seeley, Jay Kienzle, Lot W. Armin, Willie R. Schoenherger, Thomas DeWind, W. Earl Berry, Robert T. Tlatcher, Cornelius Hyatt, S. Reuben Guard, Diwin C. Sharp.

A prize of a new book will be given for the best lot of original puzzles received by January 20, Seasonable puzzles, having for their subjects persons and events connected with the month of March, are preferred.

A prize of two dollars will be given for the best list of answers to the January Tangles received by January 20.

### New Tangles

### ITINERARY TANGLE.

An American Boy started on a journey at the city numbered 1, and visited the cities indicated in exact numerical order. He found on reaching the big city numbered 24 that the first letter of the name of each city he had visited, taken in the order of his visit, spelled the name of a famous American document issued in January. Name the cities and the document.

-An American Boy.

HOLIDAY ACROSTICS.

2. HOLIDAY ACROSTICS.

All words are of uniform length. The initials spell the date of the first holiday of the year; the final letters, commencing with number 4, reading to number 12, and finishing with 1, 2 and 3, a familiar and welcome greeting common to that day.

1. A month. 2. Capital of Upolu island. 3. Islands forming the westernmost group of the Aleutian Islands. 4. A state. 5. The first (Latin) word in Virgil's Aeneld. 6. A poultry disease. 7. The cry of a dog. 8. Cunning. 9. First Czar of Russia. 10. The city where St. Paul is sad to have suffered martyrdom. 11. Present Secretary of the Treasury of the United States. 12. The city besieged ten years by the Greeks, according to legendary account.

The city besieged ten years of cording to legendary account.

—S. Reuben Guard.

JANUARY LADDER.

JANUARY LADDER.

The left upright spells a January holiday; the right upright, what are customarily made by us all on that day.

The rungs in order from the top down are as follows:

A lake on Mt. Desert island; a city, river and county of Mississippi; a town of Jack County, Texas; a mountain mentioned in acripture; an Illinois city, on the Mississippi.

—George L. Harrington.

PYRAMID.

4. PYRAMID.

Across: A letter from Copenhagen: an animal: Runic letters; discussed; an alloy of copper and tin; the first day of the year.

Down: A letter in January; to exist: moisture from the atmosphere; to trust: a Russian coin; a famous canal: a measure of length: places; alang word for father; abbreviation of a Southern state; a letter in January.

Ray Blore.

### HISTORICAL LABYRINTH.

Starting with a certain corner letter and con-tinuously moving from square to square uniti al' the letters are used once only, find an event in American history that occurred in January.

This Upright Engine is Yours Very Little Work

Engine still retains its popularity and still continues to be easily the best dollar engine in the market

Dest dollar engine in the market.

In construction it is simple and sensible, and in all its parts strong and durable. Unlike other dollar engines it has no steam pipes to get filled with rust and dirt. The steam chest, steam and exhaust ports, whistle, whistle valve and throttle valve seats are all cast in one piece, and locked steam-tight to top of boiler. It is made throughout of well tempered polished sheet brass. It exhausts steam through the smoke stack as shown in cut; which no other engine does

exhausts steam through the smoke stack as shown in cut; which no other engine does.

The safety valve is the lever and ball pattern. The valve seat is made large in order that the boiler may be easily filled through it.

Every engine is thoroughly tested before packing, and fully warranted. All parts of the engine are interchangeable, and we have always on hand duplicate parts with which to supply our customers.

Each engine is packed securely in a wooden, locked-corner box suitable for mailing or expressing.

Full directions for running the engine will be found in each box, with the price of duplicate parts.

We will send to "American Boy" subscribers one of these fine

engines, all charges prepaid, for two new yearly subscriptions to "The American Boy" at \$1.00 each; or for one new yearly subscription to "The American Boy" (at \$1.00) and 35 cents in money additional. Price of the engine \$1.00. We will send it prepaid on receipt of price.

# The Food Value of a Soda Cracker

You have heard that some foods furnish fat, other foods make muscle, and still others are tissue building and heat forming.

You know that most foods have one or more of these elements, but do you know that no food contains them all in such properly balanced proportions as a good soda cracker?

The United States Government report shows that soda crackers contain less water, are richer in the muscle and fat elements, and have a much higher per cent of the tissue building and heat forming properties than any article of food made from flour.

That is why Uneeda Biscuit should form an important part of every meal. They represent the superlative of the soda cracker, all their goodness and nourishment being brought from the oven to you in a package that is proof against air, moisture and dust—the price being too small to mention.

### QUITTING SCHOOL

Dear Boys:-

THERE comes a time in every boy's life when the question arises with him "why not quit school and go to work," I know it does arise in the minds of some boys, for they have asked my advice in the matter.

The question arose more than once with me when I was a boy and, judging from the small number of boys. as compared with the whole number, who continue in school until such a time as they may be properly said to have attained a school education, I imagine that my experience was not an unusual one.

The average American boy is an active animal. He likes to be doing things. Sitting in a schoolroom reading, writing, and figuring doesn't answer his notion of "doing things." He wants to be achieving in the sense of making money, starting a business. gathering in the shekels to spend or to save, and in a word being a man; all this he is impatient for.

Unfortunately the matter of quitting school presents itself to a boy usually at a time of life when he is little able to decide it wisely. Unfortunately, too, parents, allowing themselves to be governed by selfish motives, or ignorant or indifferent as to the results of their decision, more often than not help the boy to decide-wrongly.

If a boy could realize that when he quits school e is practically deciding how much of a success he is going to make of himself, he would be very slow in laying down his books. I do not mean to say, boys, that success depends altogether upon how much book learning or how much schooling a boy may have, but I do mean to say that given two boys of equal capacity and equal natural ability, that boy who sticks to his school will be infinitely better off in the end than the boy who quits midway.

There is an education that comes from contact with men and from the actual handling of the tools of everyday life, from travel, and from observation and experience, but nothing can just take the place in a man's life of the instruction of the school—book learning, if you please.

The boy who stops school and goes into business three years ahead of his companion, other things of course being equal, has not got three years the start of that companion by any means. The chances are that the boy who starts three years later will not only overtake the other one but will speedily outstrip him in the race.

### BEASONS NOT GOOD.

For some years I have been a lecturer in one of the best business colleges in the country. I have had an opportunity to watch hundreds and hundreds of boys—the most of them boys who for one reason or another have been taken out of the public schools where they should have remained, and rushed into a business college for a "business education," in order that they may have some excuse for asking employment.

In a large proportion of the cases that have come before my observation I am sure that there has been absolutely no good reason for the boy's quitting school. In some cases the boy has grown tired of the routine of school life and begged his father to permit him to quit and earn something for himself. The father, himself perhaps not an educated man, has given his permission with little thought of the results, probably seeing only an opportunity for him to escape paying for the boy's clothes and board—a something that appealed more strongly to him than any mere consideration of good that might come to the boy later in life. Or the boy has proved an indifferent success in school. He has not kept well up with his classes; his teacher complains that he is slow, or bad; he would rather play than study; he has no "mind for books." So the parent decides that education does not "fit" Johnnie and he turns the boy loose with the hope that in business life at least he will be a success. Or the boy does not like his teacher. The two have had several little spats. In order to spite the teacher the boy is taken from school and shoved into some employment-any emplyment so it brings a few dollars a week.

The considerations that lead boys to quit school and their parents to permit it are in the great majority of cases just as silly as these.

### A CRITICAL TIME

It may as well be understood by us all that there are certain times in every boy's life when his faculties really go to sleep. Men who have made a study of child life tell us this. It is not a theory but a scientific fact, proven by the long continued study and observation of not one boy but of thousands of boys. In some cases this period comes as early as the eighth or ninth year; in other cases it comes a little later. The mind then ceases to be active and creative. The boy who used to get his lessons well now has trouble with them. The teacher wonders why he doesn't do as well as once he did. His parents, if they pay any attention to his school reports at all, notice that he is failing in certain studies where he used to be perfect. He doesn't want to study; he would rather sleep. He doesn't want to go to school; he would rather play.

Parents and teachers should understand that these things are not necessarily signs of the boy's unfitness for school work, but that they are phenomena to be looked for and expected at some period in the life of the boy, and that if that period is weathered the boy will return in due time to his active, vigorous, mental life. Boys at this period should not be urged too hard but to a certain extent humored, but not allowed to quit school, for now is department of life it worked it was trained for the the time when they most likely will seek to quit, and hence it is the danger time of school life.

### A SILLY ERROR.

Once in a while someone argues in public print that a school and college education, particularly the latter, unfits a man for active life. Don't you believe it, boys. The evidences in favor of the school-bred man are so plentiful that it seems ridiculous to make the argument. Occasionally a school-bred man fails: in fact many do fail. The fact remains, however, that the great proportion succeed—an infinitely greater proportion, than in the case of men not

It is very difficult, boys, to find a man who doesn't wish for his son more of a school education than he himself had. That ought to be evidence enough that men when they seriously consider the value of an education put a high estimate on it, for men usually want for their offspring better things, greater success, happier lives than they have had.

My own father used to say that, having himself been deprived of a college education, he had early determined to see to it that his children had as thorough an education as it was possible for him to give them. He had seen in his own experience with men and with business affairs that a man without an education is terribly handicapped when he comes into competition with men who have had an education.

I do not care how humble the work a boy is going to engage in he will do that work better for having been broadly educated. I asked a young woman who is a teacher of girls in a Brooklyn High school, why she taught the girls Latin. Her answer was peculiar. "In order," she said, "that they may become better house-keepers." I suppose many would have laughed at that answer, and yet I did not. She meant that the study of Latin broadened the mind, gave it grasp and reach, and disciplined it so that in whatever

### THE BOY WHO CANNOT GO TO COLLEGE

CONTRIBUTED

T seems to be the universally accepted theory that no young man has an education, unless he has been graduated from some collegiate institution; but such is by no means the case. The young man who has applied himself to books in the spare moments, when his daily work was over, is infinitely better educated than the boy who "skinned" or was tutored through college.

While there are many incidental advantages, the great reason why a young man should go to college is to obtain a disciplined mind. Then, having discovered what his powers are—to use the language of President Eliot of Harvard-he should use them for his own good and the good of others. But men of this character are not confined to college graduates. Benjamin Franklin may be taken as a typical example of a man of this type. One, however, may well ask: "Was he not, in the true sense of the word, college-bred?" He was the master of five languages-one more than is required by our best colleges of to-day. He was a brilliant scientific student; his experiments along electrical lines would have given him a degree in any modern university. He was always studying the social institutions of his own and of other lands. Possessing a remarkable knowledge of general subjects, and cultured by European travel, he was one of the best educated men of his time.

A. T. Stewart, though not the possessor of a college education, was a man of exceptionally disci-plined powers. He was educated for the ministry, but taught school for some time before he went into If one will look into the matter, he will find that Andrew Carnegie, Cornelius Vanderbilt, Peter Cooper, Roswell P. Flower, and many others who were never graduated from a college, are notable examples of the success of a disciplined mind not obtained through a university training.

The youth who must be self-educated is far better off to-day than one of Franklin's time. nothing about the large number of free libraries that have lately been established, the several university extension courses, the reading circles, the night schools in our cities, the educational courses offered in connection with Y. M. C. A. work, the instruction through correspondence, etc.—all of which afford exceptional advantages to the boy who cannot go to college—the cheapness of books and of scientific and educational periodicals makes possible a degree of mental training quite impossible a century ago. Through the medium of text-books, magazines, etc., the college professor now addresses a much larger class than the few who meet with him regularly in the laboratory or lecture room.

As the training at college comes not from the spacemodic effort at examination time in order to get a passing grade, but from the daily preparation of each day's lesson; so the training received through home study is best obtained by "keeping everlastingly at it.'

While studying at home in the evening is harder. requires more will power, and lacks the inspiration of the noble professors in our American institutions, the results are the same as those of college work so far as the disciplining of the mind is concerned. It is well to remember that few men have contributed anything to the world's progress who were not educated. Whether this education be self or college matters little.

most accurate and telling service.

A Detroit lady not long ago told me that she had sent her daughter to Vassar in order for one thing that the girl might learn how to make pie. She did not mean to be taken literally. I understood that she did mean that her daughter having a thoroughly educated mind would be able to do well whatever she set her hand to do-humble though the work might be. I have seen a few persons with untrained minds who could make good pie, and I know enough of educated people to know that generally speaking they are not satisfied to do their work halfway or in a slovenly manner, whether their work be humble or great. There are exceptions to all rules, however, but we must not permit ourselves to be led away by the exceptions

All I have said may be a little difficult for you boys to grasp. What I want you to know is simply this, that the more training a mind has the better it is able to do its work, whatever that work may be, whether it be planning and building a great bridge to span a mighty river or building an apple pie.

### WHAT MEN NEED.

What boys will need when they become men is cleancut, well balanced, well regulated minds, for after all it is the mind that rules. A man with a clean-cut, dependable mind is not going to permit his hands to do what they ought not to do, nor his feet to go where they ought not to go. A well educated man, other things being equal, draws a straighter line than does an ignorant man. A well educated man drives a straighter furrow with a plow than does an ignorant man. The more mental training you get the more masterful man you will become, Quit school now if you must, but know this, that when you do so you say to yourself, "I must run the chance of taking second or third place in the world's race. I quit school now in order to get into work more suited to my tastes, but in doing so I understand that I handicap myself forever."

I do not know, boys, of a single occupation in life in which an education will not improve your chances for success.

### AN INSTANCE.

I cannot forbear giving you a single instance out of my experience. In my class in college was a young man who stuck to his course until at the age of twenty-one he was graduated and received his degree of Bachelor of Arts. He was not a brilliant student, but a plodder. During the last two or three years of his college course he conceived the notion of studying shorthand, and while the other boys were playing or idling away their spare time he practiced shorthand. On his graduation he obtained a position in the city of Pittsburg as a stenographer in the office of an oil company. There were other stenographers in the office, some of whom had held positions for some years. In the course of a little time the New York office of the oil company wanted a man who could act not only as stenographer but as confidential clerk to one of the company's officials. There were men in the Pittsburg office who were good stenographers-perhaps better than my classmate and with longer experience, but he was selected and sent to New York. That was some years ago. A few months ago, when in New York, I called at the big building on Broadway in which the offices of this oil concern are located. I sent in my card to my once college friend. I was bidden to wait. In some ten minutes I was ushered into a beautiful office and there found my old college mate looking like "a ten time winner," and to my surprise—though I don't know why I should have been surprised. I found that he was at the head of a very important department of the business, with many men under him, naving the confidence of his superiors and in a fair way to reach a still more lucrative office.

In talking the matter over he told me that he knew it to be a fact that the stenographers who were with him in Pittsburg were either still there or had drifted elsewhere and into positions little, if any, above that in which they had started.

As I said, my friend was not a brilliant man. He was what I would have called an indifferent student. He stood nowhere near the head of his class, but he was not only a stenographer at his graduation he was an educated stenographer. The result was, as I have related, when a position awaited a stenographer with a trained mind, able to grasp the details of a complicated business and do more than 'take dictation" and "transcribe his notes," he was able to fill the place; and the place came without any of his seeking.

This is only one of numerous instances that have fallen to my notice where an education, as the foundation for work in itself comparatively humble, has been the means of lifting the worker to higher planes of success that otherwise could not have been attained.

I fear I have talked a little too deep for you this time, boys, but I want you, if you have read thus far, to reread again and again what I have here said. I have a real hope that your parents and your teachers, too, will read this talk. If by this word I can keep at school one of you boys who are now dissatisfied and unhappy in your school work, I feel that my time and yours will not have been wasted.

Very sincerely yours,

M-6 Sprague

## FOR THE MIKADO

OR, A JAPANESE MIDDY IN ACTION & By KIRK MUNROE

(BEGUN IN DECEMBER)

CHAPTER V.

JIU-JITSU METHODS.

R TT is well known to every one of you," said the superintendent, addressing the cadet battalion, standing at attention before him, "that the breach of Academy discipline most obnoxious to me is that form of brutality known as hazing. Generally this is practiced upon inexperienced newcomers by those who are older and stronger. Moreover, the hazers, imbued with the true spirit of cowardice, take care to be in such overwhelming numbers that their victims have no opportunity for successful resistance to their demands. An affair of this kind was planned For last night, when the selected victim was the very latest arrival at the Academy, Cadet Matsu, who comes to us as a protege of the Emperor of Japan; and who, by all rules of courtesy, should be treated with the especial consideration due a guest. Instead of this he has been, from the very first, hailed by a designation that is particularly obnoxious to him, because he regards it as insulting to his countrymen. including the Mikado, whom he reveres above all created beings. In every instance he has carefully explained this to those using the offensive term, and courteously has requested them not to repeat it. I am happy to state that, in most cases, this entirely proper request has been respected. In one instance, however, it was contemptuously ignored, whereupon Cadet Matsu very properly refused to salute those persons who thus declared their intention of continuing to insult his Mikado, through him. For this act of defiance he, shortly afterwards, was dragged from his bed at midnight by a score of masked men, and, with his roommate, was removed to a vacant building, where he was required to make humble apology for his alleged offense. Failing to do so he would receive, at the hands of his captors, such physical punishment as they deemed adequate. Choosing, without hesitation, the latter alternative, as I trust every one of you would do under like circumstances. Cadet Matsu, unfamiliar with American methods of boxing, promptly was knocked down. In another moment the victim of this assault had regained his feet; and, adopting Japanese methods of self-defense, not only had whipped out his direct assailant, and that young gentleman's second, a man half again as big as himself, but actually had the entire party of would-be hazers on a mad scramble for safety from his furious and incomprehensible attack. What the final outcome of this extraordinary battle would have been must be left to the imagination; for at that point it suddenly was interrupted by the approach of two officers who happened to be strolling in that direction. When these reached the building, they found Cadet Matsu to be its sole occupant. In answer to inquiries, he would only say that he and his roommate, Cadet Brownleigh, had been brought to that place against their will by a party of masked men and induced to participate in a certain Japanese game. Placed under arrest, and brought before ma for examination, this morning, Cadets Matsu and Brownleigh communicated all the facts in the case. but refused to divulge the name of any other person implicated in the affair, although informed that by taking such a stand they rendered themselves liable te dismissal from the Academy. As it was, they were ordered into close confinement until such time as their assailants should be discovered, or a final decision in their case should be rendered.

"I am happy to state that, almost immediately upon this condition of affairs becoming generally known, I received a visit from two third classmen, who acknowledged themselevs to be the persons who had applied the offensive term to Cadet Matsu, the instigators of the attempt to punish him, and the principals throughout the whole affair. Having thus confessed, they stated that they had done so with the hope that they might be allowed to take the place of the two fourth classmen then confined on board the Santee, and that the latter might be given their freedom.

"I replied that, while they certainly would be punished for their share in the attempt at hazing, I could not release the prisoners in whose behalf they appeared until I had the name of every man concerned in the disgraceful affair of last night, and asked if they were prepared to furnish them. They replied that they were not; but said that, if allowed a few hours, they believed they could persuade every one of those who had been in the boathouse to make personal acknowledgment of the fact. This proposition was accepted; and now we are to learn of its success or failure. Midshipman Snelling, have you and Midshipman Lloyd succeeded in your undertaking?"

"We have, sir," answered the cadet thus addressed.
"Then I am about to request every man implicated

in the attempted hazing of Midshipman Matsu to step to the front. At the same time, I give due warning that a certain punishment awaits each one thus making confession; and that, as a preliminary to it, he will be required to salute Midshipman Matsu; which act will be regarded as an apology for the past, and a promise for the future. Hazers, Forward, March!"

Copyright, 1904, by Harper & Brothers.

Amid a breathless silence, and under the curious gaze of the entire assemblage, a score of third classmen stepped a few paces to the front, where they were halted and formed in line.

The heart of the superintendent swelled with pride as he gazed on those sturdy young Americans, thus proving themselves willing to undergo an ignominious punishment to right and relieve those who, otherwise, would suffer for their fault. But duty required him to repress this feeling and continue to exhibit official sternness. So, instead of exclaiming, as he would like to, "My dear lads, I am very proud of you!" he said:

"So far, so good, and I am gratified by the spirit manifested in this public confession of wrong-doing. Now I request that each one of you, as his name is called, advance to within two paces of Midshipman Matsu; halt, salute him, and then continue to the position occupied by the marine guard, where he will consider himself as under arrest."

This command, issued in the form of a request, was obeyed to the letter; each one of the hazers, as

his name was called, stepping briskly forth, saluting Takahaki, who stood by himself, the observed of all, and then yielding himself to the marines who waited to receive him. The young Japanese, though inwardly trembling with nervousness at the publicity thus given him and his affairs, did not betray his feelings; but, standing in the rigid attitude prescribed by regulation, punctiliously received and returned each salute as it was rendered. At the same time he heaved a sigh of relief when, with this ceremony of reparation ended, he and his roommate, no longer under arrest, were permitted to resume their places in the ranks. As they did so, the third classmen who had just begged his forgiveness for attempting to haze him, were marched away towards the Santee, on board of which they were to undergo twenty-four hours of solitary confinement. In addition to this punishment, each received so many demerits as to keep him conspicuously upon his good behavior during the remainder of the year, in order to avoid gaining the very few more that would dismiss him from the Academy.

As one result of the episode thus happily ended, Takahaki Matsu, commonly and affectionately known to his mates as "Johnny Chopsticks," was never again called "Jap" by any person at that time connected with the Annapolis Academy. Another result was his receipt of an invitation, from the captain of the Academy football team, to become a candidate for place with that august body.

This invitation was not sent until after much discussion by the managing committee of the Academy Athletic Association. Some of the members declared that the little Japanese was too small of stature and too slight of frame, to withstand the shock of even a moderate scrimmage, much less the tremendous struggles of a big game.

"He may be quick enough," said one, "but so's a dickey bird, and what becomes of the most agile of dickey birds when he meets with a flight of hawks?"

It happened that the officer who had walked home from the club with the superintendent on the night of the recent attempt at hazing, and who was noted in naval circles as an all-around athlete, was present, as a guest, at this meeting of the committee. He listened with interest to all that was said for and against the issuing of an invitation to Takahaki to try for the team, until it became evident that an adverse decision was about to be reached. Then he begged the privilege of making a few remarks. This being granted, he said:

"Gentlemen, during a recent tour of duty in Japan I was accorded the privilege of inspecting the institution which, in that country, takes the place of this Academy with us. I mean the Japanese naval school at Yetajima, on the Inland Sea. Of course this is a place of intense interest to an Annapolis man; and, naturally, I found myself instituting comparisons between its methods and ours. In many respects they are similar, though the Japanese instructors devote more time to practice, and less to theory, than we do; but in the department of physical culture there is a striking difference. The Yetajima cadets have no gymnasium, no football team, no baseball, none of our athletic games. In place of them they have Jiuiitsu (pronounced Joo-jits), Ken-jitsu, and Botori: three methods of muscular development which, taken together, produce the most marvelous results I have ever witnessed. The first is a form of wrestling, based upon an intimate knowledge of human anatomy, in which the wrestlers are instructed, not only how to reduce opponents to instant submission by grips, twists or blows, that, if carried a degree further, would result in dislocated or fractured bones. and how to give the most tremendous falls; but they are taught how to receive similar falls without serious injury. Ken-jitsu is a violent form of single-stick fencing, in which no manner of attack is barred. But of all these stalwart athletics, the fiercest is Botori; which in itself combines the most sensational feature of a free fight and a football scrimmage on a large scale. The game is played, or rather the battle is fought, on the broad plain of the drill ground, between opposing forces of several hundred men. One half of each side is detailed for attack, while the other half remains to defend from assault a stout. eight-foot pole, held upright, with one end on the ground. At a signal the attacking forces rush past each other with loud cries, and each charges furiously the opposite body of pole defenders. The result is about the hottest fighting, outside of actual warfare, that I have ever witnessed. Everything being permitted, including blows and all forms of tackle, the most wonderful feature of Botori is that serious injuries from it are almost unknown. From early childhood, toughened and taught to protect themselves by Jiu-jitsu methods, those Japanese boys simply can't be knocked out by anything short of

sledgehammers.
"Now, gentlemen, I have told you these things for

## MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 6-From Governor Dockery of N issouri

Photo by J. U. Strauss, St. Louis.

GOVERNOR A. M. DOCKERY

State of Missouri

June 6, 1904.

I greet the American Boy so the citizen of the future.

May his career be one of continuous honor, misself an example
for future generations. His is the mission of broadening and
attempthening our country's greatness, and I leave the nature
in his hands with the full assurance that the task will be
well performed. There on be no greater honor bestowed upon
him than to be a true American Boy.

Fith assurance of my sincere sympathy in any movement which looks to his advancement, I have the honor to premin Very sincerply,

Coremet of Placount

the sake of adding that, with the chance of placing a Japanese jiu-jitsu player on your football team, you are also given the opportunity to make the name of that team respected on every gridiron of the country.'

So earnest was the speaker and so impressive were his remarks that hardly had he resumed his seat before the Committee on Athletics unanimously decided that Takahaki Matsu should be invited to try for the Academy team.

#### CHAPTER VI.

#### WHY DUN BROWN HATED RUSSIANS.

Dunster Brownleigh, having been a football player ever since he learned to walk, had "made" the navy team as a matter of course, and from the first had been known as one of its most promising members. It was he who had suggested that, in spite of his light weight, Takahaki might prove a valuable acquisition, and when an invitation to try for the eleven finally came to his roommate, Dunster was jubilant over the success of his plan.

"Of course you will accept it!" he cried to the Japanese lad, who was thoughtfully staring at the note he just had read aloud. "You don't have to write an answer, you know; but just show up and report at this afternoon's practice. I'll introduce you, and the coaches'll soon find out what you are good for."

"But I may not go," suggested Takahaki, looking up from his note. "I am not sure that it would be

the right thing for me to do."
"Not the right thing to do!" gasped Dunster. "Why, man! it's about the greatest honor that can be offered to a pleb. Even third classmen consider the eleven the best thing within reach, and try for all they are worth to make it. You can't refuse it! You simply can't! To do so would be your ruin socially. You'd never be put up for another place, or asked to go in for anything again, unless it might be one of the Litt. societies, or some other mind improvement scheme."

'That might be the best thing for me," casponded the young Japanese, gravely. "Is it not for that mind improvement that I am here? I was not sent here to play games; but it is for study that I am come; so that one day I may have the knowledge how to fight and sink the ships of the White Czar, whose mouth is ever open for devouring my country. No, my friend, it is not to play amusing games that I am come to America; but it is to learn how to fight the Rus-si-an, according to the best methods of the best fighting people in the world."

"Thanks, old man. That is a very pretty compliment. But what do you mean by talking of fighting Russians? I have not heard that Japan and Russia are at war."

"Not yet are they at war; but sometime will they be; for Russia is creeping, creeping, ever creeping. eastward, with the eye of desire fixed upon Japan, like a great cat, with death and destruction in its heart, creeping towards a bird. But my country knows her danger and is preparing to meet it. When all is ready, then will there he war with Russia."

'And you will be in it?" asked Dunster, enviously. "If I live, I shall be in it," replied Takahaki,

"While I shan't," said the former, in such a despondent tone that his roommate looked up inquir-

ingly.
"No, why should you be?" he asked. "You are American, and Americans are friendly to Russia, as also they are to my country."

"Some Americans may love Russia, but others hate her. I am one of the others," replied Midshipman Brownleigh, his dark face flushing and his eyes glistening. "Also I was born with the right to hate those who made slaves of my own people. Listen:

"My mother is a Pole. Her father, my own grandfather, was Count Cassimir of Warsaw, a descendant of Polish kings. It is in memory of him that I am named Cassimir. He fought against Russia for the liberty of Poland. For that his estates were confiscated, and he was reduced to such poverty that he became a teacher in the university. The Czar issued an order forbidding the use of the Polish language in the schools of Poland, and proclaiming that only Russian must be taught or spoken. My grandfather defled this order, and continued to use in his classroom the tongue that was his and his students by right of birth. Also he secretly taught some of them English, the speech of a free people.

"About this time also he married a girl of his own rank and of equal poverty. Shortly after this marriage, without warning, the house of Count Cassimir was entered at night by a squad of soldiers, and he was torn from the arms of his bride, who was struck senseless to the floor. When she regained consciousness she was alone; nor did she ever again see her husband. Only once did she hear from him. Two nights after his arrest something was tossed through the open window of her room. It was a small block of wood, hollowed to the center and containing a note. evidently hastily scrawled with a splinter dipped in blood. It bade her flee to America that her child might be born in a free country, and it was signed with the pet name that only she had ever called her husband. How it came to her she never knew, nor did she learn certainly the fate of my grandfather; but it was rumored that he was exiled for life to the Siberian mines.

"By the aid of friends the Countess Cassimir came to America, and here soon afterwards my mother was born. My grandmother lived long enough to impress her sweet, sad face on my memory, and to show me the note written in her husband's blood. which she kept in a tiny silver box and regarded as her most precious treasure. Now my mother has it, and some day it will be mine. If my grandfather still lives he is a lash-driven slave, toiling amid the horrors of remotest Siberia. Have not I, as well as you, the right to hate Russia?"

"It is so," replied Takahaki, who had listened with intense interest to this pathetic tale of Russian outrage. "You have the right, and we are of one mind. "But," he added, smiling, "before we talked of Russia, we spoke of the ball of the foot game, and I was telling you why I might not play him."

"Of course we were," interrupted Dunster, "and you vere giving me the best reason in the world why you should go in for the team, now, at once, with all your heart and soul."

Takahaki's face showed his amazement at this assertion, but he politely remained silent until his com-

panion should finish speaking.
"You said," continued Dunster, "that Russians were your enemies, and that some day you hoped for the chance to fight them. Well, by getting on the team you can have that chance at once, or at least in a very short time."

Takahaki's narrow eyes opened wide with amaze-

"Yes, I am giving it to you straight," said Dunster, noting the other's expression, "and it's this way: You know-or rather, of course, you don't know, though anyone would who has followed Academy football-that, next to West Point, the Lversity team, 'Lu Lu's' we call them, always put up the stiffest game on our schedule. Last year we beat them-

"But last year you were not of this place," protested Takahaki.

"No; but I expected to come, and so of course kept tab on all gridiron doings in any way connected with the Academy."

Takahaki looked puzzled.

"So you see I knew all about the Lu Lu's. This year we heard, more than a month ago, that they had something in pickle for us; but we have only just found out what it is."

"What is it?" asked Takahaki, curiously.
"It is a giant," answered Dunster; "the biggest man ever seen on an American college team. They claim that he can pick up any two of our men and carry them off, one under each arm. Of course no one believes that yarn; but, from all accounts, he is a holy terror, and-

"They keep him in a pickle, this giant?" murmured Takahaki reflectively.

"Oh, that's just a figure of speech, you know. It means that he's lying low, and they are trying not to give him away. But what I was going to say is

"Also you say that he is a holy man," continued Takahaki, his bewilderment over these novelties of English speech momentarily getting the better of his politeness. "Is he then a priest?"

"Worse than that," laughed Dunster, "he is a Rus sian."

"A Rus-si-an?"

"Yes, a Russy-an," laughed Dunster. "Came to this country to study mechanical engineering in all its branches, undoubtedly with the intention of using the knowledge thus gained against your country, when you two get to scrapping. Also," and here Cassimir Brownleigh's face darkened ominously, "his name is Suwarrow Suwarrowvitch, and he is a direct descendant of that butcher Suwarrow who, a little more than one hundred years ago, murdered a city full of my mother's people; thirty-five thousand of them, men, women and little children, unarmed and defenseless, who had surrendered with Warsaw, the capital of Poland."

"Perhaps also this Lu Lu man, this holy giant, this Rus-si-an, would like to do that same thing with my city of Hakodate," suggested Takahaki, quietly.

"Undoubtedly he would," answered Midshipman Brownleigh promptly, thereby casting a most undeserved reflection upon the character of the present Mr. Suwacrow.

"I think I will be happy if I make one of what you call the bail-foot team," said Midshipman Matsu; and from that moment Dunster felt certain that the navy eleven was slated to do things that would cause com-

That very day Takahaki reported for practice and was promptly set to work under the direct supervision of his recent enemy, third classman Lloyd. Of course, as he had never seen a football game, he proved to be the most awkward member of the entire awkward squad; and at the end of the practice hour he confided to Dun Brown, who had been hard at work in another part of the field, that of all the strange things he had encountered in America this play of the "ball-foot" was the most bewildering.

"Every time when I try and do something right, I find I do him wrong," he said despondently. "To get that ball, if I run at a man, who always I try and think of as a Rus-si-an, and knock him down, or trip him up, somebody cry 'Foul! for shame!' and I may not have that ball. If I run up behind, to take that ball quick, when he is not knowing, some other body yell, 'Hi! Hof side! Drop him, Johnny!' and again I may not have that ball. Also I hear one man call very loud, many numbers. It is told that all number have meaning, and at same time that only one or two of it mean something. So, if I try do that thing what all number mean, I do not anything do; and if I am try do what thing one number mean, it always must be wrong thing. Yes, all of it is very impossible for Nippon man."

Dunster shouted with laughter at this description of his chum's earliest experience as a football player; but finally he managed to say: "Of course it is puzzling, Taki; but you are all right, and you'll catch on after a bit. Why, I heard Lloyd say that you were a corker."

Midshipman Lloyd had made use of that very expression in describing the afternoon's work to the captain of the team, Midshipman Snelling; but what he said was:

"I tell you. Cy, the Jap's a corker in a scrimmage, perfect little dare-devil, not afraid of anything or anybody, and he gets there every time, without a scratch; but he's a slugger from the word go, and,

unless his methods can be civilized, there isn't an umpire but what would rule him out at the first tackle.'

Thus it seemed that Takahaki had quite as much to unlearn as to learn in order to become an acceptable football player. So perhaps it was a good thing all around that, at the very beginning of the season, an imperative order from the Secretary of the Navy forbade the playing of any match games by the Annapolis team of that year.

#### CHAPTER VII.

#### A FORBIDDEN GAME.

The Secretary's order against the playing of match games by the navy football team, created dismay at the Academy, and was discussed with many angry comments.

"Afraid we'll get dinted, or have our paint scratched, I suppose;" said Dun Brown, scornfully. "Regards us as government property, too good for use, to be kept in storage until it rots, or becomes a back number. The idea of the American Navy being under the thumb of an old molly-coddle like that! It is enough to disgust one with the whole business; and I wish I were well out of it."

Midshipman Matsu, to whom these remarks were addressed, in the privacy of their jointly occupied room, and who was equally disappointed with his chum, at being denied an opportunity to meet a Russian on the field of battle, concealed his feelings beneath a placid smile, as he answered:

"But he must have some good reason, this wise man, or he would not do such a thing; and for us it is to obey without question."

The Secretary of the Navy did have a good reason, and, strangely enough, Dunster himself had furnished it by writing home a glowing description of the remarkable fighting tactics of his new room-mate. "He is teaching me Joo-jits," the letter continued, "and the two of us are going to lay for the 'Lu Lu's' center tackle, a Russian giant wearing the pleasantly suggestive name of Suwarrow. If we don't make a stiff of that fellow, then I lose my guess, that's all."

While Mrs. Brownleigh had no personal acquaintance with Russians, from earliest childhood she had heard such tales of their cruelty and ferocity, that to her they were the most terrible beings in all the world; and the thought of her darling boy preparing to fight one of them whom he himself described as a giant, bearing a name synonymous with savagery, was unbearable. Acting upon impulse, therefore, she carried her trouble to her husband's business partner, the gruff old congressman who always had been her stanch friend. He never had played football, never even had seen it played; but, from the casual reading of newspaper accounts, he had gathered the idea that from every game several men were borne away dead, or disabled for life. Thus he was in a mood to sympathize with the distressed mother, and readily promised to see what could be done

It happened that this particular congressman was chairman of a House Committee that, more than any other, controlled naval appropriations. Also it happened that the Secretary of the Navy just then was planning to ask for an unusually large sum of money during the coming session of Congress. Consequently, when he received from the man upon whose influence the success of his pet scheme most largely depended, a request that foothall be forbidden at Annapolis, the Secretary did not hesitate very long before issuing the necessary order.

"It is tough on the boys," he reflected as he signed this order, "and they will hate me for it: but. in this case, the end justifies the means and some day they will know how it is themselves.'

Although, on account of this order, the Annapolis team was compelled to cancel its engagements for the first month of that season, its members by no means abandoned hope of so presenting their side of the question to the Secretary as to persuade him to revoke the ohnoxious decree before November. In this hope they were encouraged by Dunster Prownleigh, who, at a meeting held in Midshipman room for an informal discussion of the situation, declared that, through a relative (he meant his godfather) who was devoted to him, and who at the same time was absolute owner of a certain high official at Washington, he believed he could procure a recall of the hateful order.

"It's such a sure thing." he added earnestly, "that I should be very sorry to see the team disband, or even to let up on its work. Some of those outside Johnnies, and especially the 'Ln Lu's,' are giving us the loud ha-ha just now. They are saying that the Secretary would never have issued such an order had he not realized that the navy team of this year was N. G., and certain to be whipped out of its boots by every fresh-water college that it played. So my idea is that we want to keen up a full head of steam, and he ready to sail in for all we are worth the minute time is called, as it surely will be within a few days."

"You see it is this way." Dunster confided to his roommate that night. "My mother never is so hapry as when she is attempting the apparently impossible to please me. Also I have a godfather with whom she is very chummy, and who delights in doing things she wants him to do. He's a funny old party, but about as fine as they make 'em, though you'd never think it, to look at him. Furthermore, my godfather is in Congress. Hence these tears; or in other words, that is how I happen to be sharing a room with Takahaki from Hakodate, here in Annapolis, at this moment. Now whatever godpapa says is listened to with respect in Washington, because, being chairman of an appropriation committee, he holds a pass key to the Treasury, which makes him king pin, as it were, over all the other

(Continued on page 108.)

HE winter of 187.. was a hard one in the mountains. Game was scarcer'n hen's teeth and it was nigh to impossible to live out o' doors. I was chummin' that winter with Dick McCann, an old hunter and trapper that I'd known from the first year I struck the mountains. If it hadn't been for him I'd a died o' the blues, or somethin' else, as you'll see. As it was, we managed to keep a-goin' by stickin' close to our shack and tellin' over and over agin hard luck stories of winters when we didn't have a snug place to sleep in, plenty to eat and drink, and two good dogs and each other for company.

We turned into our winter quarters in the fall expectin' a long, hard winter. The signs were all that way. We had built our shack snug and tight agin the side of a hill; in fact we dug part way into the hill for one side of it for better protection. A little ways off we burrowed into the ground to make a sort o' storehouse for our pervisions, some o' which was fresh meat killed in our fall hunt, and some of it was dried beef and canned goods we had brought out from Denver. We built what we thought was a good strong door agin the opening of our storehouse and felt secure for the winter.

At first it was good to jest set 'round our fire and swap yarns, many of 'em bein' made up as we went along, but after awhile that got a little tiresome. The old lies didn't go any more, so that when one of us begun to tell somethin' the other un would up and laugh at him till he hed to quit for shame.

As for books an' papers, they was scarcer'n canaries, exceptin' for one scrap of a Denver paper that had been used for a wrapper on some of our vittles, and that was near six months old, but we stuck to it like grim death. We called it our "liberary" and took turns readin' it 'till we both hed it by heart. You'll laugh when I tell yer it was an advertisement for folks that can't sleep. If there was anything we didn't need it was somethin' of that sort. Every time we waked up after sleepin' through a two or three days' snowstorm we got out that old scrap of paper and read about how we'd be cured if we took a twenty-five cent bottle of somethin'.

We warn't bothered with many visitors, that's certain, for the weather was too cold for trappers and hunters. Our two dogs was a mighty sight o' comfort to us, but afore long they got as fat and lazy and good-for-nothin' as we was, and could put in as many hours in a day sleepin' as a ground-hog.

The howlin' o' the storms, and the barkin' of starved wolves, which was the only critters that dared venture out, didn't skeer us much. When yer don't hear nothin' day in and day out for weeks, even sich things is music to yer ears. Dick used to say he couldn't sleep unless he could hear the wolves howlin' and the wind blowin'. Dick was an ole hunter, gray and wrinkled, and as brave as a lion. He reminded me so much of an old grizzly at times, I called him "Grizzly Dick" most of the time. He was one of the best guides in the Rockies

'Long toward March we saw signs o' the weather breakin' up, and we begun to get impatient to get to work. It made us a little keerless, and accounts for this story I'm tellin' you.

Early in March we made two or three long tramps through the woods and brought in nothin' but frozen fingers and ears. The bears hadn't come out o' their winter quarters and the small game kep' under kiver. We was considerable discouraged till one day we run acrost bear tracks and I never saw such marks o' jcy on a human face as on Dick's, He almost got down on all fours and kissed them tracks. The marks made by the hind feet o' the critter was smaller'n those made by his fore feet, so we knew it was a black bear, for the grizzly's feet are about the same size front and back. He was a big un for his fore feet made tracks near fourteen inches from heel to tip of claw.

Follerin' the tracks we found his winter quarters under the roots of a big tree on the side of a little hill. He'd been out foragin', that was plain, but he hadn't hed any better luck than we hed, for there was no blood marks on the snow and nothin' to show that he'd been draggin' anything.

The first thought we hed was to smoke him outp'rhaps I'd better say smoke 'em out, for it was purty certain we'd find a pair of 'em, with maybe two or three cubs, for the young uns come durin' the winter, gin'rally 'bout January or February afore the family breaks up its winter housekeepin'. The print o' his feet and the length o' his stride showed he was a big un and made us all the more anxious to get at him. Tige, the biggest of our dogs, was starvin' for a taste of fresh meat, and it was all that we could do to keep him from pushin' his way right into that hole. If he'd gone in it would have been the last o' him, for the best dog livin's not a match for a bear, if the bear can get a chance at him. One quick stroke of a bear's paw will lay out the best dog ever born. A dog's only good for findin' the critter, and then by barkin' and by snappin' at his hind legs keep him busy till the hunter can come up with his rifle. Tige, by the

#### No. 1-- Capturing a Thief

way, was the best bear dog that ever tracked a bear. He was ole and a little wobbly at times, but he hed all his teeth and they was set in a jaw like iron. He warn't such a big dog, but he was a fighter—every inch o' him. He had a way o' circlin' 'round a bear so as to keep the bear busy fer us to come up. It was peculiar and I never knowed any other dog to do it. But once he got at a bear he never let him get away, but managed allers to keep him turnin' 'round and 'round so as we could allers find him when we heard his bark.

Wal, we made up our minds to smoke them fellers out, but there warn't any dry wood or leaves or anything nearer than our shack, so, slow like, we called off the dogs and went back home, decidin' that the next mornin' we would go prepared to give sich an invitation to the big un and his family that they would come out and say "good mornin'."

That night we set long afore the fire cleanin' our guns, though it warn't needed for we'd done the same thing a hundred times durin' the winter. The dogs seemed to know what we was doin' for they lay on the floor lookin' up into our faces sort of peart and anxious, as much as to say, "Don't fergit we're in this." We couldn't help noticin' the anxious way they looked, for gin'rally they stretched themselves out on the ground afore the fire and went to sleep soon as supper was over, and not even the barkin' of a hundred hungry wolves disturbed 'em.

'Long about four in the mornin' somethin' happened that made Dick and me set up and rub our eyes. Tige was growlin'. "Lay down, Tige," Dick called out. "What's ailin' ye? Gettin' anxious?" The dog came over to where Dick was, and, to tell you the truth, he said as plain as words, "Dick, get up. There's mischief brewin' outside." Dick aimed a blow at Tige's nose, not intendin' to hurt him, for Dick would as soon hurt a little baby as Tige, but the knowin' brute wouldn't move an inch till Dick got up.

It was a cold night and the wind was howlin' outside, so as if a tree had fell down on us we couldn't a heard it. Dick went to the door and listened. Then he turned to Tige and looked mad. "You cowardly scamp, there's nothin' out there but the wind." But the dog didn't care. He meant business and not even scoldin' could prevent his doin' his duty. As plain as day he meant for Dick to open the door and he warn't goin' to stand any foolishness about it. I b'lieve he'd a bit Dick if Dick hadn't done it. It took a lot o' grit to leave

a warm fire in the middle o' the night and go out in the storm, but Dick hed grit enough for anything.

By this time I was up and gettin' ready to go out, too, for somehow I felt that everything warn't right. Dick's confidence, too, in the dog was sich that after talkin' it over he agreed with me that we'd better find out what the trouble was. so wrappin' ourselves up and takin' our guns from the pegs where they hung, we went out, led by Tige and Ben, the other dog. It was just breakin' light over the mountains, and peerin' about keerfully we saw the door of the meathouse open, and leadin' away from it the tracks of a bear. Examinin' the rnow we saw he had dragged somethin' away with him and then we turned skeered like to our meathouse.

It didn't take us long to get into that hole in the ground, fer the door was standin' wide open, and sich a sight as met our eyes was enough to make a man swar. What hadn't been eaten by that bear had been mussed all over the ground, and a big quarter of ven'zon, that we'd been savin' till the last, was every bit carried away. There warn't any use lockin' the meathouse door after that, and there warn't

any use scoldin' Dick fer leavin' it open. I've heerd of a bull in a china shop but it couldn't be worse than a bear in a meathouse. I've heerd that bears like a vegetable diet, sich as nuts, berries and fruit, and in course they do, and most bears live on 'em all the time, but this bear was a meat-eater and he'd had the meal of his life; and what he couldn't eat himself he'd dragged off fer that mate of his'n and them cubs. When a bear turns thief he's the meanest kind of a thief. What he can't eat or carry away he allers spoils.

Our dogs was yelpin' like mad way off on the mountain follerin' the bear's trail, and sooner'n I can tell it almost, we'd gathered a lot o' dry stuff and foller'd 'em. We knew where to go. It was that bear we'd tracked the day afore.

It was broad daylight when we reached the bear's hole. Our two dogs was squattin' at the entrance barkin' their heads off, and now and then makin' a dash as if they intended to go right in and give 'em a fight at close quarters. But them dogs knew too well they'd never get out alive, so they took it out in barkin' and yelpin' and pawin' up the snow.

In a few minutes we hed a fire under the roots o' the big tree, fur enough in so's to find a dry spot where the stuff would burn. Then we banked the snow up at the mouth of the hole so as to keep out the air, and made a smolderin' fire that would give out a lot o' smoke. Bears don't like smoke; as soon as they snuff it they break and run. In this case thar was only one way to run, and we knew afore long they'd be comin'.

Each of us takin' a dog with him and selectin' a tree a little ways off up the hil' in a direction so the wind was right, we waited and watched for signs of bear, havin' all we could do to keep the dogs quiet.

Wal, it warn't long afore we saw the shaggy head of one of 'em and the smoke pourin' out over the edge of the hole, showin' that he'd knocked the snow bank down and crawled through. As quick as I can tell it he was standin' out in full view, sneezin' and blowin', and mad clean through. For a minute I thought he didn't have no mate, but he did, and cubs, too, the purtiest pair I ever laid eyes on, and I tell yer they made a handsome picter, standin' out agin the white snow with their heads up snuffin' the clear, mornin' air. It seemed a pity to kill 'em, but bears have to be punished like other critters when they do wrong, and we couldn't fergit our meathouse and that haunch of

At almost the same minute Dick and me let go (Continued on page 105.)

I GAVE A LUNGE WITH MY ENIFE AT THE CRITTER'S BLAZIN' BOUND EYES

#### FOR THE MIKADO

(Continued from page 100.)

little tin gods. Thus enlightened, you readily will note the sequence. Whenever I consider a change in existing conditions advisable, for the good of the service, I merely call up mother. She gets godpapa on the wire, he passes the news on to the powers that be, they phone his, her, my wishes down here, the circuit is closed, and the good work is done. This is as it has been, as it should be, and as I have every reason to believe it will be in the present emergency. So just you peg away at your game, Johnny, and we'll get the chance to do up friend Suwarrow yet."

Upheld by Dun Brown's cheering conviction that the weight of influence, being exerted in their behalf, must speedily prevail, the team devoted itself to practice with renewed energy. Takahaki mastered the rudiments of the game, and bade fair to become a star player, while the team, as a whole, was spoken of as the best the Academy had turned out for many years. Still the coveted permission to test their abundant strength and skill in open conflict failed to arrive, and at length, with the waning season, their high spirits began to flag.

November came, and with a heavy heart Captain Snelling cancelled all dates for the remainder of that season. Then he sent in his resignation. He wrote that he could not afford to waste any more time over a hopeless proposition, and advised that football be stricken from the list of athletic games played at the Academy.

While the captain's resignation was accepted, his advice raised such a storm of discussion that the question of permanently retiring from the "gridiron" was reserved for a subsequent meeting. Dunster Brownleigh was the most ardent among those who proposed to maintain their organization, and to continue indefinitely their efforts to gain a new

ruling in favor of their beloved sport.
"It's bound to come!" he declared, vehemently. "I've already received notice that our friends are at work, and that things are looking our way. be no better than chumps if we gave up now."

The notice that Midshipman Brownleigh claimed to have received had come in the form of a letter from his mother, in which she had promised to speak about the football situation to his congressman godfather as soon as the latter returned from a vacation trip to the Pacific Coast that he then was taking

Now it happened that during his western journey, which carried him as far north as Victoria, B. C., the congressman saw in that city his first game of football, and was delighted with the graceful skill of the players. There was no slugging, nobody got hurt, and the whole affair seemed to him about as harmless as a game of croquet, though infinitely more exciting. He was not told that the game that he witnessed was played under Association, rather than under Americanized Rugby rules, nor would be have known the difference if this information had been vouchsafed. From that hour football to him assumed a most kindly aspect, and he was sorry he had ever uttered a word against so innocent a game.

When next he met Mrs. Brownleigh, and that fond mother, fortified by the knowledge, sadly conveyed in a recent letter from her boy, that all football games scheduled for that season had been canceled admitted that, after all, football might not be so dangerous as she had imagined, the congressman promptly wired the Secretary of the Navy

"Have been studying athletic games. Find football grand exercise. Believe it should be made special feature of naval training.

The Secretary's face assumed a vastly relieved expression as he read this change-of-heart message. He had been greatly worried by the numerous condemnations of his recent order against football, received from all parts of the country, as well as by requests, almost amounting to demands, that it be revoked. Now he saw a chance for gaining many political friends, by allowing each of his critics to imagine that his presentation of the case had caused the head of the navy to change his mind.

promptly was forwarded to the Naval Academy, Presently he challenged George Washington, who, tries to run matters to suit himself and to improve read at evening parade, and greeted

with rousing cheers from the entire battalion, the moment parade was dismissed.

A few minutes later, at a hastily called special meeting of the Academy team, Midshipman Dunster C. Brownleigh, was unahimously elected to the vacant captaincy, an honor never before accorded to a pleb. An animated consultation between the new captain and members of the athletic committee resulted in the immediate sending out of half a dozen telegraphic challenges to as many college teams. The very next day it generally was known that, late as was the season, two games had been arranged. On Thanksgiving day West Point would play the Navy at Philadelphia, and three days later the L— University team, the victorious "Lu Lu's," who already had defeated West Point, would visit Annapolis.

"You surely have run up against if. hard!" said ex-Captain Snelling, shaking his head, and speaking to Captain Brownleigh.

The moment there was a prospect of a game the big man had volunteered to play in his old position of center tackle, and the offer had gladly been accepted.

"West Point will give us all we want to handle." he continued, "and to play the 'Lu Lu's' only three us." days later is to invite almost certain defeat.'

else to be done. We simply must meet those fel-

lows, and the 30th is the only date they can give

"Well, of course, we'll play for all we're worth; "I know it," replied Dunster, "but there is nothing but the outlook is squally for navy blue." (To be continued.)

#### A Washington's Birthday Party By ERNEST

HE Farleys were patriotic. And it was no wonder, for little Roger's great-grandfather had been a Revolutionary hero. As soon as Roger could talk he had been told the story of George Washington and the cherry tree. He, of course, did not understand it at that time, but it had been repeated to him each Washington's birthday since then.

When he was four years old his father told him the tale of George Washington riding on his mother's pet colt-how the colt had objected, rearing, kicking, jumping and stamping until it became so oxcited that it burst a blood vessel and died. He told how sorrowful George Washington had felt and how he dreaded to tell his mother the sad news, well knowing how deeply it would grieve her. But there had been no hesitation on George Washington's part. It was right that he should tell his mother, and he told her. Naturally, she was distressed over the loss of her pet colt, but her grief was thrown into the background by her gladness over her son's truthfulness.

But now Roger was six years old and was "growing to be a man," his papa said, and he was already a patriot.

The Farleys were preparing to celebrate Washington's birthday, and Roger, full of patriotic zeal, was doing his best to help.

Over the sitting-room mantel hung a fine large picture of Washington as a Mason, in an oak frame, carved with Masonic emblems. Mrs. Farley decorated it with a beautiful vine with bright red berries. The mantel was draped with a large silk flag of the United States. Mr. Farley sent up a fine tree from the florist's. Upon this, Mrs. Farley tied bunches of candied cherries. Around the trunk of the tree, just under the drooping branches, she tied a pretty aluminum hatchet with ribbons of red, white and blue. Besides the cherries, there were suspended small guns, swords and drums for Roger and his friends.

In one corner of the room was a spinning wheel decorated with our national colors. All the portieres had been taken down and in their places hung our flags. Red, white and blue ribbons floated from the chandeliers. There were to be no regular meals served that day; instead there was to be a "continued" table, as was the custom formerly on New Year's day. The table was a delectable sight spread with all the delicacies of the season and festooned with red, white and blue.

From one until nine o'clock the guests came and went. There were a good many, for there were Mr. and Mrs. Farley's friends, grandpa's friends and Roger's friends. Mrs. Farley, with powdered hair and dressed as Martha Washington, dispensed hospitality with generous hands.

Roger was nearly wild with joy when half a dozen of his friends arrived exactly as the clock struck one. But, a few moments later, he came near forgetting his guests at the sound of patriotic music outside. He raced to the door. Ah, there were his grandpa's friends—veterans of the Civil War. They had been ushered to the very door. Later an old man came in a sleigh-he was the grandson of a Revolutionary soldier and appeared in full regimentals, "with silver buckles on his knee.

Oh, what a delightful day!

Oh, how everyone enjoyed it!

Oh, what stories were told by the veterans!

The very old man in Revolutionary costume told the story of George Washington's wrestling contest. "He was only a young fellow at that time," he said, "and wrestling was considered a manly sport. Once-during one of those wrestling bouts, Washington was sitting down under a tree reading a favorite book in which he became so interested that he forgot to watch the contest. Meanwhile the champion wrestler, who was called 'the strong man he head of the navy to change his mind.

of Virginia,' wrestled with every man who would what he did. He might have been obliged to have An order restoring football to its former status meet him in a contest and was victor over them all. said, "I can't leave him, for when I'm gone he

being still interested in his book, paid no attention to him. The "strong man of Virginia," however, soon became so offensively boastful of himself that Washington laid aside his book. He entered the ring and boldly faced the champion. This is what the bully himself said of the contest: 'In Washington's lion grasp I became powerless, and was hurled to the ground with a force that seemed to jar the very marrow in my bones."

Roger and his friends showed their liking for this story by giving three rousing cheers, after which they passed turkey sandwiches and hot coffee with loaf sugar and whipped cream to all the old gentlemen.

Someone told how Washington and his brave soldiers steered their boats among the icebergs and did not seem to care if they froze their feet, and how they swam rivers, struggling with the floating ice.

Another presented a vivid picture of Washington crossing the swollen Delaware in a blinding snowstorm-battling with the fierce current and cruel ice floes. He told, also, of the weary days and nights on the march and at Valley Forge.

One old man dwelt on Washington's bravery in penetrating the deep forests where lurked the flerce wild animals, and in climbing the mountains between the Potomac and the Ohio in the bitter winter weather.

Mr. Farley exhibited the coat of arms of the Washington family. There was an eagle at the top; below were two wide red bars, over which gleamed three stars; the words imprinted were Exitus acta probat.

"What does it mean, papa?" asked Roger. "It means, 'The event justifies the act."

The veterans played a Revolutionary game, which caused much amusement and shouts of laughter. Patriotic songs were sung and when it was getting near to nine o'clock, Mrs. Farley-or, rather, Martha Washington-sat down to the piano and began to play some music which had such a surprising effect upon the old folks that in a minute everyone was on his feet, dancing the minuet.

At last, after once more helping themselves to anything they wanted from the refreshment table, the party broke up and the happy day closed with the doxology, in which ever one-young and oldjoined.

#### THE BOY WHO IS FAITHFUL

By ALICE MAY DOUGLAS

It is all right to be smart, but it is all wrong to be smart in the wrong way. I have seen boys who think that they are smart in ordering others around and boasting of what they are to do. If I had any work to be done I'd never hire a lad like that to do it.

It is true that some employers are in need of smart boys and ever on the outlook for them; but there are thousands of positions where boys of only ordinary ability are wanted. Boys that are too smart are often not desired, since they too often want to dictate and cannot be dictated to; they try to run the business to suit not their employers, but themselves.

There is a greater demand for faithful boys than for smart boys. There is nothing that one more appreciates in one under him than faithfulness. I once heard a gentleman say that he asked a friend why he paid his secretary such a very large salary when he could secure one for a much smaller sum. He replied that he could secure one for a less amount, but not one who would do the work as did this one. "When I am gone," said the friend, "everything goes on just as if I were here." Now if this secretary had been smart, rather than faithful, his employer might not have been able to say of him

> upon my methods, and it is not a partner that I want, but a secretary.' Where one succeeds because of his

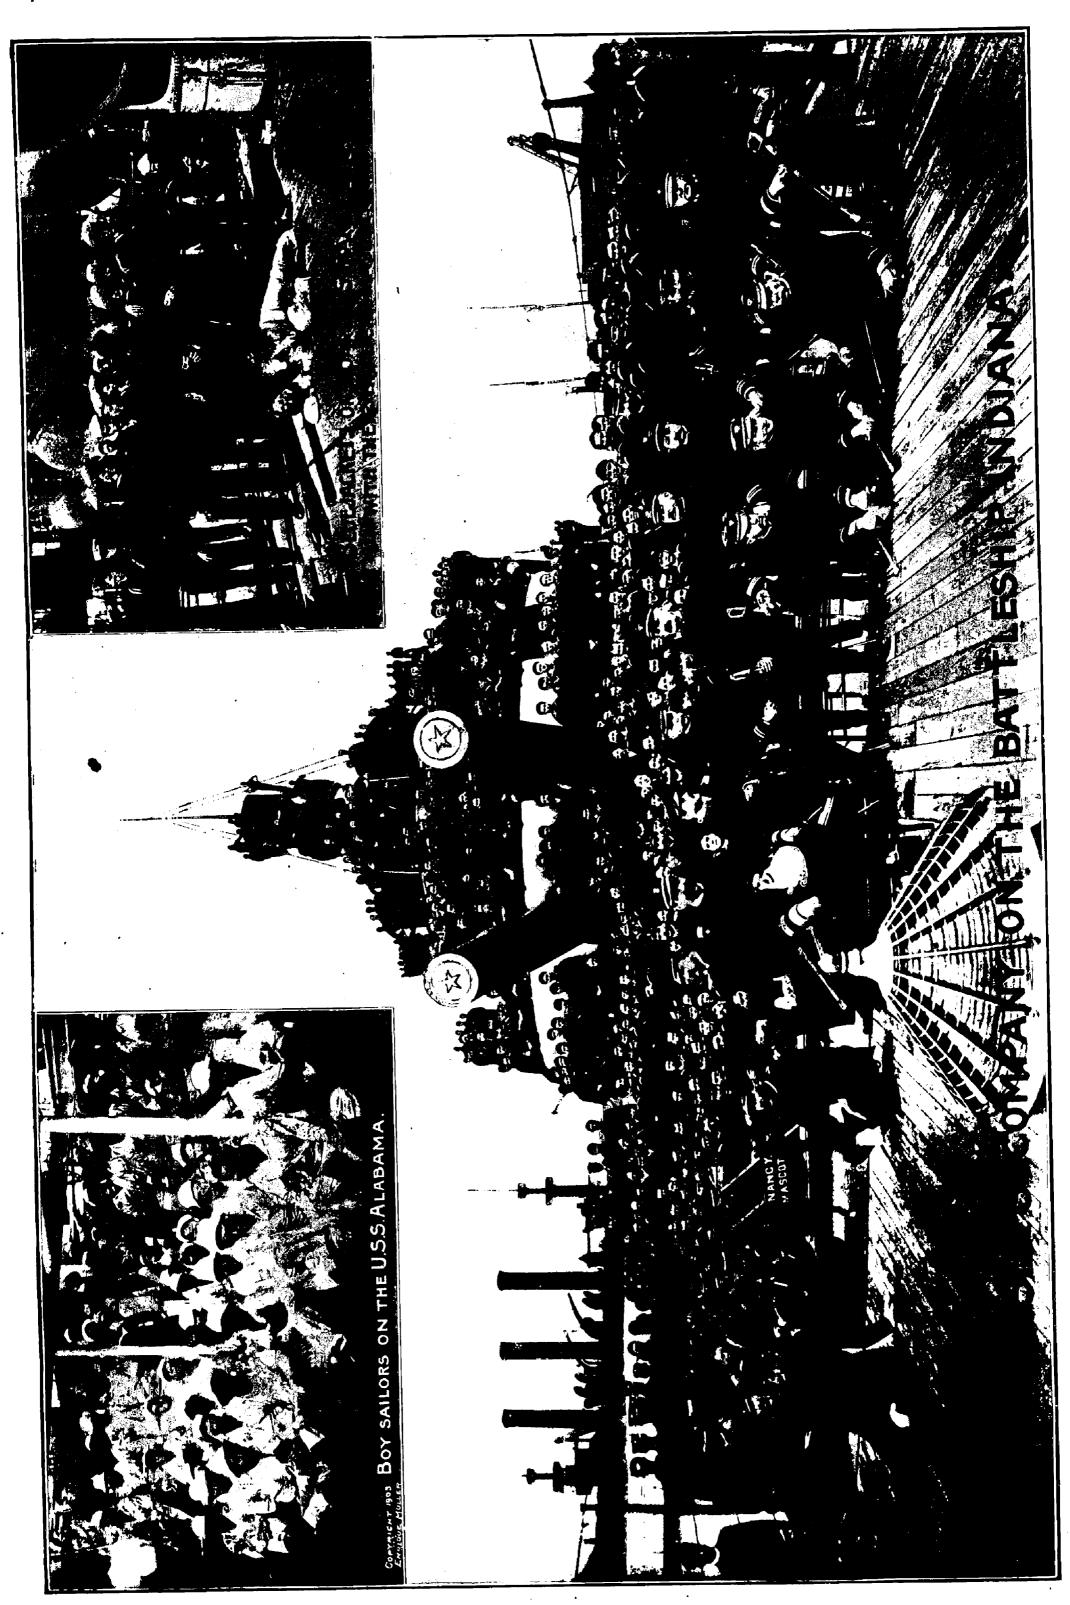

smartness, ten succeed because of their faithfulness.

And not at the boy's faithfulness alone does a would-be employer look; he desires a boy who is an all around moral boy. He knows that it is of no use to hire one who smokes cigarettes, for these muddle the brain, cause heart trouble and kill the smoker at so early an age that he will be obliged to soon secure another lad. Nor does he care for a boy who gambles, for his funds would be too handy for such and the temptation to borrow them too great. Nor does the employer desire a boy who drinks intoxicants even in the slightest degree, for he thinks there will be a possibility of his making a mistake.

It may be that the man who is thus critical indulges himself in all of these vices, but he wants the boy he employs to be free from them. He knows more than any other to what they will lead, and it is probable that a boy who is inclined to them would obtain a position with a good man rather than from a man like this, for a good man would think that he might assist the lad to give up his evil ways.

#### WHAT HAPPENED PIETRO

ANANOH, bananoh, bananoh!"

As Pietro Girgotto pushed his handcart, heavily laden with the fruits of the tropics. through the populous streets of Brooklyn, his mind was occupied with the scenes of his early boyhood in the city of Verona, and, if the truth be told, particularly with a merry trio with whom he used to romp through its ancient streets and wake the echoes by peals of laughter; or, to be still more precise, with a member of that jolly trio, one certain Marinetta, as dark-haired, black-eyed, olive-skinned, gentle and graceful a girl as ever drew breath in sunny Italy.

What had become of her? he wondered. Where was she now? For all he knew to the contrary she might, at that very moment, be hidden in the New York Italian colony, just across the East River, like a needle in a haystack, and as difficult to find. His mind rapidly reverted to the day on which they parted-perhaps never to meet again. Two years is but a short span of time, and yet how full of incident the period had been for him. The tempestuous ocean voyage, the landing in a strange country where men spoke a barbaric language as compared to his own, his father's illness and death, his own tribulations and difficulties in the way of earning a livingthese thoughts flitted through his mind like a panorama of the past. What might not have happened to her during the same time!

Suddenly his day dreams were dispelled by the

stern reality of business.

"How much are the bananas?" asked a tall young lady in black, with one slender hand on the clasp of pocket-book.

"Fifateena centa," he answered promptly.

"Too much," she replied, making no effort to conceal a smile, for she was highly amused and well aware of the Italian love for bargaining.

His vocabulary was not large, but none the less

effective.

"Twel'a centa," he said piteously.
"No, ten cents," she persisted, still beaming down upon him, as though the sunlight of the beautiful summer afternoon was reflected in her face.

"All ri', ten 'a centa," he said, as though he was giving away some of his goods, and proceeded to

do up a dozen of the yellow fruit. But, just as he was preparing to wind the string about the bulky package, his customer emitted a scream that nearly made him drop the fruit. Looking down the street, he beheld a sight that almost froze the blood in his veins. A horse was coming up the thoroughfare at a breakneck speed, while behind it in a wildly careening carriage, with a face as pale as death and terror-stricken eyes, sat a gir' of about fourteen, vainly striving to regain control over the frenzied animal. But she was as helpless as a small boat in a hurricane, being flung from side to side, as though she were a suppet, while the carriage swayed to and fro. Pietro could see the people scramble for safety, as the horse galloped up the street. Now and then a man worked his arms like a windmill in an effort to stop the runaway and then hastily jumped aside to let the carriage pass him like a rocket. The horse was but a block away, when Pietro darted into the middle of the street, despite the warning cries that reached him from all sides, and stood there full of determination and courage, but with a heart hammering against his

By HUGO ERICHSEN

breast. The brave boy did not seem to see the danger bearing down upon him, but gazed directly at the girl in the carriage, now visible on one side of the plunging horse, now on the other. When the animal was nearly upon him and it appeared certain he would be run down and killed. Pietro, with a great leap, sprang at the bridle of the horse and clung to it with all his might. He was a big lad for his age, and, try as it would, the horse could not continue its flight under the disadvantage of his weight. In dragging the boy along, the mad beast tried to free itself of its burden. Before it could do so, however, several men ran to its head and brought it to a standstill. It trembled in every limb, while some kindhearted persons bore the unconscious and bleeding Pietro into a nearby drug store, where first aid was administered to him, while others removed the girl from the carriage. Strange to say, even when she was reunited with her mother, a somewhat portly woman who wept copiously at sight of her and embraced her ever so many times, she refused steadfastly to part from the wounded boy and insisted upon accompanying him to the hospital.

It was a long time before Pietro regained his senses. When he opened his eyes at length and beheld the girl sitting at his bedside, he held out his hand with a feeble movement and merely said: 'Marinetta.''

But there was a world of meaning in that one word-undying devotion that went straight to her

"Povero amigo." she responded, in a voice that came perilously near breaking down, while she bent over him.

Why did she call him her poor friend, he wondered. Trying to turn, so as to get a better look at her face, he was racked with pain, and then he understood.

"O come now," said the doctor cheerily, entering at this juncture, "you're all right. Only badly bruised. From the looks of it, though, it was a wonder every hone in your body wasn't broken. You'll sell lots o' bananas yet."

The boy nodded. "No go back Italee now," he said; "sella da ba-nan', maka da mucha mun."

And before long, with his hand in Marinetta's, he

fell into a sound sleep.

#### JIM TYSON'S BEAR STORIES

(Continued from page 102.)

with our guns. Each of us hit our bear, but neither of 'em dropped. I guess we was a little out of practice. I aimed at his heart, but got him too high. The funniest thing then happened that I ever saw. I hey heerd tell o' sich things, but I allers thought the feller who was tellin' it was "drawin' the long bow," as the sayin' is. Both o' them bears went up in the air on their hind legs, and with an angry snarl rushed for each other. Each o' them thought the other feller had struck him. Then there was the purtiest scuffle you ever seen, fer they was mad now clean through. I burst right out laughin'; I couldn't help it. And Dick, he, too, stood thar holdin' his sides. Them bears was mad enough to eat each other up, and all the time the cubs was dancin' 'round, tryin' to keep out o' the way o' the big uns. It warn't a good place for a fight o' that kind fer the ground was steep, and the first thing we knowed they was rollin' and tumblin' down the hill, the cubs follerin' 'em, half the time rollin' like little balls o' fur. Before they struck the bottom Dick and me and the dogs was after 'em. I didn't make half a dozen jumps afore my foot struck a loose stone and over I went, throwin' my gun twenty feet ahead o' me. I had sprained my ankle and was rollin' straight down among them bears! There was no use talkin'. I made up my mind it was all

off with Jim Tyson. No more huntin' days fer him. I heerd Dick yell at me, but I couldn't hear what he said, and it wouldn't have done any good if I hed. I was agoin' down hill purty fast, but the dogs beat me. Dick told me afterwards that Tige grabbed the big 'un by the hind leg with a grip such as only Tige's jaws could take, and at the same time Ben sprung at the other un. This made the bears forgit about each other, and, loosenin' their holds, they turned on their new enemies. This gave me time to roll out o' the way as I thought.

Then Tige let go o' his bear and made a rush fer the other un that was gettin' the best o' Ben. When the big hear found he was freed he made a start fer me, snarlin' like fury. I gave a lunge with my knife at the critter's blazin' round eyes, that seemed to be not over a foot from my face. closed my eyes and said a prayer—though it warn't a prayer, but more like "Good-bye Dick," nothin' else, and that was the last I knew until Dick was holdin' my head and callin' to me that I was all right.

Dick had caught the big fellow with a shot in a tender spot jest in the nick o' time, and there the critter lay stretched out in the snow at my feet, dead as a door nail. The two dogs had given the other bear all that she wanted to think about till Dick could get through with the big un and give the finishin' touch to her, too.

I was feelin' purty bad over that leg o' mine, but, you wouldn't believe it, I was feelin' worse over them two cubs. Maybe bears ain't got no feelin', but them little uns was worryin' a mighty sight. They knew somethin' was wrong and was whinin' a little under their breath and pokin' their noses in the snow 'round their dead mother, as if they was tryin' to wake her up.

How Dick ever got me back to shack I never jest knew, but he did, and it was a long day, I can tell you, afore I could hunt bears agin. Dick had the job all to himself of skinnin' and cuttin' up them hears, and totin' the best parts of 'em into the meathouse afore the wolves could git 'em Them cubs got to be good friends with Tige and Ben and we kep' them in the shack till summer, when we took 'em with us to Denver and gave 'em away to people we thought would take good care of 'em.

I've took a good many bear skins in my day, but never one I set more store by nor the one I seen comin' toward me all glistenin', that mornin' on the mountains when I gave myself up for a dead trapper.

WO young men of East Orange, N. J., accomplished a remarkable trip by water, last summer, in a boat of their own construction. The two their own construction. The two young men are brothers, nineteen and eighteen years old respectively. They have been interested in boating and aquatic sports since they were twelve years of age. Three years ago they built a canvas covered sailing skiff, which was the admiration of their companions. Last year, after studying the designs of various gasoline launches, they drew the plans, and built a launch twenty-one feet in length, with standing top and side curtains, as is shown

launch twenty-one feet in length, with standing top and side curtains, as is shown in the accompanying photograph.

A one-and-a-half horse power, gasoline motor was installed by the boys themselves, and they spent their summer vacation in cruising on Long Island sound. Last summer, as the result of carefully laid plans, they undertook a much longer trip.

laid plans, they understand trip.

The poat was refitted with a six-horse power, double cylinder engine, of the high speed auto type, and a new propeller, adapted to this style of motor. All this work was done by the boys themselves.

On the twentieth of July, their little launch, furnished with two beds, a cooking stove and cooking utensils, and with its

launch, furnished with two beds, a cooking stove and cooking utensils, and with its lockers stocked with provisions for the trip, left Bayonne, or Newark bay, with flags flying, and as happy a crew of two, as ever sailed the seas.

They rounded Bergen Point sailed up past the statue of Liberty, between the New York, and New Jersey shores, then along the Pallsades on the Hudson river, across Haverstraw bay, through the gate of the Highlands, and on up the river bor-

of the Highlands, and on up the river bordering the Catskill mountains. Albany was reached the third day. Here a permit from the Superintendent of Canals allowed them to enter the Erie canal, where it joins the Hudson river.

Seventy miles farther on, and the crank shaft of their motor, which had been performing its 750 revolutions per minute,

forming its 750 revolutions per minute, broke!

Here was a dilemma! A broken crank shaft, whether on a small boat or an ocean steamer, is a serious matter.

The first thing was to make port where there were machine shops. This was done by engaging a tow from a canal boat, which landed them far into the night, at the town of Little Falls. A week later, a new crank shaft arrived from New York, and was fitted up at the shops, and the boys went on their way rejoicing.

Syracuse was reached in another day, and here they entered the Oswego canad, arriving at the city of Oswego, on Lake Ontario, the following night. Early in the morning they were up and off for Clayton, on the St. Lawrence river, for the day was fine, and boats which had been waiting for a week at Oswego, for the rough water to

fine, and boats which had been waiting for a week at Oswego, for the rough water to go down, were ready to start.

This was the longest stretch of steady running the boys had; eleven and a half hours without a stop of the engine, and much of the time out of sight of land, laying their course by chart and compass. So secured was their reckening that they came in straight as a die to the dock at Clayton.

Three weeks were spent at the Thousand

Clayton.

Three weeks were spent at the Thousand Islands, which is called the Paradise of small boats. Here were cozy nooks, stretches of quiet water, safe anchorages, and beautiful scenery. At this place they were guests of Mrs. Henry Lee, the wife of the well known landscape artist of New York, and the cut here shown is a snap shot from her camera.

Leaving this delightful place on August 27, they resumed their trip down the St. Lawrence river. The boys had obtained reliable information regarding the famous rapids, and they successfully "shot" the first two, their staunch little boat taking to the water like a duck, and coming through without a mishap.

"All that is necessary." say the boys, "Is to keep to the middle of the channel, and not lose your head. Nobody need fear the rapids, if they have a good staunch boat and understand their engine." However, the safer way is to take the magnificent canals, which here parallel the river, and are navigable for the largest, as well as the smallest boats. These Canadian canals are massively built of stone, and their locks are all operated by electricity, the immense fall of water furnishing the power for generating the current.

The boys spent several days in Montreal, seeing the sights of the metrocolis of Can-

The boys spent several days in Montreal. The boys spent several days in Montreal, seeing the sights of the metropolis of Canada, and were incidentally entertained on board the Dominion line steamer Manxman. The captain of the big liner noticed the American flag floating proudly from the little boat, where all other flags were British at the time, and invited the boys on hoard. He even offered to take the craft and all on board the liner for a trip to Scotland, but the boys declined this tempting offer.

From Montreal their route lay down the

From Montreal their route lay down the St. Lawrence river to Sorel, where the Richelieu river enters from Lake Champlain. Along this river they encountered

much bad weather, and made the acquaintance of the Canadian French, their school
knowledge of the language standing them
in good stead. The weather cleared as
they entered the United States, and down
Lake Champlain to Fort Ticonderoga was a
magnificent run of eighty miles in one
day!

The scenery here is grand and rugged,
mountains from their lofty heights running sheer down to the water's edge. The

#### HOW THE BATWA PYGMIES By ALFRED W. CUTLER WERE PHOTOGRAPHED

Fair the Pygmies would not tolerate being made the victims of sly snapshots by kodak "fiends," and resented all such attempts with great ferocity, in fact the very day that I photographed them they were with difficulty restrained from seriously in-juring an innocent offender in this respect.

It was, therefore, necessary to secure special permission in order to photograph them, and even then one had to win their friendship and confidence, as they were peculiar in their likes and dislikes, refusing

In Central Africa, were undoubtedly the most interesting human exhibit at the Louisiana Purdians and similar exhibits at the World's treatment they have met with may have Fair the Pygmies would not tolerate being made the victims of sly snapshots by ultimate civilization of the Dark Continent.

#### When Lost in the Woods

Juring an innocent offender in this respect.

It was, therefore, necessary to secure special permission in order to photograph them, and even then one had to win their friendship and confidence, as they were peculiar in their likes and dislikes, refusing to be photographed by some people without any apparent reason.

After securing a permit from Dr. McGee of the Anthropology Department, I questioned Mr. Verner—to whose tact and persevering efforts the public is indebted for this exhibit—as to the best way to secure the goodwill of the Pygmies. It was then about five o'clock in the afternoon, and he suggested that it would be a good idea to make myself known to them at once, and photograph them. This advice I followed and got along far better than I had expected with these most primitive specimens of the human race. One of them scribbled something on my cuff with a bit of pencil which had evidently been given him by a visitor. I thought nothing of it at the time, but it turned out to be quite an important event.

The next morning when I entered the enclosure in which the Pygmies were exhibited I saw at once that I was going to When a man goes out hunting where he

BATWA PYGMIES PROM THE KABAI DISTRICT, CENTRAL APRICA

have trouble. They did not recognize me and were in no mood to be photographed. Appeals to Mr. Verner were in vain; he could do nothing with them. Suddenly I bethought me of the strange writing on my cuff and showed it to the author thereof. The effect was magic. With a grin which reached from ear to ear he jabbered something to his comrades, and after that it was all plain sailing.

One cannot help but feel touched at the

One cannot help but feel touched at the implicit faith and the courage displayed by this little band of African Pygmies in entrusting themselves as they did to the tender mercies of a single man on a journey which must have presented them a situation full of superstition and terror. It is

branches, which generally are to be found longer on the south side of trees, while the branches exposed to the north are generally knotty, twisted and drooped. In the forest the tops of the pine trees dip or trend to the north.

If you find water, follow it; it generally leads where civilization exists.

The tendency of people lost usually is to travel in a circle. By all means keep cool and deliberate. Blaze your way by leaving marks on trees to indicate the direction you have taken. If you keep a cool head and a stout heart you will find that to be lost from camp is really a comedy.—Walter E. Bergman in the North American Trapper.

#### A Piratical Misadventure

"Do you refuse to obey the orders of our chief?" demanded Tim Stevens sternly.

"Yes, I do!" stoutly declared Lieutenant

"Yes, I do:" stoutly declared Lieutenant George Taylor. "I'll be a pirate all right but I'm not going to be a policeman."
"Look here," pleaded the chief, dropping his authority. "It's the chance of our lives. We'll get the \$5,000 reward and we can have a launch instead of this old." lives. We'll get the \$5,000 reward and w-can buy a launch instead of this old thing," kicking the side of the flat-bot-tomed punt which had once seemed so de-sirable, though not exactly the long, low, rakish craft of piratical fiction.

This put a new face upon the matter.

This put a new face upon the matter. One by one the band consented to engige

One by one the band consented to engage in the hazardous enterprise.

There were fourteen in the band, not counting Jimmie, George Taylor's brother, who, though only seven, was admitted to piracy because they met in the Taylor barn in the winter, and Jimmie would tell his father unless sworn to secrecy over the terrible "traitor's head," which was in reality a pumpkin covered with a towel, but which did well enough when the candidate was blindfolded.

Fourteen boys should be a match for

didate was blindfolded.

Fourteen boys should be a match for one man, even though he might be the bank burglar for whom a reward had been offered. They had found him fast asleep in the pirate's lair that they had built of poles and thatch on the little island in the lake which separated Greenville from Coons. Coons.

Taking the painter from the punt they started back to the cabin, with the exception of Jimmie, whose tearful protests threatened to arouse the burglar.

The man was sleeping the heavy sleep of one who is thoroughly exhausted, and the boys had his arms bound before he

The man was sleeping the heavy sleep of one who is thoroughly exhausted. and the boys had his arms bound before he was aroused sufficiently to protest. At his first shout, five of the boys promptly sat upon him; and thus handicapped, it was impossible for him to make resistance to further operations. When he had been securely tied at last from shoulders to ankles, the boys who had been sitting upon his chest arose and enabel him to speak.

"What are you little rascals up to?" he demanded wrathfully.

"That's all right," explained Tim soothingly. "We are not going to hurt you. We're just going to sell you for \$5.000."

The stranger made a powerful effort to rise, but soon perceived the impossibility of doing so, and sank back. "You won't get any \$5,000," he protested, "but I'll give you \$5 if you'll let me up."

"We're not thieves," indignantly exclaimed the chief. "We're pirates. You're the man who robbed the Greenville bank."

"I'm nothing of the sort," declared the prisoner. "I'm just on a trip. My boat is on the bank here."

The chief smiled. "We looked all around the island," he said. "and we didn't find any boat. We know your pal has gone after food or something."

"I'll make you smart for this when I get loose," panted the prisoner. "I suppose you've stolen my boat."

"I'l you call us thieves we'll kick you," threatened the chief. "Come on, boys, let's take him down to the boat."

Selzing their prisoner by the should rs they dragged him over the rough ground, through brambles and over stones to the shore where the valiant rear guard, frightened by the noise of their advance, I ad

#### Mosley Commission Displeased

During the visit of the Mosley commission to Chicago the members visited several public schools, seeking pointers to eneral public schools, seeking pointers to enlighten Englishmen. One of the schools visited was at Palos Park, a little frame building where about thirty youngsters were cultivating their gray matter. The youngsters gazed awestruck at the Englishmen and were made speechless when they heard the visitors speak. There was one youngster in the crowd who had his nerve with him and his tongue in trim, and he answered to the name of Richard O'Connell. After some commonplace questions as to the methods of the school, Dick O'Connell made himself famous in the following dialogue: lowing dialogue:

"The boy in the third seat back, what's your name?"
"Richard O'Connell." "You have studied history. What did we have in 1776?"

"The revolution."
'Against whom was it?'
'The British redcoats."

"What did we do to them?"
"We licked 'em."

"We licked 'em."
"Did we ever have any more trouble with hem?
"Yes, in 1812; we licked them again."
"If we ever have any more trouble with them would we lick them?"
"You bet."
At this point one of the commissioners lost patience and remarked:
"How perfectly ridiculous to teach a child thing like that."—Denver Times.

#### A Peasant Who has Become a Power

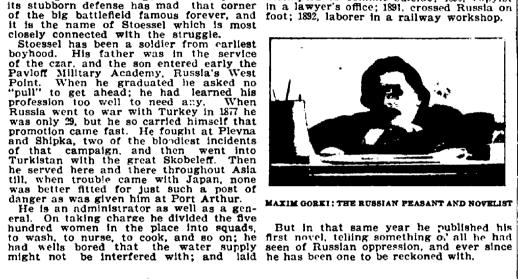

In the heart of St. Petersburg stands a hotel called "The Patkins." As large as an American "skyscraper," and gorgeous as a palace, its charges are so high that only the richest can afford its luxuries. Not long ago there entered its gilded vestibule a young man, fine-looking but meanly dressed—and the door-tender promptly put him out. On the very next night this same visitor, still dressed more like a ploughman than a frequenter of the brilliant hostelry, was seated in its parlors, surrounde, by

than a frequenter of the brilliant hostelry, was seated in its parlors, surrounded by well known men who paid respectful attention to all he said—for on that day it had become known that Maxim Gorki was a personal friend of the Czar.

Gorki has lived a hard life, but he is a power in Russia. If greater freedom is to be given the people, as now seems certain, it will be Gorki who must be thanked for some of the gain. He was born of lowly parents, and has lived like a tramp, but he loves all humanity, and his stories have influenced not only his fellow peasants but "The Great White Father" himself. Here is his eventful life as the man himself has written it:

is his eventful life as the man himself has written it:

In 1878, I was apprenticed to a shoemaker; 1879, apprenticed to a designer; 1890, scullion on a packet boat; 1883, worked for a baker; 1884, became a porter; 1885, baker; 1886, chorister in a troupe of strolling players; 1887, sold apples in the streets; 1888, attempted to commit suicide; 1890, copyist in a lawyer's office; 1891, crossed Russia on foot; 1892, laborer in a railway workshop.

#### Christmas for Paroled Boys

Justice Deuel in the Childrens' Court of New York City, on December 24th summoned forty boys who were out on parole to appear before him so that he might receive reports on their conduct. Unknown to the boys he had prepared beautifully illuminated certificates to present to such as had been doing well. There were two kinds of certificates, one bearing a gold seal and the other a sliver seal. The first meant discharge from parole and the other meant that while the boy had been doing well yet his record still did not permit of full suspension of sentence. The boys were called before the justice one by one and given a word of commendation and encourgiven a word of commendation and encouragement. Seventeen received gold certificates and twelve silver. The certificates were 8x10 inches in size and read as fol-

Daniel said when he found himself among the lions: "Heaven knows I have done nothing to deserve this."

#### Carol of Roumania, King and Bear Hunter

Carol, of Roumania, who has served that little kingdom down in the southwest corner of Europe as its monarch for 49 of his 65 years, is one of the most enthusiastic huntsmen on the Continent. Happily married, surrounded by children and grand-children, with a stately palace in his capital of Bucharest, and an annual salary of \$237,000, this old rentieman is never so happy as when in his hunting-box, "Sinia," up in the Carpathian Hills.

There he goes whenever possible, regardless of season and weather. With him go two guides, though they act more as carriers of his guns and yame, for the king by this time knows every foot of the ridges along which he stalks his quarries. The Carpathians are full of wiid animals; red deer and chamois, wolves and lynx and boars, and bears especially. The Roumanian bruin is smaller than his cousin here in the Rockies, but he is as sly and wary as any bear that wears fur, and, once cornered, is the hardest sort of a fighter.

King Carol is as fearless, however, as he is enthusiastic, and not long ago his Mannlicher brought down the one thousandth bear he has killed. As he started to keep count in 1881, that is a record of more than 43 skins a year—in spite of which the highlands of his country seem still to offer what Mowgli called "Good hunting."

AUSTIN DUFF WINS IN HIS HOME-MADE AUTO

HIS is the story of a twelve-year-old Brooklyn boy who won the first prize in the boy's automobile race, in a home-made auto. The modern "Darius Green's" name is Austin Duff and he lives at No. 126 Alabama avenue.

When the race was called at the bicycle path in Prospect Park, Brooklyn, young Master Duff received many a laugh at his odd-looking machine, but the laughter gave way to cheers when the home-made auto-

with Austin. The only thing new about this machine is the horn and Austin had to buy that.

Austin made the machine with the help of his father and he says there isn't a toy auto in New York that can beat his speed.

The prize given for winning the race was a miniature touring car, a three-seated French car equipped in the manner of a fifty horse power Panhard, but Austin says that even this swell new machine cannot supplant the work of his own hands. There were six contestants in the boys' automobile race in the same heat with young Duff, but there were 250 entries in the entire event. All the crack automobilists in Brooklyn assembled to see the race and there were mounted policemen, bicycle policemen and plain policemen on hand to keep the crowds of children along the line in place and to help in case of accidents. But there were no accidents, for though a furious pace was kept up amid the honking and chugging of the automobiles the boys had their cars under perfect control.

The fact that the diminutive autos were

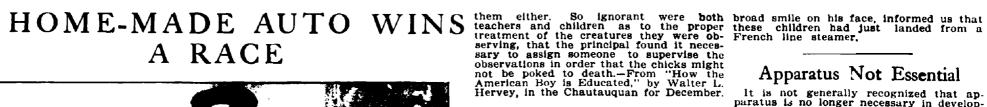

der perfect control.

The fact that the diminutive autos were propelled by pedals operated by small boys sitting in the miniature cars may be accountable for the absence of the list of fatalities that usually accompany auto

racing.
When Austin Duff was awarded the prize there was an indignant protest from the boys with "swell" autos, but the judges not only gave the prize to the boy with the home-made machine, but they compil-mented him upon his ingenuity.

#### A Barnyard Curiosity

Any one who has taught in a school whose children live on treeless streets and

#### Notes by the Schoolmaster

In one of the public schools of New York city the boys are required to originate designs for the box covers which they make in the workshop. One boy developing a great liking for the work, devoted some of his leisure time to planning designs to cover various kinds of spaces. The decorative value of his designs attracted the attention of his father who holds a position in one of the large publishing houses of the city. The father took four pieces of the boys work and submitted them to his firm for use. Two were accepted and now adorn use. Two were accepted and now adorn the covers of widely circulated books, and what is of great importance to the boy—a check, in payment for services rendered— came to him through the mail. Now this

check, in payment for services rendered—came to him through the mail. Now this boy has a new way to make pocket money and he is justly proud of his ability.

The instinct of genius which biographers so delight to dwell upon in writing the lifehistory of famous men, often makes itself very manifest in boys, said a New York city school teacher the other day.

I had a boy last year, direct from an upstate farm who was constantly scheming about how to apply certain devices used in perfecting farm implements. One day he came to me with a match box so constructed that by lifting a slide one match and one only would be deposited upon a little receiver. The thing was ingenius and certainly invited the match-using public to practice economy. Asked to explain the boy said he got the idea from closely observing a corn planting machine at work on his father's form. Whether this

It is not generally recognized that apparatus is no longer necessary in developing strength by exercise. The United States Army was the first to realize this. In the "setting up" exercises to develop the body, which are practiced in the army, no apparatus of any sort is used.

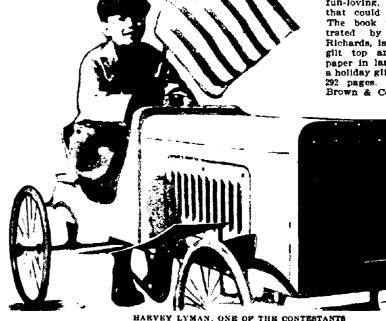

#### Boys' Books Reviewed

STORIES OF COUNTRY LIFE, (Eclectic School Readings), by Sarah Powers Bradish. The teacher of the fourth grade in search of supplementary reading will find this little book to be most suitable. The country with all its charm and variety of life and labor is set forth in attractive and interesting form. It tells also about coal and mining, lumber and saw-mills, iron ore and the many forms and industries where they are used. The young reader will add greatly to his knowledge by a perusal of this already well-known book. 170 pages, with many illustrations. Price, 40 cents. American Book Co. Book Co.

Book Co.

MAKING THE NINE, by A. T. Dudley. We took pleasure in commending a former work of the author, "Following the Ball," and having read the present work have no hesitation in recording our satisfaction with it in every respect. The story teaches without preaching all that a healthy, pure-minded boy should be. While athletics occupy a prominent place, the lessons of honesty, uprightness, friendliness and fair play round out a most fascinating book, a modern "Tom Brown's School Days," and no better book could be placed in a boy's hands. It is nicely illustrated by Charles Copeland, and by views of Exeter. 332 pages. Price, \$1.25. Lee & Shepard.

EIGHT COUSINS, by Louisa M. Alcott. We are glad to renew our acquaintance with one of the nicest books for young people that Miss Alcott has written. Rose is as fascinating and as tender and loving as ever, while Uncle Alec is the best of uncles and the seven cousins are the happiest, most natural, healthy, fun-loving, kind-hearted boys fun-loving, kind-hearted boys that could be found anywhere. The book is handsomely illus-The book is handsomely illustrated by Harriet Roosevelt Richards, is finely gotten up with gilt top and printed on good paper in large type. Will make a holiday gift that will be prized. 292 pages. Price \$2.00. Little, Brown & Co.

#### BOYS AS MONEY MAKERS

#### Boys, How About Your Finances?

By CHARLES F. WADSWORTH

There are quite a number of subjects to be considered in connection with boys, and

be considered in connection with boys, and one of the most important is that of his finances. I regret to say that the financial instruction received by the average boy is not greatly to the credit of his parents, otherwise nearly every boy, when he reaches his majority, would have accumulated capital enough to start himself in business, establish a little home, or at least provide himself with an education commensurate with the demands of these strenuous days.

There is no good reason why the average boy should not be able to accumulate a thousand dollars or so by the time he is steadfast aims of all boys, and the parent who fails to impress upon the youngster the importance of cultivating habits of thriff and economy will be held to account the son reaches the age which enables him to appreciate the common sense features of a boy's financial opportunities. For a boy to gard for if not, he should consider that if he is not to receive be the more easily paid for: if not, he should consider that if he is not to receive help from the thing itself, it would be reasonably sure to increase in value from reasonably are to increase in value from reasonably are to increase in value from reasonably sure to increase in value from reasonab

basiness, establish a little home, or at least provide himself with an education commensurate with the demands of these strenous days.

The provide himself with an education commensurate with the demands of these strenous days.

The provide himself with an education commensurate with the demands of these strenous days.

#### "The American Boy" is Always Read

The accompanying diagram will be found both interesting and instructive. It illustrates in a curious manner the well-known fact, that THE AMERICAN BOY is always read in all directions, whether, it be north or south, east or west.

Commencing with the letter T in the center, try and figure out how many different ways there are of reading "THE AMERICAN BOY" in this peculiar arrangement of letters.

Every time a new square is included, it counts as a different reading, so that those squares containing stops must not be overlooked. We'll tell you the result a little later on. You'll be surprised when you see how many different ways one might have read it.

## The Young Midshipman's Adventure

By FRED MYRON COLBY

N the long ago summer of 1771, a slender, sickly-looking English lad of thirteen, son of a Norfolk rector, shipped as a midshipman on board this Majesty's ship the Race-horse, bound on a voyage of exploration towards the North Pole. The captain was the boy's own uncle, a bluff, hearty English seaman, who had promised the boy's father that he would have his nephew in watchful keeping.

The rigging with ice, and made the decks so slippery that one could scarcely stand on them. The sharp frost froze the toes of many of the men. Often they were and at last they were shut up quite help-less in the midst of the frozen seas.

With the darkness and the cold and the would have his nephew in watchful keeping.

ne would have his nephew in watchful keeping.

Although so young it was not the midshipman's first voyage. He had already seen service in the West Indies, and had shown the mettle in him in a naval encounter with the French in those western waters. In fact, he had had a rough apprenticeship, but Raty, as they called him, had come safely through all the dangers and privations of a sea voyage in those carly days.

The lad was positively fearless, and they tell a story of him in his childhood that is quite characteristic. There was a severe freshet in his fifth year, and during the height of the storm Raty was missing. He was found, after an anxious search, sitting by a swollen stream tossing pebbles into the rushing tide.

"I wonder that fear did not drive you home," said his grandmother.

"Fear!" said Raty, inquiringly.

"Yes fear." cried the grandmother prob-

"I wonder that fear did not drive you home," said his grandmother.
"Fear!" said Raty, inquiringly.
"Yes, fear," cried the grandmother, probably in no gentle accents.
"Fear," repeated Raty, thoughtfully. "I do not know what fear is; I never saw it."

would have thought it a dull, anxious time enough for the young midshipman. But it was not all gloom and despondency on board the Racehorse, and Raty's spirits were hard to dampen. In the short Polar days there was work to do, and during the long evenings the crew sat around their cozy cabin and told stories of their far-

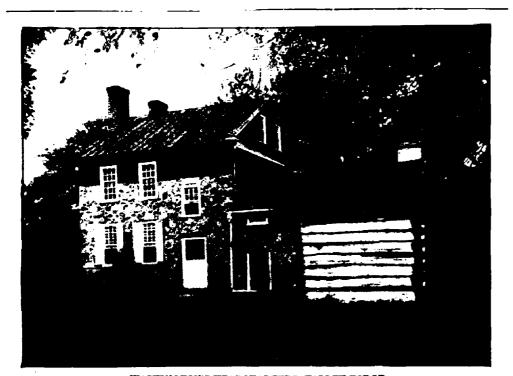

away English homes.

There was more or less adventure, too, and Raty had his share of danger, you may be sure. Whatever was done he was always sure to be the first, and he experi-

ably in no gentle accents.

"Fear," repeated Raty, thoughtfully. "I do not know what fear is; I never saw it."

But Raty's hardihood was taxed to its utmost in that venturesome and hazardous voyage into the Northern seas. There were cold, sleety rainstorms that coated to the bear, when a figree and desperate

struggle took place. The boys soon exhausted their ammunition, and when the morning dawned the brute stood confronting them with only a chasm in the lee between them.

As often as the bear tried to leap the crack he was sent staggering book by a

crack, he was sent staggering back by a blow from Raty's clubbed musket which fell like a sledge hammer on the animal's

"Come on, let the creature go," cried his companion, who was getting wearled of the struggle. But Raty was just warming up

struggle. But Raty was just warming up to the encounter.

"Stop a minute," he cried, "do but let me get a blow at this brute with the butt end of my musket, and we shall have him."

Meanwhile the absence of the two lads had been discovered, and the captain sent out a party to find them, and guns were discharged on the ship as a signal to return. The day was just breaking when the boys were seen at a distance in close conflict with the bear. Fortunate, indeed, it was that help came at that time otherwise the history of Europe would have been changed. always sure to be the first, and he experenced more than one narrow escape. His shipmates named him 'Reckless Raty,' because he was so venturesome.

One day the captain sent out a party to hunt for game on the floes, as provisions were getting low. Raty was one of the party, and when returning to the vessel he saw a large Polar bear at a distance. The boy could not sleep that night, for he had been discovered, and the captain sent out a party to find them, and guns were discharged on the ship as a signal to return. The day was just breaking when the boys conflict with the bear. Fortunate, indeed, it was that help came at that time, otherwise the history of Europe would have been changed.

In giving his last blow at bruin Raty slipped and fell on the ice, and the feroclous beast, maddened by his wounds, comrades stole from the ship, and taking advantage of a fog set out on the ice in pursuit of bruin. The chase was a keen one, but the boys at last came up with the bear, when a figree and desperate

leaned back across the cleft in the ice and

took to flight.
"Why didn't some of you shoot him?"
asked Raty. "That bear's skin would have
made the handsomest rug in the world."
"You young dog!" exclaimed the captain. as Raty clambered upon the deck, pale and nearly exhausted from his long and desperate encounter. "what on earth did you want of that bear?"

"Sir," answered the boy, pouting his

want of that bear?"
"Sir," answered the boy, pouting his lip as he was in the habit of doing when excited, "I wished to kill the bear, that I might take the skin home to my father."
The captain's grim face softened, for Raty's father was his favorite brother, and his stern voice trembled somewhat as he said:

"Well, you are a brave lad, and I will not be too hard with you; but I think your father would rather have you safe than to get the finest bearskin in the world, Mas-ter Horato" ter Horatio.

For Reckless Raty was Horatio Nelson, long years afterwards the hero of the Nile and of Trafalgar, and Great Britain's bravest naval commander, who by his skill and daring won a peerage and a burial place in Westminster Abbey.

#### FOURTH OF JULY EVENING IN CAMP.

TE had an extra dinner that day in honor of the Fourth of July, and wound it up with a surfeit of excellent ice-cream. Every one seemed to be good-natured, and we plebs were not molested at all. Looking over to the Colonel's table, what was my surprise to see him lean back in his chair and induge in a ringing laugh!

On our way to camp, we were reminded in the usual fashion that we were still plebs.

On our way to camp, we were reminded in the usual fashion that we were still plebs.

I was Sam Jackson's rear rank file, and the file closer directly behind us devoted so much time to Sam that I was let alone, and had a good opportunity to study the physical effects produced on Jackson by an old-time jumping.

After breaking ranks in camp, Silkins and I went to our tent to take a comfortable nan after our hearty dinner. Corp sat around a while on the locker, wondering how people could sleep in the day-time.

and I went to our tent to take a comfortable nan after our hearty dinner. Corp sat around a while on the locker, wondering how people could sleep in the day-time,

morrow. Nearly all of the old cadets, who had any pretensions to being ladies men, attended the hop. A few, mostly year-lings, stayed at home. A considerable minutes after return from breakfast, came attended the hop. A few, mostly year-lings, stayed at home. A considerable number of these third-classmen banded to-gether and started through camp, with the

to the east of us and the yearings started to leave. Ours was the next in order. At that moment, I raised the rear flap of the tent and slipped out into our "back yard," where I could witness without being a par-

ticipant in the proceedings.

On the arrival of the yearlings at the entrance, Silkins and Corp sgrang to "attention." When the preliminary forms had been observed, one of the visitors remarked:

"H'm! Only two plebs in this tent?"
"No, sir; there are three of us," Silkins replied.
"Well, where is the other man?"

Silkins hesitated a moment, then said:
"He just went out at the back."
"What's his name?"
"Mr. S—."

"Hey, you Mr. S--, come in here!" "Hey, you Mr. 8—, come in here!"

I hesitated a moment, and then made my entrance, looking sheepish, I am sure. An explanation was demanded. I became more confused in rendering it, and was obliged to do penance by sitting on the point of a bayonet. Silkins gave a rendering of his famous song, "Only a Pansy Blossom," Corp spoke his piece, "The boy stood on the burning deck," after which the procession moved on, and I sprang from my uncomfortable chair.

comfortable chair.

The party halted at the next tent, where they made things lively for the inharmoni-

ous trio.

At tattoo, all the fourth-classmen were present, but most of the upper-classmen, being at the hop by permission, were reported "absent." After tattoo roll-call, we made down our beds, and turned in, but with no thought of going to sleep. It was the first day that plebs were on guard, and we wanted to see the fun. The second relief was to go on shortly before tattoo, and we had learned that the sentinel of that relief, in the post adjoining and runting parallel to our company street, was a ning parallel to our company street, was a

We waited impatiently for taps. Having answered "All in, sir," to the cadet officer in charge of the company, we settled back in our beds and awaited developments.

They were not long in coming.
"Who comes there?"

"Patrol."

"Advance, patrol, with the countersign."
"What's the matter with you anyway, dister? That's not the way to advance—"
"Who comes there?"
"Corporal of the guard."
"Advance, patrol, with the countersign."

At nine o'clock there was a general turn-

the—"
"Who stands there?"

"Who stands there?"
"Officer of the guard."

"Who goes there?"
"Friend with the countersign."
"Advance, friend. Halt, everybody.
Corporal of the guard, number—,"
"Well, here I am."

drill, mechanical maneuvers, etc., for the first class, artillery drill, small-arm practice, and dancing for the third class, and artillery drill, swimming, and dancing for us.

Our programme for drills was as follows: Squad drills, from 7 to 7:45 a.m., post, Number One at the guard tent called troop parade (of our own, as we had not yet joined the battalion) at 8, guard mounting immediately afterwards (for those interested), foot battery from 9 to 10, swimming from 10:30 to 12:30, dancing from ming from 10:30 to 12:30. When one had to face this list in addition to his police duty, orderly work, cleaning of guns, trimduced triangle and testifying to his general worthlessness. Mr. Stultz finally succeeded in getting all of the parties off his post, except the corporation of his relief, who tarried a while to jump him for becoming so rattled. Short-to impossible for him to do it gracefully. Number One was never a striking success, for his eyes would wander from the would have the back of his hand up when it should be down.

At these drills, the cannoneer who handles the sponge and trammer staff. Inasmuch as it is difficult for a pleb to do a thing correctly, and next to impossible for him to do it gracefully. Number One was never a striking success, for his eyes would wander from the would straighten up on the wrong foot, and he would have the back of his hand up when it should be down.

At these drills, the cannoneer who handles the sponge and members and members and next to impossible for him to do it gracefully. Number One was never a striking success, for his eyes would wander from the would straighten up on the would be down.

At these drills, the cannoneer who hand to fif the parties off his post. Number One at the guard tent called to impossible for him to do it gracefully. Number One he would straighten up on the would be down.

At these drills, the cannoneer who hand to timp member one a very sound and error post. The corporation of the post. The corporation of the parties off his post. The corporation i

had to face this list in addition to his police duty, orderly work, cleaning of guns, trimmings, writing explanations, etc., he felt that he fairly earned the \$1.50 a day which went to his credit on his check-book.

On returning from supper, we went as usual directly to our tents. We had a new subject for discussion in the drills for the morrow. Nearly all of the old cadets, who

the 7 o'clock drill, which consisted of the setting-up exercise with a good deal of double-timing. Then came our own little apparent intention of getting from us the double-timing. Then came our own little fun they missed by not attending the hop. troop parade, while the corps was having The first intimation that I had of their the real thing. Our formation at this time, approach was when they reached the tent however, consisted of a rigid inspection, so to the east of us and the yearlings started rigid, indeed, that not one man in twenty double-timing. Then came our own little troop parade, while the corps was having the real thing. Our formation at this time. was found in form to escape comment from the inspecting officer.

"Corporal of the guard."
At nine o clock there was a general tunning out of the whole corps for the particular drills awaiting them. The different squads were formed in rank from right to "Officer of the guard."

"Advance, of—"

At nine o clock there was a general tunning out of the whole corps for the particular drills awaiting them. The different squads were formed in rank from right to left, and the Officer of the Day stood in from to superintend the formation. Twelve front to superintend the formation. Twelve first-classmen were detailed to act as chiefs of detachment at our artillery drill. Our class was divided into two equal parts, forming a couple of batteries, each of which was divided as nearly as possible into six detachments. The respective chiefs "fell out" a man for his gunner. Since as yet there was no standard of fitness, the gunner was generally from the same state as his chief, or was selected because of his fine personal appearance.

Sikins and Fletcher were in my detachment, and, when the chiefs had taken their

ment, and, when the chiefs had taken their places, according to rank, we found the Colonel presiding over our destinles for the hour. The instruction for the first day was mostly theoretical, consisting mainly

sat around a while on the locker, wondering how people could sleep in the day-time, and then sauntered off on an aimless ramble on cadet limits.

At parade a long order was published specifying the drills for the rest of the month. We were drawn up in rear of the battallon in order that we could also hear. The orders provided for troop parade at 8 o'clock in the morning, engineering drill, mechanical maneuvers, etc., for the first class, artillery drill, small-arm practice, and dancing for the third class, and itee, and testifying to his general worthlessness.

Mr. Stultz finally succeeded in getting all of the parties off his post, except the corporal of his relief, who tarried a while to impossible for him to do it gracefully, the delivering his orders for challenging, at a rate that fairly hummed.

"Yes, slr," and mr. Studending and an intercent the explanation of the explanation of the nomencature of the delivering his orders for challenging, at a rate that fairly hummed.

"Yes, slr," and mr. Studending at a rate that fairly hummed.

"Now you've got lots of time. Advance and the

other numbers, although their duties were not so difficult as those of Number One, had enough opportunities to do them wrong, and they rarely missed the chance. On our return from this trying drill in the hot sun, we longed for the next thing on the programme.—swinning. The roll of my squad was called by Mr. A.—, who

of my squad was called by Mr. A—, who became so overcome by his new responsibility that the Officer of the Day "skinned" him for "slow calling roll."

It was a long tramp to the bathing grounds, which are located near "Target Hill," on the line of the West Shore Railway, about three-quarters of a mile from camp. To reach the place we had to descend the plateau on which West Point stands to the river, and then follow the line of the West Shore Road to the north for the rest of the way.

Arrived at the grounds, we found a number of the way.

the rest of the way.

Arrived at the grounds, we found a number of bath-houses, into which we rushed.

After disrobing, I donned the gaudy bathing suit furnished by the commisary department, went outside and joined the procession of plebs. We waded through a marsh and a long stretch of shallow water and reached headquarters, which a marsh and a long stretch of shallow water, and reached headquarters, which consisted of a double-decked raft, holding, among other things, the instructor in gymnastics and swimming (generally known as the "gym flend," a civillan), and the officer who was in charge of us at artillery drill. He was evidently on hand to make sure we did not "run It" on the "gym flend." [The idea of a

CHAPEL

cadet, at this embryotic stage, running it on any one!]

We grouped ourselves around the raft. and the instructor ascertained the names of the men who did not know how to swim. They were taken separately and attached to a rope, the other extremity of which was held by the instructor. The proper move-ments were explained to the rope-girdled pleb, who strove bravely to execute the evolutions, until his head dipped under water, when he was fished up by the watchful teacher in the second story of the

I had learned the art of swimming several years before, and therefore (scaped the lassoing experience. Each of us who understood the natatorial art had to report to the "gym fiend" and swim ten minutes by the watch, after which we were said to have qualified and were entitled to swim wherever fancy prompted, provided we took care not to drown.

The long tramp homeward, along the railway track, under the flaming sun, and the arduous climb to the top of the hill, more than counterbalanced the refreshing coolness of the bath, and by the time we reached camp we were sighing again for a plunge in the delightful Hudson.

plunge in the delightful Hudson.
We entered our tents at about 12:30. There was hardly time for the pleb who had been detailed for that day as mail carrier to "drag" the mail. After looking over my daily newspaper, and reading a letter from home, the first drum sounded for dinner.
Of course we dropped everything and tracked to the president property.

rushed to the parade ground, so as to avoid

a late.

I was on the parade ground in ample time to save myself from a late. At the messhall I found the cadets were not in as good humor as on the previous day. The yearlings at my table told me that I had to "qualify" on bread and molasses, and I willingly made the attempt.

The cadet slang for molasses is "sammy," and it is customary at present not to allow a pleb thus to designate it, until he

allow a pleb thus to designate it, until he has eaten a certain number of silces of bread smeared with the sweet stuff. The yearlings at my table insisted that in my case this number should be four. Being quite hungry, it was not difficult for me to

meet the requirements.

A few minutes for rest in the shade of our tents, after our march from dinner, and then came the first drum-beat for dancing. The ranking pleb (Mr. A—, of course) called the roll. We fell in as usual at the second beat of the drum. Mr. A—— gave the command "Left face," and then discovered that his class-roll was in his tent.

Mr. Smith, the captain of my company, was Officer of the Day and had taken his place in front to superintend the formation. He demanded the cause of the delay. Mr. A—— attempted to explain, but his remarks were cut short by the more pointed ones of Smith, who sent the delinquent to

his tent for another list.

While A—— was calling the roll, the Officer of the Day was occupied in keeping us "braced." Before the roll-call was finished, we had assumed our best attitudes, and the men in the rear rank had learned that front-rank files were no pro-tection from the eagle eyes of Captain

When A—— had reported the result of the roll-call to the Officer of the Day, the latter impressed upon the terrified delinquent the momentous responsibility that rested upon him as a squad marcher, concluding his remarks with the warning: "If you don't keep all those pleak bread or if

cluding his remarks with the warning: "If you don't keep all those plebs braced, or if I see any talking, I'll skin you."

A—— was a nervous little fellow and was frightfully rattled. He knew where we were to be marched, but could not tell whether to give "fours right" or "left" until he had studied a while and turned all the way round, so as to face the same way as the men in ranks. Then he failed to get it right, for he commanded "fours right." We all executed "fours left" to a man, and were marching off, when the man, and were marching off, when the watchful Mr. Smith yelled:

"What do you mean, sir, by letting all these men disobey your command? Bring these men disobey your command? Bring them into line again and start them off

One would naturally think that when One would naturally think that when there are only two ways of doing a thing, a pleb will accidentally hit on the right way once in a while,—but he is sure to miss it nine times out of ten. Accordingly, A—— commanded "fours left." Warned by our first experience, we executed this command, and on we went in a rolld line of two ranks, bearing down upon the tents and their drowsy occupants, leaving the 

'I don't know, sir."

"What do you know, sir?"
"I don't know, sir."

"I do. You don't know anything. Give the command Fours left about."

Mr. A——gave this command, and we were ready to try it over again. This time we got off smoothly, and no more difficulties met us, until we were nearly across the post of Number Six, when the sentinel roared at our squad-marcher: roared at our squad-marcher:

Why don't you salute me?" A—— did not stop to see who it was that called for a salute, but raised his fingers to his cap and delivered what might be called

a general salute for any one who felt the

LEARNING TO DANCE.

We were marched, or rather we marched ourselves, to the gymnasium, broke ranks in front of the door, and rushed into the fencing academy on the ground floor at the north end of the building. There we found the Professor, an elderly foreigner, his assistant (Adolphus his son), the planist. and an officer of the guard, who was present evidently for the purpose of seeing that we did not "run it" on the professor, who as well as the assistant and the pianist, were civilians.

The professor paired us off as well as he could, and, taking the "odd lady" himself, led us through the mazes of a grand march. Finally, he gave the command "Drop hants," and we were quite evenly distrib-

nants, and we were quite events distrib-uted about the academy, with about room enough to learn the preliminary steps. Whether the Professor was imbued with the mathematical ideas of West Point, or whether it was a method be surgiced with whether it was a method he pursued with civilians as well as with cadets, I cannot say-but our first "math" lesson came with our early instruction in the waltz.

He fished a piece of chalk from his rear

coat-pocket and described a circle with himself as a center. He then drew a north and south diameter and another one per-pendicular, thus dividing the circumference into arcs of ninety degrees, and he did it as prettily as you please.

He then raitled a pair of clappers that he had held unobserved in one of his hands. Immediately, the pianist started a waltz to the Professor's monotone of "oney" "twoey" "tree," while the latter, starting from the south end of one of the diameters. capered about the circle, until he came to the starting point again on "tree," He did this several times for us, and

then the clapper caused the music to stop.

A short explanation was given to us, and we all began to waltz to slow music.

I know that the normal state of plebs is

awkwardness, but I think every man in the room felt unusually awkward that day; the men who could dance because the fact was not recognized officially by the professor, and the men who could not dan for obvious reasons. Of course it came hard to the latter, but they made it much harder for themselves.

Some of my companions were notably awkward. I recall one from Ohio who had

awkward. I recall one from Ohio, who had as yet but a single grievance in his milas yet a single grievance in his mil-itary career, but it was a sore one. The authorities would not recognize his right to wear cowhide boots; they compelled him to stow them away in the trunk room, and, to cap the climax, constrained him to weir the regulation low shoes.

Naturally he was embarrassed and in hot water all the time. He had never "reck-oned" that such things formed a part of the course of instruction at the Point.

It is hardly necessary to state that we were allowed to carry our hands naturally and slouch to our heart's content while in the dancing academy. We all described our steps on imaginary circles with something like uniformity. Our Ohio friend however, required one of the Professor's chalk diagrams to be marked out specially for him. When the rest of us had made a complete turn, the Buckeye was sure to be facing in the opposite direction, the palms of the hands to the front, and heads of perof the hands to the front, and beads of perspiration on his brow.

But the professor was accustomed to such cases, for he stepped behind the embirrassed fellow, grasped him by the shoulder, and guided him around. He then rolled up two wads of paper and placed one in either of the pleb's hands,—a clever idea that had the desired effect.

After practicing for some time in the

After practicing for some time in the way I have described, the Professor allowed us to waltz about the room at will.

Our dancing lessons were kept up all summer, and, by the time we went into barracks, there was not a man in the class who was not a fairly good dancer. All graduates are professor in this correction.

graduates are proficient in this accomplishment. Not only that, but they understand thoroughly how to guide a lady in a crowded ball-room. This is probably be-

crowded ball-room. This is probably because each cadet has often acted as "lidy" himself, and also to the friendly rivalry in learning the art.

There is a uniformity in the style of dancing by cadets, You never see a West Pointer assume that linguid, indolent, stooping position, considered so English and "swell" in certain circles. He stands perfectly erect, keeps to the floor, and holds bis partner at a respectful distance from is partner at a respectful distance from him.

I have often heard the question. "How is dancing a part of a military training?" The answer is, it greatly assists a young

#### Multiply This in Your Head

man to acquire that grace and ease of carriage characteristic of the true gentleman. West Point is a school of and for the peo-ple, and much of the material that goes thither requires a vast degree of polis ing.

A half hour after our return from dancing

A hair nour after our return from dancing police call was sounded, and all through the camp rang the cry, "Turn out; company police detail." I was a member of this detail for the day, and I "turned out" promptly, swept the company street and "dragged" it (i. e., drew the broom over the gravel so as to cause it to lie uniformand assisted in policing the tents whos-

occupants were on guard.

Then came the 4:30 drill under the hot July sun, with parade at 6, and my first day's work was over. After supper the "festive yearling" went forth, and another night of pleb-devilling opened, the particulars of which need not be given here, as it has been sufficiently referred to in what it has been sufficiently referred to in what I have related about hazing.

Day after day our drills went on as I have described, Saturday and Sunday excepted of course. Saturday was not much of a holiday for me, as the programme was about the same as that for the Fourth, with the exception of the exercises. Sunday was the longest of all the days of the week.

Immediately after breakfast, on the Sab-Immediately after breakfast, on the Sabbath, we set to work getting our tent rendy for inspection. The floor had to be sw pt, the bedding carefully piled, the wash-bowi cleaned, the tent walls rolled, the cleaning-box renovated, etc. At eight o'clock, in lieu of parade, was an inspection under arms. This inspection was about the same as that at parade, but perhaps more rigid if nossible. if possible.

After breaking ranks, every one

After breaking ranks, every one proceeded to his tent, put his gun in the rack in the rear, and repaired to the front of his tent. When all the cadets had thus appeared and had taken their proper places. Captain Smith "dressed" us; and, as the commandant and tactical officers approached, gave the command "about face." We stood in this position until the inspection was over, when ranks were broken. broken.

broken.

The next thing on the programme was chapel exercises at 10:45, preceded by another inspection. All the cadets were side arms and gloves, and we were marched over at "attention." As there was plenty of room downstairs, we were allowed to sit there.

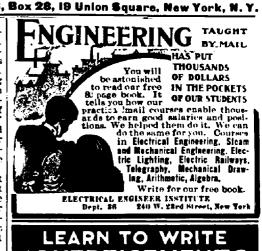

The seats on either side of the center aisle, and those on both sides of the chan-cel, were reserved for the cadets. All the other seats were then open to viritors. The "cadet girls" were generally there in force. (To be continued.)

The "Boy Courier" a Good Boys' Book

The New-Church Messenger, in its issue of January IIth, gives in its list of books approved by the New-Church Sunday School Library Committee the name of "The Boy Courier of Napoleon." a new boys' book by the editor of THE AMERICAN BOY. The New-Church Messenger is the organ of the church known to many as the Swedenborgian Church.

## ONE BOY'S SUCCESS WITH Taking the essay from his jacket pocket, Tom assumed an impressive attitude and read: ANGORA GOATS

York, there recently took place the first annual poultry show of the Association of Poultry and Pet Stock Breeders of New York. One of the features of the exhibit was the display of rare Angora goats. There were three exhibitors, Homer Davenport, the well-known contents who has taken to goats, breeding cartoonist who has taken to goat-breeding of late as a fad that yields at once pleasure and much profit. The other leader in the competition was a young lad of seven-

WILLIAM J. COHILL AND HIS PRIZE CUP

teen, William J. Cohill, by name, hailing teen, William J. Cohill, by name, hailing from Hancock, Maryland, and it was his exhibit that not only won the one hundred dollar silver cup for the best specimen of Angora, but he was the object of much curiosity on the part of the tens of thousands who visited the show, and the recipient of much admiration and many congratulations from young men of his own age who admired his enterprise.

Young Cohill comes of a distinguished

T Herald Square Exhibition hall, New first annual poultry show of the Association of Poultry and Pet Stock eders of New York. One of the featers of the exhibit was the display of Angora goats. There were three externs, Homer Davenport, the well-known confist who has taken to goat-breeding at as a fad that yields at once pleasand much profit. The other leader in competition was a young lad of seven
This is the first year that I have had the courage to make an exhibit outside of our own country fairs," said the boy breeder, "and I must say that I am gratified at my success. I have just returned from St. Louis where, at the Exposition display, I won one hundred dollars in gold, and more than that, received an order from Hagenbeck, the great animal trainer, for eight of my best Angoras, to be sent to Hamburg for starting a goat herd there on the principles which I have found so successful at my Maryland home. This additional cup winning pleases me also more than I can tell, for it brings me in contact with people who can hap file in my work, for I am a novice and want to learn all I can.

learn all I can.
"It was one day a few years ago that my father read in some paper, published either at home or abroad, that Angora goats fed very well on underbrush, whereeither at nome or abroad, that Angora goats fed very well on underbrush, whereas sheep required grass. I wonder, said he, 'If that would not be a good way to clear my hundred-acre tract, to prepare it for an apple orchard?' 'Get me the goats, father,' said I, 'and I will try it.' That was the beginning. I began breeding the Angoras, and they began to increase wonderfully. Our lands lay along the foot hills of the Alleghenies. Acres and acres were covered with brushwood which is hard to get rid of, but the goats got at it, nibiled away the leaves and tender branches, and of course the brush died, while the goats thrived. Naw I have two hundred and fifty goats, and my father has five hundred acres of reclaimed land planted with apples and other fruit, apples being one of the leading products of our section of country.

"As to profits, I need only say that while "As to profits, I need only say that while the goat is prolific and there is a good return in the sale of fine goats, there is also other income. The average goat will yield about six pounds of mohair a year, and this is worth thirty-five to forty cents a pound. This pays for the winter keep. Every goat is worth two dollars a year as a brush-clearer, for that is what labor performed as efficiently by human hands would cost. Angora meat is sweeter and juicier than lamb, and there is a market for it (not always under that name, perhaps), at any time, Then a thoroughbred Angora for breeding purposes is worth four hundred dollars, one prize-winning buck bringing me thirteen hundred dollars though this is a rare occasion even in the bringing me thirteen hundred dellars though this is a rare occasion even in the Angora market. The goat does not like the dame, but he does not mind the cold and he is a splendid pet. I am now branching out into another goat industry, having taken my winnings and invested them in out into another goat industry, having taken my winnings and invested them in Swiss Toggenburger goats, exhibited at the St. Louis fair, for the purpose of raising them for their milk. Goat's milk is of very fine flavor and much prized for invalids, being much richer than cow's milk, and yet easier digested. One Washington man offered to take 250 gallons a day from me, if I could supply it, paying me one dollar a gallon. I understand that the Toggenburgers are as easily raised as the Angoras, and I am determined to try them, for they would especially suit our climate. Altogether I may say to young men of my age, if you have the 100m and who admired his enterprise.

Young Cohill comes of a distinguished old Maryland family, and his people have been stock breeders for many generations. He is a clean-cut, unassuming youth, with a cool, steady eye and a complexion that

#### DOWN BROWNLOW HILL

By GEORGE WHITEFIELD D'VYS

ING, ding, ding, ding!
Ding, ding, ding, ding!
"Fifty-five! Hurrah, no school!"
shouted a young boy lustily, as the town bell ceased its ringing. "No school," he repeated, "so I guess I will right about face and forward march home. Maybe I can earn some money shoveling snow!"
What a morning it was!
Though cannon boomed, and bells pealed forth joyously, but few persons were out to share in the gladness they bespoke.
Snow—snow—everywhere, and a beautiful sight it was with all about clad in virgin whiteness!

The great storm had raged furiously

excellent essay, that you were a fine writer and a good scholar, but it was too bad you and a good scholar, but it was too bad you and a good scholar, but it was too bad you fault spoiled all."

"What was that?" eagerly asked Tom.
"That no one could tell you anything. That was your failing, nor could you yield fair estimate of other people's abilities."
Those other fellows are her pets, that's all, the more glory for me in winning out, I say. Don't you say so, too? But let me read you my essay, will you? It isn't long, only two pages. Mother can hear it again, too."

Jimmle noted the amused look that flitted across the parent's face, so with an an-

signt it was with all about clad in virgin whiteness!

The great storm had raged furiously throughout the night, and now it was over but the roads were unbroken, so the supertintendent of schools decided to give the "No School" signal.

100.

Jimmle noted the amused look that flitted across the parent's face, so with an answering smile, he replied valiantly; "Bathaughtily, "No wonder it got the prize is thaughtily, "No wonder it got the prize is thaug

And wasn't it cold!

"No School" signal.

And wasn't it cold!

Just the morning a wide-awake boy likes, for each footfall was music to his ears as it pressed upon a crust so hard that not even the bootheels left an imprint.

Jimmle Saunders soon stopped before a house. "I guess I'll run in and see Tom a minute," he muttered. "What ails him anyway—here's his walks not shoveled yet.

Maybe I can get the job."

"Well, well, Tom Perkins," he exclaimed, as the latter entered the kitchen where he was in waiting. "You're a good one, you are. Haif-past 8 and your walks not shoveled. I had mine done an hour ago:"

"Oh, well, you're the smartest boy in Northville, you know," was the rather ungracious response.

"Ha! ha! That's a good one. But I say aren't you a bit cross this morning, Tom?"

Jimmle asked laughingly.

"Yes, I am, and I've good cause to be!"

Tom answered savagely. "I am on the program for the school exercises this morning and, just think, fifty-five has sounded so all my plans are spoiled."

"But you read the same thing at the opera house tonight, don't you? I should think that would be glory enough," the

"But you read the same thing at the opera house tonight, don't you? I should think that would be glory enough," the caller ventured mildly.

"Well, it isn't, just the same!" was Tom's vehement reply. "Joe Welch, Dick Metcalf, Ned Young and all the other fellows I beat out, won't come to the big patriotic meeting tonight. They'd have to be at our school exercises and so would have heard my essny. They are fealous because I won and I'd set my heart on showing them that not only can I write well.

sause I won and I'd set my heart on showmg them that not only onn I write well,
but I can read well also!"
"Oh, vanity!" laughed Jimmie, "Surely
you have a modest valuation of your own
powers! But I say, Tom, that reminds me
of what I heard Miss Turner tell my
teacher yesterday. She said you had ap william ...

"The Glorious Seventeenth of March.
"Born and reared, as we are, in the vicinity of those historic eminences, Dorchescinity of those historic eminences, Dorchester Heights and Nook Hill, the strongholds from which Washington drove out of Boston the British soldiers who had so long ruled the people with the iron hand of oppression, what wonder that we are imbued with the spirit for which his army fought and died, and that on this day each year, patriotism is removed in our rules!

and died, and that on this day each year, patriotism is rampant in our midst:

"Bells ring, cannon boom, our streets are magnificently bedecked, there is but the morning session of school for patriotic exercises, and patriotic ardor alone swells each heart, as well it might, for it was one of the grandest of military achievements, accomplished as it was, with but small loss of life.

"We know the events that quickly followed the daring of the heroic band who on the night of December 16, 1773, threw into the waters of Boston Bay every chest of tea aboard English ships, in bold defiance of Parliament, which had imposed exorbitant taxes in order to maintain an army here. Aye, we know of each event. The Boston massacre, the fights at Lexing-The Boston massacre, the fights at Lexington and Concord, and the glorious battle of Bunker Hill:

of Bunker Hill!
"Thereafter, daring not to again sally forth, ten thousand troops under Gage remained in Boston, while outside, Washington's genius was surely moulding into a well organized, disciplined army, what the British jeeringly termed a mob of half-clothed rustics."

'And this army was so encamped about

"And this army was so encamped about the peninsula that Boston was besleged! Yes, the British were hemmed in, yet Washington was not satisfied; he wanted the town freed from red coats, and he went to work to accomplish the task. "At dusk of March the fourth, his Colonists began cannonading the British and the fire was returned with zeal, Gage, not knowing that under cover of this operation, eight hundrd men as guards, with twelve hundred workmen and three hundred ox carts, were crossing the frozen marshes and securing a position on Dorchester Heights overlooking both town and hester Heights overlooking both town and harbor.

The firing ceased, and unconscious of danger the British went to peaceful slum-ber, but the toilers worked on with the ber, but the toners worked on with the strength and quickness of pioneer muscles, backed by strong wills, determined hearts and a righteous cause, 'American Liberty,' and at the next dawn the besieged gazed with amazement upon the formidable forti-

with amazement upon the formidable fortification which crowned the Heights, allke a menace to army and fleet!

"Gage realized he must do one of two things, drive the Colonists from the Heights, else himself evacuate Boston. He resolved to attack, and Percy with twenty-four hundred men was sent forward.

"It was the fifth of March, 1775, just six years after the day of the Boston massacre, 1770, and as Dewey at Manila Bay on that memorable May first, 1898, spurred on his men with the slogan.

"Remember the Maine!"

'Remember the Maine!'

so had Washington animated the Colonists 'Remember the Fifth of March!'

"Ready and eager to avenge their breth-"Ready and eager to avenge their breth-ren, the Colonists awaited the attack but a storm arose and Percy was compelled to postpone operations; while the Americans continuing to strengthen their works, so fortified themselves that the British soon realized that to attack would be madness! "So Gage faced the alternative; he would evacuate!

"But Washington was impatient that Gage should move out quickly, not knowing when more red coats might reach Boston; so on the night of the sixteenth of March, his army crept still nearer the town and on the morning of the seventeenth, Gage beheld the Colonists strongly fortified on Nook Hill!

"That was Evacuation Day!
"Consternation seized the British and so

"That was Evacuation Day!
"Consternation seized the British and so precipitate was their flight that many valuable stores were left behind. Hurrah for that seventeenth of March! Hurrah for Washington! And hurrah, hurrah, hurrah for the grandest of all institutions, American liberaty!"

"There! How's that?" asked Tom, as he ended with dramatic effect.
"Pretty good, Tom," replied Jimmie

ground or in the logs, trees and walls of his father's farm that he had not examined critically. When first shown a mouse trap he proceeded to insert a finger, touch the bait and get caught. This was a revelation, and negotiations were at once entered upon with his father by which he was to rid the premises of rats at one cent

lation, and negotiations were at once entered upon with his father by which he was to rid the premises of rats at one cent a head. A rat trap proving unequal to quick money making he hung up in a bin at the barn, which contained ground feed for the horses, a number of baited steel hooks. On that night he went to bed dreaming of wealth and believing confidently that the next morning he would find a rat dangling on each hook. Grog's father returned with the team after nightfall from a trip to town and, proceeding to get the feed for his horses, was greatly surprised to find himself on the end of one of Grog's hooks. It did not take very long for Grog's father to understand and for Grog to suffer the consequences.

Grog early learned that the low land along the river, some half a mile away, was good trapping ground and also that

was good trapping ground and also that the smell of muskrat on a boy's clothing was a mark of distinction. Then he began was a mark of distinction. Then he began studying up the comparative merits of the various kinds of traps. Finally deciding that the single steel trap was what he wanted, he borrowed one, swung it over his shoulder and sought the trapping grounds where he carefully laid his plans, allowed his trapping areas and sought the trapping grounds where he carefully laid his plans, allowed his trapping areas. grounds where he carefully laid his plans, placed his trap under water and secured the chain to a stump. Grog hastlly swallowed his next morning's breakfast and ran all the way to his trap in his eagerness, and what was his joy to find a large muskrat that had drowned itself in endeavoring to escape. After great effort he succeeded in removing its skin and proud of the odor that encompassed him about he

ceeded in removing its skin and proud of the odor that encompassed him about he hastened to school before it should evaporate. He was the hero of the school that day, but his lofty pride had a fall when he marched, odor and all, into his home. Encouraged by his success in muskrat hunting he tried his hand at something else. One day in his rambles he found a large hollow oak tree with an opening near the ground that had a peculiar worn appearance as if from friction of something

passing over it frequently. Grog was eager to know what it meant. The hollow was too small for a coon or a pole-cat, and too far from the water for a muskrat; he hoped that it was a mink-hole. Fetching his trap and securing it he waited until the following day when on examination he found that he had caught a weasel, thus exploding the theory among his school-mates that a weasel is so spry he can dodge a bullet and that he is quicker than a steel trap.

mates that a weasel is so spry he can dodge a buillet and that he is quicker than a steel trap.

But he was bound to catch a mink. He knew a boy who had sold a mink skin for four dollars. Grog had never seen a mink and knew nothing of its habits. One day while closely examining a bank that hung out over the river he discovered a hole nearly concealed by the long grass. Securing his trap to an old root he went away to dream of how he was to spend his money. Alas the next morning brought only dismay and mystery! The ground adjoining showed violent struggle, the trap was gone and only a short piece of the chain remained. The trail led away into the swamp where it was impossible for Grog to follow. Great were the discussions had in school that day as to what sort of an animal could be powerful enough to break so strong a chain and to this day the mystery has never here colved.

so strong a chain and to this day the mystery has never been solved.

One day while crossing a fallen sycamore tree Grog discovered that it was hollow. He had learned that minks usually inhabit hollow logs and that to catch the next transfer from scent, must be used. inhabit hollow logs and that to catch them a new trap, free from scent, must be used; but a new trap was beyond Grog's reach. Some one suggested that he dip the old one in melted beeswax. The required beeswax was found in his sister's sewing bisket and the work was done; then, with great care he set his trap. The next morning brought disappointment. Nothing daunted, however, he left his trap baited and waited for another day. What was his joy on returning the following morning to hear as he approached the log the rattle of the chain. Springing forward his eye caught sight of a splendid looking animal; it was wedgeshaped with a snake-like neck, small head

ters, with a distinct dark line down its brown back. Instinc-tively he knew it was mink he had so long distinct the mink he had so long sought. After repeated efforts in vain to kill it with a stick he searched until he found a strong forked stick with which he succeeded in pinning it down on its back; in this position he easily dispatched it.

and broad hind quar-

it.

Grog is now an old man with bent form and gray hair; life has brought to him business successes, but he has never had the feeling of wealth and distinction that he experienced when the money he received from the sale of the mink skin was in his pocket and the smell of mink was on his garments. on his garments.

#### The Mystery of the Orator's Power

"The orator must be an actor who knows how to tune himself and his sentences to the middle notes which all men possess, and then, once again to his listeners, to lead them on to any point he chooses. When he can combine this ability with wisdom and with statesmanship, he becomes a great man, but he often gains reputation through reciting the ideas of other people. In many cases the first channel through which an idea is sent falls as a medium for reaching the people. When it is revived and trumpeted forth by a more forceful or more fortunate orator, it has all the elect of originality.

of originality.

"That oratory depends in a measure upon the mental condition of the listeners has been proven over and over again. A congregation of many minds, all thinking upon the same subject, has been the foundation of strange experiments. The 'children's crusade,' which destroyed the flower of France in the middle ages, was one of these waves of feeling, incomprehensible to those they control, which arise from this same human source. We are reminded of some historical instances by the events of the past few months in our own country.

"The other day at a Maine camp meeting, staid, sensible people were so excited by the speech of a foreign missionary, who told them nothing they did not already know, that they gave away their last pennies, and stripped themselves of jewels to donate to a cause which had been familiar to them all their lives.

nles, and stripped themselves of jewels to donate to a cause which had been familiar to them all their lives.

"The study of oratory should be regarded as a scientific pursuit. The man who makes public speaking an exact science, and who learns how to run the scale until he strikes the dominant note, may have incalculable power over his fellow-men. Without this careful study, eloquence ranks as an intermittent and almost fortuitous gift, like that of the hypnotist."

#### A CARRIER PIGEON THAT TRAVELED LITTLE PETE 8.000 MILES TO REACH HOME

OME time ago a consignment of homing or carrier pigeons left San Francisco for Auckland, New Zealand, to be used in carrying communications between Auckland and Great Barrier Island; and among the little feathered messengers was a bird named Pete, which helonged to me. Pete was always known as a wise fellow, his intelligence at times causing people to marvel. But Pete was a tramp; that is, he could not be depended upon if sent on a long trip, often loitering on the way to hunt food or to play, perhaps staying out hours when he should have been absent only minutes. So Pete was shipped away to be used as a loft bird—one which stays at the home loft to attract returning messengers. Well, he went this time because he couldn't help it; but his cunning played a fine trick on his new owners. This bird was taken 2,000 miles by land to San Francisco; 2,089 miles by water to Hawaii; thence 2,240 miles by water to the Samoan Islands; thence 1,600 miles by water to Auckland—in all nearly 8,000 miles, and—now Pete is at home again!

The home-coming of this bird is little short of marvelou4, and

The home-coming of this bird is little short of marvelous, and this is how he accomplished it. Watching carefully for an opportunity to escape, after landing at Auckland, Pete took to his wings, and finding in the harbor the vessel which had carried him so far from home, he radiated from its masts in every direction, searching for a familiar scene or object, which, of course, he could not find so many thousand miles away from his American dove cote. However, he stayed near the ship, perhaps thinking it would return to America; but when the vessel finally steamed out, headed for Australia instend of the United States, Pete descried his perch and struck out straight toward his home land. So it happened that the Lucy Belle, an old-fashioned salling vessel laden with lumber from the Samoan Isles, when three days from Christmas Island, was boarded by an almost exhausted stranger: and the stranger was The home-coming of this bird days from Christmas Island. Was boarded by an almost exhausted stranger; and the stranger was nobody in the world but Mr. Pete. As the old sailor is a very supersitious being, Pete was welcomed amid cries of wonder at encountering a homing pigeon in the middle of the Pacific ocean, and was allowed to ride wherever he chose on shipboard. The bird was kindly treated and fed. and one day, during a storm which

frightened him and drove the little tramp to shelter on deck, it was discovered that he carried a small tag on one leg, bearing a number and his name. He was placed in a box with slats for bars, and in this

in a box with slats for bars, and in this condition came into San Francisco Bay with the Lucy Belle, just as happy at sight of land as any member of the crew, who considered him a mascot.

The story of the Lucy Belle's mascot soon spread among the shipfolk along the wharves, and in a few hours Pete was identified as having been shipped some weeks before for Auckland. Then it was

GROG DISCOVERED & HOLE MEARLY CONCRALED BY THE GRASS

that the people understood that the crafty

that the people understood that the crafty fellow was homeward bound.

All this is wonderful enough; but the fact that Pete reached home unaided over 2.000 miles of land route is, perhaps, only less wonderful. But he did.

It was argued on the Lucy Belle that a bird possessing a brain wise enough to figure out an ocean voyage could reach his home on land; and after some debate the sailors securely fastened a little story to Pete's leg, reciting his adventures so far as known to them, and turned him loose. How the dear little wanderer found his way home he alone can tell.

It took Pete nine days to travel the 2.000 miles, in covering which, of course, he must have stopped often; for, if he could have gone straight home, the distance could have been made in thirty or forty hours. We who had sent him off to Australia had not the slightest idea that he was this side of the equator, or of the world, when, one morning, not long ago, Mr. Pete quietly hopped down from the home loft, and, without any fuss whatever joined his mates at a breakfast of corn, wheat and crumbs!

Now, what do you think of him?

He will never be sent away again, for

Now, what do you think of him? He will never be sent away again, for there is not sufficent money at the dis-posal of any one man to secure him.—Ross B. Franklin, in December St. Nicholas.

Evidences are multiplying that "For the Mikado," Kirk Munroe's story now running in THE AMERICAN BOY, which is on of two in the preparation of which Mr. Muntwo in the preparation of which Mr. Mun-roe made a trip around the world some-thing over a year ago (it having run in this paper in the numbers, December, 1903 to September, 1903 inclusive) is the best story that ever appeared in our page.

#### "On the Field of Honor'

"On the Field of Honor"

A 226 page book containing stories of young American heroes, by Annah Robinson Watson. Twenty-five sketches of young heroes make up this volume, the heroes being those who displayed valor on the battle fields of the Civil War. Here are told true stories of daring and devotion to duty that may well stir the blood of old and young, and make each of us proud to say, "These were my countrymen." "On the Field of Honor" is a book of inspiration for the young; a setting out of the glorious heritage that is shared alike by every American. The book is beautifully bound. We will send it postpaid to any address on receipt of 75 cents, or we will send it free to any AMERICAN BOY subscriber who sends us two new yearly subscriptions to THE AMERICAN BOY at \$1.00 each, or who will send us one new yearly subscription and 35 cents. Address THE SPRAGUE PUBLISHING CO., Detroit, Mich.

HELESTHE EDIT

By M.A.C.

HE editor of The Budget failed to escape the rage for "Women's Editions," which swept over the land a few years ago. The ladies of a local society for the amelioration of something or other descended on him and he surrendered, took two pipes, a pound of smoking tobacco, a fishing rod and decamped, leaving The Budget in their charge for one week, with the privilege of making all the money they could out of it. His printer was supposed to stay, but, being by classification a tramp, and having a heavy board hill hanging over his head by a single hair, he embraced the opportunity two hours after the editor had gone to depart by way of the railroad track. This left the mechanical end of the office at the mercy of the inky imp called Tatters. The ladies were a good deal disturbed at the disaffection of the printer, but bravely decided to go ahead with Tatters and attempt to get out the paper. They called him in to give him some instructions. He stood before them wearing, as usual, a long apron stiff with ink, paste and unknown substances. The only thing which saved his face from being in the same condition as his apron was the fact that he was in the habit of constantly twisting

WHAT IS IT, SPRING POETRY ? "

it into many shapes, so that the ink, paste and other substances on it never had time to stiffen. His hair pointed in all direc-tions, like that of a jack-in-the-box, and in his left hand he carried a section of

wet type.

"What are you doing, Tatters?" asked the lady who was the president of the amelioration society, with some dignity.

"Throwin' in," answered the imp.

"Throwing in what?"

"Type."

"Into what?"

"The case. Think I was throwin' it into my hat?"

The lady looked at him coldly and he

went on:

"But I'm 'most through an' you'll hear me hollerin' for copy in 'bout a quarter of an hour," and he retreated into the composing room and slammed the door.

The ladies were indignant, but there was

The ladies were indignant, but there was clearly nothing to do but grin and bear it. A few moments later there came a most dismal, long-drawn wall from the other room, which, after much effort they managed to interpret as the promised "hollerin." It was followed by the appearance of Tatters' head at the door. "What is it?" asked the president, who had been chosen editor-in-chief, a little sharply.

the table.
"We shall certainly do as we see fit,"
interposed the editor-in-chief, with great

interposed the editor-in-chief, with great dignity.

"I resign!" cried Tatters, again tearing off his apron and throwing it behind him, where it stuck in the city editor's lap, greatly to her dismay. "I resign my position, that's all. Here, if you want it in ink, gimme a pen. Lemme write it out in black and white: Dear madam—I hereby resign my posish. (Signed) Tatters. Gimme a pen, I say."

"Tatters, be calm—act reasonable," said the editor-in-chief in a soothing tone. "What shall we put on the editorial page?"

"Editorials, of course," he answered, slightly mollified.

"On what subject?"

"The danger in great political majori-

"The danger in great political majorities.

"But we do not know anything about

"But we do not know anything about politics."

"Neither does the boss, but he writes two columns 'bout every week. But, if you can't do it, write 'bout automobiles."

This struck the ladies favorably and one of them began an article on "Will the Automobile Supplant the Horse?" while the city editor handed Tatters an item, which he took, wrinkling up his nose and remarking that her question marks looked like button hooks, and retreated to the composing room. composing room.

composing room.

For the remainder of the day they kept him pretty well supplied with work. When not so provided he spent his time perched on a high stool blowing a wheezy mouth organ, and occasionally shouting. "Copy," in an agonized tone. Once or twice something offended him and he threatened to resign, but, as the ladies immediately surrendered, nothing came of it.

The next two days passed in a some-The next two days passed in a somewhat uneventful manner. By giving him plenty of work, he was kept reasonably quiet. There was not much trouble Thursday, either, though shortly after noon he set up a loud roar, saying that he had been taken suddenly sick and was in mortal agony. The ladies asked him if they could not do something for him, and he only howled the louder, and finally lay down on the floor upon his back and and he only howled the louder, and finally lay down on the floor upon his back and began pounding the boards flercely with his heels. A doctor was called, but as soon as Tatters saw him he got up quickly and went back to his work.

"What's the trouble with you, young man?" inquired the doctor.

"Antimony polson from the type."

"What's the trouble with you, young man?" inquired the doctor.

"Antimony poison from the type." answered Tatters, dismally. "I'll go off with it some day just like—'scat!' All good printers die of it sooner or later."

Tatters may have told the truth about his illness, but a different cause was given later.

Friday was press day and the ladies arrived at the office early. Tatters rushed into the front room and addressing himself confidentially to the city editor, said: "Say, want a bully item of news?"

"Why, yes. Tatters; what is it?"

"Dog fight," answered Tatters. Jim Beasley's dog and Deacon Ketcham's. Down by the post office. The deacon didn't want his dog to fight, but Jim didn't care. Set down and get your pencil—tell you all about it. You see the dogs met, and Jim's dog sort of walked around the deacon's dog once or—what's the matter? Ain't you goin' to use it?"

ong sort of walked around the deacon's dog once or—what's the matter? Ain't you goin' to use it?"

The editor said she thought not.
"What!" cried Tatters, in consternation. "nothin' about it, after I watched it and got all the facts for you?"

"No, I don't think we care for it."

"Now, see here," said Tatters, dropping his voice into a still more confidential tone, "act reasonable, as you said to me, I saw last night your paper was goin' to be dull, that it needed livenin' up—it ain't all your fault, it's a dead week—I saw this, I say, and what do you think I did this morning just to help you out?"

"I don't know, Tatters, what was it?"

Tatters came closer, sank his voice to a whisper, and said: "I drove the deacon's dog around to the place and then sicked? Jim's dog onto him. All to give you an item!"

The lady was deeply touched by his devotion, and said as much, but was forced to add that they could not mention a common dog fight in their edition.

mon dog fight in their edition.

Tatters drew back and stood silently gazing at her. She expected nothing else but a final resignation on the spot. But his face showed sorrow rather than anger. The young lady thought she detected a tear, but this is not probable. For half a minute he did not move, and then he said "You couldn't use it in a funny way, either. I spose. It was funny. The deacon pulled on his dog's tail, and Jim pulled on his dog's tail, and Jim didn't do

"Copy," said Tatters. "Did you think I was singing the Doxology?"

"There is no copy ready yet. Can not you be doing something clse?"

"I can that," and he snatched off his apron and started for the door. "I can be goin' fishin' just as easy as not."

"Tatters!" cried the frightened editor, springing to the door, "don't you dare desert us. You stay here until some copy is ready for you."

Tatters retreated and put on his apron in an agitated frame of mind.

A moment later one of the young ladies, who had been appointed managing editor, took a roll of daintily-written manuscript from her hand bag, and said:
"Here. Tatters, is something you can begin on."

Tatters took it, sniffed, glanced at it and calced." "What is it—spring poetry?"

any hard pullin'—Jim may have pushed a little when the deacon wasn't lookin' his way. You wouldn't let me write it up, either, I 'spose?"

"No, Tatters, I'd like to, but I can't."

Tatters turned back to the composing room and not a sound was heard from him for an hour, except the steady click of his type.

It was about 11 o'clock when the editor-in-chief came into the office and said to the city editor: "I think there is an item of news for us out at Tarbox's, on the Coopersville road. I hear that Mr. Tarbox has been injured by an unruly cow. It is but a mile and a half out there—can't you go out in your auto and get the particulars?"

There was a loud shout behind them, and Tatters burst in and ran through the room, shedding his apron in his flight, and

Tatters took it, sniffed, glanced at it and asked: "What is it—spring poetry?"
"No, it is the essay that I read at the commencement. We shall put it on the fourth page."
"What! the editorial page," shricked Tatters. "Put such stuff as that on the editorial page of The Budget! Not much," and he tossed the manuscript on to the table.
"We shall certainly do as we see fit."

There was a loud shout behind them, and Tatters burst in and ran through the room, shedding his apron in his flight, and room, shedd like the wind and shouting for everybody to get out of the way of the wild cow editor. What shall we do now?"
"I'll see if I can catch him in your auto, and I'll go on and find out about the accident, anyhow."

But though she knew how to handle the muching to get the most greed out of the

machine to get the most speed out of it, she might as well have tried to overhaul an express train as the wild cow editor. Leaning forward, he tooted the horn continuously and never slackened his pace for thuously and never slackened his pace for the whole distance. When she arrived at Tarbox's she found that Tatters had got the facts, gone down a lane and started back by another road. She saw Mr. Tarbox, got his version of the affair and returned herself. Tatters was in the office, looking innocent and hard at work. "Don't say anything to him," cautioned the others. "He'll surely resign if you do."

She wrote a paragraph about the accident and it was sent in to Tatters with the last of the copy. In a few moments he came out holding the sheet of manuscript in his hand. "See here," he said, "are you going to print such stuff as that about that cow fight?"

"What is it Tatters?" asked the editor-"What is it, Tatters?" asked the editor-

"What is it, Taiters?" asked the editor-in-chief.
"Just listen," answered Tatters. "She says: 'Yesterday afternoon Brookdale's worthy milkman, Mr. Tarbox, had a narrow escape. He had just separated a calf from its mother, when the latter became enraged and attacked him with her horns. He was badly shaken up, but escaped serious injury.' Do you hear that?"
"Yes, it seems to me all right. Put it in just as it is."
Tatters uttered a howl. "I re—" Then

Tatters uttered a howl. "I re—" Then he paused and was silent. He looked at the floor a full minute, then said half to himself: "No, I'll stick to it. After all I've lived through this week, it's too late to go now."

He went back to the other room and re-

He went back to the other room and resumed his work.

It was after supper that night before they got to press, but with the prospect of a goodly sum for ameliorating the unameliorated heathen, the ladies did not complain. Tatter's friend, Jim Beasley, had been engaged to turn the crank of the press, while Tatters himself fed in the blank sheets and superintended the work. He seemed remarkably meek and pleasant, and the ladies all observed that they had not seen him in so amiable a frame of mind during the whole week. The auto ride did Tatters good they remarked. He appeared, however, to be in a great lurry, and conhowever, to be in a great lurry, and constantly urged Jim to turn faster, and advised the ladies to make haste with the folding and get the papers ready for the postoffice.

TATTERS UTTERED A HOWL

accident," said the editor-in-chief, glancing over the first page.

over the first page.

The city editor opened another copy and began to run her eye down the columns. Suddenly she exclaimed: "Why what's this down in the corner?"

"What is it?" asked the others in chorus.

She read aloud:

"TERRIBLE ACCIDENT!

"TERRIBLE ACCIDENT!

"Yesterday forenoon, as old Bill Tarbox, the milkman, went into the barnyard to put a handle on his pump, the old one being entirely worn out, he was attacked by a wild Texas cow. The critter had hydrophobia and was gnashing her teeth like a hyena and was bellowing like an elephant. She was a large cow, higher than a horse, and had horns nearly a rod long. Tarbox hit her with the handle, but she tossed him fifty feet into the air and then caught him on the fly and histed him up again. This time he lit in a tree and was rescued by the hook and ladder company. The cow jumpred a sixteen rail fence and took to the woods. The mad cow editor of The Budget

woods. The mad cow editor of The Budget

BUT TATTERS HAD ESCAPED BY A REAR DOOR

followed her and last saw her tearing up large hemlock trees with her horns. Tar-box is not expected to live. Full account of an interesting and important dog fight ext week."
The ladies ran into the back room, but

Tatters had escaped by a rear door.

NCE a year the city of Cheyenne, Wyoming, dons its holiday attire and, decorating in the true western style, opens itself for the celebration "Frontier Days." Four days were given over to the carnival last year in the early fall and were patronized by some 30,000 people from all over the country.

As early as daylight the streets began to fill with the bright red and yellow shirtwaisted cowboys as well as the cowgirls of less gaudy inclinations, with their glittering spurs tinkling to the movements of prancing horses. At night vast crowds lined the thoroughfares and with yelling and tooting of horns and playing of bands made the town seem like a community of Indians on the warpath.

of bands made the town seem like a community of Indians on the warpath.

The special events of the carnival took place at the fair grounds about a mile from the city. Near the west end of the arena two large strong corrals were built, and a fence, running from these to the center of the oval, started the steer or wild horse in the right direction.

Probably no sport of the American public is fraught with more danger than the feat of roping, saddling and riding a horse that has never felt the touch of human hands. He may fall and roll completely over, crushing the rider; or he may rear and fall backwards carrying the rider with him, or try any one of a dozen other little tricks which, unless the rider is prepared, quite often results in severe injury and sometimes death.

Each rider is allowed one assistant, mounted, and together they enter the corral and rope what to the rider seems the worst horse in the bunch, for the successful rider of the hardest horse to "bust" takes the money. The horse is dragged to the arena in front of the grand stand, where the fight for supremacy between man and beast begins—and man does not always win. A blindfold is first fastened over the broncho's head and the saddle blanket adjusted, then comes the first fight of the day, for the moment the horse feels the weight of the saddle on his back he is up in the air like a rocket and tugging at his ropes with the strength born of fear. After several attempts the girths are tightened and the rider springs into the saddle, his helper removing the blindfold at the right moment. Then begins the fight, the horse springing high into the air to land with legs as stiff as four posts; but the man does not leave the saddle listting as steady as though a part of into the saddle, his helper removing the blindfold at the right moment. Then begins the fight, the horse springing high into the air to land with legs as stiff as four posts; but the man does not leave the saddle, sitting as steady as though a part of the animal. Far across the arena and back, over fences and ditches, through crowds of horsemen, scattering them like chaff before the wind, the horse and his rider fight, one for liberty, the other for the prize and the accompanying honors.

Rider after rider performs this feat, some successfully, some to go to their quarters

crippled but happy with the generous cheers of the crowd ringing in their ears.

The steer roping contest, though not so dangerous, requires quite as much skill as the "busting," and the success of the winner depends as much on his horses as on himself for a trained correct will do himself, for a trained cowpony will do much to help the rider.

When the word is given a steer is let out When the word is given a steer is let out of the corral and like an arrow starts for the open arena. The moment he crosses the one hundred-yard line a fiag is dropped. At this signal the roper starts, and, slowly circling his lariat around his head and closing the gap between himself and the steer to ten or fifteen yards, watches his chance for a throw. The instant the throw is made the horse stops and braces itself for the pull that long ex-

#### Farmer-boy Co-operators

Co-operation has enabled fifteen thousand Co-operation has enabled fifteen thousand boys in Illinois to increase the productive capacity of their soil ten to twenty percent. Within the last three years. Fifty young men organized the Illinois Farmers' Club as a parent organization, and auxiliary clubs were formed in nearly every county in the state, with educational cooperation as the central idea.

Working in conjunction with the Illinois experiment station, the Central Club outlined work for the County Clubs, and each of these county organizations made several trips to the experiment station during the

trips to the experiment station during the farming season, where they were taught the scientific side of farming. These modern ideas were applied to the farms of the young men with wonderful results the very

These auxiliary clubs are made up of bys eighteen to twenty-two years of age, who are now loud in their praise of co-operation. They have all worked together to produce definite results and have won a glorious victory. This movement has been extended to Iowa, Missouri, Indiana, Ohio and Wisconsin, where the farmer-boy cooperators are setting a new pace in agriculture and all its branches.

#### How Fishes Breathe

By means of their gills fish breathe the air dissolved in water. The oxygen consumed by them is not that which forms the chemical constituent of the water, but that contained in the air which is dissolved in the water. Fishes transferred to water from which the air has been driven out by a high temperature, or in which the air absorbed by them is not replaced, are soon suffocated. They require aerated water to maintain life, and they take it in constantly through their mouths and expel it through their gills, retaining the air. It follows that if the water in a lake should be completely cut off from contact with the air long enough to exhaust the supply of air, the fish in the lake would die.

—St. Nicholas.

#### Holiday Greetings From Missouri School for the Deaf

COWGIRL BACE. THE COWGIRL IS AS DARING A RIDER AS ARE ANY OF THE MED

VIEW OF THE LINCOLN SPRING ON THE LINCOLN FARM

he had rescued the president who figures foremost in his nation's history.

Austin Gollaher was born seven miles east of Hodgensville, the county seat of Larue county, Kentucky. He was two years older than Lincoln. That part of Kentucky was at that time embraced in the territory known as Hardin county. In a division of Hardin county, the site upon which Lincoln was born, three miles south of Hodgensville, and the farm upon which Gollaher first saw the light of day, seven miles east, were included in a county named Larue, called so from the fact that Benjamin Larue was the most prominent citizen at the time, and one of John Rogers Clark's assistants in planting this wilderness. wilderness.

ers Clark's assistants in planting this wilderness.

The Lincoln farm is in a poor, barren part of the county. The land is rolling and abounds with hills. Many years ago, so the older citizens say, the cabin in which Lincoln was born was torn down and the logs removed to a neighboring farm, where they were used in building a small barn. But A. W. Dennett, of New York a millionaire, went to Hodgensville, purchased the Lincoln farm, bought the old barn in which the logs of the Lincoin cabin had been used, and had a cabin constructed on the original site, as near like the original as possible. It remained there but a short time when it was removed to the Nashvillo exposition and placed on exhibition there. It was removed from there to New York, where it may be seen today. To the south of the cabin site a few feet, the hill slopes gently into a large basin. In this basin is "Lincoln Springs" the name by which the farm is familiarly known. This spring is without doubt the finest in central Kentucky, the water flowing from it in great abundance and being clear and cool the

old, and the wood decayed, visitors to the farm carried it away, piece by piece, until farm carried it away piece by the number of the larger stones have by far. Dennett, workmen unearthed the foundation of the chimney which stood at the southern side of the original Lincoln cabin. Some of the larger stones may be seen there today, discolored by the intense heat to which they had been subjected.

When Lincoln was six years old his parnets removed from this farm to a point on Knob creek, east of Hodgensville, and but a mile from the farm upon which live la about the open door. "And we went to school together over on that hill at the turn of the road. My carliest recollection of Abe was when his father moved down there on the creek where Frank Dawson of Abe was when his father moved down the schoolhouse, and it was here the with her. I had to go alone. We always had good times together, and spend the day the balance of the time in which to play. The wind may mother went over the halance of the time in which to play. The wind may be seen and the was here the months during each year, and as the two boys were hardly strong enough to do in anual labor on the farm, they had the balance of the time in which to play. The nests; the small stream which ran near the new home of the Lincoln's was full of fish, and the two made good use of their time.

To reach the Gollaher home one must frive over a hilly unsettled part of Landon's was full of fish, and the work of the series of

N a quiet country cemetery in Central Kentucky is a newly-made mound, and beneath this repose; the body of Austin Gollaher, who, when a boy, saved Abraham Lincoln's life. He was bore the stamp of truth. It was plain to Lincoln's playmate and boyhood friend and but a week before he passed away at the age of ninety-three years, he related in a clear and concise manner the story of how waters of Knob creek with a sycamore limb, little thinking then, and paying practically no attention since, to the fact that he had rescued the president who figures foremost in his nation's history.

Austin Gollaher was born seven miles east of Hodgensville, the county seat of Larue county, Kentucky. He was two years older than Lincoln. That part of Kentucky was at that time embraced in the territory known as Hardin county. In a division of Hardin county, the site upon which Lincoln was born, three miles south of Hodgensville, and the farm upon which collaher first saw the light of day, seven miles east, were included in a county named Larue, called so from the fact that Benjamin Larue was the most prominent citizen at the time, and one of John Rogers Clark's assistants in planting this wilderness.

bon't look up, nor down, nor sideways, but look right at me and keep on coming. It lost his hold and fell off the log.

"I ran up the bank, and found a sycanore limb which had fallen off one of the recs nearby. Reaching it out to him he aught hold of it and it was only a minted te until he was safely landed on the ank, but he was about gone. It was now time before he came around all right, and for several minutes he threw up mudy water in a stream. Then we sat down to talk it over. He pulled off his clothes at him to dry. I knew if Abe's mother found it out she would whip him, and, besides, she would tell my long soul, and I never mentioned it until long time after the Lincolns moved way.

"One day my mother told me that the saw him. The next time I heard of him he saw him. The next time I heard of him he saw him. The next time I heard of him he was running for president, and I had hard time finding out if it was the same Abe I had played with and fished out of the creek. I told all the nelghbors that it was the same boy, and that I was going either. And I dld. After he was elected president he sent me word by Dr. Jesse Rodman, over at Hodgensville, who was up on the to come up there and visit him. I never went, but I expect if I had he would be to come up there and visit him. I never went, but I expect if I had he would be to come up there and visit him. I never went, but I expect if I had he would wing the hold of his clothes to come up there and visit him. I never went, but I expect if I had he would have given me a nice place as judge of some court here in Kentucky."

Exhausted, though with a merry twinkle in his eye, the old man sank back on his pillow, little thinking that he had recited the true story of the rescue of the martyred president's life; never dreaming that within one week from that Sunday morning his soul would wing its way beyond the blue to rest throughout eternity with "Honest Abe." "I ran up the bank, and found a syca-more limb which had fallen off one of the trees nearby. Reaching it out to him he caught hold of it and it was only a mincaught hold of it and it was only a minute until he was safely landed on the
bank, but he was about gone. It was
sometime before he came around all right,
and for several minutes he threw up muddy water in a stream. Then we sat down
to talk it over. He pulled off his clothes
and hung them in the sun to dry. I knew
if Abe's mother found it out she would
whip him, and, besides, she would tell my
mother, and then I would get a whipping. mother, and then I would get a whipping. We finally agreed that we would go on home and not say a word about it to a living soul, and I never mentioned it until a long time after the Lincolns moved

old piece of tree and some short rails had been thrown across by workmen in the neighborhood, and we decided that we could get across all right on them.

"I was the older, so of course I went first. I made it across all right. Then Abe got down on the rails to 'coon' it over. When he was just about in the middle of the stream his courage falled him. He commenced to cry. I shouted to him, Don't look up, nor down, nor sideways, but look right at me and keep on coming. He lost his hold and fell off the log.

"I ran up the bank, and found a syca"I had played with and fished out of

#### A NATION'S HONOR AT THE PEN'S POINT

ance, by a professor of pedagogy in

THE writer recently heard a lecture seemed to him almost a miracle, as it must on the possibilities of human endurto us at this day. He proposed to the genance, by a professor of pedagogy in theman that the United States should de-

on the possibilities of human endurance, by a professor of pedagogy in a great university, which reviewed one of the most signal instances of that quality ever recorded. The story has been told before, but it is not as much known as it ought to be, for it teaches several important morals.

In 1862 Charles Francis Adams, our minister to the Court of St. James, discovered that an English firm of shipbuilders was constructing two powerful armored war vessels at its yard in Birkenhead, near Liverpool, which were to be delivered to agents of the Confederate States at an unfrequented West India island, as soon as completed. Then they were to be sent upon missions of destruction like that of the Alabama. It was one of the greatest dangers that had arisen to menace the Union cause.

Mr. Adams secured the most ample proof that such was their destination and laid it before the proper British authorities, demanding that the vessels he prevented from

An experienced messenger removed the bonds from in front of the revister as fast as he affixed his signature to them. A capable army surgeon was in attendance constantly, and administered such food and stimulants as were deemed best calculated to insure the greatest possible endurance of physical strength and will.

During the first sevel hours three thousand, five hundred signatures were made. In the first half of the eighth hour great muscular agitation and strain were felt. In the forenoon of Saturday every muscle of the right side connected in any way with the movements of the hand and arm became seriously inflamed and the pain was almost unendurable. In the afternoon of Saturday the pain diminished. A feeling of numbness took possession of the hand and crept up the arm to the shoulder, making them seem dead. The fingers became distorted. It was necessary to shift the pen and hold it between the first finger and the thumb. Changes of position were frequently made. Walks were taken in the open air. The surgeon advised, during the night of Saturday, that the register's strength could hold out but two or three hours more at hest. He thought the resignation should he sent to the president. But with the objections to a change before his mind the official continued the painful and horribly monotonous work. When Sunday morning came there were only a few and norring monotonous work. When sunday morning came there were only a few more than two thousand signatures yet to be affixed. The surgeon advised that to continue the task would seriously endanger

the officer's life. But he determined to continue the work to the end if possible.

He did so, and about noon of Sunday the last bond was signed. The last hundred signatures required more time than the

signatures required more time than the first thousand.

The fairly Herculean task was accomplished. When the bonds were laid on upon the other without folding, and packed for shipment, they made a stack six feet

for shipment, they made a stack six feet and four inches in height.

They reached the ship in time for the Mendry noon sailing, and reached London in time to redeem Mr. Adams' pledge to our great and mysterious benefactor, and keep the faith of a Christian nation.

The intended destroyers never soiled upon

The intended destroyers never sailed upon

The intended destroyers never sailed upon their mission.

The register's feat was one of the most signal acts of patriotism during that period which so tried men's souls. The pen did the country more service in that eventful forty-eight hours than the sword has after here permitted to do in the same often been permitted to do in the same length of time.

And that little group of great events pre-

sents to history the extreme alertness and firmness of our faithful servant abroad, as well as an astonishing incident which seems like an interposition of Divine Providence in behalf of our national cause. It also recalls those changed conditions which would now enable a minister, under the same circumstances to make known the situation to the Washington authorities and

situation to the Washington author uses and receive his advices in a few minutes.

For five years after his great achievement Mr. Chittenden could never promise to perform any professional duty during any particular day. He suffered greatly as a consequence of the task which he imposed upon his physical organism for the sake of his construction and the honor. sound sit bus country and its honor.

ONE VIEW OF THE PANDOR SPRING ON THE PARM WHAT OF MRICE PROOFN'SY'S STREET

NO see the scarlet tanager is to remember him always. He canhim always. He cannot be confused with any other bird. Many times I have been asked. "What bird is that about the size of an oriole, with red body, black wings and tail?" The body of the male scarlet tanager is a flaming red. His wings and tail are jet black. There is no mixing of colors. Among all the feathered folk this bird is easiest to recognize, bird is easiest to recognize, remember and

Tanagers are found only in America, and

Tanagers are found only in America, and there are about three hundred and fifty species in all, most of which make their home in South and Central America. Five of these species find their way north in summer to rear their young and enliven our woodlands with their bright colors. If the United States were bisected north and south by the half-desert that skirts the Rockies on the east, and also east and west by an indefinite and varying line somewhat north of its middle, the summer homes of these five species would be roughly outlined. The scarlet tanager claims the north-cast section, and nests from the Missouri to the Atlantic. The crimson-headed or Louisiana tanager claims the northwestern portion, and is found from the eastern foothills of the Rockies to the Pacific. The summer red-bird or rose tanager is found in the southeastern portion; and the western summer redbird or Cooper's tanager, and the hepatic tanager claim the southwestern portion.

The scarlet tanager claim the southwestern seems like a

the thrushes and the cuckoos.

The first nest of this bird that it was my good fortune to discover was found on July fourth while enjoying a picnic party with a number of friends in central Iowa. My interest in birds was then only just begun, and it was not easy for me to pay proper attention to my friends on account of my interest in the well-made baskethome which held the family treasures of this tropical visitor. The male flitted about somewhat nervously from tree to tree, uttering his peculiar alarm notes, ti-kla, ti-kla, and flashing his flaming body, now here, now there, among the dark green follage. I pointed him out to my friends, but, to my surprise, they did not manifest any great interest, but seemed to take for granted that such beautiful feathered creatures might be found any day. From this

granted that such beautiful feathered creatures might be found any day. From this indifference I learned what every bird-lover so well knows, that interest in bird life becomes a passion and a joy only after a number of birds have become known, their ways and habits studied, and they themselves regarded as one's friends.

The nest of this pair was placed about twelve feet from the ground on the horizontal bough of a small oak, about two feet from the trunk. My observation of a number of nests would indicate that the scarlet tanager prefers the oak for nesting purposes, and that the nest is usually placed on a horizontal bough, about ten or twelve feet from the ground. John Burroughs makes the observation that, "A line five feet from the ground would run above five feet from the ground would run above more than half the nests (of all birds) and one ten feet would bound more than threeone ten reet would bound more than threefourths of them. It is only the oriole the
wood pewee, the tanager, the warbling
vireo, and two or three warblers, that, as
a rule go higher than this." Of all the
birds he names as building in this upper
strata, I think the scarlet tanager builds
nearest to the ten foot line. The nest is
placed, on, the climb talesce as few small

year. The first one contained four eggs, and was robbed. The third

less, and almost holds his breath. He fears lest too much noise or the slightest provocation send him away to his tropical home.

The bird, in habits, actions, and even in song, seems not quite at ease. There is an elusiveness in his ways, a translency in his appearances, an uncertain quality in his appearances, an uncertain quality in his song, as though he were aware of being away from home, and dare not presume too far. This will-o-the-wisp quality keeps one in fear of losing such a beautiful creature. This effect, however, may be due more to one's cagerness to hold and enjoy such a preclous treasure, than to actual qualities or actions of the bird itself.

Many have heard of the scarlet tanagers who have never seen them. Their favorite haunts are not about our homes, but in open woodlands. They are not numerous, like the orioles, grosbeaks and thrushes. A single pair may be found in a grove or neighborhood. A sight of the male is something which one mentions to his friends and writes of in his diary.

The female is a bird of modest colors—colive-green dusky and vallowish below. This will-o-the-wisp quality keeps one in fear of losing such a beautiful creature. This effect, however, may be due more to one's eagerness to hold and enjoy such a precious treasure, than to actual qualities or actions of the bird itself.

## "Old Abe" Again Long time readers of THE AMERICAN

Long time readers of THE AMERICAN BOY know that we have taken occasion to mention Old Abe, the war eagle, and in at least two numbers gave his picture, in one case using it on a front cover. Early in November we received a letter from Neil Barrett, a Wheaton, Minn., boy, saying that his grandfather, J. O. Barrett, who in the seventies resided in Wisconsin, and charge of Old Abe when the bird was at the Centennial at Philadelphia and also when he was at the old South Church in Boston; that his grandfather wrote a book on the life of Old Abe as well as sold photographs of the famous bird.

Neil is 16 years of age and a member of the sophomore class in the Wheaton high school and has a perfect record for attendance as well as the highest standing of any one in his grade. He is captain of the North Star Company, No. 15, of Til.:

we again can our readers attention to the fact that we have handsome pictures of Old Abe, being halftones from his photographs, size 10½x13½, suitable for framing, which we will mail to any ad-dress at ten cents each.

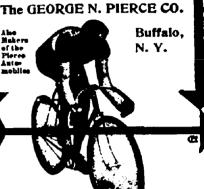

#### Parkman's Deed of Justice

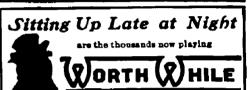

A story is told about Francis Parkman, the historian, which shows that in spite of impaired eyesight he was not blind to of impaired eyesight he was not blind to injustice. A friend met him walking along the street, howing two street boys by their coat collars. In reply to his friend's request for an explanation Parkman said: "I found this boy had eaten an apple without dividing with his little brother. Now I'm going to buy one for the little boy, and make the big one look on while he eats it."

## THE BOYS' CORN EXHIBIT AT THE ST. LOUIS **EXPOSITION**

PARTIAL VIEW OF BOYS' CORN PAVILIONS AT THE ST. LOUIS EXPOSITION REPRESENTING THE EFFORTS OF FARMER BOYS IN ILLINOIS. THE PAVILIONS CONTAIN THE PRIZE WINNERS-1,250 IN NUMBER. THE PHOTOGRAPHS OF OVER 600 BOYS APPEARED IN THIS EXHIBIT.

HEN I was selected by the Illinois State Commission to have charge of the Illinois Agricultural Exhibit at the World's Fair at St. Louis, I determined that the farmer boys should play an important part in the display-and they certainly have.

they certainly have.

I laid my plans before Governor Yates, and he not only cordially endorsed them, but handed me fifty dollars as a "starter" on the premiums. It is not my intention to go into a long description of this contest. I got up a list of three thousand five hundred dollars in premiums, consisting of cash, machinery, live stock and newspaper subscriptions. Then I printed the premium list and the rules governing the contest and mailed them to one hundred and twenty thousand farmer boys in Illinois. Eight thousand boys sent for the sample packages of corn and went to work.

The Prize Corn, more than one thousand

ages of corn and went to work.

The Prize Corn, more than one thousand exhibits of ten ears each, was beautifully and plainly installed in the Illinois section of the Palace of Agriculture at St. Louis and remained upon exhibition the entire summer. More than six hundred of these boys sent me their photographs and I placed them upon their corn.

Above these two vast pyramids of white and yellow corn, each twenty by thirty feet, was a handsome satin banner, inscribed, "Grown by the Farmer Boys of Illinois."

W. B. OTWELL

The corn was of fine type, quite uniform in appearance and measurement, and with the significant sign above it and the bright open-faced photographs upon it, it was a sight worthy of the admiration of the whole world. I doubt if there has been another exhibit at the World's Fair, before which more admiring people have stood, than at these Boys' Corn Pavillons.

It is not simply the large exhibit of corn but it is the personality behind the exhibit that compelled the passing thousands to stop and gaze with wonder. I have often wished that somewhere upon the prairies of Illinois could be gotten together these eight thousand farmer boys. What an inspiring sight it would make!

And as I sit and think of these eight thousand clean, honest farmer boys, scattered over almost every county in Illinois, I am sure that their concentrated efforts along such praiseworthy lines will make of them better farmers and better men. And the agricultural interests of the state will, in a measure, feel the throb of these young hearts, for in the future more even than in the past, the farmer boys, as they grow into strong young manhood, will have largely to do in the shaping of the world's affairs

Very sincerely, WILL B. OTWELL.

Bas-Relief of Washington at Valley Forge

Our front cover this month is from a photograph of a bronze tablet showing Washington at Valley Forge, that was recently unveiled in the West Side Y. M. C. A. at West Fifty-seventh street. New York, by Miss Helen Gould. The bronze tablet was executed by J. E. Kelly and represents Washington at prayer in the woods near Valley Forge. It is designed according to Isaac Pott's generally accepted story of that event. The tablet is the gift of John J. Chancy. The presentation speech was made by Major-General Joseph Hayes of the Washington Continental Guard. At the conclusion of Gen. Hayes speech Miss Gould lifted the flag from the tablet and a speech of acceptance was made by William E. Kingsley. In sending us this picture Mr. Kelly wrote: "I am especially glad to do this, as my favorite declamation as a boy was entitled "The American Boy." It is appropriate that this picture should appear in your paper because the donor of the bronze, Mr. John J. Clancy, said that his morne, Cone on—lively!"

That's all right, mother, nothing will happen. Don't you worry, I'm big enough to look out for that I guess. I'll look out for my clothes all right, too. Gool grappriate that this picture should appear in your paper because the donor of the bronze, Mr. John J. Clancy, said that his morne, Cone on—lively!"

That's all right, mother, nothing will happen. Don't you worry, I'm big enough to look out for that I guess. I'll look out for my clothes all right, too. Cone on—lively!"

Thomas do change into your school clothes, presisted his mother, "for I know you faither cannot afford another suit for you this year, if anything soils your Sunday one."

That's all right, mother, nothing will happen. Don't you worry. I'm big enough to look out for that I guess. I'll look out for my clothes all right, too. Gool graphy is the proposed that the form

C. A. was that no boy hereafter should be ashamed to be caught at his prayers.

"Oh! who shall know the might Of the words he utter'd there? The fate of nations then was turn'd By the fervor of that prayer.

"But wouldst thou know his words, Who wander'd there alone?
Go, read enroll'd in heaven's archives
The prayer of Washington!"

#### Take Care of the Nickels

"Careful saving and careful spending incareful saving and careful spending invariably promote success," says Marshall Field. "It is not what a man earns, but what he saves, that makes him rich. John Jacob Astor once said that the saving of his first \$1,000 cost him the hardest struggle. As a rule, people do not know how to save. The average young man of today when he begins to earn is inclined to when he begins to earn is inclined to habits of extravagance. He gets the idea that he must indulge in habits corresponding to those of some other young man, without regard to what he earns; and he imagines he cannot be manly without. The imagines he cannot be manly without. The 5, 10 or 15 cents a day he squanders, while apparently a trifle, would if saved in a few years amount to thousands of dollars; and go far toward establishing the foundation of his future career. Too few realize that in order to acquire dollars one must take care of the nickels. The young man should begin to save the moment he begins to earn be the saving ever so little and to earn, be the saving ever so little, and if he does so the habit will be of incalculable benefit to him in after life."—Frank Carpenter, in the Record-Herald.

#### Down Brownlow Hill

(Continued from page 114.)

That was the prize! Miss Turner told us the committee would have a place on the the committee would have a place on the programme for the best essay from the Grammar School and that the writer could read it. What a prize to win! Just realize what it means sitting upon the platform with all those notables, and the big supper afterward! Um! I wouldn't miss it for anything; it was an opportunity of a lifetime, so I set to work, for Joe Welch does say one true thing, 'If there's anything worth having, it is worth working for.' Halloa! Here comes a mob!"

At least a dozen lads came tearing into the yard and seeing Tom at the window.

one shouted:

"Hi there, Tom, get your sled; we're all going over to Brownlow hill. Come on!"

"Won't you clear the walks before you go off consting, Tom?" said Tom's mother as the boy went to the door.

"Hold on just a minute, boys." Tom stelled. "Jimmie is here, too. We'll be right out. Mother," he said, as he again

O, it was glorious sport!
Old Brownlow was like ice, and the fields beyond its slope were in prime condition, making the coast one of the longest the boys had ever known.

The fun was fast and furious and the morning wore quickly on.
There was double runner racing and single sled contests till it would seem a boy could not ask for more, and yet Tom Perkins was not satisfied. He was ill at ease, for who can be truly happy with a guity conscience, and Tom knew he was acting contrary to his mother's wishes.

"Say, boys, did any of you see that pungual under the shed at the mill, when we passed?"

"What of it?" asked Ned Young.

"It will, mother, honest. Here they come, let them in please "
The boisterous shouts ceased at the gate and quictly the group of schoolboys entered the sitting room where Tom Perkins was pillowed upon the lounge before the

"What of it?" asked Ned Young.
"Just this," Tom replied. "The mill is closed so why not borrow the pung, drag it to the top of Brownlow, and then ail get on. Catch on, do you? That would be coasting, eh? The whole crowd of us together! We'll the the Cartery we'll the the coasting.

It sounds all right." said Dick Metcalf quietly. But if you should hit the—"
"Oh, bother, I won't hit that rock, I tell
you. Pile on boys, those not afraid," called

you. Pile on boys, those not afraid," called Tom, as he placed his sled between the thills and seating himself, firmly grasped them in either hand.

"All ready—push, Ralph!" he shouted.

Every one of the boys scrambled upon the pung and Wintersvale gave it the needed start.

Away it speeded down the long steep incline, each moment adding to its terrific flight and as well, to the wild shouts of loy! A hundred eager young Indians in war paint could scarcely equal such yells! On, on, they speeded, and as they neared the gate which was the entrance to the fields, with cool head and steady hand. Tom steered for the space between the two posts.

Whiz!
"Hurrah!"
They cleared the gate!
"Bravo, Tom, bravo!"
Crash!
It was the work of an instant. The gate was but a few rods beyond the fork along the turnpike road, and where this left the road which skirted the river, was a large loulder and narrow indeed was the space actween it and the fence.
Tom had tugged hard and strong on the right thill, but the pung was slow in retip nding, then came the crash!
A few inches and all would have been well. Indeed so nearly had he come to escaping mishap that the left runner of the pung cleared the rock, and it was only a protruding corner of the platform that struck. Yet, this was enough to send the platform high into the air. The transient bolt pulled out, and thills, runners. Tom and his sled swung vlolently around the roadway and plunged heavily upon the ice ten feet below!
Crash, crash!
Even thicker must be the ice that could stand such a shock.
"Help! Help!"
It was a terrified cry, then all was still.
"Where's Tom?" shouted Dick.

"Help! Help!"
It was a terrified cry, then all was still.
"Where's Tom?" shouted Dick.
"Where's Tom?" echoed Ned.
The boys had been hurled with great force from the platform and although there were many bruises and scratches, wild shouts of laughter rang out as they scrambled to their feet.
"Where's Tom!" called Joe above the uproar.

roar.
"Help!"

For one moment each face lost its rully

"The river. Quickly, boys!" shouted Ned Young, leading the way across the read and all reached the stone wall in time to

and all reached the stone wall in time to see their schoolmate disappear beneath a small area of broken ice.

"To the rescue!" shouted Ned Young. "Hang and drop, we've got to do it!" "Than running farther along the wall, he dropped upon his knees and throwing all his weight upon his open hands, he swung over and then lowering himself gently he let go, and struck the ice squarely on his feet.

His companions followed his lead. "Quick, boys, make a lifeline! All in a row, the light end first, everybody's left hand in the next fellow's right. Line up!"

"Me, too!"

It was Jimmie Saunders who called from

"Me, too!"

It was Jimmie Saunders who called from the wall. He had coasted down the south side, the pung having started before he had climbed old Brownlow.

"Cot your sled?" called Ned.

"Right here!" answered Jimmle, dropping it stern first over the wall and the next moment he was with the boys.

"You're the lightest, Jimmle, sit on it. We'll push it back to the open, then you grab Tom and hang to him! We'll do the rest. Dare you?" Ned asked swiftly.

"I dare!" said the plucky little fellow. It was all over in the twinkling of an eye.

eye.

The light end of the "life-line" held the

rope of the sled to which Jimmie clung with his left hand, while his right seized and gripped Tom's collar firmly.
"Steady now-pull!" shouted Ned. and step by step the life-line moved to the right and slowly the limp form came upon the solid ice.

the solid ice.
"He's dead!" wailed one of the younger boys.

"Not if I know it!" answered Ned. "Stay "Not if I know it!" answered Ned. "Stry on your sled, Jimmle. We'll lay him on his stomach across your lap and two of us will trot him over to Centerville. The hospital is the place for him. Come, Joe," he called and face downward, these two placed the prostrate form as Ned had suggested and it was they who caught up the rope and started swiftly away on that life or death mission. mission.

tered the sitting room where Tom Perkins was pillowed upon the lounge before the open grate, and on all sides the greeting was most cordial.

"We missed you at school today, Tom!" exclaimed Dick Metcalf heartily, "and we're all glad to hear you'll be back with us in a few days and that's honest Indian! Joe read your essay at the big meeting last night, and everyone said it was the best

get on. Catch on, do you? That would be consting, eh? The whole crowd of us together! We'll take the South side, go through the turnpike gate and skim along the river road as far as we can go. Who says aye, first?"

There was a grand chorus, all voices calling "aye" and although it was actual labor bill, what of that! Wasn't it play?

"I will steer." said Ned Young. "I'm the biggest and weight counts."

"No you don't, I will," said Tom. "You nor no other fellow can steer like me. I'll sit on my own sled between the thills and have one in each hand. How's that?"

"But hold on!" called Joe Welch. "How about the big rock at the turnpike! Steering a pung clear of that will be different than steering a sled or double runner, and just there is where Ned's weight would count. Tom, you'd better let him steer."

"Huh, You've always got a kick coming, Joe," said Tom, sneeringly. "I wasn't born last year nor the year before, either, I'll make the gate all right, then swing in and keep to the fence till we reach the road. How's that!"

"It sounds all right," said Dick Metcalf quietly. But if you should bit the side of the sounds and the force in the force

## Washington and the Flag

"Once, ah once, within these walls, One whom memory oft recalls, The Father of his Country dwelt. And yonder meadows broad and damp, The fires of the besieging camp Encircled with a burning belt. Up and down these echoing stairs, Heavy with the weight of cares, Sounded his majestic tread; Yes, within this very room Yes, within this very room Sat he in those hours of gloom. Weary both in heart and head."

Longfellow wrote these lines in commemoration of the time when Washington was once an occupant of the house in which

once an occupant of the house in which Longfellow himself once lived for so many years and in which he died.

Washington left Philadelphia on the twenty-first of June in the year 1775. He was accompanied by General Lee and General Schuyler, and he was on his way to Cambridge in Massachusetts to take command of the American Army. We are told that General Washington presented a very commanding appearance as he left Philadelphia in an open carriage drawn by a span of snow-white horses.

Philadelphia in an open carriage drawn by a span of snow-white horses.

The Philadelphia Light Horse also acted as escort to Washington. The cavalcadewas everywhere greeted with shouts and cheers, to which the General responded in a very dignified way. He reached Cambridge on the third of July and took charge of the American Army under an cim tree, still standing and pointed out to visitors to the town as the "Washington Elm." The American Army numbered about fifteen thousand at this time.

Washington made his headquarters for a

Washington made his herdquarters for a short time on the campus of Harvard College in a house still standing and known as Wadsworth House, From here Washington removed to the house now so familiary the standard of the house now so familiary that the standard of the stan ous as the Longfellow House because it was for so many years the home of the gentle poet and it was here that he died.

The memory of Washington was very saved to Longfellow and he often made cred to Longfellow red to Longfellow, and he often made eference to the Father of his Country in his poems.

Those were busy and anxious days for Those were busy and anxious days for Washington. Indeed, they were stirring days for every patriot. The people realized that there was to be a real struggle for American independence, and they were determined that that independence should determined that independence should be theirs. The red ensign of the king was flaunted in their faces and the British troops were daily growing more insolent. Washington said of his own troops that they were a "mixed multitude of people, under very little discipline."

This was very displeasing to a "born soldier" like Washington, and his first duty was to bring order and discipline into a somewhat chaotic war camp. That he suc-

This was very displeasing to a "horn printed Many ama cup printers when the state of the state o

This flag was of thirteen stripes, alternate red and white, and was supposed to be emblematic of the union of the thirteen colonies, but the Union Jack was still on it in recognition of the sovereignty of England. land, for the people were still unprepared to break absolutely away from the mother country, and the retention of the Union Jack was perhaps a plea for a harmonious adjustment of the differences existing be-

tween the two countries.

The next day after Washington had flung The next day after Washington had flung this flug to the breeze a letter was received from the King in which he expressed such kindly and even tender sentiments for his American subjects, that many were deceived by it and they rejoiced that the Union Jack had been retained on the new flug. Others, with "long heads," were not at all deceived by the King's honeyed words, and they resented the appearance of the Union Jack on the flug, declaring that it was a sign of continued submission to the King.

But this flug, unfurled by Washing-

sion to the King.

But this flag, unfurled by Washington on the second of January of the year 1776, continued to float by land and sea as the American emblem for a year and a half. Then came the time when it was utterly incongruous for an American flag to float the crosses of St. George and St. Andrew, and on the fourteenth of June of the year 1777 Congress ordered that the American flag should consist of thirteen alternate strines of red and white and that there be added to it thirteen stars on a white ground; and some one has told in rleasant rhymes of how Betsey Ross made this flag in Philadelphia—

"A woman sat in the silent room.

Lit by a candle's flickering flame.

Sewing on through the shadowy gloom.

While glorious thoughts with the stitches came.

A glow of crimson, a gleam of white, As the banner lay across her knee. The colors catching the candle's light. In their longing to fly to the breezes free.

Blue as the breadth of the boundless sea, Flecked with the blazing stars of night, Glad with the light of the sunshine free, It waved a promise blessed and bright."

#### Practical Points for Young Printers

Practical Points for Young Printers

A printing press as a gift has brought joy to many an American boy, and has likewise brought the problem of how to use it so as to get the best results. Very often a press fails to give satisfaction because the boy who is handling it is inexperienced. The rather condensed directions which accompany printing presses require to be supplemented, and it is hoped that the points treated in this article will enable the fortunate possessors of new presses to secure the most good out of them.

One of the first things is to unpack the press very carefully and put it together slowly, step by step, in accordance with the directions. If a new press does not give satisfactory service ten chances to one it has not been properly set up, and it will be profitable to have a man who understands machinery to take it apart and put it together, strictly following the original directions.

To print well it is necessary to have the form in compact and present and present and presents.

who understands machinery to take it apart and put it together, strictly following the original directions.

To print well it is necessary to have the form in compact and perfect shape. The form is the body of type, engravings, etc., imposed or set in the chase, which is the metal trame used to keep the type in position. To fit the forms into the chase, an imposing stone or table is needed. This may be an even marble slab or a planed board, and the surface must be absolutely smooth, if the face of the type is to be even enough to make a good impression. When the forms are in the chase the latter must be locked to prevent the type falling out. More difficulties beset the amateur printer on account of careless locking than from any other cause. The form must first be secured in the chase by using "furniture," which are pieces of wood of various lengths and breadths, of proper size to fill up the vacant spaces. Some chases are locked by screws, others by quoins or metal wedges furnished with the press. The keyn-ite to a successful locking of the form is to do the operation very gradually. Care must be taken not to lock too tight, and, of course, common sense warns against a chase so loosely locked that type fall out. The lines of type must, of course, be set evenly in the chase. This is called justifying, and if not done accurately the columns will all project a bit under each other, giving a lopsided effect when printed. Many ame eur printers wonder why some letters p.int very black and others are not seen on the pape. This is because the form is not planed. This important operation comes in just before the final tichtening turns are made in locking the chase, and is done by hammering down the type-faces with a planer, consisting of a har-twood block two inches thic't and a mallet. If the type is justified, and the surface even, a good impression is sure to result.

letting the cure project the sides.

The amateur printer is prone to use too much ink. A very small portion will suffice if it is evenly rolled. The use of too much ink turns out black and heavily-printed work and fills the interstices of the type with ink which dries and cakes, rendering it almost useless for the

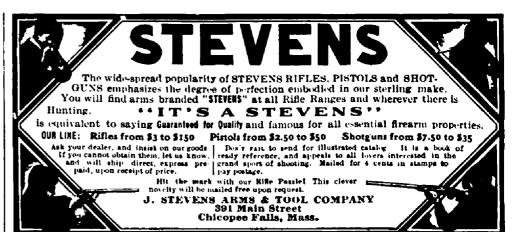

#### The Reviewer

A remarkable contrast is shown in the December. 1903, and November. 1904, issues of "The Flea." The paper is increased to double the original size and the printing of the latter issue is free from the "offset." and uneven registration of the earlier. The style of the November issue is very pleasing. Of course, there is considerable improvement from the literary standpoint. The paper is humorous in contents, which are all written by the editor, and pub-(Continued on page 126.)

#### Stamp Notes

Salvador, according to Whitefield Kings re-cently issued, has a stamp product of 450 varie-

The Scandinavian countries are a good field to specialize in, as nearly all these stamps can be bought for a small sum.

The total issue of St. Louis stamps to November 3, were as follows: 1c, 79,233,500; 2c, 191,ber 3. were as follows: 1c, 79,233,500; 2c, 191 298,500; 3c, 4,389,500; 5c, 6,674,300; 10c, 3,860,600.

The postal exhibit will not be returned to Washington, but will journey into the far northwest in attendance upon the Lewis and Clark

Since postage stamps were invented, 19,242 varieties have been issued, and the collection of them is one of the most fascinating and instructive of fads.

C. A.—A watermark kindly employed by the printers of British colonial stamps. It means "comes after" and shows the stamp to be of a later issue than C. C.

Owing to the dampness of the climate in Fiji it was recently discovered that all of the letterards on hand had become stuck together and had to be destroyed.

The portrait of Columbus has appeared on the stamps of Chile ever since this republic issue i stamps, but the new series now in preparation will contain other portraits.

In the future the stamps of Australia will be printed on A. Crown paper. It will be nearly a year before the paper can be put into use as it must be manufactured abroad.

The largest perforation known is the "Susse" perforation of France, 1853-60. The smallest is on the 1864-70 Tasmania. Neither perforation is official, both having been done privately.

Lithographed stamps differ from those that are engraved, in that they are smooth, the ink of the printing appearing level with the paper, as in the case of any surface printed stamps.

Since the boundary dispute between Chile and Argentine Republic has been settled, Chile sends all letters to the latter republic on the basis of inland rates, so long as the letters are sent by land.

The 1846 ten-cent stamp of Baltimore has brought as high as \$4,000. The St. Louis twenty. cent stamps issue! in 1845 are more valuable still. The last one to exchange hands brought a little over \$5,000.00.

To Remove Hinges -In

geria is prognosticated by those who read the signs in the stars. Whether this means the abo-lition of one set of stamps or the a dition of an entirely new one, time alone will tell.

A good stamp to watch for, but one which with likely sellom be found, is the recently discovered error, "Fignt" for eight in the current 81 stamps of South Australia. This is said to be a true error and not a case of faulty printing.

Many hinges attach themselves so firmly to the stamp that a quick pull upon them is liable to tear the stamp, or at least to bring away enough of its back to cause a "thin spot." In removing the hinge, draw it slowly, pulling it off sideways, and not down. It should be peeled off, not pulled off.

Early issues are best and most interesting Early issues are best and most interesting from the collector standpoint, for in old days the thought of securing revenue by the sale of stamps did not occur to the small governments of the world. Therefore the varieties which ap-pear in specimens which are found in fine con-dition are becoming increasingly rare and there-fore desirable. fore desirable.

The American Glass Stamp Mount, patented July 5th, 1904, by Massachusetts interests, has heen placed on the market. In different sizes. These mounts consist of two layers of glass, ingeniously fitted together, with enough space between to allow of easy incress and excess of the specimen. A stamp, fitted between the two layers of glass, assuredly is protected from fineers, dirt, and other enemies to good condition.

As the term signifies, remainders are the surplus atock left on hands of the postal authorities after the stamps have become obsolete. Genuine remainders are those which are actually issued for postal duty, but which are no longer required, having been superseded by new series of stamps. Some of the British colonies and

many foreign states have had, at times, large quantities of remainders. These they either sell to the highest bidder or destroy. Needless to say, with the less wealthy governments the former is the favorite method.

It is said by some philatelists, who are also photographers, that photography will detect the alteration when the cancellation of a stamp has been removed by a fakir. If the cancelling mark has been obliterated the blue or green color mark has been conterated the blue or green colorwill make no impression on the plate, while the black traces of obliteration can be seen with great distinctness. Even where the stamps have been well washed and no traces of obliteration can be seen by the naked eye or through the microscope, the photograph will show the tell-tale marks of use with perfect clearness.

There exists a curious postal regulation in France whereby letters addressed to the President of the Republic, to the Presidents of the Senate and Chamber and to the Prefect of Police are not required to be stamped. The Matin has taken advantage of this to organize a new system of petitioning in favor of penny postage. With every paper sold a post card is inclosed addressed to the President of the Chamber of Deputies. The readers are asked to sign it and drop it in the nearest post-box. The postal authorities are the only people who may not fully appreciate the beauties of a scheminvolving the collection and distribution of perhaps half a million cards.

Your others, face value. A coin so poor that you cannot make out the inscription is worthless. Russell C. Noble: Your rubblings are from common U, S. silver coins. Oral M. Hutto: An 1821 half-dollar sells for seventy-five cents at the dealers. The ordinary quarter and half-dollars of 1858 will bring no premium. Edw. McGowan: The 1877 dime is worth only face. Harrison J. Wolfe: The 1798 dollar, if in good condition, sells for about three dollars. It is one of the commonest of the old dollars. Neal R. Clark: The dime of 1874 was struck at three mints, Carson City, Philadelphia, and San Francisco. All are very common. Lynn Boyjan: Only the dime of 1884 issued at the San Francisco mint is valuable. The mint may be determined by the small letter very common. Lynn Boyjan: Only the dime of 1884 issued at the San Francisco mint is valuable. The mint may be determined by the small letter S on the reverse or back of the coln. Herbert is Knowles: The island of Antigua, one of the West India Islands, has issued but one coin, and that was a farthing in 1836. It wills for a half-dollar. Ed Volck: If your half-dollar of 1853 is the one without the arrow points by the date and without the rays around the eagle on the reverse, then it is a very rare piece. Your rubbing is not plain enough for us to decide this inatter positively. H. H. H.: Only the eagle cents of 1856 bring a premium worth mentioning. A good 1856 will sell for about ten dollars now. M. E. S.: The old Spanish sliver is very common, and unless it is in extra g od condition will not bring a premium. We suspect your piece to be a Mexican 8 reals issued under Charles IV. of Spain. Jarvis Wright: The twenty-cent pieces were only issued during the years 1875, 1876, 1877 and 1878. The last two years they were struck only in proof and they are the only dates that will bring a premium. F. W. Jones: A sixpence of Elizabeth (England) dated 1574 is worth a deliver and 1878. period one from a stamp, do not give it a sudpence of Elizabeth (England) dated 1574 is worth den pull. Many a good specimen has been torn by so doing, and it need hardly be remarked that a tear decreases value enormously.

The consolidation of Lagos and Southern Niggria is prognosticated by those who read the girls in the stars. Whether this means the abo. The explicit details of these Perry Marks: The earliest dated coins dated after the Christian Era were issued about the middle of the afteenth century. Harold Briggs: The coinage of the gold dollar ceased in this country in 1889. They were issued in large numbers most of the years they were issued, and while very many have been utilized by the jewelers, and in the arts, the prices maintained today must be base! more upon sentiment than reality.

#### Coin Zoology

Pex B. Floyd is collecting stamps from an animal standpoint. He calls it his zoological collection, and is trying to get one of each kind of animals as represented on the stamps, and he asks if such a collection could be made of coins. Of course, and a very interesting line it would make extending from the tortoise of Aegina, 700 B. C., down to the eagle of our day. Now we are going to ask our boys to help us make out a list of the lower animals to be found on coins. Give us the names of the animals and on the coins of what countries they may be found. For the best list we will present a Judean mite similar to the one the widow cast into the treasury so many, many years ago. Besides this we are going to ask you to send us in a brief concise answer to the question. "What advantages are to be derived from the collecting or study of coins?" swer to the question. "What advantages are to be derived from the collecting or study of coins?" For the best answer to this question we shall be glad to present a large Egyptian coin struck by Ptolemy III., 247-222 B. C. This coin will weigh about two ounces and a half. Thus we will give as premiums one of the smallest and one of the largest coins of antiquity. We want these answers in our hands by April 1st. and will ask you to send them to Coin Editor, care of The American Roy. Detrot. Mich. American Boy, Detro.t, Mich.

SECOND PRIZE PROTO; "WINTER IN A NORTHERN NEW YORK TOWN" By E. E. Trumbull, Plattaburg, N. Y.

#### Winter Photography

Winter Photography

At this season of the year camera-work is practically confined to indoor flashlights and snow scenes. For interiors, that is to say taking pictures of rooms, flashlight photography is very satisfactory, but it is not adapted to portrafture, a purpose for which it is of in used. The so-called flashlight cartridges are very convenient, but care must be taken not to burn one's fingers in handling them. In illuminating rooms, it is better to light them from the top, that is to set off the flashlight on top of a stepladder, out of range of the camera.

For photographing snow scenes, use a slow plate and a small stop. Avoid photographing a perfectly smooth surface, as it does not look well. A picturesque roadway would be preferable. If necessary, walk around in the snow in front of the camera. The best time to take a view is in the afternoon or evening, when the shadows are long. Do not attempt to include too much. In order to produce the soft effects that are most satisfactory, employ a weak developer and carry development farther than usual.—The Editor.

#### The Art of Retouching

SECOND. The contrast between the pictures SECOND. The contrast between the pictures could not possibly be greater, the one having been taken in midsummer and the other when Plattsburg. N. Y., was snowbound. Both possess artistic as well as technical merits and our readers will do well to study them. The first-prize photograph was taken on a very bright day, on an Eastman plate, stop 64, exposure 1 second.

#### The Letter-Box

R. J. Wagner, Fostoria, O.-It would do no R. J. Wagner, Fostoria, O.—It would do no harm to try it, out I have my doubts as regards success. Better make new exposures, repositive. E. A. Stifel, Pittsburg, Pa.—I. Kind of plate employed, length of exposure, number of stop, name of developer and variety of pape; 2. The Photo-Era, Boston, \$2.50 a year; The Photographic Times, New York, \$1 per annum; both are monthlies, M. H. Potter. Newark, N. J.—We are pleased to learn that you are greatly interested in this department and that you propose to favor us with a picture of a cat's paw having two extra toes.

#### Honorable Mention

The December issue of The Practical Photographer (Boston Photo-Era Publishing Co.) is exclusively devoted to the retouching of the negative and will, therefore, prove of great interest to professional photographers and advanced amateurs. It contains many artistic and useful illustrations.

Our Prize Pictures

Our Prize Pictures

The lucky prize winners this month are: H. D. Lippincott, FIRST, and E. E. Trumbull,

#### Current Comments

Current Comments

Eugene Walker, Lawnsdale, Hamilton, Bermuda.—Your "Street in Bermuda" is intercesting, but too indistinct. Apparently it is out of focus. Try again. John L. Hopper, Highland, N. Y.—Your photograph of a bird would be excellent, if it, too, were not out of focus. Morgan Calhoun, Madison, Fla.—Your name was included among those entitled to honorable mention on account of "The Thresher" and photograph of a group, but your work is very unequal; some of your photographs are badly toned and poorly mounted. E. D. Mitchell, Sidney, Ia.—"Replenishing Polly's Wardrobe" lacks definition and has too much contrast; if it had been taken in the shade and a longer exposure had been given the result would be more satisfactory. Ivan Kirlin, Watertown, S. D.—Your photo is undertoned. E. Losterin, Racine, Wis.—Your "Lake Mich. Light House" is flat, which appears to be due to lack of density. W. Kittleberger, Detroit.—Leave your plates in the developer longer and note result. G. L. Hurrington, Langdon, Minn.—Apparently your print failed in the toning-bath and should have been taken out sooner. L. A. Case, Carbon la c, Pa.—"The Cascades" is undertoned. C. Richards. Benton Harbor, Mich.—Your photograph is real good, but too large a subject for so small a plate. H. Warne, Bellevue, Pa.—Cyko print seems to have been slightly underexposed. Try aguin and send us another print. D. Thomas, Jr., Reading, Pa.—Too much contrast; whites are chalky. Harry Stouts, Adrian, Mich.—Print remained too long in toning-bath and was completely ruined in mounting.

#### Useful Hints

To fix a graduate, the bottom of which was broken off, I procured a collar to a lamp, inserted the broken and of the graduate into the small opening of the collar, turned it upside down and filled the collar with plaster of Paris. After it had set, my graduate was as useful

as ever.
I develop my plates with Eikonogen and Hy-drequinone, and this is the way I make my developer:

#### Water ... 8 ounces. Eikonogen ... 4 ounce Hydroquinone ... 4 ounce.

No. 2. Carbonate of potash..... 

#### A SIMPLE PASTE RECIPE.

Gurney.

Take as much water as paste is needed, stir in any good starch until it is creamy, not too thick, and place it over a fire. Stir constantly until it begins to thicken, but not boil, then remove and stir until a nice smooth white paste is obtained. Squeeze through a cloth and it is ready for use. Let it cool before straining.

#### The "Good Old Boys' Paper"

Osmond, Nebr., December 3, 1904.
I enclose \$1.00 for that good old boys' paper for another year. I earned my money for THE AMERICAN BOY by buying old rubber and metal and shipping it away to LeMars. Ia. Wishing good luck to THE AMERICAN BOY, I am, Yours very truly—Joe W. Leedom.

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be pain for each photograph that may be used, the prize photographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the picture.

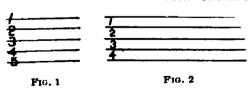

PIRST PRIZE PHOTO; "AT REST"

By H D. Lippincott, 4926 Wakefield Street, Germantown, Pa.

## How to Play the Mandolin

The first thing is to understand the notes. The first thing is to understand the notes. A staff is composed of five lines (Fig. 1) and four spaces (Fig. 2). Fig. 3 is called the treble cief, the only one used in mindolin playing. A note corresponds to each line and to each space. The notes on the lines are e, g, b, d, f (Fig. 4). E is on the first line, g on the second, b on the third, d on the fourth and f on the fifth. The notes on the spaces are f, a, c, e (Fig. 5). There are different kinds of notes. The whole note is an open note without a stem. 5). There are different kinds of notes. The whole note is an open note without a stem, as in Fig. 6. It gets four counts. The half

note (Fig. 7) is an open note with a stem. It gets two counts. The quarter note, a black note with a stem (Fig. 8), gets one count. So much for the notes.

We will now take the mandolin. There are eight strings on this instrument, namely, two g's, two d's, two a's, and two e's. The coarsest wound strings are g's and d's, the finer a—and the very fine strings, e.

Seating yourself on a chair, cross the right leg over the left, so as to rest the mandolin on the lap; hold the neck of man-

mandolin on the lap; hold the neck of man-

dolin with the left hand, between the thumb and first joint of the first finger.

The mandolin pick is held with the right hand, between the first finger and thumb. Bending the first finger, lay the pick on and clasp it with the thumb. The other fingers being nicely curved; rest your arm on the lower end of mandolin. Now with your pick, begin to stroke the strings, beginning with the gentings, a quick stroke. ginning with the g strings, a quick stroke,-

#### TAUGHT IN EIGHT LESSONS By LILLIAN STANDIFORD

not let the pick sound the two strings separately, but give one quick stroke so that they sound as one, down and up strokes alternately. Then play 8 g/s, down and up strokes, 8 d/s, 8 a/s and 8 e/s.

Play it over and over until you make the strokes with case. Then practice the following exercise on the open strings (open strings because no fingers are used to hold them down). Try to keep the eves on the music; not looking on the instrument any more than necessary; do not memorize, but

F10 7

keep your eyes on the music if you wish to become a fast reader.

Notice the first note in the music is g; it is always three spaces below the staff. There are four g's, down and up stroke. The second measure has four d's. The d string is the first space below the staff. The next measure has four a's. The a string is the second space of the staff. The next measure has four e's. The e string is on the fourth space of the staff. Practice until you learn how to skip from one string to the other with ease.

#### Mackintosh's Toffee the Pure and Delicious OLD ENGLISH CANDY

The enormous sales of my Toffee in this country and in England (the home of Mackintosh's Toffee) have made little great international candy. It is shedutely pure and wholesome, and the best candy ever made for children. I want to caution you arainst inferior initiation of my Toffee. Be sure that yougethheoriginal "Mackintosh's Toffee." Ask your dealer, and if he cannot supply you send me Tent Cents in stamps for a sample package; or \$1.50 for a 4-1b Family Tin. Try your dealer, for

## The Boy Mechanic and Electrician Electric NOVELTIES AND SUPPLIES II II's Electric We have it.

A Permanent Department

Questions relating to Mechanics and Electricity will, so far as space permits and where asked by boys, be answered in these columns

Edited by Robt. G. Griswold

"Is that so? Well, I'm very giad that you had so little difficulty. And now i suppose you are ready for the other parts."
"Indeed we are, and we came in to see if you could spare enough time this morning to show us how to build them."
"Why certainly; let me see, it is the sending key that you want now, isn't it?"
"Yes, and the coherer, and relay and sounder."
"Well, I will make you a material."

sounder."
"Well, I will make you a perspective sketch showing the arrangement of the instruments on the base board of the coll, and then draw the connections in with dotted lines, showing how the wires lead underneath the base.

"The key is easily made. Cut a strip out of 1.2" inch hard briggs head it to the obstance.

"The key is easily made. Cut a strip out of 1-32 inch hard brass, bend it to the shape I have indicated here, and drill a couple of holes in one end for the holding-down scrows, and one hole in the smaller end to fasten the knob on by a small screw, Make this knob out of some hard wood. Solder the connecting wire to the large end and allow it to pass down through a hole in the base. Then put in a screw directly underneath the knob and clamp the other connecting wire under its head. File off the top of this screw, which should be brass, until the key strikes it on a flat surface and not a small point. The key should not lift off the screw head when the pressure lift off the screw head when the pressure of the finger is relieved, more than a sixteenth of an inch."

Adjust the screw so that when a current is sent through the coil and vibrator, connect-

Adjust the screw so that when a current is sent through the coil and vibrator, connected as shown, the armature will tap the glass tube at every vibration.

"And now for the relay. I would like to have you make an electrolytic detector, but they are very hard to adjust and keep in good condition, and you will understand this one piore readily. It is extremely sentitive and quite easily made. Make the magnet of a piece of one-fourth inch round iron, annealed as I told you to do the core of the coil; bend it into a 'U' about one-and-a-half inches long and of the same width. Insulate the legs with paper as in the case of the vibrator magnet, and wrap e.c. with fifty layers of No. 30 single covered cotton magnet wire, making each coil about one-and-one-eighth inches long. It will be well to make small flanges to wind between; cut them out of heavy pasteboard, drill a hole slightly smaller than the core and force them on, giving each a coat of shellac afterwards and allowing them to dry thoroughly. They will then be very hard and will hold the wire at the ends nleely. The wire on these magnets will have to be wound on by hand, unless you want to go to the trouble of making separate pole pieces and a yoke, Try to have the same amount of wire on each spool.

"The armature of this relay oscillates and is mounted on a small steel shaft, sharneed to a sharn point at each ord."

With the tension of this relay oscillates and is mounted on a small steel shaft, sharneed to a sharn point at each ord.

I a bounder are connected so that they take urrent from the same wires. Do not compass through one before going to the other or you will have the sounder beating time to make an audible click. "You will nate the turner will have to pass through one before going to the other or you will have the sounder beating time.

The armature of this relay oscillates and is mounted on a small steel shaft, sharneed to a sharn point at each ord.

The armature of this relay oscillates and is mounted on a small steel shaft, sharneed to a sharn p of the finger is relieved, more than a sixtienth of an inch."

"What size of wire shall we use for the
connecting wires underneath the base, Uncle?"

"I think about No. 16 or 18 bell wire will
he large enough and it is pretty well insulated."

will have to be wound on by hand, unless
you want to go to the trouble of making
separate pole pieces and a yoke. Try to
have the same amount of wire on each
spool.

"The armature of this relay oscillates
and is mounted on a small steel shaft,
sharpened to a sharp point at each end.

How Two Boys Built a Wire

Ry ROBERT G. GRINWOLD

CHAPTER 11.

NCLE HENRY, we have finished they came into the study a few days later, "and they work arm at they work arm at they work and so little difficulty. And now i suppose you are ready for the other parts."

"Indeed we are, and we came in to see if you could spare enough time this morn
"Indeed we are, and we came in to see if you could spare enough time this morn
District Time And Time Indeed we are, and we came in the see of the parts and the latter should be so placed the magnet, or poses, in the directions, just as I have shown in approach the class of the magnet, or poses, in the should approach the class of the magnet, or poses, in the simply another vibrator like that on the coil, only it is intended to tap the glass tube placed over it with a quick succession of shocks so as to shake the filings loose from one another. The adjusting series in sticking to the poles with a thin coat with a quick succession of shocks so as to shake the filings loose from one another. The movement of the armature should be very single at the coils. The movement of the poles with a thin coat will persist in sticking to the poles will persist in sticking to the poles with a thin coat will persist in sticking to the poles will persist in stick the circuit is broken in the coherer, consequently breaking the circuit for the tapper and sounder. These are then ready for the next signal. The tension of this spring may be adjusted by turning the screw with

or you will have the sounder beating time

the coil on a separate circuit also because that requires a much heavier current than the receiving instruments.

current than the receiving instruments. "You are now ready to connect up your stations. Both of you climb two tall trees and stretch a wire between them to support your aerial wire. Before drawing the wire taut, hang your aerial wire to it by a series of insulators. These are the little white ones used in putting up electric lights and you can get three or four from any electrician. I have shown you in this sketch how to thread them. The aerial wire needs very good insulation. You could sketch how to thread them. The aerial wire needs very good insulation. You could improve the sending and receiving qualities of your stations by hanging three or four wires in this manner and connecting them at the lower end where they enter the house. Be sure that they do not touch anything where they pass through the wall, except the insulating tube which should be of either glass or percelain, such as is used

rooms in different parts of the house to try them out and adjust before setting up so far apart. Just hang a small wire from the ceiling by a pin and silk thread to act (Continued on page 126.)

with the tapper,
"I have marked the binding screws so that you can easily tell how to make the connections to the batteries.

You could use one battery for both the relay and the tapper, but I think you will get better results with them on different circuits. I have put the could on a way way and the could be connected to the country of the could be connected to the country of the country of the connected to the connected to the country of the connected to the connecte

except the insulating tube which should be of either glass or porcelain, such as is used for electric light wiring.

"To the inside terminal of the aerial wire, attach the little spring clip that I have shown attached to one of the terminals of the coherer. It is slipped over this clip when you are receiving, and slipped over one terminal of the coil when you are sending. The other coil terminal is connected with a grounded wire, that is, a wire nected with a grounded wire, that is, a that is buried in the earth outside house. The binding screw man soldered to the adjustable clip, while the house. marked

whow to make the instruments of connect them up.

Now you need a coherer. The coherer the little instrument that detects the issage-wave as it strikes the aerial wire, one civing instruments may be operated. It is calling this the 'message-wave' so that is composed of some very fine in I speak of the impulses received by elevated wire outside. This little insument is composed of some very fine the little filings, enclosed in a glass tube tween the ends of two metal rods. The islatince of these filings, in their normal its conormously high, but after that little insument is sent down through them from a perial wire, they immediately drop in the resistance to a point which will allow for current to pass freely. But once this meetion has been established, it will resistance, the high resistance.

You can get two mall pieces of glass bear and with a 14-inch hole through them. "Now you need a coherer. The coherer is the little instrument that detects the message-wave as it strikes the aerial wire, and forms a connection through which the receiving instruments may be operated. I am calling this the 'message-wave' so that you can better understand what I refer to when I speak of the impulses received by the elevated wire outside. This little instrument is composed of some very fine metallic filings, enclosed in a glass tube between the ends of two metal rods. The resistance of these filings, in their normal state, to the passage of an electric current is enormously high, but after that little current is sent down through them from the aerial wire, they immediately drop in their resistance to a point which will allow the current to pass freely. But once this connection has been established, it will remain so unless the tube is tapped and the filings scattered, when they will again present the high resistance.

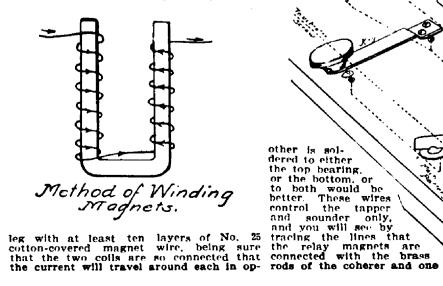

main so miness the tube is tapped and the fillings scattered, when they will again present the high resistance.

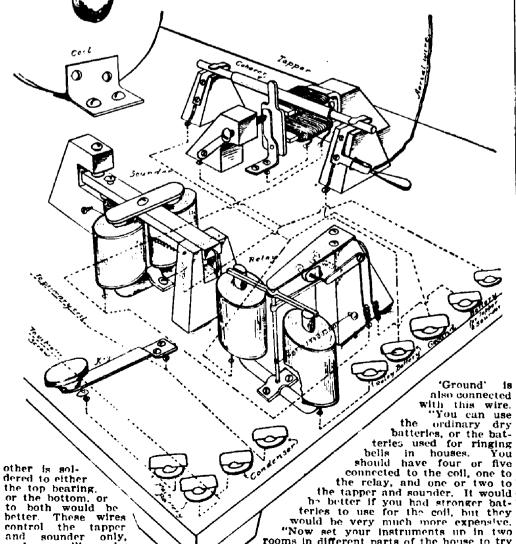

"You can get two mall pieces of glass tubler from the druggist, about two inches long and with a 4-inch hole through them. Then get four pieces of brass wire that will just fit the bore of the tubes snugly, and file off the ends perfectly square; these wires should be about two inches long. Go to some electrical store and get a small piece of nickel wire, and also a small piece of silver wire. Then with a fine file make some fillings of these two metals and mix them in the proportion of one part silver to three parts nickel. The wires are now ready to be placed in the glass tube; push one into place and from the open end of the tube introduce a very small quantity of the mixture of fillings. Then push the other wire in until it leaves a space of about 1-32 of an inch. This space should not be more than half full of the filings, otherwise they will pack and cannot be shaken loose.

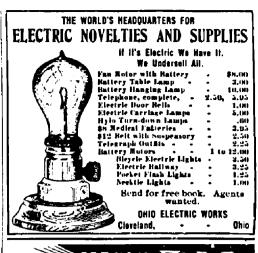

"Now make two little pedestals like I

shaken loose.

"Now make two little pedestals like I have shown here and fasten to the baseboard. To the top of each secure the little clamps made of spring briass, into which the coherer may be slipped and a good contact secured. One of these clips has an extension for attaching the aerial to when receiving. Then make an electro-magnet by bending a piece of 1/2 inch flat soft iron into a 'I'' about one-and-a-quarter inches long and three-quarters of an inch between the legs, the strip of iron being one-half an inch in width. Drill a hole in the back so that it may be fastened to the support by a screw. Wrap some writing poper around the legs and secure it with a coat of shellac. When dry wrap each shaken loose. "Now mak

#### CLEVER WORK WITH THE POCKET KNIFE JOHN L. DOUGHENY

No. 7—The Life Buoy and Anchor

N choosing subjects for the first part of this series I have carefully eliminated designs of a complicated character. The purpose of these articles is to teach those fundamental principles common to all problematical whittling feats. The "chain idea" has been used frequently, for the benefit of new and inapt readers and to illustrate its numerous different applications. It is by far the most important. ers and to illustrate its numerous different applications. It is by far the most important principle for the amateur to master. Those who have followed the articles from number one should understand it by this time and be able to design work involving its application. This month's plan will make it plain to the beginner. For want of a better name we call it "The Life Buoy and Anchor." As usual the-material recommended is any soft, easy to cut wood that happens to be handy. We start work on a block six inches long, six inches wide and one inch thick. Find the center of the piece and draw a circle just inside the outer edges (which will be a little less than six inches in diameter). From the same center inscribe another circle, whose radius falls short of touching the circumference of the first by three-

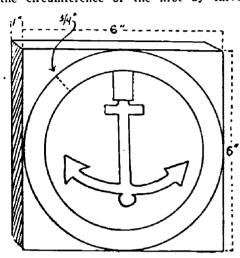

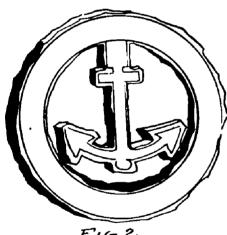

FIG. 2.

quarters of an inch. These two concentric circles constitute the diagram for the life buoy. The anchor is suspended from it at the center of the top, so before going any further we will decide on its size and position. A ship's anchor is usuany larger than a buoy but in this case we will forget conventionality and make the anchor the smaller. If any one sneers at the proportion, tell them the anchor is for a rowboat and the life buoy for the giant Goliath. Draw the anchor inside the smaller circle, taking care to allow space for the ring (which is not part of the anchor), at the top, and to leave ample room for knifeplay between the arrow-shaped ends and the inside of the buoy. Fig. 1 shows how the block is marked. Exercise great care quarters of an inch. These two concentric

F162.

in this part of the work and the work on the balance will be comparatively easy. In cutting out the portions marked it is well to keep a little distance from the lines. There is time to do the finishing later on and a wrong cut at this stage will spoil the whole job. There are several different ways of taking out the waste material. One good method is to bore several holes and connect them with lines; then take out the intervening piece by sawing. A good sharp knife is sufficient tools to do the work with. Much depends on the grain of the wood you are using; the best way of getting at it will no doubt suggest itself. Fig. 2 shows the block after the first cutting is

FIG. 4.

locked rings that will swing freely and still be inseparable. This is the so-called "chain principle." The body of the piece is one-half inch square; its length is three-quar-ters of an inch. Draw two parallel lines, from top to bottom (one inch) on the center of each of the four sides. Cut away the margin outside of each line, to a depth of one-eighth of an inch. The piece is now margin outside of each line, to a depth of one-eighth of an inch. The piece is now shaped like an elongated cross. Divide it into two parts overlapping each other halfway. Fig. 2 is a picture of the parts we are working on removed from the rest. Part 1 shows how the piece is marked uppart 2 shows the margins cut away. Note that the edge of the top ring faces front while the edges of the bottom ring face right and left. In the case of an ordinary chain the links would be oval-shaped, that is longer one way than the other. In this case they are made perfectly round. Fig. 4 shows the way they are finished. Before making the final cut that loosens the ring it is well to finish the shaping of the others. The life buoy to look like the real article must be rounded off. Leave several cle must be rounded off. Leave several raised portions on the front to resemble straps. Shave off the sharp corners with

F16. 5.

a knife and smooth with a piece of broken glass. The anchor is finished in much the same manner. From point to point it measures about four inches, its length is about four and a half inches. The crossbar on the top is delicate and easily broken on account of its short grain. If, by any mischance you happen to break it, drill a small hole at that point with a gimlet and insert a piece of wood, which will look quite as well. When you have done all you can with the knife, give the whole thing a thorough sandpapering and dip into linseed oil. The oil will lessen the chances of warping or cracking. Fig. 5 is a picture of the complete design. It is a neat an impropriate ornament for a boy's room, but will not stand much handling. It is hung will not stand much handling. It is hung on the wall by means of a piece of narrow ribbon.

#### Helpful Exercises

The following exercises, given by Dr. Latson, in "Success," if carefully and perseveringly practiced, will uplift and expand the collapsed body, will restore to normal activity the cramped and unused muscles of respiration, and will inculcate a habit of normal breathing at all times.

Exercise No. 1.

Take a slow, full breath, at the same time raising the hands straight up above the head. Clasp the hands together, and stretch upward toward the ceiling. Then, still holding the breath, walk slowly up and down the room.

Exercise No. 2.

Inhale breath, at the same time raising the hands so that, when the lungs are full, the arms will be extended straight upward. Then, without holding, exhale the the breath, allowing the arms to sink slowly.

#### Exercise No. 3.

Place the hands at the waist. Sink the head upon the chest, and bend forward, at the same time inhaling a slow, full breath. Notice that the waist under the hands is expanded with inhaled air. Rise as you slowly exhale.

Exercise No. 4.

Stand easily, with the feet well apart. Now exhale the breath in a gentle sigh, and, at the same time, sink the body down to a crouching position, with the head bent forward and the finger tips lightly touching the floor. Then rise suddenly, stretching the body up to its full height, with the arms extended toward the ceiling. At the same time take a full breath. After a moment of firm stretching upward, exhale the breath easily, and sink back to the crouching nosition. back to the crouching position.

back to the crouching position.

Exercise No. 5.

Stand easily on both feet, with the head and chest up, and the arms hanging by the sides. Inhale a full breath through the nose, as slowly as possible. Then exhale, also as slowly and gently as you can, to the sound of 'sh' as in 'hush.''

These exercises are fundamental. The first straightens the spine and uplifts the chest, the walls of which are at the same time expanded and made more flexible. Then, also, the head is thrown backward, so that the chest walls are free to expand and contract. The second exercise does all this, and, in addition, teaches the exact movements of normal respiration. The third exercise develops the lower part of the lungs, the diaphragm, and the waist muscles. The fourth movement develops the lungs and every important muscle in the body, and adds to the working efficiency of every organ. The fifth is an exercise especially adapted to the development of the voice in speaking and singing, also to resting the body when fatigued.

#### Daddy and Me

My dad he often looks at me My dad he often looks at me And says how very glad he'd be If he could only be a boy. I guess that it's so long ago Since he was one, he doesn't know That being boys ain't so much joy.

Now you just bet, I'd be real glad. To be grown up as big as dad, And have a beard and never do A thing 'less I just wanted to.

Mention The American Boy When Answering Advertisements

The foregoing illustration is of a duck-boat, built from a set of Brooks Boat Mnfg. Co. patterns by an eleven-year-old boy. Master Albert Arnold, residing at 1400 11th street. Bay City, Mich. Master Arnold built the boat without any assistance or instructions other than those given with the patterns. He had the lumber properly dressed according to the bill and worked four days building the boat. We think this a pretty good showing. Arnold and his boy friends used the boat all summer, and it is tight and serviceable, comparing favorably with any of the boats of this class. He has since added a small sall and although he experiences difficulty in working to windward, the boat sails well with the wind free. Arnold now intends to get to work on a larger boat. He has earned almost enough money to buy the patterns and material. He says in a letter to us that almost any boy with ambition enough to stick at it can build a pretty rowboat if he wants to, and that his father says, if a boy has to earn the money to buy his patterns and material he will appreciate his boat all the more. Arnold has been a constant reader of THE AMER-ICAN BOY for several years, and his idea in writing us was that perhaps other boys would like to know how he was able to build and own his boat.

## The American Boy

Copyright, 1905, by The Sprague Publishing Company

#### THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postolice as Second-class Matter

The American Boy is an illustrated monthly paper of 32 pages. Its subscription price is \$1.00 a year, payable in advance. Foreign subscriptions, \$1.50, New Subscriptions can commence at any time during the year.

Payment for The American Boy when sent by mail, should be made in a Post-office Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter.

Silver sent through the mail is at sender's risk.

Expiration. The date opposite your name on your paper or wrapper shows to what time your subscription is paid.

what time your subscription is paid.

Important—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed. Subscribers can, by watching the expiration date on their address label, renew early and thus be sure of getting all the numbers as issued.

Letters should be addressed and drafts made payable to The Sprague Publishing Co., Majestic Building, Detroit, Mich.

WILLIAM C. SPRAGUE. President and Editor. GRIFFITH OGDEN ELLIS. Vice-President and Ass't Editor. Secretary and Treasurer. J. COTNER, Ja.,

#### Our Washington's Birthday Number

We feel proud of this number of THE AMERICAN BOY. And do you not think our pride is justifiable? There have been numbers of our paper that did not beg n to measure up to our ideals; this one is at least some approach to it. We submit to you boys the question, is there anywhere a better collection of boy literature in thirty-two pages that surpasses it in live interest, in educational value, in healthful inspiration? We submit to you fathers, mothers, teachers, employers, friends of boys the question, do you know of any influence that can come into a boy's life giving promise of more easily winning lift over to a love for good reading than is this paper? Honestly, now, have we not reason to be proud of this number of THE AMERICAN BOY? Can we improve on it? Yes, in many, many ways. Will we? Of course. You do not know us if you think we are content to rest satisfied with present attainments. We expect to kee, on growing and improving. Good as THE AMERICAN BOY is today, it is not as good as we intend to make it tomorrow.

#### How Two Boys Built a Wireless Telegraph

(Continued from page 124.)

as an aerial, connecting your ground wires to the water pipes, or gas pipes. Now see if you can get signals from one to the other by carefully adjusting the distance between the ends of the brass rods in the coherer, or perhaps changing the amount of filings between them. Everything depends upon the proper action of these filings.

"When you get them so that the roles."

pends upon the proper action of these filings.
"When you get them so that the relay will respond every time one of you makes a signal with his coil, then adjust the tapper so that it will shake the filings apart as soon as the relay closes the circuit. You will then have no trouble with the sounder as it works on the same circuit as the tapper. You will hardly need the sounder, in fact, since the buzz of the tapper will indicate the signals just as well, but if you wish to put the sounder clsewhere, you can take it off the base and mount it separately. An electric bell can be put in its place, or connected in the same manner from some other part of the house to be used as a call signal, the aerial wire clip being left connected to the coherer at all times while not sending; then either of you can call the other.

times while not sending; then either of you can call the other.

"And now for the alphabet. The alphabet used is the old Morse code, although there have been some changes made so that the dashes may be more easily transmitted. Unless one has an electrolytic detector, it is difficult to distinguish between mitted. Unless one has an electrolytic detector, it is difficult to distinguish between the short and long dashes. I will print for you, below this sketch, the Morse code as it is used by telegraphers. The dots are made by pressing the key down for just a short period, while the dashes are made by holding the key down for a longer period, the long dash being equal to two short dashes, and the short dash about twice as long as the dot. The spaces between the dots and dashes are about as long as the dots, and those between the letters about as long as the long dash.

"Now let me know when you have the

be great."
"Good bye, boys."

"Good bye, Uncle Henry."

#### Amateur Journalism Dept.

(Continued from page 121.)

(Continued from page 121.)

lisher. A specimen quip is "The printer and not the Editor made all the mistakes!" Don Otto Herald, Bloomfield, Ind., gets out "The Flea."—"The National Star" is a worthy beginning. We suggest the use of smaller type for the heading and for titles. Wm. Barton. Chicago, is the publisher.—"The Sport." published at Vacaville, Cal., by Burleigh Bashford, has the editor's own name misspelt, but is otherwise free from typographical errors. The impression on the inside pages is very even, and there is no reason for the poorer appearance of the front and back pages. A typographical treat is the only description which fits the beautifully printed Christmas issue of "The Lucky dog," which Tim Thrift, of 61 W. Roy street, Cleveland, has just malled.—An amateur paper, ated January, and received in November, is a rarity indeed. The distinction belongs to "The Pansy Magazine," published by Howard G. Brooks, of New Brunswick, N. J. The publisher has remarkably full advertising columns and this affords proof of what we have more than once asserted, namely, the enterprising amateur can make his paper self-supporting with advertising matter. "The Pansy Magazine" has a musical poem by L. M. Ayres, one of the leading amateur poets; a striking essay on "Pawn Shops," by Frank Bucksiew, local Y. M. C. A. secretary, and interesting miscellany and editorials. It has the admirable motto. "Watch the Pansy Grow," which it has lived up to during the past year, being now twice its original size.

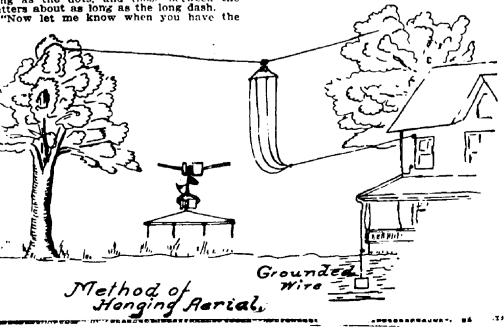

#### The Bulletin Board

The Bulletin Board

The Western Amateur Press Association held a successful and lively convention on Thanksgiving Day in Milwaukee. Ira E. Seymour, of Kansas City, Mo., was elected president. His home city was selected for next convention seat.—A second transcontinental tour is being taken close on the heels of that of President Lind, of the National A. P. A. Jas. F. Morton, Jr., an ex-president of the N. A. P. A., is delivering a series of literary and philosophical lectures throughout the country, and in each city is stirring up the amateurs.—J. W. Smith has resigned as official editor of the United and I. E. Seymour, a former president, now holds the office.—Thos. A. Edison, the great inventor, formerly published an amateur paper when he was a new shoy on the Grand Trunk R. R. The baggage car was his print shop, and he sold his little journal to the passengers.—The Blue Proci Club has been recently organized in New York City.—Lynn Pritchard, the 11-year-old editor of Grand Rapids, Mich., has discontinued "The News" after three years of publication.

#### The Question Box

John Hughes: 1. The price of 8-point body type is 52c per lb. 2. To ascertain amount of type required for a publication, divide the number of square inches of the desired page size by 4 and the quotient "ill be the number of lbs. required. About 25 per cent should be added to the weight for dead letters.—Fred L. Cowles: Several reliable printing-press manufacturers advertise in our columns. We believe that credit is given by some houses if good bank reference is furnished.—T. G. Meyer: There are three national amateur press associations. If you write enclosing stamp full information of the Inter-state will be sent you. The average yearly dues in each association is \$1.00.—

instruments finished and I will help you set them up."

"Oh, will you, Uncle Henry? That will be great."

"Good bye, boys."

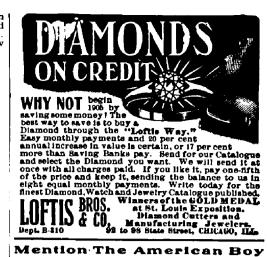

"A. Jest": The National Amateur Association will convene next July in Cleveland. The United will meet about the same time in Kansas City. The Inter-state will meet on Labor Day in New York City.

#### Courage

Be courageous! Do not falter
In the task you've set to do;
If the work seem hard and prosy,
All the future may be rosy
Yet for you.

If the game be worth the winning—Whether health or gold await—
If you're in the strife to win it,
Oh, improve each precious minute
Ere too late.

Be courageous! Ever hopeful
That there'll be a smoother way—
That your burden may be lighter,
And that time will bring a brighter, Sweeter day.

## YOU DON'T NEED A GUN JUJ

If you would know how to defend yourself, unarmed, against every form of violous attack and render helpless your assailant with an ease and rapidity which is astonishing-if you would possess that physical strength and power of of endurance which characterize the Japaness sold er-you must learn Jiu-Jitsu. Jiu-Jitsu is the most wonderful system of physical training and self-defense the world has ever known. Its practice develops every muscle, every tissue and strengthens every organ of the human body. It makes men "strong as steel," and women the physical equal of men of their own age and weight. As a means of self-defense, it is as potent at short range as the most deadly weapon. The Science includes a thorough knowledge of anatomy, and teaches how to produce temporary paralysis by a slight pressure exerted at one of the many vulnerable points. When once a person skilled in the art effects one of the Jiu-Jitsu "holds," it is utterly useless for an opponent to offer resistance. It makes no difference how unequally matched in point of size or strength the contestants may be, a knowledge of Jiu-Jitsu will enable a woman to overcome and render powerless the strongest man.

#### JIU-JITSU SUCCESSFULLY TAUCHT BY MAIL

For over 2000 years the principles of Jiu-Jitsu have been religiously guarded. By an Imperial edict the teaching of the system was forbidden outside of Japan. The friendly feeling, however, existing between Japan and the United States, has been instrumental in releasing Jiu-Jitsu from its oath-bound secrety, and all the secrets of the Japanese National System of Physical Training and Scif-Defense are now being revealed to the American people for the first time by the YABE SCHOOL OF JIU-JITSI, at Rochester, N. Y. Mr. Y. K. Yabe, formerly of the Ten-Shin Ryu School of Jiu-Jitsu has formulated a correspondence course which contains full instructions in Jiu-Jitsu. It is identical with the course taught in the leading school of Japan.

#### FIRST LESSON SENT FREE

An intensely interesting book which explains the principles of Jiu-Jitan has just been written by Mr. Yabe. As long as the edition lasts this book together with the first lesson in the art, will be sent free to interested persons. The lesson is fully illustrated with full page half-tone engravings and shows one of the most effective methods known to Jiu-Jisa for disposing of a dangerous antagonist. If you desire to know more about the closely guarded secrets of this marvelous science, you should write to-day for this free book and specimen lesson. They will be sent you by return mail, postpaid. Address

Read across and down this department. A prize of a new book will be given for the heat list of answers to the February Tangles 12. Reserved by February 39.

H

A prize of two dollars will be given for the best lot of original puzzles received by February 20. As these will appear in April it will be wise to use subjects pertaining to that month. This reply to one of our country boy solvers may explain to others as well our position with reference to Tangles requiring research. We feel that it would not be fair to the intelligence of our Tanglers to confine our puzzles to the ilmitations of the first reader or the common school geography. We want the Tangles to be just a little over your head, and not so simple and vapid as to cease to be puzzles. We want to make you reach up, and to learn a little something you didn't know, while you are enjoying the pleasure of the contest. That's why we use the best authorities and the best books in proving up all our contributors' puzzles before publication, and in making alterations freely in original matter to reach our high stan lard. Bible, atlas, history, standard literature, the classics, mythology, dictionary and encyclopaedia, all are called into requisition to make our Tangles worth while. Many of our best original puzzles and most complete sets of answers come to us every month from R. F. D subscribers. Every country home should have—many alrendy have—an up-to-date atlas, a good unabridged dictionary and a set of encyclopaedias, containing the class of information imparted in the Tangles. If the Tangles spur the country boys to acquiring such a library they have done much of good. Keep THE AMERICAN BOY intact from month to month, compare the published answers carefully with the original Tangles of the mouth previous, and you will find you are unconsciously acquiring an enlarged view on many subjects. We use chiefly the Century atlas as authority for geographical names, but any standard authority is admitted.

#### Answers to January Tangles

1. (Owing to the incorrect illustration which inadvertently appeared with Itinerary Tangle, number 1 of January, precluding the possibility of its intelligent solution, this Tangle is repeated this month, as number 18, with the correct illustration, and the answer, in consequence, is withheld one month. Failure to solve number 1 is not counted against January solvers.)

#### New Tangles

#### CHERRY TREE TANGLE.

All the cherries are to be interpreted by words of the same number of letters. When picked and arranged in correct order the initials will spell a personage connected with February.

-William Felder Howell.

#### FEBRUARY ACROSTIC.

The initials and the central starred letters, read downward each spell the surname of a great American born in February. The 4. - \* - American born in February. The final letters are uniform.
6. - - 1. Where the Joneses come from. 2. Otherwise. 3. A native of a certain European republic.
9. - - 4. Abraham Lincoln's mother's maiden name. 5. Ancient Peruvian rulers. 6. The ninth day before the ides, in the Roman calendar. 7. One-hundred and forty-four. 3. Cultivates. 9. Scents. 10. 9, 9, 9.

#### CONNECTED WORD-SQUARES.

The numbered letters, taken together in order, spell the surname of a President bern in February.

-5 - Upper left square: A division of the brain; was indebted; a leguminous plant; a female name.

-8 - 10 - Upper right square: A native prince of India; the New Testament spelling of the eighth son of Jacob; the son of Jehoshaphat who became king of Israel; a genus of plants.

Center square: The word Christ employs in

Center square: The word Christ employs in speaking of God as His Father; an oblique line; Adeadly poison; at sea.

Lower left square: A Buddhist priest; the Amalekite king whom Samuel hewed in pieces; a

Lower right square: An exclamation of sorrow; to fasten with a key; an eruption of the skin; a snow-shoe for coasting.

—Cornelius Hyatt.

#### ITINERARY TANGLE.

An American boy started on a journey at the city numbered 1, and visited the cities indicated on the map in exact numerical order. He found on reaching the big city numbered 2 that the first letter of the name of each city he had visited, taken in the order of his visit, spelled the name of a famous American document issued in January. Name the cities and the document.—An American Boy.

#### FEBRUARY GEOGRAPHY.

The horizontals are all found in a state name!

for a President born

for an other president born

for an other President born

1. The highest mountain in the state. 2. The body of water on which the largest city is situated. 3. A "Port" on an arm of the above. 4. A city in the northwest part. 5. A cape. 6. A county. 7. The third largest city. 8. A mountain near the center of the state. mountain near the center of the state.
—Morton L. Mitchell.

#### FAMOUS NICKNAMES.

The initials of the required names, taken in order as given, spell the surname of one always associated with February in the American boy's

mind.

1. Expounder of the Constitution. 2. Old Man Eloquent. 3. Vice-President of the Confederacy.

4. The Superb. 5: Jonathan Oldstyle. 6. City of Elms. 7. The Teacher President. 8. Rock of Chickamauga. 9. Andrew Jackson's sobriquet.

10. The Little Corporal. —Bert S. Barney.

#### MYTHOLOGICAL ACROSTIC.

The initials spell the name given to a February day, celebrated in all Christian lands. The words are of unequal length.

HATCHET TANGLE.

Substitute the required names for the numbers forming the hatchet. Then commencing with a certain letter and taking every third letter once around the hatchet in a certain direction, find a February holiday celebrated by every American

1 to 3, a county of Idaho: 1 to 4, a man men-

1 to 3, a county of Idaho; 1 to 4, a man mentioned in scripture; 4 to 8, Secretary of War under President Polk; 13 to 8, U. S. Senator from Connecticut since 1881; 13 to 15, present Secretary of State; 13 to 17, a President of the U. S.; 18 to 21, an American Revolutionary officer, defeated at Briar Creek in 1779; 19 to 27, a great American General, hero of a famous ride 3; to 27, President McKinley's first Secretary of War; 34 to 32, Christian name of President Grant's last Secretary of the Treasury; 34 to 37, President McKinley's Secretary of the Navy; 40 to 37, the thirteenth Vice-President of the U S; 43 to 40, the second Secretary of Agriculture; 43 to 38, an eminent English writer of the nineteenth century; 44 to 49, President Garfield's Secretary of State; 2 to 57, a recent Secretary of State, afterwards U. S. Supreme Court justice; 56 to 53, signer of the Declaration of Independence from New Jersey; 55 to 50, a Vice-President of the U. S. who became President.

SHAKESPEAREAN ENIGMA.

My whole has 19 letters, and is the title of a play by William Shakespeare. 14-3-10-17-7-19 is the opening scene of the play. 9-16-11-12-10-17-12 is a character in the play. 4-12-1-2 is a character in "Love's Labor's Lost. 13-6-12-11-8 is a character in "Measure for Measure." 8-15-6-12 is a character in "Much Ado About Nothing." is a character in "Much Ado About Nothing." 2-5-18-1-12-6 is a character in "Troilus and Cressida." —The Idiot.

ANAGRAM STORY.

All blanks to be filled with words made from the same five letters transposed, without repeti-

tion.

Milton says: "Bring the \*\*\*\* primrose that forsaken dies." Every country on \*\*\*\* has need of first-rate men—not men who \*\*\* has need of first-rate men—not men who \*\*\* or M, or Z, but real first-raters. A man with a brave \*\*\*\*, who is a good \*\*\*\* of evil, and willing to go to \*\*\*\* even, if his country demands it, is the true patriot. Our own America! Look \*\* \*\*\*! Why was it the poet, \*\*\*\*, left her to live in England? Was it for \*\*\* edd it? Like an old salt \*\*\* \*\* salled across the deep, and like the proverbial \*\*\* \* left the ship at port. Two words stan for true manhood. Their initials \*\*\* \* .

The words are Truth, Honesty, American boys \*\*\* \* and T from the alphabet of manhood and wear them in your bosoms.

and wear them in your bosoms.

CHAPTER VIII.

TAKAHAKI FACES THE FOE.

THE GREAT THANKSGIVING game between Annapolis and West Point, witnessed by ten thousand spectators, including a special trainof army and navy people from Washingload resulted in a tie of six to six, each ton. scoring a touch-down and goal. There a strong wind blowing down the field, and the goal in each case was made by the team having it behind them. There were many brilliant plays, and so much desperate fighting in scrimmages that both sides were pretty well done up at the conclusion of the game. From it, however, West Point went home very well content, for their information concerning the strength of the navy team had caused them to fear a crushing defeat at its hands. Annapolis, on the other hand, retired from the battle in a despondent frame of mind. Cy Snelling, their heaviest man, had a dislocated ankle, and so, of course, was out of the L-- University game that must be played three days later. Also the L. U.'s had defeated West Point 11 to 6, while Annapolis only had tied the score.

And what had Takahaki done in this, his first match game? He simply had succeeded in getting himself ruled off the field at the very beginning of the first half, on the charge of striking a foul blow. He was making a beautiful run with the ball, dodging the would-be tacklers in a manner to arouse the envy of "Eel" Lloyd himself. Only one man remained between him and a touch-down, and the young Japanese warded off his interference with an open-handed defense that was so effective as to leave the other for a moment incapable of further effort. He at once claimed to have been struck by a clenched fist, and an umpire, judging wholly from the effect of the blow, allowed the claim, thereby disqualifying Takahaki from further play during that game.

Captain Brownleigh vigorously protested against this decision, but with so little effect that Takahaki, muffled in an ulster, was compelled to view the remainder of the struggle from the side lines. Smarting under the unfairness of his treatment, sitting there alone, and as he thought unnoticed, he was extremely unhappy. Why had he allowed himself to be tempted to join in this silly game, so cumbered with rules that one might as well be blindfolded and have his hands tied behind him? If it were only Botori, unhampered by regulations of any kind, how he could enjoy the mad rush and flerce struggle! But this football, with its umpires eager to rule one off the field if he so much as lifted a hand against an opponent: Bah! it was a game for girls or little children, and he would have no more of it.

All at once the lad's bitter musings were interrupted by a scrap of conversation that came to him from the bleachers but a few feet away.

'It is a fool thing to allow a dwarf like that on a football team where he must meet real men, and it is well for him that he was ruled out before he got smashed like a grasshopper," said a harsh voice.

"Oh, I don't know," replied another. "It seemed to me that he was doing first-class work, and was in a fair way to make his touch, when they ruled him off for slugging."
"Slugging!" retorted the first speaker. "That is

a good one! Why, that infant couldn't slug a flea. No; it is more to be believed that he was ruled off at his own request, to save his wretched little life. I only hope they will take him out of their team, for I should hate to meet him in a game. I might

step on him without knowing it."
"Have a care, Suwarrow!" laughed the other. "Remember the story of David and Goliath, that is if you ever heard it. There is always the chance that a little man may have something unexpected

up his sleeve.' At this moment, Takahaki, attracted by the sound of a name that he had learned to hate, rose to his feet, turned squarely about, and stared at the speakers. They were young men, evidently students, and one of them was a pleasant-faced chap who reminded him of Dun Brown, and whom he felt that he could like. The other was a blonde giant, with a mane of tawny hair, whom he hated on sight, as instinctively as a dog hates a wolf. A single glance of bitter defiance flashed between them, and then the Japanese lad moved away.

"That is the very chap we were talking about! I hope he didn't overhear what we said!" exclaimed the smaller man of the two, recretfully.

"I care not if he hears all and as much more, the Makaki!" responded Suwarrow, savagely.

That night Captain Brownleigh planned the rearrangement of his forces made necessary by the loss

of Snelling. He himself had played at right guard and had looked forward, not without considerable trepidation, it must be confessed, to facing the giant who played left guard on the L. U. team. Now he must take Snelling's place as center rush and snapback. Who should he put in as guard to face the big Russian? He had plenty of fairly heavy men to choose from, but no two of them put together seemed heavy enough when his mind pictured the giant of the opposite side. He made a diagram showing the relative positions of the players of both teams, and studied it with knitted brows. "Lloyd, of course, will continue at quarter, and you, Taki, will play at right half as you have done. Hall, Jones and Abercrombie must stay where they are," he said aloud, though not addressing anyone in particular; "but who to put in for guard opposite that infernal Russian, beats me.'

"Dun Brown, if you would let me play on that guard," began Takahaki hesitatingly.

"You, Taki!" cried Dunster, looking up to see if the other were in earnest. "Why, you are the lightest man on the team, while I am looking for the heaviest. Of course, you don't mean it, though."

"Yes, Dun Brown, I mean all right. I am make this ball play for only catch that Rus-si-an, and would be where I may meet him most quick, and most time. If you would make of me guard I will be very glad."

"Why, man, he would eat you alive at one mouth-

"Maybe, if he can open his mouth; but also maybe it will stay too tight shut."

'Honest, Taki, do you think you could do a thing to him?"

"Yes, Dun Brown, I think maybe so."

"By George! I've half a mind to let you try it. There isn't anyone else who would have half a show against him, and it may break him all up just to see a little chap like you facing him. Perhaps he'll be afraid to tackle you hard for fear you will explode or something."

So it was settled, in spite of amazed protests from Snelling, from members of the athletic committee, and from half the team. Captain Brownleigh listened patiently, but refused to be moved from the position he had taken; and thus Takahaki gained his heart's desire.

During the next two days the team devoted every spare minute to practice in their new positions, and poor Taki was banged about unmercifully. Even the members of his own eleven felt aggrieved that he should occupy a place for which he seemed so eminently unfitted, and gladly would have seen him forced to resign it. But the Japanese lad took his punishment with smiling good nature, and seemed none the worse for it in the end.

"All I can say of him is that he's a tin wonder on steel springs," remarked "Eel" Lloyd during a heated discussion of the situation, "and though I don't believe he can do a thing to the Russian, it will puzzle the latter to know what to do with him."

Although the crowd of spectators assembled to witness the second and last Navy game of the season was not nearly so great as that at Philadelphia, it was a notable gathering, and filled Annapolis to overflowing. Special trains were run from Baltimore and Washington, and one of them brought the gruff old congressman whom we know as Dunster Brownleigh's godfather.

The L-- University team was the first to trot out from under the grand stand and make its appearance on the field. It was accorded a hearty welcome by the assembled thousands of spectators. many of whom exchanged comments on the extraordinary size of one of its players. A minute later, a thunderous round of cheers greeted the advent of the Navy team, which, losing the choice of goal, promptly lined up for the kick-off, with their eager opponents tacing them.

As the two teams thus assumed position, a sudden roar of laughter broke from the spectators, and with it were mingled cries of:

"David and Goliath!"

"Give the little one his sling."

"Jack and the giant!" "Hold him up, so we can see him."

"Baby mine!"

"Where's his nurse?"

These expressions, and hundreds of others like them, were called forth by the amazing disparity in size of two opposing guards; and they irritated the Navy team until there was hardly a member of it hut what wished Midshipman Matsu back in Japan at that moment.

"Never mind. Taki, don't let them jar you," said Dunster Brownleigh. "I have no ears,"

replied Takahaki, looking up with a quick smile. "I have only eyes for see that

Across ten yards of open space the "Lu Lu's" big guard glared incredulous at his direct opponent. Heretofore he had always been faced by men as nearly of his own size as could be found, and the bigger they were the more pleased he had been, since he thus was given a chance to show off his own prodigious strength to advantage. Now to be faced by a pigniy, a dwarf, a Makaki, as he termed the Japanese, was bewildering. It was even worse than that, it was maddening, for he knew not how to act. How could he use his strength against a thing like that? Perhaps it was only a joke, though, and in another minute the little chap might be replaced by someone more nearly his own size. He glanced into the faces of his comrades to see what they thought of the situation. They were laughing at his predicament. Again he glared at the opposing line. Yes, there was the little man crouched. ready to spring forward, and with eyes narrowed to merest slits, that seemed to pierce him like knives. Then the big man became filled with a terrible rage.

OR, A JAPANESE MIDDY IN ACTION & By KIRK MUNROE

'It is an insult!" he hissed to himself, "but dearly shall they pay for it. And he, the Makaki, I will break him into little pieces."

As these thoughts flashed through Suwarrow's mind the referee's whistle blew. Dun Brown snapped the ball back to quarter, who instantly passed it to a waiting half. The two lines of crouching forwards sprang at each other like unleashed tigers, and the game was on.

#### CHAPTER IX.

"now do you do, six to two?"

As the great game between Annapolis and L-University was played under old rules, several kinds of interference were at that time permitted that since then have been forbidden. Consequently the game was a much more savage affair than would be possible at the present day. From the first crashing collision of the opposing forces, a human figure, projected violently through the air as from a catapult, sailed over the heads of the Navy men and dropped heavily to earth behind them. It was Midshipman Matsu who had thus been picked up and flung bodily by his big antagonist. One of the Navy backs punted at the same moment, and the ball, sailing at such a height as just to clear all heads, struck the human projectile so fairly that they came to the ground together.

Takahaki, holding the ball for a "down," instantly was buried and ground into the earth by the ton's weight of flercely struggling humanity that fell on him with the force of an avalanche. Moreover, as he was judged to have been "off-side" when he caught the ball, his down was not allowed, and his team was compelled to forfeit ten yards of precious territory.

"For Heaven's sake! send that man to the side lines, Brownleigh," demanded Hall. "He's no more good in this game than a child, and if he isn't promptly killed, or taken off the field, he'll ruin us in no time."

'All right," answered the captain, "I'll consider your suggestion. Look out! Here they come!"

The L. U's played a flercely aggressive game and charge after charge, each led by the giant Russian, crashed with relentless force against the Navy line. which slowly but surely was forced backwards. Five yards were lost, ten, fifteen, twenty, and the ball was getting perilously near the Navy goal. Desperately as the middles fought, they could not withstand the cruel weight hurled against them. struggle was on the Navy ten-yard line, when suddenly "Eel" Lloyd emerged from a scrimmage, and running like a hare, with Dunster Brownleigh beside him to ward off interference, succeeded in carrying the ball back into L. U's territory before he was caught and downed.

In the meantime these two had left behind them a terrific scrimmage that raged about a center composed of Takahaki and the big Russian. Never for a moment had the former lost sight of his chosen opponent, nor let slip a chance to attack him. Never again, since the very first, had the big man been able to seize his annoying enemy. The latter eluded his clutch like a drop of quicksilver, and seemed to rebound from him like a rubber ball. Repeatedly the Japanese lad was hurled breathless to the ground and crushed beneath a writhing, prodding, kicking pyramid. Always Suwarrow formed one of its component parts, and for a time he and Takahaki were invariably found grinding against each other at its very bottom. After a while, however, it was noticed that the Russian seemed a trifle less eager to plunge into the very heat of the scrimmage, but contented himself with throwing his great weight against its outer rim. Now, too. Takahaki no longer sought the fate of a grain of wheat between an upper and a

nether millstone, but seemed to float buoyantly to the surface of the plunging mass of heads, legs and arms, always appearing as close to Suwarrow as though he were a steel filing attracted by a magnet. His attacks upon his bulky antagenist were like those of a king-bird against a hawk, and for a long time they seemed equally productive of annoyance, but without other visible effect

Again was the Navy line forced slowly back yard after yard, fiercely but impotently fighting for every inch until they found themselves in the very shadow of their own goal. Then in desperation Captain Brownleigh flung himself across the fatal line with the ball clasped tightly in his arms. He had made a "safety" and might carry the ball out anywhere within his own twenty-five yard line, for a free kick; but at the same time ne had given his opponents two points, the first thus far scored by either side. This was greeted by a joyous roar from the L. U. rooters, and by an ominous silence from those who sympathized with the Navy.

Don't look to me like it was fair to pit a bantam 'gainst a big Shanghai rooster," remarked a certain gruff old congressman, occupying a seat in the grand stand, to a stranger sitting at his left.

"But," replied the latter smiling, "the bantam has the spurs of a gamecock, and if I am not very much mistaken he is using them to good effect. Does the Shanghai appear to you to be quite as aggressive as he did at first?"

"No, I can't say as he does; but what mortal man would, after a solid half hour of rough and tumble fighting? for 'taint nothing else that I can see. I tell you, my friend, there's soemthing wrong about this business. They may call it football as much as they please, but it's nothing of the kind. I've seen the real thing, and I know. Football is a gentleman's game; but the riot these boys are engaged in is more like real fighting than anything I've gazed on since the Civil War."

"Where did you see football played?" inquired the stranger.

"Up in Victoria City, British Columbia, and a prettier game of any kind than that was, I never want to watch."

"Probably played under Association rules," suggested the stranger.

"It certainly was played under rules of some kind, which is more than you can say of the death struggle taking place before our very eyes at this minute.

"There you are mistaken, sir," replied the stranger, who was a naval officer recently returned from Japan. "This game is played under a number of most carefully considered rules that are strictly enforced. For instance, a blow from a clenched fist is not allowed, throttling is not allowed, tackling below the knees is not allowed, nor is tripping, off-side play, or—By Jove! but that was great!" he exclaimed, springing to his feet and joining in a wild outburst of cheering from the Navy side.

"What was it?" asked the congressman during a partial subsidence of the joyful racket.

"Didn't you see the bantam throw the Shanghai

over his head?"

'I saw the big man go down like he'd been shot, but I didn't see who done it. Isn't there any rule against killing a man that way?

'Oh! he isn't killed," laughed the other. "He's only sick at the stomach and wishing the whistle would blow before he has to get up and take more medicine. There it is now! Well, he's in luck this time."

The end of the first half found the score 2 to 0 in favor of L. U., and both sides thankful for a short respite from their tremendous exertions. It also found the middles clamorous for Takahaki's withdrawal from the game, in favor of their heavi-

Only "Eel" Lloyd, stripped to the skin and undergoing a brisk rubbing at the hands of a trainer, entered a protest. "Don't you listen to them, Brownleigh!" he cried. "I've been watching that chap from the very first as anxiously as any one, and if he isn't doing great work then I'm awfully mistaken.'

"But we've got to score in the next half," objected Abercrombie.

"Of course we have, and with the help of our

friend from Japan we can do it, too."

"How is it, Taki?" asked Captain Brownleigh, addressing his room-mate, who was lying prone on the floor stretched at full length and inhaling long, deep-"Can you stand the strain another drawn breaths. half? How are you feeling?'

"I feel pretty fine, Dun Brown, and very glad for catch that Rus-si-an," was the smiling answer.

"Then you wouldn't like for me to put a heavier

man in your place?'

"No, Dun Brown! No!" cried Takahaki in distressed accents, at the same time springing to his feet with the elasticity of a rubber ball. "I am very happy with that Rus-si-an, and pretty quick he will be of the ball-foot tired if I may play with him. No, Dun Brown, if you take me off I so ashamed that maybe I hara-kiri do. If you please!"

'All right, old man, you shall stay in it till the bitter end; but, remember, we've got to score or die a-trying.'

"Hei (yes), Dun Brown, I think maybe we shall score make," replied the lad from Japan, again smiling contentedly.

Apparently, however, he had small cause for content during the earlier portion of the second half, when he might have been the football itself, so terrible was the punishment he received, principally at the hands of the L. U.'s big guard. The latter devoted his entire energy to the annihilation of his small adversary. Once he flung him through the air for a nerve-racking fall; and several times he fell on him with pointed elbows digging viciously into Takahaki's anatomy. Finally the two were lost to sight in the most desperate scrimmage of the game. From it darted "Eel" Lloyd with the ball

tucked under his arm and sprinting like the wind. Fleet runners were at his heels, but he was fleeter than they. Outstretched fingers clutched vainly at his canvas jacket, his neck felt scorched by the heat of panting breaths. A mighty roar from grand stand and bleacher filled the air, but he heard it not. In his ears, to the exclusion of all other sounds, rang the words heard in the dressing room: "We've got to score or die a-trying." A figure loomed ominously before him. He dodged it and fell plump into the arms of another. The next instant he was buried deep beneath a falling mountain, and something snapped. He was vaguely conscious that a sharper pain was added to his already innumerable aches and smarts, but he did not care; all lesser evils were lost to sight in the overwhelming bitterness of his disappointment. Five yards more and he would have scored a touch-down. Now his great run would go for naught. There would be another line-up, and again the L. U.'s, headed by that terrible Russian, would buck, buck, buck, with resistless weight forcing the middles back yard by yard, as they had done over and over, until all that he had gained was again lost.

As the mountain above him was lifted he slowly regained his feet and tried to brace himself for the coming struggle. He was in great pain, and wondered if there was any go in him. All at once he became conscious that the roar of cheering was continuing without abatement, and he wondered what it was for. He glanced back up the field, and in an instant all his pain, all his discouragement were forgotten. The big man of the L. U.'s, their invincible battering-ram and chief bulwark, was being led from the field so completely done up that his head swaved weakly to and fro, and already a substitute, seemingly not more than half his size, was running to take his place opposite the ever-smiling

These two, the Japanese and the Russian, had been found at the very bottom of the scrimmage locked in an embrace so fierce that it took the strength of half a dozen men to separate them. Takahaki was underneath, and it was feared that he was killed; but the moment the Russian was pulled from him he scrambled to his feet and ran to join his comrades who were streaming far down the field in the wake of Lloyd's magnificent run. But Suwarrow had to be helped to his feet, and then was led slowly from the field, incapable of further effort.

So, thanks to the little man from Japan, there no longer was a giant to batter the Navy line. At last they were faced only by men of ordinary stature. a knowledge so cheering and so strengthening that at the crisp signal of quarter-back Lloyd they sprang upon their weakened antagonists and swept them from the earth. At least they rushed them across their own goal line like autumn leaves before a gale, and scored the first touch-down of the day. Then, for one breathless minute, the tremendous riot of cheering was hushed as Dunster Brownleigh took position for a place kick for goal. Lloyd, lying at full length, held the ball just clear of the ground. For an instant the young captain sighted keenly the imaginary line from ball to goal; then he sprang forward and kicked, apparently without effort. Released from Lloyd's hands at the moment of impact, the brown ball, lifting from the ground like a swallow in swift flight, skimmed cleverly over the bar, midway between the sentinel posts, and the goal was won.

"How do you do, Six to two? That is the score We give Lu Lu!"

chanted the Navy rooters, beside themselves with joy. Nor were they later obliged to alter a single note of their jubilant song; for only five minutes of the half remained, and during that interval the exulting middles easily held their own even against the most strenuous efforts of their desperate antag-

So six to two, in favor of Annapolis, remained the score of the fiercest game ever played on the Academy grounds; and that evening, while talking it all over, every member of the team acknowledged that but for Takahaki of Hakodate it certainly would have been 2 to 0, and perhaps much more, against

"It simply was the first battle of a Russo-Japanese war, fought here on American soil," vehemently remarked the gruff old congressman, as he prepared to leave the grand stand; "and I am going to see if something can't be done to put an end to such violations of international comity.

#### CHAPTER X.

#### A FRIENDSHIP WITH THE BUS-SI-AN.

So the football season ended in a blaze of glory at the Naval Academy, and Captain Brownleigh was showered with congratulations upon the success of his administration. The heroes of the great game, Midshipmen Lloyd and Matsu, were laid up for repairs, the former with a fractured collarbone and the latter with two broken ribs but little they cared for such trifles since they were so covered with glory as to be envied by every other member of the team. In her western home, Mrs. Brownleigh was agitated by conflicting emotions. She trembled when she considered the danger to which her boy had been exposed, through her ignorance that games might still be played even after an entire schedule had been cancelled, and at the same time she so glowed with pride at his prowess that she carefully treasured every newspaper account of the great game. It was a comfort, however, to remember that for a year at least there would be no more football.

As for the gruff old congressman, whose indignation, at what he considered the brutality of the

game he had witnessed, caused him to make another effort to have football suppressed at the Academy. he only was laughed at and told that the administration could not afford to vacillate.

After the game, during the very first conversation between Dunster and Takahaki, the former said:

"How you did make that Suwarrow chap hate you, old man! Do you know in the dressing-room, after it was all over, I heard him sputtering to himself, in his own tongue, that some day he hoped to have the pleasure of helping to wipe every Japanese off the face of the earth. I shut him up quick, by answering in Polish, which he evidently understood, that possibly the wiping out might be done by the other side. You ought to have seen him glare at me! Weren't you afraid he would

kill you in some one of those scrimmages?"
"No, Dun Brown," replied Takahaki, scornfully.
"I not any 'fraid of that Rossky; but he of me was very 'fraid, and but for those ru-als (rules), I would have make him so that he could not finish even one half. Many thing I could do to him, but for those ru-als; and they make me 'shamed for be so long to at length put him from the game. It is those ru-als that I do not like so much that never ary more will I the ball-foot play. Much better I like Botori, with no ru-als.'

"Never play again!" cried the captain of the team, in dismay. "Oh, come, Taki! You surely don't mean that. Why we are already counting "Oh, come, Taki! on you with your jiu-jitsu tricks for next season's work."

"Yes, Dun Brown, I mean. Without jiu-jitsu am I not any good in ball-foot play; and with ball-foot ru-als, jiu-jitsu not any good. So next when I fight with a Rossky it must be that no ru-als come in between us."

So decided was Takahaki's stand against a game whose rules forbade him to attack even a Russian according to his own benighted ideas of what was right and proper, that though he continued to be active in all other athletics, the memorable struggle with L. U. was his first and last match game of football. It had, however, done him the good service to firmly establish his social position at the Academy, where his dash and fearlessness. combined with gentle manners, unfailing cheerfulness, and exquisite courtesy, rendered him a prime favorite. Between him and Dunster Brownleigh there sprang up a love like that of David and Jonathan, and the influence of the lad from Japan over the happy-go-lucky young American was most salutary. Of course Dunster could not allow a 'Jap" to outrank him as a student, though to hold his own he was forced to work as never before in his life. Nor could he get into much mischler; because Takahaki, having implicit confidence in him, insisted on following his lead in everything, thus making him directly responsible for whatever troubles they might encounter.

The Japanese government having instructed Midshipman Matsu to gain, while in America, all possible knowledge concerning the construction and management of submarine boats, he spent his second year's furlough in the yard and shops of a torpedo boat construction company that made a specialty of submarines, and Dunster Brownleigh accompanied him.

"Not but what I'd a heap rather be up in the "Not but what I've a near rather as a spending the Adirondacks where my people are spending the summer, and have you go along with me, marked the latter. "But, as I can't persuade you to do that, any more than I could persuade the moon to come down out of the sky, and as I want to know just as much about submarines as you do, there's nothing for it that I can see, but just to tag after you, and spend the only vacation I've had in two years at a measly old shipyard among a lot of greasy shops."

"So Dunster followed Takahaki; and his parents, leaving the Adirondacks for his sake, took rooms in a great seaside hotel not far from the shipyard, where they did everything in their power to give the two young fellows a good time out of working hours. Because the Brownleighs were there the gruff old congressman, now become a senator, also put in an appearance at the seaside hotel; and about the same time the Japanese Minister, desirous of seeing for himself how the protege of his Mikado was getting along, ran down for a week, and all these people became drawn together by a sympathetic bond, the name of which was Takahaki.

Mr. Brownleigh spoke of him as one of the most remarkable young men he ever had met; while Mrs. Brownleigh already loved him on account of his friendship with her boy. The senator, who had seen him on the football field, admired his fighting qualities, and the Minister naturally was proud of the lad who not only had achieved distinction in his own country, but had in so short a time gained an enviable reputation among strang-

There were a number of pretty girls at the hotel, every one of whom declared herself to be intensely interested in torpedo boats, and most anxious for further knowledge of the subject. As the senator, still connected with naval appropriations, and desirous of learning something of their expenditure, had a government launch at his disposal, in which to visit the shipyard whenever he felt inclined, all these young ladies made love to him, with the result that launch parties to the shipyards became the most popular form of that season's entertainment. So the senator's launch always was well filled with a bevy of girls, sometimes chaperoned by Mrs. Brownleigh, sometimes gathered in a flattering group about the grave-faced Japanese Minister, but never for a moment neglecting the senator himself; and when they reached the shippard Dunster and Takahaki, appearing very manly in their working suits of oil-stained canvas, were in instant demand as guides and explainers of the bewildering sights

(Continued on page 135.)

## Just Aetween Gurselves

#### GOING TO CHURCH

THANK YOUS.

Dear Boys:—

HAVE HAD so many "thank yous" from you for what I have said from time to time under the heading of "Just Between Ourselves," that I am encouraged to keep on. I have had ample evidence, too, of the fact that some of the advice I have given has been seriously taken by you, and a knowledge of this makes me sure that the space devoted to these talks is not wasted.

Then, too, I have had much encouragement from parents and grown-up friends of boys. Parents say in some cases that their boys take advice from me sooner than they take it from them. This is not strange because somehow or other we get to feeling that persons with whom we are on terms of intimacy are not much wiser than ourselves. I have even heard of boys who think they know more than their parents do. Yet these same boys will often give a respectful hearing to some stranger, although his advice may not be a whit better, or wiser, than what they get at home.

And I do not forget that there are many thousands of boys who do not get advice of any kind, except such as they get by way of a scolding or punishment. Nor do I fail to recall that there is a great deal of bad advice given to boys, for all parents are not wise to know what is best for their boys, nor are all solicitous about whether their boys have good advice or not.

To such boys as would rather take the advice of a stranger, to such boys as get no advice at home, and to such boys as get evil advice, I am glad to be able to talk.

SOME REASONS FOR GOING TO CHURCH.

I was recently asked by a young man whether it was to a boy's credit that he attended church when he did it simply for the purpose of getting in with good people and thus perhaps the more easily getting ahead in the world. I answered "yes." "But," I added, "the motive that takes a boy to church simply that he may appear to be good and win the favor of good people is not the highest motive for going to church, by any means.

Boys ought to go to church for many reasons. The highest reason of all, of course, is that to worship God is right, and that the church form of worship adopted generally by christian people is productive of the best results and is, we may well believe, pleasing to God. One can, of course, worship God without going to church, and thousands of people are doing that who have no churches to attend; but where it is possible one should not only go to church but should, as early as possible, get the church going habit. People who say they can worship without going to church may be right, but they are adopting a very dangerous plan, for private worship in most cases degenerates into no worship. Let a church die and see how soon the members grow irreligious.

Then, too, among the reasons that should induce a boy to form the church-going habit is that in the church he may obtain a certain degree of mental and moral culture by hearing good instruction from good men, on good subjects; he may there hear and take part in good music, which in itself is educative, and he may there put himself into a thoughtful state of mind which always tends to a higher kind of living. From whatever motive one may go to church he cannot listen to a thoughtful sermon, hear inspiring music, and the reading of the "Book of Books" without being helped mentally and spiritually.

THE CHURCH-GOING BOY HAS THE BEST CHANCE.

But I am going to leave out of account all of these higher motives and argue along the line that the church-going boy stands a better chance of succeeding in life than does the non-church-goer.

There are many things that go to make up success in life. I am not going to enumerate them, nor indeed any large part of them. I am just going to call attention to a few and leave the rest for the preacher.

#### APPEARANCES COUNT.

Say what we will about appearances being deceitful, and not judging persons by their looks, the fact remains that appearances have a great deal to do with one's success. Boys and men, of course, have made a success in life, who have had no regard for appearances, have been careless in dress, careless in manner, careless in speech, careless in companionships; but these are only exceptions. Other things being equal the boy who is careful in dress, careful in manner, careful in speech, careful in companionships, will succeed better many times over than will the boy who is not. The very fact that every Sunday finds a boy at church is a big argument in his favor. No matter what he is there for, the very fact that he is there gives people a good impression of him-an infinitely better one than if he were seen at church time loafing about his home, or on the street corners, or engaged in some sort of amusement.

#### HE GOT THE JOB.

I could give you many instances of where a good appearance has led the way to success. The other evening at a banquet I heard a preacher tell this story out of his own experience. He said that once when he was preaching in a small town not far from a large city, the manager of a large establishment in the city, with whom he was personally acquainted, wrote him asking if he knew of a young man of certain qualifications, saying that if he knew of such

an one he could give him employment. The preacher answered saying that he could not think of anyone in the town who filled the requirements, but that every Sunday morning at a certain time a young man passed his house on the way to church whose earnestness and regularity had impressed him, at the same time suggesting that perhaps he would do. The business man replied asking him to look up the young man in question and report again. The result was that the young man was employed and put in the way of great success in life. Appearances in that case was the sole stepping-stone by which the boy obtained a position. Had he been seen every Sunday morning carrying a baseball bat and directing his steps toward the ball field, no such letter would have been written by the preacher. Every business man wants earnest, conscientious helpers. The chances are that the boy who finds a place every Sunday in the house of God is earnest and conscientious; appearances at least are in his favor.

THESE BOYS DO NOT GET THE GOOD JOBS.

About the doors of a certain theatre in Detroit every Sunday afternoon is a crowd of young men and young women waiting for the doors to open. Can you imagine a business man of Detroit seeking in that company to find persons to help him in his business, if his business is an honorable one? Would you not rather expect an employer to keep away from such places, and to pass by any applicant for a position whom he has once seen amid such surroundings? Certainly! Every man of right mind believes that the church on Sunday is the best place for not only men, women, and girls, but boys.

#### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 7-From Governor Chamberlain of Oregon

GOVERNOR GEO. E. CHAMBERLAIN OF OREGON

To the Boys of America:-

In the United States every avenue is open to you. There is not a position in the religious, political or commercial world that is not open to you if you begin now to lay the foundations necessary to attain it. To do this, my savice to you is:

First: Be honest with yourselves. If you are, you will be honest with every one. However much you may deceive others you cannot deceive yourselves. First of all, then, be honest with yourselves.

\*To thine own self be true,

And it must follow, as the night the day, Thou came: not then be folse to any man.

Second: Whatever you do, do well. There never was a time in the history of our country when young men thorough in their work were so much needed as now. Every thing that is given your hand to do, give it your best effort, and you can rely upon it that your services will always be in demand.

Third: Do the hard things first. Do not lay them saids expecting to take them up when the easier tasks have been dompleted. If you will make this the rule of your lives you will be surprised to find how light your work will become and how much of leisure will be left for you to improve your minds and bodies.

Last but not least, do not neglect those duties which every human being owes to God: Be caroful to cultivate all those virtues which bring you nearer the Supreme Author of your beings.

Governor of Gregon.

FRIENDS COUNT.

Another great element in success in most lines of work is acquaintanceship. Other things being equal, the man with the largest acquaintanceship will be the most successful man. Now you and I can both think of exceptions to this rule. Men have been successful who have shunned society; yet we must recognize that this is not the rule. The greater part of a physician's capital is his acquaintanceship and his reputa-tion among people. The best physician in the world would starve without clients. The best lawyer on earth would be minus a practice if he were minus friends and acquaintances. But there is no one who recognizes the value of acquaintances and friends quite so much as the young man who is out of a job. A young man recently came to me and asked me to assist him to get a position. My opportunities for helping him were small. I asked him who were his friends. Shamefaced he replied that in the three years he had been in the city he had made no friends who could help him. In all that time he had not made the acquaintance of a single individual of influence, unless I might be considered as one. And where do you think I met him? By the chance invitation of an acquaintance he happened into a Bible Class one Sunday afternoon when I was teaching. Upon the strength of that slight acquaintance he called upon me for help, during the following week. Suppose that in that three years he had allied himself with some good institution-we will say, for instance, a live city church. Suppose that he had made himself conspicuous there for his earnestness and his desire to help. Young men in churches and Sunday Schools can always find work to do and in doing it they always become conspicuous. The result would have been that at the end of three years he could have counted a large number of influential acquaintances to whom he could have turned in an hour of need. As it was he was satisfied with spending his time and his money with companions who in an hour of need were not only no help to him, but an absolute detriment.

#### THE CONCLUSION.

My advice, then, to every one of you boys is this: if you want to succeed in life put on the appearance of being what you ought to be. The very effort to appear to be what you ought to be will help you actually to be it. A simple illustration will show: You know that business men generally disapprove of the use of cigarettes by boys. It goes without saying that you ought not to smoke them, but if you will smoke them don't smoke them where business men will see you. Your very effort to keep from it at certain times and under certain circumstances will help you to overcome the habit entirely. Go to church because you ought to. If the ought doesn't appeal to you, go to church because you will appear better there than any place else, and because you will find more opportunities there of meeting and becoming acquainted with the kind of people who can help you to success, than anywhere else. If you go for these purposes, later you may go for other and better ones.

I have been arguing, you will understand, along a very low level. In other words, I have been telling you to go to church, not because it is right but because it is expedient. You will perhaps not hear this preached from pulpits, but I think the idea is worth a sermon by a layman. Don't you?

Very sincerely yours,

M-6 Sprague

The Cost of Wrong-Doing

An incident related recently by a wealthy pror of a department lesson on the cost, even in this life, of wrong doing. The proprietor and his partner had both been poor boys, and had risen by hard work and careful attention, to the head of the business. They determined to find, from among their employees, a boy whom they could advance in the same way, and eventually take into partnership. They had several conversations on the subject, and ultimately selected one who was very bright, active and industrious. Both partners liked his appearance and habits, and agreed between themselves to watch him closely. If he proved to be the right kind of boy, his promotion was to be rapid. The head of the department was instructed to watch him also, and report. He did so from time to time, and his report was always favorable. After a few weeks the partners consulted, and agreed to give the boy six months' trial, and if at the end of that time he had still a good record, his promotion would begin. Of course no intimation of his good fortune was given to the boy, and the scrutiny was continued. The last week of the six months' probation arrived, when one morning the superintendent saw the boy slip something slyly into his pocket. He insisted on knowing what it was, and ultimately the boy confessed that he had stolen a quarter of a dollar. He was of course dismissed, and never learned how near he had been to the highway of fortune. He had sold the fine position that was in store for him, and his magnificent fortune, for a quarter of a dollar. Every one will agree as to the folly, as well as the wickedness of his act; but how few realize that to sacrifice the eternal future for the sake of some worldly advantage, is just as foolish.—Christian Herald, New York.

## SCHOOLBOYS THEN AND

% T WAS DRIZZLING the other morning when school on the back of a camel of the desert. my youngest boy—he's 10—was ready to start for school," observed Stoutsome, "and his mother was on hand, of course, to see that he didn't make any mistakes.

"It's wet out this morning, son," she said to him, "and you must put on your cravenette and your rubbers.

"And the kid, of course, put 'em on—that is, he permitted his mother to help him on with the things. 'She slipped his shoes into the rubbers and slid his arms into his nice warm raincoat with the ulster belt at the back, and handed him his stack of books. Then the tyke strolled out into the hall, took his pick of the umbrellas in the rack and off he went whistling and ready for any old kind of weather.

'Gosh, but that boy looked trig and comfortable! And it pleased me to see the little tyke that way,

"But as he strutted down the street, perky with the knowledge that things were just about coming his way-well, I looked the shaver over, and I fell to thinking of what a dead snap that boy's got compared to what drifted my own way out in the queer little old Western town where I hung out when I was his age.

"The only overcoat that ever I owned as a boy, or, for the matter of that, that I ever owned at all before I began to buy overcoats for myself, was like that one Simeon Ford has described so entertainingly-that is to say, it was whittled down from my dad's old Army of the Potomac overcoat. It was a sort of heirloom in our family, and it was also a holy show.

"Every boy that appeared in our family had to take his regular whack at wearing that overcoat, and the boy who showed a contumacious spirit wearing it, on account of the riflicule of his schoolmates, as exhibited by their hoarse hoots of 'Sojer!' and 'Coffee Cooler!'-well, that boy just had to go without any overcoat at all.

"And rubbers for a boy! Well, I'd just like to've seen the expression on the faces of the old folks if any such crazy suggestion had ever been made to them -rubbers to cover the regular footgear of a boy going to school!

"We wore topboots. Sometimes they were boots approximately of the size of our feet, but not often. I don't remember ever having had a pair of boots that were originally devised, designed or intended solely for my own wearing.

"As a rule, the boots that I wore to school were about four sizes too large for me, so that I had to be mighty wary in walking or running in muddy and sticky paths, lest I pulled my feet right smack out of my boots and landed in the mire in my stocking feet. I had that dismal experience several times before I picked up the necessary skill that finally enabled me to take chances even on wading in a duck pond without being in any danger of losing my boots.

"But, overlarge as all of the boots were that came my way when I was a tyke, they were mighty hard to get into when they were frozen stiff in the winter time. I used to try to work this fact as an excuse to stay home from school on extremely cold days, but never managed to get by with that. There'd been a lot of boys in the family before I got along, you see, and my mother had all of those little boy dodges so pat that I had no chance in the world to spring any new ones on her.

"It's foolish, by the way, for a boy to permit himself to be born into a family in which a number of other boys have preceded him. He hasn't got much chance in such a situation. The other fellows have taught his mother too much.

"Nope, I never managed to stay home from school on account of my boots being frozen. When I'd try that on my mother she would say to me, calmly and placidly:

"I know your boots are frozen, son-but there's plenty of mutton tallow, you know."

"And I knew what that meant, of course. Meant

that I'd have to grease my boots before going to bed that night.

"My mother 'ud put a lump of tallow on the back of the kitchen stove—the receptacle for the tallow was usually the lid of an old tin shoe blacking box. Then she'd see to it that all of us boys placed our hoots on a line near the stove, to sort o' thaw them

"Then we'd take turns dipping into the tallow dish with our fingers, and then it 'ud be a case of each boy using his own elbow grease to get the kinks and dents and contrariness out of those boots. We'd have to rub and rub and rub the tallow into the leather, our mother standing by with her hands on her hips, and a kindly interested expression on her face, watching to see that we did the work well, and then we'd plant the boots alongside the stove, in a row, so's to keep them sort of warm during the night and not have the tallow cake on them-and thus we'd settle our own chances of being able to crawl out of going to school on the following morning on account of frozen boots.

"And umbrellas! A boy of my day and date going to school of a morning under the shelter of an umbrella! Why, he'd have attracted just as much attention that way as he would have if he'd gone to

"There was only one umbrella in our family, anyhow, and that was a huge, greenish, parachutish affair, that looked suspiciously like it had been cribbed from a wagon-you know those big front-seat-ofa-wagon umbrellas—and that one umbrella was strictly sacred to the grown-up folks. Us younkers

would as soon have thought of taking it out, to school or anywhere else, as we would of taking the old daguerreotype of our grandmother out into the "Oh, we just plugged along, and got wet and then

dry again, and caught colds and got over 'em again, best we could, and certainly as well as our providers could afford. And here I am, at that, sound enough, and glad enough, when it comes to that, to see my own youngster a-sailing along to school in rubbers and raincoat, bought especially for him to fit his sizes, and any old umbrella he may please to take out of the umbrella rack.

"Only I wish the self-contained little midge wouldn't take it all as such a dead straight, it's-coming-to-me matter of course."—N. Y. Sun.

#### THE BOY WHO IS "GOING TO"

By J. L. HARBOUR

Y THE STREETS of 'By and By' one arrives at the house of Never."
"Harry, have you been down to see how the furnace fire is?"

"No, sir; but I'm going to in just a minute."

"HE READS THE BEST"

in front of the house?

"I'm going to in just a few minutes." "Have you rolled the ash barrel out of the cellar so that the men can get it when they come for it? You know that this is their day, and I told you an hour ago to roll out that barrel.

"I'm going to just as soon as I finish this chapter in my book. It has to go back to the library to-

This conversation took place in the home of Mr. Vale one morning very recently, and I do not wonder that Mr. Vale stepped forward and took the book from Harry's hands and said sharply

"Harry, you will go now-this moment-and do everything I told you to do. Wait a moment. Did you mail those two letters I asked you to run out and mail last night?"

Harry looked a little aghast and said:

'Why, I-I-was going to, but-but-well, I wanted to just look over the evening paper, and then forgot it. I'll run out and mail them now.

"You careless boy! It was imperative that one of those letters should reach its destination by noon to-day, and now it will be six to-night before it can do so. Your 'going to' weakness may cost me more than a hundred dollars in this one instance, and it has always been a source of trouble and annoyance to me. It will be a source of positive mischief to you if you do not overcome it. I'm going to have something printed in big, black letters and put in your room where you can see it every day, and I want you to heed it."

And this was what Harry found printed on a large

sheet of white cardboard and fastened on the wall above the foot of the bed in his room:

"Never leave that till to-morrow which you can do to-day."

'Benjamin Franklin," said Mr. Vale at the supper table, "was a wise man, and this is one of the wisest of his sayings. It would be well if every boy in the land would heed it. The boy who is always 'going to' do things can never be depended upon to do anything when it should be done, and in time he is numbered among the men who 'By one delay after another spin out their whole lives, till there is no more future left for them."

This is true. You will find it to be sadly true in your own experience if you allow the "going to" habit to become fixed. I call to mind at this moment a man of real ability whose life has been very much of a failure simply because he cannot be depended upon to do a thing when it should be done. And it was but the other day I heard a business man say of one of his employees who had just died:

"He was not a man of any great business ability, but I paid him just as much as 1 paid some of my other employees of far greater ability, because he was so absolutely trustworthy when it came to doing a thing when it should be done. If I told him to do a thing at such an hour, I could rest assured that it would be done at that hour. I do not think that I ever heard him say, 'O, I forgot,' a single time in all the twenty years he was in my employ. The word 'procrastination' was not in his vocabularv.'

It is a word all boys should fight shy of if they would attain the highest degree of success in life. It will be sure to make mischief if you allow it to influence you to the extent of thinking that tomorrow will do just as well as to-day for the doing

of the thing you have been told to do

to-day. The "just going to" habit has caused more than one man to lose the oppor-tunity of a lifetime. The dawdler is sure to be left in the race of life. Now is the time to do the thing that must be done and that you have agreed to do. you will do this or that to-morrow? Read this: "To-morrow! it is a period nowhere to be found in all the hoary registers of time, unless perchance in the fool's calendar. Wisdom disclaims the word, nor holds society with those that own it."

#### The World's Oldest Inhabitant

Several years ago, when the son-inlaw of Karl Hagenbeck, the animal trainer, was looking for interesting specimens, he learned of the existence on an island of Seychelles, off the coast of Madagascar, of a giant tortoise, that was celebrated among the natives not merely for its great size—it weighs 970 pounds-but for the fact that there was documentary evidence that it had been living on the earth for over 150 years and probable evidence that it was from 100 to 150 years older than that. After careful investigation, he was satisfied of the truth of the statement, and set about to secure the loan of this animal (which, by the way, is held in the highest esteem and respect on the island), for exhibition at the St. Louis World's Fair. Not until the strongst assurances were made that the venerable curiosity would be returned to the Seychelles did the native population consent to part with him for his long vacation. We are informed by Mr. Hagenbeck that when the tortoise reached this country, it was found that a tiny palm tree was growing from the back of the creature. The tortoise loves the mud, and it is evident that soil was washed into a deep scar on his back and that the seeds of the palm, mixed with the earth, took root and the tiny growth had thrived in its portable field. The tortoise is the

"Have you cleaned the snow from the pavement longest-lived animal, exceeding even the elephant, which frequently exceeds one hundred years of life. The fact that 150 years ago the Seychelles natives began to take particular pride in this tortoise because of its age makes it certain that it must have been at least one hundred years of age at that time. This is borne out by the condition of the shell, which is a guide to determining the age. Further evidence is its most abnormal size. It possesses extraordinary lifting strength. While it was in its heavy cage at the World's Fair express office, it became impatient, and proceeded to break its way out. It smashed the heavy 2 by 8 inch timbers with ease.—Scientific American.

> The Queer Beggar Boy One day the queerest beggar boy He came to our back door; He was the raggedyest one I ever saw before. My mother told him, "Come right in And sit down here and rest,' And gave him lots of buttered bread. And cake, and turkey breast. And then she gave him my old coat, And hat that's almost new And then she said, "Poor child, poor child," And gave him playthings, too. But 'stead of being happy, then, And nice and satisfied, As I'd 'a' been, that beggar boy

Jus' cried, and cried, and cried!

Louise Morgan Sill, in Harper's Magazine.

A PRESIDENT WHO BELIEVES IN BOYS ON THE POURTH DAY OF THIS MONTH (MARCH) THEODORE ROOSEVELT ENTERS UPON HIS SECOND TERM AS PRESIDENT OF THE UNITED STATES

### FOR THE MIKADO

(Continued from page 132.)

and sounds encountered by the fair visitors on

With those alleviations, Dunster Brownleigh's "working" vacation became such a pleasant affair that he deeply regretted its termination with the arrival of the day when he was compelled to return to the exacting routine of the Academy. His regret was strengthened by the fact that his roommate was to be left behind. This was brought about by the Japanese Minister who seemed to think that Takahaki was acquiring at the shipyard an experience too valuable to be interrupted for the present.

Thus Dunster, going aboard the steamer that was to carry him to Annapolis, was separated for the first time in two years from the chum who so decidedly had influenced his own life during that time. As his boat was beginning to move from her moorings and he was exchanging last farewells with Takahaki, who remained on the wharf, the latter suddenly pointed to an approaching launch. It was that of the senator, filled with a greater number than usual of pretty girls, come thus early on purpose to bid the departing Middy good-bye. Of course the latter's whole attention instantly was diverted in that direction; and as the outgoing steamboat passed the incoming launch, he, leaning far over a guard rail, exchanged merry salutations with its fair occupants. All at once he became filled with amazement; for, sitting beside his godfather, was a well-dressed stranger, whom, at the moment of passing, he recognized as the young Russian, Suwarrow Suwarrowvitch.

Of course there was then no opportunity to gain the slightest information concerning this unexpected and decidedly undesirable presence, and as

he was swiftly borne away he could only speculate uncomfortably as to its meaning. On reaching Annapolis he promptly wrote to the senator and to Takahaki for information, and from the former he received the following brief reply:

"Dear Boy:-In answer to yours regarding Mr. Suwarrowvitch, would say that I don't know what call you have to be so worked up. He seems to be a gentleman even though he is a Russian, and he is most popular with the girls. He came to me with a note of introduction from the Russian Ambassador which of course I was bound to honor, America and Russia being the good friends they are. No, your mother did not meet him. she having left before he arrived. Try to have a little more charity for those so unfortunate as to be born in other countries, and believe me to be as always,

"Your Affectionate Godfather."

Takahaki wrote: "Yes, the big man about who you ask some question is here at work and I make with him much friendship. More of him I will tell you when we may sometime meet again.'

Of course this was very puzzling, and Dunster was not at all pleased that his friend should be on friendly terms with a man whom he considered to be an enemy to both of them. No enlightenment of the mystery came to him until some months later when, on the night before Christmas, as he was dressing for a ball to be given by the cadets in the old symnasium that evening, the door of his sitting room was quietly opened and in walked his long absent roommate.

"Hurrah! old man," cried Dunster, springing forward and grasping his chum's hand. "Why didn't you let me know you were coming? I suppose you have run up for the ball, and you are here just in time, too. So hurry up and jump into your dress

togs."
"The ball?" repeated Takahaki, looking puzzled.

"Is it a game?"

"Game? No, of course not," laughed Dunster. "It is the Christmas Eve hop in the Gym., you know, to which you are one of the heaviest subscribers. Don't you remember, I wrote you all about it, and you sent back twenty-five dollars? Awfully sorry that I can't stop for more 'chin-chin;' but I must run up to the hotel to escort a young lady from Baltimore who-But, I say! What's the matter with you coming along? There's more than one of them, I don't exactly know how many, in the party and they'll be pleased as pie to have another man in buttons."

Always ready to follow Dun Brown's lead, Takahaki promptly accepted this invitation, hurried into his dress uniform, drove with his chum to the Maryland, where he was introduced to half a dozen of the jolliest and prettiest of Baltimore girls, and from that moment until the conclusion of the ball he was the life of the party. Never had he shown such sprightly wit: never before had he ap-

peared so contagiously happy, so bubbling over with irrepressible joy. Always a good dancer, on this occasion he danced to perfection; and long before the hop was ended, Takahaki of Hakodate was unanimously voted by the fairer half of the assemblage to be the very dearest little cadet they ever had met.

He received a score of invitations to forthcoming balls and parties to be given in nearly as many different cities during the next two weeks, and he gravely promised to accept every one of them, always provided that he could obtain permission from the authorities. He was loaded with cotillion favors, and when finally, to the softly lingering strains of "Home, Sweet Home," the brilliant affair came to an end, the lad from Japan knew that he had gained a beautiful memory, to be treasured so long as he lived.

An hour later, Dunster Brownleigh, returning from a little supper engagement, was amazed to find his roommate hard at work packing a trunk.

"What on earth are you doing, Taki?" he cried. "I am make ready for a travel," was the smiling

reply. You surely aren't going

"Travel! Where to? back to the shipyard?" "No; it was there I got my order to come here and arrange to start with all hurry for San Fran-

cisco.' "San Francisco! And what are you going to do

there?

"Take the steamer of Saturday for Yokohama." "For Japan! Then you have been recalled?"

"Yes, Dun Brown." "Do you know why?" "No, I do not know. But, Dun Brown, I think

maybe," here the young fellow stood up with a gleam of intense excitement in his eyes, "I think, almost sure, that pretty quick, my country and the country of that Suwarrow

are at war.' "You don't mean it!" gasped Midshipman Brownleigh. "A war with Russia! and you will be in it, while I shall be left behind? Oh, Taki! can't you take me with you? I would give half my life to be in that fight."

"For have you fight with me, I too would give half of the years to come,' replied the other. "But such a thing may not be. For this time, only Nippon Denji (man of Japan) may fight the White Czar Also it is perhaps a war most dreadful: for it will be the fight for life of one little man against three very big man; forty poor millions against one hundred and twenty millions, very rich.'

"Taki, what did you mean when you wrote that you had made a friendship with Suwarrow?"

"That Rossky come to learn the submarine. I not like that anyone else teach him. So I make much friendship and show him everything. Oh, yes, I teach that Rus-si-an many thing most val-youable for-Japan."

I do not think that I ever heard him say, 'O, I forgot,' a single time in all the twenty years he was in my employ. The word 'procrastination' was not in his vocabulary."

It is a word all boys should fight shy of if they would attain the highest degree of success in life. It will be sure to make mischief if you allow it to influence you to the extent of thinking that tomorrow will do just as well as to-day for the doing

of the thing you have been told to do

The "just going to" habit has caused more than one man to lose the opportunity of a lifetime. The dawdler is sure to be left in the race of life. Now is the time to do the thing that must be done and that you have agreed to do. you will do this or that to-morrow? Read this: "To-morrow! it is a period nowhere to be found in all the hoary registers of time, unless perchance in the fool's calendar. Wisdom disclaims the word, nor holds society with those that own it.'

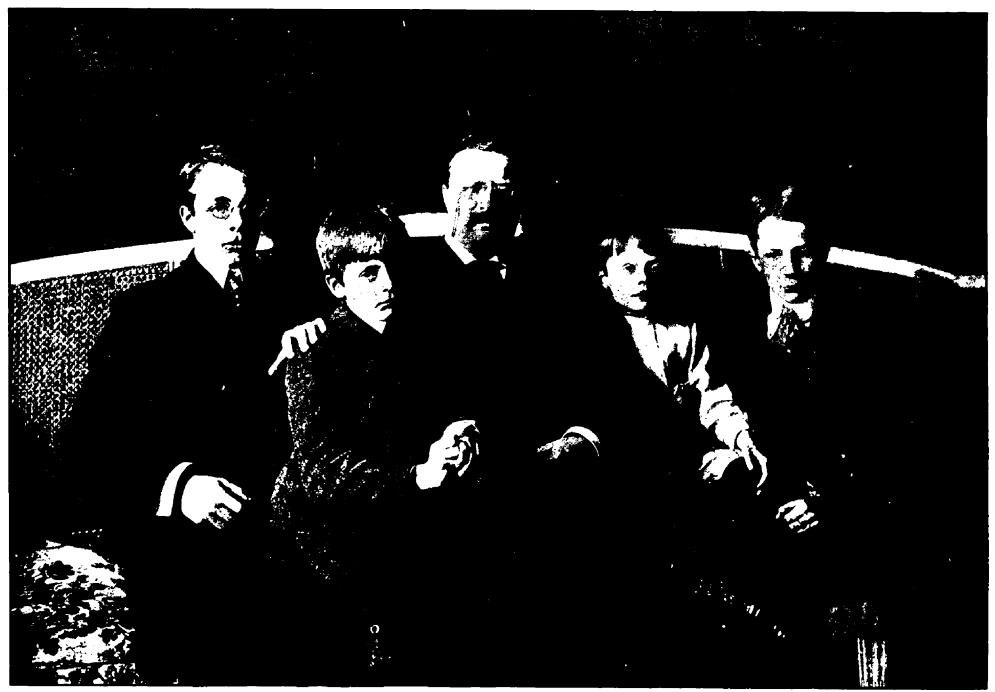

### The World's Oldest Inhabitant

Several years ago, when the son-inlaw of Karl Hagenbeck, the animal trainer, was looking for interesting specimens, he learned of the existence on an island of Seychelles, off the coast of Madagascar, of a giant tortoise, that was celebrated among the natives not merely for its great size—it weighs 970 pounds—but for the fact that there was documentary evidence that it had been living on the earth for over 150 years and probable evidence that it was from 100 to 150 years older than that. After careful investigation, he was satisfied of the truth of the statement, and set about to secure the loan of this animal (which, by the way, is held in the highest esteem and respect on the island), for exhibition at the St. Louis World's Fair. Not until the strongst assurances were made that the venerable curiosity would be returned to the Seychelles did the native population consent to part with him for his long vacation. We are informed by Mr. Hagenbeck that when the tortoise reached this country, it was found that a tiny palm tree was growing from the back of the creature. The tortoise loves the mud, and it is evident that soil was washed into a deep scar on his back and that the seeds of the palm, mixed with the earth, and the tiny growth had thrived in its portable field. The tortoise is the

phant, which frequently exceeds one hundred years of life. The fact that 150 years ago the Seychelles natives began to take particular pride in this tortoise because of its age makes it certain that it must have been at least one hundred years of age at that time. This is borne out by the condition of the shell, which is a guide to determining the age. Further evidence is its most abnormal size. It possesses extraordinary lifting strength. While it was in its heavy cage at the World's Fair express office, it became impatient, and proceeded to break its way out. It smashed the heavy 2 by 8 inch timbers with ease.—Scientific American.

The Queer Beggar Poy One day the queerest beggar boy He came to our back door; He was the raggedyest one I ever saw before. My mother told him, "Come right in And sit down here and rest,' And gave him lots of buttered bread. And cake, and turkey breast. And then she gave him my old coat, And hat that's almost new And then she said, "Poor child, poor child," And gave him playthings, too. But 'stead of being happy, then, And nice and satisfied,

As I'd 'a' been, that beggar bov Jus' cried, and cried, and cried! -Louise Morgan Sill, in Harper's Magazine.

A PRESIDENT WHO BELIEVES IN BOYS

ON THE POURTH DAY OF THIS MONTH (MARCH) THEODORS ROOSEVELT ENTERS UPON HIS SECOND TERM AS PRESIDENT OF THE UNITED STATES

### FOR THE MIKADO

(Continued from page 132.)

and sounds encountered by the fair visitors on

With those alleviations, Dunster Brownleigh's "working" vacation became such a pleasant affair that he deeply regretted its termination with the arrival of the day when he was compelled to return to the exacting routine of the Academy. His regret was strengthened by the fact that his roommate was to be left behind. This was brought about by the Japanese Minister who seemed to think that Takahaki was acquiring at the shipyard an experience too valuable to be interrupted for the present.

Thus Dunster, going aboard the steamer that was to carry him to Annapolis, was separated for the first time in two years from the chum who so decidedly had influenced his own life during that time. As his boat was beginning to move from her moorings and he was exchanging last farewells with Takahaki, who remained on the wharf, the latter suddenly pointed to an approaching launch. It was that of the senator, filled with a greater number than usual of pretty girls, come thus early on purpose to bid the departing Middy good-bye. Of course the latter's whole attention instantly was diverted in that direction; and as the outgoing steamboat passed the incoming launch, he, leaning far over a guard rail, exchanged merry salutations with its fair occupants. All at once he became filled with amazement; fe or, sitting beside his godfather, was a well-dressed stranger, whom, at the moment of passing, he recognized as the young Russian, Suwarrow Suwarrowvitch.

Of course there was then no opportunity to gain the slightest information concerning this unexpected and decidedly undesirable presence, and as

he was swiftly borne away he could only speculate uncomfortably as to its meaning. On reaching Annapolis he promptly wrote to the senator and to Takahaki for information, and from the former he received the following brief reply:

"Dear Boy:-In answer to yours regarding Mr. Suwarrowvitch, would say that I don't know what call you have to be so worked up. He seems to be a gentleman even though he is a Russian, and he is most popular with the girls. He came to me with a note of introduction from the Russian Ambassador which of course I was bound to honor. America and Russia being the good friends they are. No, your mother did not meet him, she having left before he arrived. Try to have a little more charity for those so unfortunate as to be born in other countries, and believe me to be as always,

### "Your Affectionate Godfather."

Takahaki wrote: "Yes, the big man about who you ask some question is here at work and I make with him much friendship. More of him I will tell you when we may sometime meet again."

Of course this was very puzzling, and Dunster was not at all pleased that his friend should be on friendly terms with a man whom he considered to be an enemy to both of them. No enlightenment of the mystery came to him until some months later when, on the night before Christmas, as he was dressing for a ball to be given by the cadets in the old gymnasium that evening, the door of his sitting room was quietly opened and in walked his long absent roommate.

'Hurrah! old man," cried Dunster, springing forward and grasping his chum's hand. "Why didn't you let me know you were coming? I suppose you have run up for the ball, and you are here just in time, too. So hurry up and jump into your dress togs."

'The ball?" repeated Takahaki, looking puzzled. "Is it a game?"

"Game? No, of course not," laughed Dunster. 'It is the Christmas Eve hop in the Gym., you know, to which you are one of the heaviest sub-Don't you remember, I wrote you all about it, and you sent back twenty-five dollars? Awfully sorry that I can't stop for more 'chin-chin;' but I must run up to the hotel to escort a young lady from Baltimore who—But, I say! What's the matter with you coming along? There's more than one of them, I don't exactly know how many, in the party and they'll be pleased as pie to have an-

Always ready to follow Dun Brown's lead. Tahaki promptly accepted this into his dress uniform, drove with his chum to the Maryland, where he was introduced to half a dozen of the jolliest and prettiest of Baltimore girls, and from that moment until the conclusion of the ball he was the life of the party. Never had he shown such sprightly wit; never before had he ap-

other man in buttons."

peared so contagiously happy, so bubbling over with irrepressible joy. Always 2 good dancer, on this occasion he danced to perfection; and long before the hop was ended, Takahaki of Hakodate was unanimously voted by the fairer half of the assemblage to be the very dearest little cadet they ever had met.

He received a score of invitations to forthcoming balls and parties to be given in nearly as many different cities during the next two weeks, and he gravely promised to accept every one of them, always provided that he could obtain permission from the authorities. He was loaded with cotillion favors, and when finally, to the softly lingering strains of "Home, Sweet Home," the brilliant affair came to an end, the lad from Japan knew that he had gained a heautiful memory, to be treasured so long as he lived.

An hour later, Dunster Brownleigh, returning from a little supper engagement, was amazed to find his roommate hard at work packing a trunk.

"What on earth are you doing, Taki?" he cried. "I am make ready for a travel," was the smiling reply.
"Travel! Where to?

You surely aren't going back to the shippard?"

"No; it was there I got my order to come here and arrange to start with all hurry for San Fran-

"San Francisco! And what are you going to do there?

"Take the steamer of Saturday for Yokohama."

"For Japan! Then you have been recalled?" "Yes, Dun Brown."

"Do you know why?" "No, I do not know. But, Dun Brown, I think maybe," here the young fellow stood up with a gleam of intense excitement in his eyes, "I think,

almost sure, that pretty quick, my country and the country of that Suwarrow are at war.'

"You don't mean it!" gasped Midshipman Brownleigh. "A war with Russia! and you will be in it, while I shall be left behind? Oh, Taki! can't you take me with you? I would give half my life to be in that fight."

"For have you fight with me, I too would give half of the years to come," replied the other. "But such a thing may not be. For this time, only Nippon Denji (man of Japan) may fight the White Czar Also it is perhaps a war most dreadful; for it will be the fight for life of one little man against three very big man; forty poor millions against one hundred and twenty millions, very rich.'

"Taki, what did you mean when you wrote that you had made a friendship with Suwarrow?"

"That Rossky come to learn the submarine. I not like that anyone else teach him. So I make much friendship and show him everything. Oh, yes, I teach that Rus-si-an many thing most val-youable for-Japan.'

# THE CHAMPION CORN PLOWER

By MOTT R. SAWYERS

HE SONOROUS VOICE of the sheriff, calling, "Hear Ye! Hear Ye!" had declared court adjourned for the term, but the train on which the judge expected to leave was not due for several hours, so he with a group of lawyers remained in the court room discussing cases and telling stories. The conversation gradually took a reminiscent turn and at length one of the attorneys appropriately asked, "Judge, what do you call the most important event in your life?" The courtly man deliberated a moment, and then replied, "It's quite a story, but I will tell you."

All prepared to listen to a narrative of unusual interest, for few things had been more talked about during that term by the more talked about during that term by the members of the bar than the judge's rapid rise and prospects for further advancement. He had had unprecedented success in his early practice and because of conspicuous fitness was now serving his second term on the bench, though still a young man. Men more prominent than himself had given him high praise and one eminent jurist had declared that while most lawyers were made only by practice.

one eminent jurist had declared that while most lawyers were made only by practice, Judge Wilson was a finished product the day he was admitted to the bar.

"I will tell you," he continued, "It was almost twenty years ago out in Iowa. It was more fruitful than any dozen days I have had since and I am still making money out of it. It happened this way. We had a large farm which my father, my brother fifteen years old and myself were taking care of. We planted one hundred and twenty acres of corn that spring. I was eighteen, strong and tireless, saving I was eighteen, strong and tireless, saving every cent I could to go to college, but not making much headway toward it for we thought forty acres of corn enough for one man to handle, so that I had but little opportunity for making money. The weather being unfavorable we got behind with our work and the weeds were about to take the corn, when father, who had been away from home care in one even to take the corn, when father, who had been away from home came in one evening and said, 'Boys, I've got some one to help plow tomorrow. Pierre Lecarde will be here.' We started with surprise and pleasure. Pierre Lecarde was a Frenchman who lived about six miles distant. Neither of us boys had ever seen him, for he lived alone away from the road and never took any part in the neighborhood festivities. No one knew much about Pierre. He had come into the community unannounced, secured a plece of land, paid for it and gone on living his solitary life. But they do not ask foolish questions about the past in a new country. Buyers would just as soon purchase from solitary life. But they do not ask foolish questions about the past in a new country. Huyers would just as soon purchase from Pierre as from any one else, so he prospered. One thing, however, everyone knew and that was that Pierre Lecarde was the champion corn plower of the county. Time after time ambitious youngsters and even older men had competed with him, but always with the same result. Pierre beat them by rods. So father's announcement put us into a state of great excitement. While we were still discussing the matter one of the neighbors came over to see about a mowing machine which he and father were talking of buying in partnership for the coming hay harvest which promised to be unusually heavy. Of course we told him about Pierre's expected coming. He was well acquainted with the Frenchman and aroused our curiosity still more. 'You fellows will see some plowing tomorrow,' he said, 'you will have to hump if you keep in sight of him,' and then he went on telling of Pierre's achievements—how he had tended eighty acres with one team and how the best men in the county had tried to beat him and failed. Just team and how the best men in the county had tried to beat him and failed. Just before he left he described him to us with

before he left he described him to us with a sly wink at father which I did not comprehend till later, as 'a great, big man, with a team of little, scrawny Indian ponies that looked like they never had seen a currycomb, and an old cultivator that rattled like it would fall to pieces.'

"I slept but little that night as I pictured over and over to myself the ideal champion—a great, big man.' of course, anyone would know that! 'Little, scrawny Indian ponies!' What a combination! 'An old, rattling cultivator!' I laughed at the idea. Many a time I had heard the folks tell of a famous coup at the county fair idea. Many a time i had near the torse tell of a famous coup at the county fair years before. On that occasion a queer-looking old man and a ragged boy came driving in with a rattle trap of a buggy and an ungainly old horse. A mid the description of the description of the state rision of the crowd they had insisted on rision of the crowd they had insisted on entering the beast for the running race. It was great sport for the spectators and the owners of the other horses, but no sooner had the entry been recorded than the boy appeared in a silk 'jockey suit' and the horse was transformed into a wide-awake thoroughired which easily won the money of those who had been foolish enough to bet against it. That couphad been the theme of neighborhood talk for years. Those who had witnessed it seemed never to tire of teiling it, with ademed never to tire of telling it, with additions, for their own mutual enjoyment and the instruction of those whose lives had been narrowed by missing it. And now in Pierre and his little Indian ponies plowing more than the brag big teams I

was to see something like it.
"In the morning as I was getting my team ready for work I heard a great clatter in the yard. I stepped to the barn door to see what was up. The sight I beheld fairly took my breath away. Standing hitched to a newly-painted cultivator was the handsomest team I had ever seen. They were fit for a picture—smooth-coated, rangy bays—brighteyed, full of power, and polished as if they were out for a parade. Their harness was in perfect condition, freshly-oiled and lavishly ornamented with brilliantly colored rings. A dapper little man, with a bright blue hand-kerchief around his neck, and boots well blacked, was shaking hands with father and talking loudly about corn, hay, plowing and the weather, all in the same breath and gesticulating with his free arm. The meaning of the neighbor's sly wink dawned upon me—this was Pierre. He was so different from what I had imagined a champion to be that I immediately conceived a great contempt for him and re-

solved to take him down a peg before "I hitched up my team and without fur-

ther preliminaries we went to the field. And cultivator. As I passed by him to get 'Now,' said father to me, 'here is a man who knows how to plow corn. I want you to watch him and learn all you can. And I Pierre, I want you to show him whenever you see he needs it.' The little coxcomb at once entered a protest in a manner that did not at all raise him in my estimation. 'No sir-ee' he exclaimed in broken French, 'I don't want to fool wiz boy. He bozer my team. You got pay me two dollar and half today, I do zat. I carn that by ze acre.' 'All right,' replied father apparently taking his protest as a matter of course, 'Go ahead.' And 'Go ahead' we did. Pierre screamed at his bays and started off almost at a trot, clucking and talking to his horses at every step, speaking first to one and then the other. All this fuss and noise gave him another drop in my estimation. 'Champion': I thought, 'I'll show him.' I was getting along well, I supposed, when suddenly the Frenchman stopped came back to me and over and take him the money. I set out thought. 'I'll show him.' I was getting along well, I supposed, when suddenly the Frenchman stopped, came back to me and burst out vociferously, 'Zere, look at zat' Vere you learn to hill ze corn? Zees ze vay, see me!' On we went again. Again he stopped. That time he fairly yelled, 'See ze end of zat row. You lazy! You stop too quick!' We started again and I begun to entertain hopes of keeping up with him all day when I had to stop to change one of my shovels, while he went clattering on and soon had gained a whole row on me. Thus it was all forenoon—frequent stops, accompanied by what seemed

"We had been instructed to quit early and off went Pierre, clucking and chattering, without a word about his pay. After supper father who was always particular about such matters told me to ride over and take him the money. I set out at a good gallon and covered the six miles

solely by whip and lines and turning the rows with the same motion every time. Pierre's expression, 'Vat ze deeference vat I say, so I get ze corn plow,' stuck to me. I had a purpose in this silence and was determined to maintain it. At the end of the hour I took the team from the field, covered with sweat and blowling hard, unlarnessed them, gave them a good rubcovered with sweat and blowing hard, un-barnessed them, gave them a good rub-bing down, put them in the barn an i re-turned to work with my regular horses. I worked on until noon, making no attempt at speed but doing my very best to make my land look at least as well as Pierre's neatly kept field. In the afternoon i re-peated the performance, and every day during the week, lengthening the time for the blacks each trip until they fully un ler-stood that when we went to the field everything was to go on the jump until we got back.

"I worked on the farm the remainder of

everything was to go on the jump until we got back.

"I worked on the farm the remainder of that year, saving what I could, using the blacks whenever I could and always making them walk at their best gait. The next spring came the important event. One day in February I told father of my plans for college and then I added, 'If I will tend sixty acres of corn this spring and beat Pierre plowing you will give me the black team, won't you?' He laughed and said, 'On those two conditions, yes,'

"The tract of land which he estimate! for me as sixty acres, measured only fifty-five, so I rented twenty-five more and prepared to manage eighty. The way I worked that spring was not to be laughed at. Having no chores to do I was in the field at sunrise and plowed as long as I could see. Whenever I used the blacks I pushed them along, never saying a word, until the manner in which they silently reeled off acre after acre was astonishing even to me. One Saturday evening I lai my last field by I felt that I was good. pushed them along, never saying a word, until the manner in which they silently reeled off acre after acre was astonishing even to me. One Saturday evening I lai my last field by. I felt that I was gool for another week of hard work, and good care had kept my team in excellent condition. I, therefore, began making inquiry for some one who had late plowing that I might add to my college fund and perhaps be brought into competition with Pierre without a direct challenge, for I now believed my blacks invincible. That evening word came that one of the neighbors had been injured in a runaway and would be confined to the house several weeks. Hired help was scarce and it was suggested that the neighbors gather in and plow his corn for him. I did not welcome the suggestion, for I was anxious to get wages, but I had been brought up to be neighborly and reluctantly agreed to give one day's work. The next morning at meeting, our minister, deeming it a work of mercy and therefore proper, had the details arranged by the leading men. I had nothing to do with the arrangements but if I had had entire control could not have had them more to my liking. Five men were selected to do the plowing. To make things more interesting, a purse amounting to four dollars and fifteen cents was made up among those present, to be given to the one who should excel. The work was to be done on the following Wednesday. Pierre Lecarde was to be one of the plowers, I was to be another. I paid but little attention to the others, merely noting that they were men whom Pierre had beaten. We kept Sunday religiously at our home, so my blacks were not touched that day. The next morning I took them out and plowed vigorously about three-quarters of an hour, and while rubbing them down inspected them thoroughly from the tips of their ears to the ends of their tails. After dinner I took them to the blacksmith and had their feet carefully trimmed and their shoes reset. On my return, I went over my harness, piece by piece, oiling and repairing—and them to the blacksmith and had their feet carefully trimmed and their shoes reset. On my return, I went over my harness, piece by piece, oiling and repairing—and then my cultivator. The next day I gave the horses a warming up, just to get them accustomed to their shoes and any changes I might have made in the harness. That afternoon I went to the field where we were to plow, and examined it from all points, walking around it and through it were to plow, and examined it from all points, walking around it and through it in different directions, deciding just how i would plow each part should that part be asigned to me. I had made Pierre's motto mine and was determined to have everything ready. After supper I wrote out a list of the things which I ought to do to make my preparation complete. I checked the list over repeatedly and could find nothing that I had left undone. I was ready. My team was ready. My cultivator was ready. I could see no reason why I

was ready. I could see no reason why I was not in a position to go 'fass.'

"As I set out Wednesday morning I flattered myself that my shining blacks presented fully as fine an appearance as Pierre's handsome bays; but his words were in my mind. 'Vat ze decerence how I look, so I get the corn plow, and I had no intention of letting a regard for appearances keep me from winning though I was secretly pleased with the looks of admiration which were given my outfit as I drove into the neighbor's yard. A good many persons were already on the ground and our parts had been assigned to us. Promptly at the hour appointed we drove into the field and the contest was on into the field and the contest was on. Pierre was clucking and talking with un-usual vehemence but I said nothing. I intended by my silence to mislead Pierre in-to believing that I was not going 'fass,' and I knew that the blacks would make good speed regardless of noise. My expectation was that Pierre would suffer from overconfidence. He had beaten the others in contests and knew nothing of me except what he had seen the year before, and that was not such as to cause him any alarm. I stationed my brother where he could watch Pierre and report to me. Everything went as I had planned except that Pierre made better speed than I had anticipated. My intention was to get such a lead on him in the beginning before he realized it that he could not catch up. At the end of the first hour I was one row At the end of the first hour I was one row ahead of him and three ahead of the others who strangely enough were even. By noon I had increased my lead over Pierre to four rows and no longer regarded the others as competitors. I was sure Pierre did not know how we stood and if I could only hold my own I would win. I took the noon hour as did Pierre in working with my team and cultivator. My ex-(Continued on page 159.)

to me merciless ridicule. As we went in alry. The other was a for dinner I looked over his work and my cellence in mathematics. contempt was considerably lessened. There was not only a good stretch done, but there was a neatness and finish to it that was a revelation to me. I knew at once that it was the art of a master and I gazed upon my own furrows with a good deal of the self-concelt taken out of me. When we reached the barn I led my horses to water, threw in their feed, jerked off their bridles and went to the house, according to our custom; but Pierre unharnessed his, rubbed them over with a cloth, sponged out their nostrils as I had seen the men do at the county fair and carefully wiped the sweat from the collars and backpads.

"During dinner I perceived that father was taking advantage of Pierre's talkativeness to gain information about corn-plow-ing, and though I felt humiliated by my treatment during the forenoon I determined to learn all I could. 'Of course I am ze boss cornplower, ze shampeeon,' he blustered, 'for I am ze only one vat goes at it scientif. Ze science, zat ze zing! Ze gran secret ees to have everzing ready be-fore you begin; zen you can go fass. No one ever hear me stop to fix anyzing. My plow ees right. I knows how high ze corn, how long ze row, how rough ze groun. I knows it all. And zen ze team—ze team, zats it! Man can stan ze vork, but ze team not so vell. shoulders, feet, legs, I watch everzing. I takes no chance. I knows how fass and far I go—ten row, eighty rod, zat one acre. Zat ze firs hour, zen fasser. Have everzing ready before you begin zen you can go fass, zat ze science. Zat my

alry. The other was a certificate of excellence in mathematics. 'Yes,' I said to myself, 'that is where he gets the science. Leaving him asleep I went out to look at this corn field. The way every the part of the corn field. his corn field. To my eyes it was a mar-vel of beauty. The rows were as straight as an arrow, and as clean as a floor, while the ends were rounded as carefully as a fop could tie a necktic. I studied the scene until I was sure I knew just how the result had been attained. Then as darkness had been attained. Then as darkness was coming on I returned to the house, waked Pierre, gave him his money and left. In that ride home my life plan was made. Pierre's motto was pounding like a triphammer in my head, 'Have everything ready before you begin, zen you can go fass.' I had intended to go to college that fall, take one year, remain out the next while I carned money and then take an-other and so on until I had completed the course; but Pierre had knocked that idea skyhigh. I would wait until I could see my way cl start at all. clear through before I would

"The next morning father left to be gone a week. Without saying a word to anyone. I went out into the pasture and brought in a pair of four-year-old horses that had been idle nearly all spring. They had been used some but they were so unmanageable and restless that it was next to impossible to do good plowing with them, and as a result they had never been pressed into service when anything else was fit. They were coal black and almost fass and far I go—ten row, eighty rod, zat one acre. Zat ze firs hour, zen fasser. Have everzing ready before you begin zen you can go fass, zat ze science. Zat my motto. Some fool say I talk too much and dress too fine; but vat ze deeference how I dress or vat I say, so I get ze corn plow? Yat ze deeference? "When we were through eating, my brother and I stretched out for the noon rest, but Pierre was busy with his team

# THE IROQUOIS INDIANS!

By J. GERTRUDE MENARD

These savages, whose name for a hundred years was the synonym for death hundred years was the synonym for death and disaster, and who belonged to an aggregation of five tribes important enough to be dignified by the title of "Nations," conducted a species of warfare against mankind that gave them great prominence in the annals of their time. Not only upon the people of their own race—the less powerful tribes of the Hurons and Algonquins, fell the weight of their pitiless onslaughts, but the settlers of early New France were their constant prey; and even the distant New England colonists, lying unprotected on their lonely frontier farms, became the frequent victims of their tomahawks and torches.

BAPTISTE, THE INDIAN PILOT

As wily as they were brave, as treacherous as they were sagacious, the Iroquois owed not to these qualities alone the supermacy they maintained over their contemporaries. They were acknowledged to possess the highest form of Indian intelligence. Their country, which stretched from Niagara Falls to the present city of Albany, and thence to Lake Champlain, contained solidly built, permanent "lodges." Their crops were well planted and well cared for. They had formed the habit, unpracticed by other tribes, of storing provisions against a time of want. Then, while their neighbors were weakened and decimated by frequent famine, the Iroquois fortified by their abundant supplies, grew in numbers and strength.

Of the 16,250 Iroquois living at the present day, 5,300 still reside on reservations in the old fatherland, now the state of the support of having his head, set in the distinction of stately feathers and wampum, printed on the ten-dollar notes of the Dominion of the ten-dollar notes of the Lachine Rapids each year at the opening of navigation, a thing that has now become one of the time-honored ceremonials of the country. As soon as the ice has broken before even the hardiest Canadian dares venture upon the familiar waterway, "Big John" in his faithful canoe tests the safety of the trip. When he has given his word that danger waterway, "Big John" in his faithful canoe tests the safety of the trip. When he has given his word that danger waterway is a sound that the

fortified by their abundant supplies, grew in numbers and strength.

Of the 16,250 Iroquois living at the present day, 5,300 still reside on reservations in the old fatherland, now the state of New York.

But in that Canada, the flercest rapids of whose rivers they shot triumphantly, whose wildernesses they haunted like terrible spectres, whose pleasant farms they

whose wildernesses they haunted like terrible spectres, whose pleasant farms they laid waste at will, the majority of the Iroquois find a congenial home, changed by time and circumstance into a law-abiding, people, content to turn their strength to whatever "ignoble" task may gain them a subsistence and a home.

Of the three Iroquois settlements in Canada—Caughnawaga, St. Regis and Oka, by far the largest and most important is a prey always to the terrible heat and to Caughnawaga, a village beautifully situated on the St. Lawrence just above Mont-

THE AVERAGE boy perhaps no class of persons are so interesting as are the Iroquois Indians.

These savages, whose name for a undred years was the synonym for death and disaster, and who belonged to an agregation of five tribes important enough be dignified by the title of "Nations," and that pave them great prominence the annals of their time. Not only upon the people of their own race—the less powit being the custom of the Iroquois house-wife to clean her abode only upon feast-days, which occur two or three times a year. The wigwam fire, that shrine indis-solubly connected with Indian home life, has degenerated into a commonplace stove; upon the walls in place of tomahawk and scalping knife hang cheap prints of the present King of England, or gaudy chromos purchased from prodering poddlers; and purchased from wandering peddlers; and when one looks eagerly for an odd gar-ment of buckskin, or the remnant of an eagle-feather headdress one sees only an old felt hat or the most prosaic of shabby coats thrown carelessly upon chair or ta-ble

ble.
The women sitting in the little bare rooms, however, have not been altered by civilization so markedly as have their sur-roundings. The swarthy skin, the high cheek-bones, the piercing black eyes fulfil the ideal of the Indian countenance. The principal labor of the female portion of the village is the making of moccasins and beaded articles to sell in the city of Montreal. The attire is ordinary except that no hats or bonnets are worn. A black shawl, not inartistically draped, is the inseparable headgear and wrap of the Iroquois woman, as is a string of beads around the neck her as is a string of beads around the neck her ever-present adornment. The mothers still retain the ancient custom of strapping their bables to boards, and it is a not uncommon sight to see a rigid, brown-faced bundle leaned conveniently against a nearby wall or doorpost while the unencumbered parent plies her needle among the gay colored beads.

One glory the Iroquois braves still retain

One glory the Iroquois braves still retain in their fallen state, however, and that is their ancient skill as pilots and voyageurs. The mighty river, whose flercest fury of ice or flood was in former days unable to check or flood was in former days unable to check their course or daunt their courage, still owns them masters. The wonderful feats in this direction performed by "Big Baptiste" has procured for him the distinction of having his head, set in the dignity of stately feathers and wampum, printed on the ten-dollar notes of the Dominion of Canada. "Big John," another pilot of note, has gained fame and money by his hazardous shooting of the Lachine Rapids each year at the opening of navigation, a thing that has now become one of the time-honored ceremonials of the country. As

the quiet homes of their native village, from the shores of their familiar river, fifty-five men under the leadership of one of their most skillful woodsmen, rafters and pilots, set forth with the contingent

IROQUOIS INDIANS IN FESTAL ARRAY

Lachine. The name Caughnawaga signifies "near the rapids." and from the bridge which spans the river at this point one may see the white line of foam which marks the treacherous currents of the Lachine

real and directly opposite the township of sufficient here to state that these sturdy northmen came very near saving the day. By the success or failure of the Indian experts in taking the heavily laden loats up the cataracts of the Nile, Lord Wolseley proposed to decide whether the relief party should go by way of the river or around by the Red Sea. At Alexandria 20,000 men waited impatiently while the Indians made Rapids.

The settlement, which is the outgrowth of one of the early missions, was founded in 1696. It contains a population of over two thousand, inhabiting houses numbering about four hundred. The government of Canada allows the Indians only the land, sufficient for dwellings and garden plots, together with the sum of three hundred dollars yearly for the purpose of securing an instructor in the English language. All the buildings therefore, school, cottages,

week; the city had fallen, and General Gordon was dead. Had Lord Wolseley trusted the Iroquois without the month's delay of the trial trip, one page of English history would have been different.

But to the dauntlers pilots came, nevertheless, full measure of praise and recognition. The Royal Engineers who planned most elaborately on paper, the advance up the stream, and shouted their orders from some safe vantage point only to see boat after hoat hurled to destruction, came facility to discover the wisdom of retiring boat after hoat huried to destruction, came finally to discover the wisdom of retiring from the foreground of the campaign, and of bringing out the humble voyageurs who said nothing but did much. And to the governor-general of Canada, Lord Wolseley sent this message: "I desire to place on record not only my own opinion, but that of every officer connected with the management of the boat columns, that the services of these voyageurs have been of the greatest possible value. They have shown not only great at the services of these records and the perceable and harmless. It is only when that old enemy of the red man, the pernicious "fire water," makes its appearance that disturbances take place. The community is as far as possible self-governing, the executive body called the minds that once sat in solemn conclave to decide the fate of powerful nations, now give their attention to the mending of roads or the sinkless.

dles stand quiet in the chimney corners; when the steamboats and lumber rafts that ply the wonderful northern rivers and lakes wait idle at their moorings, when all the icy world, in fact, is wrapped in silence and desolation, the braves of Caughnawas: sit around the fires and relate through clouds of tobacco smoke the thrilling story

f their adventures in ancient Egypt. It must not be supposed that the two It must not be supposed that the two thousand Indians now resident in Caughnawaga are of unmixed Iroquois blood. During the time when this powerful people gave their wavering allegiance, now to the English, now to the French, now to the Dutch, it was their wise custom to adopt each year a large number of the captives secured in the various wars with hostile nations. The prisoners thus appropriated were forced to assume the manners and customs of the tribe and became in a short time thorough Iroquois. Even remote New England added its bitter contribution to the ranks of these savages, and to the infusion of Puritan blood Caughnawaga owes such incongruous names as Rice, Williams. such incongruous names as Rice, Williams, Jacobs, Hill, Stacey, McGregor and others. A few statistics will show the importance of this system of adoption:

of this system of adoption:

Eunice Williams, seven years old, daughter of Rev. John Williams, minister at Deerfield, Mass., was taken to Caughnawaga in February 1704. She was called by her captors, Karenstenhawi, "She brings corn." She married an Indian chief, Arosen, "the beaver," and her descendants now

Jacob Hill, twelve years old, taken near Albany, known by his captors as Karonheintawi, "heaven given," married in 1766 a captive girl, and had four children. His descendants are eleven hundred in number.

John Stacey, fourteen years old, Hill's companion in captivity, surnamed Aionwatha, "the maker of rivers," is the ancestor of over four hundred of the Caughnawara.

of over four hundred of the Caughnawaga

on oringing out the humble voyageurs who said nothing but did much. And to the governor-general of Canada, Lord Wolseley sent this message: "I desire to place on record not only my own opinion, but that of every officer connected with the management of the boat columns, that the services of these voyageurs have been of the greatest possible value. They have shown not only great skill, but also great courage in navigating their boats through difficult and dangerous waters."

It was many months before the term of their African service expired, and the newmade heroes were allowed to return to their Canadian homes. Since that time, during the long winter season, when the canoes lie inverted on the snowbanks outside the cottage doors, and the trusty paddles stand quiet in the chimney corners.

It is not the possession of money that constitutes wealth, that gives the highest satisfaction, and awakens the consciousness of noble achievement, the assurance that one is fulfilling his mission and that he is reading aright the scaled message which the Creator placed in his hand at birth.—"Success Magazine."

NEW YORK BASKET-BALL TEAM WINNING PROM CHICAGO IN THE ST LOUIS EXPO-

# WITH THE BOYS

sounds like a joke, but we are prepared to believe anything that comes from the great West. He says that the rabbits cost his father's ranch company more than \$100 last year through their eating growing oats. The ranch company has six dogs, two of them being shepherds, one a Newfoundland, whose name is "Jack,," and three hounds, two being staghounds and the third a registered greyhound. Jack has caught and killed five coyotes and Christy's father is tanning the skins for a coat. During the summer vacation Christy helps to irrigate the farm, cocks hay, picks potatoes and shocks grain. The Yellowstone National Park is not far away, and Christy thinks every American boy should visit it.

### TOO MUCH ABOUT CITY BOYS

ELMER NICKELL, Cordell., Okla., thinks we are publishing too much about city boys and city life, and he is afraid we are going to take the boys away from the farms. He says he is going to attend Agricultural College and in that way become a first-class farmer. We hope that his criticism is not just.

### A YOUNG HUNTER

J. BAILEY HENDLEHART, Gettysburg, J. BAILEY HENDLEHART, Gettysburg, Pa., admired very much our December cover because he loves hunting. He is 15 years old and in the junior class in High School. He takes especial interest in the pictures of ships and the stories and articles regarding the sea that appear in THE AMERICAN BOY.

### A JAP CELEBRATION

W. PIERCE JAMES, Spokane, Wash, tells us about a Japanese celebration that took place in his city January 7th, the celebration being in honor of the capture of Port Arthur. The fireworks, he says, were on the bomb order, the bombs being shot from apparatus to great heights. When these bombs burst they sent out into the air heautiful designs, such as fish, storks, butterflies, dragons, dogs, Japanese and American flags. As these emblems fell to the earth the boys were ready with umbrellas, sticks and canes to catch them. There was an evening celebration indoors and everyone who attended received a present in the way of a silk handkerchief, or something else of Japanese make. W. PIERCE JAMES, Spokane, Wash.,

As these emblems fell to the boys were ready with umbrellas, sticks and canes to catch them. There was an evening celebration indoors and everyone who attended received a present in the way of a silk handkerchief, or something else of Japanese make,

TEN YEARS WITHOUT A MISS

MILLARD D. GROOT. Hackensack, N. J. who has recently become a subscriber of THE AMERICAN BOY through the efforts of GEO. H. FLINT, another of our subscribers, has earned distinction for having attended every session of the Sunday School of the First Reformed Church of his city during ten years. At the 1901 Christmas exercises of the Sunday School he received a handsome set of books in recognition of his faithfulness.

HUBRE E. FABIANO, Nueva, Caceres, Camarines, P. I. writes that he can hardly wait for the issues of THE AMERICAN BOY. He wants to he known as a friend of American boys. "Six years ago," he says, "I heard no English spoken, while now thousands of Philippine men and women can read, write and speak it. I feel desperately interested in all American boys for the working hard to get my friends to read H. H. AMERICAN BOY."

WHAT LIP AMERICAN BOY."

NORMAN RYDALL is the little son of one of the managers of the great Cawston Ostrich Farm at Los Angeles. Our picture shows Norman riding an ostrich.

A LONG WAY FROM HOME

L. K. ARMSTRONG, Cologne, Germany, writes us a long letter telling about himself. He left America June 4th last to study German and music in Cologne. When he was living in America he didn't quite understand, as he does now, what a fine country he lived in. He sends us part of a birthday letter written him by his father. We are going to print it because it gives such good advice. It reads: "My boy, it looks to you a much longer line from fifteen up to sixty than it does from nearly sixty down to fifteen, and you may think I am only trying to hurry you—but as the days, weeks and years roll by you will see that each one secres to grow shorter, and there are so many things to do and so little time in which to do them. The motto 'Do it now' is good all the time; I hope you will always live up to it. Do all you can to-day; to-morrow will be full of things for itself, and so with every succeeding day. The more you conquer to-day the more you will to-morow. Give your whole life to whatever task you have in hand and never doubt but what you can do it. The farther up you get to-day the higher you can get to-morrow. Do everything in the most thorough manner. Get at facts and the reasons for them and you can then reason out other things. Never do a mean thing. They may be slow in coming back to you with shame, but they are sure to come. Stand for truth, honesty and clean morals always. Never do a thing you would be ashamed to tell your mother of. Be kind, just and true. Remember the other fellow has the same rights you have. Be prompt in all things. Make friends and keep them by being loyal to them whether they be rich or poor. Work while you work and give your whole being to it, and when you play do the same with that. Think good thoughts by shutting out bad ones. There is always a hright side if you only look for it."

The boy says he went to Europe alone and that he was not seasick in going over nor has he been homesick. A very good record. He carries a little silk flag in his pocket and has had se

### FROM A FILIPINO BROTHER

WHAT HE SAW IN WALES

WILLIAM RICHARDS, Toledo, O., is a son of the Staff Captain of the Salvation Army of that city. Last summer he visited England and Wales, attending the International Congress of the Salvation Army with his father. He says delegates from forty-nine different countries and colonics attended. Wales he reports to be a quaint and curious country. The village in which his father was born in Wales has one more building now than it had when his father left there twenty years ago. The Welsh language, he says, is something terrific. He sends us some souvenirs, and here are some extracts from the reading matter which appears: matter which appears:

Scene-Slopes of the renowned Carnedd

Scene—stopes of the renowned Carness. Liewelyn.
Tourist—Good morning, my dear. What is the height of this mountain?
Shepherdess—3.560 feet; about 8 feet less than Engage.

Shepherdess—3.566 feet; about 8 feet less than Snowdon Fawr.
T.—Whose sheep are these?
S.—They belong to M. Goronwy Cadwaladr ap Gruffudd, sir,
T.—Oh! a very nice name, too. And where does he live?
S.—At Tre'rgeifrgwylltion.
T.—What is that lake I see over there?
S.—Liynlle'rllyfnwygwrdd.
T.—Another jaw-breaker. Have you been much from home at all?
S.—Only in Anglesey, sir. I went with my brother and my sister to Llanerchymeddymondo, and from there to see Creigiau'r Crugyll, and came back to Llanfairmathafarneithaf, and then—

T.—Hold hard! let me breathe a little, my dear! W'll, where afterwards? S.—Well, my brother had to go back to Chwarel Caebraichycafn, and my sister to Tre'rhianod, Llanaelhaiarn, but on our way home we went to see the little church by the river—such a funny old-fashioned church sir.

church, sir.

T.-Where is it? I mean what parish?
S.-In Llanfairpwligwyngyligogerychwyrndrobwllantysiliogogogoch.

ndrobwllantvsillogogogoch.

He reports that he saw a tubular bridge and also a church which at high tide is entirely surrounded by water. He says the English people are very kind and courteous, but holding strange opinions of the United States. Some of them think every one here carries a gun. He took a hundred pictures with his "Brownie." The boy plays the cornet and violin and is in the seventh grade in school. His age is 14.

### FROM ACROSS THE BORDER

FROM ACROSS THE BORDER

JAMES A. McKENZIE. Portage La Prairie, Canada, writes a story about himself. He is 14 years old and is in the first form in the Collegiate Institute. He is also in the Portage La Prairie band, that numbers thirty-two instruments. Every boy in his neighborhood can shoot with anything from a shotgun to a catapult, and there is much game in his vicinity such as chicken, duck, geese, rabbits, fox, wolves, bears, moose and elk. Boys are able to shoot small birds and even muskrats with their catapults. He is very fond of farming and loves to get up early in the morning and go out into the clear, pure air, which, he says, puts vigor in his muscles. There are no streams with fish in them, and no hills for coasting, in his neighborhood. Skating and hockey in a large rink makes good sport for the winter. Most of the boys in his town do not care to read papers and it is hard to get subscribers.

### UP IN NORTH DAKOTA

NILS JAHREN, of Enderlin, N. Dak., is the son of the pastor of a Lutheran church with five congregations to visit, but that ought not to make much difference, for Nils says his father has the finest pair of black horses in the county and that they go like a whirlwind. Enderlin has a population of a thousand people, and Nils lives in the country near by, where his father owns fifteen acres of ground.

### A YOUNG FARMER

LUTHER REINER, Creston, O., age about 16, lives on a farm of twenty acres with his mother and sister. His father, who was a Lutheran clergyman, died nine years ago. Young as Luther is, he does the farming, including plowing for corn and planting it; at the same time he doesn't miss school and takes an interest in good boy literature, as is indicated by the fact that he is an admirer of THE AMERICAN BOY.

### CAN SEE MOUNT HAMILTON

RALPH RAMBO lives in the beautiful Santa Clara Valley, Cal., in plain view of Mount Hamilton and the Lick Observatory. His father gave him THE AMERICAN BOY as a Christmas present and he thinks it is the best present he could have given

### A FIRESIDE CHAT

PAUL F. ZELL, Lancaster, Pa., writes us a letter, asking us to read it some evening sitting before the fire, when we feel like having one of our boy friends to talk with. He says THE AMERICAN BOY has a magnetic influence on him for good; that he wants to be a leader among the boys of his community, so far as awakening them to a true American spirit is con-

cerned. He says it is very difficult to get the boys interested in good reading, but he is sure if the boys will but read THE AMERICAN BOY for a little while they will become interested. He is interested particularly in oratory and in reading, and looks forward to the time when he may be able to earn money by his pen. He feels at times discouraged, as he has to depend on himself for his clothing and his beard and he gets little time for school, but he consoles himself with the thought that there is more clear sky than cloudy sky.

### PLUCKY

PLUCKY

JOHN G. HANNA, Galveston, Tex, writes some criticisms on the picture and description of the log cabin that appeared on page 33 of the January number of THE AMERICAN BOY. As our purpose was simply to point out how to make a miniature log cabin with a pocket-koife, there ought not to be any criticism of the fact that we make use of wires and glass, which articles in the construction of log cabins were not common in the days of our forefathers. Our correspondent goes to the Public School and for the past two terms has been the leader of his class, this netwithstanding the fact that he is unfortunate enough to be minus a foot and is totally deaf. He says that he gets as much pleasure out of life as does the average boy, by looking on the bright side of things. His hobby is mechanics and electricity and the thinks the new department in THE AMERICAN BOY the best in the whole paper. He thinks a saw or a lawnmower beats dumb bells or Indian clubs as a muscle maker, and that two months at the woodpile did more for his bicens than a year at the Y. M. C. A gymnasium.

### A YOUNG BALL PLAYER

One of the youngest baseball enthusiasts in the United States is little LAWRENCE McCALL, son of Mr. and Mrs T. A. McCall, of Xenia, Ohio, Although not yet four years old he understands pertectly every play in professional baseball. The little fellow, after returning from a game can not only tell the errors that have been made, but also the names of the players who made them.

During last summer Lawrence, with his parents, resided in the city of clincinaat. While there he became acquainted with all the members of the Cincinnati league team. He took an especial liking for "Bob" Ewing, the pitcher. There is not a bill pitched by Ewing but that Lawrence can imitate to perfection. Such an admirer is he of the big pitcher that he insists that he shall be called "Little Bob Ewing" instead of Lawrence.

### TOO LATE

HAROLD MOODY, Glen Rock, Pa., age 14, sent us, January 10th, a short story entitled "George Washington." Doubtless hodid not know that by January 10th one February number was all made up. The story was very good, considering the age of the writer.

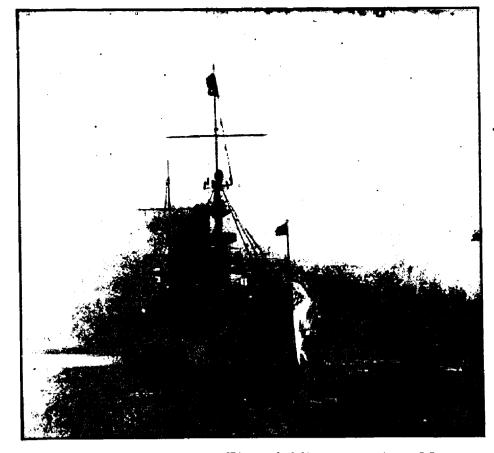

### FROM FAR OFF JAPAN

An illustrated postal card comes from one of our Japanese subscribers at Nagoya. Japan, by name of M. KIMURA

### A BOY-MADE HAND-CAR

George F. Brewster, a Tilton, N. H., boy, has built for his brother and himself the hand car shown in the illustration. The car is 8 feet long and the axies measure 28 inches. It is steered in front by the pressure of the feet. Young Brewster says that the car will go on a level almost as fast as a boy can run. This young man has also made a small auto to run about the floor by means of clock-work. He has a small horizontal steam engine (¼ horse power), getting his steam from a factory next door to his home. He runs a companion lathe and saw together and has many good tools.

The "Colorado," a Fine Addition to Our Navy

The armored cruiser. Colorado, was recently turned over to the government by the Cramps, and on Monday, January 16th, the splendid ship was put in commission. The pennant of Captain Duncan Kennedy flies at the mizzen fighting top.

### Play Congress at Nuremberg

Play Congress at Nuremberg

At the play congress which was held in Nuremberg in 1902, the chief Olympic feature was an exhibition given by 8,000 school children of the games they had learned at school. The tournament took place in a broad meadow which was situated near the city. The entire curriculum of games from the first grade up through the high school was played. In the first event sixty-seven classes of girls came on together. These girls represented all the grades of the elementary school. Each class played a different game and sixty-seven games went on simultaneously. The report says: "The children, darting to and fro in their bright-colored dresses in the similit meadow, made an entrancing spectacle, while the accompaniment of song which characterized many games, entrailed the ear as well." "The girls were wild with enthusiasm," the report says. After the girls had played for half an hour they marched off the field to the music of the bugle, and sixty-seven classes of boys took their places and in turn played the games of their course of study. After another half hour the boys gave place to classes from the higher schools. A feature of this third period was that there were fourteen games of football going on at once. After the games were over, prizes were given to the children who had played the best. The usual prize in athletic contests in Germany is a crown of oak leaves and sometimes a "beautifully engraved diploma" as well.

This is the most ambitious exhibition of games that was ever given so far as I know, but many cities of Germany could have given a similar exhibition if occa-

games that was ever given so far as I know, but many cities of Germany could have given a similar exhibition if occasion had called for it.—The Chautauquan.

### A Business View

In conversation with a business man, the other day, he made the following remarks, and as they seem to express the opinion of the average business man. I am passing it on for the benefit of my friends.

opinion of the average business man, I am passing it on for the benefit of my friends, the boys:

"I like the young man who came into the office the other day to apply for a position. He said he had a position with a dry goods store, nice work, a nice employer, but he couldn't see that he was working toward anything better, and his employer said he couldn't see any great future, either. He was getting \$3 a week, and \$3.50 was still a long way off. In fact, it was like spoiling a pair of \$5 pants climbing a greased pole for a 50 cent orize.

"I explained to him that we wanted the services of a young man who had an ambition for better things, but that part of that work was of the disagreeable nature of pushing a cart occasionally, which wasn't as nice and clean as his present work. But that didn't make any difference to the young man: what he wanted was a place that would give him a chance to learn—he could stand the joits. So I told him he could use us to further his ambitions all he wanted to; that we wanted just such boys. And it was a fact. And, furthermore, the concern I am with is no different from others: they all want good boys to answer when they press the button.

"A young man who was earning \$8 a

boys to answer when they press the button.

"A young man who was earning \$8 a week five years ago is now foreman in one of our departments, and earning \$25. He simply worked himself into the place. He was always on time, never lost his temper, never in a hurry (haste makes waste, you know); he just worked steadily all the time—never washed his hands till after the whistle blew—and he had better things coming."—The American High School.

### Dress Reform for Boys

The Head Master of the Kingston Grammar School in England has sent out circulars to parents asking them in dressing their boys not to use linen shirts, collars and waistcoats, but to furnish the boys with flannel knickerbockers, or trousers, and flannel shirts with flannel collars. He suggests that over the flannel shirts they wear jerseys in winter. The waistcoat, he contends, affords no protection to the back while it prevents the expansion of the chest. As everyone knows, the back of a waistcoat is thinner than the front. The part between the shoulders requires more

protection than does the chest. Every boy and man should have a waistcoat lined at the back with fiannel. Medical men agree that a great improvement can be made in the way of boys' wear to the benefit of their health.

### There Will be no Chances This Year for

The idler. The leaner

The coward.

The wobbler.
The ignorant.
The weakling.
The smatterer.
The indifferent

The indifferent.

The Champion Corn Plower

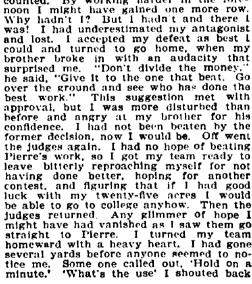

(Continued from page 136.)

Perience with Pierre the year before hallowing the draaded and I prepared for a bruising afternoon. I soon saw that he had been addened and I prepared for a bruising afternoon. I soon saw that he had been doing his best and was going by a prearranged schedule. My hope of taking him napping had been a foolish one. If I won it would be a straight out victory. I simply that have gained one more row, as bravely as I could. 'Well, you might that the fore and napper and the pull that a coupled my defent as best I the four doilars and fitteen the pull the man and turned to go home, when my hand with the four doilars and fitteen over the ground and see who has done the said, "Give It to the one that bent. Go over the ground and see who has done the best work." This suggestion met with approval, but I was more disturbed than hendred yards shead of Pierre when the hugges again. I had no hope of beating in this country.

The Champion Corn Plower

(Continued from page 136.)

Perience with Pierre the year before had shown me that he was an antagonist to be dreaded and I prepared for a bruising afternoon. I soon saw that he had been doing his best and was going by a prearranged schedule. My hope of taking him napplng had been a foolish one. If I won it would be a straight out victory. I staight to Pierre I turned my team had younded the about the would not go take the coloness with a staight to Pierre I turned my team for

A Better Job than Selling Papers.

# Boy Wanted.

We want to take into our employ at least one bright, hustling boy in every town in America. We want a boy that is alive and wants to make money. We will put such a boy into a permanent business that will earn him more money every week than he can make by selling papers, working in a store or mowing lawns. You can become a salt merchant and supply all of your town with table salt. Not an experiment. Boys are making big money at it. Work only out of school hours. Not one cent of capital required to start. The first good boy writing from each town will of course get the chance. Write at once for our book explaining the plan, then ask your father or any grown up friend about it.

Preference will be given to boys already working as these will the more appreciate what a great chance our plan offers. But whoever you are, don't wait. Write at once. You may be the first boy to reply from your town. Address

St. Clair, Michigan.

his promise to give me the horses. I had not finished putting my team in the barn, when my brother burst into the yard, waving his hat and shouting to father and mother, 'Hurrah for the champion corn plower! John won! John beat Pierre! Hurrah for John!' and my cup was full. The judges had awarded me the prize that was certain, but I could scarcely realize it. That I should plow more than Pierre, I expected—but that I should plow more and better!—they had surely made a mistake. The next morning I got on my

more and better!—they had surely made a mistake. The next morning I got on my pony and rode out to my fields. I had not noticed them before but there they were as true and neat as Pierre's had seeme! the previous year. I then went to the place where the contest had been held Yes, it was true. I had beaten Pierre. From there I went to Pierre's. His fields still seemed a marvel of beauty, but as I examined minutely and honestly I saw that I had beaten him both at home and in the contest. That night father, who seemed contest. That night father, who seemed even more elated than I was over my viceven more elated than I was over my victory, formally transferred the blacks to me. A little later I sold the corn on my twenty-five acres as it stood for one hundred dollars. I already had live stock that would bring one hundred and fifty more and I had almost one hundred in money. Counting the team at one-fifty, this assured me of five hundred dollars. I knew that with what I could earn in vacations this would take me through without a

that with what I could earn in vacations this would take me through without a break and that everything was ready so that I could go 'fass.'

When the time to leave came, father was unwilling to part with the team and agreed to pay me a dollar a month and their keep for the use of them. It was a good return for the amount invested and I accepted the proposition at once. The money that I had no immediate need for I put out at interest and on the fourteenth day of September set out for college, and never missed a single day from any cause until I graduated at the head of my class in the law department of the State University.

So I call the day on which I first met Pierre the most eventful day of my life, for since then I have made Pierre's motto my

since then I have made Plerre's motto my invariable rule, 'Have everzing ready before you begin zen you can go fass,' and to that I attribute all my subsequent suc-

# FRENCH FROG AND AMERICAN EAGLE AN ENGLISH SCHOOL STORY

CHAPTER I

### THE COMPANY ASSEMBLES

HENRY MORDAUNT, write this story on behalf of the Gang; that is to say, the inmates of the Red Dormitory at Crosscombe school, who are all to give me the benefit of their advice and assistance, and fountain pens and so on; and the profits, yes, even if they run into poundsare to be equally divided. But I am to be the sole author and editor. They may criticise as much as they jolly well please, but it is to stop there. I am not to be interfered with or contradicted; and the manuscript will be kept in my own locker. I have put down the above in black and white, so that things may be on a proper

I have put down the above in black and white, so that things may be on a proper footing from the first. For Anstruther has just looked over my shoulder and says that the title I have selected is rotten. All envy, you know! The truth is, he thinks he ought to have been chosen for the task, all things considered. So he might have been if he could spell, and if people could read his writing. That is where I come in. Then, as to style. Mr. Magruder, who is kind enough to look this over and correct it. says that a refined and cultured public

will do anything for me, to make her people give a picnic that afternoon and invite the girls. Then, of course, 'gernon cried to go, as I knew he would, and had to be taken—with apologies to Mrs. Jervis. So there was no scene. I know by experience what it is, when they come to the station in a body in the wagonette, and hang round a fellow's neck before the cyes of those grinning porters not to mention any

in a body in the wagonette, and hang round a fellow's neck before the eyes of those grinning porters, not to mention any of our fellows who may be in the train!

As it was, I got off in style, with the starch still in my collar, and no Ethel having hysterics in the waiting-room, or Algy being picked off me like a limpet from a rock and kicking like a little demon. Thanks to my excellent management, I believe the people at the station thought the pater was merely a polite friend, or at most a rather unfeeling guardian.

Well! I traveled up with the old gang—Baines and Lamont, and Crickhowell and Ascott. Carclough we picked up, as usual, at Little Deeping, where we dropped an old gentleman who said he should write to the company and tell them about Baines getting up into the rack. Otherwise we had a very pleasant journey, and were only twenty minutes late.

By E. S. TYLEE

By E. S. TYLEE

says. This time, however, M'Closkie decided to take the air, and some of them wished they had not been quite so eager. We others, who had considered his ways, had a very cosy little party inside, and could exchange the weather and discuss one another's rheumatics without let or hindrance. M'Closkie, you see, though he does not otherwise resemble a bicycle, is apt to run a bit nasty when he starts working after a rest. For that matter, his temper is always uncertain; that is to say, certain to be bad.

Even Curioliush.

did not know much about the boy, but expressed the opinion that he would probably require a great deal of sitting on. We all promised to do our best, especially Puffy Adams, Puffy weighs quite a large part of a ton, and the fellows are always telling him that he ought to go on tour. Then there was a French boy, Rene Briant, of whom Carclough only knew that he was an orphan, and was to be received at reduced fees on condition that he talked French with us. Several fellows remarked in my hearing that they would like to hear Briant attempt it.

French with us. Severa.

French with us. Severa.

The other new fellow was of quite a different sort. We were told that he was seventeen and was joining Doctor Hardres's army class with a view to entering Sandhurst in a year or two. More interesting was the fact that he was said to be a first-class Rugger man, and as strong as a horse. Puffy Adams, who is famous for getting early and accurate information about other people's business, had met him at home and reported that he was six feet two inches in height, but rather short tempered, for he had heard him at alking to the cabman. Furthermore Puffy declared that Anstruther, the newcomer, was a sort of cousin of Doctor Hardres, was a sort of cousin of Doctor Hardres,

Then, as to style. Mr. Magruder, who is kind enough to look this over and correct it, says that a refined and cultured public will be repelled by my loose and slangy way of expressing myself, and that I shall do well to avoid the use of phrases which, however vivid and picturesque in themselves, are not sanctioned by classical authority. Furthermore, he has offered to "retrench," as he calls it, which means scratch out, any idioms which are likely to offend the fastidious taste of the educated reader, and to substitute for them his own flowing and elegant periods.

Well, I confess I am fond of a good crisp word which means something; but I suppose a Master of Arts like Magruder, senior assistant at Crosscombe, formerly Scholar of Trinity College, Cambridge, must know best. So I have accepted his offer, and whenever in the following pages you find me putting long tails to my sentences, or making rings round my meaning like Euripides, the Crosscombe cat, when he is going to sleep, you will know There was a noise in the gallery outside the domitters and caught him on the hop. There was a noise in the gallery outside the domitters and correct mitory; and, generally speaking, it is a mistake to take up your quarters there if there is anything of the muff about you. Better see Mrs. Mole in time, and explain to her that mamma objects to your sleeping on the third floor, or in a turret room, or something of that sort. She there is anything of the muff about you. Better see Mrs. Mole in time, and explain to her that mamma objects to your sleeping on the third floor, or in a turret room, or something of the source see Mrs. Mole in time, and explain to her that mamma objects to your sleeping on the third floor, or in a turret room, of the state up your bed.

galia.

A little informal meeting of the Gang was held in the gymnasium to pass the proposition and settle details. As fast as every fresh member turned up he was met by two trusty scouts detailed for the purpose, and pulled headlong out of his cab before it had fairly come to a standstill. Then, as soon as he had given his keys into the matron's hands, and before he had washed his own, he was hurried down into the gym, between his two ushers at a gallop. Arriving there, goggle-eyed and panting, and with his topper on the back of his neck, he found Carclough, as captain of the Gang and chairman of the meeting, installed on the jumping horse, with Baines and Ascott, with Indian clubs,

meeting, installed on the jumping horse, with Baines and Ascott, with Indian clubs, supporting him on either side.

Of course every fresh comer was challenged at once and required to give the watchword of the Gang. As a general rule, fellows had completely forgotten it, and we had some rather neat things in the way of reprimands from the chair before they were allowed to sit down. The fact was, the word was so long that Carclough had written it for safety on his cuiff, inside, so that he could refresh his memory by passing his hand, negligently, across his fevered brow. Crickhowell composed it but I always thought myself that five and thirty letters were too many, and made a

to the company and tell them about Baines getting up into the rack. Otherwise we had a very pleasant journey, and were only twenty minutes late.

The Doctor had fagged M'Closkie to come and meet us, with the omnibus. It was rather a stormy day and, taking for granted that M'Closkie would go inside, as he generally does, the fellows made rather a dash for the roof. For Mac is a Caledonian, "stern and wild," as Scott thirty letters were too many, and made a thirty letters were too many, and made a process thirty letters were too many, and made a process thirty letters were too many, and made a process thirty letters were too many, and made a process thirty letters were too many, and made a process thirty letters were too many, and made a process thirty letters were too many, and made a process thirty letters were too many, and made a process to speak.

The meeting was very enthusiastic and successful, the chairman's terminal address unanimously resolved to go through the whole form of initiation unabridged, and give the candidates a regular good time: that is to say, a time which would do them good. The programme was drawn up

his temper is always uncertain; that is to say, certain to be bad.

From Carclough we learned that there were a larger number of new boys than usual, but that most of them were very young, and only three would be in the Senior School. Of these one was an American, son of the well-known millionaire and oil-king, Silas Q. Pickens, whose recent arrival had caused so great a sensation in our quiet corner of Somerset. Carclough all one know much about the boy, but expressed the opinion that he would probably pounced upon him at once hugged him till gives her no end of trouble. So Mrs. Mole pounced upon him at once, hugged him till he kicked to get away, and then carried the youngster off to take tea with her in her own little room. He told us afterwards that they had stewed oysters, and muffins, and all sorts of things. He added that he was awfully glad to come back, and that Crosscombe was much jollier than Lucerne, where he, with his mater, had been spending the summer holidays. The mountains, it seems, "made him quite tired to look at them." I should think so! Such a weak little chap as that!

We heard with pleasure that there had been much trouble with the rats in the west wing, and that it was to be feared they might invade the dormitories. There were also two fresh owls' nests, and things in general promised well. Henderson, putting his own low tastes before the inter-

which was the least. The relation was special favor, at such an advanced age.

Everyone felt that this new fellow, at any rate, was going to be an acquisition, and great satisfaction was expressed on finding that he had been assigned to the Red Dormitory. That is the Gang's dormitory; and, generally speaking, it is a done in a hurry, after the janitor had left mistake to take up your quarters there if and M'Closkie had paid his usual domicilithere is anything of the muff about you. Better see Mrs. Mole in time, and explain to her that mamma objects to your sleeping on the third floor, or in a turret room, or something of that sort. She won't believe you, of course; but she will change your bed.

The Red Dormitory is in a turret room, of the School House;

and Crickhowell's pistol, the one that he said used to belong to a pirate, who must have been a most hardened ruffian, for it was in such a dilapidated state that Crikey used to tie it to a tree and pull the trigger with a string. The Gang used to possess a skull and crossbones, but Carclough forgot and left them in his study, where the matron found them and handed them over

matron found them and handed them over to the dustman.

In close attendance on our noble captain were the two lictors, Bain's and Ascott, whose duty it was to carry out his orders and coerce the refractory. They were neatly uniformed in scarlet jerseys, and wore half-masks of black paper, which had a most impressive effect. It was generally considered that a mutineer, however muscular would have small chance against erally considered that a mutineer, however muscular, would have small chance against them; though they were seldom obliged to proceed to extremities. As a rule the new fellows gave in at once, and went through their initiation like lambs. Beside the two lictors stood a small screen behind which were posted the youngest members of the Gang armed with two pairs of old bellows, a little charcoal in a saucer, and some bits of old iron to clink. With the aid of these implements they produced a very fair imitation of the process of heating branding-irons, and the noise was always found to inspire candidates with a lively sense of the terrors to come

was that of our secretary and recorder, Martin Crickhowell, generally known as Crikey, on account of the marvelous narra-Crikey, on account of the marvelous narratives with which he was wont to regale the room on nights when the captain commanded stories. In appearance Crikey was a tall, thin, rather handsome boy of sixteen, with large, dark eyes and a face of singular palior—"a vampire," he used to say, in explanation of this latter feature. "That was when I was in South America. An earthquake (they are always having earthquakes there), aroused me just in time, before the creature had glutted its horrible thirst," and, indeed, to judge from the unending tales of his own past adventhe unending tales of his own past adven-tures, our secretary was a traveler and a hero compared to whom Ulysses himself seemed quite a sedentary character. His father was a colonel, not in the Marines, as the fellows used to say, but in the Line and in India, and Crikey had been bred and fed by four remarkable uncles, who and in India, and Crikey had been bred and fed by four remarkable uncles, who took a conspicuous part in all his yarns, and turned up again and again in the most unexpected places. Mainwaring, who has a turn for mathematics, once calculated that if Crickhowell had really undergone all the remarkable experiences which he related, he must be at least two hundred and fifty years old. But Crikey only smiled mysteriously, and remarked "Perhaps!"

He had lately adopted a tame rat, which he kept in a sort of hutch in his desk with air-holes underneath, letting it out for exercise at night. He had trained it in the most marvelous way to keep quiet during class time, and as yet the creature had escaped detection, though his next neighbors were occasionally conscious of a

had escaped detection, though his next neighbors were occasionally conscious of a weird, far-off whiff, too vague to be called unpleasant, when Crikey had neglected his pet for a while. Crikey called him Mahommed, and asserted that he was a good Mussulman. "Recite your profession of faith, Mahommed!" he would say, and Mahommend would obtainly squark But faith, Mahommed!" he would say, and Mahommend would obediently squeak. But some of the chaps said that the rat was his familiar demon, and Crikey rather encouraged that idea, too.

### BOYS AS MONEY MAKERS AMATEUR JOURNAL-ISM DEPARTMENT

### Getting Ahead

T. Ellison Bruce, Bowman, S. C., age 17, wants to tell how he has been making money for the past four years. The first two years, he says, he made just about enough to pay for his clothes, papers, books, etc., but in the third year he saved \$55.00, which he invested in bank stock, and since the opening of the fourth year he has saved something more. His way of

making money is selling papers, peanuts, working in a general store at odd times, and doing odd jobs at printing on a small press. Late last fall the cashler of the bank was taken sick and the directors selected him as assistant cashler. In the near future he expects to buy a printing outfit and start a weekly paper for his town.

### Future Captains of Industry

Every morning on my way to my office I

Every morning on my way to my office I pass a little candy store which is the congregating place for the boys who attend the school in my neighborhood. The other day I heard a very remarkable conversation between two boys. One said, "What are you going to do with your dime?" The other answered, "Spend it for candy, I guess." "All of it?" asked the other. "Sure, it's only a dime. What are you going to get?" "A nickel's worth of candy." "What are you going to do with your other nickel?" "I'm going to put it in my bank and save it."

When I got to my office I sat down with a plece of paper and began to figure. That boy was probably ten years old. If he saved a nickel every day until he became of age he would have \$171.50. I had never thought it worth while to save these nickels before, but I have known many a time when \$170 would come in very handy. But I had forgotten one thing. If that money was put in a bank it would have heen drawing 4 per cent, interest and would have earned \$34.68 more, making in all \$226.28. If that boy will keep up his plan of putting one-half of all he gets away where it will earn more money for him, he will be one of our captains of industry some day.—Our Boys and Girls.

### What a Penny Can Do

Most of the talk is about "millions" these days, and I notice that young people, like older ones, are beginning to look down on the pennies and to imagine that saving pennies is too slow altogether for this age. Let me tell you a true story about a re-ent big engineering contract that shows the value on pennies.

the value on pennies.

A great firm, well known through the country, figured on an engineering contract a few years ago. They had everything calculated to the last cent, except the cost of some dredging. On this they couldn't quite figure within half of one cent per cubic foot without getting more facts.

facts.
"We'd better investigate," said the elder partner, "and find out just how much we'll partner, "and find have to dredge." "Nonsense," sa

have to dridge."

"Nonsense," said the younger and more active partner. "It is only half a cent, and it's not worth bothering about."

So they signed the contract.

After they had worked six months it developed that the firm would have to dredge away ten million cubic feet of material. It also turned out that it would cost them exactly "only half a cent" per cubic foot more to do it than they were getting for it. Ten millions cubic feet, at that half a cent each, which the younger partner had said was "not worth bothering about" amounted to just \$50,000.

The firm has been working three years now to fulfill a contract at a heavy loss, simply because a man didn't consider that half a cent was worth bothering about.

It is the teachers who are expected to help the parents to see the possibilities of their children, that there may be as little regret as possible to be eliminated from their future.

It is a very common occurrence to hear women and men lament their lack of opportunities in early life. They also regret lack of thoroughness. Two hours study a day means in time, many weeks.

Every moment is a point in time to begin new work, or to carry forward the old work with renewed energy. We have margins of time which are generally wasted. The sub-conscious mind often carries on problems and solves them if the mind is trained to take up new work.

half a cent was worth bothering about.

### How a Prize Winner Feels

Dear Mr. Sprague: Many thanks for check for \$2.00, it made me feel mighty good and I believe I have grown an inch since. The dear old American Boy does the right thing always, so thanking you again and wishing our "Boy" many years of prosperity and success. I am CREDON McGANN. Midway, Ky., Jan. 3rd, 1906.

GOOD PAY—GOOD PAY—GOO

### Choice of Vocation

By PAULINE ADELAIDE HARDY

Our best work is done easiest; that is, the work for which we are naturally fitted is easier than a kind of work which we are

forced to take up.

How is a boy to know that he will make the best chemist that the world has ever known, if he never studies chemistry? Or a wonderfully skillful physician, if he never becomes interested in physiology? Or an inventor, if he does not grasp the principles of mechanics? There are boys and girls all over the land, who fret because

an inventor, if he does not grasp the principles of mechanics? There are boys and girls all over the land, who fret because they have to go to school. They should first find out what they are good for; learn to do things well, in both work and studies; get a taste for hard work, for they are not crowned with much success who do not possess it.

Then it is true that a boy must study before he or his friends can possibly decide what his particular line of work is; we have some notable exceptions, both among women and men, who did not take a long course of study. It is true they studied life as they found it, and early learned the particular kind of work best suited to their needs. Perhaps it would be well to say, that sometimes geniuses find out the bent of genius, without the help of parents, teachers or friends. Washington Irving, Thomas Edison and Louise Alcott, are good examples of these.

What if the father of a family wished above all other things when a wouth to be

Alcott, are good examples of these.

What if the father of a family wished above all other things when a youth, to become a minister, but had his plans frustrated, and he then chose teaching as the one profession which is nearest, would it be surprising to find among the sons and daughters doubts as to what they were best fitted for? Perhaps in one, a daughter, there is a desire to be a minister, but for fear that it is not her mission, she becomes a teacher. She is a leader of youth, her minister said to her, "You can get nearer to your pupils than I can to my congregation. I wish I had your opportunity. You have them five days and I have them one day." He sees and recognizes her wonderful fitness for leadership, through her power in discerning the capabilities of her power in discerning the capabilities of her pupils, in the study of their peculiar traits and tastes. She also recognizes the traits and tastes. She also recognizes the resources of those who have not yet developed their capabilites. Mistakes are made continually by taking for granted that at twenty, a youth is all that he can be; there is no reserve force. When ten or twelve years older, the friends say: "How he has grown? I never knew it was in him to do such work. I thought there was only common ability in that boy."

grammar, so he gave up his education, although his parents, sister and friends urged him to study that he might pass his examinations into the high school. He said at last that he could not undersund grammar. last that he could not undersand grammar, and that it was no use to try longer; that he would rather go to work on his father's farm. He did so, but he found that he did not like farming. He was large and finely developed. His mother and father did not know what he was fitted for, but they did know that he was thoroughly dissatisfied after he had tried several kinds of work. He visited in a city, and heard some lectures on physiology, and saw some dissecting. He was very enthusiastic about it, which showed to one person, at least, that he had missed his calling. His grandfather had been a very successful physician, and this youth could have been, too, if his people had known enough to have placed and this youth could have been, too, if his people had known enough to have placed him under some private teacher in English, so that he could have passed his stumbling block—English grammar. Although he is not yet thirty, he says it is too late to take even a partial course in college and a medical course afterward. There are two very successful and excellent physicians, who did not study for physicians until after forty years of age. They then had a good knowledge of hygiene and then had a good knowledge of hygiene and

much common sense.

It is the teachers who are expected to help the parents to see the possibilities of their children, that there may be as little regret as possible to be eliminated from

It is little short of marvelous to see at the end of the year what has been ac-complished, in the way of study, by per-sistent effort and as the work goes on with the years, it shows the difference in the workers between a happy intelligent, en-thusiastic man, and a discontented, ignorant, hopeless drudge.

### The College Stimulates

We are apt to overestimate the value of an education gotten from books alone. A large part of the value of a college education comes from the social intercourse of the students, the re-enforcement, the buttressing of character by association. Their faculties are sharpened and polished by the attrition of mind with mind, and the pitting of brain against brain, which stimulate ambition, brighten the ideals, and open up new hopes and possibilities. Book knowledge is valuable, but the knowledge which comes from mind intercourse is invaluable.—O. S. Marden in "Success Magazine."

EDGAR JACKSON, Hennessey, Okia., age 15, is quite a money saver. He has worked for seven years in a grocery store and now has \$800.00 saved up. His father died when he was not quite three years old. His attendance on the store has been outside of school hours. Last winter he finished the common school branches. He is a quiet boy and snends his evenings at home reading and studying. He is especially well up in history and has a fine collection of old coins. MAURICE WINDUS, Pullman, Wash., age 13, is quite a farmer. He owns an acre of land, a cow, two calves and six pigs Last summer he sold vegetables for his father and received half the returns. He is in the last year of the preparatory department of the Agricultural College. He has a library of 150 books and is a stamp collector. EDGAR JACKSON, Hennessey, Okla., age 15,

### A Boy Editor and Publisher

The hustling American boy is proberbial for doing things, but few even of this energetic class can hope to duplicate the energy and success of thirteen-year-old Paul H. Appleby, of Sedalia, Missouri. Paul is an amateur journalist and a good one, too. He has been interested in the work for some years and his miniature magazine is now in the middle of its fourth volume. It is called "The Chum," and a picture of the bright boy editor is given herewith. The journal, which would reflect credit on many a youngster well up in the 'teens, has for its motto "Everyone needs a chum." and it sets out to fill the need. Carefully edited and with articles really well written, "The Chum" is an

ideal amateur paper. Business ability and journalistic enterprise are shown by the fact that Paul has quite a cosmopolitan array of contributors, among them being Jean Craigmile, of Cheshire, England; Bennie Naseef, American colony, Jerusalem, Palestine; Martin C. Brennan and Cecil Doyle, New South Wales, Australia, and Herbert Choles, Pietermaritzburg, South Africa. The young editor exercises his editorial prerogative in "Chummy Chats," which contains interesting comments on amateur affairs and papers. The proprietor and editor of "The Chum" is a typical American boy, full of life and fun, He considers the hours snatched from playtime and employed with pen and press as among the most pleasant and profitable of his career.

### Amateur Press Clubs

People interested in a common hobby sooner or later organize for the more beneficial pursuit of their work. The amateur journalists are no exception, and flourishing press clubs of young people from fourteen to twenty are permanent fixtures in all the large cities. Discussions of a practical nature regarding journalism and typography, studies of authors and parliamentary procedure and social intercourse make the sessions interesting and profitable. A number of readers have enquired about the existence of local clubs in their vicinity and we have compiled the following list of those who will be glad to give quick and accurate information for the localities specified:

Boston, N. J. Martin, 1181 Center St., Newton Center.

Boston, N. J. Martin, 1181 Center Dt., Newton Center.

New York, B. J. Goldstien, 71 E. 92nd St. Philadelphia, W. R. Murphy, 223 So. 37th St. Baltimore, J. J. Cleary, 2018 Eastern Ave. St. Louis, J. W. Boud, 7802 Vermont Ave. Cleveland, W. J. Brodie, 478 The Arcade. Chicago, Carl Hegert, 500 Belden Ave. Milwaukee, W. C. Alhaeuser, 495 First Ave. Kansas City, I. E. Seymour, 708 W. 13th St. Minneapolis, M. J. Cohen, 931 Aldrich Ave. San Francisco, Edw. M. Lind, Box 2482.

### The Reviewer

The Reviewer

A GREAT REVIVAL of interest seems to have struck the world of amateur journalism at the present time. A regular cyclone of activity is evidenced by the number of papers which have come to the editor during the winter, and more especially during the past month. Many of these are in their first issues: others are old-time papers, and a few are revived magazines. A striking fact is the number of papers published by boys and young men who imagined that their papers were unique until informed of the existence of hundreds of other young editors, publishers and authors through THE AMERICAN BOY. As a general thing the papers mentioned in this department will be glad to exchange copies with others of similar character. By this reciprocity the young editors are kept in touch with what their fellows are doing, and many good and novel ideas of printing and writing are exchanged. Besides this, many papers conduct review columns and great profit is apt to follow the criticisms contained therein.—SOME AMATEUR PAPERS are like the grass of the earth, here today and gone tomorrow, and others are like TEUR PAPERS are like the grass of the earth, here today and gone tomorrow, and others are like Tennyson's brook. Perseverance and constant effort will make yours one of the latter class!—
TO WELCOME back an old and tried friend is at all times a grateful duty. In the amateur journalist ranks the re-publication of "The American Gem" is halled with delight, as it has become one of the largest and best amateur papers of recent years. Established in January, 1898, the "Gem" ran till the middle of 1902, when pressure of business compelled its suspension. Charles A. Wendemuth, the publisher, announces that the paper will be better than ever. W. R. Murphy, for several years, associate editor on the "Gem," will resume his old position and contribute an extensive department of criticism each month. The "Gem" is one of the papers which is gladly mailed to those interested in amateur journalism. The address is 7802 Vermont avenue. St. Louis. Mo.—WITH UNFAILING regularity "The Shorter Budget" comes out weekly. The editor, J. B. Lyon, a sixteen-year-old hustler, shows the true news instinct, and the town of Shorter, Ala., owes thanks to him for keeping everybody posted on local events. It is quite a feat for a schoolboy to publish a weekly newspaper.—ANOTHER PAPER whose editors have the "nose for news" is "The Alert," published every here today and gone tomorrow, and others are lik events. It is quite a feat for a schoolboy to publish a weekly newspaper.—ANOTHER PAPER whose editors have the "nose for news" is "The Alert," published every two weeks as a combined story magazine and newspaper by Bemis Brothers, at Spencer. Iowa. The publishers do their own printing, making a neat job of their three-column, four-page sheet. A heavier stock of paper would give a much hetter effect.—"THE SPECK," of Williamsport. Pa.. has added another brother to the staff, which is now as follows: Editor, J. Gibson Logue; assistant, E. G. Logue; associate, P. Logue. A chatty column of reviews of contemporaries is a new feature. The "Stamp Notes" and "Sporting Notes" are very concise, but meaty.—A MAD CHASE to catch up with Father Time seems to be the occupation that is engaging the energies of "The Monthly Herald" of St. Louis. A little indulence can be granted, however, as C. W. F. Pinckert and his associates have published the paper with commendable regularity for nearly six years. Its editorials are always strong and well written.

# BOYS It's Easy Money

Thousands of boys all over this country, who never had much money to call their own, are happy now at the merry jingle of cash in their pockets, made by selling

### THE SATURDAY EVENING POST

Friday afternoons and Saturdays. They have no better chances, they are no brighter than you. # Che Great American Boy Army

FOR MANLINESS IN MUSCLE, MIND AND MORALS

Every Energetic American Boy Should Be a Member of "The Order of The American Boy"

Company News

THE PANHANDLE COMPANY, NO. 10, Wellsburg, W. V., want to know some plan of making their company meetings successful. We have written suggesting various ways. Some of the other companies may tell what they are of the other companies may tell what they are doing. One thing is certain, that if the members of a company have its interest at heart they cannot fail to make the meetings interesting, as each will be thinking up some new scheme. THOMAS B. REED COMPANY, NO. 6. Auburn, Me., has had a prosperous year, keeping up the interest and retaining its members. They had 100 invited guests to their Halloween party, which was a decided success. We find from a newspaper clipping that it also held a tine entertainment at the home of Mr. James W. White, on December 16, the occasion being the second annual banquet of the company. Good things to eat, speeches, toasts, music and singing constituted the evening's entertainment. Rev. Mr. Piske spoke on American citizenship and the noble objects of the O. A. B. Among the other toasts proposed and ably replied to were: American Boys, Living, Our Objects, The Past and Present of Our Order, Duty of Each Member to His Company, How Can We Be Worthy of Our Namesake, Our Future, etc.

## The Order of The American Boy

A NATIONAL NON-SECRET SOCIETY FOR AMERICAN BOYS Under the Auspices of "The American Boy"

### Object:---The Cultivation of Manliness in Muscle, Mind and Morals

The object more definitely stated: To promote mutual and helpful friendships among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of language and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patriotism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to stimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

ABRAHAM LINCOLN COMPANY No. 41, PERU, 1LL Oaptain Otto Castendyck holding Charter, Arthur Zimmerman, Treasurer, on his right, and Fred Bauer Secretary, on his left.

Captain Otto Castendyck holding Churter, Arthur Zir Becrotary, o

Davis, Capt.; Charles Adams, V. C.; James Pheloon, Secty.; Clinton Bonney, Treas.; John Libly, Libn. ROCKY MOUNTAIN BOYS COMPANY, NO. 45, Ogden, Utah, is progressing nicely. It is trying to interest other boys in the Order and with every hope of success. RELIANCE COMPANY, No. 25, Brookville, Pa., has meantime suspended regular meetings, but have not lost interest in the Order. It is recruiting a baseball team, and the captain seems to want to do something. He has a fine school record. ABRAHAM LINCOLN COMPANY, NO. 41, Peru, Ill., sent us a picture, which was duly received. It wants to have one of our circulating libraries. It has held 20 meetings since it was organized and has 16 members and \$7.60 in the treasury. A pretty good record. HAMILTON, ATHLETIC COMPANY, NO. 20, Hamilton, Ind., began the new year by electing the following officers: Otis Dirrim, Capt.; Paul Dargue, V. C.; Samuel Weigler, Secty, and Treas., and Russell Collins, Libn. It has a library of 16 books and about 200 magazines. LITTLE GIANT COMPANY, NO. 20, Augusta, Wis., is one of our prosperous companies, having 20 members. Its club room is decorated with bunting, pictures and flags. It has also a punching bag, which gives lots of exercise and amusement. Its officers are: Arthur Coam, Capt.; Harry Cook, First Lieut.; Charles Taylor, Second Lieut. STEPHEN DECATUR COMPANY, NO. 28, Brooklyn, N. Y., sends us its 26th regular company letter, detailing its work during the preceding five weeks. It recently admitted two new members. A new and more capacious club room has recently been secured and the membership of this fine company is steadily increasing. Its newly elected officers are: Amos K. Hobby, Capt.; Howard R. Palmer, V. C.; Harold B. Pratt, Secty, (re-elected); W. Herbert Thornton, Treas.; Leslle H. G. Groser, Libn. (re-elected), and John Swan, S. A. This company makes a suggestion as to Division commanders, which we shall consider. Other company as strong contestant for the spe ing gloves and punching bag. On New Year's day the members enjoyed a fine sleigh ride. It has started a military company and have uniforms, caps, guns and swords. We are pleased to have a picture of the company, but are sorry all the members are not in it. We want pictures showing all members. We want just to get a good idea of how the boys of the Order look. ROHERT DALE OWEN COMPANY, NO. 4. Stewartsville, Ind. We are especially proud to have the report of this Company, as it is one of the oldest in the Order, just beginning its fourth year. The Secretary writes that the members hope to make this the banner year of the company. Its membership has increased, its enthusiasm has increased, its library has increased, and its treasury has increased. It began 1906 with 26 members. Meetings are held in the I. O. O. F. Hall each Friday night. Dues 15 cents a month. Fines are imposed for various offenses. It has started a fund for the nurpose of building a hall of its own. The officers are: Carl Schettler, Capt.: Hobart Viets, V. C.; Jacob Schettler, Secty.: Edward Perry. Cor. Secty.: Willie Gardner. Treas., and Paul Robb, Lihn. CAPITAL CITY COMPANY, NO. 9. Trenton. N. J., reports that it is doing nicely, and is endeavoring to increase its membership.

Meetings are held every two weeks. It is heartily in favor of an annual American Boy Day. JUNIOR GUN CLUB COMPANY, NO. 48, Indiana, Pa., has 7 members and a nice club room, where the members meet every Monday evening. Its meetings have all been enjoyed. Dues 5 cents per week, and it has \$1.04 in the treasury. The members are decorating their club room with a view to certain entertainments they purpose giving soon. GENERAL LAFAY-ETTE COMPANY, NO. 3, Washington, D. C., is progressing most satisfactorily. Regular meetings are held and occasional visits to a play gives added zest. The members made up a party and visited the Lafayette theater recently and enjoyed it very much. The last meeting in the month is also devoted to social pleasure. GENERAL GEORGE A. CUSTER COMPANY, NO. 5. Detroit, Mitch, lately elected the following officers: John Rogers, Capt.; James Penhale, V. C. and Secty.; John Penhale, Treas. It it busy getting up a baseball team for next season. Dues have been raised from Z cents to 10 cents a month, and weekly meetings are held at the Secretary's home. The Company is endeavoring to get a club room, where it can install a library, etc. Its charter has been framed. SMOKY MOINTAIN COMPANY, NO. 3. Iryson City, N. C. has now 14 members and at its meeting on January 13, 11 were present from Comporer, Capt.; Dancollmany 13, 11 were present from Compony has lately had to mourn the loss by death of one of its leading members. Carl McCauley. His fellow members marched to the cemetery behind the hearse, the Captain carrying the pennar. Two rooms have been rented, in one of which is kent the library of books, consisting of Henty, Dickens. Cooper and other authors, and the other contains its gymoutifit of boxing gloves, diumb bells, punching hag, etc. Dues are 20 cents a month. WILD WEST COMPANY, NO. 18. Portland, Ore, has recenily had a picture taken

laws, with a few changes, and will have its charter framed. Meetings are held every week; dues 5 cents a week, with fines for various ofcharter framed. Meetings are held every week; dues 5 cents a week, with tines for various offnses. Its library of books numbers 13 volumes. MUSKINGUM VALLEY COMPANY, NO. 49, Zanesville, O., has now 15 members and its officers are: Hector McLain, Capt.; Joe Weltz, V. C.; Leroy Suker, Secty.; Albert Jones, Treas.; Stanley Hastings, Libn. and S. A. It has a library of 70 books besides magazines and papers. It is also recruiting a baseball team and will provide the members with uniforms. There is \$2.20 in the treasury. PLAINVILLE SUNFLOWER COMPANY, NO. 28, Plainville, i. ansas, expects to have a hall of its own soon in which to hold its weekly meetings, it intends to give a social soon in honor of the Sunflower Company. OLYMPIA COMPANY, NO. 19, St. Louis, Mo., sends us cards of invitation to a grand dramatic entertainment on January 12th, which we had respectfully to decline. This company is working for new members so as to form a military company. The entertainment already mentioned brought \$20.00 into its treasury. The Captain writes that their young lady friends assisted greatly in making the affair a success. The members have also been asked to give the same program to help other societies, which speaks well for their abilly. The company will cooperate with other companies in St. Louis for American Boy Day. We think this idea of cooperation a very good one and will be glad to help it along. Its meetings are of a most interesting and enjoyable nature. Meets every Saturday evening. Dues 5 cents a week with thes for improper conduct, which are paid without a "kick."

### An Idea for a Boys' Club

An Idea for a Boys Club

Why don't some of our clubs that belong to the ORDER OF THE AMERICAN BOY organize themselves into field clubs, for the purpose of studying nature and providing for themselves healthful recreation? The work might include: 1, Excursions. 2, The formation of collections of natural objects, like ore, shells, animals, etc., etc. 3. Lectures and addresses. The excursions might be made to points of interest in the neighborhood, under a leader for the day, who might be some man or woman who knows something about geology, botany, zoology, etc. The club might be divided into sections, each section taking up some particular branch of study as, for instance, one might study plant life, snother insect life. Then the meetings might follow some such topics as these: "How to Collect and Preserve Plants;" "The Birds of our Vicinity and Their Habits;" "The We shells," etc. We shall be glad to assist any companies desiring to organize for this purpose.

### New Companies Organized

### Special Prizes—Our Picture Gallery

I am glad to notice so many companies contesting for the special prizes offered for the largest increase in membership, and in order that the companies recently organized may understand the conditions of the contest, I will here repeat them:

To the company sending us the largest number of subscriptions for new members between January 1st and March 31st, we will give one of our handsome O. A. B. pennants, a good book for boys and a fin-picture of "Old Abe," the famous wareagle.

picture of "Old Abe," the famous war eagle.

To the company sending us the second largest number of subscriptions during the same period, an O. A. B. pennant and a good book.

To the company sending us the third largest number of subscriptions during the same period, a good book or a picture of "Old Abe," or a pennant, as desired.

The same prizes will be awarded each three months during 1905, the dates of closing the contests being March 31st, June 30th, September 30th and December 31st.

Each month's company letter will contain a list of the ten companies which stand highest in the contests.

In sending us subscriptions in these contests, the sender must be careful to state that the boy for whom the subscription is sent is to be a member of a company, as otherwise our records connect when the

sent is to be a member of a company, as otherwise our records cannot show this.

Remember that these special prizes are given in addition to the usual commissions and premiums for obtaining new subscrib-

This gives each company a spleudid chance to decorate its club room and and

to its library

This gives each company a spleudid chance to decorate its club room and add to its library.

The following are the ten companies which at the end of January stood first in the contest: Muskingum Valley Co. No. 49. Division of Ohio, Zanesville, Ohio, Wm. B. McKinley Co. No. 47. Division of Illinois, Champaign, Ill. Thos, B. Reed Co. No. 6. Division of Maine, Auburn, Me. Gon. U. S. Grant Co. No. 14. Division of Indiana, Indianapolis, Ind. Nishua Botna Valley Co. No. 1, Division of Iowa, Farragut, Iowa. Loyal American Co. No. 69. Division of Michigan, Wyandotte, Mich. Riverview Co. No. 14. Division of Nebraska, Plattsmouth, Nebr. Timothy Murphy Co. No. 1, Division of Nebraska, Plattsmouth, Nebr. Timothy Murphy Co. No. 1, Division of New York, Cobleskill, N. Y. Junior Gun Club Co. No. 48, Division of Pennsylvania, Indiana, Pa. Black Fox Co. No. 24, Division of Wisconsin, Peshtigo, Wis.

Remember that Headquarters is fixing up a great picture gallery, containing the portraits of all the companies, and I want every company to have a place in it.

Now, as a final word, get to work arranging for American Boy Day, and strive to increase your membership not only to obtain the prizes, but that the celebration of the day may have greater assurance of success. Let me know what your companies are doing. I am always pleased to have your letters.

Yours for M. M. M. M.,

WM. C. SPRAGUE,

President General.

### Worthy Endeavor

I have at various times received letters I have at various times received letters from members indicating that amid all their sport and fun, the great principles of our Order are not overlooked or forgotten. One such letter recently received tells how the members of one company were enabled the members of one company were enabled to raise money enough to send away a poor sick woman to a more congenial climate where she might have a better chance to regain her health, and that same company is now endeavoring to establish a benevolent fund to aid in worthy cases of a similar nature. Such deeds of kindness are ample testimony that the boys of our Order stand ever ready to do their share in all worthy endeavor, and I am gratified to be at the head of such an organization.

Yours for M. M. M.

Was it due to slow running?

In 1850 he went to work for the Naugatuck at the princely wage of twenty-five cents per day unloading bricks. With these bricks, spotted deeper red by blood from his worn fingers, he laid the foundations of his career. In 1902 when, at the age of sixty-nine years, he resigned railroad labors to accept the presidency of a bank, he had served his road during fifty-two consecutive years, having been successively a stevedore, office boy, relief agent, conductor of construction train, conductor of passenger train, station agent, telegraph operator, general freight agent, general ticket agent, superintendent and director. Yes, it has been darkly hinted that Mr. Beach knew his business—a rare accomplishment. Possibly this had something to do with the absence of accidents. bsence of accidents.

We want to do with the "Yes, you killed me. Super. I had been drinking. You called me onto the carpet.

Mr. Beach's men knew that he understood I thought you were going to discharge me. absence of accidents

Ry BURRITT HAMILTON

the measure of good service. He kept "post-ed." Thirty-eight times during the thirty-two years of his superintendency he walked over the entire length of the line in his charge. With his own eyes he examined tracks, grades and ties; with his own hands he tested the soundness of the timbers in trestles, culverts and bridges. To

pressed a cough instead of a sentiment. The superintendent had come up. He was a man of medium height, virile, keen-eyed, kindly. He greeted the two pleasantly, then called the brakeman aside, saying:

"You are a new man on the road?"

"Yes, sir."

"I wort you to succeed."

"I want you to succeed."
"Thank you, sir."

The schedules were usual—frequently fast.

Were the trains infrequent?

No. As the road prospered it increased its train service. During the latter haif of the thirty-two years, it is safe to say that there were, on an average, fifteen trains each way daily, together with freights, excursions, extras and specials. With such an amount of roilling stock constantly in motion, it would seem as though almost any railroad might have occasionally varied the monotony by damaging a few passengers.

An examination of the case proves that Mr. Beach knew railroading. To adopt a phrase current along the line, "Beach was the Naugatuck." There was nothing amateurish in his methods. He made the road pay.

The schedules were usual—frequently fit increased it increased it increased it increased it increased it increased it increased its train service. During the latter haif of the system. Thenceforth he knew that even to the heels of his shoes he was cared." Five hundred men—the whole force along the line—felt as the brakeman did. "Beach doesn't have smash-ups," remarked a rival, "but he has no discipline. The other day he took a hundred of his men to church with him. The idea of a man associating with the people he employs. But the fellows would go through fire for him, although he never swears at hem, never swears at anyone, never swears. It's beyond me how he gets along." Possibly the critic overestimated the commanding power of profanity. At

heels of your shoes."

In this way the new brakeman became a part of the system. Thenceforth he knew that even to the heels of his shoes he was under the watchful eye of "the boss that cared." Five hundred men—the whole force along the line—felt as the brakeman did. "Beach doesn't have smash-ups," remarked a rival, "but he has no discipline. The other day he took a hundred of his men to church with him. The idea of a man associating with the people he employs. But the fellows would go through fire for him, although he never swears at them, never swears at anyone, never swears. It's beyond me how he gets along." Possibly the critic overestimated the commanding power of profanity. At all events, Mr. Beach was obeyed.

Tom Shields, now known as the "Mayor of Watertown," was once called into Superintendent Beach's office to account for an over-use of something stronger than sodawater. The man promised future total abstinence and was allowed to return to his work. A quarter of a century afterwards, when Mr. Beach had resigned and was passing over the road saying good-bye to his men, Tom Shields came up with tears eroding channels through the dust on his sorrowful face.

"Super," said Shields, "you killed me."

"What!"

"Yes, you killed me. Super. I had been drinking. You called me onto the carpet. Tuck is the carpet.

### MY FIRST SUNDAY IN CAMP.

HE WEST POINT chapel is a charming little place. There is a beautiful blending of the insignia of war and the calimess of perfect Christian ice. The walls within are decorated with peace. The walls within are decorated with tattered, war-worn flags and tablets to the memory of the illustrious generals of the Revolution. The organ is in a gallery at the rear, where the manly voices of the cadet-choir chant the "glorias" and sing the hymns. Over the pulpit is an American flag, and above this, a painting by a famous artist. It represents a stately woman, leaning against some kind of a table. She is evidently at a great height above the ground, for the dull glow in the sky beyond shows that the invisible sun is setting, while the stars are coming into view ting, while the stars are coming into view in the heavens above.

How many Sundays have I sat in that

How many Sundays have I sat in that dear old chapel, on a summer's day, while the chaplain's words sounded in my ears like the murmur of far-off mountain streams. Odd fancies came to me at such times. Often I wondered how far that tall lady would fall, if she should slip backwards, and tried to count the stars in the sky nbove, but they seemed to dodge behind each other, just as one of the Pielades and the from view when we gaze steadily

hind each other, just as one of the Plelades shrinks from view when we gaze steadily at it, and, therefore, I could never make sure of the exact number.

Religious instruction at the Point consists of these Sunday morning exercises. There are two churches, a Protestant and a Roman Catholic, and every cadet is required to attend one or the other, unless he has conscientious securious against doing so. I knew of but one cadet who had "scruples," but he left the Superintendent's office much quicker than he entered it. The Protesant church is generally some form of the Episcopalian. The sect, however, depends upon that of the chaplain appointed by the President, but most army chaplains are Episcopalians.

Besides the usual Sunday everging a superintendent of the chapter of the casual observer.

So absorbed was I in my reflections that buttons, as well as collar and cuffs, in my white jacket and the helmet had to be of the Day, from behind me, until his adjusted and trimmed. Meanwhile, troop awful wrath seemed to concentrate itself in my left ear, and I jumped fully a foot in the air.

"What do you mean, sir. by slouching in this outrageous way, and carrying upon the casual observer.

So absorbed was I in my reflections that buttons, as well as collar and cuffs, in my white jacket and the helmet had to be of the Day, from behind me, until his adjusted and trimmed. Meanwhile, troop of the Companies (which was after parade, in the air.

leisure, and on the return to camp marched he

skirt the sides of the sentinel's beat.

Most of the older cadets left orders with their special dutymen to awake them at a certain hour. My classmates, with less pretension to comfort, made their down on the hard tent floor.

Some wag of a yearling had found all the plebs with watches, and designated them as Number one, Number two, etc., the practical working of which system will be lilustrated later.

A dreamy stillness settled over the catalogue of their special dutymen to awake them as Nothing was bear and so floor.

Going on the catalogue of their camp.

Nothing was heard except the drowsy drone of the insects, the measured tread of the sentinel, and an occasional cry of. "Call off, number—," and from the interior of some pleb tent rang the answer "Number—, half-past three and all's well." Then off. number—.

After supper, we had only to sit down in our tents and await developments. There was not even the consolation of an expected letter from home, for there is no Sunday mail at the Point, except the newspapers. On week days there are two mails, one at 11 a.m., and another at about 6:30 in the evening. A pleb was detailed in each com-

pany to "drag" the mail from the quartermaster's tent, and to distribute it. As the

The cadet collar is a turned-down one. or less regular intervals, until each upper-class-man received his mail without the ex-ertion of going after it. Woe to the hap-less pleb who did not distribute his mail according to the rank of the recipients!

On this Sunday evening, I sat down on our locker, and tried to forecast my near future. First of all was the receipt of my cadet uniform, the gray dress-coat, and white trousers; second, my tour of guard

duty.

My first anticipation was realized the next day, for I was "turned out" to go over to the commissary. My clothes fitted me very well, and the inspecting officer allowed me to "drag them off" with me.

As for the guard duty, I was not as anxious for it as the rest of my classmates. I had no fear of not being able to learn my orders, but I knew I would get dreadfully rattled when several different parties were I on my post at the same time. More than likely I would not be able to advance them they would be sure to advance them the

In oder to consider the matter more clearly, I went outside for a little turn in the street. Seeing no one near, and my went through camp and published the order meditation suffering from the constraint of that "parade would be in white," which "finning out," I adopted the expedient of meant that instead o, the dress-coat a turning my hands around and carrying the short white jacket (two of which had been backs to the front, trusting to the dark-ness to conceal the "formation" from any

the Episcopalian. The sect, however, depends upon that of the chaplain appointed by the President, but most army chaplains are Episcopalians.

Besides the usual Sunday exercises, cadet professory and carrying your meetings were held on the evening of each Wednesday and Sunday, at which most army. While in camp, those cadets who wished to join meant the attendance was voluntary. While in these gatherings were excused from marching back with the battalion. The greater part of the attendants at these summer part of the attendants at these summer meetings were plebs.

On our return from chapel, on our first sunday, a surprise awaited us. Slikins was called down to the commandant's tent and informed by that officer that he was released from arrest. My tentmate's inexperience had here taken into consideration, and his offense overlooked for that time, but he was warned not to make another breach of confinement.

Then came our Sunday dinner, which was the dinner of the week. We ate at our leisure, and on the return to camp marched in columns of fours instead of a of before it as at retreat,) in their instead of potoching in instead of potoching in instead of potoching in instead of potoching in the air. What do you mean, sir, by slouching in instead of potoching your hands and carrying your hands in stuch a fashion as that? You are that the scond drum, the company death the most worthless specimen of a pleb I sourtageous way, and carrying your hands in that? You are the most vertices specimen of a pleb I sourtageous way, and carrying your hands in such a fashion as that? You are the most vertices extreated began.

As soon as the last company details fell in. So much had to be done at the lest moment I found the collar too have a surprise await to walk off my large for my white jacket, and my belt too long; consequently I got a bit late. In one brace at all) and allowed my hands to heard the large form white several last the knee, so as to preserve the crease, that the last moment I found the collar too have the wite w "found" on demerits before we went

on returning from supper, about a week after going into camp, the acting first sergeant of my company notified me that I was detailed for guard for the next day. Immediately I set to work "spooning" up my equipments, cleaning my gun, etc. I was the first man in our tent to go on guard, and I received the congratulations

could dream again.

And so the afternoon wore away with no disturbance of a military nature, except police call (which is at five o'clock on Sundays), until the first call for parade. When the band had resumed its place, after marching to the front, a hymn was played, and retreat sounded as usual.

After supper, we had only to all and another than the sounded as usual.

After supper, we had only to all and another than the sounded as usual.

After supper, we had only to all and another than the sounded as usual. with white trousers, collars etc. This is not entirely unselfish on their part, since the sooner the plebs walk a guard tour the sooner are the first-classmen excused from guard duty.

I was not able to find a collar in my com-

The cadet collar is a turned-down one and is pinned to that of the dress-coat. The cuffs, too, as a rule are pinned in the

sleeve.

The yearling engaged me in conversation while he was working, and just as he was completing his task, asked me the name of my company. When he learned that I was not a member of his company, he jumped me savagely, and I had to leave his jent without the needed article.

ready for guard-mounting. The men de-tailed for guard were excused from troop parade at 8 o'clock. About five minutes before troop parade, the Officer of the Day furnished us,) and the white helmet would

Fortunately, however, for my self-re-spect, he did not carry out his threat. With When the cadet of the red sash left me, the assistance of a borrowed helmet, ennoon are apt to make one drowsy, and it was not long before the hubbub attendant upon breaking ranks subsided, and the upper classmen began to make their beds down on the ground, in the shade of their tents, and under the old gnarled elms that

spected every one in a general way. He had very little to say to those in front, but he was very particular, when he came to the rear rank, where "plebs most do congregate."

There were two officers of the guard. One inspected the front, and the other the rear rank. These officers, like the adjutant, glanced over us in a general way, but in addition they inspected the guns.

Both officers, when their eyes fell on me led off with asking me where I got that helmet. Furthermore, the chamber of my gun was rusty my belts were solled, and collar too large.

The scene was as picturesque as it was characteristic. Some fifty yards in front stood the old and the new officers of the day, with red silk sashes about their waists, and red silk cross-pieces over the hreast, covering the usual white sword belt. The camp-stools were rapidly filling up with the summer visitors, the pretty girls dividing their glances among the ceremony pany of the proper size, and went over to in progress, the music, and the devoted

Meanwhile, the band played and the corporals of the other two reliefs were busy before taps, is the one that has all the comin assigning their men to posts. The upper binations and fun (?) No sooner had taps classmen took what they wanted according sounded than I began to hear whispered to rank, and the plebs accepted what was consultations at the first guard tent. "I'll left. "No. 1" seemed to be the favorite come on his post from the direction of post, for several reasons. It was at the camp," "You advance yourself as friend first guard tent in front of camp, and the with the countersign," "I'll get two plebs sentinel had a good view of all the visitors. Besides, when it came time to change resome of the expressions I overheard. liefs. No. 1 was relieved at once, and did not have to march all around camp. No. 4 came next in preference. This is

not have to march all around camp.

No. 4 came next in preference. This is in rear of camp, and is well shaded. It is just the spot for an indolent first classman (and even the best of such are lazy when the question of dragging a gun is before them) who indulges in day dreams; and walks his post at the rate of a quarter of

a mile an hour.

I was on the third relief, and was designated as No. 5. This post includes the eastern half of the path on the south side of camp. We broke ranks after relieving the old guard. My corporal told me that I went on post at twelve o'clock. In the meantime I had better "bone" my orders. The men off post were confined to the vicinity of the guard tents, and were compelled to keen their equipment on at all

who stands there?"

The corporal made sure that I knew my

orders, and left me.

A few minutes later, as I was turning

officers of the first class were allowed to

cross any sentine!'s nost without report

ond relief which had gone on at 10 o'clock.
On reaching the sentinel who guarded "No. 5," the corporal gave the command, "No. 5, arms port," and the sentinel gave me the special orders of my post.

I stood at "attention" until the relief was off my post, and I was alone with all the responsibilities of my position. While I was thinking my orders over, an officer crossed my post, and I came to attention at once, and gave him a "present arms." He was only a lieutenant and entitled to nothing more than a sergeant's salute. First opportunity—first break.

My or ders required that I should not allow civilians to meddle with

civilians to meddle with the guns in the artillery park south of my post, to permit no cadets to carry away material from the Quartermaster's tent, without having first obtained that officer's permission, and to allow no civilians to cross, walk, or loiter on my nost.

my post.
When the novelty of the situation had worn off, I began to yearn for a chance to put my orders into execution, and show how worthy I was of the responsibility with which I was honored. I longed for some thoughtless civilian to attempt an execution. ian to attempt an examination of the artillery pieces in the park. How quickly I would come to an "arms port" and tell him in polite language not to meddle with government prop-erty. Then I wished for a cadet to come along and try to walk off with some of the Quartermaster's property.
While busy with these

thoughts, one of the policemen, whose duty it was to carry away the rubbish from camp, approached with a wheelbarrow and halted at the line of trees that bounded my post in the south. He sat down on the handle of his barrow, lit his pipe, and gazed at me in a contemplative way. contemplative way.

contemplative way.

He was not on my post, but the front wheel of his barrow was. So I called "Corporal of the Guard, No. 5." The call was repeated, and when the corporal came, I directed his attention to the sacrilege. He replied by asking my name and state, and whether or not I was of sane mind. He then requested me to repeat my orders.

Shortly after the corporal left me, an old cadet came down to the Quartermaster's tent. He looked around in a careless way, picked up a small plece of rope, and started off, whistling a popular melody.

ACADEMY BUILDING

But the ghosts paid no heed to tommand. I gave them no further tion, but allowed them to disport seleves until they grew weary and vanished among the neighboring to officer of the guard visited my pofurther interruption occurred until relieved some time after 1 o'clock. off, whistling a popular meson.

"Have you authority to take that rope, sir?" I asked.

No reply.

"Have you any authority to take quar-termaster's stores?" I asked in a still louder voice.

The cadet now looked at me contempt-ously, and said: "Oh, get out!"

uously, and said: "Oh, get out:"

I didn't summon the corporal of the guard this time. I made up my mind that I would allow cadets to walk off with every and rone, and allow the tent-peg, stretcher and rope, and allow the policemen, so disposed, to sit around my post and smoke their pipes to their heart's content, before I called the corporal of the guard, and raised again the question of my

At 1 o'clock, the battalion marched down At 1 O'CIOCK, the battanen marched down to dinner, and I became aware that I was hungry. However, my meal would not be forthcoming until the return of the battalion, when the first relief was to go on

post.
Now that camp was deserted, and there

cadets who were chatting with them, and the regular military gait, and that I had company were detailed every day to act as helping their sweetmeats to disappear.

After we had been marched in review. not forgotten to use the privilege of carrythe senior officer of the guard conducted ing my hands naturally, and to walk sine formation had been in single rank. The cadets who were chatting with them, and the regular military gait, and that I had helping their sweetmeats to disappear.

After we had been marched in review, not forgotten to use the privilege of carrythe senior officer of the guard conducted us in column of fours to our place in the depressing toes. My Ohio friend was on right of the old guard. The guard was "No. 6," and not having any wads of paper divided into reliefs of six men each, and to hold in his hands, was "finning out" in the first was "fallen out" to relieve the sentinels of the old guard then on post.

Meanwhile, the band played and the corporate of the other two reliefs were busy before tank is the one that has all the compared.

The result of all their plotting appeared in the hurried challenges of some pleb-

midnight, but by that time things had become quiet. After I had been pacing up and down the path for a few minutes, I was sure I saw an object near one of the trees that lined the path.

"Who stands there?" I challenged. The person challenged immediately began to walk away.
"Who goes there?" The person stopped

going and began to come.
"Who comes there?"

The man stopped, and said: "I am not

coming, mister."

"Who stands there?"

"Corporal of the guard."

"Advance, corporal of the guard, with the countersign."

around at the east end of my post, I de-tected several white objects at the other omeers of the first class were allowed to around at the east end of my post, I decross any sentinel's post without reporting, between 9 a. m. and retreat.

When twelve o'clock came, we were bayonets, and found I was not mistaken. formed by our corporal and marched around camp to take the place of the second relief which had gone on at 10 o'clock. On reaching the sentinel who growed with the manner of small have playing horse.

nopping around and riding brooms, after the manner of small boys playing horse. I never believed in ghosts, but perhaps I would not have been as free from fright as I was at the time, had I not heard before that "No. 5" was frequently visited by apparitions at midnight.

Just for the fun of the thing I challenged. One of the spectres answered "Ghost."

Previous to our joining the battalion, the formation had been in single rank. The plebs numbered as many as the privates of the first and third class combined. Consequently, the formation was now in double rank. The rear rank was composed entirerank. The rear rank was composed entirely of plebs, and occasionally one of my classmates was fortunate enough to march in the front rank.

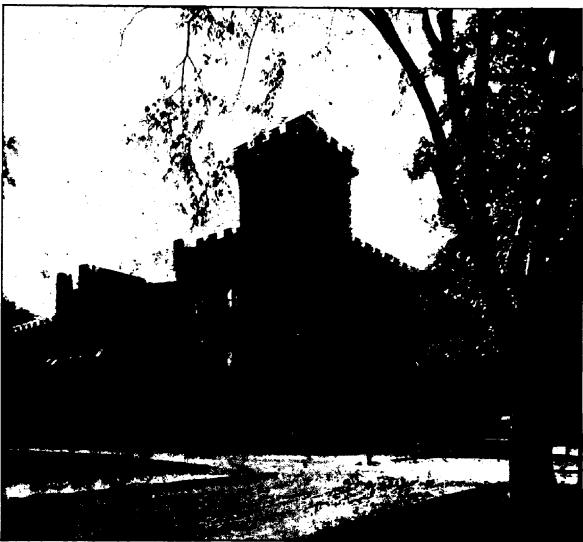

The inspections at parade occupied much more time than formerly. Captain Smith detailed one of his lieutenants to inspect the front rank, while he inspected the rear one in his most rigid manner.

On the first of August, the "color line" had been established. Immediately after inspection at troop parade, the companies were formed and marched to the color line, sentinel and a pitiful call for the corporal of the guard.

I went on post about half an hour before midnight, but by that time things had become stacked by the command of the senior capital and a pitiful call for the corporal a path running north and south, about ten yards from the extreme western tents. Here the battalion was formed, and arms were stacked by the command of the senior capital of the color had. captain. The stacks were dressed, after which the companies were dismissed. The battalion colors were laid horizontally on the two middle stacks.

> Three members of the guard were selected by the adjutant as sentinels, to walk the by the adjutant as sentines, to waik the color line. Any member of the guard (who was not a pleb) signified his intention of trying for this position by tossing up his gun as the adjutant inspected at guard-mounting. When this was over, the candidates were formed in the vicinity of the first guard tent, and the adjutant inspected them.

The gun was the most important consideration. Some men made a habit of "bon-ing colors," and kept beautiful guns. They spent hours in rubbing linseed oil into the stock and polishing it with the handle of a tooth-brush. They took the whole gun tooth-brush. They took the whole gun apart and polished the individual parts and screws, keeping the pieces wrapped up in linen, so as not to allow any dust to gather on them. Why, you could take a good color gun (provided you wore gloves) and look into the barrel with the breech closed. look into the barrel with the breech closed, and see the rifling and the head of the firing pin. It was considered a reproach if the adjutant could soil in the slightest degree his white liste thread gloves, by rubbing it on any part of a color man's rifle. In cases where the candidates were so "spooney" that it was hard to decide among them the adjutant would not them ne of the spectres answered "Ghost." them, the adjutant would put them "Advance, ghost, with the countersign." through the manual of arms, and base his

ACADEMY BUILDING, WEST POINT

But the ghosts paid no heed to this last decision on the grace and accuracy of command. I gave them no further attention, but allowed them to disport themselves until they grew weary and finally first colors, the next as second colors, and vanished among the neighboring tents. tion, but allowed them to disport them-selves until they grew weary and finally vanished among the neighboring tents.

Just after I had called off the hour at twelve-thirty, the officer of the day and officer of the guard visited my post. No further interruption occurred until I was

I went on post again at reveille. last tour was exceedingly wearisome. When I marched off guard at 9 o'clock, the last tour novelty of the business had worn away noverty of the business had worn away, and I felt that I would much prefer the daily routine of drills and nights of refreshing sleep to walking a tour of guard duty, with two hours on post and four off, for the whole twenty-four.

### RETURN OF THE FURLOUGH MEN.

By the first week in August, every man in my class had walked at least one tour of guard duty, and had received a complete cadet outfit. We were considered to be sufficiently well trained in the school of the sumciently well trained in the school of the soldier to join the battalion. So one day we were notified that on the succeeding morning we would join our respective companies. This meant that we would attend parades, inspection, and roll-calls with the old cadets. Our drills remained the same as before, except that we had an infantry was little probability of any officers cross- drill in the school of the company at four ing my post, I found time to collect my o'clock in place of the squad drills. First-thoughts. I found that I was exceedingly classmen were excused from attending this warm, that I had been walking my beat at formation as privates, but two from each

ants were obliged to walk one of the regu lar posts.

The colors and stacks were kept on the line until four o'clock in the afternoon One of the color men walked the line con-tinually, and it was his duty to see that every cadet and officer who crossed it took off his hat to the colors. The guard duty of the color men was limited to the hours I have specified, and they had the privilege of sleeping in their own tents.

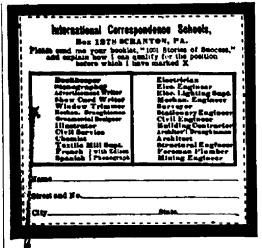

There was a great deal of friendly rivalry among the different companies in securing first colors. As a rule, some enthusiastic yearling in each company kept a tally, first colors counting three points, second two, and third one.

The plebs did not have the privilege of "throwing up" for colors until the 28th of August, that eventful day of camp life when the furlough men return to the Point. When I say privilege, I use the word in a restricted sense. I am quite sure that there is nothing in the regulations or orders say-ing that fourth classmen shall not throw up for colors or go to hops, but "custom"

for colors or go to hops but "custom" says "no," and that settles the matter.

It happened on some days that the guard consisted almost entirely of plebs. On these occasions a yearling, with a disposi-tion to "run it" on others, perhaps would "throw up" his gun for colors. Three yearl-ings on the entire guard, and three color

(Continued on page 158.)

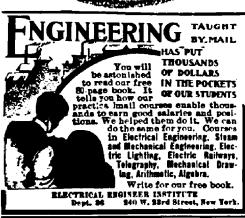

### How a Mark in This **Coupon Brought Success**

R. L. Tappenden was a forge shop apprentice at \$12 a week when he marked this coupon. As a result of marking the coupon he became Superintendent of the forge department of the Fore River Ship and Engine Co., of Quincy, Mass., earning over \$5000 a year. Mr. Tappenden's case is but one of thousands of similar experiences of those who have realized in this coupon their opportunity. To fill in and mail to us the coupon above is a simple and an easy thing to do. Yet it may be the starting point to great success for you. The I. C. S. has made it easy for every ambitious person to reach a good position and a high salary. You can qualify yourself in your spare time and at low cost. Cut out, fill in and mail your coupon to-day and we will send you full details and our booklet "1001 Stories of Success."

### GARDEN BOY'S

ANNUALS FROM SEEDS-By HUGO ERICHSEN

that amount will buy all the seeds you need.

As our summers are short in Northern latitudes, readers in the Northern states will have to start some of their flowers early in order to get them to bioom. This is notably the case with the Aster. Salvia Mexicana and Ageratum. Of course, the plants can be started in the house, at just about this time, in boxes. After the seeds have been lightly covered with earth, and moistened with water, the boxes are placed in a window where they will be exposed to the morning sun. But it should be borne in mind that the rays of the sun grow hotter as the season advances. Therefore, it is plain that neglect in watering would kill the plants. If you are not prepared to give them regular attention, you had better not begin with them at all. When the plants are impricked out into very small pots, being ultimately transplanted from these to the open ground, as soon as danger from frost is over When the small plants are plants are very tender, and that the rays of the sun grow hotter as the season advances. Therefore, it is plain that neglect in watering would kill the plants. If you are not prepared to give them rezular attention, you had better not begin with them at all. When the plants are two or three inches high, they are "pricked out" into very small pots, being ultimately transplanted from these to the open ground, as soon as danger from frost is over. When the small plants are yard or garden, so that only about six

HERE IS no reason why every boy shouldn't have a garden, if he wants one. The idea that it takes years before a back yard may be transformed into a place of beauty, redolent with fragrance and ablaze with color, is no erroneous one. It can be done in a few weeks. Presuming the ground to have been thoroughly spaded over and the soil to have been pulverized and properly manured, all that is required is a few packets of seeds. And seeds are cheap; a dollar invested in this way goes a long way. If your yard is small, probably less than that amount will buy all the seeds you need.

As our summers are short in Northern latitudes, readers in the Northern states will have to start some of their flowers early in order to get them to bloom. This is notably the case with the Aster. Salvila Mexicana and Ageratum. Of course, the plants can be started in the house, at just about this time, in boxes. After the seeds have been lightly covered with cort, and moistened with water, the boxes are placed in a window where they will be exposed to the morning sun. But it should be borne in mind that the young plants are very tender, and that the rays of the sun grow hotter as the season advances. Therefore, it is plain that negative as little as possible. The more disturbed as little as possible. The more earth adheres to their roots, their oots, the better. Salving and they are taken out of the pots and planted ont of doors, they should also be shaded. This can be done by inverting flower-pots over them or covering them with paper over them or covering them with paper over them or covering them out of the sun for a few days, until they have dust they are taken out of the sun for a few days, until they have taken out of the sun for a few days, until they have to their note and they are taken out of the sun for a few days, until they are taken out of the sun for a few days, until they are taken out of the sun for a few days, until they are taken out of these ways tused to their note.

It is advisable to keep them out of the sun for a

inches projects above ground, and is then covered with glazed sash. It is, of course, not absolutely necessary to make it of the size specified. Perhaps you will find the upper and lower sashes of an old window about the house. Construct two frames, side by side, place your sashes on them, attaching hinges to the back of each so they will not fall off when raised, fill up the boxes with fine mellow earth and you will be ready for business. As the cold frame depends upon the sun for warmth, the latter part of April is soon enough to start it in the latitude of Detroit. At points farther south, of course, it might be established much earlier. A frame of this kind can be managed by anyone. Sow your seeds rather thickly, for you can thin out the plants later on, water occasionally and air your miniature greenhouse whenever the sun shines brightly. The heat generated by the sun in early spring is a revelation to those who have had no experience with it, wherefore it is not safe to neglect ventilation lest your plants perish. On some days, the baby plants may even have to be shaded.

In case of a double cold frame, such as I have described, it may be well to devote one side to flowers and the other to early vegetables. It is a great pleasure to enjoy radish and lettuce many weeks before they appear on the tibles of your less fortunate neighbors, and a greater still to share them with your friends.

If you have never been interested in plants before, you may have wondered what the term annual in the title of this article means. Gardeners thus designate flowers that are not hardy, die with the approach of winter, and that must be sown from year to year. The list of annuals is so very large that I can refer to a limited number only. I have endeavored, however, to select the hest, that is, those most likely to prove satisfactory in the hands of those of my boy friends who have had but a limited experience in gardening.

Of the Asters, I prefer the late-flowering branching varieties. The flowers are

have had but a limited experience in gardening.

Of the Asters, I prefer the late-flowering branching varieties. The flowers are large and stand erect on long, graceful stems, well above the follage. In my opinion, these are the most satisfactory Asters grown. The plants are very strong some of them covering a space of two and a half feet square.

Cosmos is a beautiful flower, but very uncertain. The early-flowering varieties are almost sure to bloom, but the late-flowering sorts are generally nipped in the bud by the early autumn frosts.

To enable you to make an intelligent selection of the seeds of annuals, I will, first of all, give you a list of plants that are noteworthy for constant and brilliant bloom, namely: Sweet Alyssum, Calliopsis, California Poppy, Cornflowers, Scabiosa, Salpiglossis, some varieties of Daisles, Nasturtium, Petunia, Phlox Drummondii, Portulacca, Sweet Peas, Verbena and the double Zinnia.

sia, California Poppy, Cernflowers, Scabiosa, Salpiglossis, some varieties of Daisles, Nasturtium, Petunia, Phlox Drummondii. Portulacca, Sweet Peas, Verbena and the double Zinnia.

Some of the low-growing plants are particularly adapted for obtaining masses of color. For a mass of white, I would recommend Sweet Alyssum, White Ageratum, Achillea, the white Brachycome, Double Daisy, White Palox, Drummondii, White Portulacca, and White Verbena. A solid bed of blue may be obtained by means of the blue Ageratum, Veronica, Blue Brachycome, Lobella, Myosotis Alpestris and blue Verbena. Among the red flowers available for "massing" are: The Carmine and Crimson Candytuft, Gaillardia, the scarlet Phlox Drummondii, the red Portulacca, the Salvia and the red Verbena. Yellow is supposed to be the color of the autumn flower, but splotches of this tint may be introduced into the mid-summer garden by planting the orange and yellow California Poppy, Gaillardia, Iceland Poppy, yellow Portulacca, Partridge Pea, and yellow and orange Nasturtium.

With me, year in and year out, Nasturtiums have been very satisfactory. I generally train them over a large heap of earth and sow them promiscuously, without regard to color. Before summer is far advanced, the mound over which they clamber is hidden from sight, and from then until the first frost puts in an appearance they supply me with a succession of cut flowers. They are particularly effective in a rose bowl and are admired not only because of the peculiarity of their flowers, but also because of the beauty of their leaves.

The annuals notable for their fragrance are numerous. The list includes: Asperula Odorata, Sweet Peas, Pink, Rocket, Ten Weeks Stock, Tuberose, Violet and Waliflower.

Now I am not going to describe any of the flowers enumerated, because you will

HE WARBLERS are at once the delight and the despair of the bird student. His despair, because most of them are small birds which inhabit the tree-tops, and are difficult to study, his delight, because the difficulties to be overcome render each new acquaintance formed among them a distinct conquest.

Not only are they difficult to study because birds of the tree-tops, but they come to us from the south in late April or May, when insects, worms, caterpillars, etc., upon which they fred, are abundant. Then the foliage is sufficiently advanced to hide them from view as they flit about the upper branches and twirs, poising upon wing before blo-soms and assuming all manner of attitudes as their sharp eyes search the under sides of leaves for food. They are birds of bright colors, yet the colors are not flashy, and they are usually variegated, several small areas of different colory making un the plumage. For example, the Myrtle Warber, whose general color effect is a slaty-biue, has four separate dashes of yellow-on the crown and rump, and on each sid of the breast, while there are also various splastics of black and white. Such an arrangement of colors makes the bird blend with the green of the leaves. Indeed, one may often search the tree-tops long and eagerly, listening meanwhile to the notes of many warblers, without being able to get the eyupon a single bird.

Among the birds of North America this interesting family is second in size. The finch family to which all sparrows belong, takes the first place. The family is divide into two main groups or sub-family sether Flycatching Warblers, most of which inhabit North America. There is also a small sub-families there are more than one hundred species. Mr. Frank M. Chapman says that thirty-five species regularly enter the North Eastern United States, less than halif of which remain to breed, the rest going farther north to their summer homes in the coniferous forests. Though the family is so large and the difficulties of becoming acquainted with them are so many, we

YOUNG SUMMER WARBLER

Notwithstanding the expectation invited by the name "warbler," these birds can hardly be called singers. Most of them have pleasing and unpretentious little warbles. They are too busy searching for food to sing much. Most of their notes are conversational rather than musical. Some delicious worm is snatched from a biossom, then a few notes escape the glad throat just to tell how good it tasted. Walking through the woods in May, one hears music in the tree-tops. It almost seems to be the music of the tree-tops

hears music in the tree-tops. It almost seems to be the music of the tree-tops themselves, but it is the music of the warblers, the lisping, twittering, work-aday music of their happy and busy lives.

Not all the warblers, however, are birds of the tree-tops, nor are all of such colors as blend with the foliage. Some are ground warblers, and may be seen stepping daintily at the base of bushes. Others are birds of bushes and small trees.

The most conspicuous yellow bird in our shrubbery is the Summer Warbler. It is

of bushes and small trees.

The most conspicuous yellow bird in our shrubbery is the Summer Warbler, It is called also Golden Warbler, Summer Yellow Bird, Blue-eyed Yello v Warbler, or simply Yellow Warbler. The merest novice cannot well confuse it with any but the American goldfinch, and a second look instantly distinguishes it from this beautiful bird. The goldfinch has a pure yellow body, with binck cap, winrs and tail. The Summer Warbler has no black, while the yellow is not as pure as that of the goldfinch, but upon the bird's back hay an olive shade, and its breast is noticeably streaked with reddin-brown. The goldfinch is somewhat larger in size, and their songs also are very different, that of the goldfinch being soft, sweet and flowing, while that of the Summer Warbler is thin, sharp and animated. Though it can hardly be called musical, and hay little variation, it is one of the cheeriest songs in the bushes. There is no pretense at music except that of a happy heart. You are reminded of a school girl in vacation time, after her first term of music lessons. She hay mastered a few exercises only, and she keeps playing them over and over on the oli home organ out of sheer buoyancy of spirits. It is one of those songs that pleases more because of what it reveals than because of what it is.

The nest of this little golden sunbeam is usually placed in a bush about three or four feet from the ground. It is a very strong and compact structure to be huilt by such a small bird. The material is

principally plant down and soft plant fiber, but it utilizes any kind of soft, pliable sub-stance that it may chance to find, such as stance that it may chance to find, such as wool, hair, the fuzzy part of old ropes, etc. The nest is placed in a crotch, and its walls are made thick and strong. They are woven about the small, perpendicular branches to hold the nest in place. It cannot, however, be called a woven nest. Its texture is more like that of felt. While the size and depth of the nest proper is always about the same, the whole structure varies much in height according to the nature of the crotch. One nest that I observed last season formed a column seven inches high. The lining is usually of any soft plant down, but inside of this there is a sufficient layer of long hair, twisted round and round, to keep the plant down in place and preserve the form of the nest. the nest.

The structure is usually well concealed among the leaves, and is often placed near the top of a gooseberry bush, in a bunch of saplings that have shot up from some old tree root, or even in a large thistle.

I was setting up my camera about fifteen feet from one of these bird homes one day, when the male came out from the bushes.

I was setting up my camera about fifteen feet from one of these bird homes one day, when the male came out from the bushes for the purpose of inspection. A few feet from me he polsed on his rapidly-moving wings as humming birds are accustomed to do, and then darted into the bushes, where his little lady had secreted herself. This process was repeated a number of times. When the camera was focused upon the nest, and I had retreated fifty feet into the bushes, bulb in hand, the mother returned to her eggs, coming very cautiously through the bush from its farther side, and slipping into the nest without a sound. A few leaves had been pushed aside to let the sunlight into her cozy little home in order to secure a photograph. This, together with the presence of the camera, gave her great anxiety. The sun was hot, and every moment or so she would stand up in her nest and flutter her outspread wings, evidently for the purpose of cooling herself by fanning. When the bulb was pressed and the camera clicked for her photograph she was gone in an instant. The leaves were carefully replaced to shield the five greenish-white, brown-spotted eggs from the sun's rays.

When the young were eight days old I returned to photograph them. There was a marked difference in their ages, the smallest being nearly a week younger than the largest. The oldest was ready to leave the nest, and seemed about to do so when I arrived. He sat in the nest perched upon the backs of the others. His eyes were wide open and shining, his whole body restless. I considered myself fortunate to have arrived at such an opportune moment, but while I arranged my tripod in a sunny, open place, not far distant, the parent birds eagerly called their young, and in answer, the older slipped awny into the bushes, and I was compelled to be satisfied with a photograph of the next oldest, which was found to be a delightful subject for the camera, posing gracefully, but

isfied with a photograph of the next oldest, which was found to be a delightful subject which was found to be a definiting subject for the camera, posing gracefully, but without that eager and persistent restlessness which characterizes the young of most small birds when they are fully fledged.

The nest of the Summer Warbler suffers severely at the hands of bird enemies. Out of eight nests observed in a single season five were rified. In one case the eggs were first taken, then later the nest was carried off bodily. In another the nest was in a thistle bush which stood beside a dry though a weasel had stood upon his hind canal."

legs and pulled the nest over with his front

legs and pulled the nest over with his front feet to accure the eggs.

The nest of this cheery little birl is an easier prey than most others because it is made of light-colored material, and the amount used is large, so that the nest, though usually placed well within the sheltering leaves, is yet quite easily discovered. The birds also, being of bright yellow, are easily observed as they go to an I from their homes. Any prowling bluejay or observing cathird, both of which are eggesters, could not very well help knowing where their nest is located. Though the cowbird is not an egg-cater, it is neverthecowbird is not an egg-eater, it is nevertheless a bird enemy, laying its eggs in the

A SUMMER WARBLER'S NEST

nests of other birds, and eaving its young for foster mothers to rear, much to the detriment of their own children. From this interloper small birds suffer most, and the Summer Warbler is not exempt. I found her nest one day in a low bush, so situated that the prospect of some good photographs was excellent. The nest contained one egg, but the next egg laid was that of the cowbird. The mother warbler was greatly perplexed. She was seen in the neighborhood for a few days, but did not lay any more eggs, and as far as I could observe, did not go near the nest. In fact, I thought she had abandoned it. But one day I found her busily engaged carrying to the nest additional nest-building material. She would come and go with quick, hurrled movements, not stopping for a monests of other birds, and leaving its young to the nest additional nest-building material. She would come and go with quick, hurried movements, not stopping for a moment at the nest, and most of the time not even alighting on its edge, but throwing the material in from a great a distance as she could, as though regarding the nest a detested thing. Soon she had filled it half-full of bits of downy plint fiber loosely thrown in. She was burying both her own and the cowbird's egg. Ha is she been left unmolested, she doubtless would have laid other eggs upon the new bottom with which she was burying the unwelcome companion of her first egg. But some enemy rified the net of both the half buried eggs, after which the distressed mother abandoned it.

The Summer Warbler is to be found in nearly every grove, orchard, or patch of shrubbery, and frequently ventures into our gardens to make its home in the bushess. Of all our small birds none is daintier in color or more delightful in manner.

# A Novel Educational Institution

BOYS WAITING TO BE EXAMINED BY THE PHYSICIANS

N THE NAME of the Saint who divided his cloak in order to give half to a shivering beggar, the Rev. C. W. Robinson, of the well known Church of the Evangelists, Philadelphia, has opened a unique educational establishment, which he calls St. Martin's College. This college, which will be one of the adjuncts of the Epsicopal church, is intended for the education of boys of good character who are destitute. It is a charitable institution, and will be supported by voluntary contributions, but in order that no stigma may attach to the students in later life, through their connection with a charitable institution, the school has been given the high sounding name quoted above. The boys will be given the highest possible education compatible with the funds at the disposal of the originators of the plan.

possible education compatible with the funds at the disposal of the originators of the plan.

From over two hundred boys who have applied for admission to the new college, fifty were selected, after a careful examination by the college physicians and these are now installed in the buildings fitted up for school rooms and dormitories. They will all be taught useful trades, as well as given a thorough education. Each boy is supposed to be the property of the rector until he attains the age of twenty-one. If he wishes to leave the college he can do so, but when he enters Saint Martin's it is on the understanding that no one has any authority over him but the school faculty, at the head of which is the Rev. C. W. Robinson, through whose efforts the institution has been established.

The Church of the Exangelists, of which Mr. Robinson is the rector, was once a rich congregation, but the wealthy residents of that part of the town have long since deserted it and the edifice, one of the most interesting in America, is now quite out of the beaten track of well-dressed travel and is in fact the center of a district in which live fifty thousand Italians. The church still owns some property adjoining the structure, and several houses that belong to the corporation have been utilized to form one large building to which has been attached the name of Saint Martin's College.

It is called "St. Martin's College" because

tin's College,
It is called "St. Martin's College" St. Martin exhibited in his earthly life that self-sacrificing care and charity towards the poor which makes him an example for all. In the legend of his life it is said

cut his cloak in two and gave half to the shivering beggar. The legend says that one night after this when Martin was saying in his prayers, our Lord appeared to him wearing half a cloak, and saying, "Martin, do you recognize this?" and the Saint replied, "Yes, Lord, it is what I gave to the beggar." Whereupon Christ replied, "Nay, Martin, You are mistaken. When you clothed the beggar you were clothing me."

So far the number of applicants for admission to the college has been far in excess of the available room, and as applications are still pouring in the directors are bewildered to know how to provide for a larger number than they had originally intended to take care of. It is probable that the Episcopal congregations will unite in assisting the projectors of the plan for educating poor boys and that in a very little while after the school has been formally opened it will have grown to proportions exceeding the wildest dreams of those who established it with a view to the advancement of a few of the industrious and ambitious boys of the neighborhood.

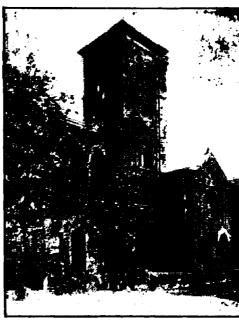

None of the officers of the college receive compensation of any kind. Teachers, physicians and directors give their services freely. The only salaried assistants will be those who teach the boys the various trades, printing, book binding, carpentering, plumbing, etc. The usual course of training in English will be given the boys in conjunction with the education in the trades. As they progress it will probably be found possible to add to the income of the institution by disposing of the work of the institution by disposing of directors, of the boys.

In addition to the board of directors, of the boys.

the boys.

In addition to the board of directors, of which the Rev. C. W. Robinson is the head, the list of officials includes the following as "visitors" or honorary members: The as "visitors" or honorary members: The Rt. Rev. Dr. Whitaker, bishop of Pennsylvania; the Right Rev. Dr. Mackay-Smith,

bishop coadjutor of Pennsylvania, the Right Disnop coadjutor of Fennsylvania, the Rient Revs. Dr. Coleman, bishop of Delaware; Dr. Scarborough, bishop of New Jersey; Dr. McLaren, bishop of Chicago; Dr. Nicholson, bishop of Milwaukee; Dr. Grafton, bishop of Fond-du-lac; Dr. Francis, bishop of Indianapolis; Dr. Seymour, bishop of Illinois, and Dr. Weller, bishop-coadjutor of Fond-du-lac.

# How to Make and Throw a Lasso

HROWING A LASSO is not only an teresting pastime but an accomplishment that, sooner or later. Will prove useful, especially to a boy on

a farm.

Any boy of ten or more years of age can make and learn to successfully throw this instrument of the prairies; all that is required is a little ingenuity and prac-

is required is a little ingenuity and practice, the latter backed by perseverance.

The name lasso is from the Spanish lazo, meaning "a snare," a "slip-knot." These terms graphically describe the article, which is simply a slip-noose on one end of a rawhide or an ordinary hempen rope, the length of which varies from forty to

one hundred feet.

Sometimes the term "lariat" (a corruption of the Spanish la reata, "the rope"), is employed in describing or referring to the lasso, but erroneously so as the former is for tethering a grazing horse or other animal. A lasso is often used for tethering, but a lariat, being without a noose, is no use as a lasso.

The best lassos are made of rawhide. The best lassos are made of rawhide. The hide is cut into long strips about half an inch or less in width. The hair is then removed and all irregularities in width or thickness corrected. It is next soaked in water until pliable, when it is braided, four strands being generally used. The braiding must be done with great care in order that the rope may be of the same size and shape throughout.

This kind of a lasso would be difficult

This kind of a lasso would be difficult for a boy to make. There is another style, however, almost as common as that just described, which is made with an ordinary rope. Get about thirty feet of good hempen rope three-eighths of an inch in diameter. This must be made very pliable by repeatedly stretching it between posts, or, better still, by trailing it on the ground behind a moving wagon, or from the back of a horse, now and then changing ends. If thus trailed for several miles it will be

on the stranger for several fines it will be quite pliable, and use will make it more so.

On one end fasten a ring made by sawing off a section of the horn of a cow or an ox. This should be about one and onehalf inches in diameter on the inside, and rounded so as to leave no sharp edges to

obstruct the free passage of the rope.

An iron ring, or one made from a shank bone, is often used, but as it is heavier than horn, they are liable to do injury, especially when used by boys for catching their playments. their playmates.

It is best to attach the rope to the ring

that when a Roman golder about to embrace Christianity, he was met one day by a poor, lame, half-naked beggar, asking alms. St. Martin was on a horse, clad in armor and wearing his soldier's cloak. In response to the request he drew his sword,

Now pass the free end of the rope through the ring, thus forming the slip noose. The lasso is now all complete except making a small loop on this end for the insertion of the hand (or, if used on horse-back, for attaching it to the pommel of the saddle.)

When used by a boy standing on the

When used by a boy standing on the ground the lasso is grasped at the loop with the left hand. It should now be carewith the left hand. It should now be carefully and evenly coiled up, the size of the coils depending upon the height of the boy. The larger the loops the easier they will run off.

The last twelve or fifteen feet of the rope should not be coiled, but left to form the noose and to allow a few feet of slack. It is very important that the size of the noose be carefully adjusted to the strength of the boy. A boy fourteen years of age of the boy. A boy fourteen years of age ought to swing with ease a noose three feet in diameter. The exact size is best

determined by experiment.

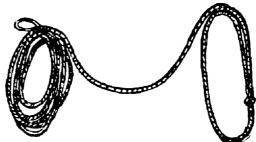

With the coil in the left hand, hanging lightly between the thumb and the fingers, the noise should be grasped, together with

the noose should be grasped, together with the free part of the rope, in such a manner that the ring hangs, on the right, about one foot from the center or bottom of the lower half of the noose. (The diagram will help explain the correct position.)

To throw the lasso, the noose must be circled repeatedly about the head, in doing this the wrist is not held stiff, as a beginner imagines, but turns or twists with each revolution of the noose. This wrist motion is very essential as it keeps the noose open. noose open.

When sufficient momentum has been ac quired, the cast is made, with a slightly upward movement. If the alm has been true and the noose settles about the object, a quick ferk and backward step or two will draw it taut and secure whatever is within it.

It is a little difficult at first to acquire the proper wrist motion, without which the noose cannot be kept open, but prac-tice will soon enable one to succeed, also to correctly estimate distances.

Fitted with double telescope crystal lenses, made of lacquered brass and nickel plated, handsomely designed, has metal props for sides. Complete with oil lamp and large assortment of colored sides. OGS ON THE battlefield, as rescuers of wounded who have crawled into out-of-the-way places to die, are no longer a novelty. Dogs as policemen are decidedly new and novel. It has been proven by the police of Philadelphia that a trained dog is the best adjunct the force can have

can have.

Recently it occurred to one of the patrolmen that it would be a relief during the

GUESS SHE MUST BE LOST"

ionely hours of the morning watch if he took his dog to share the dreary vigil. With the marvelous instinct of the intellitook his dog to share the dreary vigit. With the marvelous instinct of the intelligent animal the dog soon got into the habit of following his master to the station house, standing in line when the roll was called and accompanying him everywhere on his beat. By degrees the actual duties of a policeman seemed to become familiar to the dog. It required only one experience with a tramp freezing to death in an alleyway on the policeman's beat to show the clever dog what was required of him. Thereafter Rex, who is a splendid specimen of the St. Bernard, and who has inherited the instinct of rescuing unfortunates who are succumbing to cold, spent most of his time when on "duty" in nosing up alleyways, peering under wagons, searching in doorways, hunting in gutters and sniffing around dark corners, always on the watch for some wayfarer dead to the world and likely to be dead in actual fact unless speedily restored to consciousness.

ness.
Rex adopted his own method of procedure when he found such cases. Running to his master he caught at his coat and dragged him to the spot where the freezing tramp or inebriate lay. Not until the man had been transferred to the ambulance or patrol wagon was Rex ever satisfied to resume his search for other unfortunates.

fortunates.

From the search for men who had fallen unconscious by the wayside to the recov-

ery of lost children was a natural and easy transition. Rex grasped the idea very quickly that a child crying in the midst of a group of sympathizers was pretty sure to be lost. In the day time, when his master was sleeping, Rex, who seems to be able to get along almost without rest, will wander the streets looking for lost children. Occasionally he makes mistakes and half frightens to death some youngster who is not lost, but merely in tears over one of the numerous vicissitudes of infant life. The number of times, however, that he has brought to the station house, after the fashion of his species in the Alps, some little girl or boy, who has been led along with his or her arm around the big dog's neck, proves the usefulness of the animal as a member of the police force.

In addition to his cleverness in rescuing freezing wayfarers and bringing to the station house strays from the family fold, Rex has to his credit the finding of no less than five fires in the smouldering or onless than five fires of the smoke issuing from some crevice discloses the danger to the watchman. In this way he has saved thousands of dollars' worth of property.

It has become the habit with the police of Philadelphia who are on duty at night to take with them a pet dog. During the tedious hours of the watch they train the dog to search for belated wanderers who have gone to sleep in the Frost King's arms, to examine the signs around closed stores for traces of anything wrong, to call

"HERE'S A BUM WHO NEEDS LOOKING APTER"

instant attention to the presence of smoke that they are probably the most remark-issuing from the houses or buildings along able forms of life in the whole world. the beat and to scurry for assistance when

Mention The American Boy When Answering Advertisements

MONG THE MANY bird pets which I have kept at different times, owis have always been my favorites. Even before I had ever seen an owl I always longed to have one as a pet. There was something trresistibly attractive to me in the picture of the strange solemn-looking bird which only came out by night, and haunted dark woods and ivy-mantled ruins. Perhaps its cat-like appearance, too, had something to do with it, for to me owls always seem more like cats than birds, and I quite sympathize with the boy who described an owl which he discovered crouching in a hollow tree as "for all the world like a great cat with a claw at the end of its nose." However this may be, I well remember the rapture with which I was filled when a friend, returning from a walk in the country, brought back as a trophy a young horned owl, which duly became my property. Though filled with admiration at its personal appearance, its great yellow eyes and little budding horns, as the two feathers which stick up on the head of this species are called, I was a little disappointed at finding my overtures received in a decidedly hostile spirit, and I went away from my first interview with the bird of mystery with a beautiful impression of his claws and beak upon the back of my hand. It must be confessed that this individual owl, having oeen captured some time after leaving the nest, did not turn out a very desirable pet, but I was not discouraged. I have always found that most interest attaches to those pets which we manage to secure for ourselves, and certainly of all the birds which I have at different times kept, those which have cost me the longest walk and the hardest climb have generally been my favorites. Consequently, my one ambition for a long while was to find an owl's nest or myself. For many years, even at the time when I could pick out the most cunningly hidden nest of the blackcap or garden warbler, and tell exactly which corner of the wood in which to search for the tiny wood wren. I should have considered the finding of an owl's nest I should have considered the finding of an owl's nest as a fent far beyond me, partly for the reason that I had only a limited idea of owls at home, that being in connection with hollow trees, of which there was a plentiful lack about our northern country, or of ruined castles and towers, of which there was an absolute dearth. The fact also of the owl being still to me a bird of mystery—for at that time I had never ever heard, far less seen, a real live owl—prevented me from ever dreaming that there might be nests for the finding in the neighborhood; and yet all this while there different species of owls close at hand, and I have no doubt that, had I only known where to look. I could have found their nests as easily as I can

as easily as I can

do now.

BABY OWLS

Old havis' and pragpled next are favorto a grant of the state of the

ble-down cottage. They have been brought up in company with several other bird pets, up in company with several other bird pets, magples, jackdaws and hawks, and when quite young it was an exceedingly pretty sight to see them all together on one perch, watching the proceedings of the jacks and magples with an air of absorbing interest. Sometimes a jack would fly up to the perch and give one of the tawnles a friendly dig with his beak, for all the world as though he wanted to say, "Wake up, old fellow." Whereupon the owl would proceed with great gravity to comb the disturber's plumage with beak and claw, occasionally pausing during the operation and surveying his work with half-open eye, Jack the while winking at his mates below with an air of, "It's all right; it pleases the old air of, "It's all right; it pleases the old buffer."

Barn owls also I have kept at different times, and found them very amusing pets. My first I got from a barn where for several years a pair had nested in an old pigeon cote. Jeff we called him, and a funny-looking object he was when first h.s education was begun. From a little ball of fluff with an impish face at one extremity and a pair of remarkably sharn claws of and a pair of remarkably sharp claws at the other, he developed into a very fine bird, and would fly down in broad daylight from his cage to catch a live mouse, and then back again to make a meal of it. The

to live a year withour a drop of water, the other two species are very fond of a

with attention to these points, any of my readers may succeed as I have done with my pets, and will come to agree with me that the much maligned bird of night is well worth making a relend of.

### What a Gentle:nan Must Be

President Eliot in an address to Harvard freshmen, said: "A gentleman must also be quiet. If a man is heard brawling about the college yard one can feel perfectly sure that he is either an outsider or a newcomer. He must never do anything that will hurt a woman or a child or an inferior. He must be generous, efficient, deferential to age, beauty, excellence, skill, and all worthy things." This and one from a hole in the wall of a tum-

SIR ALFRED HARMSWORTH

### Sir Alfred Harmsworth

"The Napoleon of British Journalism" is now only in his fortieth year, yet he owns absolutely or controls thirty-two publications—dailies, weeklies and monthlies. He was trained to his Irish father's profession of the law, disliked it, left it when twenty-eight, began journalistic work with \$800 capital—and today, at the end of twelve years, Alfred Charles Harmsworth is a power throughout Europe, less because he is worth some \$750,000, than because of the influence of the papers he directs.

"Answers" was his first venture; a weekly that agreed to look up correct replies to all possible queries. Then he started a monthly and began to show Engstarted a monthly and began to show English readers what good short stories were like. Then he put out the "Daily Mail," a morning paper, following it with the "Evening News"—and each has today a circulation of 400,000 copies, paying jointly to their stockholders annual profits of half a million. These are but four of the thirty-two every one a monumental success. How did he do it? By realizing that the British public was as human as the American, and bringing to it, in place

the British public was as human as the American, and bringing to it, in place of the slow-going, bulky papers which it had always known, papers smaller in size, with news crisply told, headlines which really guided the render, and, above all, a system of world-wide correspondence which has "beaten" the older London dailles time after time.

Harmsworth has made so clear a mark in his profession that all England endorsed the honor of knighthood which King Edward recently conferred upon him.

### **NEXT** MONTH

¶ Look out for "What a Boy Can Do in a Back Yard". It will appear in our April number, well illustrated.

### William Barclay Parsons

"The man who buil, the New York sub-way" deserves every way" deserves every bit of the praise that is being poured upon him. He has won phenomenal success; it is much, indeed, to be, at forty-five, the recognized head of an important technical portant technical profession, with a record of twenty-two years of unbroken victories behind one. The secret is that Mr. Farsons has Mr. Farsons has even more than unusual brains; he has will power behind knowledge, and strong character back of all.

At Columbia University he stroked his crew and was captain of the tugof-war teams, doing well all that came to his hand even then.

of-war teams, doing well all that came to his hand even then. When a studying in the School of Mines he spent his vacations surveying or working on railways; he realized he had much to learn and he wanted to learn it thoroughly.

With such preparation he went into the engineering world and in just twelve years was so prominent in it that he was named chief engineer of the New York Rapid Transit Commission in 1894. Ever since, he has done little but work over the immense problem of how to handle the crowds of a great metropolis, and the finished subway is his fittest monument.

Yet he has done other things. He went into China, for instance, to survey a railroad route between Hankow and Canton. "You'll get killed, if you try it." said the American consul; but Mr. Parsons tried it, and did it, and didn't get killed.

No wonder honors crowd upon such a man. Roosevelt has made him a Commissioner of the Panama Canal, and Edward of England has done even mere, for he has invited the genius of New York's underground to attempt the task of straightening out London's traffic problems. None but an Englishman has ever been asked before to put hand to such a work.

If young men are casting about for ca-

work.

If young men are casting about for careers upon which to model their own, they will not go amiss in studying the lessons of Mr. Parson's life. He took time to lay a solid foundation; he cultivated character and determination as well as "book learning," and has shown that success awaits the man who "knows how to do one thing well."

WILLIAM BARCLAY PARSONS

OSCAR II, KING OF NORWAY AND SWEDEN

### King Oscar II

King Oscar II

"If the Swedes were to proclaim a republic tomorrow, Oscar would at once be elected president."

That is the opinion of scores of travelers in the northern European kingdom, and it is simple truth. The monarch of Norway and Sweden is immensely popular with his people—as might be expected of a fellow so democratic that he likes nothing better than to talk with some subject as affably as to a near neighbor. Over six feet tall, built powerfully, with a record for athletic prowess as well as sound statesmanship, Oscar, now seventy-one, still stalks chamois, climbs mountains, or walks twenty miles a day—and still writes books. Indeed he is a real literary man, not a

twenty miles a day—and still writes books. Indeed he is a real literary man, not a mere trifler with letters like his "dear cousin," the German Kaiser. Oscar's poems have been translated into French and Russian. His essays have appeared in the famous English reviews. He has played successfully the parts of both critic and historian, and now is at work upon his pers nal memoirs, in which he promises to tell the truth of the diplomatic moves of the big European game in which he himself has played no small part.

Oscar is also possessed of a fine vo'ce.

he himself has played no small part.
Oscar is also possessed of a fine vo'ce, and many are the evenings he spends with a few chosen friends grouped about the plane for duets or choruses. Yet a third distinction has this king; he is a remarkable linguist, speaking fluently German, French. English and Italian, as well as his native tongue, with some knowledge, too, of Russian and Danish. He is distinctly one of those "Grand Old men" of whom not only Sewden but all the world may well be proud.

### **NEXT** MONTH

¶ In our April number will appear Lesson 1 of Experimental Lessons in Electricity by R. G. Grisvold. Fine !

### How the "Spit" Ball is Pitched

Pitched

Harry Howell, the eastern pitcher gives the following explanation of the much discussed "spit" ball:

"The quick and mystifying break of the spit ball is very simple. The ball simply follows the law of gravitation. The force propelling it diminishes and the result is a sudden drop to the right or left, according to the way the pitcher releases his grip. The real object of wetting the ball is to allow it to slip off the first and second fingers instead of rolling off. A quick curve instead of a gradual one is the result. The sudden break gives the batter no time to draw bead, while nearly any batter can gauge a slow curve. There should be no friction between the fingers and the ball, this being alleviated by the constant wetting of the fingers.

"The spit ball is of medium speed. If thrown swiftly it shoots over straight; if slowly it strikes the ground before the plate. Very little rotary motion is imparted in the ball. It comes up big and slow and the batter can almost see the seams. As ne draws back to hit the ball seems to receive a new impetus as though struck down from behind and he misses by a foot.

"As yet no pitcher is certain whether

seems to receive a new impetus as though struck down from behind and he misses by a foot.

"As yet no pitcher is certain whether his spit ball will go to the right or left. The direction all depends on whether the arm and hands are facing downward, upward, or to the right or left. With this ball perfected, nothing can stop it unless the rules are changed.

"The spit ball is also dangerous for the team whose pitcher uses it. A slow spit ball that broke too soon cost the New Yorks the championship, it is said, as when the ball bounded a man on third reached home before it was recovered,

"'Cheerful Charley' Hickman, Detroit's first baseman, was yelling at George Mullin to throw him the ball when a Washington player was trying to steal in a game at the Capitol city, this summer. With his arm set Mullin swung around and threw the ball. It broke before Hickman caught it and hit him in the mouth, putting him out of the game for several days.

"Here are the five best spit ball pitchers: Chesbro, of New York; Patten, of Washington; Townsend, of the same club; Mullin, of Detroit, and Rhoades, of Cleveland."

### How "Tad" Lincoln Secured a Pardon

"A poor woman came to the White House one day to see the President about her husband, who was in trouble. The President was absent, but "Tad" was at home. The woman called the boy to her and said: 'My husband is in prison. We have boys and girls at home who are cold and hungry. Your papa can unlock the door of the prison and let our children's papa come home and care for us. Won't you ask your father to let him come home?"

papa come home and care for us, Won't you ask your father to let him come home?"

"'Tad' could not talk or think about anything else but that poor distressed family, and of his pledge to try and bring rrilef. When the President returned, 'Tad' was at him at once about the case of distress. Mr. Lincoln had other things on his mind and did not pay much attention to the child till he clung to his father's legs and begged him to sit down and let him tell the sad story. The father told him that the woman would be back the next day, and he would then know what he would do. That did not satisfy the son, who climbed on his father's lap, threw his arms about his neck and said: 'Papa-day (meaning 'papa dear'), won't you promise me now to let the man out?' It was too much for the grent man, who said: 'Taddie, my pet, I will let him out because you ask me to.' "—"Success Magazine."

### BOYS' BOOKS REVIEWED

THE DISCOVERY OF THE OLD NORTH-WEST AND ITS SETTLEMENT BY THE FRENCH, by James Baldwin. This is one of the Eclectic School Readings designed as supplementary to the sixth grade. The young reader will obtain a good working knowledge of that great stretch of territory which we call the Northwest. Mr. Baldwin divides his book into three parts: How the Great Lakes were discovered, introducing Jacques Cartier, Champlain and the other brave Frenchmen, both soldiers and priests who dared and endured so much for country and religion. How the Great Lakes were explored, tells of beroic adventures, hair-breadth escapes and bloody battles. How the First Settlements were made, gives an interesting description of the manner in which the French settlers lived. There is an index and pronouncing vocabulary which will be found useful to the student. 271 pages. Price, 40 cents. American Book Co.

American Book Co.

UNDER THE MIKADO'S FLAG, or Young Soldiers of Fortune, by Edward Stratemeyer. This is a timely story of the Japanese-Russia war, but told, it seems to us, with less of this popular author's vivacity than has characterized his previous work. There are the same careful, historical and geographical settings, the same heroes; but somehow in the story there is a drag; situations and incidents hardly seem to follow each other with the case and briskness that we have noted and commended in former reviews. The boys will, however, read it and gain much valuable information regarding names and places which at present are most prominent in the public view. A. B. Shute is responsible for the first class illustrations. 305 pages. Price \$1.25. Lee & Shepard.

tions. 365 pages. Price \$1.25. Lee & Shepard. THE STORY OF ROLF AND THE VIRING'S BOW, by Allen French. To those readers who love the myths and traditions, the lexends and the folk-lore stories of hundreds of years gone by, the story of Rolf, a boy of Iceland, will be warmly welcomed. Rolf searches for an archer who can shoot a certain distance, thus saving his father's farm. Failing in his quest the Althing outlaws him to the islands of Orkney and he there has many thrilling adventures. With the bow obtsined from the old viking's grave, he returns to Iceland, performs the test required of him, hereby saving his property and bringing disc miture and vengeance upon his enemies. It is a fine story, told in graphic forceful language that the boys will like The illustrations are my Bernard J. Rosenmayer. Price \$1.50. Little Brown & Co.

AMY DORA'S AMUSING DAY, by Frank M. Bicknell. Certainly there is an appropriateness about the title of this little book to the contents which is commendable as, if all the events of that memorable day were not amusing to Amy Dora Applegate, they will be found truly amusing by the reader. The filtustrations truly amusing by the reader. by Florence Scovel Shinn are in the same vein.
181 pages. Henry Altemus Co.

STORIES OF ADVENTURE, as told by Adventurers, by Edward Everett Hale. This is a new illustrated edition of the author's Stories for boys and girls. Among the adventurers whose deeds and journeyings are recorded are:

Marco Polo, Sir John Mandeville and the Crustelles Bertrandon in Palestine Geoffice. sales. Bertrandon in Palestine, Geoffrey of Vinsauf, Hernando Corte's Letters, Humboldt's Travels, and others. Of course, no one of these tales is told in full, but the main account of tails is told in full, but the main second of each is given, with the author's comments and explanations, all intended to stimulate the boys and girls to more extended reading. Grown-ups and girls to more extended reading. Grown-ups as well as young folks will find pleasure and instruction in this book, and the many portraits and pictures will only add to its attractiveness. 310 pages. Price \$1.25. Little, Brown & Co.

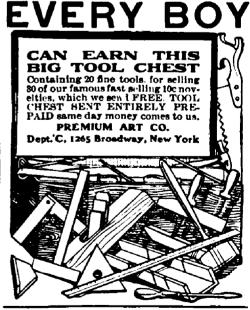

NATION'S IDOL, by Charles Felton Pidgin. The nistory of the men who played important parts in the establishing of our country ought to be of the greatest interest to American boys, and next to Washington the memory of none of these men should be honored more than Benjamin Franklin. The years of Dr. Frank-lin's solourn in France acting as special repre-sentative of our infant Republic, is the pivot while it is a story in which Master Cupid's wiles and ways are ably portrayed, the central figure is easily the great philosopher-stateman. His bury life at the court of King Louis, the successful accomplishment of his mission and the interest manifested by king and the interior interest manifested by king and court in his personality and achievements are depicted by one who loves his subject. It is a book that will interest and please the reader whether young or old. 348 pages. Henry Alternación

ZEB., a New England Boy, hv W. O. Stoddard. This popular writer for boys has put forth a good hearty, healthy story of thoroughly gra-uine boys. Full of fun and boyish pranks really for every kind of harmless mischief, yet honneeded. Boys are sure to like it. It is nicely illustrated. 288 pages. Price \$1.50. George W. Jacobs & Co. est, straightforward and helpful where help is

THE LIGHT BRIGADE IN SPAIN, by Herbert Strang, author of "Tom Burnshy." This is a FHE LIGHT BRIGADE IN SPAIN, by Herbert Strang, author of "Tom Burnahy." This is a story of war with all attendant excitements, and therefore of interest to all healthy boys. The many stirring incidents of the Peninsular War at the beginning of the nineteenth century when Spain, Portugal and Great Britain were fighting against the French and which ended in the expulsion of Napoleon from Spain, have been the themes of many stories. The story under consideration deals with the part played by The Light Brigade, composed of a number of British regiments, in the masterly retreat of Sir John Moore with his army to Corunna, the signal victory which that general there gained and his heroic death. The effect of this victory was to awaken again the patriotic erdor of the Spaniards, and the book gives a most vivid picture of the slege of Saragossa. A good story, well told, and the love romance running through it will heighten the reader's interest. There are a number of apt illustrations, and the mapdianings will be found of importance in folthen Spain, . Portugal and Great Britain wei drawings will be found of importance in fol-lowing the events recorded. The book is dedicated by permission to Field Marshal H. R. H. The Duke of Connaught, etc. 416 pages. Price \$1.50. G. P. Putnam's Sons.

THE LITTLE COLONEL IN ARIZONA, by Annie Fellows Johnston. This is the latest volume of "The Little Colonel Series," and this sweetest of girls is, if possible, more lovable and fascinating than ever. Her experiences and adventures while staying with the Ware family in Arizona still make pleasing and family in Arisona still make pleasing and altogether delightful reading. The members of the Ware family in their adobe house learning the best of all life's lessons self reliance. the best of all life's lessons, self reliance, sacrifice, duty and loving service, are worthy examples for every one. The chapter containing Mr. Ellestad's legend of old Camelback mountain possesses true poetle power. The lessons taught will appeal to the intelligent reader. No better story could be placed in the hands of the young folks. The illustrations are by Etheldred B. Barry, \$18 pages. Price \$1.50. I. C. Pages & Co. \$1.50. L. C. Page & Co.

LOU. by Harriet A. Cheever. The author has written a story, heautiful in its simplicity. Lou is just the sweetest, cutest and most lovable little lassie any one could wish to meet, and we are sure the many readers of her adventures will become as warm friends as Mother Perkins, Doctor Banks or "Uncle Captain." A book we can sincerely recommend. Nively illustrated by Bertha G. Davidson 291 pages. Price \$1.25, Dana Estes & Co.

INVESTOR'S REVIEW,

1314 Gaff Bldg. Chicago, Ili.

# GENERAL FRANCIS MARION

HERE ARE MEN apparently born for the times in which they live, and who are peculiarly fitted to be leaders in certain emergencies. Such was General Marion, whose daring, dashing method of warfare was unique in the struggle for American independence, and who played a large part in the formation of this great government.

Francis Marion was born in Georgetown, South Carolina, in 1732, the same year that gave birth to George Washington. His grandparents were Gabriel Marion and Judith Baluet, who, after the revocation of the Editt of Nantes, in 1885, left Poitou, France, and settled near Cooper river, in South Carolina. His father, Gabriel Marion, married Esther Cordes, and their children were Isaac, Gabriel, Benjamin, Job, Francis and Esther. This only sister of Francis Marion, first married John Allston, and then Thomas Mitchell, both of Georgetown; and from her are descended the eminent sculptor, Thomas Crawford, father of the famous novelist, Francis Marion Crawford, a nephew of Mis. Julia Ward Howe, who is immortalized by her "Battle Hymn of the Republic."

In those early days, many wealthy southern planters sent their boys and girls to England to be educated, but though Francis Marion was deprived of that advantage, he had a liberal education. Like Washington, he desired a sallor's life, and when sixteen years old, made a voyage to the West Indies. The schooner foundered in a storm and the crew of eight men took to a small boat without water or provisions. A dog had followed them into the boat, and it's flesh eaten raw was all they had for eight days. Several died of hunger, and the captain and mate jumped into the sea and were drowned. Among the few who escaped was young Marion, whose terrible experience decided him to follow his mother's advice—to give up a life on the ocean for that of a planter.

In 1761 he was a lieutenant of a company of cavalry, commanded by Captain William Moultrle, which was sent on an expedition against the Cherokee Indians.

of cavalry, commanded by Captain William Moultrie, which was sent on an expedition against the Cherokee Indians. Marion won distinction as "an active, brave and hardy soldier, and an excellent partisan officer." He was slender and below medium height, but possessed a strong healthy constitubut possessed a strong, healthy constitution, which fitted him for a soldier's life He had a sallow complexion, a high, broad forehead, and an aquiline rose; his eyes were dark and penetrating, and his countenance animated in conversation, but he was generally a quiet, reserved man; courteous and gentle in his manners—"beloved by his following and respected by all." by his friends and respected by all."

Before the Revolution

Before the Revolution, he lived on his plantation, Burnt Savanna, devoting himself to agricultural pursuits and in taking an active interest in those exciting times which were the shadow of coming events. In the early part of 1775, he was elected to the Provincial Congress of South Carolina. When the first blood for freedom was shed on Lexington green. Marion was among the on Lexington green, Marion was among the foremost to offer his services to his country. He was in the first corps raised by on Lexington green, Marion was among the foremost to offer his services to his country. He was in the first corps raised by South Carolina, acting as captain in the Second Regiment, commanded by Colonel Moultrie. On the 28th of June, 1776, the garrison of four hundred men on Sullivan's Island, triumphantly repulsed the British squadron of nine ships of war; and for gallant behavior on this occasion, Marion was promoted to the rank of major. The first anniversary of this event was celebrated on the island and in Charleston with firing of cannon and "in oration, toast, and song." The ladies of the city kave a dinner to the Second Regiment, and Colonel Marion, who was then in command, "hoped that the men would behave themselves with sobriety and decency in honor of the ladies who had been so kind." He was very much opposed to intemperance, and before the slege of Charleston began in 1780, was invited to a "stag party." After dinner, the host arose and said: "Gentlemen, I have a few bottles left of the old 32 and in that wine I propose a toast—Health and happiness to the defenders of Fort Moultie! Are you all charged?" Every eye was centered on Colonel Marion, who only touched the glass to his lips. Cries were heard of—"Bumpers all!" "Heel-taps!" "The children of distant generations may never hear my name, but still it gladdens my heart to thirk I am contending for this certification of the ladge of the stage of the city and in the thought that I am fighting their battles. The common weal was his sole object: "It was said of this remarkable man—leaves this room till all the liquor is druik." Marion knew that meant a regular carousal and, as they were aware of his dislike to such scenes, probably thought they intended to play a trick on himself a slave for fourtien years, but will think no more of four-steen years' servitude than and cand with such abequate for fourteen years, but lith him be over head and ear in love, and my weetheart as and with such a beauteous sweetheart as Rachel, and he will think no more of f key into the street. "Gentlemen," he said, "by the laws of good fellowship no man leaves this room till all the liquor is drunk." Marion knew that meant a regular carousal and, as they were aware of his dislike to such scenes, probably thought they intended to play a trick on him, so he ran to a window from which he leaped, lighting on the street with a broken ankle. This disqualified him for military duty, and lighting on the street with a broken ankle. This disqualified him for military duty, and when General Lincoln, in anticipation of an attack on the city, ordered all who could not take an active part to leave the garrison, Colonel Marion was carried to his home in St. John's. On the 1st of April. 1780, Charleston was besleged by the British under Sir Henry Clinton. After a brave defense of forty-two days, General Lincoln was compelled to surrender the city, and also his whole army as prisoners of war. Lord Cornwalls was put in command of the British forces in the South, while Congress appointed General Gates to the chief command of the southern army which, unfortunately, was composed largely of raw militia, half-clad and poorly fed. Two months after he took control the disas rous battle of Camden occurred, which cast a gloom over the country. gloom over the country.

Marion's whole soul was in the cause and

Marion's whole soul was in the cause and, knowing the alarming condition of the southern states, his ardent nature could no longer remain quiet. His ankle had not healed, but he left his home and sought service with Baron de Kalb in North Carolina. It was about this time that his star shone out with greater brilliancy, and he displayed that peculiar military genius which qualified him to act the part that made his name illustrious. Marion's Brigade, famous in history and romance, sprung into existence, and the men who loved and trusted their brave leader followed wherever his judgment led them. From Governor Rutledge he received the commission of Brigadier General, and was invested with full control of the military district extending from Charleston to Camdistrict extending from Charleston to Cam-den and along the eastern coast to George-

This high tribute was paid Marion's Brigade: "They were the men who, regardless of cold, hunger, privations, and fatigue, grappled with the enemy, sprang upon him from the swamp and ravine, surprised and broke up his camps, and drove him from the fields to the city, from the

city to the sea. They were the men who, when the regular continental troops had withdrawn from the province, carried on alone the war with the enemy, drove him from point to point, encouraged the troops to return, and in the darkest hours of the struggle, restored by their gallant deeds the hopes of the people. They were the men who, forgetful of their own trials, remembered only the afflictions of their country." They confirmed the opinion of Napoleon that—"famine, cold and misery are the school of good soldiers."

Marion's idea of patriotism was given to a British officer who visited his camp to arrange for the exchange of prisoners. Seeing the destitute condition of the American soldiers he was astonished and city to the sea. They were the men who.

arrange for the exchange of prisoners. Seeing the destitute condition of the American soldiers he was astonished and said he could not fight under such circumstances—"all fighting, no pay, and no provisions but potatoes." Marion replied: "Why, sir, the heart is all—and when that is interested, a man can do anything. Many a youth would think it hard to indent himself a slave for fourteen years, but let him be over head and ears in love, and with such a beauteous sweetheart as Rachel, and he will think no more of fourteen years' servitude than young Jacob did. Well, that is exactly my case—I am in love, and my sweetheart is Liberty. Be that heavenly nymph my companion, and these woods shall have charms beyond

free government.

"Now, sir," continued the general, "I walk the soil that gave me birth and exult in the thought that I am not unworthy of it. I look upon these venerable trees around me, and feel that I do not dishonor them. I think of my sacred rights and rejoice that I have not basely deserted them. And when I look forward to the long, long ages of posterity, I glory in the thought that I am fighting their battles. The children of distant generations may never hear my name, but still it gladdens my heart to thirk I am contending for their freedom with all its countless blessings."

It was said of this remarkable "The common"

self in the morasses of Pedce and Black rivers, he placed his corps not only 0 it of reach of his foe, but often out of discovery of his friends." He was once closely pursued by Tarleton, who felt very confident that this time he would capture the "Swamp Fex." Through field and fen, over ditch and fence the chase continued until suddenly—the game was lost.

"The brilliant, daring will-o'-the-wisp of the swamps," had vanished. Before the British was a pathless bog overhung with a dense network of vines, and here Tarleton drew in his rein, exclaiming: "Well! let us go back, boys, we may find the 'Game Cock,' (Sumter) but as for this—old Fox, the devil himself could not catch him!" On another occasion, Marion was almost surrounded by British dragoons in an open field, and his only hope of escape was to scale a high fence with a ditch four feet wide and the same in depth, on was to scale a high fence with a ditch four feet wide and the same in depth, on the opposite side. With loud yells and imprecations, he was ordered to urrender or perish by the sword. His noble animal seemingly con-clous of his master's peril approached the barrier at full speed and, with a bound that appeared miraculous, cleared fence and ditch, alighting on the other side without injury. Marlon turned and fired his pistol but without effect and, bidding them a tantalizing "Good-morring," made a rush for the woods and disappeared. appeared.

Ing." made a righ for the woods and disappeared.

At the battle of Eutaw Springs, on September 9th, 1781, his brigade took a conspicuous part and formed the front line of General Greene's army. After this engagement the enemy abandoned the whole of South Carolina except Charleston. A month later Marion received the thanks of Congress for gallant conduct at Parker's Ferry and at the battle of Eutaw.

After the evacuation of Charleston, General Marion disbanded his brigade under the tall cedars near Watboo Bridge, in St. John's Parish. In a modest, feeling manner he thanked his men for their faithful services, and bade them an affectionate farewell. He returned to his home and found it desolated by war. Stock, farming implements, furniture and subsistence had to be replenished, as nothing remained but

HERE ARE MEN apparently born for the times in which they live, and who are peculiarly fitted to be leaders in certain emergencies. Such as General Marion, whose daring, dashing method of warfare was unique in the ruggle for American independence, and no played a large part in the formation of the formation of the ruggle for American independence, and no played a large part in the formation of the formation of the earth.

earth.

When the public required his services again, he was ready to act and, as a member from St. John's, took his seat in the Senate of South Carolina. On the 26th of February, 1783, Congress passed resolutions thanking him "for eminent and consp'cuous services to his country," also, that a gold medal be given him "as a mark of public approbation for his great, glorious and meritorious conduct."

The sunshine of peace brought a new

The sunshine of peace brought a new joy into Marian's life—it was not as he had said, "the heavenly nymph, Liberty," but the goddess, Love. He had a relative, Mary Videau, who was said to be strikingly like him in personal appearance, and who often averaged her high addirection ingly like him in personal appearance, and who often expressed her high admiration for him. A friend whispered this to the general, who, evidently heard it with pleasure and, perhaps feeling the loneliness of a bachelor's life with his characteristic earnestness and zeal as a soldier, he laid siege to her heart and conquered. He was fifty, and she on'y a few years younger, but love sometimes takes no heed of age, and it was a very happy marriage. It is said she was his companion in all his excursions through the country; and tra-

of age, and it was a very happy marriage. It is said she was his companion in all his excursions through the country; and tradition has preserved many proofs of the strong affection they cherished for each other until his death. She brought him a handsome fortune, which enabled him to improve his property, and their hospitable home was ever opened to friends and strangers. They had no children, but adopted his favorite grand nephew, Francis Marion Dwight, son of Rebecca Marion and Samuel Dwight, He bequeathed his property to him with the proviso that he should drop the name of Dwight and take that of Francis Marion. By a strange fatality, though he was twice married and had seven daughters, there was not a son. General Marion's last bublic service was as a member of the convention which framed the Constitution of his State, in 1790. It is recorded that Moultrie, Marion and Henry Laurens, served as vestrymen of the parish of St. John's. The closing years of his eventful life were spent in peace and happiness. When the hour of death came, he was comforted with the hope of a blessed immortality. "Thank God!" he exclaimed, "I can lay my hand on my heart and say that since I came to man's estate, I have never intentionally done wrong to any." On the 27th of February, 1796, the soul of Francis Marion passed away from earth. He was laid to rest in the Marion family-burying ground at Belle Isle. The old tombstone which marked his grave, was broken by a falling rest in the Marion family-burying ground at Belle Isle. The old tombstone which marked his grave, was broken by a falling tree but, a few years ago, it was replaced by a very handsome monument. The honors paid the brave soldier and patriot on that occasion, were a fitting tribute, and an expressive demonstration that his memory still lives in the hearts of his countrymen. On the old tombstone was the following inscription:

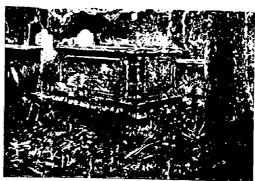

Sacred to the Memory

Sacred to the Memory of

### PRIGADIER GENERAL FRANCIS

MARION,
who departed this life on the 27th of
February, 1796, in the sixty-third year
of his age; deeply regretted by all
his fellow-citizens,
History
will record his worth, and rising genera-

tions embalin his memory as one of the most distinguished Fattiots and Heroes of the American Revolution; which elevated his native country to Honor and Independence,

reproach.

### "Three Boys in the Mountains"

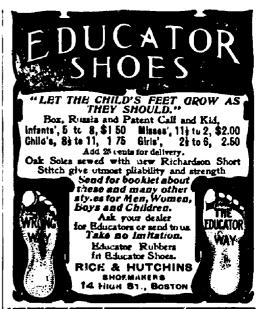

Written by William C. Sprague, Editor of THE AMERICAN BOY, under the nom de plume o' Joe Cody.

Of this popular story of western adventure we have sold within thirty days nearly 2.000 copies and orders still continue to pour in. The story depicts life in the far west in stirring style, on the plains and in the mountains, and no boy can read it without having his natural love for outdoor life and adventure quickened. It brings in the pleasures of the hunt, the chase and the camp, and deals with Indians, cowboys and wild animals. It is clean and inspiring and is just such a good, healthy story as any parent will be glad to have in the hands of his boy. It is hansdomely bound and illustrated

### FOR A LITTLE LAMB'S LIFE

Such a little lamb! Very woolly and soft and white, with a funny little black lose and four black feet. He was a Scottish lamb and lived far north where the heather stretches in purple masses and the sky is blue as flax flowers. He was born in May, and May in northern Scotland is very cold and the mists drift in from the sea and make even the mother sheep shiver, so this wee lamb found it cold indeed and he nestled down in the heather and fell fast asleep, while his mother nibbled the new grass that was creeping up green from the brown uplands. When the little lamb awoke it was very dark, only the great white stars above himand no mother, no shepherd, no sight nor sound of anything. He shivered and cast his frightened little eyes about the big, dark world that stretched so far on every side and he lifted up his little voice in a long wail for his warm mother. All night long he waited and bleated such a pleading cail, surely his mother must hear him, and then the dusk gave way to a few streaks of light and a new day was coming. Then suddenly the little shivering lamb heard the heath and gorse crackie and the black nose of one of the shepherd dogs appeared. The little lamb rushed forward and cried for joy and the good dog wagged his tail and licked his face, and then another dog came, and then the big, kind shepherd, looking very tired but very happy that he had found the little lamb, which he took up into his warm arms fondly and held very close. The lamb nestled against him confidingly and was taken back to his loving mother who was joyous to find him once more. But the little lamb never knew that the good shepherd had hunted all night over the bleak hills. She is a big woolly sheep now and never feels afraid but scampers over the heather very bravely and is as happy as the day is long.

# MAKING IT EASY TO DO RIGHT MRS. N. R. HARRINGTON

O THERE ISN'T anything to keep a boy from running away if he wants to, but there's hardly any of 'em that tries it." said one of the boys at the Cleveland Boys' Home. "If a boy showed that he was planning to leave, or didn't mean to act square, the other fellows would make it pretty lively for him, I can tell you."

I had visited the Cleveland Juvenile Court the day before, and had seen a score or more of boys convicted of various through with some pretty tough problems. If he knows that Rover is waiting for a room out to the woodchuck holes as soon as he is through.

Set of bells. They are thirteen in number, and range in weight from one to four room out to the woodchuck holes as soon as he is through.

Every boy that comes to the Farm finds for himself some kind of a pet. They have a dozen rabbits, and a pair of young foxes. There are four dogs trained to perform wonderful tricks, and a pair of don-keys which are the pride of the whole settlement.

I can tell you."

I had visited the Cleveland Juvenile Court the day before, and had seen a score or more of boys convicted of various misdemeanors, and some of them had been sent to this very farm. It therefore seemed to me the most natural thing in the world that boys who would play truant, and fight and steal, should try to run away as soon as they reached the place; but I had not been there long before I saw things differently.

place; but I had not been there long before I saw things differently.

The Home is a penal institution where the City of Cleveland sends boys who must be punished, yet who are not so bad as to warrant sending them to the State Reformatory; nevertheless it is the pleasantest kind of a home that one can imagine. There is a big farm of two hundred and eighty acres, with orchards, and cornfields, and walnut trees and swimming holes, such as would delight the heart of any boy in the world. On this big farm there are six cottages, and in each one there is a master and matron who look after the fifteen boys allotted to them, so you see a master and matron who look after the fifteen boys allotted to them, so you see it's exactly like a home in the country with fourteen jolly, romping brothers ranging from eight to sixteen. The cottages

AS MANY AS HE CAN BAT

are named for the presidents of the United States—Washington, Adams, Jefferson, etc. Each one has a big flag pole in front of it, with a pennant bearing the name, and on special occasions the Stars and Stripes

on special occasions the Stars and Stripes float above the pennant.
Shortly after his arrival, each boy falls into the habit of calling the matron of his cottage "Ma." Many of them have no mothers of their own, or worse yet, the father and mother may both be drunkards.

Just as soon as a new boy comes, the start take it woon themselves to teach

others take it upon themselves to teach him the ways of the place. No difference what offense a boy has been guilty of in the city, he is treated as if he were inno-cent so long as he obeys the rules of the

Work and play, eating and sleeping, com-Work and play, eating and sleeping, com-with healthful regularity. Five hours of the day must be spent in the schoolroom. As one might imagine, these boys are not very far advanced in their studies, but after a comfortable night and a good breakfast it doesn't seem so hard to study as it used to in the city. A boy can get

AFTER A WALNUT HUNT

them, and what beauties they are! The most of them are blooded Holsteins, and every one is a pet. The stable boss (one of the boys) told me that some of the cattle were very wild when first bought, but now every one is gentle even to strangers! I asked how they set about taming the unruly ones. "Oh, by just being good to them," was the answer. "They know who is their friend."

The boys have the naming of the cattle. Each animal has a numbered metal tag

Each animal has a numbered metal tag fastened to its ear, and the name is written on a big register, with each cow's number opposite. There is Sweetheart, who holds up her head and kisses her special favorites with her tongue. Rinca was so named because when she first came to the Farm she was restless and used to "rink" about. she was restless and used to "rink" about. Then there are three little, curly, black calves which the boys show off for the entertainment of visitors on every possible occasion. The most interesting thing about the herd is the chime of Swiss bells which they wear. The headmaster knew of an old Swiss bell maker down in Tuscarawas County, and he arranged with him for a

SOME OF THE BOYS WITH THEIR PETS

settlement.

settlement.

The man who has charge of the farm work is called "Uncle" by all the boys and he sets the time for work and for play. They had great fun the first time the new silo was filled. "Uncle" sent about a dozen of them into the big round bin to tramp down the sweet-smelling corn which the steam shredder sent pelting down upon them. They shouted with all their might as the pieces of corn stakes came down as the pieces of corn stalks came down upon them, and before long they had turned the work into a new game something like leap-frog. When they were tired, "Uncle" went to a nearby orchard, and brought back apples enough for the crowd. As they squatted around the edges of the bin eating them, one of the boys gave a satisfied grunt and said, "Gee! but this is better'n sellin' papers, ain't it?" "You bet!" they answered in hearty chorus chorus.

The boys are each assigned some special duty, and every fellow is expected to do his work without shirking and without complaining. One boy pares the potatoes, while another sets the table; two or three wash dishes, a couple of them make the beds, while some care for the horses and others milk the cows.

Those cows! How proud the boys are of them, and what beauties they are! The most of them are blooded Holsteins, and every one for the day, and the cows are of them are blooded Holsteins, and every one for the day provided into the big wagons and are off for the day, prepared to eat as much fried the day, prepared to eat as much fried

Rah, rah, rah, siss, boom, bah, Cleveland Boys' Home, rah, rah, rah, Ice cream, soda water, ginger ale or

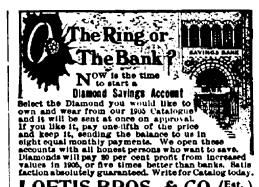

pop, Cleveland Boys' Home, always on the top."

The winter is almost as pleasant as the summer, for there are the skating ponds, and the ice to be harvested for summer, and the long evenings around the fireplace, with books and games. To many of the boys this winter at the Home is the first one they have ever spent without suffering from both cold and hunger.

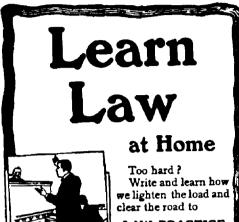

It is rather surprising to a stranger to learn that this community of boys has a learn that this community of boys has a regular organized form of government, just like a city, The boys register in duform, and upon election day cast their votes for mayor, police judge, and police clerk. There are at least two candidates for every office, and it nearly always occurs that the fittest boy is selected for each place. The mayor, with the advice of the headmaster, makes the laws which are to govern his city, and the chief of police selects his a sistants. Nearly all the boys are anxious that the laws should be police selects his a sistants. Nearly all the boys are anxious that the laws should be observed. A bully who abuses a younger or smaller boy is straightway arrested, and after a trial in police court it is very likely decided that he shall be excluded from all their games for a week. An offender found guilty of thieving would be sent to bed for twenty-four or thirty-six hours and fed upon bread and water. The boys are always prompt and sure in punishment, but they are equally quick to pardon when the culprit repents. Physical punishment is never inflicted at the Farm: a few hours twenty-tour or thirty-six nours and red a suitable mayor, they chose him for the upon bread and water. The boys are alsame reason."

same reason."

I found it was just so with the other they are equally quick to pardon when the culprit repents. Physical punishment is never inflicted at the Farm; a few hours fitted to be in authority over others.

in bed on a sunny day, or a couple of meals of bread and water, are generally enough to bring a boy back to right doing. Probably in no other "city" in America is real worth and fitness recognized as here. I learned by chance that the stable-boss and the mayor were one. I remarked to the headmaster that it seemed strange to the headmaster that it seemed strange that the boy who had charge of the stables should also be the mayor. "Nothing strange about it." he answered. "We gave that boy control of the stable because he has good judgment, and is able to control himself. When the boys were looking for a suitable mayor, they chose him for the same reason."

### New Issues

India .- 3 P. King's Head are now coming in

India.—3 P. King's Head are now coming in bluish gray.

The Duty stamp has also appeared with horizontal surcharge, "Warehouse Warrant."

Buigaria.—It has been reported that the 10s on 15s existed within the inverted surcharge.

Cape of Good Hope.—The remaining values of the King's Head sets here have been issued.

Persia.—The two new kran values of this country have appeared, there being 20K orange and 30K green.

30K green.

The King's Head ¼d stamp of Great Britain will in the future be printed in a pule yellow green shade.

Mauritius.—A new value of the current set for

Mauritius.—A new value of the current set for the A38 (Scott's) hus been received, the 4c black and red on blue.

Niger Coast Protectorate.—The ½ penny postage stamps are marked Crown and C. A. with surcharge "Consular" in red.

Bechuanaland Protectorate.—Both the 1d King's Head stamp and 1d post card of Great Britain have been overprinted "Bechuanaland Protectorate" on the stamp in two lines, "Bechuanaland" reading up and "Protectorate" down.

Ceylon—Judicial.—Duty stamps of 1903 surcharged "Judicial". In addition to the 5, 10, 15 and 25 cent values already listed, the 50: Illac and green; 1 rupes, green; 2 rupess, rel and green; 5 rupess, green and purple.

Chas, 8, Smack, Chicago, shows an interesting variety in the 12½c gray, Dutch Indies, King's Head type, in which a vertical line or break, running down the "c" of "cents" divides the letter.

### Hints for Collectors

WATERMARKS are letters or characters in the paper, which can be seen by holding up to the light. IMPERFORATE, refers to stamps issued with-

IMPERFORATE, refers to stamps issued without any means of separation, and that have to be cut or torn apart.

It is important that your stamps should be handled with the greatest care and safety. Keep your collection neat and clean.

PERFORATE, refers to stamps with round hole punches in lines between stamps for purpose of tearing apart and is a term of separation.

TETE-BECHE, a French term meaning certain stamps printed opposite one another or upside down and a pair or larger block is required to demonstrate this fact.

demonstrate this fact.
Use only the best prepared hinges, those that will peel off easily if required. Don't use drug labels or ordinary gummed paper, or the so-called perforated hinges.

The value of a collection is largely based on

its condition when you come to dispose of it, elther through lack of interest or necessity, therefore our first hint is of great importance to the owner of every collection.

### Stamp Inquiries

D. V. The stamps you mention are not worth any more than common U. S., as they are using more unsurcharged stamps than they do of the surcharges.—H. C. The 10c Columbian is cat. 3c. The 2c Columbian stamped envelope cats, 2c. I could not tell what the other stamps were.—M. W. The stamps you mentioned are from India, the 2a cats. 1c, 3a 2c. 4a 3c, 6a 4c, 8a 3c, 12a 8c, 1R 4c, 2R 18c, 3R 30c and 5R 60c.—H. L. The 5c Mexico cats, 5c. the 25c cats. 12c.

### Stamp Notes

vertical pair of Scott's No. 55 (the 12c of 1894) has been discovered imperforate

British Honduras.—The 5c on 3c, brown, Scott's No. 35 with a double impression of the "Five" and the bar below has been discovered.

Argentine Republic.—We understand that the 5c on 4c yellow No. 144 in the Addenda to Scott's Catalogue, was never issued; it should, therefore, be attributed out.

### The Numismatic Sphinx

The Numismatic Sphinx

Frank McDonald: A pretty 'badly marked' dime of 1838, or any other date for that matter, is not tworth more than ace value. The O find the New Orleans mint.—Ben De Bolee: There are three varieties of five-cent nickels of 1833. None of them will bring a premium on the dollar of 1894 or the mail cents of 1857 and 1839.—Earl Cole: Your rubbing is from a Spanish dollar of 1899. The piece seems to be in very good condition and some collector would possibly be glad to give a premium for it. As a general thing all the old Spanish and Mexican silver are worth only builton value.—Solon H. Rhodes: Face value is all your coins are worth—ltoy A. Pauli; Your rubbings are from (1) Turkey 20 paras, (2) Zanzibar, 1 pesa, 1299 A. H. (A. D. 1881). The dealers charge from fifteen to twenty-five cents each for them.—R. A. Nash: (1) France 5 franc of Louis Philippe, 1840. Only face value being holed. (2) Common Spanish 8 reals or dollar of Ferdinand. (3) Azores Islands, 20 rels, 1865; twenty-five cents. (3) Prussla, 2½ silber groschen, 1856, ten cents. Other coins common.—J. M. Woodruff: Your rubbing is rather indistinct, but we have no doubt but that the head on the obverse is that of the emperor Constans, A. D. 330-350. The coin is a third bronze and is not rare.—Elwin H. Chase: 1828, 1832 and 1833 half dollars are worth seventy-five cents each at the dealers.—Paul Emery: "Victoria, Dei Gratta Britanniar: Reg. F. D." on coins translated would be, Victoria, bei Gratta Britanniar: Reg. F. D." on coins translated would be, Victoria, bei Gratta Britanniar: Reg. F. ### Official Medals

Approximately 90,000 of the official medals of the Louisiana Purchase Exposition were minted and sold. The concessionaire was Mr. Chas. S. Muir, of Washington, D. C. The medals were struck on a regular coining press in the mint exhibit of the Government Building. The working of the coining press proved to be one of the most popular of the many interesting things exhibited in the Government Building.

The greater portion of the medals were struck in a brass colored bronze and sold for 25 cents. This composition proved unsatisfactory for the reason that it quickly tarnished; so during the later months of the exposition, it was replaced by a more satisfactory copper-colored metal. Approximately 90,000 of the official medals of

The metal, in both of the 25-cent medals, was solid gold-plated for 50 cents. Among collectors there was a popular demand for the product in silver reported to be about .600 fine. The medal in silver was first solid at \$1.00 and later for \$1.25. One is recorded as having been struck in solid gold. The product was practically confined to daily demand, there being no remainder of any except a few in the copper bronze metal, which passed to the hands of a dealer.

Mr. Muir reports that while his concession was profitable, yet it fell far below his original expectation. The expensive methods of production and the percentage paid the Exposition made net profits but nominal.

Mailing Photographs

I cannot tell you, boys, how pleased I was to note the active interest you take in this department, as indicated by the large number of photographs that came to hand for this month's competition. Unfortunately several had been cracked in the mails and, therefore, had to be excluded from the contest. To avoid this, place a piece of cardboard over your photo, even if it has been mounted. Corrugated paper or, rather, strawboard, which is very light, can be obtained almost anywhere and will save many times its cost in the reduction of postal charges. One of the photographs, ruined in transit, represented a Rock Island, Ill., sail yacht that had been built by two boys 15 years of age. At the same time I received a letter in regard to it, but this, too, had to be discarded, because it was signed: "A Devotee of Boating." As long as I am the editor of this department, I will pay no attention to anonymous communications.

### Photographic Enlargements

Arthur M. McClure, of Fairfield, Ia., submitted two photographs to us that are of particular interest. They show what a boy can do with a simple enlarging apparatus. A small view of a building was enlarged to about four times its diameter, yet every detail was perfect.

### Our Prize Pictures

The subject of Nick Bruehl's First Prize picture is a pathetic one. Poor and hungry himself, the homeless boy has yet charity enough left to share his small allowance of breat with his faithful dogs. W. J. Juengert's "A Pleasant Task" represents a job every boy likes.

### Damaged in Transit

A good photograph of a May Cherry Tree, that had grown through the heart of a red cedar, reached us in a damaged condition, having been cracked all the way across in two places. The stump of the red cedar is reputed to be one thousand years old. No name and address was given on the back, so we were unable to tell whence the photograph came.

"A PLEASANT TASK"—SECOND PRIZE PHOTO BY W. J. JUENGERT, BUFFALO, N. Y.

### Pictures From Far Off China

Edward J. Evans, Jr., of Shanghai, China, age 14, has sent us two photographs taken by himself, both of which are of considerable interest. The photographs are small and the lines are not clear enough to reproduce well so that we are unable to give our readers the pleasure of seeing them. One is a picture of the Russian when the Russo-Japanese war broke out. Afraid to go out of the harbor she was dismantled. She was then nicknamed "Manman-Jonr a Jour," meaning "waiting day by day." The other is a picture of the Russian cruiser Askold, a ship that escaped from Port Arthur and arrived at Shanghai badly damaged, Having refused to go out she also was dismantled.

### The Roll of Honor

As the number of contestants in this month's competition was extraordinarily large, it naturally follows that the list of those entitled to "Honorable Mention" would be increased to an unusual extent. This, however, in no wise de-

The Letter-Box

Cecii Gennett—In your case, we should give the preference to a plate camera. There are so many fairly good, cheap lenses that it is difficult to recommend any particular make. D. W. Schoeppe—What do you mean? Films are washed in running water, of course, the same as plates. John Perry, 2d—Yes, contestants are supposed to do their own developing, etc. Wm A. Kittredge—There are so many good cameras at the price you mention that it is no easy task to make a selection. Among those best known are the Kodaks, and the Premo. Poco. Century and Korona cameras. O. W. Hoberg—We shall make a brief reference to some of your hints in our next issue, but disagree with you in regard to the advisability of "blowing" off the plate before it is immersed in the developer; it is much better to dust it off with a large, soft camel-hair brush, lest some of your sputum get on it.

### Current Comments

Current Comments

N. Craig—Too much contrast and not enough detail. M. Fuller—Too big a subject for so small a camera; it took us some time to make out what the photo represented. A. Hovey—"Solid Comfort" is out of focus. J. L. Hopper—Print seems to be underexposed. Fred. Schreckenberger—Poor print. Do not take objects coming toward the camera. I. Kerlin—Exposure of your "Corn Palace" seems to have been all right, but plate was probably underdeveloped. At any rate, it shows lack of density. R. B. Deal—Your world's fair view is not distinct enough Was it taken out of the printing-frame too soon? W. N. Auer—Your picture is what photographers call "flat," the view is a good one, but there is a lack of contrast. Arthur Bevan—Your Christmas tree photo is quite creditable. H. Bentley—Your photo looks as though the plate had been underdeveloped. C. B. Williams—Your "Walting for Dinner" deserves credit in many respects—mounting, for instance—but yet it is not altogether satisfactory. Greater density of the plate and, hence, increased sharpness would have improved it very much. J. L. McCurdy—You should not attempt to include too much. Arthur Redman—Poor print from under-developed negative: at least that is the way it looks to us. S. N. Hart—Too eviden'ly a pose; if man had be'n taken when at work, result would have been far more satisfactory. McGill Smith—Lack of detail, possibly due to over-exposure of print. R. W. Johnson—"Billie" is out of focus and "Going to Pasture" lacks detail. C. A. McWay—Your photos are either underexposed or taken out of the developer too soon. Earl Hudson—For a first effort your photo-graph is very good.

### An Enlarging Camera for Amateurs

An Enlarging Camera for Amateurs

The desire to make portraits comes to every amateur photographer, I suppose, in the course of time. After you have taken snap-shots of all the attractive scenery and things round about, and have become somewhat familiar with the workings of your camera, you naturally aspire to something higher and more difficult, and that something is the successful making of portraits, a subject that is constantly changing, and which offers a world of study, as new ideas are being introduced into this most fascinating branch of photography almost daily.

With portrait making, especially if the work is done at home and without any special paraphernalia, the road to success is not so smooth. A great deal of thought and study must necessarily be given the subject if you would obtain satisfactory pictures.

For portraiture in the home I have found it a good plan to place the subject about three or four feet from a large window, and, with the shades well up to admit as much light as possible, turn the sitter's face slightly toward the light back on to the dark side of the face, will improve the picture greatly.

When you have succeeded in making good portraits, if your camera happens to be a small one, it naturally follows that you wish to have some of them, at least, enlarged. But to have some of them, at least, enlarged. But to have bromide enlargements made of all of your good negatives would be rather an expensive luxury, and then you would not take nearly so much interest in them as you would if made by your own hand. "But there's the rub," you will

# The Boy Mechanic and Electrician

A Permanent Department

Questions relating to Mechanics and Electricity will, it far as space permits and where asked by boys, he answered in these columns.

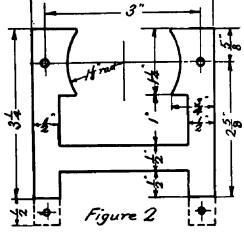

Edited by Robt. G. Griswold

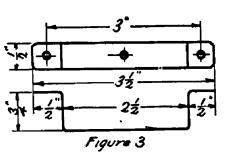

### A Simple Electric Motor

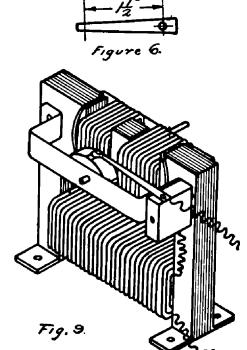

By W. F. CROWELL

This motor may be easily built of materials generally found in any house, with the exception of the wire. A file, a jack-knife, dividers, rule and a pair of scissors are all the tools required. The field piece and armature are built up of sheetiron pieces. The material for this purpose may be obtained by heating old tin cansuntil the solder melts, when they may be pulled apart and straightened into flat sheets.

Carefully lay out an armature disk, Fig. 1, on one of the sheets, punch a small hole

accurately in the center and enlarge by reaming with the tang of the file until a one-eighth-inch wire nail can just be forced into it. Cut out the disk carefully with the scissors and file off any burr that may remain around the hole. Use this as a pattern for laying off the remaining twenty-four pieces. It is perhaps better to make the hole first, then lay the pattern on with the one-eighth-inch nail passing through both the hole in the pattern and that in the uncut disk. The outline is

through both the hole in the pattern and that in the uncut disk. The outline is now traced and the disk cut; this method insures the resulting pile being very even. In a similar manner lay off and cut twenty-one pieces as shown by the solid lines, and four pieces with the extension shown by the dotted lines. These extensions are afterwards bent out at right angles and form ears for securing to the baseboard.

Assemble the sections of the field by thrusting nails through the holes and bind together with twine until the wire is wound in place.

The bearings. Figs. 4 and 5, are either from an extra heavy sheet or from one sheet doubled. The holes for the armature shaft should be of such a size as to allow it to revolve freely, but with no shake. The holes in the ends are the same diameter as those in the field pieces.

The armature is assembled by forcing The armature is assembled by forcing the disks on to the shaft which is made for a wire nail one-eighth-inch in diameter and about three inches long, the head having been cut off and the ends nicely rounded.

The commutator is made of a piece of wood as shown in Fig. 4, the hole being either punched through or burned with a red-hot wire so that it is a tight fit on the shaft. The commutator segments, Fig. 5. are cut from thin sheet copper or brass and fastened to the wooden cylinder by

bending down the lugs.

The brushes are cut from the same sheet copper or brass as in Fig. 6 and fastened

by small screws to the wood block, Fig. 7.

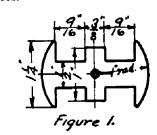

Now wind the field with about one-half pound of No. 18 gauge single cotton covered magnet wire, first wrapping a layer of writing paper around the sharp corners. Five layers are enough, and a free end three inches long should be left at the beginning and end of the winding for connections. One end is connected to a binding post and the other to the lower brush

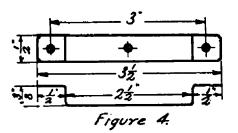

nections. One end is connected to a binding post and the other to the lower brush when the motor is assembled.

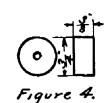

Wind the armature as shown in Fig. 8 with four layers of the same wire, connecting the ends to the commutator segments by a drop of solder.

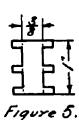

Then assemble the motor as shown in

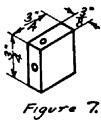

Then assemble the motor as shown in Fig. 9, riveting the bearing strips to the field by two nails passing through the holes. Put a few washers, or a short coil of bare copper wire on the shaft to keep the armature in place between the pole forces.

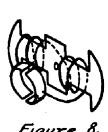

When properly connected the circuit will be through the field coil to the lower brush, then through the armature, out through the opposite segment and brush to the battery.

battery.
Note.—Mr. Crowell has described a very unique motor, em-hodying as it does a laminated field and armature, the ideal form of construction. It would be better to make Figure 8. the bearing strips of brass, as the "tin," the so-called "tin" that cans are made of is simply sheet-iron coated with

tin, is likely to cause considerable leakage of magnetism. A small grooved pulley should also

### A Home-Made Air Gun

B, WILL B. STOUT

The cylinder and barrel of this gun, which may be made by any bright boy, consists of a bicycle pump with a one-cighth inch hole drilled in the ends and soldered to a piece of straight brass tubing of a size to receive ordinary BB shot, ing of a size to receive ordinary BB shot, or a common tin putty-blower such as may be bought for a cent. The small hole in the center of the bottom of the pump tube or cylinder may be drilled with the sharpened tang end of a file. If you cannot do the soldering, a tinsmith will do it for a few cents, if not gratis. A small dent should be made in the barrel just in front of the cylinder to keep the shot from running in too far. ning in too far.

ning in too far.

The stock S should be cut out of a one-inch pine board. This should be of the shape shown, the rrel part being formed of two parts B and G, each with grooves to receive the cylinder and its barrel, so that when the piece G is fastened in place over these with glue, small brads or nalls, they will be held securely. The stock projects straight back from the mouth of the cylinder for a distance of one-inch less.

as possible. Then a rubber or leather washer a trifle larger, either taken from the old bicycle pump, or cut from an old shoe; a small tin washer, and then a small screw to fasten all together and to the plunger. After oling, the plunger should be an air-tight fit in the cylinder and move easily.

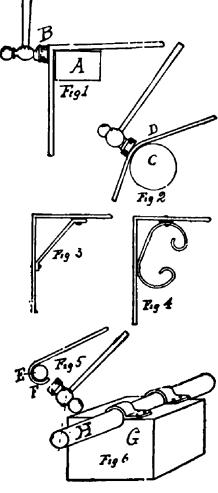

Now, from just behind the stop or catch D bore a quarter-inch hole slanting toward the trigger In the under side of the stock cut a small cavity or slot to receive the trigger as shown. The trigger is cut from one-fourth-inch hardwood, and mounted, as shown in part by dotted lines, so that when pulled back it will push up the small rod R. which in turn pushes the part D from its hold on the step or catch D. A large rubber band, secured to the stock by driving a plug into the hole H, thus clamping the ends of the rubber, passes around the part D in the mouth of the wedge, acting as a spring.

Now that the parts are assembled, the plunger P inserted in the cylinder and the rubber band (not shown) in place, take hold of the wedge-shaped head D and pull it back against the tension of the rubber, until the front of the head D catches on the step d, thus securing it in its firing position A BB shot, or small bean or nea, is now dropped into the barrel and aim taken. On pulling the trigger the rod r is pushed up, thus pushing D up till it is free from the step d, when the rubber pulls it violently forward. The piston p compresses the air before it in the cylinder, causing the shot or bean to be expelled with considerable force, depending, of course, on the strength of the rubber band. If a very strong rubber band is used the part P had better be of hardwood to better stand the wear. of hardwood to better stand the wear,

### Something for Boys to Make

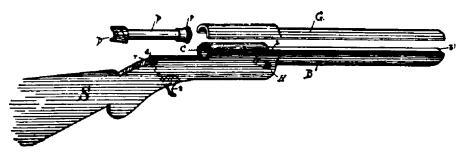

Many an industrious lad has made money manufacturing the common forms of wood brackets, shelves, boxes stands, etc., but the day of the scroll saw and the cigarbox wood bracket and picture frame has given way to the more advanced and more profitable work of metal construction, Metal brackets, stands for lamps, gates, parts of artistic fences for gardens, supporting arms for signs, etc., are among the articles of modern times that come under the head of things possible to construct of irou in the back room or attic shop. The accompanying sketches present some of the articles possible to manufacture.

First, it is essential that a light room be available, or a portion of the cellar where there is light, or a workshop may be built in the yard. Buy a moderate sized anvil, a vise and a few other tools, including bell hammer and this is all required for cold bending. If you to into a forge for hot bending other devices will be needed. Fig-

ure 1 shows how to make the square bend, setting the shoulder even. The strip metal is secured at the hardware shop or the iron works. Often the strips can be secured at low cost at junk dealers. Metal strips about half an inch wide and one-eighth of the cylinder for a distance of one-inch less an inch thick are preferable. The letter A than the length of the cylinder, ending in a notch or step d.

The piston DP is cut from one inch pine, the diameter of the forward end a trifle smaller than the bore of the cylinder, and bend is desired, the same process is apthe part D a trifle larger, finished to a wedge-shape as shown. At P is placed a shown in Fig. 2 at C. This piece of iron tin disk as near the diameter of the bore can be purchased at any junk store, where

### HOW TO MAKE AN ELECTRIC MOTOR

Send 2c stamp for copy and cat-alogue of Electrical Supplies. HERBERT E. SM'TH, 7 Park Piece, Batavia, N. Y.

Electric Pook vi Lamps and Novfactory to outcomer. In quality the set-in price the cheapest. Write for free Rocklet No. 50.

Central Electric Co.,
Port Washington, N. Y. various pieces are always strewn about. A piece about 20 inches long and 4 inches in diameter is handy. The bend in the metal begins at D and is made according to the requirements. Occasionally where sharp bends or abrupt corners are needed, the metal is beated previous to bending

In some of the work required, it is necessary to shape a complete loop or circle at the end of the piece. This may be wrought out as in Fig. 5. The use of a bar of iron or steel is as shown. The bar is usually about 2 inches in diameter and several feet in length so that it will rest firmly on a base of wood or stone. Then the bending is effected as at F, about the bar E, by repeated blows with the hammer. After a little practice, it is possible to describe almost any kind of a circle with the tools. The bar can be bought at an iron dealer's for about 40 cents. From the junk pile of a junk shop one may get a like bar for a few cents.

a junk shop one may get a like bar for a few cents.

A convenient form for shaping stripmetal into pieces required for brackets, fencs, gates, arches, and general trimmings is illustrated at Fig. 6. First there ought to be a base block, G, of hard wood, say about 2 feet square. With a round point or gouging chisel work out the groove to the size of the bar, forming a seat, by sinking the bar, H, one-half its depth into the wood as shown. In order to retain the bar securely in position in the groove, there should be two caps fitted over it and set-screwed to the wooden base. These caps may be found in junk dealers' heaps, having been cast off from 2-inch shaft boxes. Or if caps are not available, the caps can be constructed from sheet metal by bending to the form of the bar, allowing side portions or lips for boring, so that the caps can be set-screwed to the wood. Thus we get a tool which can be used on the bench for the purpose of effecting series of bends in strips of metal.

Since the introduction of the laws requiring that signs of certain size and projec-tion be removed from public thoroughfares in cities, there has been quite a call for metal begins at D and is made according to the requirements. Occasionally where sharp bends or abrupt corners are needed, the metal is heated previous to bending.

Although the worker may produce various forms of strip-metal work, the bracket is, as a rule, the most profitable to handle. The plain bracket is shown in Fig. 3, and is made by bending the strip at the proper angle on form A, after which the bracket is adjusted by means of rivets. A rivet hole boring tool will be needed. A small metal turning or drilling lathe can be purchased for a few dollars and operated by hand for the boring, or a common hand drill can be used. Sometimes the bracket is improved in design by adding a few curves to the end pieces of the brace, making the effect as shown in Fig. 4. After these brackets are made they are coated with asphaltum or Japan; or the brackets may be painted or stained any desired shade.

The plain bracket is shown in Fig. 3, a cross sectional view.

The best way is to bore straight through

ing forms, and the portions are simply riveted at the different junctures. Both iron and copper rivets are used as at I, in Fig. 9, a cross sectional view.

The best way is to bore straight through both pieces and insert the rivet. In some cases the rivet is headed up in the bore and again washers are used and the heading effected on the washer. Copper rivets are soft and easily handled, but are costly as compared with iron rivets, and demand for these pards and in Fig. 10 we show a design for one fireplaces made in many varieties in these days. The return of the open fireplace in modern houses has created a demand for these guards and in Fig. 10 we show a design for one fire places made in from the posts are made sufficiently either the ends or butts at the base are, while the ends or butts at the base are opened out to make the feet. Rings are shoped on forms and are then riveted to the base cross-piece as filustrated. Crosses are made to describe to central design and the plan is worked out quite readily with the different shapes.—

Questions on Mechanics and Electricity

Questions relating to mechanical and electrical topics of general interest to AMERICAN BOY.

Questions relating to mechanics and BOY readers, will be answered in this column as far as space will permit. Address all communications to Editor, Query Box, AMERICAN BOY.

(1) 1. Is it true that an electric current will not give one a shock unless the circuit is broken and closed at the dynamo, induction coil or switch? 2. How is a thermostat made? a feature of the capacity of most amateurs to make. The positive and which negative. 4. Will a 14 will accomplish this rout; but the DeForest instruments use an electrolytic detector, which the wireless telegraph you are describing? 5. Do 1012 sexplain the words "watt" and "watt hour."

ABS. 1. No. It depends upon the strength of the wireless telegraph instrument? 2. I have a "weet watt to materials for the capacity of most amateurs to make. The coil of the wireless telegraph you are describing? 5. Do 1

(1) 1. Is it true that an electric current will not give one a shock unless the circuit is broken and closed at the dynamo, induction coil or switch? 2. How is a thermostat made? 3. Please tell me how to make an instrument for determining which wire of a circuit is positive and which negative. 4. Will a ½ minute spark Ruhmkorff induction coil operate the wireless telegraph you are describing? 5. Do I have to make the Leyden jars if I use this coil? 6. Please explain the words "watt" and "watt hour."

"watt hour."

Ans. 1. No. It depends upon the strength of the current. 2. Our space is too limited for this description. We may describe it in a later issue. 3. This is a "polarity indicator," and will be described in a later number. 4. If the coherer is working well, yes. 5. No. 6. The "watt" is the unit of electrical power; 748 watts is equivalent to one-horse power. "Watt-hour" is a term used to describe the energy expended by one watt acting for one hour.

chory expended by one watt acting for one hour.

(2) How far will the wireless telegraph instruments described in THE AMERICAN BOY transmit messages?

Ans. This set of instruments was designed to act over a distance of about one mile. The transmission of a message depends upon two things; strength of spark and sensitiveness of the coherer. A message-wave will be sent out by a very tiny spark, but will be so feeble that it cannot be detected. Everything depends upon the adjustment of your coherer.

(3) Will a medical battery induction coll be sufficiently powerful to operate the wireless telegraph instruments you describe?

Ans. No, it would not. You would also need a condenser.

(6) Can a wireless message be sent in all kinds of weather and distinctly received?

Ans. Yes.

(7) 1. What is the cost of materials for the wireless telegraph instrument? 2. I have a sounder and Morse key; can they be used at the sending and receiving ends?

Ans. 1. The materials should not cost much over \$5 or \$6. 2. Yes.

(8) 1. Will you please tell me how to make a watch case telephone? 2. How is the wire insulated where it passes into the building? 3. How can either party be called by bell without the use of two wires?

Ans. 1. The watch case telephone is merely a small receiver which is very compactly made, and this alone gives it its name. It is no different in principle of action from the ordinary telephone receiver. 2. Pass the wire through the broken neck of a bottle, pushed into the hole where the wire enters the building. This will insulate it. 3. You can call one another by arranging an electric bell at each end, with a switch that will connect the bells as shown in the following diagram. By pressing the key at either end, the bell at the opposite end will be rung, and when the telephone is lifted off the hook, communication will be cut out. When not in use, the circuit is all ways ready for calling from either end.

### Electric Thriller for Boys

Our little "Magneto" shocking machine is a surprise in me-chanical perfection, finish, cheapness, and is free from danger By turning the crank slow or fast the current can be regulated so that a slight or severe electric shock can be produced. EVERY BOY WARTS ONE FOR INSTRUCTION AND EXPERIMENT. 18 is a veritable "fun factory" and in a group, side-splitting laugh-ter is created by the many amusements and tricks this machine is capable of producing.

IT STRENGTHENS THE NERVOUS SYSTEM Costs nothing to run, can be applied without aid and taken place of induction coils and medical batteries. Complete with hand electrodes, crank, multiplying gear, etc., complete only \$1.00 Pustage 250 Extra. A BOYS' DELIGHT.

### To Parents and Grown-Up Friends of Boys

It frequently happens that advertisers of It frequently happens that advertisers of household commodities raise the question as to whether the grown-up members of the family read THE AMERICAN BOY. From thousands of letters we have received in the past we are satisfied that they do. To prove this to prospective advertisers we wish to present them with evidence in the way of letters from parents and grown-up friends of boys, indicating that they read THE AMERICAN BOY. Such letters will be of great service to us tnat they read THE AMERICAN BOY. Such letters will be of great service to us and we shall esteem it a favor if our friends will take the trouble to write us as to who reads THE AMERICAN BOY in their homes. Address, Advertising Manager, Sprague Publishing Company, Detroit, Mich.

### To Our Subscribers

I wish to thank the several thousands of I wish to thank the several thousands of our subscribers in behalf not only of myself, but of my associates for the prompt and liberal way in which they responded to my request of last month for a prompt renewal of subscriptions. At this time of the year many thousands of subscriptions expire. The prompt renewal of these means much to the publisher, for a failure to renew promptly often means a loss of subscribers. Neglecting this matter for a month or two the paper fails to appear; the subscriber intends to continue and he determines to take an early opportunity determines to take an early opportunity to send his one dollar; then the matter goes out of his mind and finally the sub-scriber is lost—lost without a purp se on his part to be lost. He really wants the paper, but he just procrastinates, neglects,

Has your subscription expired? Look on your address label. If it has expired will you not attend to the matter at once and greatly oblige meal say me for I as editor do not want to lose your active friendship do not want and support.

Very truly yours,

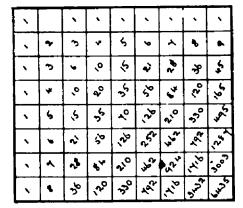

WM. C. SPRAGUE, Editor.

### All Ways Read Problem

(See February Number.)

see how many times you could read "The American Boy." Now this diagram might have been divided into quarters, and would contain the same number of possible ways within it.
Suppose we take one quarter and instead

of lettering the squares we will leave them blank. Let the boy's left hand cor-ner represent the central square in the original diagram where the letter T stood.

## The American Boy IMPORTANT ANNOUNCEMENT

On board ship in the fall of 1903, when returning from abroad, I became acquainted with Charles L. Williams, Professor of English Literature in an Ohio college. In the course of a conversation with him I learned that he had been spending the greater part of the summer at Oxford studying the history, the manners and customs, and the methods of work and courses of instruction of the great Oxford University. Inasmuch as American students have become especially interested in Oxford, by reason of the Rhodes scholarships, it seemed to me that a manual of information regarding Oxford University, written by one who with an unprejudiced eye had studied the University, would be welcomed by teachers and students in the United States and Canada. With this in view I asked Professor Williams to prepare such a manual. He at once expressed the belief that he could furnish information that would be of very great value and that he knew of no better way to disseminate that information than through the avenues presented by THE AMERICAN BOY.

We are now prepared to offer in pamphlet form the result of Professor Williams' work. The table of contents indicates something of the nature of the matter presented. It includes the following general heads: The Founder of the Scholarships and His Purpose—The City of Oxford—A Venerable Institution—Origin and Growth of the University—The University and the Colleges—The University Idea at Oxford—The Government of the Institution—The Officials of the University—Residence—Term-keeping—Examinations—Passmen and Honormen-The Honor Schools-Firsts and Double-firsts-Graduation-The College Buildings-The Chapels-The Halls-College Officials-Classes of Undergraduates-Where and How the Students Live-Chapel Attendance-The Tutors-Localisms and College Slang-Athletic Sports and Other Diversions-The Moral Atmosphere of Oxford--Expenses-Dissimilarities Among the Colleges-College Spirit-The Conservatism of Oxford-Defects in the Oxford System of Education--Special Advantages of the Rhodes Scholarships.

In his preface Professor Williams says that what appears in the pamphlet was gathered, for the most part, during a seven weeks' visit at Oxford for the purpose of finding out all he could in that time about the famous University information for the use of those American youth who may aspire to become Rhodes Scholars at Oxford." located there. He says: "I have tried to make the pamphlet a manual of reliable

The pamphlet is illustrated, giving twenty-one views of Oxford and its colleges.

### THE PRICE.

The price of the manual will be regularly 25 cents. To give it wide distribution at once we will send it, postpaid, to any address on receipt of 15 cents in postage. Address THE SPRAGUE PUBLISHING COMPANY, Detroit, Mich.

you there are but three ways of entering the square marked with a three; you can figure out in a minute's time there are six and only six ways of entering the square containing that figure.

Add together the numbers diagonally until you reach the opposite corner from which you started; in this case we find it is 6.435. But this diagram is only one-fourth part of the original problem, therefore the correct solution is four times the number, which is 25,740.

Shortly before twelve o'clock, the classmen left camp and assembled outled the control of the country points of the country points.

### Prizes Awarded for Best "Two Keys on Ring"

On page 61 of our December number we offered a prize of \$1.00 to the boy sending the best two keys on a ring, to be made by himself from wood with the ald of a pocket knife. There were eleven contestants. The first prize of \$1.00 goes to Orlo Ferris, St. Louis, Mich., whose work was beautifully done. The second prize, a good book, goes to Albert Maggs, Girard, O. All of the contestants succeeded in accomplishing the feat of cutting out the two keys on a ring from ceeded in accomplishing the feat of cutting out the two keys on a ring from a single block of wood. The names are: Nolen Turner, Woodland Mills, Tenn., Emerich Breuer, Elreno, Okla., Henry Thomas, Clarkson, Ky., J. L. Turley, Linden, Pa., Charles Montgomery, Sabatha, Kan., Clifton Goddin, Barhamsville, Va., and two whose names and addresses were not given. The boys who want their keys returned will please send us five cents in stamps.

### My Four Years at West Point

(Continued from page 145.)

men-why it was a "roast" of the best kind. But the yearling changed his mind after the adjutant skinned him for a rusty gun, and fell out a "spooney" pleb for colors.

As promised, we explain the method by which the "All Ways Read" problem should have been figured out. After all it is nothing more than than a little sum in simple addition—an example that any schoolboy should be able to work out when we have once shown him the way.

In the diagram you were asked to start from the center and working outwards from the center and working outwards the second of the standard sampled in the adjustant sampled in tor a rusty gun, and fell out a "spooney" pleb for colors.

And so the days of pleb camp wore on with the usual routine of drills and a guard tour, about every nine or ten days, until the memorable 28th of August. This date, in the cadet's calendar, stands next to the 12th of June (or the tenth or eleventh, depending on the Academic Board) that eventful day when the pleb is a pleb no eventful day when the pleb is a pleb no eventful day when the pleb is a pleb no longer, when the furlough man goes off on his long anticipated vacation, when the sometime second classman buds into the mighty first classman, and takes his place at the head of the social, military, and class grades, and when the first-classman departs forever from his gray-walled, turnered at these

departs follower from his gray-walled, turreted prison.

The 28th of August is memorable for severa! reasons. Then it is that the furlough men came back. It is the date of one of the great cadet hops of the year. It is the last day of camp, and the last entire day in which the June plebs have to "fin out" and depress their toes.

I have spoken of the habit cadets form of living in the future. As the novelty of guard duty wore off, and it had proved to be a delusion and a snare, we plebs began

guard duty wore off, and it had proved to be a delusion and a snare, we plebs began to look fol ward to another event,—viz., the advent of the "Seps," who were to be our classmates. It seems anomalous and perhaps heartless that plebs should "jump" their new classmates. I don't pretend to be able to explain it—except to say that it is every northing. is customary and is human nature. Let it

Straight across and downwards we insert ones in all squares, for there is but one way of reaching them from the starting point.

Now add the numbers together diagonally from the starting point right down across our diagram. One and one are three, and so on; the same rule holds good throughout.

Check your work in the early stages, it is customary and is human nature. Let it go at that.

There was one event that antedated the 27th by a few days which I have not described, namely, the "color-line" entertainment. It is so called because the platform erected for the purpose rests on the color line already described. I will defer the description of it until I arrive at the year-ling's estate, as from that standpoint I shall be better able to explain the features of the entertainment.

On the evening of the 27th, an order was published to the effect that all drills for the morrow, excepting dancing, would be suspended. The next morning, detachments of plebs were formed in the different companies, and under the direction of the first sergeants marched over to the armorties very simple. A glance will prove to

some mysterious process one or more guns were found in every pleb tent, and instructions were given, in a like mysterious manner, that these weapons should be spooned up by parade.

The furlough men, as a rule, return in a body on the Albany boat that leaves New York at about 9 a. m. and reaches West Point at 11:50.

Shortly before twelve o'clock, the first classmen left camp and assembled outside and to the south on the cavalry plain. The front of camp was crowded with visitors. All the officers, their wives, and friends were present. Craney's Hotel on the reservation and Cramton's Hotel at Highland Falls, each had its contingent present.

Falls, each had its contingent present.

A few minutes after meridian, a solid body of civilians (i. e., a body dressed in civilian clothes) suddenly loomed to view been jumped for doing what he had so often the crest of the hill near the old library. Immediately the air was filled with resounding yells, and at the same moment the gray-coated cadets and the approaching order, drawing the necessary text-books furlough men broke into a dead run for from the commissary, and receiving the cach other like so many tigers. No cavalry first lessons for recitations. the gray-coated cadets and the approaching furlough men broke into a dead run for each other like so many tigers. No cavalry charge in the very swirl and heat of battle was marked by a fiercer eagerness than shone on the faces of the two bodies of cadets,—one in uniform, the other in civillan clothes, as they bounded forward and came together like two mountain torrents. The blood even of the veteran officers who were watching the strange scene tinged with excitement, while the ladies looking on trembled and turned pale. No one could tell how it happened but, in the twinkling of an eye; the air was full of hats, canes and cadets. Men were wrestling and tugging as if seeking each other's, lives and looked as if serious and possibly fatal injuries must follow. But West Pointers are sturdy, and the melec ended as suddenly as it began. The furlough men came into camp and reported their return from leave, but there was something radically wrong with that furlough man who were anything on his head that might be called a but

something radically wrong with that furlough man who wore anything on his head
that might be called a hat.

By one o'clock nearly all of the new
arrivals had discarded their well-worn
"cits" for their cadet uniform, and they
spent most of the early afternoon between
camp and the trunk rooms. As a rule the
furlough men accepted the hospitality of
first classmen's homes.

Parade on the 28th was quite a feature

Parade on the 28th was quite a feature. There were about as many visitors present as at the rush in the morning. With the addition of so many men in the front rank,

not a few yearlings were obliged to take a dignified position in the rear. When all the companies had been formed on the line, the battalion reached from Number Six's

post to Number Two's, and the band on the right was compelled to encroach on the territory of Number Two's post,

The guard on this day, as I have stated, was composed entirely of plebs. Every one of my classmates, who had any ambition to get on the color line, threw up his gun at guard mounting. In fact it was gun at guard mounting. In fact it was generally understood in the corps that the three pleb color men stood a good chance for "corps" or corporals (i.e., if they ever got to be yearlings). Silkins and I had given up colors long before. What was the use when there were so many men, hand-somer, and more military than we, who spent nights and days in working on their guns and brasses? Corp tried it, however, and was rewarded by the assurance that, if there had been any fourth colors, he would have received the honor.

Much interest is taken by all the classes in this matter of pleb colors; and there is little doubt that the color men would have been made "corps," if the first and second had not been found in January, and the third had not rolled up so many demerits by the following June that he lost the confidence of the authorities.

There was a grand hop on this night, and I am quite sure that every one who attended had an enjoyable time. The few upper classmen, especially the furlough men who stayed at home, secured quite as much fun out of us. Each had to deliver his specialty.

The next day, immediately after break-fast, we began moving into barracks, and cadets, carrying stretchers loaded with articles, formed an almost continuous pro-

cession from camp to our winter quarters.
Shortly before the formation for the formal entry into barracks, we were ordered to unfasten and secure the cords that attached the tents to the poles. At the third tap of the bass drum all the tents in

camp came down simultaneously amid the cheering of the cadets.

The tents having been wrapped up and laid in the middle of the floors, we fell in behind the line of stacks at the foot of the street. In obedience to the command of the captain, we took our arms and were marched to the parade ground, where the adjutant formed the battalion and divided

it into eight companies.

Led by the band, playing the old favorite
West Point airs, we advanced in column of
companies straight across Number One,
followed the road skirting the north of the plain until we reached the officers' quarters, when we marched along the west border of the beautiful level tract until we arrived at barracks. There the Commandarrived at barracks. Incre the Commandant formed the battalion into line, and said, among other things, that the June members of the fourth class would no longer be required to depress their toes and carry the palms of the hands to the front.

The joyful relief had come at last! But, now that it had come it was an amusing

now that it had come, it was an amusing and no unusual sight to see, after breaking

first lessons for recitations.

"Release from quarters" was granted for several hours each day; and the privilege was utilized to its fullest extent by upper was utilized to its fullest extent by upper classmen who devoted their time to saying good-by to their friends and winding up their little summer affairs (if they had any, which was quite generally the case). Quarters in barracks were chosen in the same manner as in camp. The captain of the company had the first choice, and the jeb whose initial came the nearest to "Z" the last.

the last.

Two-and-a-half divisions were allotted to each company, and there were enough rooms to allow two occupants to each room. Silkins and Fletcher had made arrangements to room together, and I shared my room with a classmate for whom I had formed a strong attachment. He was named Hinson, and was a tall, well-built fellow from the South, strong as an ox but with the gentleness of a girl. I felt that I was fortunate in securing him as a companion

MARCH LADDER.

. . . . . .

Each word is the name of a well-known American monthly publication. None is repeated. The words "Magazine" or "Monthly"

zine" or "Monthly" are omitted.

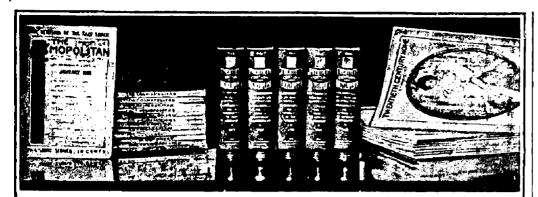

The star path from the top to the bottom spells the name of an American President who was born in March.

—Edwin C. Sharp.

-Nels W. Kindgren. 

# **ALL FOR \$3.00**

THE COSMOPOLITAN for 1905 desires to secure an additional hundred thousand business men, lawyers, doctors, clergymen, managers, etc.—men composing the brains of the country.

For this purpose half a million copies are being printed of a Five-Volume Encyclopedia, such as is ordinarily bought for ten or fifteen dollars; cloth bound, gold lettered; containing 6,000 Who's Who, 65,000 Subjects and 96 colored maps.

This is offered at ONE DOL-LAR, if accompanied at the same time with a year's subscription to The COSMOPOLITAN MAG-AZINE, One Dollar; and the new periodical, THE TWENTIETH CENTURY HOME, One Dollar —Three Dollars in all. It is an exceptional offer. A better one can never be made. It is doubtful if any publishing house can ever equal it. A large book-bindery plant was put in especially to bring the cost of this down to its lowest possible terms.

Express charges are paid by the receiver. The photograph shows these volumes. Address

The Cosmopolitan Pub. House, Irvington, N. Y.

### Our Premium Awards for New Subscriptions to The American Boy

RULES FOR "AMERICAN BOY" CANVASSERS TO OBSERVE:

The subscription price of THE AMERICAN BOY is \$1.00 per year. Our premium offers are made to Subscribers only.

We do not give premiums on renewal subscriptions, but only on new ones. A transfer of a subscription from one member of a family to another does not count as a new subscription.

A premium cannot be given to any one for sending his own subscription or that of any member of his household. It takes time and effort to secure new subscriptions, and we are willing to reward the subscriber sending them.

EUREKA SCROLL SAW OUTFIT.

JUST THE THING FOR BOYS AND GIRLS.

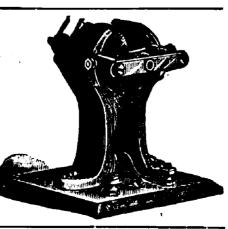

With this outfit any boy or girl can have endless amusement and at the same time earn money by making and seiling Brackets, Card Cases, Handkerchief Boxes, Jewel Cases, Easels, Photo Frames, Doll Furniture and hundreds of other useful and ornamental articles out of cigar boxes or other thin boards. No experience or skill required, Anyone can use it.

Contains 16 pieces as follows: aw Frame, 3 Saw Blades, 1 Awl, Patterns, 1 Sheet Impression pa-er, 1 Sheet Sand Paper, 1 V Strip,

THE LITTLE HUSTLER MOTOR

This motor has been greatly improved. It is mounted on a neat and highly polished base. Trimmings are nickel plated. The armature has three poles, causing motor to start without assistance when the current is applied. It will drive a five inch fan at a high rate of speed, and is fitted with a nulley for running toys, etc. Any battery from the cheapest up, that will run any motor, will drive the Little Hustler.

Given to "American Boy" rabscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 25c; or for 1 new yearly subscription and 50c. Price \$1.10 postpoid.

UNHEALTHY SKIN

PALMOLIVE" SKIN

## About YOUR Skin

A glance in your mirror shows you that the pores of your nose are larger than the pores of any other part of your face. Being larger they clog easier, and thus show to the eye what is taking place all over the face and body. When the pores clog, impurities form and unhealthy skin surely follows.

Ordinary soap may take more or less dirt from the surface but that's all.

# **PALMOLIVE**

is more than ordinary soap. It not only cleanses the surface but also the pores—and then it does more. It soothes and softens the skin with the Oil of the Palm in perfect combination with imported Olive Oil and Cocoa Butter—each being good alone, but far better together. In PALMOLIVE the secret of perfect blending has been found, making it the most wonderful skin help and cleanser science has produced.

In the bath, and also the nursery, PALMOLIVE is extremely valuable—doing for the whole body what it does for the face—supplying in exact proportion the elements requisite to the health and perfect cleanliness of the skin.

The worth of PALMOLIVE is inestimable, but the wonderful secret of making it brings the price to 10 cents a cake. Sold wherever soap is sold, or if you will send us the name of a dealer who does not keep it we will send you a cake for 10 cents and pay the postage or for 15 cents to any point in Canada or Mexico.

B. J. Johnson Soap Company, 332 Fowler Street, Milwaukee, Wis.

# Special Service to Writers Offered by The Sprague Correspondence School of Journalism

### SERVICE NUMBER ONE-PRICE \$1.00

For \$1.00 we furnish to writers a service comprising the following:

ONE—A list of the prominent dailies of the United States in the leading cities which use contributed matter—particularly such as have illustrated Sunday issues.

TWO—A list of the leading magazines of the country (some one hundred and twenty-five in number), all of which are buyers of manuscripts. To the writer of magazine matter desiring a wide field in which to operate this list will be of special value.

THREE—Publications of the so-called mail order class which have large circulations and buy material from writers, but at prices less than are paid by the more prominent magazines. This list comprises about fifty publications.

FOUR—A list of the leading juvenile publications of the United States (some thirty in number), with suggestions as to the character of their contents and their probable needs.

FIVE—A list of the leading sporting and athletic papers of the United States (some sixty-four in number), particularly such as buy matter relating to amusements and athletics.

SIX—A list of the publications representing the various trades and professions which use matter more or less technical—such as papers relating to farming, architecture, etc., etc.

There is an ever-increasing demand for good material on the part of the press of the country. Other things being equal the writer who knows the field will be the most successful in obtaining acceptance of his work.

### **SERVICE NUMBER TWO-PRICE \$2.00**

For \$2.00 we furnish a service comprising the following:

ONE—All of what is embraced in Service Number One as described above.

TWO—Information as to what editors want, as indicated by them publicly or otherwise. Of course, policies change, and what an editor may want today he may not want tomorrow. So far as possible we have obtained information as to the particular needs of several hundred publications; also as to the character of matter most likely to find acceptance with them.

THREE—Under the head of "The Market" we give a definite statement as to the prices paid and terms made with writers by the editors of various publications. This information we have received directly in some cases and in others through correspondence with writers who have had experience with the publications listed.

TO THE WRITER DESIRING A WIDE FIELD, AND PARTICULARLY TO THE NOVICE WHOSE GREATEST DIFFICULTY IS THE FUNDING OF A MARKET, THE SERVICES DESCRIBED ARE WORTH MANY TIMES THE PRICE ASKED. ADDRESS,

Special Service Department, The Sprague Correspondence School of Journalism

CHAPTER XI.

MIDSHIPMAN BROWNLEIGH BESIGNS.

AKAHAKI DEPARTED from Annapolis by first train in the early morning of Christmas day, and his going left Dunster Brownleigh so melancholy that even the festivities of the season failed to restore his usual cheerfulness. Now, for the first time, he took an active interest in far eastern affairs, and began to search newspapers in the reading-room for every scrap of information concerning the situation between Japan and Russia. He studied tables and statistics until he knew the relative military strength of the two countries on sea and land. He read up on Port Arthur, Dalny, Vladivostok, the Siberian railway, and Korea. He studied the history of Japan's war with China in 1894-5, and finally he achieved a reputation as the best posted inmate of the Academy on the Eastern situation. Then he ventured to write a short article on Japanese naval officers, with especial reference to those who had been educated at Annapolis. This he sent to a leading service journal, by which, to his unbounded pride, it was accepted, and he received a note from the editor asking for further contributions of a similar character.

On the very day that his article was published, came the startling news that diplomatic relations tetween Japan and Russia had been severed, and this, as the professor of International Law explained to his classes, meant war between the two nations without a formal declaration by either side.

The cheek of little, heathen Japan daring to defy big, civilized Russia'!' cried Ethelbert Quackenbush to a group of his classmates who were eagerly discussing the situation.

"You mean little, modern, highly-civilized, fullyprepared Japan daring to fight in self-defense against big, medieval, brutal, unprepared Russia." said Dunster Brownleigh quietly, but with flashing

eyes.
"Oh! Do I?" asked Quackenbush sarcastically. "And pray what do you know of my meanings?"

"Not much, Quack, I must confess," laughed Dunster, "but I sometimes try to puzzle them out just for fun, and often with results that are most surprising.'

"Do you mean to say—" began the other threateningly.

"No, Quack, I don't," interrupted Dunster. "I don't mean to say anything that will ruffle your little feelings. I only happened to recall a certain Midshipman Matsu, recently a member of this class, and various fights in which he was forced to take rather prominent part. If the Japanese navy is offi-

cered by such as he, why—"
"I say, you fellows!" broke in "Pink" Lawson. who had been reading. "Quit your foolishness and listen to this description of the very man you are

discussing." With this, Lawson read aloud an extract from Dunster's article in the Service journal. "That is by some one who knows Taki," commented the reader as he concluded. "and I'd like to know who he is. The whole article is a corking good one, and evidently the chap who wrote it is well up on his subject. Have you seen it, Dun?"

Midshipman Brownleigh's face was flushed with gratified pride, but he only answered: "Yes, I

glanced over it, and thought it fairly good."

"Fairly good!" shouted Lawson. "Oh, ye gods! Listen to the conceit of the man! Why, Dun Brown, if you could write half as well, you would be contesting honors with Captain Mahan himself. Go to, Dun Brown! Go to! and study modesty of demeanor."

Dunster followed this advice in so far that he went to his own room, and, after reading over for the fiftieth time the first bit of his own writing to be glorified by print, he sat down to compose another article, and thereby used up much time that should have been devoted to study.

On the following day came the great news of Admiral Togo's dashing attack, with torpedo boats, on the Russian fleet lying carelessly outside Port Arthur harbor, and the partial destruction of four of the great warships that had threatened to exterminate the Japanese navy. A few hours earlier two other Russian warships had been destroyed by the Japanese in the Korean harbor of Chemulpo.

Copyright, 1904, by Harper & Brothers.

Some six weeks later Dunster received his second letter from Takahaki, the first having been written from San Francisco on the eve of the latter's sailing for Japan.

KIRK MUNROE:

"Dun Brown, my friend of extreme dearness," he "Congratulate me a thousand times for great honors heaped upon unworthy head! I am-hold fast your heart, and prepare to be joyously amazed-I am a commander of a warship of his august majesty, Matsuhito, Mikado of Japan. I then am Captain! Captain, if you please, of torpedo boat number 999. A very small boat, it is true, perhaps the smallest in the imperial navy; but, oh! so deadly in action, so swift, so wonderfully able! and I am her captain! Perhaps it is but for today; and so I hasten to allow you to congratulate me while I may claim the title.

"Have you learned of our most honorable admiral's terrible blow against the fleet of the White Czar? Yes, certainly, you must have heard, how, flying with the swiftness of eagles, he took them by surprise while, confiding in great strength, they lay outside the forts, ready for destroying the transports of Japan. Only torpedo boats were sent in, and I was given the honorable privilege to accompany the brave 999. We, the smallest, torpedoed successfully the Czarevitch of the largest. The shot fell upon us so thick that almost we must breathe it, and, alas! our captain, the most gallant, could not longer stay with us, but was called to join the immortals of Dai Nippon. Thus to me, next in rank, fell the great honor of commanding. Again I may not talk ht some of us are to enter the iis nig harbor, to which the ships of the enemy have fied. So, my friend, am I filled with happiness that at last I may fight what you call the Rus-si-an without those ru-als.

"Always with joyous memories,

"TAKAHAKI MATSU, "Captain (for this day) I. J. N."

If it had been hard for Dunster to study and attend to every-day duties before the advent of this letter, it was doubly so now. He could think of nothing but the great lesson that was being taught the bully of the world in the school of the far East. And one of the teachers was that quiet little Japanese who so recently had looked to him for guidance in everything. Now he was transformed, as though by magic, into the captain of a warship that was taking an active part in the history-making battles of the world: while a certain Dunster Brownleigh tamely ate and slept, and pursued the same hum-drum routine that-Oh, well! what was the use in thinking of it? His own life, as compared with that now being led by Takahaki, was not worth considering.

Dunster vividly remembered the account of the daring dash of two Japanese torpedo boats into Port Arthur harbor on a night of storm and blackness, their successful attack against the mighty battleship Retvizan, and of their flight through a blinding glare of search-lights and a tornado of hurtling missiles that sunk one and drove the other helpless to the beach; but he could not recall that the names or numbers of the heroic craft had been given. Could one of them have been the boat commanded by his chum? How he wished he knew; and the very next day he read an extract from a belated war letter to a London paper, giving an account of that very incident. In it the two daring boats were mentioned by number, and one of them was 999; but which of the two finally was sunk and which beached, the writer either did not know or forgot to mention.

Shortly after this Dunster received another letter even more disquieting than that from Takahaki. It was from the manager of the shipyard in which he and his chum had worked, asking if, by any chance, he could obtain leave of absence, and at the same time be tempted by an offer to go on a special mission to the seat of war. In conclusion the writer begged him under all circumstances to keep profoundly secret the fact that such a proposition had been suggested to him.

On fire with an excitement that he must carefully suppress, Dunster made cautious inquiries that resulted in the knowledge that on no account could such a leave of absence from the Academy be granted. Moreover, he learned that the neutrality laws of the United States forbade any officer, soldier, sailor, or other employe of the government, save only duly accredited naval and military attaches, from visiting the seat of war during its

continuance. Could a midshipman resign from the Academy? Certainly not, so long as he was in good standing. except under extraordinary circumstances, since he was bound to serve for at least eight years.

There was then but one way by which a cadet could evade the obligation that he voluntarily had assumed; and in his overwhelming desire to visit the seat of war, Dunster Brownleigh, ever reckless of consequences, determined to adopt it.

Already he had become careless in his studies, and now he grew more so. Also he no longer sought to avoid the accumulation of demerits. His case became one for grave consultation among the officials of the Academy, and he received warnings of the possible fate in store for him unless he made a decided effort to regain his lost standing as one of the most promising men of his class. Even certain of his classmates remonstrated with him and begged him to "brace up," but without avail. The lad became a mystery that none could solve. was in the best of health and spirits, he attended regularly and promptly to all his duties; but day by day he sank lower in rank, until at length he stood at the very foot of his class. Then came the annual examination, and, failing to pass it, he was summoned before the superintendent.

"I cannot understand it, Brownleigh," said that official sternly, but with a note of sorrow in his voice. "You, who were one of our best men, have, with no apparent reason, retrograded so rapidly and to such an extent that your presence in this Academy is no longer desirable, and your dismissal is in order."

Beneath the searching gaze that accompanied these words the lad's eyes fell, and for a moment he almost regretted the course he had pursued.

'However," continued the superintendent, the sake of your parents and friends, and in consideration of your previous record, it has been decided not to disgrace you by dismissal, but, instead, to offer you the choice of two alternatives. You may drop back into the third class, with the opportunity of regaining the one to which you belong, by extra work; or your resignation will be accepted."

"Thank you, sir," replied the young cadet, striving to speak firmly, but with a suspicious tremor in his voice. "Rather than be dropped, I think I will take advantage of your kind permission and re-

sign.' Thus it happened that Midshipman Brownleigh, to the amazement and regret of all his friends, left the service that he had been so anxious to enter, and in which for three years he had been so prominent a figure.

CHAPTER XII.

OFF TO THE WAR.

It is doubtful if even Dun Brown, reckless, careless, happy-go-lucky chap that he was, would have taken so desperate a step in order to realize his great desire, had it not been for the Casimir blood that coursed madly through his veins at the mere mention of the word Russian. For centuries that same blood the blood of a generous, high-bred nobility, had revolted against the oppression of its brutal conquerors. Now that Russia again was seeking to smother the national life of a weaker neighbor, the Polish side of Dunster Brownleigh's nature so urged him to take part in the struggle for freedom and modern civilization, that he had no strength to resist the call. Born of a fighting stock, he could conceive no greater happiness than to be permitted to battle for his native America; but she having no present need for his services in that direction, his second preference was to fight the destroyera of his mother's family, and the active enemies of his dearest friend. To the accomplishment of this acsire but one way had opened, and this he had followed until it led him outside the service that once had been the goal of his ambition. Now, with one career closed by his own deliberate act, he proposed to open another by his own unaided effort.

With this end in view, Dunster had written to the manager of the shipyard and to the editor of the Service journal, with both of whom he reached a definite understanding. Thus, the moment his resignation was accepted he knew exactly what he proposed to do. First he wrote to his parents, telling them that, as he had failed to pass an examination, he had been offered the alternatives of being dropped or resigning, and had chosen the latter.

"I have received an offer," he wrote, "to go to the war as a correspondent. That I am not wholly unfitted for the position you may judge from the enclosed articles, which are from my pen. I am going to study the situation here for two weeks, at the end of which time I shall come, lay it before you, and ask your permission to go to the Far East. I believe you will grant it when you consider how unfitted I am for anything else, and how mortifying it would be for all of us just now if I were compelled to remain at home and face acquaintances who would pity me for having 'bilged' an examination. Besides, I often have heard you say, father, that travel was the most liberal of educations."

With this letter dispatched, and with farewells bidden to his classmates, Dunster Brownleigh disappeared for two weeks, during which time but one person of all the world knew where he was and what he was doing. The person thus advised was the shipyard manager with whom our lad had corresponded.

At the end of the stipulated period, having announced his coming by telegraph, the young man appeared at his home, where he found both his parents anxiously awaiting him.

"Oh. Dunster! How could you? What have you done?" cried Mrs. Brownleigh, as she flung her arms about her son's neck; but his father only shook hands and said: "Let us have dinner first, for I know the boy must be hungry, and talk afterwards."

An hour later the three were gathered in the cozy, softly-lighted library, and Dunster was telling of his plans. When he had finished Mr. Brownleigh

"Of course, son, both your mother and myself were terribly disappointed, as well as mortified, by your failure to pass that examination, and what practically amounts to your dismissal from the Academy. Nor can we understand it: for you always have seemed bright enough, never before having failed to pass an examination, and almost to the ad you held a creditable position in your class. 1 fear there is something back of the present situation that you have not fully explained, and that you are allowing a love of excitement, together with a desire for adventure, to turn you from the pathway of steady effort that alone leads to success."

"You are right, father; I have allowed my mind to become so filled with thoughts of the war that there is no room in it for anything else. But I do believe, if you permit me to accept this new position, you will open to me a career fully as fine as the one I have just abandoned."

"Perhaps so, son: perhaps so; for I never did regard the navy, in time of peace, as offering the most brilliant of careers. What I wanted you to gain from it was the splendid education afforded by the Academy course, and the numberless opportunities to which it would open the way."

"This may be one of them," said Dunster. "Did you read my articles, father?"

"Yes, and was agreeably surprised at the breadth of information and the insight into affairs shown by them. Also I was at a loss to understand how the writer of those articles could fail to pass an examination that was a part of his regular course

of preparation." "But I did fail to pass it, father, and now—

"Yes, son, and thus you have so decidedly taken your own affairs into your own hands that, after a most careful consideration of the situation, I have concluded to let you work them out without interference. So, if you can gain your mother's consent to your mad proposition, you may consider that mine also is given. Only, my dear boy, never for an instant imagine that by taking this position I am in any way casting you off, or losing one spark of my interest in you. Always remember that, so long as I live, I am your father, loving you as no other human being, save only your mother, can love you: standing by you in every emergency, and ready to aid you in times of distress or difficulty to the limit of my means and ability. Now, I am going out for a while, and shall leave you to argue your case to its ultimate conclusion with your mother.

Dunster found less difficulty than he had anticipated in persuading his mother to take his view of the situation, though, of course, the prospect did not appear to her so fascinating as it did to him. Gazing at it through the medium of tears decidedly dimmed its brilliancy and blurred many of its features. Still, she could not deny her only child what so evidently was his heart's desire, and, after all, it would not be unpleasant to be able to speak of "My

son, the war correspondent, now in the Far East." Mrs. Brownleigh was a little more proud of those two articles in the Service journal than of anything that ever happened.

So by the time her husband returned all was settled; but it was a shock when Dunster announced that he should start for the "Coast" by the train of the following evening.

"Don't war correspondents require to have certain papers from the State Department, that it will take you a week or more to procure?" asked Mr. Brown-

leigh.
"Yes, sir," replied Dunster, "but I already have them.'

For a moment the elder man gazed quizzically at the younger; then he said: "And, with all your preparations for the journey made, you had the cheek to come and ask if we were willing that you should undertake it?"

"Which shows what implicit confidence I placed in you, dad."

In their desire to provide for all possible contingencies, Dunster's parents would have filled several trunks with a princely outfit; but as he had been advised to reduce his luggage to the smallest possible dimensions, he declined to carry anything except a large hand-bag and a roll of rugs. From his father he accepted a fine hammerless revolver, and a letter of credit for an amount sufficient to carry him in luxury entirely around the world; while his mother, who still retained certain superstitions of her race, insisted that he bear with him her most treasured possession, the last message ever received from her father, the Count Casimir, and written with his own blood. This precious bit of paper was enclosed in a silver box, fastened with a hidden spring, and so thin as to resemble a single thickness of metal. One side was exquisitely graved and enamelled with a representation of St. Stanislaus of Poland, while the reverse bore the arms of the Casimirs. This priceless heirloom was protected by a silken envelope and again by one of chamois, and as the heavy-hearted mother hung it about her son's neck she bade him care for it as for his life.

Then came the parting, so sorrowfully bitter that Dunster finally was obliged to release himself by gentle force from his mother's clinging embrace, run from the house and leap into a waiting carriage, with voice too choked for a single word of farewell.

A few days later found our young correspondent standing, with a small camera in his hands, on the busy water front of Seattle, watching with absorbed interest the transfer of several car-loads of extremely heavy freight, evidently machinery of some kind, to the hold of a waiting steamer, the very one on which he was to sail for far-away Japan. Bulky and heavy as was this freight, it was so carefully enveloped in wood and burlaps that no portion of it was visible

"Very heavy!" remarked a voice at Dunster's elbow, as the stout derrick on the ship's deck creaked

### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 8 - From the Governor of Louisiana

GOVERNOR BLANCHARD OF LOUISIANA

STATE OF LOUISIANA Executive Demonstrati Baton Roves

Mr. # C Sprague,

Detroit, Mich.

My dear Str :-

My greetings to the Boys of America

Born to a splendid heritage of unsurpassed governmental institutions, and living in a country of unrivalled resources, their opportunities are great.

May they prove equal to them

Yours very truly, Norther 6 Blomaker

Covernor of Louisians.

and groaned beneath the weight of an unusually bulky crate.

"Yes," replied Dunster shortly, without turning or withdrawing his anxious gaze from the straining tackle.

"I wonder what it is?" persisted the voice. Dunster was too abstracted to reply.

"It may be war material for Japan."

"Yes?" returned our lad, interrogatively, at the same moment taking a snapshot at the bulky bit of freight which, having reached a sufficient altitude, was slowly swinging inboard. As he wound another film into position he turned for a glance at the intruder, for whom he instantly conceived a dis-

The man was small, dark, evidently a foreigner, but as evidently not a gentleman, rather loudly dressed, and displayed much jewelry. He smiled as Dunster turned and said

"I hope, though, it is not war material, for I propose to sail by that steamer for Japan."
"What difference would it make?" asked the other.

"None at all, of course, unless we should happen to be overhauled by a Russian cruiser; and then it might make all the difference in the world"

"But all Russian cruisers in eastern waters are safely bottled up either at Port Arthur or Vladivostok."

"Perhaps; but always there is a chance that one may slip out some dark night."

"Oh, well! I shan't worry until I see one," said Dunster carelessly.

"Then you, too, sail by this ship?"

"I dldn't say so," replied the lad curtly, as he turned to walk away.

To Dunster's great disgust, the person who thus had accosted him proved to be the only other pastenger on the great freighter Cochise. Consequently the young correspondent was obliged to see a great deal of him during the next two weeks. The man, whose name was Delar, claimed to be French, and the agent of a syndicate interested in Japanese war loans. While continually talking about himself, he managed to so pester Dunster with questions concerning his own object in crossing the Pacific, his past life, his views of the present war, and a thousand other personalities, that, to avoid him, the latter spent hours and even whole days in his own stateroom, when he longed to be on deck. Finally the longed-for announcement was made that the following morning would disclose the Japanese coast; and Dunster hailed it as a promise of escape from the annoying Frenchman even more than the ending of a tedious voyage. And it had been tedious; for across the entire expanse of the Pacific, known to travelers as the "great lonely ocean," a sail had been sighted, not the faintest trail of smoke, nothing to break the weary monotony of days. Now, with land only a few hours away, there surely ought to be something within range of vision. and, in the hope of discovering a ship, Dunster mounted the bridge, the freedom of which had been given the two passengers. The captain was there, and Dunster had hardly greeted him when a lookout stationed aloft bawled down:

"Smoke ahoy!"

"Where away?" demanded the captain.

"Nearly dead ahead, sir, a little on the sta'bord how."

A moment later the lookout announced: "Two smokes!" and directly afterwards: "Three smokes, close together!

"Perhaps, who knows, it may be a fleet of Russian cruisers," remarked a hated voice at Dunster's elbow. "How would you like that? Eh, mon brave!"

"It would at least give you something else to talk about besides me and my affairs," answered Dunster savagely, as he walked to the other end of the

Within an hour the trails of smoke had developed into dense, black clouds belching ominously from the massive funnels of three monster ships whose nature still was doubtful. Then suddenly it was disclosed by the startling challenge of a shot fired in the direction of the Cochise.

(To be continued.)

### Your Mother--Do Not Forget

To manifest an interest in whatever interests or

To seek her comfort and pleasure in all things before your own.

Not to forget that, though she is old and wrinkled. she still loves pretty things.

To make her frequent, simple presents and to be sure that they are appropriate and tasteful. To remember that she is still a girl at heart so

far as delicate little attentions are concerned. To give her your full confidence, and never to do

anything which you think she would disapprove. To make her a partaker, so far as your different

ages will permit, in all your pleasures and recrea-

To lift all the burdens you can from shoulders that have grown stooped in waiting upon and working for you.

Never to intimate by word or deed that your world and hers are different, or that you feel in any way

superior to her. To treat her with the unvarying courtesy and deference you accord to those who are above you in

rank or position. To study her tastes and habits, her likes and dis-

likes, and cater to them as far as possible in an unobtrusive way.

To bear patiently with all her peculiarities or infirmities of temper or disposition, which may be the result of a life of care and toil.

To remember that her life is monotonous compared with yours, and to take her to some suitable place of amusement, or for a little trip to the country, or to the city if your home is in the country, as frequently as possible.- "Success."

# WHAT A BOY CAN DO IN A TOWN LOT

THE PUBNACE FOR COOKING

THE POLE VAULT

OYS WHO LIVE in the country generally have plenty of 100m, with an abundance healthful exercise, and naturally acquire strength and a talent for work. Boys whose homes are in a city often need suggestions for the employment of their leisure hours. If there is no available yard this article will contain little for them, but the average town lot provides space for carrying out most of the ideas here given, all of which are possible on a lot  $50 \times 125$  in size. True, all of these devices were not used in one yard at a time, but all were tried on a small lot and proved very enjoyable. As every boy knows, sports follow in regular succession, and while at one season kites have the preference at another leaping and jumping are considered the proper thing, and again wrestling, boxing, etc., are most interesting. In carrying out what is here suggested the cost of material will be small, and the saving of boy and energy immense. The youth realizes his individuality, his rights are recognized, he forms valuable opinions and habits, and his leisure hours are commonly spent at home, where companions are sure to gather to share his good times.

The front of the lot in question is ornamented with lawn and small flower beds, which offer employment for some hours each week, but to many boys gardening is not attractive, especially if they are too young to realize the educational value of pretty grounds, and such work must be done under protest at times. The house, lawn, and garden occupy nearly half the depth of the lot and leave a "back yard" 65 feet deep. At the rear is a small hen-yard fenced with board base, and wire netting above, also covered with the wire. A roostinghouse, open on one side, accommodates the hens at night, and nest boxes are conveniently placed at one side. From six to a dozen hens make this their home and generously supply fresh eggs for the family during most the year. No rooster is kept, for roosters have a very uncomfortable habit of crowing at any and all hours, especially during the night, and neighbors object. When a hen wants to set, the owner buys a setting of the eggs he prefers and mother-biddy is given quarters elsewhere. After the little brood hatches, the "hennery" becomes an interesting place.

Every boy wants to try his hand at keeping pets, so Belgian hares were experimented with. They were finally voted a nuisance, for they would burrow out and then trespass in other gardens, and when the family had become attached to them no one would think of having them killed for eating. So the animals that survived a couple of years were given to friends who could and would properly care for them. Pigeons, to be allowed their freedom, were out of the question, and to keep them suitably enclosed required considerable space and much care. They were given up, and the "happy family" is now composed of a dog, two cats and the chickens, all of which help to make things lively at

### THE YARD PROPER.

In the yard we are describing there are two large shade trees. Under one is hung a garden hammock which is used very commonly by different members of the family, the boy finding it a convenient restfraguently Higher under the tree is a more pretentious hammock which the boy manufactured and hung. The frame is of wood, the body of canvas. A mattress and bedding were lost from the household store, and the result was a comfortable, healthful bed, during the summer months. The rope ladder, by which the boy ascends, is hauled up after he has retired, and then he feels secure and sleeps the sleep of youth. From one stout limb of the other tree is suspended a swing, and from another is a "horizontal bar" on which the owner and several boy companions do various athletic feats. At times two posts are set up in the yard, with a light bar put across on adjustable pegs, and this is

THE POND-FIRST YEAR

used for pole vaulting and high jumping. It is was the means of propulsion. A little wharf was scarcely necessary to add that the owner of the built at one side and a summer resort opened where apparatus holds the record for the neighborhood.

Another interesting snot is that occupied by a "furnace." The boy made a small pit and in it set a large oil can, with the front end cut out. A small hole near the farther end allows the smoke to escape through a length of stove pipe. The furnace and pipe were made firm by packing moist earth about them. The fire is made in the can, and the flat top is almost as good as a stove. Some days the turnace is used for heating water to produce steam for a very crude home-made stationary engine. Oftener, however, it is a regular camp-fire, where the boy cooks many meals which are served in genuine camp fashion. Onions, bacon, potatoes, eggs-scrambled, boiled and fried-toast, and chops have been successfully cooked, and we are assured they taste much better than the same articles prepared indoors. Bread and fruit or vegetables are added to the menu and the cook then has a fine meal-"a daisy," as he

says. There is a "tree house," of course. It is very simple; just a platform of boards, with a box or cupboard for notding treasures this point there is a fine view, but that is probably not why the boy loves it so. Perhaps it is because the way to it is more difficult than "up a winding stair," and when he mounts he is safe from ordinary interruptions. Occasionally he eats a meal there. His mother objected to having china dishes carried up, but he said, "Oh, I'd much rather have tin." So he uses pie plates when dining aloft.

### EARTHWORKS.

Unquestionably the greatest fun of all, however, has been with the pond. Ever since a certain boy was large enough to move a pick and shovel he has used them, beginning when he was scarcely as tall as the tools. The first attempts were holes which he called "mines." The making of one would busy him for quite a while, and when he became tired of it, or thought of something new, he would play the mine was no good, and fill it up. One "mine" took the form of a tunnel, which extended so far under ground t at a lighted candle was considered necessary at t mes in order to work properly. And with all the u e of lights and fires, the boy must have learned c ution, for he was never injured thereby. One year he made a larger excavation and several times fill d it with water and sailed boats on it. Several o the crafts were small, such as most boys try to ma te, and which he made, sails and all. Some of the ss is were ornamented—the cloth was white, and the 'emming was done in large but rather regular stitc ies in heavy, black thread. This style of boating became rather tame, so rafts of various kinds were made, and at last a satisfactory boat was invented. The buoyancy was attained by three empty oil cans used as floats, under the frame, and a paddle

many happy hours were spent. The pond could not be kept full of water, so was emptied by using a garden hose for a siphon, and allowing the water to run in little ditches to irrigate trees and garden.

The next season the boy had larger ideas and made his pond longer and deeper. A cement bottom was put in and then the place was ready for boating and swimming. The journeys by boat were short, and the number of strokes one could swim was small, but such fun! Children of the neighborhood all knew when the pond was filled, and would haunt its shores. Sometimes several would put on "bathing suits," and then what frolics!

### RAILROADING.

Railroads-ground and aerial-were productive of much merriment. The ground road was what is called a gravity road, and was built high at each end and low in the middle. It was not over 40 feet in length, but the car shot along at good speed and accidents seldom happened. The car was made of the remains of an express wagon and had but three wheels, one in front and two in the rear, and required three rails. These were smooth, narrow boards, with a flange on one edge of each, and the boy manufactured the entire plant. This road was safer, but no more attractive than the aerial line. A heavy rope was suspended between two trees, and a box-car released at one end, shot rapidly to the other at an average elevation of eight feet. Staylines kept the car in position during transit, and a large cushion (of excelsior) at the lower station served as a bumper to prevent distress to the passenger. A comical looking, but very satisfactory "chariot" was constructed with discarded bicycle wheels set on an axle and furnished with tongue and seat or floor. With two playmates for steeds, a third boy standing on the vehicle had merry rides.

### CARPENTER WORK.

The basement is high, light, and well ventilated, and on one side a long bench is fine for carpentering. A vise, lathe, and numerous tools are conveniently arranged, and with them the boy spends many happy hours. He has made boxes, kites-box and plane-shelves, carts, boats-large and small-waterwheels, motor fans and windmills. Some have not been a great success from either an artistic or utilitarian standpoint, but a few have shown considerable inventive ability, and all have helped to familiarize the worker with his tools. He has made very neat paper knives, getting small pieces of suitable wood from a friendly carpenter. He attempted woodengraving, also, using simple designs and making the tools for the first few cuts. Then an interested relative presented him with a set of graver's instruments and a dozen blocks of the necessary hardwood. This kind of employment is generally undertaken days when the weather is unfavorable for out-of-door oc-

The lad's manual training began when he was about three years old, and Santa Claus sent a diminutive saw and saw-buck. Previous to this he had used hammer and nails, but the saw was an entirely different matter. It arrived with other gifts on the Christmas tree, and was soon handed to the small boy. He was delighted, and wished to "saw wood" at once. A paper was spread on the carpet, a couple of pieces of wood given to the young sawyer, and

THE POND-SECOND THAN

### Ivan Ivanovitch

VAN IVANOVITCH, clad in his little sheepskin coat with the wool turned inward, and wearing his little boots that reached to his knees, stood by the roadside thinking. It was late in the fall, but there was scarcely any snow on the ground—only a little in patches here and there, remaining from the first flurry, and the ill-made, ill-kept road stretched away through a cheerless and barren country.

and barren country.

Down the road came a magnificent drosky drawn by three horses, harnessed abreast. Over the neck of the middle horse rose that peculiar Russian arrangement, the bitiung—a great horseshoe-shaped piece of wood richly embellished with studdings of silver.

DOG OF A PEASANT!" HE EXCLAIMED

The horse in the middle was trotting,

The horse in the middle was trotting, while the two outer ones were running, and their heavy harnesses were gay with many colored tassels and gleaming with silver ornaments. The driver was in gorgeous livery, and beside him sat a private soldier.

Leaning back among the fur robes in the drosky was a middle-aged man wearing the uniform of a colonel. Ivan knew who it was. It was the great lord who lived in the castle three miles beyond the village, and who owned all the land round about, as his ancestors had owned not only the land, but the people owned not only the land, but the people who lived on it.

who lived on it.

Just before the drosky reached the place where little Ivan stood, cap in hand, one of the horses stumbled on the rough road and went down. There was a general mix-up of horses, drosky and men, and the drosky was badly smashed. Ivan stood staring at the wreck.

'These cursed peasants!" said the nobleman. "I will have the whole village knouted for not keeping their roads in better condition."

Then catching sight of Ivan, his looks softened, and the stern man said:

"Well, little brother, what have you to say in behalf of the people of the Mir who let their roads stay in such a con-

who let their roads stay in such a con-

who let their roads stay in such a condition?"

"Please, Excellency," returned Ivan, looking straight up into the eyes which looked down at him, "I should not like to have them knouted."

"No, I suppose not," replied the colonel, with a cruel look coming into his gray eyes, "but they shall be."

"There are so few souls in the village," said Ivan, his lips beginning to tremble, "and we have to work so hard to pay the taxes."

"Tush, little brother," replied the man, "there are sixty-three souls in the mir. I know the number of my serfs—I mean of my peasants."

Now, a Russian mir, or village, is a community which is taxed according to

Now, a Russian mir, or village, is a community which is taxed according to the number of "souls" in it, and the "souls" are the men and boys of whatever age they may be—no account is taken of the women and girls by the government. The census of the mir is taken at long intervals, and upon the number of "souls" found in the mir at the time the taxation is fixed, to remain at the same figure until the next cenumeration. If before the next census only one "soul" should be left in the 'soul" should be left in the only one "soul" should be left in the village, that one man, or boy, would still have to pay the whole tax or suffer the consequences.

consequences.

In spite of the nobleman's stern manners and stern words, a look of gentleness came into his eyes every time they met those of Ivan, and so the boy, pushing back his desire to cry and run away, spoke up boldly and said: "There were sixty-three 'souls' in the mir, as I have heard. But that was years ago, when I was only a little boy."

"And what are you now, manikin?" asked the great man, with something which almost approached a laugh.
"I am a big boy," replied Ivan, stoutly, and then went on: "You see, after the census was taken came the famine and then the great sickness, so that

the census was taken came the famine and then the great sickness, so that many died; and some went to the army to fight for the little father, and now, Excellency, we have only twenty 'souls,' and ten of them are boys like myself or littler. And oh, Excellency, we work hard, and the black bread and the cabbage soup are scarce in our houses. For must we not pay the taxes for the fortythree 'souls' who are not. If you had a

three souls who are not. If you had a little boy—"

The man had placed one hand on Ivan's shoulder as he listened to him, but at the boy's last words a look of pain and rage shot across his face. "Dog of a peasant!" he exclaimed, and threw the child from him with such violence that the lad fell upon his face on the

hard ground. The great man had had a son a year before of just about Ivan's age—a son who had died and left him childless. who had died and left him childress.

That a peasant should dare by spoken word to recall that great grief—should even go so far as to compare the son of a despised mujik with the nobly-born

boy, was unbearable to the proud noble. Ivan picked himself up, bruised and bleeding, wiped his face as best he could, and then, with the stolid, uncomplaining manner which long centuries of oppression and abuse have rendered habitual for the Russian peasant, started slowly toward the village.

"Come back here!" commanded the man, and Ivan obeyed in that same emotionless manner.

The light which had come into his eyes when he told of the hard times of his mir had vanished, and in its place was only the vacant stare of the oppressed.

pressed.

The great man looked at the boy for

a minute, and then sat down on a bank by the roadside and buried his face in by the roadside and buried his face in his hands. Ivan wondered vaguely if he was crying, and if so, why! Then there came the sound of horses' hoofs from down the road, and he knew that the drosky was coming to take the noble to his castle.

The man started to his feet, and, catching the dirty Ivan in his arms, kissed him on the forehead.

"Run home," he said kindly; "I will pay the taxes of the mir until the next census. Run home and tell them."

And when the servants came up with the drosky they found their master standing alone beside the road with such a stern and thoughtful look on his face that they trembled as they addressed him.

Ron Cameron's Pickerel Shoot

PRING DID not display many signs of its presence in the North Vermont woods—at least to the eyes and other senses of the two city boys who were spending a few weeks at the farm of Ronald Cameron's father. So they only laughed sarcastically when Ronald told them that the weather was breaking and that he would show them some sport next day.

Ron and Dick did not even smile. "That kind of thing nappens to everybody now and then," said Dick generously. "You see, the pickerel have dark backs, and they are awful hard to see in the water."

Before long Ron found another fish lying just below the surface, and again he beckoned to the city boys. This time they were willing to wait till he had pointed the fish out to them carefully. "Aim away below him," whispered Ron.

Ronald told them that the weather was breaking and that he would show them some sport next day.

They had a habit of laughing that way, though they were so terribly green about everything connected with the woods that they could have been fooled in all kinds of ways if the country boys had felt like doing it.

"They make a feller feel as if he was wrong about everything." said Dick Starkweather, "even the things that we have done all our lives."

The next day was the fifteenth of March—a great day in Vermont, for it is the opening day of a curious sport. From that day till the first of May sportsmen are permitted to go after pike and pickerel with guns.

Jim and Ned Carruthers laughed more patronizingly than ever when the country boys told them what was in store. "Go after fish with a gun, eh?" said they. "Must be pretty poor fishermen around here if they have to shoot their fish!"

rish!"

They didn't know that the big pike, pickerel and muscallonge will not bite at balted hooks so early in the spring, when they are only just beginning to move around, and that they lie in the shallowest water that they can find in order to enjoy the sunlight.

Next morning the two city boys appeared armed with beautiful breechloading shotguns that made the country lads ashamed of their old guns.

THE WOODS SEEMED RENT BY AN EXPLOSION

"Now," said Ronald to them, "I've shot lots of pickerel, so I want you to have the best chances at them. I'll go first, because it isn't easy to see a fish until you get used to it. Looks more like a stick of wood or a water plant than a fish. When I see one I'll motion to you, and then you must creep up very softly and then you must creep up very softly. Be sure not to shake the bank or to let your shadow fall on the water. When you get close enough, aim under the place where the fish seems to be, and, whatever you do, don't stick the barrels of your guns into the water."
"Hu!" said Ned. "Seems to me that a fellow who never shot anything else except that old gas-pipe that you've got, can't teach us so much."

Ronald said nothing, but crept cau-

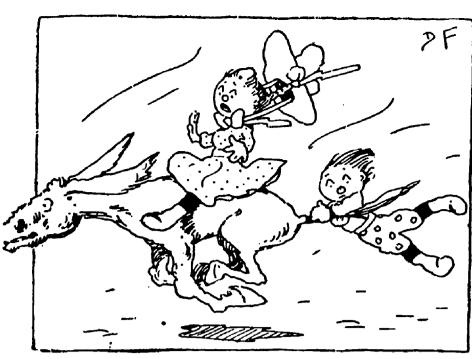

Ronald said nothing, but crept cautiously through the bushes that lined the edge of the "slang" which is what the Vermonters and New Hampshire men call some of their narrow water-

Ice still hung here and there in sheets, but many of the pools alongshore, that were sheltered from the wind and open to the sun, were quite open, though more less rolly.

Ronald stepped along slowly, placing his feet as carefully as a deer would. Suddenly he stopped short and beckoned

with a slight motion of his arm.

When Jim and Ned Carruthers came up Ronald directed their attention to the middle of a shallow cove just in front of them. The two city boys saw a shadow in the water. Without waitfront of them. The two city boys saw a shadow in the water. Without waiting for a word from Ron, they both blazed away. Almost instantly a long lithe fish leaped sparkling into the air fifty feet away and vanished again. When the water became quiet once more, the boys still saw the same shadow at which they had fired; then they realized that they had not seen the fish at all, but had mistaken the shadow of a tree branch for it. of a tree branch for it.

DUNKEL STARTED OFF LIKE A BAILROAD TRAIN

Ron.
"What for?" said Jim, and fired as he

"What for?" said Jim, and fired as he spoke. Then he dropped his gun and stooped over the bank to pick up the dead fish; but no dead fish appeared.
"The water is deceptive," explained Ron. "If you aim directly at the spot where you think the fish is, you will hit the water away beyond him."

"I would have killed him all right if you hadn't joggled my elbow," growled Jim.

you hadn't joggled my elbow," growled Jim.

Ron stared at him; he was perfectly well aware that he had not been near Jim's elbow. However, he repressed the hot answer that rose to his lips and walked away quietly.

Jim and Ned worked along the edge of the "slang" and fired a good many shots. They did not get a single fish, for sometimes they fired at pieces of stick and other times they shot over or under when they did really see a pickerel or a pike. Half the time they blundered along so noisily that the fish vanished before they reached the spot.

At last, however, they saw a magnificent pike lying in a little cove. To their excited minds he seemed three feet long. The cruel head, with the wicked eyes, was turned away from them, and they crept up with beating hearts and pointed their guns straight at him.

Jim slyly stuck the end of his gun into the water, hoping to get a surer shot that way. Ned, as it happened, did the same thing, hoping to steal a march on Jim.

Both boys fired at once. The moment

shot that way. Ned, as it happened, did the same thing, hoping to steal a march on Jim.

Both boys fired at once. The moment they pressed the triggers the woods seemed rent by an explosion. Screams mingled with the echoes from it, and Dick and Ron hurried to the spot.

They found Jim and Ned flat in the mud. Alongside of them lay the twisted and shattered remains of two shotguns. The boys were bleeding, and the rescuers found that they had been badly cut and burned. Jim's face was gashed from his left eye to the chin, and the tip of one of his fingers had been blown off. Ned had a broken nose, and one of his hands was badly torn.

"It's lucky that you are alive at all," said Ron while he was tying them up. "Don't you know that guns are bound to explode if you fire them off with their muzzles stopped up? It's a mercy you weren't torn to pieces."

It was many weeks before Jim and Ned could leave their beds. When they did, they were sarcastic to Dick and Ron no longer, and they were ready to acknowledge that they had a lot to

Ron no longer, and they were ready to acknowledge that they had a lot to

### A Trip to Donkey Land

UNKEL, the donkey, made up his mind in a hurry. Once made, he did not unmake it till he had to,

did not unmake it till he had to, which made it difficult to do business with him unless he happened to feel like it, which was seldom, if ever.

Dunkel's decision was that he would go home to Donkey Land, and he started immediately. Seth X. Y. Z. Jones and Arabella Sassafras Smith saw him start, and decided to go with him, though they did not know where he was going.

Arabella was quicker than Seth and got on Dunkel's back. Seth could not get aboard, but he was mot proud, and he took hold of Dunkel's tail.

Dunkel did not wish to take them,

Dunkel did not wish to take them, and he started off like a railroad train that is trying to catch a jack rabbit. It that is trying to catch a jack rabbit. It is too bad that only a very few persons in this world have ever seen a railroad train trying to catch a jack rabbit, for nobody else can really appreciate how very fast Dunkel went.

The result was that they arrived in Donkey Land almost before Arabella and Sath had time to fell off.

Donkey Land almost before Arabella and Seth had time to fall off.

"What is this, if I may inquire?" asked the King of Donkey Land.

"They came along without being asked." said Dunkel.

"Well, put them into the stables and we'll hitch them to our State carriage." said the King of Donkey Land.

"But you haven't got any stables," said the Prime Minister, "and if you had, you haven't any State carriage to hitch them to."

"You talk like a donkey!" said the King angrily.

King angrily.

"Yes, your Royal Asininity," said the Prime Minister humbly. "I don't know how it is. I have tried to break myself of it, but in vain, and I think sometimes that maybe it is my ears that cause it."

"Why do you think that?" asked the

"Why do you think that?" asked the King.

"Because I am such a donkey, I suppose, Sire," said the Prime Minister.

"I wonder if you can be right," pondered the King. "However, it doesn't make any difference, really. Let's decide what to do with these two-legged things from People Land."

"If they were only oats, we could eat them," suggested the Secretary of State.

"Yes, that is a good idea," cried all the other donkeys. "Let's eat them."

"The only objection to the plan," said the Secretary of State gloomily, "is that they aren't oats."

"I have a better idea than that," said the Grand Marshal. "Let's shoo them till they fly away."

"Hurrah! Let's!" cried all the donkeys.

"There is only one trouble shout tt"

keys.
"There is only one trouble about it," said the Grand Marshal. "They can't

"There is only one trouble about it," said the Grand Marshal. "They can't fly,"

"Well," said the King angrily, "I never did see such contrary children. Here we have two beautiful ideas manufactured by the best talent, and they won't do even the least little thing to make it pleasant all 'round." you know, said Seth. "Climb on, Arabella that they tried to hide behind each other.

"The best way to punish them," said Dunkel, "is to let them lo what they please. I have noticed that they always get into all kinds of trother when they do that."

"That is a very, very foolish idea," said the King, "and we will act on it at once. Hurry up, you," cried he to the children, "hurry up and do what you please, do you hear?"

Seth immediately seized the King's ears and began to pull them with all his might. They were long and silky, and the King brayed with pain. "Let go! Let go!" he yelled.

"You told us to do what we pleased, you know," said Seth. "Climb on, Arabella."

"You mustn't!" said the Prime Minister.

bella."
"You mustn't!" said the Prime Minister in horror." You can't ride on a King."

King."

"But we ARE riding on a King, you know," said Seth and Arabella kicking the King's gray sides with their heels and making him run and prance, whether he liked it or not.

"This 's all Dunkel's fault,' whim-

"This is all Dunkel's fault,' whimpered the King.
"I tell you what let's do," said the Prime Minister. "Make Dunkel take them back to People Land. After all, there could be no worse punishment than to drive them away from this beautiful Donkey Land, and it will serve Dunkel right, too."
"Good! gcod!" cried all the other donkeys. With a combined effort they threw Dunkel so hard against the King that the children slipped off the King's back and on Dunkel's back in a jiffy.

The next moment all the donkeys, including the King, were kicking Dunkel till it sounded like a drum; and Dunkel perceived that this was one of the times when it would be as well to unmake his mind.

So he started off as suddenly as he

Arabella had time to know that they had lost their breaths, they found them-

had lost their breaths, they found them-selves lying flat on the grass and Dun-kel was feeding near them as if nothing of the kind had ever happened. Seth and Aratella often tell the story now to their grandchildren, for this oc-curred nearly three years ago; and the grandchildren wish that they, too, could make a trip to Donkey Land. But Dun-kel does not seem to remember anykel does not seem to remember any-thing about it.

### Caught by an Ice Bear By CAPT. R. L. SPICER

NE never-to-be-forgotten spring I found myself on the desolate shores of Baffin's Bay, having gone north in a Newfoundland sealer from St. John's for the purpose of shooting a polar bear. Great fields of floating ice were around us, with now and then a stately glittering iceberg moving southward, and along the edge of the land hung fields of white—the "foot ice" which had formed during the winter.

The ship threaded her way through the open "leads," or lanes of water, and, on the ice-floes, or on the foot ice, the men landed now and then to slaughter the seals. These are not the fur-bearing seals which

These are not the fur-bearing seals which are hunted for their valuable pelt among the islands of Behring Sea, but another kind of seal which is hunted for the value of the oil which is extracted from its blubber.

At the curious Arctic town of Upernavik we took on board an Eskimo boy of six-teen who had arrived there in a whaler the year before, and was now anxious to re-turn to his people further north. Barren and forbidding as is the region

HE FIRED STRAIGHT INTO THE BEAR'S BYE

where he was born, he was homesick for it and begged to be allowed to work his passage north.

He said his name was Awaklok, the same as that of one of Captain Kane's Eskimo friends, but we called him David—it was shorter and easier for us, and the boy did not object.

one day when the ship was moored to a large floe, I went out accompanied by David. The floe was not level, but full of hummocks and ragged ridges, as if it had been broken up at one time and frozen together again. David carried a sealing rifle and I had my express.

gether again. David carried a sealing rifle and I had my express.

I wandered far from the ship till I could only see its spars towering over the hummocks and ridges. David also was hidden by an Ice hummock.

Suddenly I felt a tap on my back like a hearty slap from a too impulsive friend and the next instant, before I could look around, a strong blow stretched me flat on the ice and sent my gun flying. Something held me down with a firm pressure on my back. Twisting my head sideways, I saw towering above me the white body of a polar bear. It looked to me, just then, to be as big as an elephant.

I was half stunned, but retained sense enough to realize that my moments of life were probably numbered. Nevertheless I tried to reach around with one hand to get at my hunting knife, determined to die fighting. At the same instant I heard a shout, and then the report of a rifle.

The huge body above me quivered, made an effort to move forward and then fell across my prostrate body, nearly crushing me with its weight.

I crawled painfully from under the carcass of the bear and lay for a moment bruised and panting on the ice to see David standing beside me with his rifle in his hand.

He had stepped around the corner of a

hand.

He had stepped around the corner of a

hillock just as the bear knocked me down, and, running up close to the huge beast, had fired straight into one of his eyes, pentrating the brain and causing almost instant death.

Although the bear had looked so huge to me when he was holding me down upon the

me when he was holding me down upon the ice, we found on measuring him that he was not of unusual size.

David and I stripped the animal of its hide, and the pelt is now in my possession, the boy insisting that I should take it, though it was by right his, he having shot the beast. But he said: "Much more bear where I go—too much bear," and I tried to make up to him for the skin by presents of knives, an iron pot and other things an Eskimo most prizes.

### A Night With Italian Devilfish Catchers

F THE SIGNOR he like to see the fishing, it is that he can go with us to-night," said my host on the beautiful island of Capri to me one

"What are you going to catch?" asked I.
"The sepla, Signor," said he. "What you call the cuttlefish. The devilfish, that is

"Well," said I, "I can't miss a deviifish expedition."

So that night, as soon as the darkness had settled over the mighty cliffs of the wonderful island, we went forth into the rolling ocean off the weird coast.

Hore and there we saw darting lights, swinging up and down more or less wildly. These as I soon learned from my guides, were the torches carried by the fishermen, and waved in order to attract the devilian-for the bait that is used in this peculiar fishing is not bait that is put on hooks, but just plain fire.

True, the fishermen of Capri use hooks, too, but these hooks have no bait on them at all. They are simply thrown into the water and dragged swiftly to and fro, and the devilfish, which are extremely

THE PISHERMAN GRASP THE UGLY THINGS ABOUND THE MECK

inquisitive and greedy, leap at them as they dash around in the blinding glare of the torchlight.

torchlight.

Before long our boat was in the thick of the fun. All around us were fishermen, their boats moving gracefully about, propelled by strong arms. The black cliffs echoed to the laughter and wild cries of the excitable Italians.

We threw our lines over, each armed with triple hooks, very long and sharp. The torches fastened in the bow threw a weird, red light over the sea all around us.

around us.
Soon I saw queer, gruesome shapes mov-

Soon I saw queer, gruesome shapes moving like swiftly flitting shadows just under the surface. They were uncouth things, looking like great bags, with tangles of snake-like things trailing behind them and writhing hideously as they moved.

These were the cuttlefish, dashing into the fascinating circle of light. The trailing things that streamed out behind them were their arms, and when occasionally I got a close view of one, I could see two enormous flat glassy eyes at the base of the nasty bunch of arms. Then I learned that the devilighs swim backward. They propel themselves by pumping water

learned that the devilfish swim backward. They propel themselves by pumping water into their bags of bodies, and then ejecting it violently with a squirt, thus sending themselves along very swiftly indeed. All at once my hook sagged heavily, and the next moment something at the end of it began to splash on the surface. I had hooked one of the hideous fellows, and I hauled in full of curiosity.

My prey came in easily enough, and I raised it to the gunwale of the boat before I heard the warning cries of the fishermen.

nen. Then I learned something more, and a ery unpleasant something, about the very un devilfish.

Hardly had I raised the creature from the sea before I was blinded by a biting black fluid that was shot violently into my face by my victim. The creature had discharged its "ink fountain" from which is gets its name "sepia."

my face by my victim. The creature had discharged its "ink fountain" from which is gets its name "sepia."

This is a regular trick of the devilfish, well known to all the fishermen, who take care to avoid it by grasping the ugly things tightly around the neck as soon as they have hauled them in close enough.

The neck is just where the night-mare-like head with the arms on it meets the slate-colored bag-body; and I found that

his inquisitors as good as they sent, and

his inquisitors as good as they sent, and in five minutes would have been received into the heart of the fraternity. But being a stranger in a strange land, he felt much as a solitary traveler feels when he finds himself suddenly surrounded by a group of highwaymen or Indians.

Tom Lee, who always bullied every boy who would let him, committed the first overt act. Stepping out of the circle, he hit Felipe a smart smack on the cheek and, jumping back, put up his fists in a belligerent attitude and cried, "Come on, come on!"

The art of boxing was an unknown one to the Cuban boy, but the slap on the face aroused all his Spanish blood. He sprang at Tom, scratching and biting like a cat. Tom floored him with a blow right on the nose and left him rolling on the ground in tears of hysterical rage.

Dick Buxton raised the stranger and led him into a grove which bordered on the playground, striving to comfort him. When the Cuban boy had got over his hysterical attack he swore eternal friendship to Dick, and confided to him that he had in his luggage a big knife with which he proposed to wipe out his disgrace.

"No, you won't," replied Dick. "Every boy's luggage is overhauled by one of the teachers when he first comes here, and by this time your knife is swiped."

No, you won't," replied Dick. "Every boy's luggage is overhauled by one of the teachers when he first comes here, and by this time your knife is swiped."
"Swiped?" inquired Felipe, not as yet being familiar with American slang.
"Yes—confiscated if you like that better—filed for reference. Besides, we American boys don't do things that way. What you want to do is to learn to box. Tom isn't such a bad fellow at heart, but he has got into a bad habit of playing the bully. Now you do just as I tell you and you will come out all right."

The result of the conference was that Dick and Felipe became friends, the latter agreeing to do exactly as the former said in the matter of Tom, and, as Dick was the proud possessor of a set of boxing gloves, he secretly gave his new friend lessons in the art of self-defense at every opportunity.

Felipe never became an expert boxer, but he did fairly well under Dick's instructions and the other boys finding that the

but he did fairly well under Dick's instruc-tions, and the other boys, finding that the newcomer was really a pretty good fellow, treated him as well as could be expected—all except Tom, who would have at-tacked Felipe again, but was restrained

HE CLOSED HIS TEETH ON IT WITH A SNAP

and I was repaid for my long voyage, for the Norfolk Islanders are a fine class of people. The original settlers came from Pitcairn Island, so the people are descend-ants of the famous mutineers of the Bounty, and they told me stories enough to fill a book.

They are splendid seamen, for they earn a great part of their incomes by hunting whales and sharks in small boats on the mighty rollers of the South Pacific. After I had been at the island for a few days, I accompanied the men on such a sharking expedition

I had been at the island for a few days, I accompanied the men on such a sharking expedition.

To get to the sharking grounds, the long, lean boats have to "run the bar." The bar is a jagged volcanic rock, and there is just enough water over it to float the craft. If a boat gets into the trough of a wave just as it is above the bar, its bottom will hit the reef with a slam.

So there is excitement enough in going sharking even before you see a shark. The boat tosses crazily, now up, up, up. Then down, down, down! Suddenly the steersman roars something, and the craft shoots straight at a green wall of water, buries in it, climbs it somehow, and presently is careening high on top of it and preparing to dive headfirst down the other side. The landsman imagines that this is the end, surely. Before he can gather his scattered senses, the boat is dipping and rolling smoothly over the heavy but regular swells of the open sea and the crashing bar is astern.

Not far away is a queer, shining, black thing like a leg of mutter sail.

ing bar is astern.

Not far away is a queer, shining, black thing like a leg of mutton sail. It waggles like one, too. The boat glides toward it, stops, and from the hand of the man in the bow darts a glinting steel weapon. It dives into the sea just below the black sail and off it goes with a whis!

whis!

Unlike a whale, which usually starts off in a straight course, the shark when harpooned darts in all directions and will even leap clear of the water. All these things were done by the shark we struck that day. The line went this way and that way, and the boat went from one side to the other like a wagon behind a runaway horse. But the worst was to come.

come.

He was a big shark, eighteen feet long by actual measure. (We didn't measure him just then, however.) After a particularly vicious spurt to one side, during which he showed his whole wicked-looking black body and huge fins, he suddenly twisted his ugly form into a half circle and jerked himself straight at us.

The men backed water with all their might, but no oars could move a boat as fast as that big shark moved. In a moment his head struck the bow and split the stem all the way up. He backed off a bit and we saw a long sliver of the oak wood stuck in his head almost between his eyes.

Infuriated by pain, he came again and this time bit at the boat. His jaws were so vast that he managed actually to take a good part of the bow in, and when he closed his teeth on it with a snap, the wood splintered as it would under a rail-

road train.
Of course the sea rushed in at once and the craft sank under us. We all paddled and kicked to stay affoat, each man, under orders from the steersman, laying one hand on the wreck of the boat for sup-

You may imagine that it was not a pleasant plight. The shark had sunken below the surface, but that he was close to us could be seen from the swirls that appeared here and there around the boat. Somewhere under us the wounded monster was rolling around trying to release himself from the harpoon, and we knew that he might rise in renewed fury at any instant.

I wasn't a bit glad that I had gone on the sharking cruise; and while the shivers went up and down my dangling legs, I vowed that I would never go on one

again, never, never!
Suddenly, with a spouting of waters and a frothing where he beat it, the great fish arose right among us. He came out so far that we could see the harpoon in his

Wildly he thrashed to and fro, and once I looked straight into that horrible open cavern of a mouth. We all made sure that at least one of us would be crunched the next instant. But a piece of rare luck intervened.

By strange chance, the razor-like kill-ing lance which is used to stab a har-pooned fish after he is tired out, had be-come fixed in the wreckage. The shark, bothered by the harpoon line, threw him-self around to escape it, and drove him-self straight at the lance, which at once slipped into his belly. Refore the heave slipped into his belly. Before the heavy fish could check himself he had buried the

fish could check himself he had buried the terrible weapon in his body half way to the haft, and, as we found out afterward, the blade had cut his heart clean in two. Ten minutes afterward we were picked up—just in time to escape a school of our dead victim's friends, who had been attracted by the blood. That was my first and last attempt at hunting sharks off Norfolk Island.

I had to collect some nerve before I could muster up enough to grab my first devil-fish that way. But it was easy enough after I learned it, for the sepia is completely powerless to do any harm when it is and they had an argument, accompanied

was ended for that night.

Ugly as they are, the devilfish are considered great delicacies by the Italians.

and, as a metter of fact, they are pretty and, as a metter of lact, they are pictly good when they are cooked right. So our catch of the night did not go to waste, but put a nice sum of money into the pockets of my hosts.

### The Bully and the Cuban

THE SMALL boys in the lowest grade of the Cedar Hill academy could hardly wait for the recreation hour. A new boy had appeared at the boarding school, and his advent had made a sensation.

He was a slim, swarthy, sallow young fellow from Cuba, sent to the "States" for his education, and he spoke English

with a marked Spanish accent.
When the boys were let loose upon the playground, a group gathered immediately around the bewildered Cuban youth, who greeted the curious stares with which he

greeted the curious stares with which he was regarded with a polite "Good morning, gentlemen, Americanos."
"Get on to the Dago!" shouted Willie Johnes from behind the shoulders of his comrades. "Where did you come from?" "What is your name?" "Can you box?" were some of the questions hurled at the bewildered boy, who began to look a little scared at the unfriendly faces.
"My name is Felipe Delgardo. I come from Habana. Have the goodness to stand aside and let me pass," responded the strange boy with dignity, but no one made way for him.

way for him.

Had he been a Yankee boy used to the ways of Yankee boys, he would have given

fish that way. But it was easy enough after I learned it, for the sepia is completely powerless to do any harm when it is so seized.

We caught several hundred devilfish. Then all at once they disappeared, and the fishermen, as with one accord, hauled their lines in and started for the shore. They explained to me that the schools had passed out to sea, and that the sport was ended for that night.

Ugly as they are, the devilfish are considered great delicacies by the Italians.

Finally, one day, Felipe met Tom walk-ling alone in a remote part of the grove, and they had an argument, accompanied by a few passes with the fists.

"What is the matter with you, anyway?" and Tom, after a few passes had shown him that Felipe was at least his match.

"I have no wish to fight you," said Felipe with dignity, "but when I came here a stranger you insuited me without cause before the school. Call you it manly?"

Well, no," replied Tom slowly "I guess could

"Well, no," replied Tom slowly, "I guess it wasn't hardly fair." "Suppose you to be in Cuba, would you like the same?"

like the same?"
"Hardly," replied Tom with frankness.
"I guess it was a rather low down thing to do. Come back to the playground."
"For what?" inquired Felipe.
"Come on." said Tom, and Felipe went.
The boys gathered around in a ring on seeing Tom and Felipe together, and Tom made a speech.
"Fellows," he said, "Cuba here has acted like a man. Twice he had a chance to tell on me when he saw me violating the rules and didn't do it. Just now he offered

tell on me when he saw me violating the rules and didn't do it. Just now he offered to fight me. He isn't such a bad fellow after all, and I apologise for the way I treated him the first day he was here."

They gave three cheers for Tom and three for "Cuba," and by the end of the term Fellpe was the most popular boy in school.

### The Shark that Nearly Got Us

EARLY a thousand miles from Sydney, New South Wales, is a speck in the ocean wastes—an island not quite five miles long, made of high rocks that are crowned by magnificent pine trees. On this lonely rock there live a little more than nine hundred people, who do not see a stranger except by chance if a whaling vessel happens to stop there, or a traveler is led by curi-osity to visit them by means of the steamship that calls there a few times a

It was curiosity that led me to call there, Norfolk Island.

The Coin Correspondence Club

The "How I Make Money" Correspondence

Club

The Boy Naturalists' Correspondence Club

URING the few years last past The American Boy has received hundreds, if not thousands, of letters from boys asking that its editor put the writers into correspondence with other boys. Boys interested in electricity have wanted to correspond with other boys interested in the same subject. Boys interested in poultry raising have wanted to correspond with other boys interested in the same pursuit. Boys interested in travel have wanted to talk through the mails with other boys traveling or interested in travel. The American Boy has found it impracticable to meet these requests. To print them in The American Boy would be to encourage thousands of like requests and encroach upon space in its columns that belongs to its readers. For a long time we have been considering the question as to how we may meet this demand, which is quite evident, and at the same time not do an injustice to the general reader by taking up a portion of the valuable space in The American Boy for the publishing of these requests month after month. We have hit upon the following plan and we invite all boys interested in particular subjects to immediately take advantage of it.

Correspondence clubs will be organized embracing every important field of boy endeavor. Any boy may join one or more of these clubs on the payment of a small fee for each, the fees going to cover the expense in the office of The American Boy of maintaining a department, with competent clerks, the payment of postage, and other expenses incidental to the service. On the first of every month there will be sent out from the office of The American Boy to every member of each club the names and addresses of his fellow members. Every member will have before him, therefore, at all times, the names and addresses of the membership in the club, or clubs, to which he belongs. The joining of a club will be taken to mean that the member is willing to correspond with boys in the club on the matter signified by the club name. For instance, a boy is interested in electrical work and he wants to correspond with boys all over the world regarding electrical matters, comparing experiences, asking questions, submitting problems. He sends fifty cents as an enrollment fee, entitling him to a year's membership in The American Boy Electrical Correspondence Club. On the first of each month thereafter, we send him a list of the names and addresses of his fellow members. He is at liberty to put himself into correspondence with any of these members directly—not through the office of The American Boy.

The following clubs are announced as ready for applications for membership. The applications should be addressed to the Secretary of Correspondence Clubs, care of The American Boy, Detroit, Michigan:

THE ELECTRICAL CORRESPONDENCE CLUB. This club will be composed of boys interested in Electricity in all its various workings, and correspondence may relate to any matter in which Electricity plays a part.

THE MECHANICAL CORRESPONDENCE CLUB. This club will cover all subjects embraced under the term Mechanics. Correspondence will relate to machines and machinery.

THE STAMP CORRESPONDENCE CLUB. As indicated by the name, boys interested in stamp collecting, exchanging of stamps, buying and selling of stamps, and the study of stamps in general will become members of this club.

THE LITERARY AND EDUCATIONAL CORRESPONDENCE CLUB. Thousands of boys with a love for reading or a desire for an education are so situated that the getting of good reading matter and the obtaining of an education is difficult. Many helpful suggestions from one boy to another can be given in such a club.

THE CURIO CORRESPONDENCE CLUB. All boys interested in curios and the collecting of rare articles such as Indian, Japanese and Mexican things of interest and of rare value will group themselves under this club name. Boys who collect various kinds of ore, minerals, etc., are included.

THE AMATEUR JOURNALISTS' CORRESPONDENCE CLUB. This club will afford an opportunity for all boys interested in printing and journalism to correspond with one another, exchanging their papers and products and coming into friendly competiton and general helpful relation.

THE AMATEUR PHOTOGRAPHERS' CORRESPONDENCE CLUB. In this club boys interested in photography are invited to associate themselves. No club can be of more advantage to its members than this one, as the members can exchange interesting photographs, taken about their homes. The boy may learn by comparison of his own work with that of his fellows wherein he is deficient.

THE AMATEUR ARTISTS' CORRESPONDENCE CLUB. All boys interested in drawing, painting, sculpture and kindred arts are invited to join this club and, by correspondence with one another and mutual exchange of samples of work and mutual criticism, assist one another.

THE INTERNATIONAL CORRESPONDENCE CLUB. Boys residing in every part of the world, desirous of corresponding with boys living in other countries than their own, may, through the medium of this club, be enabled to obtain correspondents. It must not be forgotten that THE AMERICAN BOY circulates in every country on the globe. Nothing could be more pleasurable or profitable to a boy in the United States than to correspond with a boy in Japan, or in India, or in some South American country.

THE YOUNG FARMERS' CORRESPONDENCE CLUB. Boys on farms, young gardeners, and florists, will find great benefit from correspondence with other boys in like situations in other parts of the country, comparing notes as to varieties of seeds, crops, etc.

THE PUZZLE CORRESPONDENCE CLUB. All boys interested in puzzles and desirous of exchanging puzzles and doing puzzle work in common will find this club of advantage.

THE YOUNG HUNTERS' CORRESPONDENCE CLUS. All boys interested in hunting, and desirous of corresponding with boys hunting either the same or different game than such as found in the localities of the writers will find much pleasure and profit in correspondence to be had through membership in this club.

THE POULTRY AND PET STOCK CORRESPONDENCE CLUB. In joining this club, boys are requested to state in what sort of stock they are interested, whether poultry, bees, dogs, rabbits, or other animals.

THE COIN CORRESPONDENCE CLUB. Boys interested in exchanging coins and the buying or selling of rare coins, and desirous of exchanging experience and asking questions, etc., regarding coins will under this club name come into correspondence.

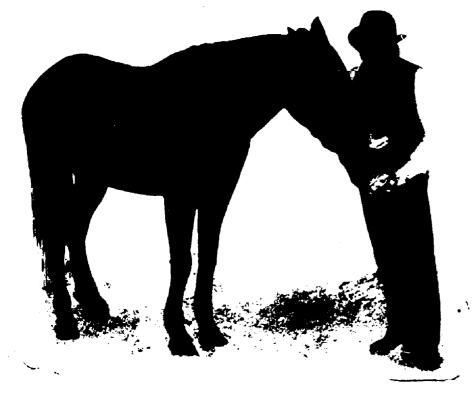

THE "HOW I MAKE MONEY" CORRESPONDENCE CLUS. This club will give boys the opportunity to correspond with other boys on the subject of money making and saving. Many boys by employing spare moments from school and study are earning and saving money and would be glad to tell other boys how to go about it.

THE BOY NATURALISTS' CORRESPONDENCE CLUB. Under this head boys may write one another about animal and vegetable life, fossils, minerals, etc. The comparison of notes by boys in various parts of the earth should prove very interesting and profitable.

It is not necessary that one should be a subscriber to The American Boy to be a member of a club. No particular form is required to be filled in making an application for membership. Simply send fifty cents and say that you would like to become a member of some one of the clubs, naming it. There is no objection to one becoming a member of more than one club. The fee is the same for each club and one can join as many as he chooses. The applicant, in sending in his name and address, must state his age, as the age will, in every case, be printed in the lists of members in connection with the name, so that in choosing correspondents a boy of, say, eighteen may avoid, if he so desires, writing to a boy of twelve, and vice versa. Address should be given in full. It should be borne in mind that the letters between the boys are not to be sent to the office of The American Boy, but sent direct. The request that letters sent us be forwarded cannot be complied with. The trouble and expense would be too great for us to undertake to become a clearing house for correspondence.

No further notice of these clubs will appear in The American Boy for some months to come other than a possible mere mention. Every boy, therefore, who desires to take advantage of the offer hereby made should do so at once.

Address, Secretary of Correspondence Clubs, care of The American Boy, Detroit, Michigan

### "Colonel Dixon"—A Remarkable Horse

Plain hypnotism is the explanation given by the owner of a horse in Milwaukee, Wis., for the wonderful powers possessed by this animal. "Colonel Dixon," as his owner, James Goodman, calis him, can count, giving arithmetical results by stamping his feet, and answers "yes" or "no" to any question put to him. The correctness or otherwise of the answers depends upon the owner of the horse, who frankly declares that he compels the animal to answer as he willis by mere force of mental telepathy. Goodman's father was a Russian Cossack, and scientists who have been puzzled by the performance of "Colonel Dixon," suggest that generations of close acquaintanceship with horses have given the family of the Goodmans an almost superhuman control over the animals.

"Add three and five," said Goodman to the horse, in the presence of a number of visitors recently. The horse stamped his forefoot eight times, In rapid succession he subtracted and multiplied figures at command, never once making a mistake. To prove his claim that Hans, the German horse who has been astonishing the scientific world, does his tricks by reason of mental telepathy. Goodman undertook to make "Colonel Dixon" miscalculate. After asking the animal to add three and two, Goodman steadily fixed his mind on the figure four, and sure enough the animal stopped tapping his hoof when four was reached.

"Colonel Dixon" travels between the shafts of a delivery wagon when not in the stable resting or doing the multiplication sum, and his owner says he has taught him to stop at the houses along his route by merely willing that he shall do it. The accompanying photograph, taken by a Milwaukee photographer especially for THE AMERICAN ROY, shows "Colonel Dixon" informing a man of the denomination of a bill held in the latter's hand.

### American Patriotism

American Patriotism

One of our readers, who needed not to be ashamed, if indeed he was ashamed, to sign his name, requests of the editor that he write an article on patriotism. He thinks that patriotism in America is dying out, and says that if we will look about us we will discover for ourselves that fact. He has been traveling about the country engaged in selling flags and putting up decorations. He calls attention to the fact that on Washington's Birthday this year, in a certain city, he found only five flags displayed in a distance of eleven blocks. He wants to know if it is coming to pass that politics and the almighty dollar is the god of the United States. He compares American people with the Japanese in this respect and tells us what everyone has come to know—that the Japanese are perhaps the most loyal to their flag of all the peoples of the earth. Our correspondent, whoever he is, says that he was at St. Louis on AMERICAN BOY DAY, and that he and his father both appear in the group picture of the boys taken on the steps of Festival Hall.

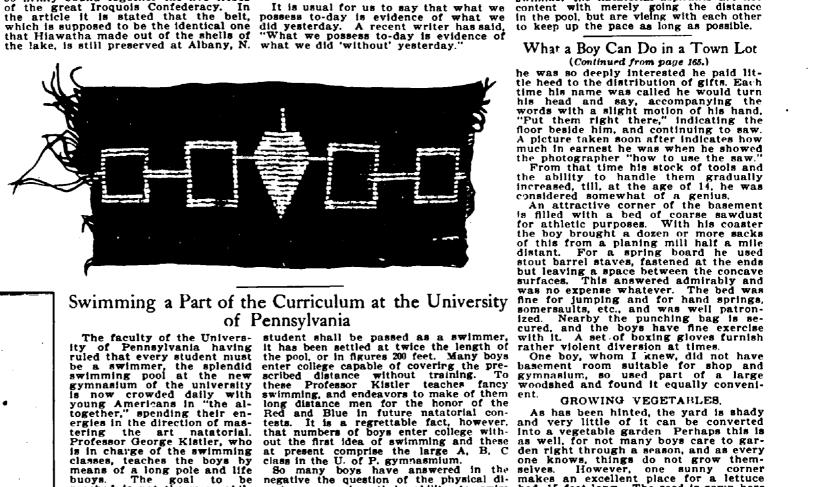

We will only add that on Washington's Birthday, and in the city of Detroit, the principal business street was without a single decoration, excepting, perhaps a mile from the center of the city, where two flags were seen hanging from residences. There was absolutely nothing in the appearance of the streets and stores to indicate that one of the two or three great patriotic days of the year was at hand. There is no question in the mind of the editor that the writer of this letter is near the truth when he says that patriotism in the United States is at a low ebb. Every American boy

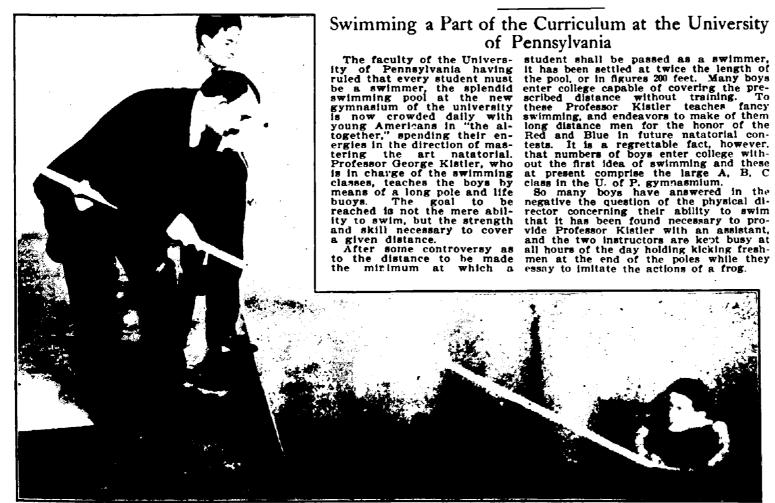

should own a flag and show his colors on every occasion—particularly on such occasions as the anniversary of the birth of the Father of his Country.

In our September, 1904, number appeared "A Real Indian Story of Hiawatha." By referring to the story, our readers will learn that among the many fairy stories concerning Hiawatha is one which recounts how he made the great wampum belt, the possession of which so firmly bound together the five tribes of the great Iroquois Confederacy. In the article it is stated that the belt, which is supposed to be the identical one that Hiawatha made out of the shells of the lake, is still preserved at Albany, N.

Hiawatha's Wampum Belt

It is usual for us to say that what we possess to-day is evidence of what we did yesterday. A recent writer has said, "What we possess to-day is evidence of what we did 'without' yesterday."

Y. We are enabled through courtesy of J. E. Boos, of Albany, N. Y., to show our readers a photograph of the belt.

As it has been decreed by the college authorities that no student shall be allowed to take part in rowing events until he has proved himself a long distance swimmer the natatorial aspirants are not content with merely going the distance in the pool, but are vieing with each other to keep up the pace as long as possible.

As has been hinted, the yard is shady and very little of it can be converted into a vegetable garden Perhaps this is as well, for not many boys care to garden right through a season, and as every one knows, things do not grow themselves. However, one sunny corner makes an excellent place for a lettuce bed, 15 feet long. The seed is sown here in rows about six inches apart, a new row being put in every two weeks for about three months. This insures fresh lettuce for many months, and, if the boy buys the seed, does the work, and sells the product at home for a reasonable price, he gets a little spending money which was easily earned.

Tomatoes are grown along one side of the yard, the plants being set in two rows, two feet apart each way, and produce an abundance of tomatoes for the ordinary family. That is, the plants will yield generously if cared for, and staked to keep them off the ground. A few beets are planted between the rows of tomatoes and most of them are ready to use for "greens" before the other plants are large enough to interfere with their growth. The space to be devoted to garden is limited, but the results are satisfactory, after all.

Lest the reader imagine the boy spends all his time outside the house, it is wise, perhaps, to add that he has various indbor amusements, which include games, books and music, the violin being his chosen instrument. In a cabinet in his room he has about 200 mounted specimens, butterflies and other insects, most of which he has identified and named with the help of two good books on the subject.

PROPESSOR GEORGE KISTLER TRACHING A STUDENT HOW TO SWIM

couldn't stand it any longer, and I near-

ly gave up.

Again by a supreme effort I recovered and tried to be calm. In those few moments I suffered the agonies of death. Then at last a deadly sickness came over

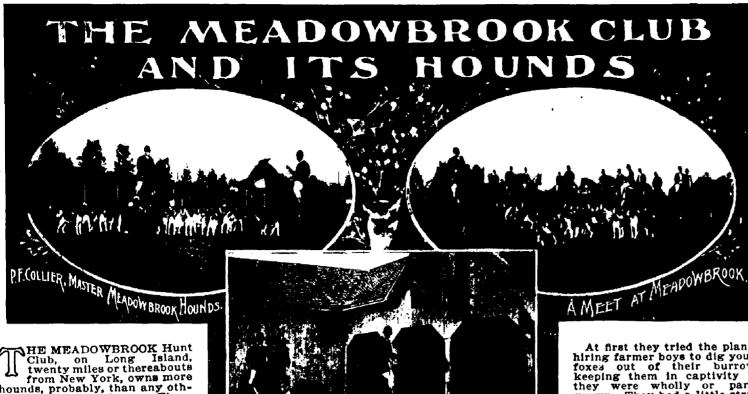

ments I suffered the agonies of death. Then at last a deadly sickness came over me and I lost consciousness.

When I regained consciousness I was again in the world of the living,—the world that I have liked better ever since. I was in my own home, in my own bed, and suffering only from congestion and fright. On inquiring how I was saved from death by suffocation, the boys told me that my brother's frantic appeals for help had been answered by a passing lineman, who had by accident dug in the right place, in fact, striking my foot. The boys also said that he had pulled me out at the risk of broken arms and wrenched limbs. I also learned that the time which seemed to me to be so long was but four minutes, strange as it may seem. I quickly recovered from this narrow escape.

In the foregoing I have endeavored to relate just how it felt to a twelve-year-old boy to go through the sensations of despair and the consciousness of approaching death. This story points no moral, other than, perhaps, boys should think twice before digging caves in sandbanks.

Columbia Park Boys' Club

We have received from Sidney S. Pelx-

HE MEADOWBROOK Hunt Club, on Long Island, twenty miles or thereabouts from New York, owns more hounds, probably, than any other hunt club in existence. There are two hundred of them, divided into three packs—one hundred are English foxhounds, while the other hundred are part American foxhounds and part drag hounds. The English fox-hounds are nearly all late importations; the American foxhounds are of old Virginia stock; the drag hounds, though of American breeding, came originally from English stock, which has been carefully kept from contamination. So far as is known, there is no single club in England, the home land of fox hunting, which owns so many hounds. Certainly no other American hunting organization has so many.

tainly no other American hunting organiza-tion has so many.

The Meadowbrook Hunt Club has anoth-er distinction. Its Master of Hounds, P.

F. Collier, the publisher, is the oldest man holding such a place in America. He is not far from seventy, one way or the other: undoubtedly he is the hardest rider to hounds of his age in this country (unless some unknown Southern gentleman leads him), and, so far as heard from, he has no peer in this line on the other side of the water either.

Only the other day he led three hunts in one day—with the English fox-hounds at 10 o'clock, with the American fox-hounds at 10 o'clock, with the American fox-hounds at 1 o'clock and with the drag hounds at 3. He was in the saddle almost continuously eight or nine hours; he rode about forty miles, for each of the runs was at least ten miles long, and he rode the five miles from the first to the second meeting place and the three miles from the second to the third. He bestrode at least six separate horses that day, making a change whenever his mount was tired, and at the end seemed remarkably fresh and unwearied considering the ground he and at the end seemed remarkably fresh and unwearied considering the ground he had covered and the stiff barriers he had taken. His friends and fellow-huntsmen declare, not only that he is the hardest rider of his age they know anything about, but that they never heard of anyone of any age attending three such meets in one day.

The senior Mr. Collier has been "a good sport" for more than a generation. Some The senior Mr. Collier has been "a good sport" for more than a generation. Some years ago he was a most enthusiastic stag hunter. He kept a tame stag then, which he used to release on occasion, when he would invite his friends to join him in the chase with a pack of hounds. The stag was a fine runner and seemed to enjoy the sport as well as the men who pursued him, or the dogs either. No matter how floet the dogs, they never caught the stag; when he was tired out he would find his way to his paddock, where he would clear the eight-foot fence at a bound. Once inside he could turn and view with disdain the impotent efforts of the hounds to get at him. Notwithstanding the complete harmlessness of stag-hunting as practiced by Mr. Collier and his friends, it was stopped by order of the Society for the Prevention of Cruelty to Animals. I have heard, but have not verified the statement, that the stag is still alive, veteran of a hundred hunts.

The Meadowbrook Hunt Club is the oldest in America. It was formed in 1875.

THEO. A. HAVEMEYER AND HOUNDS.

hundred hunts.

The Meadowbrook Hunt Club is the oldest in America. It was formed in 1876, A. Belmont Purdy being one of its chief promoters. Its location near Hempstead was determined by the proximity of the curious stretch of territory in that neighborhood known as the Hempstead Plains. This territory, treeless, almost level and with soil so barren as to be of no practical farming value, was then about 3,000 acres in extent, and admirably adapted to the use of the club for drag hunting. At first it was hoped that foxes would be found there in sufficient number to make the use of the drag unnecessary, but the hope was not realized.

At first they tried the plan of hiring farmer boys to dig young foxes out of their burrows, keeping them in captivity till they were wholly or partly grown. They had a little structure which they called the fox ture, which they called the fox house, built for that purpose near the club house. On a meet day one of these "tame" foxes would be released, but the result never was satisfactory. sult never was satisfactory. The hunters soon found that a

sult never was satisfactory. The hunters soon found that a fox which has once been imprisoned will rarely run any distance. The longest run ever made by a released fox at a Meadowbrook Hunt Club meet. I am told, was three miles though the shortest run thought at all worth while by cross-country riders is ten miles. Many of the released foxes would run only 300 or 400 yards. Frightened almost to death by the baying of the hounds, they would squat close to the ground and allow themselves to be forn to pieces by the fierce pursuers. In more than one instance the fox would not run at all, even when prodded and kicked by the man who had released him. Very occasionally, indeed, a fox is found on the Hempstead Plains, but old Meadowbrook hunters say that not one a season is killed in that locality, even now, when the club is doing much of its hunting in the Wheatley Hills to the north of the plains.

Theodore Roosevelt was an active member of the Mcadowbrook Club years before he became President, and used to hunt on the plains with his younger brother, Elliott, who was quite as enthusiastic as Theodore in sporting matters, and whose death saddened the older brother perceptibly for a long time. Foxhall Keene, one of Meadowbrook's most famous riders, will, probably, hunt on Long Island no more, for he has gone to Europe, perhaps permanently.

Theodore A. Havemeyer, of the multi-

for he has gone to Europe, perhaps permanently.

Theodore A. Havemeyer, of the multimillionaire sugar family, who used to be master of the hounds in the hunts of the old Westchester Country Club, is one of the Meadowbrook riders who will hunt on the plains as long as anybody, and so will Ralph H. Ellis, who was long Meadowbrook's master of the hounds, and who got its splendid packs together and still gives them much attention.

We have received from Sidney S. Pelxotto, "Head-worker" of the Columbia Park Boys' Club of San Francisco, an interesting letter regarding the organization, and some printed matter descriptive of it. Mr. Peixotto was the organizer of this splendid club, composed of two hundred and ten boys, who have made a place and a name for themselves on the Pacific Coast. The club is distinguished for many things—its military band, its boys' chorus of thirty-five voices, its drum and bugle corps, its gymnasium work, its military department, its manual and art training departments; its summer camps, its debating society, its athletic teams, its commercial bank, and its library. A dozen pages of THE AMERICAN BOY might be well used in describing this wonderful organization. Perhaps sometime some forceful writer from San Francisco will give us a condensed, illustrated account of this club that will fit the pages of THE AMERICAN BOY. For the present mere mention will have to suffice.

EARN A WATCH. I will give any boy or girl a watch for doing a little work for me. Send your name to me and I will send full particulars. Charles W. Snyder, Sodus, N. Y.

### BURIED ALIVE

LITTLE OVER three years ago a number of boys and myself decided to dig a tunnel in a lot near my home. This lot, which was about seventy-five yards from the street, had a sandy, shifty soil and was hilly—that is, covered with several small grass-tonped hillocks consisting of a loam, making it very treacherous. But boys seldom take consequences into consideration, and we, being like the average boys in this respect, decided to dig our tunnel

in this respect, decided to dig our tunnel in this lot.

We first dug a jagged hole about five feet deep and then proceeded to do the tunneling. We tunneled on all sides of the cave proper and cut connecting tun-

nels here and there in its walls. For a week or more we worked like beavers on this, our first piece of engineering. At last on one bright morning.—Good Friday by the way,—we finished our cave and tunnel.

There it was—a big square hole four feet square and five feet deep, with openings in the walls used as entrances to the tunnel that nearly surrounded the former hole. Of all the proud boys you ever saw, none could be found that could compare with us. But although we had finished our job, we needed some one to clean up the inside for us. All were clean up the inside for us. All were anxious to do it, and at last we decided to cast chances for the honor of finish-

ing the place.
There were four of us that wanted the There were four of us that wanted the task,—my brother, and Granny, and Mike and myself. So we gave an onlooker four bits of straw, all differing in size. I drew the winning straw, and with a whoop of delight grabbed the only shovel there and crawled into the nearest opening and proceeded to clean out. For awhile I could be seen, but, as I cleared out more and more, I got farther away from the entrance. On finishing. I turned around and on all fours

F. PORTER CARUTHERS

unable to move a muscle of my body. Yet I afterwards learned I was only under that dreadful pile of earth between three and four minutes. At first, on account of the oxygen that had been caught in the hole, I got along all right, just lying there as calmly as I could, waiting.

A TRUE STORY BY F. PORTER CAR-UTHERS, AGED 15, BROOKLYN, N. Y.

under eleven years old, such as my brother was, with only his naked hands to work with, expect to save me in a few moments, or, as I began realizing every moment might be too late, expect to dig through five feet of earth that we had spent days and days digging under.

I repeat, no wonder I lost hope of ever seeing the world again,—the world that suddenly had become to me so beautiful. And then came a spark of hope; I heard men's voices and a sharp rasping of a

men's voices and a sharp rasping of a shovel as it struck pebbles in the earth, but, try as I might, I realized that I was sinking, and felt that they would be too

Those who have never been in such a position as this, put yourselves in my place. Imagine hearing sounds of rescue, but at the same time bleeding at the nose from congestion, one of the first signs of suffocation: realizing that they didn't know in what portion of the hillock I was buried and that they had to go with much care for fear of cutting you with the shovel. Imagine this predicament, and not one will see hope of dicament, and not one will see hope of

accament, and not one will see hope of escape.

All this time I was rapidly losing consciousness. I became frantic. Time after time I tried to raise myself from under that awful burden. Time after time I tried to dig my way out of five feet of earth with my right hand—the only limb or muscle that I could move. And meanwhile that loose, sandy soil continued settling, seeking every nook and cranny In falling, as stated, I had thrown my arm forward, to protect my face, and I held it there as I fell face downward. No dirt touched my face where my forearm protected it, thus leaving a small breathing space.

For hours, it seemed to me, I lay there unable to move a muscle of my hours.

HINK of establishing a public school where it can only be reached by boats! Well, this is the experience of the children living on the St. Clair Flats, Michigan, where the silt and sand carried down the St. Clair river has formed a delta covering several thousand acres and extending into Lake St. Clair. Here, on the edges of sandbars and artificial waterways, as well as on the main channels, are to be found on the main channels, are to be found the humble homes of a score of fam-

Until last year the children of these families were cut off from all school privileges. In consequence illiteracy was general, even the parents in many cases being unable to either read or write. They could get no satisfaction out of books, magazines or newspapers, except for the illustrations and had to rally for for the illustrations, and had to rely for their information concerning the outside world on what the summer resorters told

them.

But now there is a district school there, though only for five months in the year. For seven months at least the young folks are free to fish, to set traps for muskrats, of which there is a great abundance, to skate, to sail, to "run" errands in duck boats or other kinds of boats, to gather driftwood, which in the main keeps them warm in winter, or to go in swimming.

On what is called Esmeralda cut, the

go in swimming.

On what is called Esmeralda cut, the front room of a cottage has been provided with desks, and here the dozen or so pupils within easy reach of this location gather and take up the study of the three Rs—reading, 'riting and 'rithmetic—and in due time become intelligent as well as industrious citizens of this great republic.

Some of these young pupils have al-

are generally tied. A couple of the pupils last fall, however, were brought to and taken away by gasoline launch, which might be accounted as almost as aristocratic a way of attending school as with an automobile.

### The Game of Questions

Prepare a set of cards with numbers written on each in plain, large characters, and then have a duplicate set, which are to be placed in the center of the table, and the other set must be shuffled and dealt to all

the players.

When ready, one will commence by drawing a card from the table and asking any personal question. The one who holds the duplicate must put it in with the other, saying. "It is I," or "I do," or some such

answer.

The more ridiculous or saucy the question is, the greater merriment it creates; no time should be lost in finding the duplicate, but look quickly and reply promptly. Here is an example:

"Who is the laziest person here? says one, drawing from the pack a card marked 10

10.
"It is I," says the one who has the card marked 10 in his hand, throwing it on the

"Who has the darkest eyes?" says the last one, drawing out a 5.
"I have," says the one who can match the 5.

"Who has yellow hair?" says another, producing a 7.

Some Indians pick hops all through the heat of the summer and spend in a day their entire earnings for glass beads, while all the time winter is coming on Some of these young pupils have alIn front of the school house is a modand no blankets and warm clothing are

### Birds' Nests That Are Eaten

Doubtless many of our readers have read of birds' nests which are eaten or made into soups, but probably few have seen them or have any idea what they are

like.

The Esculent Swallows, which build these nests, inhabit Borneo, Ceylon and Java, and in appearance closely resemble the swallows so well-know to us.

The nests are built against the sides of precipitous rocks, and are composed of a sticky fluid supplied by glands beneath the tongue of the bird.

Nothing else apparently enters into their construction beyond this glutinous secretion. The birds take infinite pains in making these dainty little structures, for they are composed entirely of these gummy threads carried backwards and forwards. These threads quickly dry and harden and

the little home becomes firmly attached

the little home becomes firmly attached to the face of the rock. A nest takes about two months to construct; each contains two eggs, pale and translucent like the nest itself.

Collecting these nests is dangerous work, but nevertheless forms quite an industry. Men are lowered down the face of cliffs by means of ropes; they knock off these nests and place them in bags, which are drawn to the top when filled.

When relaced in hot water the nests soften and swell; it is claimed they make excellent and nourishing soup.

It is certain that these edible nests are much sought after, that they fetch a high price and are esteemed a luxury.

price and are esteemed a luxury.

### My Dad

My father always says, says he, That when he was a boy like me, He never thought of having fun Till he got all his lessons done.

And he says when His father had Errands for him, he'd run like mad. It must have made his father glad To have a good son like my dad.

Turkey-Egg and Skuck

By BURRITT HAMILTON

OW would you like to own such a name as Jeremiah Wigglesworth Egglesford? You can have it. The boy it belongs to does not want it any more.

If you had been at Dinsmore Public School last September, you might have seen a crowd of excited boys gathered about an object of interest on the playground. The object possessed ten-year-old pomposity, Fauntieroy curls, and a lisp. It was its mamma's very ownest sugar-plum and called itself "Jeremiah Vigglesvoort Ecclesford," adding, "Puppah is a New Yok bankah."

Now the Dinsmore fellows were average boys with real red blood. They didn't care much about who one's papa was. They merely said to all newcomers, "Who are you?" And Jeremiah Wigglesworth Egglesford, up to this time, being no one in particular him-

self, was rated 'a skillet," even it his father did have three A's in Dun's.
"Hooray for Turkey-Egg!" cried Skuck Cooley, knocking off the newcomer's hat. "Hooray for Turkey-Egg!" cliorused the whole crowd. The new boy was bewildered. Never before had his dignity been violated. He ransacked his brain for a fitting retort.
"You ah guttah-snipes," roared Turkey-Egg.

"You ah guttah-snipes," roared Turkey-Egg.

I have neglected to say that Turkey-Egg was undiplomatic. Possibly you have noticed it. Inside six seconds six boys were roosting astride his prostrate magnificence.

"We'll learn ye," growled Skuck Cooley, rumpling Turkey-Egg's curls.

"I'll tell teacha! I'll tell teacha!"

"Paste him, fellers," commanded Skuck. There was an interval punctuated by wails. Then came the truce.

"I won't tell teacha! I won't tell teacha!"

'Let 'Im up."

So ended the first skirmish. Neither side foresaw the remote result of the encounter. Its immediate product was a touching interview between Superintendent Scowis, and the six assailants. Old Scowis, as the superintendent was secretly called, believed in the leather strap method of elevating the conduct of small boys. The traitorous Turkey-

of small boys. The traitorous Turkey-Egg had told.

This explains why, when school was dismissed that afternoon, six boys "legged it" for home. Arrival there ended the teacher's jurisdiction for the day. From past experience the six knew that the home government was less retributive. By the time Turkey-Egg reached his domicile, the other boys, by basty pre-arrangement, were waiting behind his father's barn. All of them were armed with home-made bows and blunt arrows, in addition to which one of them carried a can partly filled with red paint, picked up somewhere on the way. No one dreamed what color it might add to the camwhat color it might add to the campaign.

paign.
Turkey-Egg soon appeared. Emboidened by the proximity of the parental castle, he bruited forth vain-glorious deflance from the back steps.
"O gwan!" responded Skuck Cooley, the leader of the six hostilities. "We've jest comed over to git acquainted."
Reassured, Turkey-Egg ventured out. Introductions were unnecessary, Turkey-Egg remembered having met all present. With boyish immediateness, it was proposed that the assembled myrmidons amuse themselves by shooting at was proposed that the assembled myrmidons amuse themselves by shooting at a mark. Turkey-Egg assented. Skuck hung his dilapidated cap on a nail that protruded from the side of the barn. After a few rounds of arrows had been ineffectively discharged, a happy thought came to Bub Bascom. "We can't see that black cap worth a cent," said Bub, "but Turkey-Egg's hat would make just a bully mark to shoot at."

Turkey-Egg felt flattered. This was the first preference that had been

shown him by his companions. Amid shouts of approval he substituted his new straw hat for Skuck's cap. It was wonderful how the archery improved. Turkey-Egg was filled with admiration; his hat was filled with holes.

"Now," said Skuck at last, "let's try a new stunt. Me and Bub is the best shots here. Let's me and him take a shot apiece for the champeenship. Turkey-Egg can be umpire. Me and Bub'll shoot together, and the one that comes nearest to the centre of the hat will be champeen."

Consent was unanimous.

"Now," continued Skuck, addressing Piggy Malone, proprietor of the red paint, "you toss up that can for a signal and me and Bub'll blaze away. And you, Turkey-Egg, git up clos't to the mark, so you ken see sure where we hit."

All was quickly arranged. Turkeyconsternation, now opened his eyes and sat up. In doing so he located two inconvenient bruises, Angered by the unexpected pain and chagrined to find himself no longer either a hero or a martyr, he uttered several terse words that he had learned that day at school. "Never," said his mother afterwards, in relating the incident, "never have I heard such shocking language sound so welcome and so—so appropriate."

All was quickly arranged. Turkey-Egg, puffed with the pride of his new office, posted himself within a foot of the himself within a foot of the hat. Piggy held the paint can in readiness. Bub and Skuck stood with bows drawn and arrows almed. Piggy intoned:

"Ginger, jiney,
Go to Chiney,
Booney riney.—GO!"

Go to Chiney,
Rooney, riney,—GO!".
Up went the can of paint.
The bow strings twanged.
The spectators cheered.
The umpire howled. The
howl was for good reason;
both arrows had hit him
and he was, at the same
time, the storm center of a
rain of red paint. Mistaking this for blood, TurkeyEgg redoubled his bellowing.

Egg redoubled his bellowing.

The flight of the conspirators was precipitate but not unjoyful. "We hit him right where old Scowls lammed us," whispered Skuck to Bub as they skedaddled together down a back street.

Turkey-Egg's mother, hearing the lamentations and recognizing the voice

Turkey-Egg's mother, hearing the lamentations and recognizing the voice of her beloved Jeremiah, rushed to the scene of carnage. To her horror, she found her offspring apparently weltering in gore. "Jeremiah, my son, are you killed?" she screamed.

"Y-yes ma-a," bleated her precious lamb.

Tenderly, regardless of injuries to her afternoon gown, she carried the broken Turkey-Egg to the house. A great hubbuh ensued.

"O doctor, doctor! My hoy is bleeding to death and I can't find the wound," cried the distracted mother when the family physician arrived. The Doctor felt the boy's pulse; snifted suspiciously. "Nonsense, madam," said he, "that's paint—plain red paint."

Turkey-Egg, who had been contributing occasional groans to the general

When Turkey-Egg returned to school he was less boastful than formerly, but he harbored a determination to square accounts. One day Mr. Scowis found a note on the floor. He read: "Deer Piggy. I think the teccher is a broot to

lick us. dont you.—Skuck." This brief and damaging document had been evolved from Turkey-Egg's brain and executed by his hand. Its design was to implicate Skuck and Piggy in a violation of the rule against note-writing. The anti-Scowls sentiment was thrown in to magnify the offense and, if possible, intensify the penalty. Turkey-Egg could have shouted for joy when he saw Mr. Scowls pick up the note and read it. To its author's disappointment, however, no immediate action was taken. The fact is, that Mr. Scowls was uncertain of the identity of said Piggy and the so-called Skuck. He was unfamiliar with the playground nicknames. He cleared the matter up, nevertheless, in due time. When the hour for penmanship came, Mr. Scowls deviated from the usual routine and said: "The boys will please write the following sentences:

I obey my teacher.

The horse is a useful brute."

(Comtinued on page 175.) dont you.—Skuck." This brief (Continued on page 173.)

We are sending Regal quartersize shoes to people in all parts of the country who have never before found a fit except in made-to-order shoes.

THE REGAL, in quarter sizes, is a genuine bench-made custom shoe. Only, instead of measuring your foot and keeping you waiting ten days, we have Regal shoes, in all our 98 stores and in the Mail-Order Department, ready to fit at once every possible combination and variety of length and width, height of instep, shape of toe, curve of heel, weight and kind of leather.

With quarter sizes in men's Regals all the way from 4½ to 13, and in women's from 1 to 8, you can depend on our having your exact fit ready

for you.
We could not produce such a shoe as the Regal for \$3.50—nor for anything less than \$6—if we sold it through the usual trade channels. We call it a "six-dollar shoe at the wholesale price" just because we do sell it to you at wholesale. The five profits that are usually divided between tanner, leather broker, manufacturer, jobber and retailer are reduced to just one—and you get the benefit.

We operate our own tanner.

We operate our own tanneries and sell Regal shoes only through our own 93 stores; and the short-cut Regal sys-

Don't say you are hard to fit till you have tried on a Regal in one of our stores, or have ordered a pair through the Regal Mail-Order Department.

You take no risk in ordering by mail. Your order is filled personally by an expert mail-order salesman. Your shoes are sent out the same day, and you don't keep them if they don't suit.

### The New Spring Style Book Is Well Worth Sending For.

### BOYS AS MONEY MAKERS

### This Should Inspire Boys

I am sure readers of THE AMERICAN BOY will be interested in a brief sketch of a boy who has been unusually successful in his efforts to secure an education along the line of his chosen profession. Here is an example of the wisdom of of the wisdom of

of the wisdom of first finding out what one can best do, and then developing that talent.

The subject of my sketch is Charles E. Heston, son of Dr. J. W. Heston, of Brookings, South Dakota. Going back about

CHAS. E. HESTON Going back about five years we find Charles attending the South Dakota Agricultural College, of which his father was then preslege, of which his father was then president. At that time Charles was having very hard work with his studies. He had no liking for grammar, history or Latin, and it was with difficulty that he could be kept in school even a part of the time. Dr. Heston is a pronounced believer in giving a boy an education in keeping with the needs of his chosen line of work, and was opposed to the plan of pounding Latin into the head of a boy who intended to be an engineer plan of pounding Latin into the head of a boy who intended to be an engincer or a farmer. Becoming convinced that a classical education was out of the question with a boy whose whole heart and mind was upon electricity and mechanics, Charles was allowed to quit school and hire out to a telephone company to dig post holes at seventy-five cents per day. Work of this kind, with some experience in a local telephone exchange, stringing wires and putting in 'phones, occupied a year's time and allowed the boy ample opportunity to become acquainted with the rudiments of electricity as applied to this industry. At the age of seventeen Charles was allowed to go to Chicago in search of work in this line, and there he found employment with the Chicago Telephone Company, being placed behind a switchboard handling five thousand subscribers. After a few weeks Heston was put to charge of the work of maintaining

work in this line, and there he found employment with the Chicago Telephone Company, being placed behind a switchboard handling five thousand subscribers. After a few weeks Heston was put in charge of the work of maintaining the switchboard, a position requiring considerable skill in locating the little breaks, and this position he held for eighteen months. The young man had "come to himself" and made up his mind that he needed more education and was ready again to go to school. Going home he again entered the Agricultural College and took a course in electrical engineering, after which he went to the University of Wisconsin. There he put in eighteen months of hard work and study, completing his Junior year at that institution with honors last June.

Early last spring an examination in electrical and machanical engineering was held in the various states, under the civil service rules by the United States government, and one of Heston's professors at Madison suggested that he suggestion and presented himself before the examining board in company with several others, including two of the long the marries. Among other qualities necessary to success are economy, willingness, including two of the long the required for should read good books and cultivate the should read good books and cultivate the should read good books and cultivate the should aread good books and cultivate the should acke his readings of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it will be of practical nature and such that it w

and left for Washington, D. C., September first.

The young man's position affords one of the best electrical opportunities in the world, as it gives an open field for doing original work with all the resources of the Government behind him, and with every variety of condition and circumstance to meet. Young Heston has already won the confidence of his superior officers and has been promoted, and is now in charge of two large forts, where he is working out the new system of Signal Service. His salary is increasing as he advances and will soon reach such a point as to justify his devoting his life to the service of the Government.

What this young man has accomplished should inspire other young men to similar effort and success.

### Suggestions for Young Men

"Give me some suggestions for the boy who wants to succeed," was asked of a prominent merchant.

"I would advise him to do his very best when he starts out and to study how to do when he starts out and to study now to do
it better and better. Every clerk should
try to make himself valuable to his employer. He should fit himself for the next
position above that which he holds, and it
will not be long before that position is
vacant. One secret of success is in using
the time not required for business, sleep or
meals for study. One should read good

examination, and went to Milwaukee at the close of the term, where he secured a position with the Wisconsin Telephone Company. A few weeks later he was surprised to receive a telegram from the War Department at Washington, asking if he would accept a position. He was informed that of all those taking the examination in all the states he had stood highest, his general average being 88.56 per cent., and upon questions of experience and practice 92 per cent. He was further told that the purpose of the examination was for the selection of a competent electrician for the Engineer Corps of the War Department, whose duty it would be to install wireless telegraph and telephone plants at the regard and telephone plants at the regular army posts throughout the country. After a conference with his father, Charles decided to accept the position and left for Washington, D. C., September first.

The young man's position affords one of the best electrical conservations of intelligence was under the professional man. Indeed, any man of intelligence was under the condition of the best electrical conservations. of them were obliged to go there to succeed in their chosen line of work. For the young man who has a business career in view there is possible as good a success in a small city as he may hope for in a great one. If he has not much money capital, his personality, his character will more readily atone for that in a small town. This is especially true of the professional man. Indeed, any man of intelligence may hope for greater preferment in the small centers of population than in the large. As to social life and the general decency and comfort of passing through this vale of tears as conditions exist even today—and they will be far better ten years from now—a self-respecting family has ten times better chance in a town of ten to fifty thousand inhabitants almost anywhere in America, than it can by any possibility hope to have in a city of the first class. The small town is a better environment in many ways. Not the least of its desirable qualities is the fact that it is closer to the out-of-doors. The man who has a cottage of his own, with a horse and buggy and a shotgun in some place of a few thousand inhabitants, is better off as a man and a citizen than one who is receiving a \$20,000 salary in any big city.—Field and Stream for February.

CARLISLE INDIAN SCHOOL BOYS LEARNING TO BE

ther disappointing income the very soul.

One night, long after school had been dismissed, Skuck sat alone on the curb street weeping. The direct research weeping the direct research we direct research we direct research we di

of a quiet street, weeping. The dire weekly report was in his pocket. He felt that he could not face his mother's tears. Skuck was no coward. Yet at this moment he was stricken with the noble fear of causing his mother pain.
Turkey-Egg came down the street,
whistling. Catching sight of Skuck he
paused, approached, stopped his tune

"Hello, Skuck! That you?

"I say, Skuck, what's up?"
"Everything."
"What's happened?"

"Dassent go home."

"Why?

"Got a bad card."
"What of it?"

Turkey-Egg and Skuck

(Continued from page 172.)

Turkey-Egg fell into the trap.

Turkey-Egg and Skuck was up in an instant. "You gazoot," he cried, "Ive a good mind to at all on it is a comman. Turkey-Egg and thinself and soon led the class.

Turkey-Egg into the man and secondly, for limits of the way folks acted, that she might never be well again. She had wiseling a the principal performers, the male degulates of the securion of the bar called up the vision of Skuck and Bub, its principal performers; the maledorous grease of disappointing his mother that harmonic particular than the times of a wagon.

The two boys trudged off together untitle the principal performers; the maledorous grease of man greasing the running fell into the trap.

Turkey-Egg into the trap.

Turkey-Egg into the principal performers; the maledorous grease of the beautiful the distance of the principal performers; the maledorous grease of the principal performers; the maledorous grease of the principal

Superintendent Scowls began to pro-nounce more difficult words. Turkey-Egg knew that Skuck wouldn't last much longer. The contest was practic-ally won. Then Turkey-Egg saw someally won. Then Turkey-Egg saw something that no one else could see. The pale, beseeching face of Skuck's mother seemed to come before his eyes. It was merely a memory, but he saw her plainly and ceased to wish to win.

"Hollyhock," pronounced the superintendent

'H-o-l- - -y-h-o-c-k, hollyhock,'' said

"H-o-l---y-h-o-c-k, hollyhock," said Turkey-Egg.
Superintendent Scowls was astonished. He knew that Turkey-Egg had deliberately missed.
"Next," he said.
Skuck spelled the word right. The prize was a silver dollar. Skuck actually hugged Turkey-Egg when school was over. "It was your coaching, helped me win," said Skuck; then he ran home believing himself the happiest boy in Dinsmore. But he was not. The happiest boy in Dinsmore was Turkey-Egg.

### Company News

CONOCOCHEQUE COMPANY NO. 45, Chambersburg, Pa., asks if it would be expected to have much of a calebration on American Boy Day. It has only six members. If the members will carefully read the company monthly letter they will see what is required of them in the way of interesting pastor, teachers and other adult friends in the matter. This company has \$1.00 in the treasury, some good books in its library, and has framed its charter. NATIONAL COMPANY NO. 5, Louisville, Ky., has the following officers: S. H. McMeekin, Capt.; Wm. Fritz, V. C.; Ches. Calveard, Secty.; F. T. Stacksieder, Treas., and has bright prospects of largely increasing the membership. WILLIAM B. McKINLEY COMPANY NO. 47, Champaign. Ill., has nine members, and its captain is Arthur O. Savago. It has \$4.75 in the treasury, a library of 21 books and a few games. Its meetings are held every Friday in an office which it occupies rent free. Dues 10 cents a month and fines for absence, etc. It has a social committee and a building committee, the latter looking out for a suitable place for a gym. It expects to turn out a baseball team next season which shall be A1. CUPERTINO COMPANY NO. 22, Cupertino, Calif., recently elected the following officers: Earl Parrish, Capt.; Sydney Laugheed, V. C.; Lester Crittenden, Secty.; Harold Dixon, Treas., and Mrs. Parrish, Libn. This company is in a prosperous financial condition, having \$7.00 in the treasury. It has purchased 3 pairs of dumb-belis and Rev. Mr. Cherington is the instructor. Mr. and Mrs. Parrish have evinced warm interest in the company, having given the members a trip to Stanford University which they thoroughly enjoyed, and they also gave a Hallowe'en party at which

### Sad Ending of a Promising Young Life

We deeply regret to learn of the death of Raiph Letherman, Captain of Archie Roosevelt Company, No. 41 (O. A. B.), California, Pa., as the result of a most distressing accident. It appears that Raiph with two boy friends were coasting down one of the streets of the town after school. At the bottom of the hill there is a railroad crossing and the boys were accustomed to make a sharp turn at this place. The momentum of the sled, however, prevented the turn being taken properly. The sled struck the curb with great force and Raiph, sitting at the rear end, was thrown upon the rails, his head coming in contact with the iron step of

the rear car of a train which was moving at considerable speed, and killing him instantly. Ralph was 14 years of age, the only son of Dr. J. A. Letherman, a well-known and highly respected physician of California. He was a respected physician of California. He was a hoy of fine mind and gave promise of noble manhood. Our sympathies are with his be-reaved father and with his comrades of the Archie Roosevelt Company in the loss of one who was a sincere friend and in every way worthy of their affectionate regard. Appropriate resolutions expressive of the great loss they had sustained in the tragic death of their leader were unsalimously signed by all the unamimously signed by all the members of the company.

# The Order of The American Boy

Under the Auspices of "The American Boy"

Object:--- The Cultivation of Manliness in Muscle, Mind and Morals The object more definitely stated: To promote mutual and helpful friendships

among boys; to give wider circulation to high class boy literature; to cultivate in boys physical, mental and moral courage, and develop them along social, intellectual and moral lines; to cultivate purity of lauguage and actions; to discourage idleness and encourage honest sport and honest work; to cherish and emulate the examples of great and good men; to inculcate lessons of patrictism and love of country; to prepare boys for good citizenship; to cultivate reverence for the founders of our country, and to rtimulate boys to all worthy endeavor.

Boys desiring to organize Companies may obtain a Pamphlet from us containing directions. It is sent for a 2-cent stamp.

over 60 were present. At its meetings it discusses parliamentary law and other useful subjects. NEMO COMPANY NO. 9, Nemo, So. Dak., writes that one of its membere, Charles Webber, has been appointed a page at the State capital. His fellow members are naturally proud of the honor which has come to one of their number. STEPHEN DECATUR COMPANY NO. 28, Brooklyn, N. Y. Reports come from this company with the regularity of clockwork, this being its 27th. Five successful meetings were held during January. It purposes issuing a bulletin to the members each month detailing its plans. It has challenged Bay Ridge Company No. 19 to a spelling match, and also sent a challenge to Massasoit Company No. 37, Rockford, Ill., to play a game of checkers by correspondence for a prize. We hope to learn the result of this rather unique contest, and are glad to commend the enthusiastic record of this company. The members are very helpful to their sick brothers. WeBFOOT COMPANY NO. 21, Roseburg, Orc.. has monthly dues of 10 centa, and imposes a fine of ten cents on members for offenses. It has a canoe club and the members have entered into a flag contest, standing third in the contest. The yell which the members give at every meeting is:

Who are we? Who are we?

Who are we? Who are we? We're the Webfoot Company of the O. A. B. We're the Webfoot Co. No. 21, The twenty-first division of Oregon.

The twenty-first division of Oregen.

JEFFERSON DAVIS COMPANY NO. 2, Palmetto, Fia., has lately added 20 books to its library, making a total of 30 books, as well as \$6.00 in its treasury. It has a nicely furnished club room where it meets every Friday evening. We are promised a picture for our portrait callery. It has 11 members and will celebrate its second anniversary in April. It wants to hear from other companies. SILVER GATE COMPANY No. 26, San Diego, Cal., is busy trying to raise \$25.00 to buy lumber and canvas to build a club house. To do this the members are making articles in wood work and selling them and have raised almost the complete amount. We rejoice in their success. TIMOTHY MURPHY COMPANY NO. 1, Cobleskill, N. Y., has 14 members with the foliowing officers: H. George Roth, Capt.; Chester Barnes, V. C.; Lester Benedict, Secty.; Ray S. Lowndes, Treas.; Stanley Sommers, Libn. It held a banquet some time ago, which was most successful. At some time ago, which was most successful. At its meetings, it has debates, humorous readings, stories of adventure and heroism, questings, some time ago, which was most successful. At its meetings, it has debates, humorous readings, stories of adventure and heroism, question boxes and minute speeches, and refreshments are served by the parents of the members. BTONEWALL JACKSON COMPANY NO. 3, Suffolk, Va., has had to discipline one of its members. This is something we always regret to hear about, but one member cannot be allowed to overrule the whole company by disobeying its laws. The captain writes that the effect will be to increase the respect of the community for the company and add to its membership. TRIVE BLIVE COMPANY NO. 3, Hinckley, Me., hes held 10 regular meetings, among which were two socials. It has 11 members and meets every two weeks in the schoolhouse. The members are interested in athletics and intend to have a good track team this season. The members are also striving to build themselves up in the way of writing, speaking, etc. JUNIOR GUN CLUB NO. 48, Indiana, Pa., had a dinner at the home of Capt. Charles McLain and elected new officers as follows: Charles Carnahan, Capt.; James Alter, Secty.: Frank Zeigler, Treas. COLONEL MORGAN COMPANT NO. 14, Fort Morgan, Colo., elected the following officers at its lart meeting: Milton S. Kimball, Capt.; John I. Barkley, Lieut.; Abner S. Baker, Secty.-Treas.; Wyllys E. Warner, S. A. It has 9 members, a pennant, and is learning "The Jolly Student." Dues 10 cents a month and fines for misbehavior. Meets every second Friday at the homes of the members, and has \$2.90 in the treasury. It will purchase an American flag, have a pic-

tur. taken and select company colors in the near future. Average age of the members is 15. This company seems to have "go" in it. KENSTONE COMPANY NO. 46, Martinsburg, Pa., bas 18 members and about \$2.50 in the treasury. The Vice-Captain gave the members are banquet on Feby 13 and they had a splenoid time. Washington's Birthday was celebrated on Feby 20th with a fine program. Refreshments were served at the close. The members are much interested in athletics and are starting a gym. The company meets every second Monday evening. WILD ROSE STATE COMPANY NO. 62, Liabon, Ia., has recently elected the following officers: Leonard Furnas, Capt.; Chas. Roach, V. C.; James and they are now saving their money to go camping next summer. The meribers enjoyed a sleigh ride lately and also celebrated Hallowe'en with a party, and they are now saving their money to go camping next summer. The meribers enjoyed the reading of the company letters and try to follow out the suggestions. HAWKEYE COMPANY NO. 17. St. Louis, Mo., has a fine library. The company meets every Friday evening. The recent lection of the summary of the monther of the boy who was not itself, paring therefor \$5.00 a month rent, of officers resulted as follows: Frank Torrence, Capt.; Conger Reynolds, Secty.; Louis Pholo, Capt.; Conger Reynolds, Secty.; Louis Pholo Capt.;

has 14 books and 34 magazines. Dues are 10 cents a month with a fine of 5 cents for absonce without cause or other offerse. The members entertained their young lady friends at a masquerade lately, serving light refreshments. Impromptu speeches, debates, etc. are a feature of the meetings and are most interesting. ETHAN AILEN COMPANY NO. 2. Brattleboro, Vt. held its election of officers recently which resulted as follows: Wallace Wright, Capt.; Roy Monroe, Secty.; Stuart Brovn, Tress.; Arthur Dewitt, Libn. Two new members were recertly received into the company. It intends going camping this summer. Rev. Mr. Lawson is taking a warm interest in the boys and is helping them along right lines. In preparing for camping out, each boy is to have a soldier's outfit of frying pan, plate, knife and fork and cup. Mr. Lawson had the boys at his home and gave them an account of his travels in the National Park. They enjoyed it. PLAINVILLE SUNFLOWER COMPANY NO. 28, Plainville, Kan, altho in a town of only 600 poulation, has 18 members and feels just as big as the biggest and will celebrate American Boy Day. The badge of any member leaving the company or being dismissed should be given up to the captain, but nothing should be done without giving a boy every chance to continue his membership. This company gave a social recently to their company counsel and friends and it was a big success. It has rented a hall for meetings, etc., and pays \$4.00 a month rent, and the members are making fair progress. ABRAHAM LINCOLN COMPANY NO. 41, Peru, Ill., recently received 2 new members, which makes their membership 11. Ithas \$7.50 in the treasury and will send for a circulating library. The members intend making a great success of American Boy Day and are interesting their parents and teachers in the matter. That is the right way to insure success. They have an American Boy conservation of the success of American Boy Day with such a start. They practice every Saturday. STONEWALL JACKSON COMPANY NO. 3. Suffolk, Va. meets each Thursday even

BLACK FOX COMPANY No. 24, PESHTIGO, W18.

"LITTLE PATHER" OF AUSTRIA AND HUNGARY IN HIS TYROLESE OUTFIT, WHICH HE WEARS WHEN HUNTING

### The "Little Father" of Two Kingdoms

One of Europe's periodic parliamentary rows has recently called renewed attention to the dual monarchy of Austro-Hungary, over which presides one of the "Old Guard" of rulers—Franz Joseph. When August arrives he will be severated.

new king could deliver it in Hungarian, a notoriously difficult tongue to master. But when the opening phrase had echoed through the hall—in purest Hungarian—the assemblage went wild. Swords were waved, hats were thrown into the air, while cheers drowned all mere speaking. Patriotic Hungary has never ceased to swear by the emperor since the emperor since

then. He is a man simplest habits. Usually he is up at five, and most of his days are given to affairs of state, including two hours when the very poorest may have poorest may have audience with their "Little Father." During meals the royal band plays near by, for music is Franz Joseph's hobby: when he hobby; when he takes "a night off" takes "a night off"
it is to go to the opera. A whole day off comes rarely, but when it does the venerable gentleman is pretty sure to spend it ministre of war to command at the pront shorting. shooting.

There is a good story told of him which goes back to his fifth birthday. He was walking with his grandfather, Emperor Francis I., when they passed a sentry

sentry.

"Is he a poor man?" asked the child. When he explained that he thought the soldier must be poor since he went on duty, the Emperor made clear that everyone—even little princes—must "go on duty" sometime, and then added: "But he probably needs money, Give him this"—holding out a gold piece.

The coin was offered, but rules are rules, and it was politely refused.

"Put it in his cartouch box," suggested the Emperor, but the little arms could not reach so high—so the old monarch "hoosted" his grandson and the crown clinked down among the cartridges.

### A Great General in Difficulties

For months the world has been reading of Kuropatkin, commander of the Czar's forces in the East, and military experts have united in calling him one of the greatest leaders of today. Skobeleff, Russia's ablest general, said to him:
"He the coolers bendest preved of leff, Russia's ablest general, said to min.
"He is the coolest, hardest-nerved of
men"; he wears every decoration for
bravery which lies in the Czar's gift; he
is the idol of his men. What make of
man is he?

Toll has been the keynote of his fifty-

Toll has been the keynote of his fifty-six years of life. His energy is relent-less. By seven he has breakfasted and is at his desk in the working saloon of his armored car, where he labors till eleven at night, save for such times as duties call him into the camps. He takes thirty minutes for luncheon, forty for dinner, drinks little, and smokes scarce-ly at all

dinner, drinks little, and smokes scarcely at all.

Work is no new thing to Kuropatkin. When eighteen he declined to join the Imperial Guards, a "crack" regiment, preferring to learn his trade with the Turkistan Rifles. This practical schooling was followed by a course at the General Staff College, where he graduated with highest honors and such a reputation that he was invited to France to reorganize the cavalry. Then came the Russo-Turkish war, wherein the young officer was several times wounded, but more times promoted for valor and ability. He has served, too, as Governor of Transcaucasia, where he taught Asia's robber bands some lessons they will not robber bands some lessons they will not forget, and where he built roads and schools and churches; and he has sat in the Cabinet as Minister of War.

It is to be remembered that had Kuro-

MR. BURBOUGHS AT THE DOOR AT "SLABSIDES"

patkin's advice been taken the Russo-Japanese war would not have come when it did. He argued against it from the first. Once at the front, however, he the first. Once at the front, however, he did splendid work, and would have done better had he, from the first, been given so free a hand as he now is granted.

### The "Grand Old Man" of the Outdoor World

when August and the enty-five.

He won the affection of his Hungarian subjects the day he took oath in their ly a renewed interest in April third beaucient Assembly. A speech was, of cause it is the birthday of a prophet of course, in order, but no one dreamed the new king could deliver it in Hungarian, he will be sixty-seven when his annian potentially difficult tongue to master.

True nature-lovers have found recently a renewed interest in April third beautiful to a prophet of Dame Nature herself—John Burroughs. He will be sixty-seven when his annian versary arrives this month, and for thirty-one of those

ty-one of those years he has lived the life of a sociable hermit in his little cottage in Jersey. "Slabsides" Jersey. "Slabsides" he calls it, and there he receives his callers, himself calling only on the little feathered and little feathered and fur-bearing citizens of the groves and upland pastures not far back from the Palisades which tower above the Hudson.

Mr. Burroughs began work by teach-

gan work by teaching school, and for eight years stuck to that. Then came an experience as clerk Then came an experience as clerk in the Treasury Department in Washington, followed by some years when he was a bank examiner. But all this went against the grain of one whose heart was in the green fields, so he returned to teaching—with all who read English for scholars, writing for them what he sees and learns in that busy out-of-of us overlook too readily.

Lately he has crossed literary swords

fied

Lately he has crossed literary swords with Thompson-Seton, who holds that animals think. The New Jersey nature student declares that what seems evidence of animal thought is merely evidence of their power of association, which in them is developed far higher than in man.

### A Present-Day Crusader

General William Booth, the splendid old commander of the mighty Salvation Army, has just left his native England for another "crusade." Seventy-five though he is, he is tireless in his work, and now is bound for the Holy Land, thence to Australia and new Zealand, and then back by August, when he proposes to lead a revival among the Scottish hills.

Wherever there are "Wherever there are souls to be saved," he said before sailing, "there is work to do. Work is what we are here for; I love it. I shall preach to Mohammedans, Greeks and Turks before I return—but I have faith."

but I have faith."

That word sums up the secret of his life. He was only fifteen when he began preaching in the fields near Nottingham. He joined the Methodist ministry and worked in it ably, till the fearful wickedness of London's poverty-ridden East End made its appeal to him. From that moment he From that moment he gave himself to the outcast of the cities, eventually creating the Salvation Army.

Today that organiza-Today that organisa-tion is twenty-seven years old, with 7,558 branches in forty-nine countries; fifteen "so-cial farms," where heal-thy work is always to be had by the unem-ployed or disheartened;

Claus Spreckels Building

fifty-eight workshops, supplying for city-poor muscles an outlet that might else be sought in crime; and 169 food depots where poverty's hunger is satis-

Gladstone once said: "If I were called upon to name the man who has done the world most good in the last quarter of the nineteenth century, I am not sure that I should name Booth, but I know I could not give answer without seriously considering his claims to that high bonor."

### A Merry Cat Song

The cat sat on the fence
And she wailed the whole night long.
It sounded like "Mee-yow!"
But it really was a song.

Human folk who tried to sleep, Were as mad as anything, But the moon she said: "Ah me! What a lovely song of Spring!"

That's the way the world is made; All mixed up and humorous; And the things that please the moon Are not popular with us.

GENERAL BOOTH, PATHER OF THE SALVATION ARMY

### Where Tarpon are Found

That great game fish, the tarpon, is after all a creature of rather mysterious habits. It seems first to have been discovered as a game fish on the east coast of Florida. Much more recently that it was taken in the neighborhood of Pensacola. Then came the prodigious reports from Aransas Pass and Corpus Christi, Texas. Lastly, a few fortunate and adventurous anglers brought out the greatest tarpon stories of all from the relatively little-known town of Tampico, in old Mexico. Thus it is to be seen that the tarpon is found at one time of the year or another along a tremendous strip of coast country, even wider than the shores of the Gulf of Mexico. Its breeding grounds seem to be well to the southward, and it seems to move north as the lower waters become too warm for it. By mid-summer it is well all over the middle Gulf country and Texas. Its migration, if it have any definite migration, has never been closely charted, but that it does move from the Mexican to the Florida coast and back again may be accepted as the truth or something closely parallel to the truth.—E. H. Henning-Brown, in Field and Stream. That great game fish, the tarpon, is

### A Pathetic Letter

Now and then we receive letters from Now and then we receive letters from boys with pathos enough in them to melt hearts of stone. One such letter is before us, written by a helpless but not hopeless boy. His tale of woe is so harrowing that we cannot print it. Enough is said when we say that this boy has been lying in one position for nineteen years. Think of it, boys—you boys, who do not appreciate health and strength; but listen to what this boy says:

says:
"I do not believe in finding fault or "I do not believe in finding fault or grumbling. A man who smiles is the winner every time. I don't let myself become blue and despondent. Such a course would only give sorrow to my friends and do me no good. I have found that grit and determination can overcome any obstacle. Hold up your head, and if you must die, die fighting in the last ditch. I have never yet seen a bad condition improved by worry. Worry simply uses up strength. If you can't get what you want in life, then get what you can and make the best of it. When you take hold to accomplish a thing, hang on like 'Bud Means' bull purp.' Bud said that when his 'purp' once took a firm hold 'heaven and yearth could not make him let go.' If men had more of a bulldog spirit they would get a letter party. I love to receive letters. I am not financially able to answer all who am not financially able to answer all who may write to me."

Perhaps it may come as a surprise

when the editor says this boy is thirty-four years old. His name is Thomas F. Lockhart, and his address, Wellington,

U is the gayest letter in the alphabet, It's always in fun.

### A FRENCH FROG AND AMERICAN EAGLE AN ENGLISH SCHOOL STORY

American Rights Purchased by The American Boy

CHAPTER II-CONTINUED.

HIS, however is a digression. For the Initiation Ceremony our recorder had arrayed himself in a flowing Eastern robe, which did not look at all like a dressing gown till you were close to it, and wore upon his head a tall, conical hat, spangled with oriental devices. In his hand he carried the roll and rules of the Gang and the agenda paper—documents of formidable roll and rules of the Gang and the agenda paper — documents of formidable length. With these he now beckoned to the French boy, Rene Briant, who was the first candidate to be initiated. Crikely had carefully instructed the novice as to what was required of him, so the foreigner, a pleasant-looking youngster with curly dark hair, at once left his place and advanced to the centre of the dormitory.

"Lictors!" commanded Carclough in an awful voice, "proclaim silence in the Haii of Assembly, and prepare the neophyte for the preliminary tortures
"Now, then, briskly with those branding irons!" called out Ascott to the assistants behind the screen.
"Aye, aye, sir: was the reply, and the puffling and clinking began again with redoubled vehemence.

doubled vehemence.
"Gentlemen!" urged Briant, plaintively;
'you will have ze goodness to remark zat
I have ze skin extraordinarily delicate."
"Don't apologize, old fellow," said the
humorous Baines. "We shall get a very

numerous Baines. "We shall get a very neat impression, never fear."
"We might be administering the oath to

"We might be administering the oath to him while the irons are heating," suggested Postlewaite with a thoughtful air.
"A good idea! Let us have it at once, Crikey!" said the cap'en; then, hastily correcting himself, "Hereditary Grand Recorder Martin Crickhowell, administer the oath to the condemned—candidate I mean!"
The oath was correspond in blood red by

oath to the condemned—candidate I mean!"

The oath was engrossed in blood-red ink on a fair large piece of parchiment, with six heavy scals hanging from it. It was all composed by Crikey himself, and was a neat thing in its way, though there was enough Persian and Arabic and Coptic in it to sink a boat. The recorder read it through in a deep, hollow voice, pausing impressively now and then to let it soak in, and fixing Briant from time to time with a thrilling look. Meanwhile Postlethwaite burnt a little blue fire in the back-ground.

The condemned—candidate I mean!" noble features were horribly distorted; with blindly groping hands he seemed to seek some absent stay or help; anon he spluttered wildly.

"Treachery! We are be rayed!" cried hastened to the rescue of the chief.

"It was true, zen!" observed Briant in trangul comment. "Ze philtre have discover' his guileful heart. O vonderful beverage!"

He had tossed off his own portion of the smacked his thus which was not marked his thus which has not marked his

ers pocket, but was restrained by his two guards, who shook him a little for what they regarded as an audacious attempt to score off the captain.

"Let him alone. He did not understand," said Postlethwaite benevolently. "Look here, Briant! You've got to plant your pagan name at the foot of that paper, which is as much as to say you are content, if you play false, to be jolly well scragged. Comprenez?"

"It is well, I am content," replied Briant, resignedly; though he only understood, from Postle's energetic pantomime, that he was required, for reasons unknown, to sign the document placed before him. He took the quill handed to him by Crickhowell and bent to the task.

"And put it down in English—in English, you know. None of your foreign dodges here!" added Ascott, feroclously.

There was a laugh at this at the stern lictor's expense, and every one looked on good-naturedly while Briant signed, in a beautifully neat and fine hand, very different from the blotched signatures which preceded it. He laughed himself, and remarked that it was droll.

The branding on both heels followed, and was a great success. The "branding-iron" was a stencilling plate, and had been so carefully cooled that, as soon as it touched the feet of the victim, he uttered a piteous yell, and implored mercy. It took some time after his tormentors had released him before he could be convinced that he was not in great agony and marked for life. For the next hour he rubbed his feet furtively, at intervals, and he informed Mainwaring, Baines, and Ascott, that they were "three barbarians."

After this the "tossing" fell rather flat. The fact was the lictors were afraid that Briant would stun himself against the ceiling, as he was quite a light weight, at the second attempt he clung to the blanket in somewhat pusillanimous style, till the operators were fain to tip him out of it into

erators were fain to tip him out of it into

"He is well," said Carclough. "Cupbearer, bring forth the potion!"

"Helas! at is not ovair, zen!" sighed the unhappy allen, casting languishing giances at his own cosy but unattainable bed from the square of cold oak floor where he stood shivering between the two grim lictors.

"I should think not indeed!" retorted the capien indignally. "All the tare to youth

cap'en indignantly. "All the jam is to come. Mainwaring!"

"I should think not indeed!" reforted the cap'en indignantly. "All the jam is to come. Mainwaring:"

Mainwaring approached, clad in a long flowing robe, and bearing a tray, on which were a pair of tooth glasses, each half filled with some turbld decoction.

"Neophyte," said Crickhowell instructively, "you see before you the Pur Al Kall, a drink whose excelent virtue it is that, whereas the candidate who with sincere and guileless heart partakes of it is marvellously refreshed and strengthened, the properties of the rare herbs threin infused, gathered in the deserts of arabia Fellx, minister the direst agonies to whose ever is meditating descrition of this Brotherhood or treachery to its chieftain."

"Quel horreur!" faintly ejaculated the of his thin, white hand, "his body to bloat, his senses to reel, and his form to be bent as double as his mind. Neophyte, it is thin, white hand, "his body to bloat, his senses to reel, and his form to be bent as double as his mind. Neophyte, it is thin, white hand, "his body to bloat, his senses to reel, and his form to be bent as double as his mind. Neophyte, it is thin, and tremblingly accepted the proficered goblets. Apparently, extreme fart had bewildered his faculties, for instead of advancing to the foot of the stead of advancing to the foot of the bold proficering gall, and tremblingly accepted the proficered goblets. Apparently, extreme fart had bewildered his faculties, for instead of advancing to the foot of the proficered goblets. Apparently, extreme fart had bewildered his faculties, for instead of advancing to the foot of the position of the proficered goblets. Apparently, extreme fart had bewildered his faculties, for instant approached with uncertain and for his bed, and endeavored to force the Puil had been deavered to force the Puil had been deaver

of strange cault of strange caultation seemed to dawn on the attentive faces around.

one, and demanded of him whether he still one, and demanded of him whether he still one, and fearful spectacle. Scarcely had our beloved cap'en swallowed his share of the mystic cloudy fluid when, as though scized with sudden madness, he cast the empty beaker from him, shattering it into a thousand fragments on the floor. His noble features were horribly distorted; with blindly groping hands he seemed to spluttered wildly.

"Treachery! We are betrayed!" cried his alarmed followers, while Crickhowell hastened to the rescue of the chief.
"It was true, zen!" observed Briant in tranquil comment. "Ze philitre have discover' his guileful heart. O vonderful beverage!"

"Crickhowell passed a thick roll of manual control of the control of manual control of the control of manual contro

with a thrilling look. Meanwhile Postlethwaite burnt a little blue fire in the background.

"Stranger," demanded Carclough as soon as the reading was concluded, "are you prepared to subscribe to the terms of the oath to which you have just listened, shuddering?"

"Subscribe! Wiz plezair," answered Rene, innocently cager. "How mooch!" He made a futile attempt to get to his trousers pocket, but was restrained by his two guards, who shook him a little for what they regarded as an audacious attempt to score off the captain.

"Let him alone. He did not understand," said Postlethwaite benevolently "John and provided and provide

undertone. We all expected that the president on recovering would wreak a signal vengeance on the Frenchman for the audacious substitution of which he had been guilty. Greatly to our astonishment, however, Carclough, as soon as he had done on the firm of the substitution of which he had been guilty. Greatly to our astonishment, however, Carclough, as soon as he had done coughing and spitting, contented himself with remarking that his draught had "have ten minutes for refreshments," interpolated someone at the far end of the dormitory.

"Lictors, gag that man!" commanded the captain. "Recorder!"

"The ncophyte will then proceed to partake of the Pur Al Kali, or cup of brotherly love, with the captain," read Crikey from the agenda paper.

"It is well," said Carclough, "Cupbearer, bring forth the potion!"

"Helas! It is not ovair ven!" sighed the "Recorders" said Corploses.

sideration of his imperfect knowledge of Luglish, Briant was excused the usual pet speech of grateful thanks which is required of ordinary candidates; and a few minutes later he returned to his bed a fully quali-fied member of the Gang.

"Recorders," said Carclough as the French boy retired, "summon the next can-

"Austin Bentley Anstruther!" read Crikey from the list in his hand. All eyes were turned towards the bed of the tall youth who had arrived that morning. His back was turned disrespectfully on the president, and he was snoring in a way that was a little too artistic to be real

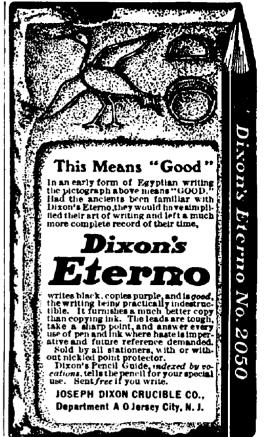

to gather courage from desperation, he at length faced the captain, and knelt before him with a beaker in citier hand.

Our chief graciously bent towards the suppliant, accepted the left-hand gobiet, and raised it on high in mute salutation, humbly imitated by Rene. At the same moment a smile of strange exultation moment a smile of strange exultation seemed to dawn on the attentive faces around.

Somebody, unknown, choked in his pillow, from excess of emotion, perhap: "Salaam!" exclaimed the captain, and they quaffed. And then was seen a strange for this supreme crisis, that they applied the noble qualities of our beloved captain, and his eminent fitness for the exalted position which he occupies, shone forth in all their splendor. In another moment there would certainly have been bloodshed, from note at least, if not more. Fortunately, we had a man at the head of affairs. Gathering himself up in all his dignity, and most of the bedclothes, Carclough one, and demanded of him whether he still one.

NEW YORK CHICAGO BASKET BALL CONTEST AT ST. LOUIS EXPOSITION

Sizes run from 22 to 34 inch chest measurement.

The best magazine in the world for boys.

### A Splendid Book for Boys "Three Boys in the Mountains"

The story of Western Adventure -clean and inspiring—that ran in THE AMERICAN BOY

through the greater part of 1901, has been issued by The Sprague Publishing Company in book form. This story is the longest and best story that has yet appeared in "THE AMERICAN BOY." Its author is the editor of "THE AMERICAN BOY," under the assumed name of Joe Cody. This is sufficient to indicate that it rings true in morals, and that nothing has been allowed to enter the story that will hurt a boy, but that everything is there that will give interest and dash to the narrative. It brings in the pleasures of the hunt, the chase and the camp, and deals with Indians and animals in plains and mountains. It is a good healthy story that a parent will be glad to have in the hands of his boy.

HANDSOMELY BOUND IN CLOTH AND ILLUSTRATED.

Given to "American Boy" sub-scribers for 2 new yearly subscrip-tions; or for 1 new yearly subscrip-tion and 35c. Price 75c postpaid.

### "On the Field of Honor" Stories of Young American Heroes.

Second of the Series of Books for American Boys, by Annah Robinson Watson.

Twenty-five sketches of young heroes make up this little volume of 226 pages, the heroes being those who displayed valor on the battlefields of the Civil War. Here are told true stories of daring and devotion to duty that may well stir the blood of old and young, and make each of us proud to say, "These were my countrymen."

Mrs. Watson's style is of the very best-clear, plain, straightforward; there is no straining after effect, but there is pathos and soul-moving on every page. Her theme is a noble and lofty one, and she has been fully equal to every demand. "On the Field of Honor" is a book of inspiration for the young; a setting out of the glorious heritage that is shared alike by every American. No praise is too high for it.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price 75c postpaid.

### A Selected List of Books on all branches of Engineering, Electricity, Mechanics, etc. They are Standard Works

ELECTRICITY. The study of, and its laws for beginners, comprising the laws of electric current generation and flow. Ohms law, galvanism, magnetism, induction, principles of dynamos and motors, wiring, with explanations of simple mathematics as applied to electrical calculation. By N. H. Schneider With 55 original illustrations and 6 tablets, Price, 25 cents.

DRY BATTERIES. A practical handbook on the designing, filling and finishing of dry batteries, with tables, for automobile, gas engine, medical and coil work, electric bells, alarms, telephones, experiments and all purposes requiring a first rate battery. Fully illustrated with 30 original drawings. Price 25 cents.

ELECTRICAL CIRCUITS AND DIAGRAMS. Being a selection of original up-to-date and practical diagrams for installing annunciators, alarms, bells, electric gas lighting, telephones, electric power light and wiring circuits, induction coils, gas engine igniters, dynamos and motors, armature windings. By N. H. Schneider. Price, 25 cents.

ELECTRIC BELLS AND ALARMS, How to Install Them

tion coils, gas engine igniters, dynamos and motors, arinature windings. By N. H. Schneider. Price, 25 cents.

\*ELECTRIC BELLS AND ALARMS, How to Install Them. By N. H. Schneider. Including batteries, wire and wiring, circuits, pushes, bells, burgiar alarms, high and low water alarms, fire alarms, thermostats, annunciators, and the locating and remedying of faults. With 56 original diagrams. Price 25 cents.

\*\*SMALL DYNAMOS AND MOTORS.\*\* How to make, test and repair them, with tables of windings and 35 illustrations. Price, 25 cents.

\*\*ELECTRIC BATTERIES.\*\* A full explanation of the construction and uses of primary batteries. With 34 illustrations. Price, 25 cents.

\*\*SIMPLE ELECTRICAL WORKING MODELS.\*\* How to make them and how to use them. With 43 illustrations. Price, 25 cents.

\*\*TELEPHONES AND MICROPHONES.\*\* Making and using simple forms of telephones and microphones, with 29 illustrations. Price, 25 cents.

\*\*SMALL ELECTRIC MOTORS.\*\* How to make and use them, including design, examples of small motors and their applications, speed controllers, starters, fuses, etc. 48 illustrations. Price, 25 cents.

\*\*ELECTRIC LIGHTING, for amateurs.\*\* The installation of electric light on a small scale, construction of lamps and lamp holders, switches, batteries and their connections. With 45 illustrations. Price, 25 cents.

\*\*INDUCTION COILS.\*\* A practical handbook on the construction and use of shock and spark coils. With 35 illustrations. Price, 25 cents.

CARE AND HANDLING ELECTRIC PLANTS

SMALL ELECTRICAL MEASURING INSTRUMENTS, describing the making and using of the different instruments, fully illustrated. Price, 25 cents.

DESIGN SHEETS. Direct current dynamos. These sheets are for carrying out dynamo designs according to the method laid down by S. P. Thompson. I.—General Descriptions of the Machine and the Commercial Test. II and III.—Schedule for Electrical, Mechanical and Magnetic Test. IV.-Schedule for the Calculation of Armature Winding and Field. V .-Temperature Test, and Estimate of Weights and Costs. Five sheets, 8 in. x 101/2 in. Price per set, 25 cents. Special price on a quantiy. Each sheet has two holes punched in one end for easy filing. Price, 25 cents.

MODEI, BOILER MAKING. Contains full instructions for designing and making Model Stationary, Marine and Locomotive Boilers. Fully illustrated with original working drawings. Price, 25 cents.

drawings. Price, 25 cents.

METAL WORKING TOOLS AND THEIR USES. A Handbook for Young Engineers and Apprentices. Shows how to use simple Tools required in Metal Working and Model Making. Illustrated. Price, 25 cents.

X-RAYS SIMPLY EXPLAINED. The theory and practical application of Radiography. 10 illustrations and 6 plates. Price, 25 cents.

STATIC ELECTRICITY. Simple experiments in. A series of instructive and entertaining electrical experiments with simple and inexpensive apparatus. With 51 illustrations. Price, 25 cents.

SIMPLE SCIENTIFIC EXPERIMENTS. How to perform entertaining and instructive experiments with simple home-made apparatus. With 59 illustrations. Price, 25 cents.

SIMPLE MECHANICAL WORKING MODELS. How to make and use them, including Stationary Engine, Locomotive, Steamboat, Waterwheel, etc. With 34 illustrations. Price, 25 cents.

MODEL STEAMER BUILDING. A practical handbook on the design and construction of Model Steamer Hulls, and fittings, with 39 scale drawings. Price, 25 cents.

# Napoleon Bonaparte

A History Written for Boys By WM. C. SPRAGUE, Editor of "The American Boy."

An interesting account of the career of the great Emperor. The story is well told and the author has selected incidents which will attract and interest boys, however without distorting historical facts. A literary advisor of one of the leading edurational houses says that the history should be put in all Public Libraries in the country, as it is undoubtedly the best history written for and from the boy's point of view. of view.

The book is attractively printed and contains a number of illustrations of number of illustrations of famous paintings illustrating Napoleon's career, and makes altogether one of the most interesting and attractive juveniles for the coming season; bound in cloth with cover design in three colors.

Sent to "American Boy" subscribers for 2 new year-ly subscriptions; or for 1 yearly subscription Be₩ and 50c. Price, \$1.00, post-

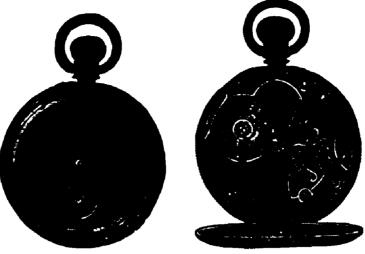

### Little Joker Dynamo

Permanently magnetized field, hard enamel finish; armature wound with over 100 feet of silk insulated wire; German silver current regulator, polished hardwood base, nickel plated electrodes attached with insulated conductor cord. Packed in strong wood box, with treatise and directions.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35cts. Price \$1.00 postpaid.

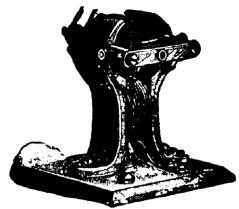

### The Famous Yankee Watch

Millions of these watches have been sold, and it has always been one of our most popular premiums. It is often asked if this watch is inferior to other Ingersolis of similar price. The answer is, to the contrary; in the great essential, timing quality, it is exactly the same; and because of its absolute simplicity in winding and setting, it is free from corresponding liability to derangement common to all stem-winding watches. winding watches,

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price \$1.00 postpaid.

### The Little Hustler Motor

This motor has been greatly improved. It is mounted on a neat and highly polished base. Trimmings are nickel plated. The armature has three poles, causing motor to start without assistance when the current is applied. It will drive a five inch fan at a high rate of speed, and is fitted with a pulley for running toys, etc. Any battery from the cheapest up, that will run any motor, will drive the Little Hustler.

They are of the simplest construction and cannot get out of order, over-flow or fail to write, as the feeds the same as now used by all the standard Fountain Pen Manufacturrendard roundard restandard roundard red by two lateral slots, thereby keeping the ink always in contact with the point of the pen, and always wet and ready to write. This Fountain Pen is fully guaranteed, and in the event of its proving unsatisfactory in any particular, can be returned to the manufacturers and a new one will manufacturers and a new one will be sent. A printed guaranteed slip will be found in every box. We firmly believe that this Pen will give better satisfaction than most faction than most \$1.00 and \$1.50 Pens now on the market.

Given to "American Boy" subyearly subscrip-Price, tion.

### Weeden Upright Engine

This Engine still retains its popularity, and still continues to be easily the best dollar engine in the market.

In construction it is simple and sensible, and in all its parts strong and durable. Unlike other dollar engines it has no steam pipes to get filled with rust and dirt. steam chest, steam and exhaust ports, whistle, whistle valve and throttle valve seats are all cast in one piece, and locked steam tight to top of boiler. It is made throughout of well tempered polished sheet brass. It exhausts steam through the smoke stack as shown in cut; which no other engine does.

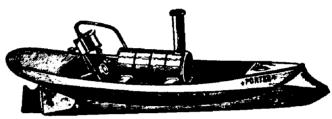

The safety valve is the lever and ball pattern. The valve seat is made large in order that the boiler may be easily filled through it. boiler. It is made

Every engine is thoroughly tested before packing, and fully

All parts of the engine are interchangeable, and we have al-ways on hand duplicate parts with which to supply our cus-

Each engine is packed securely in a wooden, locked-corner box suitable for mailing or expressing. Full directions for running the engine will be found in each box, with the price of duplicate parts.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 35c. Price \$1.00 Torpedo Steamboat

This Steamboat has a nicely modeled hull (torpedo type) well put together, and is very attractive in appearance. It has a polished brass boiler firmly secured to the thwarts; steam chest mounted on an inclined frame, to which the cylinder is adjusted.

Length of Hull, 151/2 inches; of Boiler, 33/4 inches.

A small balance wheel is connected to the cylinder and propeller shaft, and to the latter is fixed a three bladed brass propeller.

The lamp is securely soldered in the bottom of the boat to prevent it sliding about while the boat is in motion.

The whole is finely decorated in colors, and each one is tested and guaranteed.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 40c; or for 1 new yearly subscription and 80c. Price \$1.25 postpaid.

### The Practical Typewriter—No. 2

This is a very complete machine, having key for each letter, roller feed, automatic inking and spacing, sight writing. Will take a small letter head, and can be easily and rapidly operated. By reversing the carriage the machine can be used for addressing packages or writing in books. Has feed roller as shown.

Given to "American Boy" subscribers for 3 new yearly nubscriptions; or for 2 new yearly subscriptions and 45c; or for 1 new yearly subscription and 90c. Price \$1.50 postpaid.

### Eureka Scroll Saw Outfit

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 45c; or for 1 new yearly subscription and 90c. Price \$1.50 postpaid.

### The "Ever Ready" Electric

### Scarf Pins and Button Hole Flowers

In asking your consideration to the different styles of Scarf Pins presented below, we wish to lay particular stress on the fact that they should not in any way be compared or confused with the "so-called" cheap electric scarf pins now on the market, as these worthless imitations will not give satisfaction and are simply a toy.

The "Ever Ready" Electric Pins give a strong, bright light, rendering legible the finest print. From the fact that the best of material and workmanship enter into their construction, and further THAT THE BATTERY AND BULB ARE MADE FOR EACH OTHER, satisfaction is assured in the way of service and wear. way of service and wear.

In use, the small wire cord which connects the pin with the battery and push button is quite concealed, and the latter can be carried in any convenient pocket, when the slightest pressure on the small stud causes the miniature bulb to glow.

Using these pins a second or two at a time, from 1,500 to 2,000 flashes will be obtained before renewal of battery. The "Ever Ready" Battery used with these pins is the smallest made, and can easily be adjusted.

New batteries can be fitted with the greatest ease, by simply undoing the two small nuts which hold the flexible cord.

This pin can of course not only be attached to tie, but equally handly to vest or coat lapel.

Button Hole Flower.

A perfect flower model, made of material unaffected by moisture, translucent and wears translucent and wears 1-2-2-10 for cents. Extra 1-2-2-10 for cents.

No. 1.—Price complete, \$2.25. Extra Battery, No. M-20, 30 cents. Extra bulb on pin, 75 cents. Extra bulb only 50 cents.
The above flowers can be furnished in all the natural colors.

Jewel Scarf Pin.

### Skull Scart Pin.

Made of pure Ivory. When lighted becomes No. 4.—Price complete, \$2.25. Extra Battery, No. M-20, 30 cents. Extra bulb, 50 cents.

### Elk Head Pla.

A very neat and tasty design, made of pure Ivory. When lighted be-comes thoroughly transparent.

No. 5.—Price complete \$2.25. Extra Battery, No. M-20, 30 cents. Extra bulb, 50 cents. No. 5.-

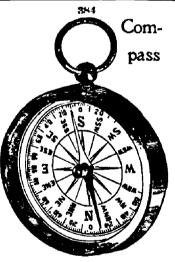

Any one given to "American Boy" subscribers for 4 new yearly subscriptions; or for 3 new yearly subscriptions and 50c; or for 2 new yearly subacriptions and \$1.00; or for 1 new yearly subscription and \$1.50. Price of any one, \$2.25, delivered.

### Daisy Air Rifle

Shoots BB shot or darts. They shoot as straight as any gun made, and entirely free from danger, smoke and noise. With a little practice any boy can become a crack shot.

Given to "American Boy" subscribers for 3 new yearly subscriptions; or for 2 new yearly subscriptions and 35c; or for 1 new yearly subscription and 70c. Price \$1.25 postpaid.

This Compass is open face, nickeled back with ring handle. Dial is 1-14 inches and very fine. Nicedle very sensitive, and it is guaranted to be first class in every particular.

Given to "American Boy" subscribers for I new yearly subscription. 50c, postpaid.

385 The Ever-Ready Electric Vest Pocket Light

Finely Finished Cover.

The high standard and efficiency of the "Ever Ready" Lights are due to the important facts, that only the HIGHEST CLASS OF MATERIAL AND WORKMANSHIP are employed in their manufacture. From the raw material to the turning out of the complete light each operation is under the direction and supervision of practical and thoroughly experienced foremen.

Given to "American Boy" subscribers for 2 new yearly subscriptions; or for 1 new yearly subscription and 50c. Price \$1.25 post-maid.

### American Boy Music

We have made a contract with the publishers of

"The American Boy March and Two-Step" and "The Jolly Student."

Two of the best pieces of music for American boys ever published, by which we have more than one thousand copies of each to sell to American hoys. "The American Boy March and Two-Step" was composed especially for THE AMERICAN BOY, and has never been placed on the market excepting through our paper. Musicians, and particularly boys, who like stirring, patriotic, martial music, are delighted with "The American Boy March and Two-Step" and with "The Jolly Student." The editor of THE AMERICAN BOY was recently at a meeting of the Detroit Newsboys' Association where were gathered together five hundred of the newsboys of Detroit. At this meeting the writer of the music, Harry Zickel, author of "Black America," played the accompaniment to the song "The Jolly Student" and it was sung by a prominent Detroit singer. The boys went wild over it, and by the time the third verse was sung they were joining in the chorus, spontaneously, and without invitation. "The American Boy March and Two-Step" is a piece of instrumental music, while "The Jolly Student" is a song. It is a song that is being adopted by the schools throughout the country as a patriotic song for hoys, and it is bound to create a furore among old and young wherever it is heard. The price of each of these pieces of music is 25 cents. "The American Boy March and Two-Step" can only be purchased of THE AMERICAN BOY. We hope to have your order for one or both, and we guarantee that you will be pleased.

Both pieces given to "American Boy" subscribers for 1 new yearly subscription. Price for both 50c; or 25c for one, postpaid. "The American Boy March and Two-Step" and "The Jolly Student."

HOW TO SEND MONEY There are four ways in which money can be sent at our risk—by Postoffice Money Order, Express Money Order, or by Bank Check or Draft; and, when none of these can be pro-

cured, send Registered Letter. If you send money by mail in any other way, it must be at your own risk. ORDER PREMIUMS BY NUMBER Any article can be purchased at the selling price as given above. We wish our friends "hustling American Boys" success.

# Hints on Sprinting, for Boys

By ARTHUR F. DUFFEY, Georgetown University World's Record Holder for 50 Yards and 100 Yards

bition few know outside the trained and successful athlete the hardships, self-denial and hard work to be encountered before one can literally come to the front in athletic sports, particularly in sprinting

sprinting.
No hard and fast rules can be laid down for building up the body and alone, whether training it for athletics, as no two constitutions or bodies are allke, each individual requiring different treatment.

Each must exercise and train to suit his After leaving wn physical requirements and capabili- a

LL SCHOOLBOYS are more or less interested in athletics, either on the gridiron, baseball diamond or the cinder path, and nearly all of ward knee, and let the body fall forward as if you were going to fall on your face.

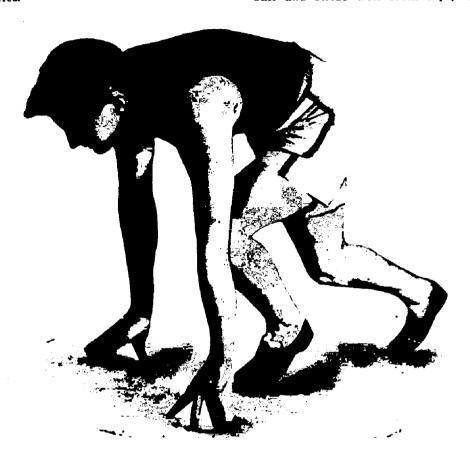

It is chiefly to boys that I address these hints on training, which are the collection of my own personal experience during my athletic career, which began during my schoolboy days. For this ambition few know outside the trained and successful athlete the hardships, self-denial and hard work to be encountered down the track.

down the track.

Now you are going—pay no attention whatever to your opponents; keep your head up and look straight forward all the time. Run as if you were running alone, whether your opponent is ahead or healing you.

### ACQUIRE LONG, BOUNDING STRIDE.

After leaving the mark try to acquire a bounding step similar to a rubber ball and stride well from hips, which

DUPPEY AT THE "GET SET"

### STRICT TRAINING RULES NECES-SARY.

First, elementary training must be commenced long before the more vigorous course required to prepare one's self for public performance or championship form.

To the beginner in sprint running, I would say that the strictest rules must be followed and a regular life led. Rise carly, take a cold or tepid bath and a hard rub down. Eat plain and wholesome food. Never overexert yourself, and with the foregoing rules and early to bed every night any boy or man will be put in fair condition as a preliminary to a regular course of training.

Begin by jogging about a mile or two across country in the morning at an easy pace, keeping this up for two or three weeks, and always taking a good rub down when you return home. After this preliminary work in the morning take a rest, and during the day use chest weights or dumb-bells for developing the arm, chest and shoulder muscles.

As in running, begin these exercises gently, gradually increasing the violence and length of duration when you find you can do so without fatigue. Never overtire yourself in any way. Take a brisk walk before going to bed and retire early.

After a course of about three weeks as given above you will find your mus-

After a course of about three weeks as given above you will find your muscles developed, your lungs in good condition and your body generally so evenly developed that you will be in proper shape for training.

### LIVE AND TRAIN REGULARLY.

Having gotten your body into condition to undergo a strict and rigorous course, begin by running sprints of fifty or sixty yards for a week, running the distance about five times at almost your ton speed

top speed.

The afternoon is the best time for this, and here I may say that I have always tried to do my training as near the hour at which my race is to be run as possible. The reason for this is that if a regular "!!" is led your body will not have had a longer or shorter time in action than if the training is done at the regular time, when you toe the mark on the day of the race.

### WAY TO START.

After a week of these bursts of speed, the art of starting may be taken up. On the start depends the race, and starting is the most difficult part of sprinting for the beginner to master.

The old method of an upright standing start has gone out of date. The proper method of starting is the "crouching" start.

ring" start.

First the hands must be on the line, the forward foot being five inches behind the line, one knee touching the ground and level with the instep of the forward foot. At the "caution" from the starter the athlete approaches the line and assumes an easy position. At the next word, "get set," raise the back

gives you the advantage of a longer stride. While I am barely five feet seven inches in height, I take a stride in racing of nine feet, as big as that taken by Bernie Wefers, the former champion, who is six feet one inch. On nearing the tape, say about ten feet away, the runner should pull himself together with all the force that he can command. Put out every effort, wherever your opponent may be, and fall forward, or practically throw yourself bodily on the tape at the finishing line. This will gain you many inches and win you many a race.

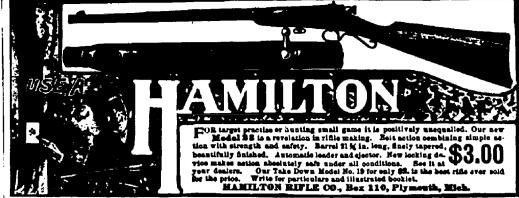

Of course, the start, the stride, the spurt and the finish must all be practised separately, a good spurt and finish being fully as essential as a good start, which, as I have before said, is half the

### MODE OF BREATHING IMPORTANT.

To become a good sprinter you must master the art of breathing. As the run-

ner approaches the mark at the cautionary command to "get set" the inhalation should be deep but not to the full expansion of the chest. The breath should then be held during the time you are crouched on the mark. Your whole attention should then be concentrated to listening for the pistol crack. Keep totally oblivious to everything else, in fact, hold yourself literally in breathless suspense. At the crack of the gun, force the air from the lungs by a quick ejaculation or grunt. This helps your start just as a pugilist adds force to his blow by grunting as he drives it home. Catch another deep breath with a gasp instantly, which will be in your second stride, and hold that breath until the tape is reached (in a fifty or sixty yard sprint), when you involuntarily gasp it out as you reach the tape.

Although this is an awful strain, the athlete will become used to it and perceive its advantage. In a longer race, of one hundred yards, I take two breaths, the second one being at about sixty yards, which lasts me to the finish. The breathing must be done through the mouth, as it reaches the lungs quicker. Never entirely empty your lungs. The minute you do you collapse and lose your speed.

A beginner should practise breathing

your speed.

A beginner should practise breathing daily according to these rules and should expand the chest and lungs by the chest weights.

### USE OF THE ARMS.

The arms should be developed as well as the legs, as they play an important part in sprinting.

On rising from the start clinch your fists. Bring the left arm diagonally across the chest as the rear foot is pushed forward, and each arm is swung across the body alternately in unison with the stride. This cross motion of the arms, I have found, proves a great help to maintaining the "bounding" stride. Great care should be taken when practising this motion that the arms are practising this motion that the arms are not swung too far out or the assistance

will be nullified. The body should be carried at an incline forward of about 80 degrees. Many a race is lost by a man carrying his body upright and rigid, both of which retard

### DON'T SMOKE OR DRINK.

In conclusion I would lay down the following rules: Let the diet be plain. Dispense with pastries, candies and, above all, never smoke or drink alcoholic liquids when training. You will be better without the two latter at all times. Cigarettes are fatal to athletes. Bathe daily and always use rough towels after a bath and after taking any exercise. Never over-exert yourself and exhaust all your strength in any trial. Always finish your training with "something left in you." Only work the hardest in the race itself.

By practising the above methods and

the race itself.

By practising the above methods and persisting in them until they are entirely mastered you will gain strength and increase your speed to a degree beyond your expectations. Finally, let me impress on all aspiring athletes the fact that rigidness in purpose in training and the degree was assential as steady perseverance are as essential as the buildog determination necessary to land you a winner at the tape.

### A Cat of the Snows

In the high land of Thibet and in the cold and snowy steppes between the country north of Himalaya and south of Siberia, there is a beautiful cat with a silvery fur, and a glorious bushy tail that is marked with many coal black rings. Exquisite shadings of chocolate and yel-low are drawn in fine lines over her here and there, making her probably the prettiest of the small cat animals.

In general appearance and size she is like our pussies, but she is a savage little thing, and so far the only specimens that

thing, and so far the only specimens that have been brought into Europe or America have been dead ones, for no hunter has been able to take any alive.

This cat is called the Manul Cat, and now that something is known about the Thibetan country, it is probable that the pretty creatures will become residents of the big soological gardens before long, and they may turn out not to be so hard to tame after all.

ARDENERS APPLY the term percentials to plants that are perfectly hardy and do not have to be planted anew from year to year. Some of these plants do better with a slight protection—a thick layer of autumnal leaves, for instance, which is their natural covering—but by far the greatest number are not affected by the coldest weather.

is their natural covering—but by far the greatest number are not affected by the coldest weather, even when they are fully exposed to it. Most of the old-fashloned flowers, so-called, belong to this class. They are very easy to raise from seed and repay ordinary care with a wealth of floral splendor. To a boy, who lacks time, on account of chores or study, they would naturally commend themselves.

Perhaps you are so fortunate as to have a fine old grandma, who believes you are the most perfect boy that ever lived. Well, if you want to see the eyes of that dear old lady light up with pleasure, just raise some of the flowers she used to love when a girl. And then you will make a surprising discovery, namely, that all the world admires these flowers, for they have come into fashion again and now occupy the place of honor in many gardens.

and now occupy the place of honor in many gardens.

It is really wonderful how much floral beauty can be purchased, in the form of seeds, for a dollar or even half of that sum. Seeds are remarkably cheap, and the difficulty in selecting them is not how much to buy, but what to order. In turning the pages of the splendidly illustrated catalogues, you may be bewildered by the extent and the variety of the offerings. Hence I shall endeavor to help you select the best and to make your hardy garden a success that will be your hardy garden a success that will be

a joy forever.

I shall take it for granted that the garden has been thoroughly dug and raked over and enriched with manure or artificial fertilizer. By the time we get settled weather, the borders or beds should be ready for seeding. Did you ever stop to think what a marvelous thing a seed is? It may lie dormant for years, and yet, placed in the ground, it will speedily germinate into life, and turn into a beautiful flower, or a handsome shrub, or a mighty tree. They say that the ancient Egyptians worshiped the lotus. I do not wonder at it, for I have seen the flower. This reminds me of water-plants in general and suggests a plan to raise them without difficulty. These aquatic plants, so-called are the lazy man's favorite, for they require no of water-plants in general and suggests a plant to raise them without difficulty. These aquatic plants, so-called are the lazy man's favorite, for they require no care whatsoever and multiply rapidly. These aquatic plants, so-called are the lazy man's favorite, for they require no care whatsoever and multiply rapidly. They will even fourish during a long train turns brown. To establish a lit is water-plant garden of your own takes the water-plant garden of your own takes found in swamps, sow your seeds of the white or pink water-liky, gradually ill up the tank with water, and the trick is found. The rest you can safely leave to divide some of your own is the nature. At the beginning of the next of divide some of your own is the nature. At the beginning of the next of divide some of your own is the nature. At the beginning of the next of divide some of your own is the nature. The population of the production of the pr

do not know its English name—is one of the best yellow flowers for cuiting, being long-stemmed and fine of flower. To do its best, however, it must have plenty of room to spread.

Margaret Carnations are perfectly hardy out of doors while young, but they are almost invariably ruined by the cold of winter when they are two or three years old. Therefore it is advisable to make a new sowing every year. If sown this spring, the plants will bloom next

The Paris Daisy, or Marguerite, a mem-The Paris Daisy, or Marguerite, a member of the chrysanthemum family, does equally well for pot culture, or in the garden. Its single white flowers, with a golden center, are horne on long stems. The plant is both useful for cutting and pot culture, which accounts forthe fact that it is largely grown by florists. While the perennial chrysanthemums are not comparable to the splendid large-flowered sorts of the autumn shows, and equally well for pot culture, or in the garden. Its single white flowers, with a of biennials of easy culture. I should golden center, are horne on long stems, unhesitatingly choose the Campanula. The plant is both useful for cutting and pot culture, which accounts forthe fact that it is largely grown by florists. Brompton Stock. It might be well to say, however, that the last named cannot comparable to the splendid large- may be transferred to the house in fall flowered sorts of the autumn shows, and and returned to the garden in spring.

should not be confounded with the lat-ter, they commend themselves to us be-cause their pretty hardy pompons make bright masses in our gardens long after heavy frosts have cut down other flow-

MAGNOLIA

holo

Curiously enough, the Delphiniums. or larkspurs, are much more robust when grown from seed than they are when obgrown from seed than they are when obtained through a division of old plants. The dwarf varieties should receive the preference for bedding and the tall sorts be planted among shrubbery or employed as a background for other plants. The tall varieties require plenty of room to attain perfection, hence should be planted about two feet apart.

The Snap Dragon, although a perennial, must be sown every year to give satisfaction.

The perennial varieties of Lobelia, more familiar to us under the name of the Cardinal Flower, on account of its color, are tall, handsome, showy plants, quite effective for a background or grouping. Although the Lilac may be more easily grown from cuttings, these are not always obtainable, which is particularly true of the rarer sorts. The Japanese

true of the farer sorts. The Japanese tree lilac mny also be raised from seed.

Some of my boy friends in the South some of my boy friends in the South may not be aware of the fact that it is possible to grow Magnolias from seeds. Among the varieties offered by seedsmen, that known as the grandiflora or large-flowering Magnolia, is particularly commendable. With us, in the North, the Magnolia is not hardy without protection. tection.

If I were asked to make a selection

A good plan to grow perennials and biennials is to put them among the vegetables in the kitchen-garden and to transfer them in early autumn to the places in which they are to bloom.

PERSIAN LILAC

### STORIES OF BIG BIRDS

### Owl's Devotion to Dead Mate

A remarkable instance of bird instinct and devotion is reported from Quaker Neck. Early last week Henry Brown, a farmer there, set several jump-traps about his farm to catch prowlers, of whatever nature, that had been playing havoc with his flock of fowls. A day or two later he missed one of the traps. Yesterday Bartus Trew, a neighboring farmer, discovered two owls in an apple tree. One, a large horned owl, was in evident distress, trying to shield and warm its mate. To a leg of the dead hird was hanging Brown's jump-trap with chain attached.—Philadelphia Record. A remarkable instance of bird in-

### Eagles and Chamois in Fight

A desperate combat between two eagles and a chamois was witnessed on a snow-covered mountain near Flushi on Sunday. One of the eagles attacked a young chamois, when it was charged by the sire of the herd, which was some distance away. At this point another eagle appeared, but the chamois repeatedly beat them both off by flerce thrusts of its antiers. The struggle continued for half an hour, after which the birds took to flight. The chamois remained immovable with head erect, gazing defiantly at the soaring birds until they were lost to sight.

Some sportsmen next day found the spot where the heroic combat had taken place littered with feathers and fur, and the snow was splashed with blood.—London Express.

Mr. Archibald Wilson, a farmer of Badnoon, Ardgay, was out on the hills gathering sheep; in company with two or three assistants, when he observed

an eagle, apparently in a state of great exhaustion, soaring over a neighboring hill. It gradually sank until it had to alight on the hillside, and, on being ap-proached, it was found to have a trap attached to one of its claws. Though unable to rise, the eagle made a desper-ate resistance with its free claw, beak and wings, and for a considerable time succeeded in beating off its would-be captors, exhausted as it was by its cum-

captors, exhausted as as the brous flight.

It was ultimately secured by Mr. William, the owner of the ground at Dunie.

The eagle proved to be an unusually fine to solve the solve of the specimen, in splendid plumage, and measured fully seven feet from tip to tip of its outspread wings. It is not known where it was trapped, but it must have been a long distance from where it was found.—London Chronicle.

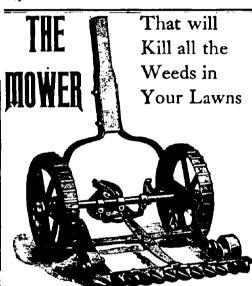

### Crow as a Pet

It is surprising to see the amount of intelligence that can be shown by a crow, but a tame bird owned by Sherbrook Howard, the son of Mr. and Mrs. Henry W. Howard, exhibits it to a large

Henry W. Howard, exhibits it to a large degree.
Each morning the bird flies to his master's bedroom window and utters shrill cries to awaken him, but will never go toward the window again during the day. Whenever hungry he flies to the kitchen and keeps up a continual squawking until fed. He refuses to run away, and, so far as known, has never been more than a quarter of a mile from his adopted home.

his adopted home.

A few nights ago several other crows from neighboring fields did their utmost to get him to fly away with them, but, preferring the home of his young master, Mr. Crow refused to stir.—Bath Independent

If you keep the weeds cut so they do not go to seed, and cut your grass without breaking the small feeders of roots, the grass will become thick and weeds will disappear. The CLIPPER will do it.

F the yellow-breasted chat knows anything of the admonition, "It is wise to be more often seen than heard," it persistently disregards it. I was one day walking through an old wooded pasture which seemed to be filled with these birds, so numerous were their notes, yet I could not get my eye upon more than two or three. They are birds of the low tangled woods, and they know how to utilize the underbrush for concealment. Unless one is accustomed to their ways

The Frogs' Spring Party

"Cheer-rup, cheer-rup, The wood frog cried.

"Creep, creep," piped Hyla, A-swing in his tree. "Creep from your beds. And be happy like me."

Then out crawled the frog folk, Green, spotted and gray, To bask in the sunshine

"Tonight," cried the leopard, His spots all aglow, "Tonight, if it's fair,

We'll give a spring party, What fun it will be! We'll invite all the frogs, From here to Swamp Lee.

There'll be a cress salad, Fly hash and worm stew, A little shrimp relish-Tis something quite new.

There'll be leaping and dancing, A swimming match, too, High diving with somersaults All the way through.

When sporting is ended,

Then comes a bass solo, 'O, Give Me a Fly.' nd 'Good Night, Dear Froggies,'

"'Tis spring, 'tis spring," His friend replied.

That joyful spring day.

And the wind doesn't blow,

The frog chorus gay
Will sing, 'Summer, dear Summer,
Is Now on the Way.'

As morning draws nigh."

### A BOY MUSICIAN WHO EARNS **THOUSANDS**

THOUSANDS

A lad to be envied is Florizel von Reuter, twelve and a half years of age, the friend of kings and queens, a magnificent player of the violin, a composer, a conductor, a great traveler, he has a man's brains in a boy's head. And, what is more, he talks like a man. He was born in Germany, and is known in practically every country in Europe. To say that he is a phenomenon is only to speak the literal truth. There is no other youngster to compare with him. Although he still remains in knickerbockers, he has been a professor of music at the Conservatoire at Geneva, where he gave orchestral lessons; he thinks nothing of rehearsing and conducting an orchestra of eighty experienced musicians, and he thoughtfully allows himself some thousands a year pocket-money—his own earnings.

Through the kindness of his impresario I was enabled (writes a representative of "Chums," an English paper) to have a delightful talk with this marvelous prodigy. I discovered him in the company of his mother, up to his eyes—not in play, as I had expected, for he had just concluded an important rehearsal—but in work. He was composing a piece of music. Although of a serious turn of mind, Florizel von Reuter is a cheerful little fellow, and is by no means overburdened by his responsibilities. He is not bigger or smaller than he ought to be, his hair is fair and curly, and his

to be, his hair is fair and curly, and his

PLORIZEL VON REUTER

complexion is pink. He is solemn and humorous by turns.
"Tell me, Florizel," I said, "something

"Tell me, Florizel," I said, "something about the notabilities you have met."

"Well," the youngster replied, "I have played before Queen Alexandra, President Loubet, the Sultan of Turkey, the Emperor of Austria, the King of Italy, the King of Denmark, the King of the Belgians, the King of the Hellenes, and the Queen of Roumania, with whom I am composing an opera. The Queen is providing the libretto and I am writing the music. Her Majesty has recently presented me with a magnificent collection of lead soldiers representing all nationalities. There are two thousand of them, and they were made expressly for me. It's a capital game—playing at soldiers. I've a lovely fort."

"You'll have to be a soldier yourself one day—that is, if you go back to your native land. The Kaiser will take care of that."

of that

or that."

Von Reuter dissented from this.
"No," he rejoined, gravely, "there are plenty of people in every country to be soldiers, but there are not plenty to be musicians."

"By the bye, how did you fare with the Sultan of Turkey?"

Anderte the total and the same \_\_\_\_ KIN & SEC bit 100 page PART 123 1 Brek Cools 1 22 2 2 La ===3 ---مليتاه P 17 Betters 1 alter BPE 7.1

REDUCED PACSIMILE OF MS. OF MUSIC CCMPOSED BY PLORIZEL VON REUTEE

THE ONE HUNDRED PILIPING BOYS AT THE ST. LOUIS EXPOSITION

play to him when I next visited Constantinople."

The loss of the money did not trouble this extraordinary youth, for he coins money wherever he goes. In fact, he is a kind of walking mint. A mortal more active mentally it would be impossible to encounter on the face of the globe. He is never really happy except when he is composing or figuring in public When he is on the platform he looks rather delicate, but in his case appearances are deceptive. He is well-built and strong, notwithstanding that he positively gloats over hard work. In the train when he is speeding along to fulfill an engagement he composes music, and when he is at sea he does the same. There is no rest in him. He is perpetually adding to his repertoire. The loss of the money did not trouble music, and when he is at sea he does the same. There is no rest in him. He is perpetually adding to his repertoire. Unceasing toil is pure, unadulterated recreetion to him, and a London doctor has observed that since he cannot be induced to refrain from using his brain it would be better if he performed every night of the week. This would prevent him from engaging in wholesale musical composition.

Words are inadequate to describe this

him from engaging in wholesale musical composition.

Words are inadequate to describe this amazing representative of the Fatherland. He can speak five languages the five languages the second of the fatherland. He can speak five languages the second of the languages wonderful in a foreigner—he was able to talk before he celebrated his second birthday, and by the time he was four he had mastered thoroughly the "Pligrim's Progress." His knowledge of history is profound. He went to the Tower of London in the autumn, and while there he had the services of a guide. Before many moments had elapsed he showed that he knew a good deal more than the guide himself, who was so astonished at the precocity of his infantile employer that he remarked: "You ought to have a diploma for your knowledge of the Tower's history."

"When did you begin to study music?"

"When did you begin to study music?"
I inquired of Von Reuter presently.
"I can't remember when I didn't play.
At the age of three I was able to play tunes on a quarter-size fiddle, and I could distinguish any note or combina-tion of notes that was struck on the

plano.

piano."

"Aren't you nervous when you face a huge London audience?"

"Not a bit. I just feel happy."

"An audience composed of Royalties upsets you a little, perhaps."

"That's not so. I'm never nervous. You see, music is my life. When I'm playing or conducting I'm having a jolly time—you may be sure of that."

"Apparently you have no passion for games."

games."
"Oh, I like some games. I have never witnessed a cricket match, or a foothall match, but I am fond of playing with a ball, and of running and fencing. At

(Continued on page 191.)

### A HUNDRED FILIPINO BOYS COME TO THE UNITED STATES

In a recent issue of the American High School, Domingo San Jose, a Filipino student in the Indianapolis High School, writes interestingly of the hundred Filipino boys who in 1903 were sent to the United States at the expense of the Philipaire Construent and placed in America. United States at the expense of the Philippine Government, and placed in American schools. The young man writes that on September 27th, 1903, he, along with ninety-nine other Filipino boys, was sent to the United States, with a pension of \$500 each a year, to obtain an education and to familiarize themselves with American ideas. miliarize themselves with American ideas. The entire hundred were under the superintendency of W. A. Sutherland, one of Governor Taft's interpreters. After a pleasant voyage, during which all but seven of the boys were badly seasick, they reached San Francisco; there the boys were distributed among the schools in the different counties of Southern Callfornia. Of the nineteen sent to San Diego Intendency of W. A. Sutherland, one of Governor Taft's interpreters. After a pleasant voyage, during which all but seven of the boys were badly seasick, they reached San Francisco; there the boys were distributed among the schools in the different counties of Southern Callfornia. Of the nineteen sent to San Diego

Learning to add and to divide Instead of sweeping o'er the tide!"

Just then fear struck the buccaneer, For teacher had him by the ear;

And the brave pirate cried: "Ouch! Oh! You hurt! Please, teacher, let me go, And I will never more repine Because I am not on the brine."

various states, six of them, one being Domingo San Jose, going to the Manual Training High School at Indianapolis.

### TO GET AN EDUCATION

Vernon Householder, an Ohio boy, wants to know if a person can receive as good an education at home through correspondence schools as by going to some residence schools. Such a question cannot be answered by yes or no. A good correspondence school may give better instruction than a poor residence school. The chances are that the residence school will do better work for the student than the correspondence school. The best way to learn about a correspondence school is to obtain the names of some of its students and graduates and ask them regarding their experience with it. I would not advise any boy to stop going to a residence school ence with it. I would not advise any boy to stop going to a residence school and take up a correspondence course, unless he has learned upon good authority that the residence school is not doing good work and that the correspondence school is doing good work. The chances are always in favor of the residence school dence school.

### BUILT HIS OWN SHOP

Victor Adams, of Blaine, Washington, though but fourteen years of age built his own shop, which is a combina-tion of carpenter shop and blacksmith shop, and we are able to present a pic-ture of it. The building is 30 feet by 12 feet, and it is in two parts—a carpen-

VICTOR ADAMS' SHOP

ter shop equipped with a full set of carpenter's tools, a turning lathe and a scroll saw, and a blacksmith shop with a forge, anvil, vise and hammers. Vica forge, anvil, vise and hammers. Victor lives in the very northwest corner of the United States, the boundary line between the United States and Canada being only two blocks from his home.

### ROBERT THE PIRATE "The class room is no place for me,"

Said Robert with a frown; My proper sphere is on the sea With pirates fierce and brown. There on the heaving main would I In my long, rakish vessel lie,
And with my sure ten-pounder gun
I'd make the frightened galleon run,
Alas!" said Robert, "that I must
Spend my young days in heat and dust,

### A MAINE FOX FARM

Up in Dover, Maine, on a tract of several hundred acres of land, is a sight that would delight and interest the average American boy to the point of enthusiasm. A fox farm—an innovation indeed, for, without doubt, it is the only one in the United States, is to be found there. More than half a hundred foxes play mischievously within the enclosure formed by an immense wire fence, and they are multiplying rapidly.

The owner of the fox farm is Ellijah Morton. At a cost of \$150 for the foxes and about \$100 for transportation charges, he first secured six blue foxes from Alaska. Later he added silver gray and red foxes. On the arrival at Dover of the foxes from Alaska. Mr. Morton fenced in two acres of land with a fence ten feet high and so arranged at the top that the animals could not climb over. Beneath the fence a stone foundation was laid to prevent the foxes from burrowing under. The land thus enclosed was next divided into tweive distinct yards. A house with upper and lower apartments was built in each yard.

Mr. Morton has enjoyed watching the habits of the animals on his farm greatly. In summer he finds that they prefer to live in burrows, while in winter they appreciate the shelter afforded by the little houses, always occupying the second floor. In captivity the animals become quite tame. They also seem to enjoy playing with those with whom they are familiar. They will eat anything that a dog will eat.

### A BOY'S SKILL AND BRAVERY

Harold Burr, an eight-year-olu Concord, Ohio, boy, dis-played remark-able bravery and skill dur-

while the people who witnessed the affair held their breath. After a long run the team came to an embankment leading to a river. Here Harold, thinking of what might happen, skillfully climbed out of the wagon and alighted on the ground without injury.

### TOOK THE ADVICE

A boy in Livingston, Montana, who may not want his name used, so I do not print it, writes of the pleasure that he experienced in reading our February number. He says, too, that his father and mother were delighted with it and that he particularly enjoyed and profited by the editorial on quitting school. "It seems," said he, "as though you wrote that for my own special benefit. You can be able to say that you kept one boy in school, anyhow. The way I was fixed I wanted to go back to school and still I wanted to stay out. I was ashamed to go back, but after I read your letter to boys, I decided to go back, and it was the last day of the week, too; so your wish came true."

### A MAINE BOY AND HIS SPORT

A Northport, Maine, boy is getting some notoriety in the Maine newspapers on account of his ability to use the shotgun and rifle. Wal-ter R. Nealey is his name. He is twelve years of age, weighs 61 pounds and

of age, weighs 61 pounds and is four feet five in ches tall. When very young he began practicing with an air rifle; later his father gave him a fine new "32-40." He can shoot rabbits on the run and partridges on the wing. Recently when out hunting alone he came across a fine doe. Before she got away, he had taken three shots at her, each one taking effect. The shots were made when the animal was on the run. The doe weighed seventy-eight pounds, dressed. As we can well imagine, Walter was at once the happiest and most envied boy in Northport. He has a dog, of which he is very fond. He claims the dog can say, "I want" and "Hello" just as plainly as can a man.

### THE AMERICAN STUDENTS AT **OXFORD**

The American students, beneficiaries The American students, beneficiaries of the Rhodes Scholarship Fund, who have just closed their first term at Oxford, have already made their mark. The amount allowed to them from the fund enables them to live comfortably with a little left over for vacation journeys. There are forty-three of these American students, and they hail from every part of the Union. The only distasteful thing "Friento them in their experience at Oxford is

the discipline to which they are subjected. Although the average age of the young men is twenty-two, and they are as a rule broad-shouldered fellows and an eight-year of a Concord. Ohio, boy, displayed remarkable skill during a runaway at Painesville, Ohio. Harold had been left in charge of a team of horses while his father along and the horses becoming frightened with vehicles, but Harold jumped for the reins and with remarkable skill guided the runaway horses through the midst of the many vehicles, while the people who witnessed the affair held their breath. After a long run

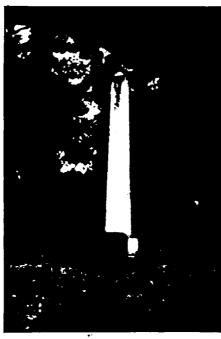

an eight-year as a rule broad-shouldered fellows and many of them valedictorians from our treated like boys, work with tutors at their elbows, are watched and disciplined as if they were mere children. Of the forty-three, thirteen have entered for English studies, one for theology, and two undetermined. The Oxford two undetermined. The Oxford two undetermined two undetermined. The Oxford two undetermined two undetermined. The Oxford for English studies, one for theology, and two undetermined. The Oxford two undetermined two undetermined to reme, four for modern, three for science, four for modern, three for kept here.

A HUMBLE HERO

In the public cemetery at Marion, Alabama, is a monument that attracts more than ordinary interest from visitors. It there have a a runaway of them valedies, one for theology, and two undetermined. The Oxford law is the proportion of the boys have selected law.

bama, is a monument that attracts more than ordinary interest from visitors. It speaks of heroism and self-sacrifice on the part of a humble negro.

The monument was crected by the students of Howard College and the Alahama Bapitst Convention, in appreciation of the conduct of a young negro servant employed in the college, who, forgetful of self, lost his life in efforts to save the students on the occasion of a great fire in 1854 that destroyed the college buildings. The inscription on the monument tells the story:

HARRY'S MONUMENT

servant of H. Talbird, D. D., President of. Howard College,

Who lost his life from injuries received while rousing the students at the burning of the college buildings on the night of October 5th, 1854.

Aged 23 years.

He was employed as waiter in the College and when alarmed by the flames at midnight and warned to run for his life replied. "I must wake the boys life, replied, "I must wake the boys first," and thus saved their lives at the cost of his own. A consistent member of the Baptist church, he illustrated the character of a Christian servant, "faithful unto death."

As a grateful tribute to his fidelity and to commemorate a noble act, this monument has been erected by the students of Howard College and the Alabama Baptist Convention.

### Where to Feel

A Quaker hearing a person tell how much he felt for another who was in dis-tress and needed assistance, asked him-"Friend, hast thou felt in thy pocket for

Edited by W. R. MURPHY

### The Bulletin Board

Indiana amateur journalists have organized a state association with A. M. Keefer, Mongo, president; Stanley Scheidier, Cambridge City, vice-president; Miss Lena Minton, Sheridan, secretary; Phurman H. Williams, Hagerstown, treasurer; Roscoe W. Goens, 1512 E. 8th street, Muncle, official editor; Russell L. Joseph, 1927 N. Illinois street, Indianapolis, historian, and Howard Rice, Scottsburg, Samuel Goldstein, Indianapolis, and Frank Hills, 109 E. Main street, Fort Wayne, directors. A neat official organ has been issued.—Amateurs are always glad when any one of their number enters the professional magazine field. Ira Eugene Seymour, a youthful almateur writer of Kansas City, has just come east to become managing editor on a juvenile magazine. His duties will be with the business rather than the literary department.—The Philadelphia Amateur Journalists City has entered upon its fourteenth term of continued prosperity. The officers are, President, Chas. H. Russell, 1407 Thompson street; vice-president, M. E. Oechsle; secretary-treasurer, W. R. Murphy, official cditor, Harold C. Whiteside.—The proposed correspondence debate between the Baltimore and Kansas City Amateur Press clubs has been abandoned, at least temporarily.—"The Fairy Amateur Press Association" has been organized by a number of bright western boys. The reason for the name lies in the fact that each member has entitled his paper with the name of some kind of a fairy. "The Sylph," "The Dryad." "The Fairy" and "The Elf" are samples.—Cleveland amateur journalists are making extensive arrangements for the entertainment of visitors to the convention of the National Amateur Press Association next July. A good time is promised to all who come.—The cditor of this department has some hundreds of amateur papers which he will give to all who send a self-addressed, stamped wrapper to this office.

### The Reviewer

"A Resurrection of Indiana's best amateur paper" is the description given by the editors of "The Amateur Clubite" to their finely printed 10-paged (6x5 inches) paper. A good selection of contributions makes an interesting issue. "When Golden Dreams Do Pale," by L. Minton, is a well written story save for its occasional extravagance of diction. The author should tone down his style. Editorials by Roscoe W. Goens, Muncie, Indiana, show an evident lack of revision, though the writer's thoughts are good. The co-editor is A. M. Keefer, of Mongo, Indiana.

### A Youthful Publisher

Sixteen-year-old William H. Dixon, Jr., is far ahead of most boys of his age in literary and business ability. He is a publisher, printer, advertising agent, editor, author and poet. "Independence," which he prints at his home, 5115 Ohlo street, Chicago, contains twelve pages 1x61/2 linches, neatly printed. A liberal amount of advertising is interspersed with the reading matter, the latter consisting of several poems and a serial story, all by the young editor. In his letter he asks for criticism, for, as he says, "a little kindly criticism helps the publisher and author"—in his case the same person. The typographical arrangement of "Independence" is very neat. The "impression" is not entirely

WM. H. DIXON, JR.

clear and the printer should read the instructions in last month's AMERICAN BOY. The poems show good thought and vocabulary but the metre is not a curate. The article on "Prosody" in any standard grammar will give the ordinary rules of versification. The young man has also branched out into the book publishing business. He compiled a "cook book" from recipes made He compiled a "cook book" from recipes made up by ladies in his town and printed the entire fifty-two pages himself. From the sale of the "cook book" he hought a large printing press and type and now has a fine little office. In his spare-time—one marvels that he has any—this husy boy takes subscriptions for magazines, and of course finds THE AMERICAN BOY one of the most popular on his list.

The editor of this department will, on receipt of postage, send a few copies of typical amateur papers so long as the supply on hand lasts.

### An Acre of Land

How much profit will an acre of land produce? It depends. Here is a story which will interest all farmers.

A Mississippi farmer gave his young son an acre of land from which he was to have all the produce raised by his own effort. The hoy began by putting twenty loads of fertilizer on the land, which he then plowed and harrowed until it was in good condition. He planted one-half with early potatoes, the other with black seed onions. Both crops he cultivated himself, the former by horse. cultivated himself, the former by horse, the latter by hand. He hired several hoys to help him weed the onions. Outside of this, he did all the work himself in his spare moments. Here is the re-

sult:
Received for 60 bushels of pota-Received for 250 bushels of onions 112.50

Total .......\$172.50
Expenses.
Paid for seeds..........\$ 7.50

Paid for help..... 15.00

. . . \$150.00 This balance does not include the ad-

AMATEUR JOURNAL- ditional profit to be earned in planting winter wheat and the earnings from Spring garden truck, probably bringing the profit up to \$200.

### Loyal to his Town

Oberlin, Ohio, must be a very fine town if we are to believe Byron B. Johnston, one of our boy subscribers who lives there. Many of our readers will, of course, know that one of the oldest colleges in the country, "Oberlin," is located there. Our young friend says the village of Oberlin is a good place for boys; that there are no saloons or similar places for taking the boy's earnings or destroying his manhood. Of course, in Oberlin, as he confesses, there are some boys who are not making the best of their opportunities, but he lays the blame all at their own doors. He is interested in the discussion, which will never cease, as to whose chances are better in life—a country boy's or a city boy's. That question never can be answered. better in life—a country boy's or a city boy's. That question never can be answered. A country boy's chances are better for some things, and, on the other hand, a city boy's chances are better for some things. It is like asking the question, Which is it better to be, a man or a woman? Our friend favors the country boy's side. The fact is, that an ambitious, industrious boy, possessed of good sense and good morals, will succeed, whether in the city or in the country.

Bright young men and women, with a taste for writing, abould cultivate it. The field of Journalism offers to ambitious students, money, fame, power. We train by mail to do every branch of literary work for newspaper and magazine. Write for "The How of It." Free. SPRACUE CORRESPONDENCE SCHOOL OF JOURNALISM, 103 Hajestie Bullding, Detroit, Birb.

OW TO MANAGE sixteen hundred school-boys, many of them brim full of life and prone to mischief, in a school house where they are free from the restraint of their regular class from the restraint of their regular class teachers, is one of the many boy problems the school authorities of Greater New York have to meet. In one school, the picture of which is given herewith, this problem has been most successfully solved. Where this school is and how the problem was solved, the readers of THE AMERICAN BOY will now be told. The school is No. 166 in Eighty-ninth street, between Amsterdam and Columbus avenues, a district of the city which has so many rich, very rich, men in it, that it is often spoken of as the "mil-

The street patrol is an important part of the department, and Commissioner to the deal.

The street patrol is

straint of the teacher. There was too much disorder on the streets, in the playground and on the stairways. How to get the hoys who were guilty of this disorder— that was the vexing ques-The teachers had h to do to enough to do t look after their enough to do to look after their boys after they had them in the class-room. It would not do to add to their numerous duties, but some one must he found for the task. It was then that he decided to let the boys govern themselves. At first this was done by appointing a few monitors to watch at points where they could see the movements of all the boys. Each term more monitors were added and with the growth of the force came the need of organization. The cipolic department which handless to the could department which handless to the could department which handless to the could be added to the could be added to the could be considered to the considered to need of organization. The city police department, which handles so successfully New York's great so successfully New York's great population, became the model, and now there is in this school a system in miniature, which, in all essentials, is an exact copy of that which has its headquarters on Mulberry street. The success of the organization proves conclusively that those hove are hest governed who

hoys are best governed who govern themselves.

AN ARREST

THE WHOLE PORCE

Thomas Moore, "either in the street or in school building. The system works like clockwork. It is not only a great easement on the teacher but it is also an excellent thing for the boys themselves. Those who are under the command of the ylearn to observe the bonds of discipline under one another in a spirit they never would have if the teachers were after them all the time."

"I have found," says Mr. Halligan, the factors the bigs self reliance and gives them invaluable lessons in handling their fellows. When a policeman first gets a club he feels inclined to whack some one in the sheer joy of having it, but that exaggerated sense of authority wears off very soon with the boys. I have noticed that they use their power tactfully and early become excellent and provided has been fostered by the system. Boys come from other schools and tell how they formed in a gang and rushed a teacher against the wall and are told that such a thing and rushed a teacher against the wall and are told that such a thing alout the proved and have been called upon to select a greater than any clique that could be a proud boast that the patrol system is that the patrol system is that the patrol system is the term they feel apersonal interest in by the system. Boys come from other and quicker than self government.

A point worth mentioning in connection with the system is could never happen here. It has become and have been called upon to select a formed and have been called upon to select a formed and have been called upon to select a formed and have been called upon to select a formed and have been called upon to select a formed and have been called upon to select a formed and have been called upon to select a formed over the power that the patrol system is that the patrol system is formed and rushe held the position of commissioner and the time.

"I have found," says Mr. Halligan, the formed and rushe held the position of commissioner and the patrol system is the terming the have been called upon to select a fall times. An excellent t

# BIG INJUNS AND LITTLE FILIPINOS

By ALFRED WM, CUTLER

HE WORLD'S FAIR at St. Louis is now a thing of the past, but human beings are always interesting, especially when they belong to a nation foreign to our own, and this is my excuse for writing an article on what otherwise seems to be a somewhat untimely subject

excuse for writing an article on what otherwise seems to be a somewhat untimely subject.

The Negritos were unquestionably the most interesting of the various tribes of Filipinos exhibited at the Fair. As is generally known, they are the most primitive of all the Filipino tribes, and their old-fashioned way of hunting and tilling the ground would certainly indicate that they are not far removed from the lowest types of the human race.

They are very expert in the use of the bow and arrow. On more than one occasion I saw the little Negrito boys shooting at illes several feet off, and they rarely missed their mark.

The Igorrote village proved a never failing scurce of interest to the kodak fiend, and those who were fortunate in securing really good photographs of these little nude people have reason to

A SIOUX CHIEF AT THE ST. LOUIS EXPOSITION

congratulate themselves. It was by no means easy to get them to pose properly, even when the inevitable tip was paid in advance; in fact I have not yet seen first-class amateur photograph of an

My first experience with the Igor-rotes was with one of the women. She was a little bit of a woman, but made was a little bit of a woman, but made up for her size in ugliness and viciousness. She had only one eye and looked very wicked. I saw her coming towards me and prepared to take a snap-shot of her with a view to making an interesting addition to my World's Fair photographs, but just as I was about to "press the button" she flew at me, and after jabbering and gesticulating violently for a few moments said "Ten cents," which modest request I was glad to comply with for the sake of my camera.

to comply with to the same camera.

It was only after repeated visits to the village and many outward acts of good-will that I was enabled to secure a fairly good photograph of one of the hoys,—Keptop by name. The casual visitor had to depend on snap-shots, and these were not always taken in a friendly spirit, as will be seen from the nar-rative related above.

Geronimo, the notorious Apache chief, who gave the United States Government so much trouble between the years

1883 and 1887, must have reaped quite a harvest by posing for amateur photographers. He would accept nothing less than one dollar. Everything was "One dollar" with Geronimo. He sold photographs of himself and bows and arrows, also small visiting cards with his name written on them. When asked the price of these various articles he would hold up his finger and say solemnly "One dollar."

I also secured a good photograph of a

"One dollar."

I also secured a good photograph of a Sloux Chief, but was unable to find out his name or anything else about him, heyond the fact that he belonged to the Sloux tribe of Indians. "Big Chief,—twenty-five tribes," was all I could get out of him. He got fifty cents out of me. Perhaps of all the human exhibits at the Fair the Indians were the most superstitious about being photographed, and so I suppose I ought to consider this an act of graciousness on the part of the chief. At the same time this phase of photography became a little expensive after a while, as you had to

have your hand in your pocket all the time. One can hardly blame these poor fellows, however, for extracting a small fee wherever they could do so, as their lives must have been made quite miserable by the fact that it was almost impossible for them to turn in any direction without facing the camera of some enthusiastic photographer eager to obtain a photograph of something which he might never have an opportunity to he might never have an opportunity to secure again.

GERONIMO AT THE WORLD'S PAIR

KEPTOP

HEN I was fifteen years old I went to visit my cousin, Joel Evans, who lived on a farm some six miles from Viroqua, Wisconsin. At this time this part of Wisconsin was thinly populated. Joel's home was a good two miles from any other house, and the country round about was covered with a heavy growth of timber. A few hears and deer were left in the woods, while wolves and wildcats were often seen, even during the daytime; their howls and cries were heard nearly every night. Of course, boy-like, I was every night. Of course, boy-like, I was ambitious to shoot a bear; and for that purpose I had brought with me an old-fashioned, single-barreled, muzzle-loading rifle. Joel's father had an old army ing rifle. Joel's father had an old army musket, which, when loaded with buckshot or ball, made an effective bear gun. With these two guns in our hands Joel and I considered ourselves more than a match for any bear that walked the woods; and our petitions to Joel's father for permission to go hunting—we did not say, but we meant bear hunting—were constant and pressing, and at last successful.

It was a cool September morning when we shouldered our heavy guns, and, with our powder flasks and ball pouches hanging by our sides, started for the woods, litle dreaming of the exciting and perilous times we were to have before the

ous times we were to have before the sun set that day.

As soon as we were out of sight of the house, Joel said, a note of excitement and triumph in his voice: "Oh, Sid, I know where Big Ben's den is! And if we kill Big Ben we'll be famous!" Joel was always dreaming of being famous. He is a politician now, and is serving his state in Washington. But to return to the story.

Now Big Ben was the most notorious desperado of a bear in all that region, and for three years had terrorized the country. He had killed two men, hunt-

and for three years had terrorized the country. He had killed two men, hunters who had wounded him, and had carried off many fat hogs, sheep and young cattle. In vain the most skilled hunters tried to kill or capture him. So far Big Ben had proven himself too cunning for them all, and had escaped rifle halls and trans and continued his depredations. traps, and continued his depredations. Indeed, ever since my arrival at my cousin's my ears had been filled with the fame of the doings of Big Ben, and now the thought that we were to lunt this frightful monster was at once pleasing

frightful monster was at once pleasing and terrifying.

"Where is the den?" I asked, my heart jumping with excitement. "How did you find it? Oh, Joel, if we only could kill Big Ben!"

"Well, we can," was his determined answer. "Now, let's fire off our guns and put extra big loads in them, big enough to make Big Ben think a cyclone struck him when they hit him; and then I'll tell you how I found the den and what my plan is. Let's see if you can hit that squirrel," and he pointed toward a squirrel sitting on a stump some ten rods away.

rods away.

I knelt on my right knee, and resting my left elbow on my other knee, took careful aim and fired. The ball struck the squirrel near the head, killing

shoulder.

Joel's face flushed. "Well, I guess we do know how to shoot all right," he said. "I pity Big Ben if he comes within range of our guns. Now, let's load. I think you had better put two balls and a double charge of powder in that rifle of yours; and I'll put a handful of powder and buckshot in this old musket. I don't care if she does kick worse than a mule."

We both loaded our guns with active

don't care if she does kick worse than a mule."

We both loaded our guns with extra care. I followed Joel's suggestion and put a double charge of powder and two balls in the rifle; and when Joel had rammed down the last wad in the musket eight fingers' length of the ramrod stuck up above the muzzle.

"Great Scott, she'll kick worse than a mule!" Joel exclaimed, as he looked at the protruding ramrod. "But I don't care. Big Ben is worth it. Now, come on and I'll tell you how I found Big Ben's den and the way I've planned to kill him," and he started off down the road which led to the great woods north of the house. I walked close by his side so that I could catch every word he said.

"You know father sent me to town afoot last Saturday after that letter he's expecting," Joel began. "Well, when I started home it was a little late, so I cut across through the north woods. I could save nearly a mile and a half by doing this. Spike river runs through

these woods, and after a while I came to where it makes a bend called the Neck. It's a wild and lonesome place; and on the north bank of the Neck is a pile of huge rocks so steep that nobody can climb them. A long time ago a great pine tree that grew from the top of the rocks fell down in such a way that the top of the trunk is in the middle of the river and the butt high up on the rocks. top of the trunk is in the middle of the river and the butt high up on the rocks; and the only way one can get to the top where the tree grew is by climbing up the trunk from the river. When I reached this place I was a little tired, and I sat down to rest; but I hadn't been there the minutes before I heard a there five minutes before I heard a splashing in the water; and, Jiminee! there was the biggest bear I ever saw in my life wadng up the river. I knew it was Big Ben, because there was the white spot on his right side that I had heard the hunters tell about. My, but he is a whopper! I was so scared that I hardly dared breathe, and I lay perfectly still, hoping that he would go by without seeing me. When the bear got opposite the tree trunk he swam to it, and then, climbing up, disappeared among the rocks. The moment he vanished I leaped to my feet and ran. Oh, Sid, I know Big Ben's den is on the top of those rocks; and that is how the cunning old rascal has fooled the hunters so long. The dogs can't track him because he wades in the water a long ways before he reaches the trunk. At first I thought I would tell father, and then I thought that if I did, somebody else would get all the honor and glory of killing Big Ben; and I knew that father would let us go hunting soon, and then we could go to the Neck and kill Big Ben all by ourselves; and, oh, Sid, if we do we'll be the heroes of the whole county!"

"But how can we get to his den? You don't mean for us to climb the there five minutes before I heard a splashing in the water; and, Jiminee!

whole county!"

"But how can we get to his den? You don't mean for us to climb the tree trunk!" and I shuddered at the thought.

"This is my plan," and Joel stood still in his excitement. "On the south side of the Neck is a monster oak tree, with great branches that spread out over the water and almost overhang the trunk itself. We'll climb this tree, and find a good place to roost, and wait there until Big Ben comes along; and then, when good place to roost, and wait there until Big Ben comes along; and then, when he's on the trunk and almost under us and so near that we can't miss him, we'll shoot; and if we don't kill him we'll deserve to be eaten up," and Joel frowned, and looked very flerce, and a great deal braver than I, at least, felt.

Of course I could see nothing wrong with this plan, and was as excited and as hopeful over its outcome as was Joel as hopeful over its outcome as was Joel himself. But I can now remember that the nearer we came to the Neck the slower we went; and when at last we reached the great tree on the bank of the river, I am sure both of our hearts were thumping like bass drums. I know mine was. We crouched down by the side of the trunk for a few minutes, listening and not daring to speak a word above a whisper. Everything was quiet, and there was not a sign of bear. Very cautiously we climbed the tree. There was a huge branch about fifteen feet above the ground that projected out over the river. We climbed out on this limb until we were over the water, and had a clear view of the trunk of the pine had a clear view of the trunk of the pine

resting my left elbow on my other knee, took careful aim and fired. The ball struck the squirrel near the head, killing him instantly.

"Hurrah!" shouted Joel. "Do as well as that when we find Big Ben and he is ours! Now, I'm going to imagine that stump over there is Big Ben, and that the bunch of moss on it is the fur overhis heart, and I'm going to see how many Joel, scorning to take a rest, raised the heavy musket to his shoulder and fired at the bunch of moss.

We both ran to the stump and examined the moss. There were three buckshot in it, and all within a space but little larger than my hand.

"Bully shot!" I clapped Joel on the shoulder.

Joel's face flushed. "Well, I guess we do know how to shoot all right," he shallow water close to the shore until he came opposite to the trunk of the shallow water close to the shore until he came opposite to the trunk of the shallow water close to the shore until he came opposite to the trunk of the shallow water close to the shore until he came opposite to the trunk of the shallow water close to the shore until he came opposite to the trunk of the shallow water close to the shore until he came opposite to the trunk of the shallow water close to the shore until he came opposite to the trunk of the plainly hear his grunt of satisfaction as the climbed out of the water on the cli

most home and evidently very glad of it. most home and evidently very glad of it. By this time we boys were ready for him; that is, we had our guns pointed toward him; but I was so excited and my hands shook so at the sight of the monster so near to us, that I really don't believe that I took any aim at all; and I am sure that Joel was in the same condition. I glanced at him. His eyes and his mouth were wide open, and he was trying to say something. At that moment the bear paused and looked up at us.

ment the bear paused and looked up at us.

"Fl—fi—Fire!" yelled Joel, pulling the trigger of his old musket.

At the same instant I pressed the trigger of my rifle. There were two deafening reports, a roar from the bear, and something knocked me off the limb—I found out afterwards that it was the kick of my overcharged rifle—and I was tumbling headfirst into the river, followed by Joel, whose gun had served him in the same way. We were both good swimmers and we didn't care much for the water. But the bear! My head was hardly out of the water when I heard a wild yell of terror from Joel, and saw him swimming frantically toward the shore. Almost at the same moment there was an angry roar from the bear, and I saw his great black head swimming toward us, not two rods away. the bear, and I saw his great black head swimming toward us, not two rods away. Well, the way Joel and I got out of that water and climbed up the great oak tree on the bank would have surprised our most intimate friends. We did not have sense enough to remember that a bear can climb a tree quite as well as a boy can; and before we were fifteen feet up the bear was clambering up the trunk after us, growling in the most horribie and blood-curdling manner. When we were ahout forty feet from the ground, Joel, who was in the lead, clambered out on a great limb, that here branched from the main trunk, and I followed him.

The bear was not six feet behind me. For a moment bruin hesitated and then

The bear was not six feet behind me. For a moment bruin hesitated and then growling fiercely he began crawling out on the limb toward us. The branch under our combined weight shook and trembled so that we had to cling to it for dear life, while the constant approach of the bear forced us out on the limb, until at last we could go no farther.

Big Ben was now within three feet of where I sat hunched up on the shaking limb, his eyes shining blood-red and his mouth wide open—I shudder even now when I think of that great mouth, with its gleaming rows of white teeth and its long red tongue. The bear took another step toward us, and, partly raising himself on the limb, aimed a savage blow at me with one of his paws. There was a frightful crack, the limb sagged suddenly, and then a louder crack; and we were falling, but still clinging to the broken limb. I heard the bear utter a squeal of fright, and saw him crashing downward through the branches of the tree. Then there was a tremendous jar that almost wrested our hands from the limb, and our flight downward was arrested. Big Ben was now within three feet of

It was some minutes before we recov-It was some minutes before we recovered our wits sufficiently to know exactly what had happened; and then we found that the falling limb had struck crossways on two strong branches and held there a good thirty feet above the ground. With a shudder we glanced down and saw the bear lying in a huddled heap motionless on the rocks below. "Jiminee, but that was a narrow escape!" Joel exclaimed between his chattering teeth. "I wonder why our shots didn't kill the brute? He must have holes in him big enough to run our fists through, and he glared savagely down

through, and he glared savagely down

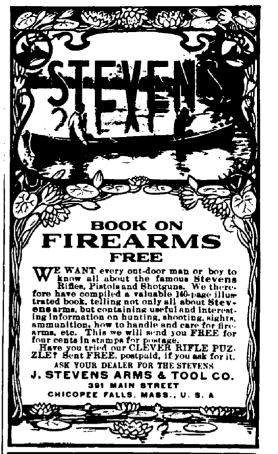

Some fifteen minutes later, after had positively assured ourselves that the bear was dead—the fall had broken his neck—we discovered the reason why his neck—we discovered the reason why Big Ben refused to be killed by our shots. My rifle balls had cut his short tail off slick and clean, and Joel's buckshot had torn off the tops of both of

Please Mention The American Boy When Answering Advertisements

with a stout line for barracuda, when a fish was hooked which at first they supposed was a shark; but immediately it rose into the air six or more feet, a glistening mass of silver, and with a vicious side swing sent the balt flying through the air. This, possibly, was the first tarpon hooked by boys.

Imagine a sardine lengthened out to six or seven feet; give it a flerce protruding lower jaw, large fiery eyes near the top of the head, three by four inch scales the lower half of which are like newly-minted silver dollars, making the animal enveloped in this armor of silver, a resplendent spectacle in the sunlight, and you have a tarpon. and you have a tarpon.

a resplendent spectacle in the sunlight, and you have a tarpon.

The tarpon has a very powerful tail, and just back of the dorsal or top fin is a long, spine-like fin; altogether the fish resembles a gigantic herring. It is a semi-tropical fish, going to the Central American coast in winter, found in large numbers about the latitude of Tampico, and in March moving north into the Guli of Mexico and up the coast of Florida on both sides, spawning at various places.

Some years ago when the tarpon had only been hooked accidentally and often grained (speared), a northern angler was so convinced that it could not be held a moment with a red had been affected to pay the appenses of any angler to Florida who would successfully land a tarpon with rod and reel and light line. This attracted the attention of anglers to the fish, and it was not long before the feat was accomplished.

From this time on tarpon fishing took its place strong the great

was accomplished.

From this time on tarpon fishing took its "last articing the great and regitimate sports. Anglers from all over the world went to Florida to take the tarpon, and hundreds of men at the various resorts became tarpon boatmen. The fish, which previously had been despised, as it was of no practical value as food, became an important factor in the interests of the State. The coming and goof the State. The coming and go-ing of the tarpon was heralded far and wide, and was the means of bringing thousands of dollars into Florida.

of bringing thousands of dollars into Florida.

As in other instances, it was not long before certain ambitious boys began to dream of taking tarpon with rods, and several attempted it. At first the loss of rods and lines was appalling. Injured and skinned fingers were common, and some boys were tipped over in their boats, and one was towed out into the breakers and nearly lost. Wonderful tales were told of the tarpon. It was known as the silver king in various sections, and fishermen off the coast of Louisiana told of its dangerous nature; how on several occasions when tarpon that had been caught in seines found themselves being dragged inshore, leaped out of water over the net, striking the men. Other tarpons had leaped into boats, one going through the bottom of a boat, sinking it. To illustrate the power of the tarpon, an instance was cited of one that leaped to the deck of a steamer, ten or twelve feet above the water.

the deck of a steamer, ten or twelve feet

above the water.
Such accounts, in many instances true, might have tended to discourage anglers, big and little, but they only served to encourage fishermen, and soon tarnons ranging up to two hundred pounds were

The migration of the tarpon is very much like that of birds. They go up the coast from Central America in vast numbers in spring, and swim along up the Texan coast. Here there is an offshore fringe of sandy islands, often eight to ten miles in length, occasionally cut by narrow openings through which the water runs into the inner hay which is six miles wide. These openings are termed passes, and several have become famous, as Pass Christian, Louisiana, and Arkansas Pass in Texas. The latter is about an eighth of a mile wide, forty feet deep in places, and has a long stone jetty on its north side, which tends forty feet deep in places, and has a long stone jetty on its north side, which tends to keep it open. The vast schools of tarpon coming up the coast enter the pass to feed on the schools of mullets which are found here, and, especially at Arkansas, afford sport that can only be appreciated by those who have enjoyed it. In a single day sixty-four tarpons, appreciation of the length have been

it. In a single day sixty-four tarpons, averaging six feet in length, have been taken here, some by boy anglers.

One spring a party went down to Arkansas Pass and a young angler determined to distinguish himself if posarkansas rass and a young angier determined to distinguish himself if possible. His father had provided him with rod, reel and lines. The rod was about seven feet long, having a short butt and long tip, with agate guides and tip. The reel, a large machine capable of holding six hundred feet of twenty-four thread line, what is known as a 10-0 Van Vleck hook, was used, and a long leader; the bait was mullet about three inches in length. The little town of Tarpon is huilt on the sand of Mustang Island, where everything depends upon the coming of the tarpon. No one goes there except to fish or shoot, and from April to October there is always a company of anglers, men, women and children, many

of whom perform prodigies of valor in landing the big tarpon.

The young angler secured a good boatman, and early one morning he was on the dock to find "Bill" tossing his net in shallow water in search of mullets for bait. These being secured, they got aboard the skiff, the angler sitting in a chair astern, while "Bill," the boatman, rowed slowly out through the pass. It was an ideal spot for fishing; the water was an ideal spot for fishing; the water was an ideal spot for fishing; the water was smooth in the pass and along the jetty, while on either side the sea broke heavily as far as the eye could reach down the coast. Once in the pass the line was tossed and unrecled until about thirty feet was out, the bait being trolled slowly along not twenty feet from the jetty. On each side the first sandy wastes of Mustang and St. Joseph's islands stretched away, upon which the sea beat and pounded, the mist and spume being caught by the stiff breeze and blown far inland.

There was something weird, perhaps uncanny, about these strange islands inhabited almost solely by crabs. But there was not much time to think, as suddenly there came a sharp tug at the line; the blood rushed from the young angler's face and left him pale and trembling.

"Give him a chance!" whispered the

angler's face and left him pale and trembling.

"Give him a chance!" whispered the boatman in a sepulchral voice.

Then came the tug again, and the boy straightened up just as he had often seen his father do; not jerking the rod, but swaying back steadily.

Then, as the boatman said later, "there was something doin!" Up into the air rose a magnificent fish, at least six feet long; a fish in an armor of silver, flashing and gleaming silvery lights from every scale. It went up and up, until it appeared to hang in the air eight feet above the water, then it swung its

WILBUR B. MOSS, THE BOY WHO MADE A RECORD

powerful tail until it almost touched its head, its big gills opened, wide, red and gleaming, then it dropped, hurling aloft

gleaming, then it dropped, hurling aloft a column of water, and disappeared amid the loud notes of the reel and the victorious shout of the boatman.

There was no holding such a fish, no stopping such a leaper, and the angler bent his entire strength upon the thurb brake, which only made the reel sound a deeper plaint. The line seemed to be literally torn from the reel until one hundred feet had gone, then into the air went the tarpon, nearly throwing a back somersult to repeat the leat several went the tarpon, nearly throwing a back somersault, to repeat the leap several times until it was entirely across the little channel, when it sounded and rushed out successfully taking another one hundred feet.

one hundred feet.

All this time the angler was pressing the reel, holding it with all his power, endeavoring to find an opportunity to turn the crank, while the boatman was backing the boat after the fish. What splendld sport it was! What excitement! How the chills ran up and down the young angler's back! How his lingers and arms trembled! How quick his breath came, and how it almost went! But in a few moments he "pulled himself together," overcoming the excitement consequent upon the first rush, and with his rod butt firmly fixed in the leather cap, his feet braced on the stern seat, his eye on the tip of the rod, he was ready to match himself against the ready to match himself against the game. The moment the fish stopped

was ready to match himself against the big game. The moment the fish stopped leaping he began to turn the reel, and as the boatman was pushing him astern he soon gained ten feet, though the tip of the rod was bent to the danger point all the time. Again the tarpon leaped into the air and lashed it, turned over, fell, then dashed out of the channel, dragging the boat slowly behind.

Fifteen minutes slipped away in this manner and the young angler's muscles were weary with the tremendous strain. The tarpon now rushed across the submerged part of the jetty, leaping three or four times, and apparently making for the surf; so the boatman rowed against it and the boy held hard. Would the delicate rod and line stand the strain? That it would was presently evident, for he began to gain line, and, hurrah! it came in as fast as he hurrah! it came in as fast as he could reel.

"Give it to him," said the boatman; "you've got him on the run."

How the boy recled! IIIs hand fairly

flew as he garnered the precious line that brought him so much nearer the prize. Again the tarpon leaped, now hardly clearing the water, and the boatman rushed the skiff astern, calling on the boy for the last spurt. The tarpon was quickly brought alongside, where it made a splendid leap, shaking its savagned so near the boat that it appeared to be coming aboard. Another turn and the boatman grasped the double part of the line above the leader, held it, and put a bullet into the tarpon's neck, fortunately severing the spinal cord; then

put a bullet into the tarpon's neck, fortunately severing the spinal cord; then he slowly dragged it in. The young angler raised his hat and shouted aloud. What a fish it was! Six feet one inch, a mass of molten silver, weighing possibly one hundred and fifty pounds, yet caught with a twenty-four thread line! Such an experience had Wilbur B. Moss, son of Dr. Robert E. Moss, of San Antonio, Texas, who, the summer he was twelve years of age, took four tarpon; one six feet one inch; one four feet six inches; one four feet two inches, and one five feet six inches—a record which stands in the United States for boys of that age.

### Boys' Books Reviewed

SPORTSMAN JOE, by Edwyn Sandys. The delight in reading "Trapper Jim" will be only increased in perusing "Sportsman Joe." Mr. Sandys has good materials and handles them in Sanlys has good materials and handles them in true workmanlike style, and there isn't a boy in America, and for that matter, mighty few grown-ups, who would not rather have been with Joe Emmons and "Big Bart Monroe" in their trip through Canada and the North West in the Rolling Tepee than anywhere else in the world. Fishing, hunting, shooting, trapping, climbing mountains, and instruct in in all the art and science of life in the great out-of-doors are set forth in most fascinating and alluring fashion. Wood lore, and the habits and nature of the denizens of forest and are depicted by a master hand, and the lessons of self-reliance, endurance and true sportsmanlike methods will not be lost upon the delighted reader. The full page half-tones and the numerous atchings are by J. M. Gleeson and C. W. Pancoast, 338 pages. Price \$1.50. The Macmillan Co.

Macmillan Co.

STORIES OF DISCOVERY, as told by Discoverers, by Edward E. Hale. This popular book for young people has been revised and made more interesting by the addition of many illustrations which will greatly heighten it in interest and instruction. Among the Discoverers whose deeds are recorded are: Columbus, Vasco Da Gama, Sir Francis Drake, Captain John Smith and Pocahontas and many otherk. A first class book for boys. The index will be found useful. 290 pages. Price \$1.25. Little, Brown & Co.

THE MINUTE BOYS OF THE GREEN THE MINUTE BOYS OF THE GREEN MOUNTAINS, by James Otis. The period of the Revolutionary War has formed a never-failing theme for the story writer. Mr. Otis has written of the events of 1777 and has made a story that will interest and delight the boys. There are excitement and adventures to satisfy the utmost craving of the reader in these directions, and the historical information the book contains adds to its interest. A Burnham Shute has some fine fillustrations. 350 pages. Price \$1.25. Dana, Estes & Co.

Dana, Estes & Co.

THE PATHFINDERS OF THE WEST, by Agnes C. Laut. Miss Laut has by this work forged a most important link in the chain of the history of an important portion of the North American continent, that of the Great Northwest. This is history, true history, yet reading like fiction. The life of Pierre Esprit Radisson—at least all of which there is any record from the time when as a boy of from the time when, as a boy of seventeen he was taken captive by the Iroquois Indians was one of daring, courage and endurance. His career as explorer, fighter and exile is a veritable romance. Other pathfinders whose deeds Miss Laut abiy received area. La Vernedrica 1922 1922 1922

finders whose deeds Miss Laut ably records are: La Verendrye, Hearne, MacKenzie and Lewis and Clark. The book shows much study and persistent research, and with the coplous index at the end makes a most valuable addition to our knowledge. The pages are embellished with many fine illustrations, and the mechanical workmanship leaves nothing to be desired. 380 pages. Price \$2.00. The Macmillan Co.

ship leaves nothing to be desired. 30 pages. Price \$2.00. The Macmillan Co. COMEDIES AND LEGENDS FOR MARION-ETTES, a theater for boys and girls, by George and Goddard King. To the parents who wish to provide home amusements for their children and thus keep them indoors evenings, as well as to the boys and girls who love private theatricals, this book will provide ample instructions. It tells all about the making and working of a doll's theater, with complete information as to operating, making and clothing the puppets. The illustrations are very funny and we are mire that the boys and girls who will learn any of the legends, comedies or pantomimes given in the book, which are all good and full of jolly good fun, and follow the directions for manipulating the puppets, which is done by means of wires, will provide an endless fund of amusement for themselves and their friends. The illustrations are by Anna R. Giles. 203 pages. Price, \$1.25. The Macmillan Co.

by Mary P. Wells Smith. This volume commences the "Old Deerfield Series" of stories of the days long before the Revolution, when the French and Indians were enemies and the English were allies of the settlers. Mrs. Smith has written a story portraying in vivid language the dangers, privations, endurance and courage of the American boys of long ago in their struggles with the wilderness, wild animals and the savage Indians. The accurately historical setting of the work, showing most painstaking care, and the lively, stirring imagination of the writer has produced a book which fully sustains Mrs Smith's reputation as a pleasing and instructive writer of books for young people; and even the grownups may profit in the reading. Handsomely illustrated by L. J. Bridgman. 304 pages. Price, \$1.25. Little, Brown & Co. THE BOY CAPTIVE OF OLD DEERFIELD.

S THERE A SANTA CLAUS? by Jacob A. Rils. Mr. Rils answers this question in his usual masterly, convincing way, and his answer will make the reader a more lervent believer in the benevolent Christmas spirit hellever in the benevolent Christmas spirit than ever. As in his other books, the author draws all of his illustrations from the experiences of everyday life. To further his arguments as to the existence of Santa Claus, Mr. Rils tells a story of President Roosevelt which is most appropriate. The little book is very nicely gotten up and the illustrations enhance the pleasure of reading. 29 pages. Price, 75 cents. The Macmillan Co.

ROULETTE, a form of separation by hyphen holes instead of round holes.

Do not paste stamps down tight in your album, for doing so depreciates the value greatly from

holes instead of round holes.

Do not paste stamps down tight in your alhum, for doing so depreciates the value greatly from a financial standpoint.

Other forms of separation are Pin Perforated, holes made by sharp pointed pins; PERC'E EN ARC, cuts made in form of a semi-circle or curved; PERC'E EN SCIB, or zig-zagged cuts.

PAPER is of various kinds, such as LAID, showing lines vertical or horizontal; WOVE has no lines; BATONNE has laid lines crossing each other, forming little squarres; RIBBED show lines raised above the paper as if embossed.

Buy your stamps from a liberal firm, who have a reputation to maintain and who have sufficient experience to know the difference between counterfelt stamps, reprints, etc., and who circulate only guaranteed genuine stamps.

Terms of various printing are 1st, ENGRAV-ING, a print from engraved plates; 2nd, TYPO-GRAPHED, a print from electrotype or stereotype plates; 3rd, LITHOGRAPHED, a print from stone: 4th, EMBOSSING, a print or impression in relief or raised above the surface of the paper.

According to "Universal Standard Catalogue of the Postage Stamps of the World," the total number of all known varieties of postage stamps issued by all the governments of the world up to the present time is 19,242. Of this number 205 have been issued in Great Britain, and 5.711 in the various British colonies and protectorates, leaving 13,326 for the rest of the world. Dividing the total among the continents, Europe issued 4,089; Asia, 3,628; Africa, 4,005; America, including West Indies, 6,095; and Oceania, 1,435. Salvador has issued more varieties of postage stamps than any other country, numbering over 450; Poland and Wadhwan have each found a solitary specimen sufficient for their postal needs.

### Stamp Notes

Uganda.—A strip of three of the 2½a of the British East Africa stamps have been discovered with the double surcharge in red.
Salvador.—The Zc Rose of the 1900 issue, surcharged "Franqueo Official" in an oval has been discovered with the surcharge inverted.
Thousands of letters, packages, newspapers, etc., addressed merely in care of the "St. Louis World's Fair," await their owners in the U.S. government building at the fair. The weight of the unclaimed mail amounts up into tons.

The weight of the unclaimed mail amounts up into tons.

China has still the old system of delivering mail. Small postoffices are zcattered through each town. When a Chinaman desires to mail a letter he goes to one of these shops and argues with the proprietor. If successful he pays about two-thirds of the amount, leaving the receiver to pay the other one-third upon the receiver.

the receiver to pay the other one-third upon the receipt.

A very good book on stamps is the A. B. C. of Postage Stamps, by Fred Melville, of London, Eng. Its title gives a collector exactly what the book contains, starting from the very beginning, telling what hobbies are. Philatelics, etc., what histories are contained in postage stamps, giving a very good description of reprints and remainders, also devotes a chapter to conterfeits and fakes, besides many other very good points which stamp collectors should know.

Whenever envelopes or wrappers are sold at a postoffice singly or in odd quantities, the fraction of a cent come from the purchaser. To the present time these fractions, which amount annually it is estimated to about \$100,000 for the whole country, have been retained by postmaxters and used to counterbalance possible errors in making change at stamp windows. The department has now issued an order requiring postmaxters to make returns of these sums, just as in the case of other postal revenues. More off the deficit. returns of these sums, just as in the case other postal revenues. More off the deficit.

The one with the legend "Brodrafolkens Dal," is from Sweden.—Everet Holmes: Your rubbing is from a common 4 reals of Spain, 1805. Age does not give a coin value. These old Spancoes not give a coin value. These old Spanish sliver coins were issued in enormous quantitles for use in the Spanish colonies in America and it is doubtful if they ever become scarce.—Kenneth English: Only the 1856 flying eagle cent is rare. The others are common. It was a printer's error.—G. I. J.: The dealers charge sixty-five cents for an 1838 dime without stars. Half cent of 1825, fifteen cents. Others common.—Earl Smith: A gold half dollar of 1871, in good condition, is worth about \$1.50. Others common.—Ralph Diotler: The 1853 three-cent sliver piece sells for fifteen cents. Fractional currency will not bring a premium unless in perfect condition. The Missouri Defense Bonds come in different denominations from 1 to 100 dollars. They may be purchased as curios at from ten to twenty-five cents each. 1849 cent, if in good condition, ten cents.—C. Johnson: All gold dollars bring a premium, selling at from \$1.50 upwards according to scarcity of issue. A fine 1885 three-dollar piece sells at the dealers for \$5.00. We know nothing about a quarter "kobo" coin of Palestine. Your others as far as we can determine from your letter, are only worth face value.—S. John McCarthy: (1) Canada, Bank Token. (2) German token, which we presume to be brass, (3 and 4) common German pfennings. (5) Denmark, 1 ore. These pieces are all quite common as are the U. S. coins you mention.—Branson Tharp: There is no premium on the 1884 or 1894 silver dollars. Over thirteen million of the first were issued and some over three million of the latter date.—Jean Roberts: 1849 cent, ten cents, Spanish 2 reals, 1777, common. Canada "bouquet token" also quite common.—R. H. Jenness: Your rubbing is from a Jackson cent or "Hard Times" Token. The inscription "Millions for Defense, Not One Cent for Tribute." has been referred to before in these columns.—Herman Burley: Your drawlings are all from very common U. S. coins.—John Arneson: (1) Ne'herlands. (2) France, Louis XV. (3) Saxony, 1845. You do not state size or condition of these pieces so it is ish silver coins were issued in enormous quantitles for use in the Spanish colonies in America and it is doubtful if they ever become See answer to P. S. Salisbury.—Joe Graham: A good 1819 quarter dollar should be worth a dollar and a half. There are two varieties: large and small 9. The large 9 is worth more.—C. J. Leland: The government authorised a coinage of 25.028 gold dollars in 1904 in commemoration of the Lewis and Clark Exposition at Portland, Oregon, that is to be held this year. We believe the pieces are held at \$2.00 each.—Merrill Manker: The 1851 gold dollar is worth \$1.50. No premium on the quarter eagle of 1852.—Arthur Dawson: (1 and 6) Common Chinese cash. (2, 3, 4 and 5) coins of Turkey. last one of Morocco a province of Turkey. (7) England, shilling of Victoria. These coins are all common still interesting pieces.—Richard Green: The legend so often seen on English coins, "Honi soit qui mal y pense," is French, and means "Evil to him who evil thinks."—Roy N. Hinds: The coin of which you inquire is usually classed as a "Hard Times" token and is common. The legend on the coin, "Millions for Defence but not one cent for Tribute." is a quotation from Charles Cotesworth Pinckney, our Minister to France in 1796, and has reference to that time when this country did pay tribute to the Barbary pirates of North Africa.—N. Douglas Foshay: You will not be able to get a premium on any of the coins you mention.—C. B. Simrell: The cent of 1811, if in good condition, should be worth \$1.50.—Alex. Truitt: The 1827 half dollar sells for seventy-five cents. There are two varieties of this date—straight base 2 and curled base 2—yours is the former.—Eugene T. McCoy: Your coin is an Upper Canada haif-penny token of 1818. It is often called the Brock half-penny. There are at least six varieties and they sell for from ten to twenty-five cents each.—Earl E. Charles: Your rubbing is from a 2 real Spanish silver coin struck in the City of Mexico in 1773. It is common.—Frank Sjostrom: Your drawing is from a small silver coin of Adolph Frederick of Sweden, 1783. It is not a rese coin in this country, and to bring a premium worth mentioning it should be in

coin is in fine condition.

T. L. ELDER, 82 East 23d St., N. Y. City.

### THE NUMISMATIST

\$1.00 PER ANNUM

The only illustrated monthly magazine devoted to coin and their collecting published on the American continent. Official journal of THE AMERICAN NUMISMATIST ASSOCIATION.

Special offers to American Boy readers.

I. The Numismatist one year, and foreign coins to the value of one dollar, on receipt of \$1.00 plus 10c for

postuge.

1. Six months trial subscription on receipt of 25 cents.

11. Sample copies on receipt of ten cents—none free. Address, The Numismatist, Monroe, Mich.

\$5.75 PAID FCR BARE 1853 QUARTERS; \$4 paid for 1804 dimes; \$15 paid for 1858 dollars; hig prices paid for hundreds of other dates; keep all money coined before 1878 and send 10 cents at once for a set of two coin and stamp value books. It may mean a fortune to you. Address C. F. GLARKE, Agent, LaRoy, N. Y. Dept. H.

HOUSE IN CLEVELAND, WHERE VICE PRESIDENT FAIRBANKS LIVED WHEN STUDYING LAW

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize pnotographs in any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, and the full name and address of the contestant, who in every case must be the artist who took the interest the contestant. address of the contestant, who in every case must be the artist who took the picture.

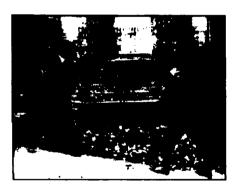

### Get Ready

Now is the time to prepare for spring camera work. Overhaul your camera and make sure that it is in good condition. Wipe out the bellows with a moist (not wet) cloth and make sure that they do not leak light. Insert a plate-holder, draw your slide halfway and leave it in that position fifteen or twenty minutes. Upon development, there will be a sharply defined line in the center of the plate, if the camera is not impervious to light. Remove the dust from your plate-holders, carefully polish the lens, and examine the shutter.

THE EDITOR.

### The Letter-Box

Geo. T. Sanders, Detroit—The so-called pinholes on negatives are due to particles of dust. You will experience no further trouble in that respect, if you will dust your plates, with a soft camels-hair brush, before you insert them in the plate-holders. F. G. Mc-Culloch, Clarksville, Tex.—For blue-black tones on gelatino-chlorise papers Liesegang advises: water, 25 ounces; sulphocyanide of ammonium, 1 ounce, and phosphate of soda. 1 ource A few hours before toning add to

"READY FOR ALL COMERS"

10 ounces of this solution a solution of 5 grains of chloride of gold in 1 ounce of water. After this bath has been used, add some more of the gold solution; it can then be used again. Sulphocyanide of ammonium is a poison that should be used with care. Altogether, we believe you will find it more ratisfactory to use platinum paper, when you want a platinum effect. John Cosner, Meina, Neb.—Unmounted. F. E. Ferguson, Van Wert, O.—Your question concerning comparative time of lenses is not stated correctly, but even if it were, I cannot give up valuable space to mathematical calculations. The Anastigmat is considered a very good lens. Allan Hovey, Hilton, N. Y.—A rectilinear lens is that form of objective which will give images of parallel lines in all parts of the picture without distortion. A doublet lens is said to be symmetrical when both combinations are precisely alike and possess the same optical properties. A rapid rectilinear is usually preferred. A fairly good camera might be purchased for the amount you mention. No, a mounted photograph does not stand more of a chance. It will not injure a photographic print to wet it, after it has been dried, previous to mounting. John W. Hudson, Davenport, Cal.—Brownie camera prints are at a disadvantage in our contests on account of their small size. J. E. Guest, Island Pohd, Vt.—I should prefer the regular velox. As regards coloring prints, you'll have to do a bit of experimenting, I can give you Island Pond, Vt.—I should prefer the regular velox. As regards coloring prints, you'll have to do a bit of experimenting; I can give you no information beyond that cited in the article referred to. Hugh A. Fargo, Buffalo. N. Y.—I must frankly confess that I cannot answer your question. Perhaps some of our readers can. It is herewith submitted to them: Kindly inform me how to strip the paper from the film of a print, after pasting it face down on the glass? What is the best kind of adhesive fluid to use? Edward M. Underhill—I. There is no difference. 2. The Seed 27 sensitometer is about as fast as any 3. Never heard of it. 4. Yes.

### Current Comments

Joe W. Leedom, Osmond, Neb - You have Joe W. Leedom, Osmond, Neb —You have already pointed out one defect in the picture What about the prominence of the lady's hands? With a little practice, you will be able to do good work. Perry N. Track, Silver Creek, N. Y.—Probably the reason we do not receive floral photographs worthy of reproduction is because flower photography is not quite as easy as it is commonly supposed to be. The defects in your pictures are due to a lack of detail in the shadows. If you had

Photo by Willis E. Elliott, Buffalo, N. Y.

photographed a few roces loosely placed upon the table, you would have been more success-ful, as every outline of flower, stem and leaf would have been discernible against the light background. O. R. Read, Philadelphia—Yes, it is a great curiosity, but it would be impos-sible to tell from your photograph whether the calf has five legs or four. Why not merely photograph the fore legs?

high standard the doctor established when he first took charge. New York: Am. Photographic Publishing Co. which he permitted himself; and we also give a reduced fac-simile of a portion of one of his own compositions.

### Something New in Color Photography

The Solgram Color-Photo Company, of Downington, Chester County, Pa., is erecting a fine stone building to be equipped with the most approved machinery for the treatment of their specially prepared paper by which photographs can be taken in the colors of nature. The display of beautiful pictures at the St. Louis Exposition proved beyond a doubt that photographing in colors had actually come to pass. The award of the grand prize to the inventor was a recognition never before accorded anyone claiming to have attained this result. The Solgram Color-Photo Company are preparing a very interesting booklet on the subject and will send it to anyone of our readers who writes for it.

### A Boy Musician

(Continued from page 184.)

(Continued from page 184.)
home I have a model theater which interests me. It is splendidly fitted up. There are two boxes of scenery and two curtains, and now and then I give performances of "Tannhauser" and "Hansel" and "Gretel," and other operas. I get someone to play the piano while I manipulate the figures and deliver the words. I went to see the "Tempest" at His Majesty's Theater the other day, and I found that I could do the piece on my stage. Mountaineering I am also keen on. When I was nine I did a climb of nine thousand feet in the region of Mont Blanc.

"Music, of course, is what I love, and, as a rule, I would sooner sit down and compose or play the plano than do anything else; but you must not conclude that boys' recreations don't amuse me. I have a grand railway train with a steam locomotive and a set of rails, and switches and turn-tables and things. This was a gift from the Prince of Liechtenstein. Then I have a library of twelve hundred volumes, every one of which was presented to me. I treasure books. I've written one myself; it dealt with curious animals. I've had a lot of pet animals. One was a lizard."

"What pocket-money do you allow yourself?"

"Every penny that I make is pocket-"Music, of course, is what I love, and,

"Every penny that I make is pocket-money. I bought my Stradivarius violin out of my earnings. It cost sixteen hundred pounds (eight thousand dol-lars). I won't accept money from any-body."

"You're very independent, Florizel,"
observed Madame von Reuter.
"I should think so," returned the prod-

igy. "What is your main ambition?" I

"What is your main ambition?" I asked.
"My ambition is to become a great conductor, a great violinist, and a great composer. I wish to be able to compose operas like Wagner's."
"What pleases you most—violin playing, conducting, or composing?"
"They all please me, but at present I prefer the violin."
"Isn't it a trifle strange to you to control a large orchestra consisting in part

"Isn't it a trifle strange to you to control a large orchestra consisting in part of hald-headed men who are old enough to be your grandfather?"

"It is not strange in the slightest. I am accustomed to it. And it is no more difficult to direct an orchestra of eighty men than it is to lead one of thirty, provided that they are all talented musicians."

You must have gone to school pretty

"I have never been to school. I have been educated privately at home, and since I was ten I have been touring Europe, giving recitals in the principal cities."

Honorable Mention

The number of good photographs submitted this month is so unusually large, that it would detract from the meri, of the distinction to publish all the names. Therefore, the Roll of Honor is emitted.

The American Amateur Photographer

Under the able editorial management of Dr.

John Nicol this picneer among amateur photographic publications is still up to the light standard the doctor established when he first took charges. When we have the content of the principal cities."

As it was now growing late and the boy had a score of music before him and a pencil in his hand, I left him to his own devices. On the morrow he was due at Bath, and on the following day he had to be in London again to conduct at St. James's Hall. A busier lad does not exist. Some months ago Queen Alexandra invited him to have afternoon teams with her at Buckingham Palace, and he actually had to decline the honor because his orchestra was waiting for him!

The picture of an orchestra reproduced on this page was drawn by Florizel von Reuter during a few hours of leisure which he permitted himself and management of the principal cities."

### Innocence of the Heron

"The heron is becoming scarcer each "The heron is becoming scarcer each summer season about the marshes and lake shores," said an old-time hunter. "I remember drawing a bead on one while it was displaying its delicacy and elegance of attitude, together with its majesty and graceful playfulness in all its movements, and I refrained from firing at it.

its movements, and I refrained from firing at it.

"The innocence of this water fowl respecting danger is exceptionally noticeable, and when it skips in the shallow water, striking at fish with its long, sharp-pointed bill, it is directed by a keen watchfulness. The heron is the most beautiful of all the waders, and is said to be held sacred by the African tribes; should one happen to be killed, even by accident, a calf or young cow must be slaughtered as an atonement.—Times-Democrat.

"REFL**ECTI**ONS" Made by fointing the Camera at a Mirror. By Peter C. Whyte, 16 Seventh Ave., Carbondale, Pa.

### Few Bad Fathers Among Birds

Bad fathers are rare among birds. Unsually the male rivals his mate in love for their children. The carrier pigeon—in fact, so do nearly all birds—feeds his mate while she is on the nest. More than that, the crow, the most dismal of all birds, often sits on the eggs in the nest in order that Mrs. Crow may have an hour or so of relaxation.

may have an hour or so of relaxation and gossip among the other Mrs. Crows of her acquaintance. The blue marten, the black-coated gull, the great blue heron and the black vulture all do the same.—Louisville Post.

By Archie M. Goshring, Key West, Pla.

A "BUCE DANCE"

# The Boy Mechanic and Electrician

A Permanent Department

Questions relating to Mechanics and Electricity will, so far as space permits and where asted by boys, be answered in these columns.

Edited by Robt. G. Griswold

steps.

We will make a great deal of apparatus that will not be difficult, and when we begin to make instruments, they will be practical, useful, and while quite simple, as pleasing to the eye as and it remains on the surface of the wax as a charge.

Rub the glass and rubber rods, and also the resin in the same way and notice that they behave in exactly the same manner.

You can try a number of substances and find that they are all influenced by quite simple, as pleasing to the eye as quite simple, as pleasing to the eye as ROBERT G. GRISWOLD.

Experimental Lessons In

Electricity

Dear American Boys:

I have no doubt whatever that the most of you are interested in electricity and would like to know a great deal about it. You would undoubtedly like to have your own electrical laboratory and fill it with batteries, bells, motors and other apparatus of your own construction.

And you can do it work a great leading wax. Balance the vane on the plece of sealing wax. Balance the vane on the plece of apparatus is complete.

Secure for these experiments a stick of sealing wax, a glass rod, a rubber penholder or ruler (a comb will answer), a plece of resin, and a piece each of brass, iron and copper wire, about one-eighth of an inch in diameter and eight inches in length. You will also want a piece of slik, as a handkerchief, a piece of flannel, and it possible a piece of fur. Some bits of issue paper (about one-eighth inch square) and a little bran will complete the list of materials needed.

EXPERIMENT 1, Place the whirling

and other apparatus of your own construction.

And you can do it very easily if you follow this series of lessons and make all the apparatus that will be described under each division. To learn a science in the language of experiment is to learn it well. All of the lessons that follow are progressive and the experiments teach one principle after another, so that future experiments that would now seem hard will be led up to in easy steps.

And you can do it very easily if you terials needed.

EXPERIMENT 1. Place the whirling vane on a level table and see that it moves casely. Bring one end of the stick of wax close to one of the paper vanes and notice that it has no effect on it. Now rub the stick of wax with the plece of silk quite briskly for a second or so, and then bring it near one of the paper vanes. You see that the wax now attracts the paper vane and will cause it to follow it completely around a circle. This is a new property that it dld not possess before, and is due to the frictional electricity that is generated by the friction of the silk on the wax, as a charge.

EXPERIMENT 2. Rub the brass, iron and copper wires with the different cloths

EXPERIMENT 6. Make a small stirrup of wire like that shown in Fig. 3 and suspend by the silk thread from the hook as in Fig. 4. Break the glass rod in halves (or better still, procure another similar rod) and after rubbing one of the pieces with the silk, hang it in the stirrup. Then rub the remaining piece with the silk and bring it near the suspended piece. Immediately the two repel each other and the suspended rod will rotate in its efforts to get as far as possible from the other.

EXPERIMENT 7. Rub the rubber pen-

diately the two repel each other and the suspended rod will rotate in its efforts to get as far as possible from the other.

EXPERIMENT 7. Rub the rubber penholder with the silk and present it to one end of the suspended glass rod, which must also be rubbed with the silk as before. Notice now that they attract each other.

We evidently have two different conditions of electricity residing upon the surfaces of the glass and rubber rods, as both of them have been rubbed with the silk and in the case of the two glass rods, it is very plain that the charges upon each piece must have been the same in nature, and we also notice that they repelled each other. But when the rubber rod was rubbed with the silk and presented to the glass rod, there was an attraction between them, which would lead us to suppose that the charges in this case were not alike, and we will find out later that they are not.

These two opposits conditions are called positive and negative to distinguish them apart, and when writing about them, or otherwise indicating them, the positive condition is indicated by the plus (+) sign, while the negative condition is indicated by the minus (-) sign. Do not misunderstand these signs to mean a difference in quantity, because the present state of the science has not yet proven which state is the greater.

In the following list is a number of substances, arranged in such an order that if any two of them are rubbed together the one standing carliest in the series becomes positively electrified, while the one standing later is negatively electrified:

Fur,

Wool,

Ivory,

Wool, Ivory, Glass, Glass,
Silk,
Metals,
Sulphur,
India-rubber,
Gutta percha, Collodion Celluloid.

Collodion,
Celluloid.

EXPERIMENT 8. Sprinkle the small bits of paper or bran in a small circle on a table and hold one end of an electrified rod over them as in Fig. 5. They will immediately jump from the table to the rod, remain there a second, and then fly away from it suddenly; as soon as they touch the table they will again jump to the rod, and so on, keeping up a very lively dance.

This action is due to the fact that they become charged upon contact with the rod, with electricity of the same character as that on the rod, and as we have learned above, these two states repel each other. But as soon as they touch the table they are instantly discnarged when the rod attracts them to it again. This action continues until the rod loses its charge. In some electric machines this principle is used to make small images of men and women, cut from pith, dance up and down between two facing metal plates, the upper one being connected with the machine, and the under one with the ground.

The exact meaning of the word "charge" can now be readily understood. It refers to the quantity of electrification of either kind produced by friction or other means upon the surface of a body. These charges may be large or small, and of opposite character (+ or -). When the electricity is removed from a body by contact with another it is said to be "discharged."

EXPERIMENT 9. Rub the wax rod with the flannel and bring it near one of the

is removed from a body by contact with another it is said to be "discharged."

EXPERIMENT 9. Rub the wax rod with the flannel and bring it near one of the vanes of the whirl, but not close enough to touch it. It attracts the vane. Now touch the wax rod to the wall or floor for a few seconds, or better still, some metallic object as a stove, rubbing it about so that the entire surface may come in contact with the metal or wall, and then bring near the vane. No attraction now exists between the two as the electricity on the wax has been discharged, or passed from the wax into the wall or stove.

Good conductors (generally the metals) are instantly discharged by coming in contact with the hand or any other conductor in contact with the ground. A nonconductor (glass, rubber) may be readly discharged by passing it through the flame of a candle or alcohol lamp. The hot gases carry the charge off and dissipate it in the air.

The ready detection of small charges, too feebic to affect the whirl, may be easily made by the use of a gold-lear electrometric for measuring stating and we will and we will and we will and the price of the charge on and dissipate it in the air.

The ready detection of small charges, too feebic to affect the whirl, may be easily made by the use of a gold-lear electrometric conductor on the second (an instrument for measuring stating stating to the charge on and we will second the conductor of the charge of a gold-lear electrometric conductor of the charge of the char

feeble to affect the whirl, may be easily made by the use of a gold-leaf electroscope (an instrument for measuring statical charges) like that shown in Fig. 6. scope (an instrument for measuring statical charges) like that shown in Fig. 6. Secure from a druggist a six or eight ounce wide mouthed bottle of clear glass, and clean it thoroughly. Pass a brass or copper wire through the cork, which has been soaked in melted wax (paraffin) and bend the inside end into a flat hook; the outside end is bent into a ring. Then get at some paint store or from some painter a strip of gold leaf one-eighth inch wide and four inches long. This material is so very delicate that you will have to handle it carefully and only with a camel's hair trace that you will have to handle it carefully and only with a camel's hair brush. Do not touch it with the fingers. Hang this strip over the hook so that an equal length hangs down on either side.

This electroscope is so delicate that it

will indicate the charge on the chips falling from the sharpening of a lead pencil, upon the wire loop.

EXPERIMENT 10. Be sure that the jar is dry and clean—no dust on the cork. Electrify the glass rod and bring it into contact with the ring. Note how the leaves diverge, even before the rod has touched the wire. Try the other materials in a similar manner. To discharge the leaves at the contact with the finger or simply touch the loop with the finger or

a wire.

This tendency of the leaves to fly apart is due to their being similarly electrified, causing them to repel each other.

causing them to repel each other.

EXPERIMENT 11. Place four tumblers on the floor with a board on top of them. Stand upon this insulated stool and ask someone to strike you briskly with a slik handkerchief, or stroke you with a clothestrush. Then touch the loop with your finger and notice how strongly you have been electrified.

whirling or circular motion creating the effect known as "magnetism" and that of rapid oscillation, or moving to and fro, known as "waves." These will be taken up in later lessons.

Now frictional electricity makes itself known principally through the effects of "attraction" and "repulsion," and in order

"attraction" and "repulsion," and in order that this effect may be made visible to our minds through the eyes, we will make the simple whirling vane shown in Fig. 1.

The base a is a piece of wood about two inches square with a sewing needle b driven through its center to form a pivot upon which the vane turns. Select from a sheaf of wheat or rye straw, several straight, long and perfect straws. From one of them cut the piece a twelve inches straight, long and perfect straws. From one of them cut the piece c twelve inches in length, and in cutting use a very keen, sharp knife so that the straw will not be crushed and broken at the ends. Cut the two vanes d and e from white writing paper and fasten them to the ends with a drop of sealing wax or glue. Then cut from one of the joints in the straw the piece f. The joints look similar to h and have no hole through them, and the cut should be made at the spot marked k so that the hard diaphragm will form a bearing for the point of the needle as at i. Lay the piece flat on a board and fasten

LESSON I.

STATIC, or FRICTIONAL ELECTRICITY.

ILEN YOU ask the question, "What is electricity?" the only possible answer is, "It is not known." We merely know that whatever it may be, all that can be learned about it is through its effects upon matter of different kinds. In itself, it does not affect any one of our five senses as other things do but it does have a direct effect upon our its essenses as other things do but it does have a direct effect upon our force, as you have a direct effect upon our force, as you have a direct effect upon our its essenses as other things do but it does have a direct effect upon our force, as you have a direct effect upon our force, as you have a direct effect upon our force, as you have a direct effect upon our force, as you have a direct effect upon our force, as you have a direct effect upon our force, as you have a direct effect upon our force, as you have a direct effect upon our force, as you have a direct effect upon our force, as you have a direct effect upon our force, as you have a first provided in the first instance, because the following induction coil.

In other words, it is invisible, possesses no odimensions of which we are aware. It cannot be destroyed and is neither mattern or energy the same, although it makes itself known in four different ways. The effects of electricity when standing still are different from those when it is in motion, so when it is at rest we speak of it as "stantical" from the when left you have the same, although it makes itself known it is at rest we speak of it as "stantical" from the when left you have the provided with the same as when it is used to denote the "charging of electricity," on the whole of the provided with the whole of the provided with the provided w

EXPERIMENT 5. Suspend the two pith balls from the hook and touch them both at the same time with the electrified glass rod. As soon as they are repelled by the rod, remove it and notice how they repel each other, coming together very slowly as the charges are dissipated in the air. These experiments teach two facts: First, that a charge of electricity may be transferred from one object to another by actual contact through the medium of induction, and, second, that the charge thus given by

and, second, that the charge thus given by one electrified body to another unelectri-fied body caused the two to repel each

away from it.

The ball in coming in contact with the electrified wax was given a charge of electricity similar in character. The process of transferring this charge from one body to another is called "induction"; in other words, the wax rod induced an electrified condition upon the surface of the ball exactly similar to that that would have been obtained had the ball itself been rubbed. But the experiment has taught that the charge imparted to the ball caused it to be repelled by the wax.

EXPERIMENT 4. Suspend the feather

EXPERIMENT 4. Suspend the feather from the hook and try the same operations as in experiment 3. and note how very much farther the feather is hell away from the wax by this repulsion.

EXPERIMENT 5. Suspend the two pith hells from the hook and touch them beth

SENDING

MESSAGE

This electroscope may be used to determine the nature of a charge, as to whether it is positive or negative. In testing any unknown charge, first electrify the leaves by presenting the glass rod rubbed with silk to the loop: The charge on the glass and that imparted to the leaves is positive (+). Then bring the electrified body near the loop, and if the leaves diverge or fly apart still farther, the body is charged with positive electricity, while if the leaves come together the charge is negative. In the latter case the negative charge neutralizes the positive charge.

EXPERIMENT 12. Place a sheet of writ-

EXPERIMENT 12. Place a sheet of writing paper on a table and brush it with a bristle brush. Then hold it near the wall and see how closely it will stick to it.

and see now closely it will stick to it.

EXPERIMENT 13. Take a cat into a dark room and stroke its fur a few times and then give one stroke in the opposite direction. Note the thousands of little sparks and the crackling sound. This is frictional electricity, and the colder the atmosphere the greater the amount generated.

erated.

EXPERIMENT 14. On a dry, cold day o evening shuffle across the floor in a pair of woolen stockings and then present your knuckle to a gas fixture or the stove and note the bright spark that leaps from your finger. It is possible to so charge your body in this way as to give a perceptible shock to a person's ear or nose, and to even light a gas jet with a metal tip. All these experiments are illustrations of the generation of frictional electricity and its detection. Lightning is exactly the same thing, only on a vastly greater scale. Our next lesson will deal with magnetism, and there will be a number of beautiful and interesting experiments to perform

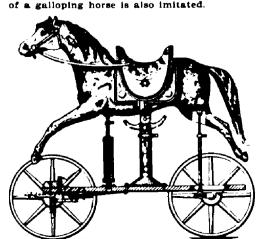

### **NEXT MONTH**

### A New Rocking-Horse

At this time, when a great deal of interest is being devoted to electrically-propelled vehicles, steam-propelled vehicles and the like, a rocking-horse-propelled vehicle is certainly worthy of some interest, particularly on the part of our younger readers.

This traveling rocking-horse not only imitates the up and down movement of a horse when galloping but, by means of a rod connecting the hind legs of the horse with a crank on the rear axie, the forward movement of a galloping horse is also imitated.

IS DOUBTFUL if there are many boys at the age of fif-teen years that understand wireless telegraphy but P.son can claim two, Newell A. Thompson, Jr., and Samuel Breck, who not only understand it, but have built and are operating two complete outfits. are operating two complete outfits. The former has established one station in the home of his aunt at No. 31 Brook street, while half a mile distant the latter has installed another similar outfit.

Newell A. Thompson began the study of electricity five years ago at New haven. Both boys have been working for several months on the apparatus and have had some difficult problems to solve. They are

cult problems to solve. They are members of the graduating class of the Prince Grammar School, and caused considerable surprise at a school exhibition held last May by school exhibition held last May by exhibiting a complete wireless system they had built. Their first ideas were received from a display given in Mechanics' Hall, and while the first outfit would not work over a greater distance than 256 feet, by careful and persistent experimenting the distance has been increased to that between the present stations.

The messages are transmitted from aerial wires, suspended from the top

aerial wires, suspended from the top of a slim pole, sixteen feet above the roof of each boy's home, as shown in Fig. 1. Young Thompson has set up his apparatus directly beneath the pole, devoting the balance of the room to his workshop, while Breck has established his station in an upper room of his home. He also has

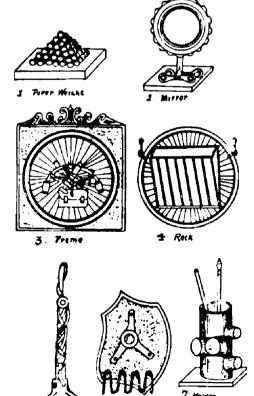

NEWELL A THOMPSON - SAMUEL BRECK INVENTORS AND OPERATORS OF A PERFECT WIRELESS SYSTEM

an elaborate workshop in the basement

an elaborate workshop in the basement. Thompson has a patent pending on the instrument exhibited at the school.

The boys have invented a feature which is claimed to be a great improvement over the former device, being more reliable in its action. This device was successfully used last June between the S. S. Saxonla and a station in Charlestown, The new apparatus now under construction will operate over a distance of at least eight miles, and the boys have great hopes of perfecting the apparatus so that they may send and receive messages over far greater distances.

## Articles Made of Old Bicycle Parts

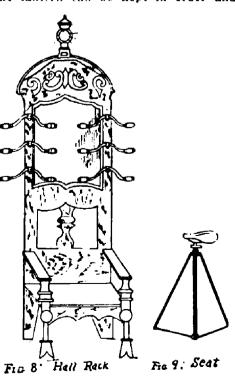

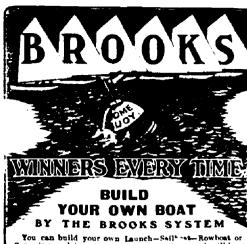

An idea of the character of the articles obtainable from cast-off bicycles is shown. Figure 1 is a collection of balls from several ball bearings, formed into a pyramid by means of cement, and nickel plated or gilded. The pyramid is then cemented to a wooden base and forms a useful desk paper weight. A table mirror (Fig. 2) is made by fastening a circular mirror to the center of a wheel sprocket gear; the stand is a pedal and pedal shaft. The pedal shaft is screwed tight to the pedal and consequently keeps the affair perpendicular. The sprocket, pedal and shaft are bronzed or plated and if desired, the sprocket may be wound with fancy ribbon. Fig. 3 is an old wheel, the tire of which is filled with sawdust to keep it expanded, and in the center of which are several mementos of a bygone cycle season, and ill are hung to the wall. The tire of the wheel is artistically ornamented with oil or water colors or coated with silver bronze. The spokes are polished, while the saddle leather is reated to a surfacing of gold or silver composition, making an attractive and useful plece of hall furniture.—Popular Mechanics. An idea of the character of the articles

GREAT DEAL of pleasure may be derived from turning parts of old bleycles into articles of use or ornamentation. Many original: ideas can be used in this work and it is good plactice for the boy of an inventive turn of mind. Sprocket gears, cone shafts, handle bars, wheel rims and other parts of old bleycles which were formerly disposed of as junk, are now carefully assorted, cleaned, polished or nickel plated, and used for wall and archway decorations. Plating outfits are expensive, but persons who possess them will do that part of the work for a small charge.

There were supposed to the work for a small charge.

There wooden base is either sanded or finished in natural state. Fig. 7 is a crank banger separated from the tubes, japanned or bronzed, and used for a pencil and pen holder. Fig. 8 is a piece of hall furniture from which the hat pins are removed and blevele handle bars substituted. The is done by simply putting the bar posts through the shaft holes in the forks and the posts on the back by means of clamps. A cycle lantern is placed at the top, with fork and head niece, by expanding the fork and prongs to conform to the shape of the top. A set screw is put into the wood through the shaft holes in the forks and the whole affair is firmly held in place. The lantern can be kept in order and

## *The* American Boy

### Copyright, 1905, by The Sprague Publishing Company

### THE LEADING BOYS' PAPER OF AMERICA

Entered at the Detroit, Mich., Postoffice as Second-class Matter

the American Boy is an illustrated monthly paper of 32 pages. Its subscription price is \$1.00 a year, payable in advance. Foreign subscriptions, \$1.50. New Subscriptions can commence at any

time during the year.

Payment for The American Boy when sent by mail, should be made in a Postoffice Money-Order, Bank Check, or Draft, Express Money-Order, or Registered Letter tered Letter.

Silver sent through the mail is at send-

Expiration. The date opposite your name on your paper or wrapper shows to what time your subscription is paid.

Important-All subscriptions are disconmportant—All subscriptions are discontinued as they expire. Renewal slips are inserted in the last number to which the subscriber is entitled, calling attention to the fact that his subscription has expired. Renewals should be prompt so that no numbers may be missed. Subscribers can, by watching the expiration date on their address label, renew early and thus be sure of getting all the numbers as issued.

Letters should be addressed and drafts made payable to The Sprague Publish-ing Co., Majestic Building. Detroit, Mich.

GRIFFITH OGDEN ELLIS. J. COTNER, Ja.,

President and Editor. Vice-President and Ass't Editor. Secretary and Treasurer.

# Fun Wanted

THE publishers of The American Boy want stories full of humor---such stories as boys will laugh over. The stories should be suited to boys of the age of sixteen. The humor should be clean and wholesome, but not of the silly style nor childish. Such as are accompanied by illustrations will be most appreciated and will bring the highest compensation. Do not send mere jokes or anecdotes. Stories of from 1000 to 3000 words are wanted

The Sprague Publishing Co., Detroit, Mich.

### An Indiana Champion

Russell L. Joseph, '06, of Shortridge high school, Indianapolis, is the 1904 high school champion of Indiana in the fifty yard dash, made in five and two-fifth seconds at Louisville, Ky.; the one hundred yard dash, made in ten seconds at Sheridan, Ind.; and the two hundred and twenty yard dash, made in twenty-one and two-fifth seconds at Indianapolis.

### Interested in Electricity

Interested in Electricity

James Irvine Finnie, Clinton, Mass, in a letter complimenting us on the February Number of THE AMERICAN BOY, speaks particularly of the pleasure he has derived from the page devoted to mechanics and electricity. He has been following up the articles on wireless telegraphy. He has made the coil and hatteries and has them in working order, and has tried the batteries for a distance of seven hundred yards and they work all right. He is expecting to go to the Massachusetts School of Technology, next September, having already passed his examination therefor. He is at present in the high school and in the evenings goes to a drawing school. His class in the high school, which is graduated next June, will go in a body to Washington City to see the sights.

### Scribs Melee Association

When I was about nine years old I induced my father to buy me a printing press, promising to do job printing for merchants and pay him back the money the press cost. One year later I was still in debt to him, so I hit upon a plan to make money faster. It was this:

I was to form a news association for amateur editors. I was to get reporters in the large cities to send me the latest news every week; the matter they sent me I was to copy and send to the members of the association. I heard about the "Scripps-McRae League" and I thought that I could have something like it, so I of the association. I heard about the Get the number of hours from mid-"Scripps-McRae League" and I thought night, divide by two and point the hour that I could have something like it, so I at the sun so that the shadow of a match

# AMERICAN FLAGS

EVERY BOY AND EVERY COMPANY AND CLUB OF BOYS SHOULD OWN A NICE AMERICAN FLAG

HE publishers of THE AMERICAN BOY are in a position to sell or give as premiums to boys Handsome Silk Flags on terms that cannot be duplicated in their own towns. They can be had either mounted on staffs or unmounted, and in several sizes. They have selected as a leader a flag 21/2 x 4 feet, mounted on a solid ash staff with maple spear-head bronzed. The flag is all silk and first-class in every way. Price, \$2.25, delivered, or given away for four new subscriptions to THE AMER-ICAN Boy, or for three new subscriptions and fifty cents, or two new subscriptions and one dollar, or one new subscription and \$1.50. The flag alone, without the staff and spear-head will be sent for \$1.50, delivered, or given for three new subscriptions, or two new subscriptions and fifty cents, or one new subscription and \$1.00. The offer is not for your own subscription or renewals. The flags are silk and are beauties.

called mine the Scribs Melee Association. I had a circular printed reading like this:

"Amateur editors, this is the one chance of your life. Join the Scribs Melee Association and get all the latest news, written by some of the best known writers. Representatives in New York, Chicago, Toledo, Denver and St. Louis get all the latest news. Dues 50 cents per month."

The next thing I did was to borrow 50 cents from my father and buy with it twenty-five two-cent stamps. I wrote to refer the watch, and 12 is north, 6 south, 3 east, and 9 west.

Photo by M. A. Yauch, Rochester, N. Y.

"PAPER MISTER"

reporters and received answers that they were at my service, but they didn't state their prices. I then sent out twenty circulars to amateur editors. Some of them responded with 50-cent pieces. Then I received "copy" from my reporters, which I forwarded to the members.

Everything went along all right until I began to get bills from the reporters. The first batch of bills was for \$25.00, and as I had only received \$7.50 from the members, the Scribs Melee Association went into a receivership. My father was appointed receiver. He settled up the bills and took me out into the woodshed and settled with me. I got a receipt all right. settled with me. I got a receipt all right. This ended the Scribs Melee Association.

### To Make a Compass of Your Watch

### What Can a Boy Do?

This is what a boy can do, because boys

have done it:

He can write a great poem. Alexander Pope wrote his famous "Ode to Solitude" when he was only twelve years old.

He can write a great book. Macaulay wrote his first volume, the "Primitiae," which took the literary world by storm, before he was in his teens.

He can write a successful play. John O'Yoofe the famous Irish actor and plays.

He can write a successful play. John O'Keefe, the famous Irish actor and playwright, wrote a play that is considered good today, when he was only fifteen. He can become famous. Charles Dickens did his "Sketches by Loz" so well that, before he was twenty-two his name was known to all the world.

He can "make his mark" so well that it will open his career. Palmerston, England's great statesman, was admired in school for his brilliant work, and wrote letters home in English, French and Italian that are models of composition today.

# **Base Ball Unifor**

This is an exact picture of our This is an exact picture of our special Base Ball Uniform for American Boys. It is made of grey flannel, all seams strongly sewed to insure good wear. Bloomer trousers, lightly padded, lace front shirt; adjustable belt and cap with wide visor.

### Funny False Faces that Can Be Made by Any One

### When I Hear My Laddie Whistle

When I hear my laddle whistle,
Dark, and stormy though the day.
Though the thorns of teasing trouble
Seem to strew my shadowed way;
I forget the weight of worry,
Life becomes serenely bright,
E'en though time, and tune together,
Oft the whistle puts to flight.

When I hear my laddle whistle When I hear my laddle whistle, Hymn, or two-step, shrill and clear, Well I know the heart within him Bubbles o'er with grateful cheer; Deep within its crystal center. Pure as snow the thoughts I see, That is why my laddle's whistle Always sounds so sweet to me.

When I hear my laddle whistle,
Half-way down the street at noon,
Then I know the door will open
With a smile of greeting soon;
Tender lips will touch my forehead,
Tender words will charm my ear,
That is why my laddle's whistle Seems so strangely sweet to hear.

When I hear my laddie whistle,
"Jesus, lover of my soul,"
Oh, what waves of Heaven's comfort
O'er my being seem to roll;
Since I know within his bosom,
Never touched by doubt, or care,
Lives the truth his whistle measures,
Like an angel singing there.

When I hear my laddie whistle. When I hear my laddie whistle,
Vernal airs around me blow,
Life is full of sunny promise.
I have said Good-bye to woe;
What though music groans in spirit,
What though critics laugh at me,
When I hear my laddie whistle,
I am happy as can be.
—Birch Arnold.

### A French Frog and FISHING MADE EASY an American Eagle

(Continued from page 176.)

timidity of temper be judged unfit to un-dergo the ordeal of the initiation Cere-mony, it shall be lawful for the president, at his discretion, to dispense with the said at his discretion, to dispense with the said ceremony, and admit the candidate to full membership of the society by inscribing his name upon the roli before witnesses; such inscription being held to be equivalent to initiation in the ordinary course. Hereditary Grand Recorder Martin Crickhowell, commanded Carclough, as he finished, "insert the name of Austin Bentley Anstruther on the roll of the society, appending to it the simple comment, Excused!"

"Stop a bit!" cried Anstruther impetuously. "Do you mean to say that you've got the cheek to stick me down as delicate and timid and excused on that account? My word! If that's what you think—"

"Recorder!" rang the stern voice of the "Recorder to the stern voice of the said that he came from Ninevell, and some of the younger hows thoughts.

# How to Play the Mandolin

THIRD LESSON. We will now learn to place the fingers on the scale. The Mandolin fingerboard b is divided into frets. Frets are strips of metal placed across the fingerboard of the Mandolin. Always place your fingers between the frets— not on them.

The notes on the G string are g on

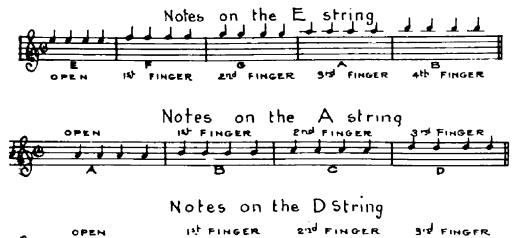

TAUGHT IN EIGHT LESSONS > By LILLIAN STANDIFORD

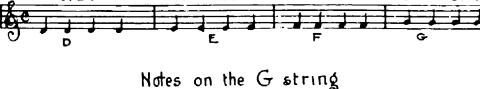

The notes on the G string are g on the open string played without fingering, a with the first finger, b with the second finger, c with the third finger on G string, between the first and second finger, between the first and second finger, a with the second finger on G string, between the first and second finger, a with the first finger, g with the second finger, a with the first finger, and between the third and fourth frets; c is the third finger on G string, between the fourth finger. The fourth finger, and between the third finger on G string, between the first finger on E string, between the nut and first fret; the exercise—four g's, four a's, four b's, and four c's.

The notes on the D string are d open, e with the first finger, f with the second finger on E string, between the first finger on D string, between the first finger on D string, between the first and second so that you know all the notes on the first and second so that you know all the notes of the third finger on A string, between the fourth and fifth frets. Notice on the D and A strings the fingers are in the corresponding places.

The notes on the D string are e open, f with the fourth finger, a with the fourth finger, a with the fourth finger, a with the second finger, a with the second finger, a with the fourth finger, a with the second finger, a with the fourth finger, a with the fourth finger, a with the fourth finger, a with the second finger, a with the fourth finger, a with the second finger, a with the fourth finger, a with the second finger in the corresponding places.

The notes on the D satring, between the string finger o made open, e is the first finger on D seventh frets. Practice these exercises string, between the first and second so that you know all the notes and frets; f is second finger on D string, between the second and third frets; g is eyes to find the places as little as you the third finger on D string, between the can.

THE BEST FISH-HOOK ON EARTH for Sea. Lake and River Fishing. No losing bait. Nor coming home without your largest fish. No breaking loose or tearing out. No one can afford to fish without one. No springs to get out of order. It is simple and strong, being a LEVER, the harder a fish pulls the stronger it will hold him. It is easily adjusted to all kinds of fishing by sliding the little clamp on the rod.

in the families commont. Excusses: Impetuously. To you mean to say that you we got the check to stick me down as delicate and timid and excused on that a voice that he was dressed in a rather was all means and the mean that he was already as momber of the game on myself. I'll—I'll was a mean of the younger boys thought in the regular way. You shall see whether I'm timid or no. Do you suppose I'm firm of the you have been the regular way. You shall see whether I'm timid or no. Do you suppose I'm firm of you have readed the money and the younger boys thought in the regular way. You shall see whether I'm timid or no. Do you suppose I'm firm of you have readed old ceremoids them on myself. I'll—I'm the too help the younger have been the cardidate that his protest came too late, and that he was already a momber of the Gang cutting sentences, informed the candidate that his protest came too late, and that he was already a momber of the Gang cutting sentences, informed the candidate that his protest came too late, and the was already a momber of the Gang cutting sentences, informed the candidate that his protest came too late, and the was already a momber of the Gang cutting sentences, informed the candidate that his protest came too late, and the was already a momber of the Gang cutting sentences, informed the candidate that his protest came too late, and the was already a momber of the Gang cutting sentences, informed the candidate that his protest came too late, and the was already a momber of the Gang cutting sentences, informed the candidate that his protest came too late, and the was already as momber of the Gang cutting sentences, informed the candidate that his protest came too late, and the was already as momber of the Gang cutting sentences, informed the candidate that his protest came too late, and the was already as momber of the Gang cutting sentences, informed the candidate that his protest came to late, and the was already as momber of the Gang cutting sentences, informed the candidate that his protest

Channel, nor changeful green like the North Sea, but of a distinct and golden yellow—a fact noted long ago by Tennyson in his "Idylls of the King." Very lovely it is too, when a setting sun is going gloriously to his rest, and under that flaming sky you see far-off the "white sails flashing on the yellow sea." It is not difficult then to fancy that the last beams are glancing on white plumes, silver armor, and fluttering pennons as a company of king Arthur's knights come down to yonder strand to the barque that shall carry them across channel that they may to have

knights come down to yonder strand to the barque that shall carry them across channel, that they may join their master "In hall of old Caerleon upon Usk."

However, that is a digression; and I should be very sorry for any member of the Gang to catch me sentimentalising in any such girlish fashion. Only I pity the chap who never gets taken that way, especially when writing about his old school. One can be moderate; at least some of us can. We are not all like Mr. Villiers Brown, who, a year or two ago, could not be restrained from publishing, at vast expense and with absolutely no returns, an elegant thin volume of poems on the subject of the surrounding scenery, dedicated to Doctor Hardress. Such humbug! Of course every fellow, nearly, felt bound to order a copy to take home to friends. And then, when you had got it (and it was published at half-a-guinea!) the poetry inside was like the jam in one of Mr. Popjoy's three-cornered tarts—no matter which angle you start from, there's only one little pool in the middle. So half Brown's book was blank parchment, or measly vignettes. And that was the best half too!

I am afraid I have been digressing again, but the truth is, never having

gentler and more wooded, for a mile or two. Then they gradually recede, the river makes a sudden bend, and you emerge from Crosscombe valley into the open country. None of us, as far as I know, have ever explored much in that direction. Generally we prefer to go west, where the hills become perfect crags, and there are caves and stalactites and all manner of games. We are taken there periodically on chipping expeditions, and generally come back with cartloads of ammonites and perizzites and so on, for the museum. I myself once found a petrified lobster without a head. I suppose some beggar in the Stone Age was just preparing it for a salad, when some other chap stole up behind and clubbed him. I think science is no end of sport. After showing Pickens round the water-meadows we brought him back by Duck Lane to the Winston high road, from which a long avenue leads through the Doctor's private grounds to the north side of the School House. Pickens seemed to have greatly enjoyed the walk and, on parting, particularly thanked Baines for the interesting information he had given him, saying that he hoped at some future time to go with him and stalk a centaur or two. He spoke quite gravely, but Baines re-

him and stalk a centaur or two. He spoke quite gravely, but Baines re-marked to me afterwards that he was afraid he had wasted his time.

### A Stranger From Pekin

When the allied forces fought their way into Pekin at the time of the Boxer uprising, a general assault was made on everything that belonged to the Chinese.

everything that belonged to the Chinese. There was a part of the city which, in itself, was called the "Sacred City," where the Dowager Empress lived. Even within the precincts of the "Sacred City" the soldiers looted and carried away everything of value that could be put into a soldier's knapsack.

The day after the battle a member of the hospital corps, with the American troops, entered a pagoda, whose idols and draperles had been hacked to pieces with swords and strewn upon the floor. Walking among the debris, the soldier found a small idol which had lost one arm, but otherwise was intact. Picking it up, he carried it back to camp, and, placing it among his medical supplies, did not touch it again until his regi-

wormending scenery, dedicated to Doctor Hardress. Such humbug! Of course every fellow, nearly, felt bound to order a copy to take home to friends. And then, when you had got it (and it was published at half-a-guinea!) the poetry inside was like the Jam in one of Mr. Popioy's three-cornered tarts—no matter which angle you start from, there's only one little pool in the middle. So half Brown's book was blank parchment, or measly vignettes. And that was the best half too!

I am afraid I have been digressing angain, but the truth is, never having too much cash in hand myself, my blood hoils when I think of that ten and sixpence, less discount. To resume description. If, instead of crossing the stream and climbing the heights, you follow the river eastward, you have the hills on either side of you, rather in the brought it out and displayed it with the brough tit out and displayed it with the brough tit out and displayed it with the brough tit out and displayed it with are satisfaction. The idol was made of hard wood, but was so old that it was greatly decayed. The paint that had been daubed on it was worn away, although little spots of red or white or inches high and on its horrid face was a mustache and whiskers of human hair. On uncovering a cavity in the back, a sickening stench arose. A Chinaman given the information that whenever an idol was placed in a temple, the cavity in its back was filled with human flesh to give it life so that it might understand and help human beings. The soldier had great trouble in keeping his made to steal it. For a year and a half he carried it about with him. To-day it occupies a prominent place among his war relics.

### EASTER ENIGMA.

My whole is composed of 23 letters, and is a message an angel brought on the first Easter morning, as told in Matthew.

2-4-7-15-22-14 a book of the Old Testament.

23-16-10-3 a person named in Luke in the genealogy of Christ.

5-9-17 Saul's grand-father.

1-6-10-21-11 an animal employed only in war in Bible times.

20-18-8-17 two men of the same name, mentioned in I. Chronicles.

IV. 12-13-19 the first word of Matthew XX.

—Thomas DeWind.

### AESOP TANGLED.

Each sentence is a complete moral from one Each sentence is a complete moral from one of Aesop's Fables with the words all tangled up. You are asked to straighten them out correctly.

1. Ought he to share the shares who prize the danger?

2. Not those who do right know their aucht place must be it.

3. A trusted he who is his own family friend illtreats as to be not.

4. As here is in the well, brave as words in deeds.

5. Large bear with little courage less than men they do often misfortunes grievances.

6. Believed to be tale is every not.

7. Realities our life of its mere anticipations outrun.

8. Hide to be hid which things do not cannot attempt.

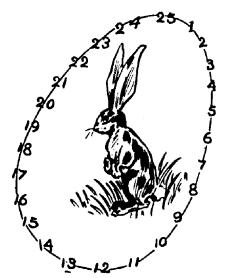

—Willie R. Schoenberger.

The letters from the key words when inserted in their numerical positions about the egg will surround it with the following, in

order, from 1 to 25:
(1) A school holiday in some states, observed in April in Nebraska, where it was founded by Governor J. Sterling Morton; (2)

Mey words: 23-8-11-20-b a vice-president who became president in April. 15-21-3-13-25-17-1-19 a September holiday 12-4-14-10-24-6 the experience of most American boys on April first. 22-18-7-2 a river and canal of

Left: A consonant in lew Hampshire; to by ble; the best thirst uencher; clear of all

### BEHEADINGS.

47. BEHEADINGS.

The beheaded letters in order spell a day whose observance is encouraged by the United States Secretary of Agriculture, as inducing an interest in the subject of forestry. Some states observe it in April: Arizona, in February; some in May, and many not at all.

1. Behead to humiliate, and leave a foundation. 2. To wander similessly, and leave to move easily. 3. Any large four-footed animal, and leave a fixed portion of food. 5. Reckless and leave a tree. 6. Peril, and leave vexation. 7. To encourage or assist in a criminal act, and leave to wager. 8. To long for earnestly, and leave to gain by labor.

—The Humbug.

### CENTRAL ACROSTIC

48.

All words are of the same length. The center letters, read downward, spell an importent commercial transaction in American history, consummated in April.

1. A beautiful shade tree. 2. An elephant's proboscis 3. A famous American commodore. 4. Pertaining to the voice. 5. Remains after combustion. 6. A country of Europe. 7. The easternmost county of Vermont. 8. A manufactured metal. 9 The water's edge. 10. A nickname for a Welshman, and so used in Mother Goose. 11. A shrub, bearing clusters of fragrant flowers. 12. The bird that is supposed to bring the habies. 13. A large, conspicuous feather. 14. Christian name of our President's eldest child. 15. A title of rank in Turkey and Egypt. 16. The king of Troy, at the time of the celebrated siege. 17. Commander of the federal forces at the battle of Gettysburg. 18. An American bay, on the same parallel as Portland, Oregon, and St. Paul, Minn., remarkable for its tides, said to reach 70 feet. 19. A current French coin.

—Ralph R. Williams.

Quick Returns.

---Emmons Emerson

### APEIL MYTHOLOGY.

All the names have eight letters. Their initials spell an April day celebrated in all Christian lands.

Christian lands.

1. The wife of Orpheus.

2. The father of Aeners, the Trojan hero.

3. A god, protector of woods and fields.

4. A son of Zeus, afflicted with a raging thirst, but condemned to stand in a lake and under a loaded fruit tree, the water and fruit always receding when he reached for them.

5. The old Roman name for the river Rhone.

—John Willig, Jr.

### WORD SQUARE.

1. A month. 2. Inordinate self-esteem. 3. A kind of firearm. 4. A loafer. 5. Sly looks.
—Stanton D. Willard.

### APRIL FRACTIONS

Take three-eighths of Michigan, two-sevenths of Alabama, six-elevenths of Connecticut, seven-ninths of New Jersey, four-sevenths of Florida, six-tenths of California. Arranged correctly they will spell the names of four Presidents born in April.

—Merlin Sisson.

Large and deductions: a consonant in New Hamp shire.

Right: A consonant in California: a deep hole: a flowering shrub; a vegetable product; a consonant in Oregon; the ocean; to rule; mature years; a consonant in Oregon.

Large will served in their numerical positions about the aggretic served in their numerical positions about the served in their numerical positions about the served in their numerical positions about the server in my imagination, and no foul words on my tongue. I should treat little folks kindly, and not tease them; show respect to servants; be tender toward the unfor-tunate—all this I should strive to do for the sake of being a comfort to people, a joy to my parents, and a help to the next century

If I were a boy I should play and romp, If I were a boy I should play and romp, sing and shout, climb trees, explore caves, swim rivers and be able to do all the manly things that belong to the manly sports; love and study nature; travel as widely and observe as wisely as I could; study hard and with a will when the time came for study; read the best literature—works of the imagination. tion, history, science and art according to my taste and need; get a good knowledge of English; try to speak accurately and distinctly; go to college, even if I exand distinctly; go to college, even if I expected to be a clerk, a farmer or a mechanic; spend my Sabbaths reverently; try to be a practical, every-day Christian; help on every good cause; never make sport of sacred things; be "about my Father's business," like the boy of Nazareth; "use the world and not abuse it"; treat old men as fathers. "the younger men as brethren, the elder women as mothers, the younger as sisters, with all mothers, the younger as sisters, with all purity," and thus I would try to be a Christian gentleman, wholesome, sensible, cheerful, independent, courteous.

Benjamin L. Miller, 129 North Clark st., Chicago, wins the prize for best list of answers to February Tangles. He found 29 battles in number 25.

Morton L. Mitchell, Oriilia, Iowa, wins the prize for the best lot of original puzzles.

A total of 211 original new puzzles arrived from our Tanglers in this month's competi-

A total of 211 original new puzzies arrived from our Tanglers in this month's competition.

Honorable mention is accorded the following for excellence: John H. Black, Florence DuBois, Henvis S. Roessler, Willie R. Schoenberger, Fred H. Gunkel, Jr., Allert Brager, Emmons Emerson. W. L. Rothermel, George G. Taylor, Abram M. Karker, Eugene A. Scanion, Walter T. Horton. E. D. George, Wm. O. Simon, Conger Roads, Stanley B. Weich, Dana Reid, Henry Jackson. V. R. Dunlap, Harry Newquist, John E. Caughey, Earl A. Porter, Albert W. Moss, Edward Marvin Underhili, Stanton D. Williard, Thomas DeWind, Brancon Tharp, Roy Hallings, Eugene Marius Stewart, Osborn J. Dunn. Adam G. Quandt, George V. Jehu, Curtis Moody, F. M. Smith, Howard Francis, Willis F. Holley, Howard Glickey, H. Roy Davis, S. John McCarthy, Neis W. Kindgren, Ralph R. Williams, Lloyd Harden, Ada T. Drake, S. Ward Seeley, Otis Merilin Sisson, J. Edward Shields, F. C. Milispaugh, Willie D. Burdick, Noble P. Hollister, Arthur L. Schieber, Charles Williams, D. Waldo Brown, George Harrison Stanbery, The Gopher Tangle Club, Frank N. Blanchard, Charles Roland Kerbaugh, M. Gray, Old Power, Herman H. Voelker, Joseph P. Smith, Ward Lewis, Blaine Vess, John Willig, Jr., Merrick Huston, Frank L. White, Leo Dale Dunlap, Alfred W. Robertson, Sarah Gilles, Ruscel Dickey, Acheson Callaghan, Willard S. Ruscel Dicke

Monte M. Katterjohn's puzzles all appeared in The Little Chronicle November 5, over other names. Several sent in answers to January too late to be acknowledged.

A prize of two dollars will be given for the best list of answers to the April Tangles re-ceived by April 20.

A prize of a new book will be given for the hest lot of, original puzzles received by April 20. Let them be full of June, and commencement, and outdoor sports, and all the good things boys will like to read about in June.

APRIL CALENDAR.

Interpret each numbered pictorial square by a word of five letters. Place the second letter of each of these words on the date in the ter of each of these words on the date in the subjoined April calendar corresponding to the number of its square. Beginning with the dates under Sunday, reading each row of days downward in order, to the last Saturday of the month, find the names of the capital and the largest two cities in a state admitted into the Union in April.

### EASTER ENIGMA

My whole is composed of 23 letters, and is

a message an angel brought on the first Easter morning, as told in Matthew. 2-4-7-15-22-14 a book of the Old Testament. 2-4-7-15-12-14 a book of the old leatment.
23-16-10-3 a person named in Luke in the genealogy of Christ. 5-9-17 Saul's grandfather. 1-6-10-21-11 an animal employed only in war in Bible times. 20-18-8-17 two men of the same name, mentioned in I. Chronicles, IV. 12-13-19 the first word of Matthew XX.—Thomas DeWind.

### AESOP TANGLED.

Each sentence is a complete moral from one of Aesop's Fables with the words all tangled up. You are asked to straighten them out correctly.

1. Ought he to share the shares who prize the danger?

2. Not those who do right know their 'aucht place must be it.

3. A trusted he who is his own family friend illtreats as to be not.

4. As hero is in the well, brave as words of the dead.

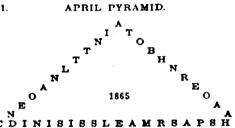

5. Large bear with little courage less than men they do often misfortunes grievances.

6. Believed to be tale is every not.

7. Realities our life of its mere anticipations outrun.

8. Hide to be hid which things do not cannot attempt.

—Willie R. Schoenberger.

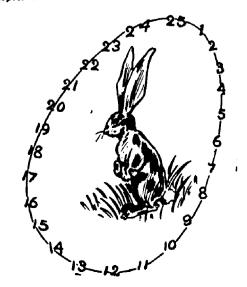

The letters from the key words when inserted in their numerical positions about the egg will surround it with the following, in order, from 1 to 25:

(1) A school holiday in some states, observed in April in Nebraska, where it was founded by Governor J. Sterling Morton; (2) A name customarily given to the first day of April; (3) A movable church festival, occurring this year in April.

Key words: 23-8-11-20-5 a vice-president who became president in April. 15-21-3-13-

Key words: 23-8-11-20-b a vice-president who became president in April. 15-21-3-13-25 17-1-19 a September holiday. 12-4-14-10-24-6 the experience of most American boys on April first. 22-18-7-2 a river and canal of

### BEHEADINGS.

The beheaded letters in order spell a day whose observance is encouraged by the United States Secretary of Agriculture, as inducing an interest in the subject of forestry. Some states observe it in April; Arizona, in February; some in May, and many not at all.

1. Behead to humiliate, and leave a foundation.

2. To wander aimlessly, and leave to move easily.

3. Any large four-footed animal, and leave a direction.

4. A declamation, and leave a fixed portion of food.

5. Reckless and leave a tree.

6. Peril, and leave vexation.

7. To encourage or assist in a criminal act, and leave to wager.

8. To long for earnestly, and leave to gain by labor.

—The Humbug.

### CENTRAL ACROSTIC.

All words are of the same length.

All words are of the same length. The center letters, read downward, spell an importent commercial transaction in American history, consummated in April.

1. A beautiful shade tree. 2. An elephant's proboscis 3. A famous American commodore.

4. Pertaining to the voice. 5. Remains after combustion. 6. A country of Europe. 7. The easternmost county of Vermont. 8. A manufactured metal. 9 The water's edge. 10. A nickname for a Weishman, and so used in Mother Goose. 11. A shrub, bearing clusters of fragrant flowers. 12. The bird that is supposed to bring the babies 13. A large, conspicuous feather. 14. Christian name of our President's eldest child. 15. A title of rank in Turkey and Egypt. 16. The king of Troy, at the time of the celebrated siege. 17. Commander of the federal forces at the battle of Gettysburg. 18. An American bay, on the same parallel as Portland, Oregon, and St. Paul, Minn., remarkable for its tides, said to reach 70 feet. 19. A current French coin.

—Ralph R. Williams.

-Emmons Emerson.

### APRIL MYTHOLOGY.

APRIL MYTHOLOGY.

All the names have eight letters. Their initials spell an April day celebrated in all Christian lands.

1. The wife of Orpheus. 2. The father of Aeneas, the Trojan hero. 3. A god, protector of woods and fields. 4. A son of Zeus, afflicted with a raging thirst, but condemned to stand in a lake and under a loaded fruit tree, the water and fruit always receding when he reached for them. 5. The old Roman name for the river Rhone.

—John Willig, Jr.

### WORD SQUARE.

1. A month. 2. Inordinate self-esteem. 3. A kind of firearm. 4. A loafer. 5. Sly looks.
—Stanton D. Willard.

### APRIL FRACTIONS.

Take three-eighths of Michigan, two-sevenths of Alabama, six-elevenths of Connecticut, seven-ninths of New Jersey, four-sevenths of Florida, six-tenths of California. Arranged correctly they will spell the names of four Fresidents born in April.

—Merlin Sisson.

CDINISISSLEAMESAPSHE

Beginning at a certain letter and taking every third letter in a certain direction until all are used once only, find a calamitous event in American history, that occurred in April.

—J. Edward Shields.

The letters from the key words when inserted in their numerical positions about the served in their numerical positions about the served on onant in New Hampshire.

Con onant in New Hampshire.

Right: A consonant in California; a deep hole: a flowering shrub; a vegetable product; a consonant in California.

Lower: A consonant in Oregon; the ocean; to rule; mature years; a consonant in Florida; a toy; to carouse; fresh; a consonant in Florida; a toy; to carouse; fresh; a consonant in Colorado; an exchange, I should put no unclean thoughts, pictures, sights or stories in my imagination, and no foul words on my tongue. I should no foul words on my tongue. thoughts, pictures, sights or stories in my imagination, and no foul words on my tongue. I should treat little folks kindly, and not tease them; show respect to servants; be tender toward the unfortunate—all this I should strive to do for the sake of being a comfort to people, a love to my parents and a help to the joy to my parents, and a help to the next century.

If I were a boy I should play and romp, sing and shout, climb trees, explore caves, swim rivers and be able to do all sing and shout, climb trees, explore caves, swim rivers and be able to do all the manly things that belong to the manly sports; love and study nature; travel as widely and observe as wisely as I could; study hard and with a will when the time came for study; read the best literature—works of the imagination, history, science and art according to my taste and need; get a good knowledge of English; try to speak accurately and distinctly; go to college, even if I expected to be a clerk, a farmer or a mechanic; spend my Sabbaths reverently; try to be a practical, every-day Christian; help on every good cause; never make sport of sacred things; be "about my Father's business," like the boy of Nazareth; "use the world and not abuse it"; treat old men as fathers, "the younger men as brethren, the elder women as mothers, the younger as sisters, with all purity," and thus I would try to be a Christian gentleman, wholesome, sensible, cheerful, independent, courteous.

# Every Niece and Nephew of Uncle Sam

should be deeply interested in what he has said about soda crackers, because they are the one food with which all of them are familiar.

Uncle Sam has given out figures showing that soda crackers are richer in nutriment and body-building elements, properly proportioned, than any food made from flour.

This is saying much for common soda crackers, and much more for **Uneeda Biscuit**, because they are soda crackers of the best quality. They are baked better—more scientifically. They are packed better—more cleanly. The damp, dust and odorproof package retains all the goodness and nutriment of the wheat, all the freshness of the best baking, all the purity of the cleanest bakeries.

Your Uncle Sam has shown what food he thinks best for his people. His people have shown that they think **Uneeda Biscuit** the best of that food, nearly 400,000,000 packages having already been consumed.

# THE PIRU CONDORS

RUPERT CRAM

By

firs on the

lined up."
"You can't make it," said Jim, as he stood poised over the deep, black canyon. "It is over three hundred feet to the bottom. Think what a slip would mean to you!" "I don't care about the height," Bob replied,

"I've trailed those condors for two months and climbed my legs off trying to locate them. Now I have them." "But it's dangerous—"

"Dangerous! Of course it is. If you fellows are going to back out now, I will get some one else to help me."

Jim hesitated an instant. "Ave and I will let you down, although I don't like it. I wouldn't go down there for all the money Uncle Sam has in his bank.'

"Oh, I'd do it for the fun of it. When I twitch the rope three times, stop pulling. Two for down and one for ready. I will climb out on this ledge and look for a good approach. I can't see over far enough from here.'

Bob as he spoke stepped to the brink and caught hold of a scrub oak. With a light swing he stood upon an eightinch ledge, a few feet below, ready for the downward

"Wait until I can tie this rope around you!" cried Jim. For reply Bob jumped to a lower ledge. From here a narrow, steep fissure full of broken rock fell almost vertically to another foothold fifty feet below.

The top of the slide looked secure enough, so Bob took one step out upon it. He barely saved himself from a fall as the loose mass began to move under his weight. Standing with his feet together and working them slightly, to keep the broken rock moving, he went down the incline as though sliding on ice, coming to a stop with a crash into a manzanita bush.

The condor's nest could not be seen from where Jim and Avery were; about halfway down there was a small clump of young firs growing on a narrow seam of dirt in a ledge, which hid the nest. As Bob dislodged the boulders and sliding rock in his descent upon this spur, the boys above him saw the old condor rise from beneath the firs and fly away.

"I wonder if Bob saw that bird? Do you think she will fight?"

"I don't know. I have heard that the mother bird will fight anything that disturbs her nest. Bob ought to have the rope tied to him," answered Avery. 'We had better fasten one end of the rope to this dead fir.'

Jim jumped up and soon had one end firmly tied to the tree. He fastened a good sized stone on other end and began to lower it over the edge. Often the stone lodged in a crevice and had to be "whipped" out in order to clear the wall. Once Jim snapped it against a big, round boulder, which slipped from its light bed and went crashing straight down towards Bob. The yell of the boys reached Bob's cars above the roar of the avalanche of rock started by the boulder. He looked hastily up and saw a wave of rocks, little and big, coming like a roll of surf down the narrow slide. A hurried glance showed him a little niche with a large boulder for its roof, close to his right. Like an antelope he jumped for it.

From the shelter of the friendly niche he watched the rocks ricochet far out over the chasm and heard them splash into the water.

He leaned out and shook his fist at Avery and Jim when the last rock had passed. The weight of the sliding rocks had swept the way clear of all bushes and spurs. There was no getting out of his niche without the rope.

"That was a close one, Jim," Avery said, as he

leaned far over the top, looking for Bob. 'I couldn't help it. It wouldn't have happened if Bob had had sense enough to tie the rope around him," Jim growled, carefully coaxing the anchorstone around a bunch of Spanish bayonets,

"Let down the rope!" "He's all right, Ave. But where is he? I can't see him."

"There he is. See the handkerchief!" "Let down the rope!" came the call again.

By walking a few feet along the bank, Jim swung the weighted rope close to the boulder. The boys

could not see Bob, but they felt the rope tighten and knew he had it.

Bob could now see the nest, a large hollow in the rocks, with its two young condors, under the firs at the very edge of the ledge. By its side stood an old bird, its shining eyes fastened on Bob as he peered over the rocky slide. It was a monster condor, over tour feet high and black as the shadow around it.

Bob now securely formed a loop in the rope, in which he sat. He then gave the signal to be lowered. He felt the rope tighten, and as soon as he received the answering signal he stepped off into space.

It was fun at first, almost play, until he glanced down and saw that a little spur of rock and soil with three or four fir trees on it, was all that lay between him and the muddy Piru two hundred feet below.

He clutched the rope with a grip of iron and forced his eyes away from that fascinating depth.

At last he was on the spur. The quarry of two months' chase lay close before him. He now tied the rope under his arms, for he knew there might be a struggle while he was stealing the young con-

Picking up a long, dead fir pole he walked slowly towards the snorting sentinel. A few close passes with the pole sent the old bird hissing over the edge, where she disappeared. Hastily grabbing the young ones he thrust them, head first, into a sack, then turned and made his way to the wall, for the smell of carrion was sickening almost beyond endurance.

Firmly tying the sack about his neck, he adjusted the rope and sent up the signal. For a moment it seemed as though the boys could not move him; then he was pulled upward for a few inches.

They can never do it!" he exclaimed, as he examined the clear stretch of rock, fifty feet up, without a break or a knob for a foothold to ease the strain. But slowly, inch by inch, he rose.

A deep, heavy, moving shadow passed over Bob's head. He turned and saw the old condor, followed by two more, coming with the speed of an express. straight for him. A chill of fear crept over him, as he wound one arm about the rope and pulled out his hunting knife.

"This is more than I bargained for," he murmured, "I wish those young ones would quit their squalling." Then a feeling of exultation passed over him as he

thought of his strange situation. He was swinging in midair from a small rope and fighting for his life. against three California condors.

"Come on, you vultures!" he cried, as he caught one a sweeping blow on the head with his foot.
"Take that and that and that!"

He was in a frenzy of fear and braveness and horror. He stabbed and thrust with all his might until the motion set the rope swinging like a pendulum along the rock.

Jim and Avery wondered greatly at the swinging motion until they caught sight of the three condors, and the echoes of the fight came rolling up the canyon to them.

"Pull, pull!" Jim cried. "There are three of them!

They will kill him!"

The two boys, gasping and sweating, bent anew to the task and hand over hand raised Bob with a rush to the friendly knob of rock at the edge of the wall.

Bob with ready presence of mind stepped out upon the spur. Here, clinging to the tight rope with one hand, he turned at bay and plunged his knife with all his strength deep into the breast of one of the fighting condors, as it swooped upon him. The force of the blow turned him around, whereupon one of the birds, seeing the advantage, darted down, fastened his huge talons into his shoulder, and started to fly away with him.

Although unable to lift the weight, the condor managed to swing him away from the rock before Bob, holding fast to the rope, reached over his shoulder with his free hand and caught it around the neck close to the ring of white feathers. There was a sharp struggle, then the great wings relaxed and Bob and the condor fell back against the rocks with

Although almost breathless from the force of the shock, Bob gave the signal to be raised. The fight was over. Two vanquished condors were crashing and fluttering down through the branches of the firs.

The young babies had ceased their squawking, and the remaining condor, after a few wide, swift, savage sweeps at Bob, sailed like an arrow down into the sunless canyon and out of sight.

"I don't think I should care to do it again," were Bob's first words as he climbed over the bank and prepared for the tramp home.

Three weeks after the condors were shipped Bob received two letters from the department; one was a letter of thanks for the good condition in which the birds had been taken, with a draft for two hundred dollars; the other contained his appointment as Summer Ranger.

A week later saw Bob a full fledged Ranger, with a fine new saddle, a heavy Colt's revolver with its glistening helt of cartridges, two suits of khaki, shoes and blankets, and last of all, a big, strong-limbed saddle horse he had hoped to own some time. The horse he called by the name of "Condor."

AY, BOB," said Ranger Baldwin one day, "here is a chance to win your spurs. Read this letter."

The letter was from the Smithsonian Institute at Washington to Forest Ranger Baldwin. It contained an offer of one hundred dollars apiece for a pair of live young California condors.

"Whew!" exclaimed Bob, "that is a good price for a couple of birds!"

"I don't think so. At any rate I can't attend to it, as I haven't time," said the Ranger. "The contract is yours if you want it."

"Want it! I should say so! It will buy my outfit if I'm appointed Summer Ranger. I think I'll start right out to-day."

"I guess you don't need instructions," Baldwin laughed, as he swung himself upon his horse and started off for a long patrol through his district.

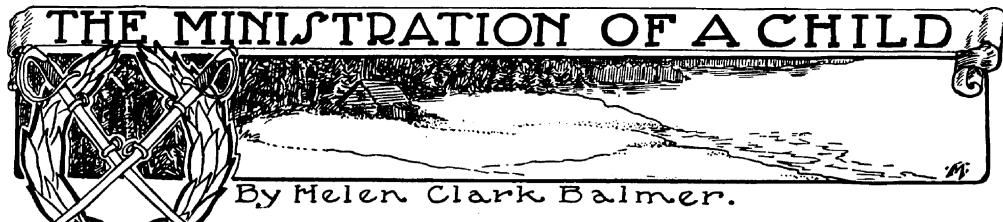

For two months Bob tramped and hunted the mountain crags for condor nests. Twice he saw the big birds soaring through the air several miles above his head, but those great black condors, with white ruffles about their necks and a big band of white under each wing, were not to be caught. Building their nests from a thousand to ten thousand feet above the sea, they chose the bare face of a cliff for their aeries and were wonderfully careful not to betray the direction to their homes.

One day, almost discouraged, Bob sat watching a straggling lamb from a high precipice over the Piru river. Suddenly a black condor, flashing in the sunlight like a streak of lightning, darted through the air upon the lamb. There was a pitiful bleat from the lamb, a hoarse, snorting screech from the condor, then the great bird slowly stretched his ten feet of wings and carried his prey to a small spur of rock nearly in the center of the three hundred foot cliff.

Bob Willits fairly flew over the ten miles to his home. At the wane of his hopes he had discovered the nest. He must succeed in capturing the condors! It meant much to him: the equipment necessary for the position of Summer Ranger.

Bob first purchased two hundred feet of stout rope. Returning from the store he called at the house of a neighbor for Jim and Avery Rawlins. Saddling up the old plow horse and tying the rope and several canteens of water upon it, the three boys started back for the Piru.

"It was right here, Jim. I had those three dead

E was such a little fellow, even with the addition of the big bunch of wilting field flowers which he tightly held in both hot, wee hands. that I could not resist the mute pleading of his moist brown eyes, and bade John stop the carriage and take the weary child out of the dust and put him beside me, encumbered as I was with palms and rare hot-house roses destined for the graves of our soldiers. When John had perfunctorily dropped the small wayfarer into a bower of lilacs and ferns, it was a very surprised but contented little face that looked up into mine; and before I could think of some congenial topic of conversation which might be within the mental capacity of my traveling companion, a sweet, childish voice began to babble about my flowers.

"Ugh-um! What good smells! Is you goin' ter de cem-tery, lady? I is, 'cause Mike's dhere; an' l is takin' dhese ter put on his grave. He only went dhere las' monf, I t'ink; an' I p'omised Mike I ud pick dese en de woods 'hind his house, an' dec'rate him up wid 'em. W'at does folks do, lady, ter dec' rate? Is you goin' ter dec'rate de sojers, to-day? Mike wanted er flag, too."

"So Mike was a soldier?" I inquired, trying to appear interested.

"No 'um, but he knowed er sojer onc't; an' Mike he keeps dat man's sojer clo'es put er way en er trunk, an' maw says I ain't ter ast questions 'bout dat sojer, 'cause p'rhaps he is gone dead; an' folks oughtenter be cur'ous bout peoples dat is gone dead.

"What did Mike look like?" I asked, condescending, in a friendly way, to be inquisitive and un-

"Mike? W'y he look mos' like Santa Claus; but he ain't got no sleigh ner reindeers, jes' er boat en er fishin'-pole. He like ter sit on de pier an' ketch fish. Mike learn me how, so I ketches dandy fish fer maw an' granpaw. Mike he live down en er lil' house w'ere de sand is stretch way, way f'om de woods ter de lake. Onct he tooked meh inside, w'en it rain hard, an' I stays mos' till supper-time. Mike he makes meh sit on de chair, 'cause dhere ain't but dat one, whiles he sit on er box, by de winder, 'jes' erso'tin heaps of hooks an' strings fer fishin' wid,' he says. Mike's got er stove an' er lil' bed, wid er red an' w'ite an' blue quilt; an', my land, I ain't never see so many sojer picters like Mike has on his walls, Seems if ud took er year ter see dem all

But, bime-bye, I gits tired, an' den Mike he look queer, an' tooked meh uppen his lap an' telled meh 'bout er lil' boy he knowed er long time ergo-how dat lil' boy didn't like ter go ter school half so much as playin' sojer, till he growed up an' went erway tuh de wah. An' how it ain't no fun ter hev ter sleep en er real tent ner ter march an' march en de rain, widout no shoes, p'raps; ner not seein' no en'my ter shoot at. How de sojers git sick of de rations an'-an' wants ter run erway. Den Mike he ain't tell meh no more, but he open er big trunkan', lady, dhere is er ole blue sojer coat wid gole buttons, an' er cap, an' er canteen, an' er gun! I asts Mike ef all dat b'longs ter de boy he knowned onct, an' Mike he nods his head widout sayin' nuttin'. But somep'n funny sounds en his froat, whiles he hunt en de trunk an' fetches up er shiny picter en er pink paper an' asts meh 'how I likes dot one.' 1t 18 er sure 'nough sojer-man wid black whiskers, an' one hand stuck proud-like inter his coat. I likes him fust rate. I tells Mike: an' I wants tuh ast w'ere dat sojer is now, but de rain is mos' stop, so Mike he says how dat I can go home all right. Den we shakes hands, an' w'en I is outside de house, I finds er nickel in meh pocket. Yas 'um, Mike he's meh fren.

Now, thoroughly interested, I patted the small, brown hand so near mine, while my imagination began to kindle under the child's naive recital. Could I read between the innocent lines the tragedy of one who had been recreant to his duty?

The brougham passed under the stone archway of Rosehill, and, as far as the eye could reach, every avenue was a sinuous stream of floral waves with the brilliant Stars and Stripes, rising, here and there. like some gorgeous exotic, amid the billows of snowballs, plumes of fragrant lilacs, and a shimmer of waving palms. My contribution to the offering of Memorial Day was intended for two brave youths who had fallen at San Juan. But I ordered John to drive past the burial place of those young heroes, while I began to question my little acquaintance more closely, and, with innocent confidence in my sympathy, he eagerly imparted all his meagre information concerning the hermit, Mike. "Yas. um. Mike he often show me dem sojer clo'es an' canteen; an' onct I ast him fer er drink out of it. An' Mike he rinsed an' rinsed dat canteen; but my! it tasted bad. I didn't t'ink canteens is so bad.

'Does you want tuh hear how Mike tooked meh wid him ter see de vet'rans?" continued my small narrator with all the assurance of a born story-teller. "Well, Mike telled meh 'bout Dec'ration Day,

w'en you fetches flowers ter put on de sojers' grabes dat is all gone dead. An' first he telled meh 'bout de vet'rans dat ud come marchin' erlong; so Mike an' me stands erwaitin' whiles de wagons, chuck full of lil' boys an' girls, widout no hats, everyt'ing w'ite an' green an' pink, keeps er comin' erlong de road. Den de music-drums beatin' grand, an' car'iages of big mens-meh granpaw sittin' 'side er gen'ral an' er cap'n, Mike say; an' last of all comes de real sojers w'at Mike telled meh is vet'rans! My sakes, lady, I is never see dat many mens, old like Mike an' granpaw is, walkin' erlong! Mike he pinted'em out tuh men, fer he knowed er heap 'bout vet'rans, bein' as how he knowed dat sojer. Mike an' de odder mens on de sidewalk tooked off deir hats, but Mike he ain't cheer loud like de crowd on de sidewalk; an' w'en de flags comes erlong, Mike he ketches tight hole of meh hand an' on'y says, 'Lawd! Lawd! Lawd!' Den one, de biggest an' de raggedest of all dem flags, kinder brushes Mike's cheek, an' Mike he jes' grabs dat ole flag an' kisses it quick, 'fore it's done gone erlong. I wonders w'y ole Mike do dat an' w'y he keep his arm 'crost his eyes; so w'en de sojers is all done gone, Mike an' meh we goes home tuh his house, an' he lets meh hole de sojer's gun, whiles he breshes de clo'es. He t'inks a heap of dem clo'es. I sees; so I asts Mike w'y he 'ain't never been no vet'ran himself.' Den I is awful sorry I ast dat, 'cause ole Mike he tu'n erway an' cry It couldn't er been worser if I ud asted him 'bout dat sojer-man an' de picter. I ud sure minded maw 'bout not bein' cur'ous. But ole Mike he cried jes'

### MESSAGES OF THE GOVERNORS TO AMERICAN BOYS

No. 9 From the Governor of West Virginia

GOVERNOR ALBERT B. WHITE, OF WEST VIRGINIA

EXECUTIVE DEPARTMENT CHARLESTON WEST VIRGINIA

May 30, 1904.

W. C. Sprague, Beq.,

Editor, Detroit, Mich.

Dear Sir:

You ask me for a message to the boys. Here it is: Be manly; despise meanness. fight down consucus and swil thoughts: always honor your mother, and don't shirk duty. Put your heart into your work as well as into your play. Deserve success by earning it. Be thoroughly American and patrictic. Rejoice in your youth and its glorious opportunities

As one of the boys who has not forgotten that he was once a boy, I am.

Clebert Bloke

awful till I climbs uppen his lap an' asted him, 'please notter.' Bime-by Mike say, 'Boy, don't tell dat I is got dem sojer clo'es till I's gone dead.' Den he sit er long time an' look out on de water an' say. 'Gawd fergive me, 'cause I 'serted.' But he say right 'way quick: 'Hush, boy, I ain't done nuttin'; an' mind you pick all kines of flowers fer my grave w'en I is been put over dhere.' Den he tells me lots of stories 'bout marchin', an' campin', an' shootin.' An' I asted him how he do so much shootin,' an' he laugh an' say, 'Youngster, I is tellin' w'at dat sojer done.' An' den he gits sorter cross an' shoves me off his lap. I ain't see him again till de day he's took ter de horsepital, w'ere he stay er long time. I gits mighty lonesome fer Mike; but, one day, a nice lady like you comes an' tooked meh ter de big horsepital ter see him. Mike is dat w'ite an' still, I is mos' scared; but w'en he asts 'bout de flowers, I knows he 'members meh. An' I is right glad I bringed Mike dose heaps of flowers dot grows en de woods 'hind his house, for Mike he holes meh hand an' keeps de flowers nex' him on de piller till de lady w'ispers dat Mike is done gone ter sleep. An' I is goin' ter dec'rate Mike to-day, 'cause I p'omised Mike sure.'

A call at the office of the cemetery and a talk with the clerk gave me the necessary directions to find the grave of the poor, unhappy deserter among the outcasts of Potter's Field. Before noon, however, no spot in the fair home of the dead was so heaped with roses, lilies and lilacs, as the low mound under which rested the once faithless soldier, Mike. At the top lay the withered blossoms of his little friend, and over all waved the Stars and Stripes.

### BE YOURSELF

By ALICE MAY DOUGLAS

Have a mind of your own. Do your own thinking. Respect your own ideas. Do not be afraid to diner from others, but be slow to put forward opinions that differ from those of the rest of a company unless yours be such that should be put forward. Have convictions and stand by them. But do not hesitate to change your mind when occasion de-One has said that a person who never mands. changes his mind is one who does not have a mind large enough to change, and another that for a man to change his mind is simply to confess that he is wiser to-day than he was yesterday.

Be yourself. You can't be another if you try; people will respect you more when you are living your own natural life and not trying to live that of

Allow others to likewise be themselves. One of the greatest authors has said that one of you is enough for the world.

### A FATHER'S LETTER

From "Books and Authors" in March St. Nicholas.

When Sir Philip Sidney was twelve years old he had made such good progress in his studies that he wrote to his father a letter in Latin and one in French. Young Philip's letter seems to have greatly pleased his father, for in return Sir Henry Sidney wrote a charming letter of advice and counsel, well worth reading in full.

We can quote only a little of it. As to study be

wrote, in the old spelling:

"Apply yowr study to suche howres as yowr discrete master dothe assigne yow, earnestlye; and the tyme, I knowe, he will so lymitt (limit) as shal be both sufficient for yowr learninge and saf for yowr health. And mark the sens and the matter that yow read, as well as the woordes. So shal yow both enreiche (enrich) yowr tonge with woordes and yowr witte with matter; and judgement will growe as yeares growyth in yow. . . Yf yow heare a wise sentence, or an apt

phrase, commytte yt to yowr memorye, with respect to the circumstance when yow shal speake yt."

### WHAT THE BOY CAN DO

In speaking about special courses of work for school children an officer of the New York City Board of Education, said the other day:

"The girls are taught how to make a room look cozy and homelike; why should not the boy know how to do his share in the work of keeping it so? On the boy ought to fall the responsibility of attending to the odd little jobs for which his sisters are never supposed to have any liking or training. Among these jobs may be mentioned the keeping in repair of doorknobs, locks and hinges; the putting up of shelves, hooks and fixtures; the oiling, staining and waxing of floors. He can usurp the function of the glazier, the painter, the carpenter and the locksmith, and his usurpation will save quite a drain on the family purse. Many of these things can and ought to be taught to hoys, especially city boys, through special courses in the schools."

cross ensign broke out from a masthead of the nearest ship.

"Russian, by Jove!" exclaimed the captain of the Cochise. "Show our colors, quartermaster."

This order was obeyed, and the Stars and Stripes streamed out defiantly from the after jackstaff; but the speed of the great ship was not slackened until a peremptory order in shape of a solid shot hurled across her bows bade her come to a halt. By the time her momentum was lost and she lay sullenly rolling on the long swells, she was abreast and within a cable's length of the nearest man-of-war. From this ship two boats filled with armed men were lowered, and a few minutes later the Cochise was boarded by a Russian naval officer accompanied by a guard of ma-

rines in charge of a lieutenant.

While the latter scattered his men, placing one in the pilot house, another at the forecastle companion-way, two more in the engine room, and the rest at various important points, the officer in charge of the boarding party, speaking English fairly well, exchanged a few words with the captain, and then the two disappeared together in the direction of the main saloon. To this place also the purser, with the ship's papers, was summoned a minute later.

The two passengers were left alone, and Dunster, forgetting his dislike for his companion in the present excitement, asked him if he thought there was any danger of the ship being seized "Who knows?" replied the Frenchman, shrugging

"Who knows?" replied the Frenchman, shrugging his shoulders, and at the same time nonchalantly lighting a cigarette. "A Russian, with the power to enforce his will, does as he pleases, the same as everyone else."

"But America is not at war with Russia, and this is a peaceable American merchant ship."

"Very true; but if she should happen to have on board anything contraband of war she doubtless would be considered a lawful prize."

"What would be done with her in that case?"
"Who knows? She might be set on fire and left
to burn; she might be sunk at once by a few shots,
or she might be taken to the nearest Russian port
and condemned."

"And what will become of us?" asked the young correspondent interestedly.

"Ah, my friend! that will depend, like the ultimate fate of all mankind, upon the lives we have led. If they are free from suspicious acts, all will doubtless go well with us; but if otherwise, then, pouf! who can tell what may happen?"

At this moment a steward notified M. Delar that he was wanted below, and for the next ten minutes Dunster was left alone to gaze moodily at the sullen warships that threatened to interfere so seriously with his plans. Then came his turn to be summoned for examination, and, filled with mixed curiosity and apprehension, he made his way to the saloon. Its only occupants were the Russian officer. M. Delar, and half a dozen heavily armed marines. While Dunster was wondering what had become of the captain and purser, the officer addressed him by name and asked if he could advance any reason why he should not be considered a prisoner of war.

"Certainly I can," answered our lad hotly "I am an American citizen, as I have the papers to prove, on a peaceful mission to Japan"

"It is conceded that you are of American birth," said the officer; "but you are believed to be of Russian parentage. At any rate, you wear about your neck a holy ikon of the Russian church. In spite of this, you are suspected of being a traitor to Russia and devoted to the interests of Japan."

"That would be a very serious charge," replied Dunster quietly, "if it were true, or if by any means you could make it appear true. As I know that to be impossible, your implied threat does not cause me the slightest uneasiness. I am an American citizen, and demand to be treated as such."

\*Possibly, then, our information is unreliable, and you are not interested in a submarine torpedo hoat shipped on this very steamer to the Japanese government, though billed merely as machinery and consigned to Shanghai."

In spite of Dunster's desperate efforts at self-control, he knew that his face suddenly had become pale, and then vividly flushed. At that moment he could not have framed a suitable reply to the startling accusation to have saved his life. Fortunately, he was spared the necessity, for the officer continued:

"If you are not thus interested, it seems strange that you should, at great inconvenience to yourself, have accompanied that same submarine on a goods train across the American continent, should have engaged passage with it on a freighter instead of sailing by a swifter and far more comfortable passenger ship, and that you should have taken these pictures of anything so little picturesque as crated machinery in process of transfer from one conveyance to another."

Thus saying, the officer handed Dunster half a dozen of the very photographs the latter had taken

at Seattle, and which, until that moment, he had supposed to be in the roll-holder of his camera, still undeveloped.

Copyright, 1904, by Harper & Brothers.

KIRK MUNROE:

For a few seconds the lad stared at them in amazed silence. Then, carelessly flinging them down, he said:

"I never before saw those photographs, and have nothing to say regarding them. As I already have stated, I am an American citizen relying upon the papers issued to me by my government for proof of my claim, and for protection; unless, indeed," he added bitterly, "I have been robbed of them."

"Certainly not," replied the officer politely. "I have them here, and am personally responsible for their safe-keeping until such time as their production may be demanded."

As Dunster had left those same papers in his stateroom, locked in his suit case, this was not reassuring.

"In the meantime," continued the officer, "as this ship is the prize of his Imperial Majesty's cruiser Rurik, I am obliged to ask you to give me your parole, as your fellow-passenger, M. Delar, has just done that you will make no attempt to leave her, or to escape beyond Russian jurisdiction, until the merits of your case have been decided by a court of inquiry."

"If I refused to give it, what would happen?" inquired Dunster.

"I should unhapply be compelled to confine you to your cabin under guard, and the restraint would be continued after we reached port," replied the officer.

For a moment the lad thought rapidly; then he said: "Very well, sir, I give my promise not to attempt to escape within the time limit you have fixed. Do you want me to take oath to it?"

"Certainly not," replied the officer, smiling. "The word of a gentleman, and especially of one so recently a cadet officer in the American navy, is more than sufficient. Also, I am happy that you have made this decision; for not only would it be most unpleasant to order you into confinement, but I should have missed your company, which I hope to enjoy while we continue to cruise together. My name is Zemaloffsky, commander in the navy of his Imperial Majesty the Czar of Russia, and I look forward to meeting again at dinner the Monsieur Brownleigh of America."

With this the officer rose, gathered up his papers, and, followed by his guard of marines, took his departure, leaving the two passengers sole occupants of the saloon.

"It decidedly is an unpleasant interruption to our voyage," remarked the Frenchman.

"Decidedly," answered Dunster shortly, at the same time turning into his own stateroom and closing its door behind him. He did not wish to converse with his fellow-passenger just then, for with anyone until he had carefully considered the situation.

His first move was to examine his suit case, which he found locked as he had left it, but his papers were gone. Also the roll-holder of his camera was empty. His next discovery was that his revolver, together with its ammunition, had been taken.

"I wish I knew whether I had been robbed before the Russians came on board," he mused. "Yes, it must have been, for those pictures could not have been developed since. I wonder if it could have heen that wretched Frenchman? If I had proof that it was I would make him smart for it before we left this ship. But how could he know, how could anyone know, that I wore what that Russian was pleased to call an ikon about my neck? That is a mystery."

The mystery would have been cleared promptly enough, could Dunster have seen M. Delar at that moment lying in the upper berth of an adjoining stateroom with one eye glued to a tiny hole bored through the thin partition, and intently watching his neighbor's movements.

But our lad had no suspicion of this, and shortly afterwards, when he met the Frenchman on deck, the latter at once began to relate his own grievances.

"They have broken into my cabin and robbed me of everything!" he exclaimed bitterly. "Did they take your money?"

"No," replied Dunster, "because I had none."

"Well, I had. It was one thousand francs in gold notes, and they have taken every sou. But they will be obliged to make restitution, the canaille! They will be taught that a citizen of the great French Republic may not be robbed with impunity on the high seas. Do you know what else they have done?"

"No; what?"

"They have transferred our crew, including captain, purser and engineers, to one of their own ships, and replaced them here with a Russian crew."

"Where do you suppose they are taking us to?" asked Dunster.

"I know not; but, as you may see, our course has been changed, and at full speed we are headed for the north."

"Then we must be bound for Vladivostok!" exclaimed the young American. "Of course, this is the Vladivostok squadron, for I remember that the Rurik was one of them. How stupid of me not to have thought of that before! And the others must be the Rossia and the Gromobol, for the Bogatyr was wrecked on their very first attempt to leave the harbor after war was declared."

"Yes," added M. Delar, "her steam steering gear went wrong in some way just as she was passing the most dangerous reef in the harbor, and before they could get the supplementary gear to working the ship had sheered and struck. Afterwards it was discovered that the gear had been purposely injured by some person on board, probably a Jap disguised as a Chinese table boy. Anyway, a lot of Chinese who had been on board were shot on suspicion as soon as they got ashore."

"You seem to know a lot about the affair," said Dunster, regarding his companion curiously.

"Oh, yes," replied the other. "I have told to you why I was coming out here, and of course, a person in my line of business learns much that is not made public. I hope, by the way, that you will not drop any hint about what I have told you of myself," he added with an appearance of anxiety; "for it would go hard with me if it were known. I have declared that I merely am a globe trotter on my way around the world, and that I came by this steamer because of the cheapness."

"All right," replied Dunster; "I won't give you away. I wish, though, that you had not told me."
"Ah! mon ami! How could I help it, when you with such frankness gave me the information of your own plan to become a correspondent de journal? And now I am very sorry that these Russians have such a suspicion of you, for it may make to

you much trouble."

"How do you suppose they got hold of those photographs?" demanded Dunster, turning sharply on the other and gazing full in his face.

"I know now! It is that purser," replied M. Delar, returning the lad's gaze without flinching. "For I remember to have seen him devil-up some photograph several times, and I think much about it. Of course, he only would have a key to your cabin."

"I wonder if I have misjudged this fellow, after all, and if I can trust him?" thought our lad. "If I only dared to, I expect he could help me a lot. Yes, I believe I will. There isn't anyone else, and I don't see how the situation can be made much worse than it is. Monsieur Delar," he added aloud, "as we seem to be equally up against it, I have—"

At that moment the two passengers were joined in their promenade by the Russian commander, whose presence evidently was so distasteful to the Frenchman that the latter, muttering an excuse, almost immediately went below.

When, late that same night, Dunster, unable to sleep, and, going on deck for a breath of fresh air, caught a glimpse, through an imperfectly curtained window, of his fellow-passenger and the Russian commander, laughing, chatting and drinking together in the captain's room, he no longer regretted that his attempt to confide in the Frenchman had been interrupted.

### CHAPTER XIV.

### DUNSTER TAKES THE WHEEL.

At the breaking out of the war between hig Russia and little Japan, the powerful navy of the former country was badly scattered. Many of its ships were in the home waters of the Baltic, ten thousand miles from the scene of hostilities, and many more were shut up in the Black Sea by the provisions of a treaty that forbade the passage of the Dardanelles by armored vessels. At the same time a powerful fleet, equal in strength to the entire Japanese navy, was in Eastern waters ready to give battle. That is, they presumably were ready, and should have beeen ready, but they were not. Most of them were at Port Arthur, where their officers spent as much time as possible on shore and attended as little as possible to their duties on shipboard. Four of the finest cruisers and several torpedo boats were at Vladivostok, nearly twelve hundred miles by sea from Port Arthur. Another superb cruiser together with a gunboat, was at Chemulpo, in Korea, three hundred miles distant from the main fleet, while ether gunboats lay in various Chinese harbors.

Instantly upon the outbreak of war the Japanese, keenly alert and fully prepared, sprang into such aggressive action that within twenty-four hours they had destroyed the ships at Chemulpo, crippled and driven to the heavily defended inner harbor of Port Arthur the main Russian fleet, and had established a blockade of that most important stronghold. Then in quick succession they captured the fine big passenger ships belonging to the Siberian railway system, compelled all Russian gunboats in neutral ports to disarm and tie up until the close of the war, and sent a small force to watch ice-bound Vladivostok in the far north. At the same time a great fleet of transports, bearing hundreds of thousands of troops, issued from the nearest Japanese ports and sped swiftly towards designated landing places on the coasts of Korea and Manchuria.

When the Russians bottled up in Port Arthur awoke to their danger, and to the fact that their aggressive enemy could no longer be despised, they made such desperate efforts to break the established blockade, and to recover for their fleet the freedom of the seas, that the Japanese were obliged to gather at that point every available ship to maintain the advantage thus far gained. At the same time they were compelled to keep a flying squadron in the straits of Korea to protect the stream of transports and supply ships constantly passing to and fro, and also to prevent a possible junction between the Vladivostok cruisers and those of Port Arthur.

It was to avoid this squadron that the Vladivostok ships, when making a dash for the open later in the season, crossed the Sea of Japan, passed through Tsugari straits between the two largest Japanese islands, and then laid a course down the eastern coast that would intersect the track of all westbound ships making for Japanese ports. The one they most wanted to capture was the big freighter Cochise, concerning whose cargo and movements they apparently had full information.

They had met with no opposition, had found excellent sport and target practice in the destruction of a number of Japanese fishing vessels and small coasters, and now they had captured the very prize they had set out to gain. Moreover, they had done this just as the state of their coal supply warned them that it was high time to head back towards the well-stocked bunkers of the only Asiatic port in their possession still open to them. So it happened that the day following the capture of the Cochise, the very day on which Dunster Brownleigh had confidently expected to land at Yokohama, saw that ship, guarded by Admiral Yezen's cruisers, steaming northward towards the island of Yezo. That night the squadron, with all lights extinguished, slipped through the Tsugari straits, passing unseen within range of the heavy guns mounted on Hakodate head, and two days later they were within sight of Vladivostok.

In the meantime, though the squadron had made its venturesome cruise unmolested, its every movement, from the time of its entrance into Japanese waters until it left them, had been noted by swift scout boats sent out from Hakodate, Yokosuka, and various intermediate ports. These, unarmed for attack, but capable of tremendous speed, fitted with gas engines emitting no smoke to betray their presence, painted a dull lead color, and lying so low on the water as to be invisible beyond a two-mile range, had hovered about the Russian squadron and had sent from coast stations frequent reports of its location and operations. Thus its capture of the Cochise was promptly noted and reported to Tokio a few hours later.

From Tokio the news was flashed up to Hakodate, together with an order that, within fifteen minutes of its receipt, sent a swift torpedo hoat dashing out of the harbor headed westward into the stormy waters of the Japan sea. Thirty hours later the same boat, wave-battered and salt-encrusted, appeared off the Manchurian coast in the vicinity of Usuri bay, and was quickly lost to sight amid the labyrinth of fog-enshrouded islands guarding its mouth.

Three days later the cruiser squadron, accompanied by their prize, hove in sight, and with colors flying from every masthead prepared for a triumphal entry into the harbor of Vladivostok. Just outside its nerrow mouth they encountered the Chinese fishing fleet of big sampans and small junks that makes daily excursions to sea to supply the city with one of its chief articles of food.

These craft, propelled by square brown sails, or, in times of calm, by sculling oars of great size. worked by several men at each one, made ludicrous haste to vacate the path of the on-coming ships Their occupants had learned by bitter experience that it is beneath the dignity of a Russian warship to swerve from its course by so much as the fraction of an inch to avoid running down so contemptible an object as a Chinese ishing boat. So all of them, except one, bore away in a direction that would carry them clear, and, aiding their sluggish sails by industrious sculling, made good their margin of safety. The one boat that failed to get promptly out of the way was quite the largest of the fleet, but its crew seemed paralyzed by terror or utterly incompetent to manage their craft; for their utmost efforts at the sculling oars only served to turn her in a circle directly ahead of the on-rushing ships. Only by a miracle did she avoid the leading cruiser, which grazed her so closely that the Russian sailors spat contemptuously down on her decks. She still was floundering and circling as the second cruiser came up, but had managed to work into a position of safety by as much as a score of yards. The third ship in line was the Cochise, and from her pilot house, in which during the entire voyage he had beer a privileged guest, Dunster Brownleigh gazed with eager curiosity at the quaint fishing boats and the approaching land with its innumerable points of interest. All at once his attention

was directed to the queer-acting junk that had been left behind the others, and which, having already made two of the narrowest possible escapes from destruction, seemed about to tempt fate for the third time. Leaving her position of safety, she actually was trying to recross the path of the cruisers as though in an insane effort to rejoin her companions. In another minute she would lie directly in the course of the huge freighter that would crush and sink her like an egg-shell.

Beside himself with excitement, Dunster sprang out on deck, yelling and vehemently gesticulating to the imbecile junk.

"Luff, you lubbers!" he shouted. "Luff up sharp! or we'll cut you down! Oh! the infernal idiots!"

On the bridge overhead the Russian commander and M. Delar were laughing at him. In the pilot house a stolid-faced Russian quartermaster gazed fixedly at the compass card as though nothing else in all the world mattered.

Suddenly this man was pushed to one side and other hands than his were whirling to hard-aport the little wheel that, with the mighty aid of steam, controlled every movement of the great ship. Before the amazed sailor could recover his outraged senses and regain his rightful position, the deed had been accomplished. For the first time in history a ship sailing under the Russian flag had departed from her chosen course to avoid sinking a contemptible Chinese junk.

The Russian commander was storming overhead and hurling down volleys of incomprehensible oaths; while the quartermaster, who had in turn pushed Dunster violently from the wheel, was glaring at him and rehearsing some of the penalties that ought to be visited upon a person so presumptuous as to interfere with the steering of a ship. But the young American cared not a rap what was said, though he understood much more of it than they supposed. He had saved the junk, which even then was bumping and scraping along the side of the great ship. and that was enough to make him feel well con-

Having seen the Cochise resume her proper

### Boys of Naples A SERIES BY MINNIE J. REYNOLDS No. VI-THE CAMORRISTA

There is in Naples an association called the Camorra, which is like the Mafia of Sicily. It is an organized band of thieves and robbers, whose leaders make things safe for the gangs through their political influence. Americans need not condemn this too severely, for it has been often enough charged that arrangements somewhat similar exist in all large American cities. Be that as it may, the Camorra is powerful in Naples, and it takes the brighter, more ambitious scugnizzi, and trains them for its ranks. A Camorrista boy of 13 or 14 will have a different look from the ordinary street boy. He will affect an air of bravado. He already smokes a pipe, and lords it over the little boys A Camorrista boy of 13 or 14 will have a different look from the ordinary street boy. He will affect an air of bravado. He already smokes a pipe, and lords it over the little boys of ten or thereabouts, who steal and beg under his direction, and bring him their spoils for division. Any tourist unwary enough to try to walk from the steamer from which he has landed up to his hotel, will be set upon by a gang of scugnizzi, who will badger and torment him until he yields and throws them coppers. He is actually prevented from walking by their importunities. He might fight, but it is easier to pay, so he flings some pennies on the street, and while the boys are scrambling for them makes his escape. It is ostensibly begging, but it is really a petty species of highway robbery. And the tourist may be sure that somewhere in sight lurks a boy Camorrista, watching the performance, and ready to take the lion's share of the spoils. share of the spoils.

course, the Russian commander descended from the bridge, and, his face white with rage, ordered Dunster into his stateroom.

"You are under arrest, sir, from this moment, and no longer on parole!" he roared. "We will see if the authority of Russia is with impunity to be defied in her own waters!"

As the lad turned, without a word, to obey this order, his eye caught a sight so startling that he gazed at it incapable of motion. The unlucky junk that already had caused so much trouble had drifted directly in front of the third cruiser, which was following exactly the course taken by the others. Even as Dunster looked he saw several figures leap from the junk and disappear beneath the waves. Then came the collision, and at the same instant a terrific explosion that seemed to lift the cruiser bodily from the water.

### CHAPTER XV.

### A "BOY" WHO SPOKE AMERICAN.

So terrific was the explosion resulting from the collision between the third cruiser and the junk, which, but for Dunster's prompt action, would have struck the Cochise, that for a moment every soul on board the last named ship was paralyzed into a motionless silence; while each person glanced at the startled face of his nearest neighbor as though seeking an explanation of the awful happening. Then ensued a bedlam of orders and counter-orders, an aimless rushing to and fro, and a confused jangling of engine room gongs that seemed to call for slow speed, full speed, stopping, backing, and going ahead, all at once. But these conflicting orders were unheeded, for every engineer, oiler, fireman and coal-passer was madly rushing for the upper deck, under the impression that their own ship was sinking. Before they could be driven back to their duties the Cochise was fully a mile from the scene of disaster. Then she was stopped and an order was given to lower boats. The Russian crew, unfamiliar with American patent davits, were so slow at this work that long before a single boat from the Cochise reached the crippled cruiser she was surrounded by the Chinese fishing fleet of junks and sampans, whose crews were picking up swimmers, wounded men, floating bodies and fragments of

Of the junk that had caused the catastrophe only a few splintered sticks scattered over a wide area remained. The great cruiser, that but a moment before had arrogantly plowed the sea in the conscious pride of her terrible strength, still floated, but that was all. Her how had been blown away and all the forward part of the ship was a mass of wreckage. She had settled by the head until her stern, with propeller still madly revolving, was lifted clear of the water; but evidently some transverse water-tight bulkhead remained intact and prevented her from sinking. Even after the awful cloud of smoke from the explosion had drifted away she was so shrouded by her own steam pouring from port and hatchway, that not for ten minutes could her true condition be appreciated.

The first rescuers who gained her deck were confronted by an appalling scene of death and destruction. Dozens of her crew had been killed outright, and as many more had been scalded to death by the escaping steam; while others still lived, but with their poor bodies so mangled that speedy death would be a blessed relief. Scores had leaped into the sea, where many were rescued by the fishing boats.

Dunster Brownleigh had actively assisted in lowering the boats of the Cochise, and even had at tempted to take a place in one of them, but had been detected and sternly ordered to remain on board. So he was forced to be content with viewing the thrilling scene from a distance, and while so doing he was approached by M. Delar.

"Isn't it horrible!" exclaimed our lad, as he became conscious of the other's presence.

"Indeed, yes; horrible beyond words," replied the Frenchman. "And well do I realize that but for your noble action, this ship instead of that one would have been blown up, and we, instead of those poor wretches, would now be dead, mangled or scalded. It is dreadful to contemplate; but also it is a cause for such gratifude that I for one to the brave Monsieur Brownleigh a heart with thanks filled to overflowing."

In the whirl of excitement crowding the past few minutes, Dunster had not given a thought to the narrow escape of the ship he was on, or to his own share in effecting it; and now it was so overwhelming that ere he could find words to reply to the

Frenchman the latter again was speaking.
"But the mystery of it all," he said, "is how you should have known of the attempt to blow up this ship, or which of those many boats was prepared for so gigantic a task. You never before have been to this piace?'

"No, I never have."

"Nor even have seen a Chinese junk until now?"
"No."

"It is not known to me that you have been in correspondence with any person outside of this ship since leaving America, and I have been your most constant companion."

'No, I have held no communication with any per-

son outside this ship."

"Then how, in the name of all the saints, did you know?" queried the Frenchman, his face expressive of eager curiosity.

"I didn't," replied Dunster.

"You did not know that the junk was a mine of destruction?" retorted the other incredulously.
"I did not."

"Then am I still more bewildered to account for your insane action. Why did you take the terrible risk of altering the course of this ship? Did you not know that any officer on board would have been justified in shooting you down?"

(Continued at bottom of page 203.)

# BOY WANTED J. L. HARBOUR

window having on it these words:

BOY WANTED.

And the boys began to appear, for it was during the summer when many boys were out of school. I was given the task of seeing the applicants for the place and explaining its duties to them. These duties were very simple. Any boy of ordinary intelligence could have discharged them, and the pay was five dollars a week, which was more than boys were usually paid for such service. I was to select one of the most promising of the applicants and take him to the proprietor, who was to question him

a little before engaging him. I rejected the first six applicants because I was sure they would not be satisfactor; to my employer, and I will tell you just why they v ere rejected.

Number one came into my room without removing his hat and his finger nails were "in heavy mourning." He had a swaggering air, which is almost always the accompaniment of impertinence. He would never do for a particular man like my employer.

Number two, although not more than sixteen years of age, brought an odor of tobacco into the room with him, and when I asked him if he smoked, he said: "Only a cigarette now and then. My employer was a man who refused absolutely to have a cigarette smoker in his employ, and when I told the boy so he said: "No the boy so he said: man can boss me by saying whether I can smoke or not." And he was shown to the door.

Number three gave certain evidence of being the type of boy who does things by halves. Only the fore part of his shoes were polished. His hands had been washed only to the lower part of the wrists. His front hair had been given a hasty combing, but the back of · his head was in a tangle. Only half of the buttons of his waistcoat were buttoned. His necktie was but half tied. I was sure

NE DAY the proprietor of an establishment in that that type of boy would never dust an office which I was employed put a placard in the thoroughly or keep things in order, and my employer was very particular on these points. This boy had to go.

> Number four plied me with questions in regard . to his exact duties, and gave me to understand that he would not be "imposed upon." He said that he had left his last place because they were always asking him to do things it "wasn't his business to I suggested that perhaps his employers felt that as they were paying him for his time from

eight in the morning until five in the afternoon they had the right to ask him to make himself useful in any way he could. When I told him that my employer would feel that way about it he said that he wouldn't take the place unless it was under-1891

THE OLD SCHOOLHOUSE AT OYSTER BAY.

There are few spots in this country dearer to President Roosevelt and his sons than the old school-house at Oyster Bay, Long Island, the little village where is located the residence which is really home to the Roosevelt family. In this unpretentious country schoolhouse all the President's children have at one time or another pursued their studies. The President has always taken a keen interest in the old school. When his children were pupils there he got into the habit of occasionally addressing the pupils, and he has kept it up ever since, even though none of the junior members of his family sare now in the classes. In this old schoolhouse, too, Mr. Roosevelt was wont in the old days to play Santa Claus (dressed in appropriate costume) for the benefit of his sons and their boy chums, and even yet he and Mrs. Roosevelt endeavor each Christmas to send some little present for each pupil at the old school. Some of the things which Roosevelt has said in his addresses in this old school building have become famous. He always preached against snobbery—declared that all boys who worked hard and studied hard and did right to the best of their knowledge and ability, were equal, and he always urged the lads to go in for strenuous athletics and not to shirk in football any more than they would in their class work in school.

stood in advance that he should do only certain things. As a boy was wanted who would make himself generally useful this boy did not have the opportunity of "taking the place"

Number five was one of these too smart boys. He had the "I know it all" manner of the boy who can never be told anything and who is too generous with his own information. Such boys always have an exaggerated idea of their own importance, and they are sure to make themselves disagreeable to others. This boy assumed a jauntiness of manner bordering closely on impertinence. My employer was a great admirer of real modesty in a boy, and this boy evidently had none of that excellent quality to his portion. He would never do.

Number six used no less than eight or nine of the silliest and coarsest slang expressions in the five minutes I talked to him. As a part of the duties of the boy to be engaged would be to wait on ladies and gentlemen and to give courteous replies to their questions, I was sure that this boy would not do.

I was almost sure that the seventh boy would be satisfactory the moment I saw him. He had such a good, wholesome look, and he carried himself in such a manly way. He closed the door quietly and carefully behind him, and off went his hat the moment he came into the room. He was tidy from head to foot, and it was easy to see that it was not a tidiness that had been put on for the occasion. Only the boy who is habitually tidy could look as he looked. His manner was modest and he gave frank and courteous replies to all my questions. When I told him that I could not well define his exact duties, he said: "I am willing to do anything you have for me to do." Once when he had not understood what I said, he said: "I beg your pardon, sir." And when a lady employed in the establishment came into the room to ask me a question, the boy opened the door for her when she passed out. She dropped a letter she had shown me and the boy picked it up for her. Our brief interview revealed the fact that this boy was neat, quiet, courteous, obliging, deferential to his elders and to ladies. The boy who has these attributes is always wanted. They are sure signs of a clean mind and an honest heart. Such boys will be sure to succeed in life, and they will never lack friends.

#### F O RTHE

(Continued from page 202.)

"No, I didn't know it, and it wouldn't have made any difference if I had.'

"But why did you do it?"

"To save the lives of those on board the junk, of course.' "To save the lives of those Chinese swine you

risked your own? Ah! my friend, it is impossible! You cannot expect me to believe such a thing." "It is true, all the same," replied Dunster hotly. "But I don't care a snap of my fingers whether you believe it or not.

Thus saying, he ended the conversation by walking away, leaving the Frenchman to stare after him, at the same time muttering:

"The imbecile! Of course I do not believe him. Of course he knew: and, if I mistake not, he now has fastened the chain so tight about his neck that it never any more can come loose. I might feel sorry for him if he had not so terribly la sufficance; but now, bah! I do not care. He is a fool."

The stricken ship was towed to the nearest beach, where she could be sufficiently patched to get her to a dry dock; and, after some hours of delay the surviving cruisers, together with the Cochise, steamed slowly into port with colors at halfmast. In company with M. Delar, Dunster was allowed to go on shore. The launch that carried them to the jetty reached it just as one of the fishing sampans with several survivors from the wrecked cruiser was moored alongside. Her crew immediately began to transfer their helpless passengers to the shore. where Red Cross ambulances awaited them, and Dunster was obliged to stand aside to allow one of the stretchers to pass. A half-stifled exclamation drew his attention to one of the bearers, a Chinese youth, evidently of the coolie class, who was staring at him as though the young American were some rare curiosity. Dunster had barely time to note that the garments of this person were wringing wet, as though he had recently been in the water. when a white-bloused soldier gave the stretcher bearer a shove with the butt of his musket and harshly bade him move on.

Under the guidance of M. Delar, who seemed quite at home in Vladivostok, the two passengers entered a droschky and were driven up the steep hill from the water front to the upper town, where they were deposited at the entrance to the Hotel Tissler. A few minutes later our lad found himself the sole occupant of a room on the second floor of a white-

MIKADO painted, green-shuttered, wooden building, that seemed fairly comfortable as hotel rooms in that part of the world go, but which could be reached only by passing through an adjoining apartment, now occupied by M. Delar.

Dunster did not like this arrangement, but had been told that only these rooms were vacant, and that he might change as soon as another became available. M. Delar, politely regretting the inconvenience, had given him his choice of them, and so there was nothing to do but make the best of an uncomfortable situation.

While he was unpacking his bag and wondering what would be the outcome of the strange position in which the Fates had placed him, there came a knock on his door, and M. Delar presented himself. "I have ventured," said the visitor, "to bring a

servant for Monsieur Brownleigh's inspection, knowing that he would immediately want one."

"Thank you for taking the trouble," said Dunster, "but you are mistaken in thinking that I need a servant.

"Pardon; but possibly it is you who are mistaken," replied the Frenchman, smiling. "In this place a servant is a necessity to every gentleman. He will care for your room, wait on you at table. procure much of your provision, run of your errand, and, in fact, do so many thing that one may not get on without him. Besides, this boy speaks a little English, which is very rare for a servant in these parts. For that reason also he demands one rouble per day. That is greatly expensive, but I believe him to be worth it."

"How much is a rouble?" asked Dunster.

"It is in reality about four francs, or eighty cents in your money; but it may be regarded as one dollar, since it is divided into one hundred kopeks."

"Then I must pay the servant one dollar per day?" "Yes. That is his extravagant charge for speaking the English."

"Is he a Russian?"

"Certainly not," laughed M. Delar. "He is of the Chinese, as are all the servants in this place

Well, if I must have a servant, I suppose it is best to have one who can understand what I say to him. Where is this English-speaking Chinaman?" "I will send him," replied the Frenchman, at the same time leaving the room.

Dunster heard him call "Boy!" and a moment later a young Chinese appeared at the door, bowing and smiling. For a moment Dunster fancied he had seen him before, but said to himself that of course he had not, and that all Chinese looked alike anyway.

"Do you speak English?" he asked of the nodding figure.

"Me spik Melican," was the answer. "That's as good, if not better. What is your

name?" "Name Sing-hi."

"Sing for short, I suppose. Well, Sing, how much

do you expect me to pay you?"
"Me git um queek," was the smiling reply. "What?"

"Me spik Melican," answered the "boy," nodding

his head rapidly. "So you have said, but that wasn't the question. How much am I to pay you?"

"Name Sing-hi."

"Look here!" exclaimed Dunster wrathfully, "I'll make you sing low if you don't quit this foolishness. What do you mean by it?"

"Me spik Melican," asserted the "boy" stoutly, but with a somewhat apprehensive expression, and all Dunster's efforts failed to win another intelligible word.

In spite of his disappointment at Sing-hi's limited vocabulary, he decided to engage him, and afterwards found no occasion to regret having done so, for a more cheerful, willing, resourceful chap it would be hard to find. He seemed to know by instinct just what his new master wanted and when he desired it. Also he knew how and where to get it. He proved a good cook, and, to Dunster's amazement, seemed to understand the American way of preparing and serving certain dishes. In fact, he became so invaluable that on the second day of their acquaintance his employer wondered that he had ever thought of getting along without him.

"Sing-hi," he said as he watched the blue-clad figure busily engaged in cleaning a travel stained coat you play such a snappy game that, if you could only understand the signals a little better, I believe I'd take you on for the whole season.'

Of course, Dunster had not expected to be understood, and so was wholly unprepared for the remarkable effect produced by these words. Sing-hi looked from the window and saw M. Delar walking down the street; went to the communicating door between the two rooms, satisfied himself by a quick glance that the Frenchman's room was empty, locked the door, and returning to his employer, with face aglow and narrow eyes sparkling, he said:

"Dun Brown, it is not now the ball-foot game we play, but the game of war with that Rus-si-an, and no ru-als but to kill him. Oh! my friend, Dun Brown! Do you not any more know me?"

(To be continued.)

# American Boy Day

WILL BE CELEBRATED AT

The Exposition, Portland, Ore., July 5, 1905, at Chautauqua, N. Y., July 22d, 1905, and at Boston, Mass. (date given later)

FTER much correspondence we are enabled to tell the readers of THE AMERICAN BOY that AMERICAN BOY DAY will be celebrated this year at the great Exposition at Portland, also at the Chautauqua Summer Assembly on Lake Chautauqua, New York, and at Boston.

The Portland Exposition management have taken hold of the enterprise with spirit and enthusiasm, promising us such co-operation as will make it a success from every standpoint. The boys will remember that July 5th was the date of our great AMERICAN BOY DAY at the St. Louis Exposition. The same date has been selected for the Portland Exposition as being the date on which there will most likely be a large crowd in attendance.

The Chautauqua Institution having completed its summer program before taking up the consideration of AM-ERICAN BOY DAY, was unable to give us July 5th, but will celebrate July 22nd.

#### AMERICAN BOY DAY AT PORTLAND

Now that July 5th has been decided upon as the date for the celebration of American Boy Day at the Lewis and Clark Exposition at Portland, we ask the hearty co-operation of every boy in America in the making of it an even greater success than that achieved at St. Louis. The editor of The American Boy will go to Portland and act as president of the day. He will have charge of the making up of the program, and to him all letters should be addressed by boys who intend to be present on that occasion. He wishes especially to hear from boys who wish to take part in the program, either in the way of reciting, orating, singing or entertaining in some form. He wants the most expert talent he can find among the boys of the country for the program that will be rendered on the afternoon of July 5th in the auditorium of the Exposition. He wants suggestions from boys and friends of boys as to who of their friends and associates will be at Portland on July 5th, and particularly as to who of those expecting to attend on that day are able to entertain by speaking, singing, etc.

The auditorium at the Exposition holds twenty-five hundred people, and we expect to fill it from the stage to the door with enthusiastic American boys and their friends. It cannot be expected that as many boys from the Eastern and Middle States will attend the Portland Exposition as attended the one at St. Louis, so that it rests upon the boys of the Middle West and the Far West to plan to attend the Exposition on July 5th and make the occasion a success. We want to hear from every boy west of the Mississippi who reads this paper, telling us whether or not he will be present, and making suggestions as to the program and as to anything else that he thinks will be of assistance to us in making plans. Confer with your parents and friends with reference to the matter and write us. Do not wait a moment.

We have already put ourselves in communication with the Superintendent of Schools, the General Secretary of the Y. M. C. A., and others in Portland with reference to interesting the boys of that city in the celebration, and no doubt we shall meet with the hearty cooperation of all Portland boys; but we want the help of boys everywhere.

#### AMERICAN BOY DAY AT LAKE CHAUTAUQUA

Everyone knows of the Chautauqua Assembly at Lake Chautauqua in western New York. This is the parent of all the summer assemblies of the country, and is the largest and most successful of them all. Here every summer thousands of persons congregate for summer sport, mingled with study and entertainment of the highest order. The Chancellor of the Chautauqua Institution is Bishop John H. Vincent, of the great Methodist Church, who, with Lewis Miller, founded the Institution in 1874. The General Council of the Institution is composed of Jane Addams, the celebrated settlement worker of Hull House, Chicago; G. Stanley Hall, President of Clark University; Bradford P. Raymond, President of Wesleyan University: Melvil Dewey, of the New York State Library. The Principal of Instruction, who has charge of the summer program, is Prof. George E. Vincent, of the University of Chicago. After a thorough consideration of the matter by Prof. Vincent and his associates, a decision was finally rendered in favor of holding American Boy Day exercises at Chautauqua, and Saturday. July 22nd, is the date.

In a letter to us dated April 12th, Prof. Vincent writes: "We shall count upon your personal presence and supervision, and you in turn may expect from us hearty co-operation. We have already arranged for a large children's chorus for the afternoon."

This secures for the boys of the Middle States an opportunity to take part in and enjoy American Boy Day without going to the Pacific Coast. The railroad rates to Chautauqua during the summer are exceedingly reasonable, and there will be no excuse for boys, particularly such as live in Pennsylvania, New York and Ohio, not being present. We want from boys of the Middle States letters promising to be present, and suggesting names of boys who are expert declaimers, orators and entertainers in particular lines.

Dr. Jas. A. Babbitt. Philadelphia, is the leader of the big summer club of boys that is held at Chautauqua every summer. He will co-operate with us, and from the membership of his club many of the entertainers will be taken.

#### AMERICAN BOY DAY AT BOSTON

At the last moment before going to press we received a telegram from W. E. Dillon, Superintendent of the Chelsea Boys' Club, advising us that at a conference of the friends of boys in Boston it had been determined to celebrate American Boy Day in Boston, the great city of New England. The date is not yet determined. Now let us hear from New England boys. We shall have particulars as to date in a few days and a circular letter will be prepared for New England boys who ask for it.

#### AMERICAN BOY DAY EVERYWHERE

We have been endeavoring to have American Boy Day celebrated in as many communities throughout the country as possible. We do not care how small the city or town, if there is some one there who will undertake to find a hall or a church where the celebration can be held, and will undertake to find the boys who will take part, we will furnish the program, that is, select the declamations, suggest subjects for orations, and give pointers with reference to other parts of the program that will enable a local leader to carry on the day in fine style.

#### NOW GO TO WORK

The editor of THE AMERICAN Boy has done his part. Ever since July 5th, 1904, when American Boy Day was celebrated at St. Louis, it has been the desire of thousands that the celebration be repeated in 1905 in as many localities as possible. The occasion at St. Louis was inspiring in the extreme. It can be made doubly so this year. It is now up to the boys of the United States to have a successful American Boy Day in the summer of 1905. Do not think that this is for some other boy to attend to. It is for you. If you cannot go to some one of the places arranged for, then see to it that some one-the superintendent of schools, newspaper editor, pastors of churches, Sunday school superintendents, Y. M. C. A. secretary, or some one interested in boys, shall take the lead in your town. We are prepared to make it easy for a leader. Every town has its talented boys-boys who can declaim, boys who can write speeches, boys who can play the cornet, boys who can play the violin, boys who can sing. Every American town has enough of patriotism within its borders to make American Boy Day an immense success. What can you do? Think about it and write us. Do not wait a minute.

Finally, we again urge upon the boys west of the Mississippi that upon them depends the success of American Boy Day at Portland, July 5th; upon the boys of the Middle States, that upon them depends the success of American Boy Day at Chautauqua, July 22nd; upon the boys of New England, that upon them depends the success of American Boy Day at Boston; upon boys everywhere, that upon them depends the success of the day in their own communities.

## Young America the Victim of a New Evil Called by the Startling Name of "Schoolroom Deformity"

Written by PROF. MATTHEW O'BRIEN, Physical Director Boys' Central High School, Philadelphia, for The American Boy. Photographs accompanying this were posed especially by Prof. O'Brien with boys of the Central High School as the figures.

A CLASS POSED BY PROF. O'BRIEN, IN CORRECT ATTITUDES

It is popularly believed that in the schoolroom Young America waxes strong and
straight of limb by reason of the judicious
exercises arranged for him by boards of
education. It is startling to learn that there
are drawbacks to this method of training our
hoys; drawbacks of so serious a nature that
the boy who is exercised in school calisthenics without regard to his fitness for such
drill is steadily deteriorating physically.
Furthermore, despite the efforts of our teachers to compel scholars to sit up straight and
assume correct attitudes during school hours
there is, it is asserted a steady increase in
the percentage of scholars suffering from
what has come to be known among medical
men as "schoolroom deformity." The cause
of such increase, through lgnorance on the
part of the teachers, and the remedy, is
treated thoroughly in the following article,
written especially for this paper by Profes,
sor Matthew O'Brien, of the Central High
School, Philadelphia, from which institution
so many boy athletes have emerged to capture high honors in the world of amateur

the other, with the head inclined towards

It is startling to learn that there are drawbacks to this method of training our boys; drawbacks of so serious a nature that the boy who is exercised in school calisthenics without regard to his fitness for such drill is steadily deteriorating physically. Furthermore, despite the efforts of our teachers to compel scholars to sit up straight and assume correct attitudes during school hours three is, it is asserted a steady increase in the percentage of scholars suffering from what has come to be known among medical men as "schoolroom deformity." The cause of such increase, through ignorance on the part of the teachers, and the remedy, is treated thoroughly in the following article, written especially for this paper by Professor Matthew O'Brien, of the Central High School, Philadelphia, from which institution so many boy athletes have emerged to capture high honors in the world of amateur sports.—Editor.

convinced that the evil is a serious and a growing one, and one that should be cricked at once and with a at once and with a strong hand, in the in-terests of the future generations of Ameri-cans, it is only neces-sary to visit an Amer-ican schoolroom and closely watch the scholars.

Notice how the avdesk. The desks are all of one size, while the children naturally vary in size. They assume strained posi-tions. Some sit with the shoulders drawn forward, the head bent down, one shoulder thrown higher than the other, as the child writes, or the backbone assuming a

shape closely resembling the letter C as the boy or girl slides down in the seat. snape closely resembling the letter C as the boy or girl slides down in the seat. The heart, lungs and in fact nearly all the throat and body organs are cramped and cannot act vigorously. We know from experience that the bones and tissues tend to permanently grow into positions that they are made to assume habitually. Day after day the boys and girls sit in the deformed attitude that the conditions under which they work compel them to assume. In time the attitude becomes habitual and they suffer for life from "schoolroom deformity."

At first and during the growing years the bones and ligaments have not permanently grown crooked, if such a term may be allowed. In time the deformity becomes a hony one and cannot then possibly becured. Some of the most common deformities, with their causes, are:

Round shoulders—This term is an excedingly general one. It may mean that the child etters through babtuel elevant.

Kound shoulders—This term is an ex-cedingly general one. It may mean that the child, either through habitual slouchi-ness, or through general weakness, espe-cially of those muscles between the shoulder blades, has permitted his shoul-ders to droop forward, causing the typi-cal rounded appearance of the back be-tween the shoulders, with its accompany-ing horror of flattened chest and sunken tween the shoulders, with its accompanying horror of flattened chest and sunken stomach. It may mean that there is an unnatural curving of the backbone. Again, such a carrying of the head forward may be due to some eye trouble, for the near-sighted child naturally strains his head forward to see distant objects, thereby causing a spinal curve which ordinary nearly often term round. which ordinary people often term round

Another common deformity is an unnatural curving of the spine in the small of the back. Slouching down in the seat is the cause.

Sitting with one shoulder higher than

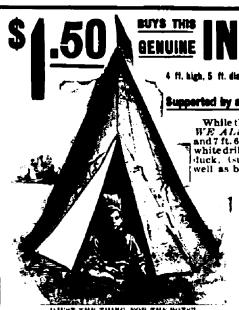

The cause of the incorrect position must be sought. In most cases it will be found to be defective eyesight, poorness-of hearing, or in the lighting or seating arrangements of the school itself. Each

teacher could roughly make tests of the sight and hearing with a very little trouble. Procure a card with the test letters

## AMERICAN FLAGS

EVERY BOY AND EVERY COMPANY AND CLUB OF BOYS SHOULD OWN A NICE AMERICAN FLAG

THE publishers of THE AMERICAN BOY are in a position to sell or give as premiums to boys Handsome Silk Flags on terms that cannot be duplicated in their own towns. They can be had either mounted on staffs or unmounted, and in several sizes. They have selected as a leader a flag 21/2 x 4 feet, mounted on a solid ash staff with maple spear-head bronzed. The flag is all silk and first-class in every way. Price, \$2.25, delivered, or given away for four new subscriptions to THE AMER-ICAN Boy, or for three new subscriptions and fifty cents, or two new subscriptions and one dollar, or one new subscription and \$1.50. The flag alone, without the staff and spear-head will be sent for \$1.50, delivered, or given for three new subscriptions, or two new subscriptions and fifty cents, or one new subscription and \$1.00. The offer is not for your own subscription or renewals. The flags are silk and are beauties.

on it. Each child should be able to read on it. Each child should be able to read the letters at a given distance, usually sixteen feet, with either eye, the other being covered by a card. A card printed with diamond type should be read at distances varying from two to four inches, varying with the age of the child. If any child shows signs of defective eyesight, the teacher should insist that an oculist be consulted at once. When the boy or girl returns properly equipped with suitable glasses the incorrect attitude that was causing a permanent deformity will be found to have cured itself.

correct attitude that was causing a permanent deformity will be found to have cured itself.

No less important than the eye test is that for the hearing. Seat the child and hold a watch near one of the ears, closing the other with the hand. Then tell the boy or girl to sit with closed eyes and say whether or not the ticking of the watch can be heard. Gradually withdraw the watch until it is thirty or forty inches from the ear. At this distance a child with perfect hearing will still be able to detect the ticking of the timepiece. Note carefully at what distance the child ceases to hear the watch tick. Then try the other ear in the same way. Some boys will say they hear the watch tick when they really do not. To check this, hold to the ear the hand alone without the watch and ask if they still hear it. If the answer is "yes," it is safe to say that the boy's hearing is defective. It is not an absolutely accurate test, but a sufficiently good one for the purpose.

the purpose.

Watch the child at school sessions. Observe if there is an effort to see the blackhoard, a peering forward with puckered eyes. Notice if the head is bent forward in an attitude of strained listening. Many a child will be found to become almost a different being when fitted with glasses, or some insignificant defect of hearing is removed.

Having searched for and removed the prevailing reasons for the incorrect attitudes assumed by the scholars, insist on proper positions being maintained. Allow no child to slouch down in the seat or sit with hunched shoulders.

This is the simple path to the removal

of such ills as have come to be recognized in scholastic circles as "schoolroom deformities."

#### A Heaven for Lions

In Western India there is a place named Junagadh. It is governed by a ruler called a Nawab. This Nawab has a peculiar fad. It is one that probably no other person in the world shares with him; at any rate, if anybody else has the same fad. it isn't likely at all that he can indulge it as the Nawab of Junagadh can. for in his territory is the great forest of the Gir, in whose 200 square miles there are believed to be more lions and panth-ers than are to be found in any other part of the world—and the fad of the Nawab is

lions.

In his territory it is a prison offense for a native to kill a lion or a panther; and it is only when visiting Europeans enter the land that the Nawab permits any hunting. Very prominent Europeans know so well that the Nawab does not like to have his lions shot that they politely decline his invitation when he extends it, knowing that this will please their host more than anything that they could do.

could do.
Even the Viceroy of India, who recently visited the Nawab, refrained from going out to shoot a lion, although, of course, that ruler had made all preparations for

Junagadh is probably the only spot in India where the lion still exists wild, and visitors to the country often have the unusual experience of hearing the terrible

usual experience of hearing the terrible roars of the brutes at night.

The Nawah naturally has the finest collection of lions in captivity in India, and it happens often that at night the cagod animals are nearly driven frantic by the roars of free lions which come out of the jungle and prowl around just outside of the menagerie.

# A FRENCH FROG AND AMERICAN EAGLE

STORY—By E. S. TYLEE

Slightly alarmed, master changed the subject. "No doubt! No doubt! By the way, do you propose taking your son into your own business?" "Sir, I propose nothing for Washington but an A1 education and the sort of start I had myself. Ef he should turn out a hustler

"Pardon me!-a-

"Pardon me!—a—
what?"
"Sir, I must apologize for using such a homely expression to a scholar of your eminence! In more classical language what I mean is, if he shows any horse sense, together with a disposition to get up and get, why, then, sir, I may he able to make use of him at the works, always supposing that his inclinations

up and get, why, then, sir, I may he able to make use of him at the works, always supposing that his inclinations lie in that direction. For the present, what I propose is to give him a year's schooling in each of the principal European countries, concluding with the empire of Japan. Washington P., sir, will follow the path of the sun!"

"A most comprehensive scheme, indeed!" assented Doctor Hardress. "It is to be hoped that your son may profit by his many advantages. But suppose Washington shows no disposition towards your own calling?"

"In that case, sir, he will carve out his career as I have carved mine," said Mr. Pickens. "So long as he is no idler, he is welcome to choose his own line. In fact, sir, I am willing to see him anything but a dude. If he wants to be that, he need not come to me for the stamps!"

It was at this moment that young Washington descried his father from the

is welcome to choose his own line. In fact, sir, I am willing to see him anything but a dude. If he wants to be that, he need not come to me for the stamps!"

It was at this moment that young Washington descried his father, from the other side of the ground and came strolling up with his hands in his pockets. He capped to the Doctor, of course, but greeted his parent with surprising ease. "How do, dad?" he said. "Mother well?"

"She's got her usual neuralgy, Wash!"
said Mr. Pickens. "Well, and so this is

"She's got her usual neuralgy, Wash!" so this is t

"She's got her usual neuralgy, Wash!" said Mr. Pickens. "Well, and so this is your new uniform for the British game of cricket!" he continued, critically inspecting his son's flannels. "I hope you are a first-class battist."

"So, so!" replied Washington, while Carclough, who as captain of the school had just been introduced to the stranger, exploded in the background. "It doesn't begin to be as good sport as baseball!"

"Wa'al, it doesn't seem to me to be as good fun as a wagon load of monkeys," said Mr. Pickens. "Never mind!—stick to it, my son, for the honor of the Stars and Stripes. I brought a few bills for you," he added, taking a roll of banknotes from his breast-pocket. "I guess you want to entertain your new friends!" But the Doctor interposed: "Excuse me, Mr. Pickens!" he said; "but what sum of money have you just handed to your of money have you just handed to your

"Sir," replied the American, "that wad is of the value of one hundred dollars twenty pounds of your currency! Washington's mamma requested me not to present him with any larger amount!"
"Quite right!" said the Head. "Indeed,
Mr. Pickans."

Mr. Pickens, I could not think of allow-ing any pupil of mine to have such a ing any pupil of mine to have such a sum at his disposal. In his own interests, as well as for the sake of the discipline of the school, I am bound to forbid it."

"That so, sir?" answered the millionaire. Well, I bow to your authority. But I hope that you will permit me to place the bills in your charge to be dispensed to Washington according to your own judgment." With some difficulty here. But I hope that you will permit me to place the bills in your charge to be dispensed to Washington according to your own judgment." With some difficulty he induced the Head to consent to this compromise. Then he stretched his long promise. Then he stretched his long promise. Then he stretched his long promise, and ordered his son back to his place in the field.

Presently an incident occurred which

that the sinner who would confess to piracy without a blush will not patiently

endure the charge of being no gentle-

troleum into various secondary products, and, as far as a self-made man could go,

he was a fair practical chemist.

"Our space is rather restricted here, I am afraid," said the Doctor apologetic-

ally. "But our Building Fund is small, and there have been several recent calls upon it. We have to do the best we

am afraid."

AN ENGLISH SCHOOL

CHAPTER IV.—A VISIT FROM A MILLIONAIRE.

THE YOUNG American's father, Mr.
Pickens, came over to Crosswindry following, and withersed the cricket match. The whole school were keeply anxious to see the great of the continued of the cricket match. The whole school were keeply anxious to see the great of the continued of the cricket match. The whole school were keeply anxious to see the great of the cricket match. The proposed the boys were perpanding the cricket match. The proposed t

of the population there is one male college student (as against one out of every five of the population in elementary schools; one out of every 125, in high schools, and one out of every 1,500 or so in professional schools).

The figures regarding quality are more striking. The ratio of American men who have received a college education has been in the past but 1 per cent, though it is now over 3 per cent. But it has been shown that the number of college-bred men in the Senate and House of Representatives in two typi-

Senate and House of Representatives in two typical congresses was 32 times as great as might have been expected, if the fact of their college training were neglected, and

were neglected, and that in fifty-seven years 68 per cent of the members of the Supreme Court and 85 per cent of the Chief Justices of the United States have been college-bred men. One out of 40 college graduates, as against one out of 10,000 non-college graduates is mentioned in "Appleton's Encyclopedia of Biography." One in every 106 of college graduates is mentioned in "Who's Who," as against one in every 600 of non-college graduates. College-bred professional men have five times the chance of other men to attain eminence.—Walter L. Hervey, in The Chautanguan for April. L. Hervey, in The Chautauquan for April.

## What a Farmer Boy Thinks

An ardent admirer of THE AMERICAN BOY is Raiph R. Williams, Warsaw, Illinois. He wants to know why we cannot have a department of special interest to farmer boys. "I am," says he, "a farmer boy myself and I am glad of it. City folks may call us hayseeds, but if the hayseeds were all dead, where would the city folks he? The farm is just the place for a boy who does not hate work, for there is plenty of that article here. The farm is not the place tenance and charged Carclough to set the matter right with Briant, which the captain accordingly did, though he was burning to explain himself to Baines. The latter showed a singularly retiring disposition during the next few hours, but lame-footed Vengeance overtook him at length, and Carclough did not spare him. More than all else, Baines withered under the captain's scornful accusation of "bad form!" for it is a singular fact that the sinner who would confess to work, for there is plenty of that arti-cle here. The farm is not the place for a lazy boy, for the farm does not agree with such a boy. There is one thing about which I am puzzled. It is this: Some people and some authors ad-vise you to stand up for your rights and not to allow anyone to run over you, man.

The Doctor and Mr. Pickens left the cricket ground soon after Briant's unlucky debut, he having expressed a wish to be conducted over the school buildings. The millionaire expressed himself as very pleased with all he saw until they entered the laboratory, which, as the Head himself remarked, was somewhat small and inadequately furnished. It was with the critical eye of an expert that Mr. Pickens looked about him there; for it appeared that a large part of his business was the conversion of his petroleum into various secondary products,

vise you to stand up for your rights and not to allow anyone to run over you, while others advise you to be meek, unassuming and not too quarrelsome, and always try to keep out of trouble. Now, I don't see how a fellow can have all of these qualities." He wants to know what we think about it.

The editor approaches this question with some hesitation. Without giving much thought to the subject he would say that there is a golden mean which every boy and every man ought to seek to reach, in this matter of standing up for one's rights. One should always be sure that he is standing up for something which he assumes to be his rights. There is always a point where patience ceases to be a virtue; where that point is depends largely upon conditions and circumstances in particular cases. Boys who go around with chips on their shoulders will always find fellows ready to know! ders will always find fellows ready to knocl: them off. On the other hand, no-body admires an unduly meek man, who takes everything that comes without any spirit. My observation is that most boys are too quick to resent what they assume to be a treading on their rights.

HE old "He-One" very provincial New England expression, a little uncouth perhaps, but most expressive.

As I have heard it used, it refers to a trout or other New England game fish, of ex-

The term is almost synonymous with an "old settler," or an "old whopper."

The particular old "He-One" to whose affairs I will invite your attention, could almost always be found under an unpre-

affairs I will invite your attention, could almost always be found under an unpretentious little bridge that spanned one of the best trout brooks into which angler ever cast fly.

What a poem is suggested to the country boy, by the magic monosyllable, bridge. Whenever I hear this suggestive word, it is always accompanied by the pleasant murmur of running water, and the smell of willow and sweet flag, or perhaps the cry of the kingfisher mingles with these pleasant murmurings.

When one says bridge to the average country boy, he never thinks of those gigantic modern structures of stone and steel with which modern engineering genius has spanned the broadest rivers and bridged the deepest chasms, but it is always the quaint little country bridge perhaps not over twenty or thirty feet in length, whose planks are wheelworn and dusty, and whose railing is rough and rustic.

and rustic.

No country boy can ever pass one of these bridges without stopping to look into the cool, fresh waters beneath, no matter how urgent the errand on which

into the cool, fresh waters beneath, no matter how urgent the errand on which he is sent.

Many a half hour I have spent lying sparticular bridge, under which the old. "He-One" lived. There was some danger of having one's legs run over by a passing team, and one also might pitch headlong into the water, but these things only added zest to the performance.

It was worth walking half a mile any day, and lying upon one's stomach in the dust for half an hour, just to get one gillimpse of this speckled beauty. He would always be standing head up stream, gently fanning the water with his fins and tail. Sometimes a sunbeam would filter through a crack in the bridge and fall full upon him, lighting up the iridescent green and yellow upon his sides and back, and making his spots to shine like gold. Then he was a living that would seem almost incredible to any one but a woodsman, to die at last the shadow, the dark mottling upon his back looking almost black, but he was always a thing of beauty, and coveted by all the small boys in the district, as a miser covets gold.

Once and only once I hooked him squarely, but he got away after a royal battle of ten minutes. The ruse that I tried upon him this time was a very slimple one that I had learned of an old fisherman.

bridge tridescent green and yellow upon the sides and back, and making his spots to shine like gold. Then he was a living spowel.

At other times he would stand in the shadow, the dark mottling upon as laving a timing of beauty, and the small shadow, the dark mottling upon as laving a timing of beauty, and the small shadow, the dark mottling upon as laving a timing of beauty, and the small shadow, the dark mottling upon as laving a timing of beauty and the small shadow, the dark mottling upon as laving a timing of beauty and the small shadow, the dark mottling upon as laving a timing of beauty and the small shadow, the dark mottling upon as laving a timing of beauty and the small shadow, the dark mottling upon as laving a timing that would seem almost intricate traps and snares, displaying an ingenuity and current of the woods and shadow, the dark mottling upon as laving a the hold shadow, the dark mottling upon as laving a timing that would seem almost incredible to any one but a woodsman, to deat last at the hands of a mere boy, or to put shadow, the dark mottling upon as laving a time the hands of a mere boy, or to put shadow, the hands of a mere boy, or to put shadow, the dark mottling upon as the hands of a mere boy, or to put shadow, the laving and the way a great flest would a very allurement of the most clentific times before, and the same way a great flest will avoid every allurement of the most clentific times before devery allurement of the most clentific times before and the same way a great flest will avoid more thand the same way a great flest will avoid more the same way a great flest will avoid more than and a plece of same the same way a great flest will avoid more the same way a great flest will avoid more the same way a great flest will avoid more the same way a great flest will avoid more the same way a great flest will avoid more the same way a great flest will rever whith a same that the hands and flest flest the same way a great flest will well remained to the same way a great flest was t

made the most of that lact, which was all the consolation that remained. The manner in which Tow-head hooked and captured the old trout was quite different, and I venture to say that no other old settler was ever taken in quite such a way.

Tow-head was a ragged, dirty, white-headed urchin of about ten years. His chief characteristic was iaziness, and, considering this fact, the capture of the old trout was a double achievement. For thereby Tow-head performed an act that forever stilled the tongues of the country youth, which had continually wagged about his weakness.

Tow-head had been sent by his father to plant corn in the neighborhood of the hidge. But on arriving at the field, he had seen some crows sitting on a neighboring tree, watching to see just where he planted the corn, that they might go and dig it up. Of course it would be folly to plant any under such unfavorable circumstances, so Tow-head hid the seed corn and hoe in a bush and went to the bridge, to rest himself with the sound of running water.

There was just room enough to sit upon the end of the planks on the outside of the railing and dangle one's feet over the water, and at the same time rest one's back against the great post that held the railing. It was a rather doubtful perch, but quite safe if one kept his head and was not disturbed by outside parties.

I well remember a hair-raising experi-

parties.

I well remember a hair-raising experience that I had on the same perch one morning while fishing. I was wholly employed with angling and did not notice the approach of Uncle Rastus Billings, who was quite a joker in his way.

Suddenly in some unaccountable manner I slipped from my perch and started for a headlong plunge into the brook. But midway in air I was arrested by a violent jerk on my coat and drawn back on to the perch.

With my heart in my mouth I looked over my shoulder into the grinning face of Uncle Rastus.

"Golly," he ejaculated, laughing as though he would choke. "If I hadn't have caught you, you would hev' fell in that time sure."

He had pushed me off the end of the plank and at the same time held on to

with the pole."

"Something has got my right leg and I can't," whimpered Tow-head. "I guess it is a turtle; he has got me by the toe."

"Tain't a fish, is it?" asked the voice up on the bridge. Then Tow-head remembered the line on his toe, and new courage came to him. "Mebbe it is," he stammered; "I did have a line on my toe when I fell in."

Then he pulled gently with his foot.

stammered; "I did have a line on my too when I feli in."

Then he pulled gently with his foot, and for answer there was a sharp jerk on the line. "Gosh, it is." he exclaimed, all excited, "an' it is a wha—"

"Tain't the old 'He-One,' is it?" asked the voice excitedly.

Then Tow-head began working in to shore, all the time drawing gently on the strange something that tugged at his foot. Then a few bubbles came to the surface, and a second later the great trout, that we had so often seen under the bridge, gently fanning the water with his fins, floated to the surface and rolled over on his back.

For a second the boy thought he must be dreaming, the great speckled beauty was so much beyond his wildest expectations. He selzed him in both hands and scrambled up the bank, shouting at the top of his voice: "I hev gut the old 'He-One,' I've gut the old

village, shouting to every one that he

met:

"I've gut the old 'He-One,' I've gut the old 'He-One."

Five minutes later he burst into the country grocery store, breathless and excited, gasping:

"Mr. Murrey, come quick, 've gut the old 'He-One,' an' I want to weigh him before he shrinks." Mr. Murrey, who was quite a boy himself, came up the cellar stairs two steps at a time and hastily put the big trout into the scales. Tow-head's eyes opened wider and wider as the grocer shoved the weight farther and farther along on the beam. At three pounds and a quarter it refused to rise again, so that was declared to be the great trout's weight.

# The Latest News Regarding American Boy Day

N THE day forms closed for this number of The American Boy we received from the management of the Portland Exposition their promise to give us for American Boy Day, July 5th:

- The Use of the Auditorium.
- The Exposition Band of 35 Pieces.
- A Welcoming Address by President Goode.
- 4 Fire Works (probably) in Honor of the Day.

Word comes from Chautauqua that a big children's chorus will take part in The American Boy Day exercises at Chautauqua, July 22d.

Boston American Boy Day sure; date named later.

of Representatives," declared Paul Rollins one day late in the fall, at the dinner table, "I read the other day that thirty-six pages are employed in the House of Representatives; they each receive \$75 per month during the session of Congress. I know I could get one of those thirty-six jobs."
"Don't talk foolishness, Paul," replied Mrs. Rollins, casting a deprecatory glance at her sixteen-year-old son. "You are going to do nothing of the kind. There may be thirty-six jobs or 3,800, for all I know. But one thing is certain; every one of them is mortgaged for all it is worth; you would stand about as much chance of getting to be a page as you would of getting the nomination for county sheriff. You will stay right here and work the farm; the idea of your traipsing off to Washington ('ity and trying to get to be a page! Why, I never heard tell of such nonsense. Who put such silly notions into your head, anyway?"

Two months previously Sanford Rollins, while repairing the roof of the

Who put such silly notions into your head, anyway?"

Two months previously Sanford Rollins, while repairing the roof of the barn, had fallen to the ground, striking on his head, death resulting instantly. The family of five—widow, Sadie, aged, nineteen, who taught the district school, Paul, aged sixteen, and two younger children—were left in fairly comfortable circumstances. The farm of 160 acres was clear, and the \$1,000 life insurance had paid all funeral expenses and left a snug balance in the bank.

"Mother, I don't want to run the farm," responded Paul. "I am not big enough nor strong enough to do a man's work yet; then, I don't want to be a farmer; I want to be a lawyer, or judge, or congressman. Farming is all right if you like it or haven't an ambition to be something else, but I have always had a great desire to work in the halls of Congress, where laws are made; it must be grand.

"You have got to have help to run

must be grand.

must be grand.

"You have got to have help to run the farm, anyway," continued the boy; "and you will find that after you have paid a hired man and the other expenses there will not be much left. Why not rent the place for a year, mother, as an experiment, and move to town. The \$3 an acre rent, with what Sadle and I can earn, will provide nicely for you and the children, and you will take more comfort and not have to work so hard. I know father would approve this plan if he could speak."

After many discussions, participated

After many discussions, participated in by Mrs. Rollins, Sadie and Paul, the girl having endorsed her brother's plans, it was decided that Paul should go to

it was decided that Paul should go to Washington and try to obtain employment as page. If he succeeded then the family would move to town the first of March and rent the farm for a year.

Sam Wayman, the stock buyer, promised Paul that he might look after the next car of hogs shipped to Chicago, a saving at the outset of \$11 railroad fare, and the following Wednesday morning, lugging a telescope packed with clothing and a big box of lunch, the farmer hoy started on his 1,300 mile journey to Washington to be a page.

Compared with Paul's likelihood of obtaining an appointment in the House

Compared with Paul's likelihood of obtaining an appointment in the House of Representatives, the expedition of the mythical Jason in search of the mythical golden fleece was a sure thing. In Chicago Paul bought a second-class ticket for \$12 and in due time reached the national capital. Having found a low-priced, reputable boarding house, and other reached the search of the sear low-priced, reputable boarding house, and exchanged his every-day traveling clothes for his best suit, Paul climbed the long flights of marble stairs and entered the rotunda of the Capitol building. Of a man in uniform, sitting near the door, the boy inquired: "Can you direct me to the officer of Congress who appoints the pages?"

"House or Senate?" asked the man.

"House." replied Paul.

"Floor below; follow the main corridor south until you come to an alcove with a sign above, 'Doorkeeper, House of Representatives.' Ask for Mr. Sanderson."

erson.
"Well, sir, what can I do for you?"
asked a middle-aged man having a business air and very sharp eyes, as Paul
entered a large room.

"My name is Paul Rollins; I would and the exhibitation of this august pres-like to apply for a position as page," ence. replied the farmer lad, approaching the official.

Paul heard one representative say scmething about "painful duty:" a page.

"Paul Rollins." repeated the doorkeeper; "are you the boy from Congressman Harper's district?"

"No, sir; I am from Iowa."
"Who is your congressman?"
"I don't know, sir."

"Who recommends you; who is your influence?"

"I have no influence, sir; I did not know influence was necessary; I have some letters of recommendation from the business men of my home."
"Jid you come from Iowa alone, expecting to get a position as page without the influence of a congressman?"

out the innuence of a congressman;
asked the doorkeeper.
"Yes, sir. I understood you would
need thirty-six page boys when Congress convened Monday, and thought
perhaps I could get one of the places;
so I came to Washington."

We "Agredove stored at the boy start-

Mr. Sanderson stared at the boy, started to say something, then settled back in his chair. Finally he said: "How much money have you?"

"Thirty-five dollars," replied the

would-be page.
"Well, he sure you save enough to buy a ticket home; you will need it very soon, I fear."

Paul felt a strange sensation in his

Paul felt a strange sensation in his throat, but said bravely: "Mr. Sanderson, I wish you would give me a trial; I know I can please you."

The doorkeeper started to say something, then settled back in his chair again. At last rousing himself he said: "My boy, this is a sort of tragedy. Do you know that I have more than five hundred applications for the thirty-six pageships, and that before the beginning of every session I have a fight with a hundred congressmen over this patronage? Every place has been mortgaged, and the mortgagee has been ready for a month to foreclose."

As the official said this the boy re-

month to foreclose."

As the official said this the boy recalled the prophetic words of his mother at the dinner table a month previous.

"Perhaps there may be a vacancy so you could appoint me; I have a great ambition to be a page in the halls of Congress, where laws are made," pleaded Paul, with great earnestness. "I should dislike very much to go home and have everybody know I had falled."

At this moment a distinguished looking gentleman, wearing a silk hat and

ing gentleman, wearing a slik hat and long coat, entered the room with a rush, exclaiming: "Hello, Sanderson, how are you? I've brought along my man Clark; position's ready. I suppose?"

The doorkeeper advanced to meet the congressman, remarking in an undertone gentieman,

to Paul, as he passed him, "No chance for you, my boy, but come and see me Mon-day, anyway."

day, anyway."

That was Saturday afternoon. Most people would have worried through rather a bad Sunday, but Paul Rollins' bump of hope was abnormal anyway, and the interview's disappointing close was soon forgotten in the multitude of attractions that everywhere confronted him.

Monday Paul was at the Capitol before 10 o'clock, and obtained a good seat in the men's gallery. It was well he came early. An hour before noon every seat in the galleries was taken and crowds swarmed through the corridors.

By 11 o'clock the chamber of the House began to fill with Representatives, and at 11:45 it was a perfect bediam of voices.

On the stroke of 12 the Speaker rose On the stroke of 12 the Speaker rose and, striking his desk with an ivory gavel, declared: "The House will be in order; the chaplain will offer prayer." The chaplain having concluded the invocation, instantly there arose a din of voices. Pages darted here and there; messengers rushed in and out; the clerks of the front were busy with bills and at the front were busy with bills and resolutions, and the official reporters hur-ried hither and thither taking down in shorthand all that was said by repre-sentatives.

Congress was in session and Paul was witness. The realization of it thrilled m. He had forgotten his mission had failed; that he must return to his home and go back upon the farm. He thought only of the grandeur of making laws

Paul heard one representative say something about "painful duty;" a page ran to the desk with a paper; the clerk read, but nobody could hear; the Speaker said something that sounded like "As er said something that sounded like "As a further mark of respect, the House will stand adjourned," and brought down the gavel with a bang. Instantly the greatest confusion prevailed. Members hurried from the chamber and the people in the galleries rose as one person and fought their way out. What did it all mean? From a policeman in the corridor Paul learned that the House had adjourned until the next day out of respect to Representative Anderson of Ohlo, who had died Sunday of heart failure, just as he was starting for Washington.

ure, just as he was starting for Washington.

That morning Doorkeepr Sanderson went over his lists. Several pages had not reported, among them George Stone, appointee of the dead congressman. The doorkeeper meditated a moment, and this is what he mentally said: "Stone is not here; if ever I needed page boys I need them now; Stone's influence is gone; Anderson's successor will name another boy even if I should hold the place open. If it is known there is a vacancy I'll have forty congressmen on my back inside of twenty-four hours. If the place is quietly filled there will be no scramquietly filled there will be no scram-

What Mr. Sanderson really did was to

What Mr. Sanderson really did was to carefully erase the name "George Stone." In its place he wrote: "Paul Rollins." "I rather like that hoy, anyway," he said; "he'll attend to business and make a good page." A telegram was sent to George Stone.

Paul presented himself at the door-keeper's office about 2 o'clock. "My boy," said the official, "I am about to do a most extraordinary thing---something I have never before done and which I probably never will do again; I am going to put on the pay roll of the House of Representatives a person who has not one ounce of political 'pull.' I am appointing you a page."

Paul was about to perform a war dance and had opened his mouth in an attempt to speak, but Mr. Sanderson waved his hand and continued: "A boy who has the spunk to travel alone 1,300 miles to Washington, with the expectation of getting a position in the House in the face of the wild clamor for such jobs, must have the stuff in him of which good pages are made. Saturday there was not the remotest possibility, apparently, of your being appointed. Since then events the remotest possibility, apparently, of your being appointed. Since then events have so shaped themselves as to render it possible for me to give you the place. port toniorrow morning at 10 to the

chief page."
Paul's expressed thanks were not artistic, but they satisfied the doorkeeper, and the happiest boy in the vorid walked

and the happiest boy in the verld walked out of that room.

A greater leap than from an Iowa farm to the floor of the House of Representatives could scarcely be conceived, and Paul's bewilderment when he presented himself to the chief page the next morning may be imagined. From the gallery he had obtained a hird's-eyeview; on the floor it all appeared amazingly different. He was given a diagram indicating positions of the desks, each of which had a number and was gram indicating positions of the desks, each of which had a number and was connected by wire with a tiny electric lamp in the annunciator in the corner of the chamber. This electric bulb glowed red when a congressman pushed a button on his desk. Paul's first lesson was to familiarize himself with the numbers and locations of the desks.

The Speaker's gavel fell; the formalities were soon over and law-making had begun. "Rollins, 126," said the boy at the annunciator, nodding toward the lowa farmer lad. Paul started to consuit his diagram, when a page who

sult his diagram, when a page who had evinced a friendliness toward him, whispered: "That's Henley; third row. second seat from the main aisle." suit his diagram,

In a moment the new page was at desk No. 126. "Get me half a dollar's worth of cigars—Regina bouquet; I'll be in the cloak room when you return," said the congressman, holding out the money. "Cigars—cigars—Congress!" thought

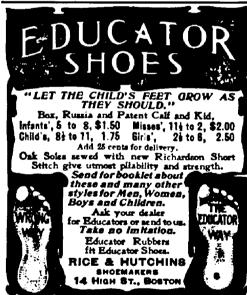

"Cigars — cigars — Congress!" thought Paul, in a semi-trance, at the same time hurrying somewhere. Had he been struck

with a club the boy could hardly have been more dazed. "Cigars, cigars," he said to himself. "Cigars in Congress," yet he was quite sure he had heard coryet he was quite sure he had heard correctly; yes, the congressman had specified the brand—"Regina bouquet." Here he was in the lawmaking chamber of his country and his first official duty was to buy cigars; it was a severe blow to the farmer boy.

Paul knew the location of the restau-rant and quickly returned to the cloak the office of room with the purchase. "Here, boy," "Well, w called the member, holding out a coin, as Paul turned to leave him. "Oh, not

"You gave me money enough, sir," said the boy.

"Yes; but this pays you."

the boy.

"Yes; but this pays you."

"But I am paid by the month by the government," declared Paul

"Oh, I know that; this is on the side; it's all right; you need not be afraid to take it," said the member, noting the boy's hesitation.

Paul took the coin, gingerly, and resumed his place on the bench by the annunciator. "Is it all right to take money from representatives if they offer it to you?" inquired the new page of the boy who had directed him to the scat of Mr. Henley.

"Sure," replied his companion. "Got a tip, did you; how much?" Paul exhibited the dime. "Sometimes we get a dime; once in a while a quarter, and about once a session a dollar; but usually nothing," said the boy.

That night after the House had adjourned Paul found he was richer by 65 cents than at noontime. During the afternoon he had bought several packages of cigars, fruit and confections; gone to the document room for many bills and reports: to the law library for a Michigan law book; to the home of a representative for forgotten papers, getting a 25-cent tip for this; mailed scores of letters, besides running a dozen errands to committee rooms. He was tired, but happy. It was glorious. to committee rooms. He happy. It was glorious.

After supper Paul fell victim to a little spell of lonesomeness, and determined to find something to occupy his evenings. The suggestion of a lady at the boarding house that he attend night school was instantly seconded. Early the next morning he was at the office of the Board of Education and obtained a schedule of studies taught at the free public night school. It was still a quarter of 10 when Paul reached the Capitol and called at the office of Mr. Sanderson.

"Well, what's wrong?" inquired the

"Oh, nothing is wrong," replied the age. "I am going to attend night school; erhaps you will help me select the studpage.

Mr. Sanderson was pleased and not only said he would gladly comply with the request, but complimented Paul on his determination to improve his time. He advised the study of mathematics, civil government, English and Spanish. "One of these days a knowledge of Spanish, as well as English, will come in very handy," said the doorkeeper.

The "long session" dragged along well into July before the legislative slate was wiped clean of unfinished business. Paul had more than "made good." He was always at his post, did his work quietly and swiftly, and had the satisfaction of learning that the chief page had remarked to the doorkeeper that Rollins was the best page on the roll; worth a half-dozen boys that might be named.

In his studies Paul had made excellent

In his studies Paul had made excellent progress, particularly in civil government and Spanish, branches that were a delight to him. He had regularly sent home from \$50 to \$60 each month, according to the ebb or flow of "tips," and at the close of the session found himself possessed of a bank account of about \$400.

"Unless you hear from me to the contrary, report to the chief page as usual started on his long journey toward the Monday morning, December 5," were the farewell words of Mr. Sanderson, as Paul (To be continued.)

BOYS! no money needed to get this BASE BALL OUTFIT **EVERY BOY** who sells a certain number of copies of THE SATURDAY EVENING POST gets this baseball outfit, including Shirt, Trousers, Stockings, Cap, a Mitt and Mask. This outfit is given as an EXTRA prize for good work, not as sole payment for selling THE POST, since the boy makes a good profit on every copy sold. Thousands of boys are finding it easy work to sell THE SATURDAY EVENING POST after school hours on Fridays and Saturdays. Why shouldn't you? Some of them earn \$15.00 a week. No money needed to start. Write us and we will send you free the complete outfit for starting in business. This includes ten copies of THE POST free. Also our booklet "Boys Who Make Money." ## BOYS AS MONEY MAKERS AND MONEY SAVERS

THE CIVIC IMPROVEMENT League of St Louis has been carrying on a novel gardening class among the boys of that city Over 250 boys attended the classes in gardening last summer. This is an attempt on the part of the League to bring the country into the city. The League has employed competent instructors and the boys have come at convenient hours during the entire summer and received instruction in gardening. It has proved to be one of the most successful

hours during the entire summer and received instruction in gardening. It has proved to be one of the most successful undertakings among boys ever attempted.

The League has several objects in view in doing this work:—First, to direct some of the surplus energy of the children of the city, which would otherwise run to waste, into channels that will tend to develop in them manliness, respect for the rights of others, industry and thrift; second, to show how small areas of land in the backyard at home or on vacant lots, which may be leased, may be made to produce an abundance of fresh vegetables for the family; third, to teach how to grow flowers so that the home of each pupil may have bouquets of cut flowers during the growing season; fourth, to develop such a knowledge of an interest in plants and their habits as shall be a direct aid in making St. Louis a more

The League has found by actual experience that the work develops a better boy than does any other plan, giving him healthful employment, pleasure, and spending money. Even though the seeds, fertilizer, plowing, tools and instruction are furnished free, the boys soon appreciate the fact that they get nothing unless they are diligent in cultivating and earing for the growing crops.

Grand first prize, an oil painting valued at \$25, given to Walter Freudenberg, of 3131 Alfred St., St. Louis, for the most excellent garden for the entire summer.

On the closing day a Hocing Contest was given in which about one hundred boys took part. The boys were divided into five different groups, and were given twenty minutes in which to hoe their respective gardens, and see who made the best appearance in them in that time. Three prizes were given in each block (1st. 2d, and 3d).

#### The Value of a Dollar

There are three ways to learn the value of a dollar: The first is to spend it, and see what you get for it. The second is to earn it, and see what you give for it. The third is to save it, and yearn for all the things it might buy if you were weak enough to spend it.

#### Good Words and Good Wishes

I often wonder what the boys of one century ago would have given to have such a magazine of their own as THE AMERICAN BOY to read and to admire. The American boy is indeed lucky to ne American boy is indeed lucky to have such a paper devoted to his interests entirely. If I should ever amount to anything in this world, which I at present hope to, I will give credit next that of my mother's to THE AMERICAN BOY, edited by an unseen friend.

With hest wishes for your future success, which I know perfectly well you deserve and will get, I beg to remain,

Ever an American Boy.

Ever an American Boy.

CARNEY C. FESLER.

chased Company hats with the letters O. A.

B. in front. This Company is busy planning for the future, having in view a State convention and a trip to the beach. Debates have been a regular feature of the winter meetings. The LOYAL AMERICAN COMPANY NO. 69, Was asked by the members to act as their Company Counsel. This Company was their Company Counsel. This Company was organized last November with 5 members and Wyandotte, Mich., recently had an entertainment and a fine program was most successfully carried out by the members and friends. Supt. Sooy of the public schools was present and gave a very fine talk on "Patriotism." Rev. Guy H. Lemon, of the Congregational church, was also in attendance and gave a very pleasing address on "Lincoln." Hernard Harrington, of the Company, gave the address of welcome and a number of the other members also gave very pleasing and interesting papers on Washington and Lincoln. The clubrooms were very prettily decorated in colors.

MURRAH! A HOMB RUN FOR OUR SIDE

chestra consisting of 4 violins, 1 clarinet, 1 cornet and 1 pianist. As it has no clubroom yet, each member keeps the charter a month. The members have had fine times during the winter with entertainments and bob-sled rides. The Company has one of the free libraries and the members are enjoying the books. It has taken in 4 new members. MASSASOIT COMPANY NO. 37, Rockford, Ill., sends us copy certificate of membership which it issues to members. It is handsomely gotten up and certifies that the member is in good standing and entitled to all rights and benefits. It is signed by the Captain and Secretary. This Company has also adopted a new pin consisting of a bar containing member's name with pin and medallion. It has also formed two branch societies consisting of O. A. B. members a camera club and a cycle club. Ralph H. Woolsey is chairman of the camera club. The members have been corresponding with other clubs and are getting along nicely. SANGAMON BAY LEAF COMPANY NO. 45, Decatur, Ill., has got 3 new members. The officers of the cadet company have been elected and the company will drill in the Y. M. C. A. gym. The boy of whom we received notice as being cared for in the hospital by this Company has now recovered sufficiently to go to his home. Officers have also been elected for the two ball teams. We are proud of the members of this Company in that they do not forget the needs and necesities of others and strive to help in every way they can.

#### Extract From Headquarters Company Letter for April

The number of letters I have received

Letter for April

The number of letters I have received from boys commending the plan of establishing Correspondence Clubs and wishing to join one or other of them assures me that I made no mistake, and that I was meeting the desires and wishes of hundreds of readers of THE AMERICAN BOY as well as of our Order. Those who have sent in their fee of 50 cents will receive a list of those who have joined the particular club in which they are interested on or about May Ist. I venture to believe that the information and knowledge to be received by boys hymeans of the Correspondence Clubs will be most valuable and lasting.

The last item of my letter this month, will, I think, prove of almost equal interest with the Correspondence Clubs. I have been corresponding for some time with the authorities of the Lewis & Clark Exposition to be held at Portland, Oregon, this year to allow us to celebrate American Boy Day at the Exposition, and I have received a communication granting to us the use of the largest hall on the grounds to celebrate American Boy Day and naming as the date July 5th, 1905, the same day of the month on which we had our great celebration last year at the World's Fair at St. Louis. Of course, this will only be one place in which the day will be celebrated, as I expect every city, town and village in our country will have its own particular celebration on July 5th.

Now that the date has ben fixed I am going right ahead with the program and I fully intend that American Boy Day this year will equal, if not surpass, that of 1904. But to do this I must have the hearty co-operation of every company and every member, as well as every reader of THE AMERICAN BOY.

There are still quite a number of companies who have apparently made little effort in the way of getting up a celebration. To these I would say, that if you do not join us in this matter, you will much regret it afterward, and your adult friends will not be ant to value you highly when they read of the doings in other towns. You should make it a matter tend to do, tell them that their part in the celebration will only be to procure a suitable meeting place, select the boys to take part, have a few rehearsals and act as chairman of the meeting. We will

act as chairman of the meeting. We will promise the material for the program During the month of March there was quite a change in the standing of the companies competing for these prizes. The following are the ten companies who on April 1st stood at the head of the list:

Loval American Co. No. 15

who on April 1st stood at the head of the list:

Loyal American Co., No. 19, Division of Michigan, Wyandotte, Mich.; Onondaga Military Co., No. 45, Division of New York, Syracuse, N. Y.; Plainville Sunflower Co., No. 28, Division of Kansas, Plainville, Kan.; Uncle Sam's Co., No. 19, Division of Minnesota, Fulda, Minn.; Seminole Co., No. 5, Division of Florida, Tallahassee, Fla.; Wm. B. McKinley Co., No. 47, Division of Illinois, Champaign, Ill.; Congressman Henry Co., No. 9, Division of Connecticut, Poquonock, Conn.; Muskingum Valley Co., No. 49, Division of Ohio, Zanesville, Ohio; Silver Gate Co., No. 26, Division of California, San Diego, Cal.; Franklin Pierce Co., No. 8, Division of New Hampshire, Keene, N. H. The prizes will be sent to the winning companies at once. April 1st began a new contest for similar prizes which will end on June 30th, and as these prizes will make handsome additions to the company clubrooms, I trust that every company will do its utmost to win them and increase its membership.

If you want your company picture to

and increase its membership.

If you want your company picture to occupy a place in our picture gallery you had better send it as soon as possible.

Yours for M. M. M. M., WM. C. SPRAGUE. President General.

# A Great Giver and His Home BO

By J. L. HARBOUR

CARNEGIE RUSIDENCE, 5TH AVENUE AND 90TH STREET, NEW YORK CITY

the trowel is this in scription:
"Presented by the Library Committee to Mrs. Carnegie on the occasion of her laying the memorial stone of the Carnegie Free Library; the gift of her son, Andrew Carnegie Esquire, to his native city of Dunfermline, 27
July, 1881."

Andrew Carnegie was a very poor boy

brary: the gift of her son, Andrew Carnegie Esquire, to his native to his native to his native clay of Dunfermline, 27 Copyrighted, 1904, by Rockwood Livy of L

THE FATHERS in olden days taught that a man should have time before the end of his career for the making of his soul. I garded as a sacred trust by its possessor have always felt that old age should be spent, not, as the Scotch say, in 'making mickle mair,' but in making good use of what has been acquired."

These words were written by Mr. Andrew carnegie when making one of his many great gifts to the world. It is doubtful if any other individual in the world ever gave away many millions, and it is his instead of these gifts places the sum at 510, 38,830.

A least \$75,000,000 of this vast sum have the institutions in the United States, and the other 125,000,000 of his vast sum have to ibbraries' in his giving. He gave at one time to the city of New York \$5,200,000 with which to establish sixty-five branch library costing several hundred housand dollars built by Mr. Carnegie. And in the city of St. Louis \$1,000,000 of the sum of the housand dollars built by Mr. Carnegie and he has given by Mr. Carnegie and he

Tuskegee Institute in America. Other educational institutions in our country have been aided by him, and his private gifts, of which there is no record, have been many and large. If boundless generosity is helpful to a man in the "making of his soul," then the soul of Mr. Carnegle must be very strong indeed.

This great philan-

one of his books, presented to Mr. Carnegie:
"To my friend, Andrew Carnegie: The highest truth he sees he will fearlessly utter, knowing that, let what may come of it, he is thus playing his right part in the world, knowing that if he can effect the change he aims at, well; if not, well also, though not so well."

BARRACK LIFE.

Y CALL to quarters on the evening of August 31, every one was furnished with text-books and the lessons for the next day, and the time until tattoo was devoted to study.

The class had been divided into sections

for each particular study, and every cadet was furnished with a card called "Hours of Instruction," on which were printed the time and duration of all his recitations and exercises. This card was placed on the mantel-piece, and if the owner of the card was found absent at any inspection and his "Hours" did not account for his absence, he was reported and compelled to write an explanation therefor.

Reveille was now at 6 a. m., sick call 6:15, police call 6:20, the first drum for breakfast 6:25, and the assembly at 6:30. After our return from breakfast, which was in the neighborhood of 7 o'clock, we were given release from quarters until 7:53, when the bugic sounded call to quarters. Recitation and study-hours lasted from 8 till 12:55, when the first call for dinner was beaten. We generally came back from dinner at about 1:35. We then had "release from quarters" until 1:53, when the call to quarters was again sounded on the bugle. from quarters" until 1:53, when the call to quarters was again sounded on the bugle, Recitations from 2 to 4. Infantry battalion drill (during September) from 4:10 to 5:30. Parade was at 5:45. Immediately after parade came the reading of the delinquencies in the area of the barracks. This having been completed, we went to our rooms, put away guns and trimmings, and came down for supper, which lasted about half an hour. Twenty minutes after supper the sentinels went on post, one in each division of barracks. Thirty minutes after the return from supper, another call to quarters was again sounded on the bugle, make a sllp.

Soon the novelty of the situation were from one section to the one above or became less frequent. Then, for amuser ment, I began to count the number of paces in my post. After an extended series of observations, and upon taking their mean I ascertained that there were 43 2-3 with his marks, and for the first time we had actual rank with all the advantages that go with it.

The last section in all studies has been called from time immemorial the "Imterior from supper, another call to quarters was again sounded on the bugle, make a sllp.

It is also customary to transfer a cadet from one section to the one above or become less frequent. Then, for amuser ment, I began to count the number of paces in my post. After an extended series of observations, and upon taking their was assigned to a section in consonance was assigned to a section in consonance of observations and upon taking their was assigned to a section in consonance of observations and upon taking their was assigned to a section in consonance of observations and upon taking their was assigned to a section in consonance of observations and upon taking their was assigned to a section in consonance of observations and upon taking their was assigned to a section in consonance of observations and upon taking their was assigned to a section in consonance of observations and upon taking their was assigned to a section in consonance of observati

return from supper, ar ters came. Studying was in order until tattoo at 9:30, when the bed could be made down. At 10, taps were sounded by the drummer, and lights were extinguished, except those of first - classmen, who were allowed to burn theirs until 11 p. m.

There was a considerable change in guard duty also. Guard mounting took guard duty also. Guard mounting took place at 7:15 a. m., on the grass plain in front of the Superintendent's quarters, in fair weather. At other times it was on the cavairy plain, north of the chapel, and near the camping ground, or in the area of barracks, or on the plazza, all dependent upon the inclemency of the weather and the dictum of the "officer in charge" (one of the tactical officers daily detailed to keep the corps correct).

After guard-mounting, the privates of

were absent, that he was absent by authority. The sentinel had to report the result of his inspection to the corporal, officer of the guard, and officer of the day.

The cadets being thus placed on honor had to report all cadets alike, for the offense of visiting the rooms of other cadets or for being in the hall of barracks unnecessarily. At first a pleb felt rather flurried when he was compelled to "rake in" his captain or a fellow like the "Colonel," but finding that no resentment was harbored, soon learned to "rake" a first-classman with as much coolness as he exhibited in reporting a helpless classmate. ("Report" and "rake" are synonyms. One is official and the other is not.) and the other is not.)

and the other is not.)
The sentinels when not in jecting, walked the first floor of barracks. The guard was kept on post until 9:45. On Sundays, in addition to the evening tour of duty, the guard was on post from 3 till 4:30 in the afternoon while call to quarters

For meals, the battalion was formed in the area facing barracks, A, B, C, and D companies from right to left in the order named. The drum corps was dispensed with in marching to and from meals. These formations served to remind the slouchy pleb that, although he did not have to "fin out" and depress his toes any more, still he must brace the same as

on Saturday, release from quarters is granted from 1 p. m. until evening call to quarters, and unless you are in confinement (as you are very likely to be) you can go anywhere on cadet limits during that time. There is the usual call to quarters in the evening, but visiting anywhere is because is allowed, and cadets on perin barracks is allowed, and cadets on permit can spend the evening until tattoo at officers' quarters or at the hotel on the

By A GRADUATE

One confinement could be served a day, except on Saturday and Sunday. On the former three could be served and on the latter two. But, in addition to confinement to the room, the authorities had for barrack life a more severe punishment, and one better suited to lead the culprit suffering the penalty to think more seriously on the error of his ways. This was extra guard duty.

One tour of extra duty lasted two hours, and Saturday afternoon was devoted to it. The extra-dutyman equipped himself as for The extra-dutyman equipped limself as for parade and at two o'clock fell in with his brother malefactors in front of the guard house. The officer of the guard posted them in the area of barracks and there they walked their narrow beats until the recess of fifteen minutes came at four o'clock. At 4:15, the extra-dutymen fell

in again and kept it up until parade.

The "area" is a good place to keep away from. It wasn't long before I received a dose of six tours for smoking. The first Saturday I walked, I started in with a resolution to comport myself in the most proper manner so as not to get any more tours because of misconduct. When I first went on, I was so busy in saluting officers that I did not have a chance to

densed, since as I have stated, they joined the battalion early in October.

the battalion early in October.

Our class was divided into sections of ten to twelve men in each study. In Mathematics, half of the number of sections went to recitation the first hour. 8 o'clock, and the other half at 9:30. There being no other way to determine seniority, we were divided into sections alphabetically, and the ranking man in each section was the "section marcher." An army officer was detailed as instructor for every two sections. two sections.

two sections.

The same order governed in the department of Modern Languages. Half of the class went the first hour, 2 o'clock, and the other half at the second hour, 3 o'clock. Our course of instruction the first half year was limited to Algebra and English. The text-books used were Davies' Bourdon, Whitney's Essentials of English Grammar, and later, Hart's Rhetoric.

The reader will appreciate the thoroughness of the instruction, when I tell him that in four months we went completely through these books three times. The rule

that in four months we went completely through these books three times. The rule is general in the Academic Department to give out advanced lessons for about seven or eight days. Then comes a partial review of two lessons at a time, and so on until the book is completed, when a general review follows, three or four lessons at a time.

generally stay there; but a member of my

generally stay there; but a member of my class invented the term "goats," and I think that this last term, while perhaps not so elegant, is more commonly used by the cadets.

I can give no more important advice to young men entering West Point, than to improve every spare moment during the first month of Academic duty, It is impossible to know a lesson too well. Keep out of the Immortals, as the entire section is as a rule "found" in pleb January. If you are destined for the "goats," you will no doubt ultimately get there, but, by a good start, and honest, faithful work, you may make your descent so gradual that when you, do faithful work, you may make your descent so gradual that when you do become a "goat," the greater part of the danger is past.

There is no favoritism at the Point, or at least it is less than at any other in-

the cover. When we had completed the "Green B. S.," we took up "Black B. S.," "Green B. S.," we took up "Black B. S.," or Hart's Rhetoric.
While I have no wish to advertise any particular text-book, still I advise you, if you wish to look up the subject of grammar before going to the Point, to examine Professor Whitney's book. He treats the subject in a peculiar, quasi-mathematical way. If you fail to do this, and are not acceptable. natural-born grammarian, you will be considerably at sea, when you come to discuss "He made the stick straight," and the syntax thereof.

24-page illustrated booklet sent free on application to F. D. SEARS, 59 Lincoln Street, BOSTON

At any rate, I was in the area until the middle of December. The only result of my observations was that the hands of the guard-house clock moved at an abnormalslow rate, and got stuck at 2:55 and at

The pleb Seps, whom I have mentioned before, were distributed around barracks, and, whenever possible, doubled up with each other. In some cases, however, a Sep each other. In some cases, however, a Sep was assigned to a June-pleb's room, as a third occupant. These classmates of ours were not given a very cordial reception,—in fact, they were compelled to "mister" us until the early part of October, when they joined the battalion. Some of my classmates, realizing how much the Seps had lost by not going through pleb camp, attempted to make up for wasted opportunities by giving the Seps a little exercise in the seclusion of some room in barracks, or by imparting theoretical instruction in swimming on the top of an alcove partition.

It was almost worth going through a pleb camp for me to lean up against the plazza railing and watch these poor fellows plazza railing and watch these poor fellows in "cits" marching around the area with toos depressed, "fins" out, and their coats wrinkled from bracing. And then what fun it was to jump out at one of them and, with the air of a first classman, demand his name! "Mr. Jones, sir." "Well, what State are you from, Mr. Jones?" "Ohio, sir." "Who's your pred?" "Mr. Smith, sir." "Well, Mr. Jones, get out of my sight, and wrinkle that coat a little more."

The Sens attended recitations with us.

sight, and wrinkle that coat a little more."

In the evening, but visiting anywhere in the evening, but visiting anywhere and cadets on persist can spend the evening until tattoo at spent their afternoons in setting-up drills in front of the library. Their courses of preliminary instruction was about the confinements were awarded as in camp.

## THE LARGEST PUBLIC SCHOOL IN THE WORLD By JOHN B. WHEELER

Photo by the N. Y. World

SCHOOL IS OUT

DUBLIC SCHOOL NO. 188, at the corner of East Houston and Lewis street, New York City, is the largest educational institution of its kind in the world. Even among New York's great schools it is a giant. Every morning at 8:30 o'clock 2,500 hoys and 2,000 girls swarm through the doors into the great assembly room to begin their day's lessons. It is a brain factory such as was never dreamed of in the days of the little old red schoolhouse in the lane where our grandfathers and grandmothers had to go.

This school building contains ninety-four class roms; its teachers handle 104 classes, of which twenty classes, or about 1,500 pupils, are on part time. There are boys and girls from Germany, Switzerland, Roumania, Hungary, Russia, France, Ireland, England, New Guinea, Venezuela, West Indies, Canada, Servia, Austria, Poland and other countries. No city in the world other than New York could produce such a school.

All the boys and girls of the different nationalities are placed in the great hopper, passed between the educational mill-

precision. Boyhood and girlhood are sunk in the quiet dignity of the student.

For twenty minutes the pupils sit in their places; then comes the time for assembly, when all the pupils of the ninety-four class rooms follow their teachers with the precision of soldiers into the big assembly room. Silently they take their seats, the girls on one side, the boys on the other, with eyes to the front.

The principal takes the Bible and turn-

The principal takes the Bible and turning to a chapter, reads, after which the morning song is rendered by the entire school, the voices ringing out with enthusiasm:

"Unfurl the starry flag we love, "Unfurl the starry flag we love.
O'er land and ocean let it wave.
To bear its message far and wide—
Hope to the fettered slave.
Where'er its ample folds are spread,
Ashore or on the swelling sea,
As blossoms to the genial sun
The hearts of men turn lovingly—
Flag of the brave and free."

After they cease singing, reading compositions, and delivering recitations, the pulls again march back to their class puils again march back to their class rooms. Then come the lessons, which last till 11 o'clock, when comes the "twice-a-day" exercises. At the command the pupils stand with the precision of a well-drilled regiment; they then protrude their chests, take deep breaths, inhaling and exhaling forcibly; following the breathing exercises, they bend the back gently forward and then back; they raise the chest and lift the arms high, and as far back as possible, keeping the elbows stiff and straight as ramrods; this is follow by knee bending, and a few more weathing exercises, then they again resume their seats. Many have fushed faces and it is easy

to see they have been brightened and strengthened physically by the exercis-

ing.
Geography (always a difficult study Geography (always a difficult study for a young pupil) is next on the list of studies—thirty minutes of oceans, bays, capes, islands, meuntains and various parts of the world. Then comes history. In connections with the school is a carpenter shop, where the boys are instructed in building frame work, stairs, boats and many other things.

Every scholar in the school is made to understand the value of thorough discipline, and it is seldom that any of the 4,500 are sent to the principal for correction.

#### HOME STUDY

"In neighborhoods such as this I do not believe in giving the children much work at home," said the principal to a gentleman visitor. "Generally speaking, the families are large, and many have enough to contend with in their surroundings, to maintain their health, without mental worries after school hours. I give them all the liberty I can, and try to make the hours they spend in city in the world other than New York could produce such a school.

All the boys and girls of the different nationalities are placed in the great hopper, passed between the educational milistones, ground and polished into American citizens, with a reverence for the flag and a love for the Constitution.

The pupils arrive between 8 and 8:30 o'clock, and buzz about the doors like bees around a hive, chasing each other, playing games, and once in a while the boys engage right heartily in fisticuffs.

The 2,000 girls, too, in their own way, enjoy themselves during their leisure hours, but when the time comes for them to to their different class rooms there is a transformation. They at once become serious. They step with military precision. Boybood and girlhood are sunk in the quiet dignity of the student.

Ever twenty minutes the number of 150, compose what is called a "guard."

the families are large, and many have enough to contend with in their surnational their health in their surnations the restory is well told the undings. They story is well told the pread to paint in the number of the great comperor. The story is well told and the author has selected incidents which and try to make the hours they spend in school as attractive as possible. They are obedient and well trained, even though the number into the thousands."

The pupils arrive between 8 and 8:30 o'clock, and buzz about the doors like bees around a hive, chasing each other, playing games, and once in a while the boys engage right heartily in fisticuffs.

FIRE DRILL.

As a general thing fire drill is given the hours have detected incidents which and the author has selected incidents which and the author heart can the real can develop the number

At the first sound of the automatic alarm they rush for the hats and coats, distributing them in a jiffy. Simultaneously the 4.500 children put away their books and sit like statues awaiting the command to form in line. The seats are thrown back as with the sound of one. The planist strikes up an air and the children march steadily along in a swinging quick-step for the street.

After the drill, recitations are resumed; slow and laborious work at penmanship follows, then ethics. At 3 o'clock the boys and girls form in lines in their different class rooms, and are dismissed for the day.

for the day.

#### Napoleon Bonaparte, a History Written for Boys

By William C. Sprague, Editor of THE AMERICAN BOY.

MANUAL TRAINING ROOM, PUBLIC SCHOOL NO. 188, M. Y. CITY

We are sending Regal quartersize shoes to people in all parts of the country who have never before found a fit except in made-to-order shoes.

THE REGAL, in quarter sizes, is a genuine bench-made custom shoe. Only, instead of measuring your foot and keeping you waiting ten days, we have Regal shoes, in all our 98 stores and in the Mail-Order Department. ment, ready to fit at once every possible combination and variety of length and width, height of instep, shape of toe, curve of heel, weight and kind of leather.

With quarter sizes in men's Regals all the way from 41/2 to 18, and in women's from 1 to 8, you can depend on our having your exact fit ready

for you.
We could not produce such a shoe as the Regal for \$8.50—nor for anything less than \$6—if we sold it through the usual trade channels. We call it a "six-dollar shoe at the wholesale price" just because we do sell it to you at wholesale. The five profits that are usually divided between tanner, leather broker, manufacturer, jobber and retailer are reduced to just one—and you get the benefit.

We operate our own tanneries and sell Regal shoes only through our own

98 stores; and the short-cut Regal system of Tannery to Consumer devotes all your \$3.50 to the making of hones. shoes, and none at all to loss and waste and useless handlings.

medium trimined sole.

Style 10002-As illustrated, except made of Black King Calf leather,

Style 10003-As illustrated, except made of Black King Kid leather.

Style 10004-As illustrated, except blucher cut, made of Russet King Calf leather.

Don't say you are hard to fit till you have tried on a Regal in one of our

stores, or have ordered a pair through the Regal Mail-Order Department. You take no risk in ordering by mail. Your order is filled personally by an expert mail-order salesman. Your shoes are sent out the same day, and you

#### don't keep them if they don't suit. The New Spring Style Book Is Well Worth Sending For.

Mailed tree; 82 pages of photographic reproductions and descriptions of all that's new and fashionable in footwear.

SAMPLES OF LEATHERS ON REQUEST. Regal shoes are delivered, carriage prepaid, anywhere in the United States or Canada, Mexico, Cuba, Porto Rico, Hawaifan and Philippine Islands, Japan, Norway, also Germany and all points covered by the Parcels Post System, os receipt of \$3.78 per pair. (The extra 25 cents is for delivery.)

Mention The American Boy When Answering Advertisements

of the long night was rapidly drawing near.

Under the shelter of a naked pinnacle of rock, known far and wide as "the devil's thumb," a lad scarce eighteen years of age crouched, holding two shaggy black dogs in leash. Beside him, and upturned so that it might lean against the side of the rock, rested his catamaran; and lashed thereto was his only remaining bag of mail, together with his snowshoes. A rifle was slung across his back by thongs of seal hide, and drawing his spotted sealskin cap more firmly down over his head and ears, he waited for the storm to cease. Farther progress, under the conditions which had suddenly overtaken him, was dangerous, if not impossible.

Adam Nugent, though but a youth, was a courier, or mail carrier, in the far North, and to his care was entrusted the safe delivery of the mail from outport to outport, over a distance of full sixty miles. In summer he journeyed with his shaggy pony and the little two-wheeled oart, but with the coming of October this means of transportation was discarded for the more sure-footed be as ts now restlessly nosing about his feet.

now restlessly nos-ing about his feet. He was alone, except for the companion-ship of his two dogs, and had reached the most desolate portion of his route. Between Cremaillere and Rose Blanche, not a foot of Blanche, not a foot of the ground was tillable, and his route, striking inland across the peninsula, carried him too far from the sea to bring him into any of the little fishing villages with which its shore was dotted. So he was compelled to travel this desolate, rocky plateau, which was, most fittingly, named "the barrena."

For a distance of

For a distance of fifteen miles one little hut alone broke the severity of the landscape, a rude shelter built by the government for the protection of the couriers, and it was in an effort to reach this hut before the close of the day that Adam had journeyed on, instead of remaining at the little village of Pouchette, where he was strongly advised against leaving. Adam could

pending, and he knew, too, the severity of the awful northern "dwy;" in which every particle of congested moisture, falling in almost impalpable powder, clouds the sight and impedes the breath. But he had miscalculated the possible time of its arrival; so, upon reaching "the devil's thumb," just as the full fury of the storm broke, he determined to secure himself and his dogs from further danger, and, under the lee of the rock, await the cessation of its violence.

"Down, Hector, down! Duke, lay close!" he commanded. "Tis safer ye be in the lee than in the open. There's nowt to

he commanded. "Tis safer ye be in the lee than in the open. There's nowt to fear, saving starving and freezing, and us have froze and starved afore, pups, and lived to see this day. And so 'twill be again," he muttered, as he pulled the dogs closer to him, that their warm hodies might add to the protection of the thickness of canvas wrapped about his

thickness of canvas wrapped about his legs.

Crouching low, he saw the outlines of his catamaran lose themselves in the drifting snow. First the lower runner, then the platform, and finally its upper runner disappeared, and only the two upper stakes, leaning against the rock above him, remained to show that his catamaran was beside him. Between these upper stakes he had lashed the mail bag, so that it formed a roof, and, little by litle, its leather sides sunk under the weight of snow and forced him into a still more crouching attitude. The air grew close and warmer. He realized that he was shut in from the fury of the storm, and, although he would suffer much discomfort, his life, as well as that of his dogs, was saved.

Taking a hard biscuit from his jacket pocket he munched it, giving now and then a small portion to each of his dogs, who cagerly devouring them, nosed his mittened hands for more. Patting their

TEADY, pups, steady! Bide quiet a bit 'til the storm lifts."

A winter gale was blowing. Drifting the snow into mountains of fleecy whiteness, wherever it encountered an obstacle to its headlong drive, it eddled and twirled it aloft in dense clouds. Sunset hour had passed, twilight had deepened, and the darkness of the long night was rapidly drawing near.

with a few words of command, and he was just falling into a doze, induced by both the severity of his exertions to reach this point and the closeness of the air, when Hector, raising his nose in feet, with every kair in his shaggy coat bristling, while Duke, springing to his side, growled deep and savagely. At the catamaran was dislodged. The next instant Adam saw a reach this point and the closeness of the air, when Hector, raising his nose in air, emitted a howl and started to his feet, with every kair in his shaggy coat bristling, while Duke, springing to his side, growled deep and savagely. At the same instant the catamaran was dislodged. The next instant Adam saw a pair of gleaming eyes staring into his own, and saw a huge paw fall upon and crush the skull of Hector, whose body fell lifeless at his feet; while Duke, springing to a vantage point upon the overturned catamaran, sunk his fangs into the coarse hair of an immense polar bear, whose wanderings had brought him across the path of the courier, and whose

It was late the following night when, after weary struggling and floundering through drifts often waist high, and often, too, stopping to conserve his strength, that he saw the lights of Rose Blanche twinkling like stars above the whiteness of the snow field; but, at that instant a sudden dizziness overcame him and with a moan of despair he fell prostrate.

Rose Blanche." When it was opened a crisp five-pound note lay within his hand, to which was attached the customary printed form of receipt. It was the courier's pay for his services during the past summer. As he wearlly handed it to his father a smile dawned upon his usually

gar Simpson

tend himself and his dog by beating the bear over its head. Whether this attitude disconcerted the dog, or whether the later's hold became loosened by its struggles, will never be known, but just as Adam was about to strike a blow the dog foll head. as Adam was about to strike a blow the dog fell back. Instantaneously the great paw of the bear shot out and fell, striking the dog with fatal effect. Selzing the opportunity offered by the action, Adam fired point blank at the gleaming eyes. Like the sudden snuffing of a candle the light of life faded out of them, and with a savage growl dying in his throat the huge yellowish-white carcass of the bear sunk upon the snow beneath it, while the fleecy covering of mother

throat the huge yellowish-white carcass of the bear sunk upon the snow beneath it, while the fleecy covering of mother earth crimsoned rapidly.

Adam now had time to glance about him and to note that, through the thinning clouds which were scudding over the heavens, bright stars were fitfully glowing, and the moon, low down near the horizon, shone as a silvery orb. The storm had ceased as suddenly as it had arisen; and, with its decline the gale was lulled into gusts of varying intensity. Quickly and carefully Adam gazed over the snow field surrounding him. Slowly and anxiously he scrutinized each mound and shadow, fearing that the mate of the dead bear might come lumbering toward him. He could discover nothing, however, and, with a sigh of relief, he prepared to move onward.

Twelve miles still lay before him, the remainder of his journey. At the end lay

Twelve miles still lay before him, the remainder of his journey. At the end lay the little village of Rose Blanche, and there, within their "tilt," his parents awaiting his coming. Unlashing the mail bag from the catamaran, he slung it over his shoulder, wondering at its extreme lightness, which up to this time he had not noticed. Then, binding his snowshoes firmly upon his feet and who cagerly devouring them, nosed his his snowshoes firmly upon his fect and mittened hands for more. Patting their grasping his rifle well in hand, he trudged broad heads, he stilled their restlessness onward with watchful eye.

#### Boys' Books Reviewed

THE WHITE CRYSTALS, by Howard R Garls. The boys will like this book, as it tells of the life of the farm and of the fields. A valuable deposit of salt is discovered on a farm in New York State and two surveyors attempt by various methods of deceit to gain possession before the secret of the valuable discovery would leak out. How these two villains are foiled by a boy from New York, Roger Anderson, who is staying with his uncle on his farm for his health, will hold the close attention of the reader. There is plenty of adventure and excitement throughout the pages. The book is nicely illustrated by Bertha C. Day. 243 pages. Price, \$1.50. Little, Brown & Co.

pages. Price, \$1.50. Little, Brown & Co. We have received from The American Sports Publishing Co. the following volumes of Spalding's Athletic Library: Official Basket Ball Guide for 1904; Indoor Baseball Guide for 1905: Official Bowling Guide for 1905. Official Bowling Guide for 1905. Official Ice Hockey Guide. 1905, and Spalding's Official Athletic Almanac for 1905. Each of these books is compiled by the most noted authority in that particular class of sport and is reliable in every particular. The pictares which each book contains of officials, champions and winning teams and trophies will be found most interesting. The Official Athletic Almanac contains the official records for all amateur sports as well as a complete list of all English champions since 1866. Each book is paper covered and is well worth the price asked for it—10 cents. The American Sports Publishing Co.

THE AMERICAN game of baseball is distinctively an American sport, of American origin, and peculiarly adapted to the temperament and characteristics of the American people. From time immemorial, games of ball of different kinds have been played, and nearly every country has adopted some ball game, suited to its needs and conditions.

while there is more or less of a family resemblance in all games of ball, I consider baseball quite as much American in its origin, development and evolution, as cricket is of English origin, both being recognized as the national games of their respective countries. Some authorities claim that baseball came from the old English juvenile game of rounders, but I am de-

ers, but I am decidedly of the opinion that it opinion that it was a natural evolution from the old colonial game of one old cat. One old cat was played by three boys—a thrower, catcher and batsman. The latter, after striking the ball, ran to a goal about thirty feet distant, and by returning to the batsman's position without be-

haisman's position without being put out, counted one run or tally.

Two old cat was played by four or more boys, with two batsmen placed about forty feet apart. Three old cat was played by six or more boys, with three hatsmen, the ground being laid out in shape of a out in shape of a triangle. Four old cat was played by eight or more boys, with grounds

element has formulated the playing rules and governed the game.

Raseball clubs continued to multiply quite rapidly from the organization of the National Amateur Association, in 1858, to the breaking out of the Civil War in 1861, but the game up to this time was confined almost entirely to New York city and immediate icinity. The New York soldiers introduced their new baseball game into the army, and it soon became a favorite camp pastime in both armies. While those two magnificent armies of the north and south could not agree upon national policies of government, both could agree on baseball, and at the close of the war the soldiers of hoth armies carried the game to every town and hamlet in the United States, and in 1865-66 baseball became a furor throughout the country. So it will be seen that baseball has its patriotic side and was one of the direct results of the Civil War, and the game can date its birth as the national game of the United States from that war.

I am indebted for my first acquaintance with baseball to a disabled Illinois soldier, returning from the war in 1863, when, as a lad of thirteen, I listened to his account of baseball as played in the camp, and under this old soldier's coaching I became a member of a boys' club in Rockford, Illinois, which I believe was one of the first baseball clubs organized in the west.

From 1865 to 1870 baseball clubs

in the west. From 1865 to 1870 baschall clubs sprang up everywhere, and the rivalry between cities became intense. The Na-

Every effort was made at this period to keep the game on an amateur basis, but the rivalries between cities became so intense, and the demand of the public for high class ball so urgent, that it was utterly impossible to keep the game on a strictly amateur plane. Veiled professionalism became the order of the day, and while the amateur status was insisted upon in the rules, young men possessed of skill as ball players were offered lucrative positions in commercial houses, with

The Origin and Early History of Baseball

Character, and later demonstrated that had grown up in the was in extended trip through the west, in 1867, and met with adapted to the temperament and characteristics of the American people, of the Rockford club, of which I had the from time immemorial, games of ball honor to be the pitcher. The result of spans a man equal to the baseball government, and, as usually happens, a man equal to the emergency appeared in the person of William A. Hulbert, atterwards pression of William A. Hulbert, atterwards presion of William A. Hulbert, atterwards pression of William A. Hulb plane.
In the winter of 1875, through the kind-

In the winter of 1875, through the kind-ness of a mutual friend, I first met Mr. Hulbert in Chicago, at which meeting I explained the demoralized condition of the game, that it was in the hands of the gamblers, how nauseating these con-ditions were to the self-respecting play-ers of that period, and how difficult it would be to change the condition, be-cause of the strangling hold the gam-bling influences had on the sport. I exssible to keep the y amateur plane. In became the order the amateur status in the rules, young man then connected with the game who men possessed of skill as ball players were offered lucrative positions in commercial houses, with the understanding the because of its demoralized condition, I that they could play baseball all they wanted to yet a large part of the sport, throw his personality into the sport, and the local club or some of its enthusiastic members.

I recall my own experience, when in the fall of 1867. I was surprised with an offer of a salary of \$40 a week as bill clerk in a wholesale grocery house in Chicago, which I accepted with the insulation that my business abilities were so highly appreciated. I learned afterwards that the business concern appraised my services at \$10 a week and the baseball club made up the balance. This so-called amateurism, or veiled professionalism, was in existence at that the claggo in Jayer who signed the contract with me captain and pitcher ism, or veiled professionalism, was in existence at that period providing for in general vogue the explained of the Chicago club, he was not its leading the proposition was accepted the management and captaincy of the Chicago club and do his best to players as not players as the chicago. The proposition was accepted the management and captaincy of the Chicago in the championship to a week and the baseball club made up the balance. #### YOU KNOW THIS BOY

All of our readers who read the account of AMERICAN BOY DAY at the St. Louis Exposition, and particularly those who were present and took part in the ceremonies will remember the Japanese boy who spoke from the Festival Hall platform. His name was K. S. Inut. Those who have a copy of the August, 1904, number of THE AMERICAN BOY may there read about him and his address on that occasion and see his picture. All will be pleased to know that he is making a hit at the University of Michigan. He is a candidate for the position of pitcher on the University baseball team and has developed more speed and a greater number of puzzling curves and shoots than has any other one of the squad. He is also giving lessons to some of the students in the Japanese system of physical culture known as Jiu Jitsu. He has made a reputation as an orator, his work on AMERICAN BOY DAY showing him to have no mean ability in this direction. Last year at the University of Michigan he was second in his class oratorical contest, and this year he has taken first honors. This achievement puts him in the finals from which the representative of the University of Michigan in the Northern Oratorical League is to be selected. He has been delivering lectures throughout Michigan and neighboring states during his vacations and on Saturdays, and from the proceeds is putting himself through the University. He is at this writing (March 1st) a candidate for the office of President of the Students' Lecture Association, an important position.

#### A YOUNG KNIGHT OF THE KEY

The village of Houlton, Me., boasts of a young boy telegraph operator in the person of Willie Paul, familiarly known as "Billie" Paul. One day the agent of the Western Union Telegraph Company at Houlton wanted a smart, active boy to fill the place of his regular messenger boy, who had become ill, "Billie" got the job. When not delivering messages "Billie" was watching the operator and studying the Morse code. His enthusiasm attracted the attention of the manager,

who offered him every facility for learners as school and a memner of a fine literating the use of the telegraph key. The every Friday afternoon. I am an ardent rsult was that "Billie," who got permanent employment as messenger, learned in the course of three months the telegraph alphabet from A to Z and was able to send and receive messages. Since that time he has frequently been left in time he has frequently been left in charge of the office, and has sent and received messages to the utmost satisfaction of his superiors. He is probably the youngest keyboard operator in Maine.

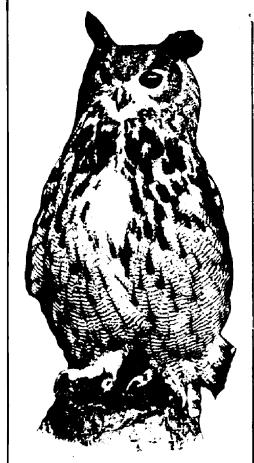

#### THE BOY EVANGELIST BACK FROM **ENGLAND**

Lonnie Lawrence Dennis, the eleven-year-old boy evangelist, whose picture appeared in THE AMERICAN BOY some time ago, has returned from a successful tour of the British Isles. He is said to have preached to four million persons during his three months abroad, and that his converts number twenty thouand. The boy has written an autobiography, in which he says his memory dates back to the ninth month after his birth; that, while still a baby, he was in the habit of arranging his dolls on chairs and preaching to them. His father's ancestors were French and Indian, and his mother's were African and

#### WHAT DISCIPLINE DOES

A reader of THE AMERICAN BOY, who has become interested in the continued story, "My Four Years at West Point," sends us an account of two incidents which illustrate the soldierly qualities of the West Point cadets after they have been subject to the strict dis-cipline of that best military school in the world. The incidents are as follows: In a parade of the cadets in Wash-ington on a recent occasion

ington on a recent occasion, some one threw an apple from the sidewalk, striking one of the cadets in the mouth. The young man never faitered; in fact, never

turned his head the fraction of an inch. At another time a cadet, while on the march in Washington, felt the sting of a poisonous insect on the back of his neck, yet he did not raise his hand to brush it off. Death resulted from the sting soon afterwards. This incident is related in the records of the war department. It is of such stuff that the officers of our army and navy are being made.

THE EDITOR IS WATCHING THE BOYS

#### A VERY AMATEUR FIRE COMPANY

Floyd Wiedemann of Harvey, Illinois, writes a letter about the fire company of which he is chief. Floyd is thirteen years old. The company has a small fire wagon, and a goat does service for horses. A regular drop harness is used and the engine house is a tent. The wagon is kept in the middle of the tent and the goat's stall is in one corner, another corner being occupied by a table, off which the firemen cat. The boys in the company, numbering eight, have suits. They have made a record of running a block in 23 seconds. Other boys in the town have fire teams, and races frequently take place between the rival Floyd Wiedemann of Harvey, Illinois, frequently take place between the rival companies.

#### AN ARKANSAS BOY ON A FRUIT FARM

Richmond J. Gipple, Bentonville, Arkansas, a fourteen-year-old farmer boy, writes about his home: "This is a great place for squirrels, rabbits, hawks, and quall. My brother Herbert and I have each a good gun and a good dog and we do lots of hunting. We also own a fine calf, and I am going to raise some money. My father owns a fruit evaporator and can dry about 240 bushels of fruit a day. Recently, during fifty-seven days, we can dry about 240 bushels of fruit a day, Recently, during fifty-seven days, we dried 13,794 bushels, at an average of 414 cents a pound. I am in the seventh grade at school and a member of a fine literary society in the school, which meets every Friday afternoon. I am an ardent lover of THE AMERICAN BOY, and worth for its coming with greet inter-

-The Editor.

#### FROM BRITISH INDIA

Ralph L. Martin, Sialkote, Punjab, British India, writes the editor a very flattering letter regarding The American Boy and particularly with reference to "For the Mikado," "My Four Years at West Point" and the Stamp Department. He says that he is looking forward to the message of the Governor of Ohio to American boys since he was born in the the message of the Governor of Ohio to American boys, since he was born in that state. He has a collection of about a thousand stamps from all over the world. He is thirteen years of age and has a brother of fifteen. His father, whose business he does not state, expects to return to America in three years and he himself is looking forward with great anticipation to returning, as he does not like British India "one bit." The two brothers go to school up in the hills. The school is an American Methodist Mission School. He says the boys call them "Amricans." 'He is living in a very hot part of the world, where the thermometer in the summer time registers as high as 150 and where the temperature in the house with all the doors and windows closed is up to 108 most of the time. No fire is needed to heat water for a bath. fire is needed to heat water for a bath. The water is just set out in the sun where in a short time it becomes so hot you can't get into it. The winter just has been the coldest in Britsh India for 33 years. The lowest point reached by the thermometer was 32 degrees above

#### A TRIO OF JUVENILE ARTISTS

A TRIO OF JUVENILE ARTISTS

Three Geneva (Ohio) juveniles have won distinction during the last few months along various lines.

Francis Miner, an 11-year-old, has shown a wonderful talent for painting in oil. The young lad is clever at his sketch work and still more so when it comes to putting the colors together and bringing out the finished product. The picture at the foot of the easel was his first effort in oil and is considered exceptionally good by those who have examined it. The time occupied on this picture by the young artist was two and a quarter hours. The picture on the easel is his first of the landscape pattern and was fully completed in a triffe over three hours. Artists claim he has wonderful ability along this line of work and his parents are giving him every encouragement.

Harold Smith, another one of the trio. encouragement.

Harold Smith, another one of the trio,

PRANCIS MINER

has great taste for music, and there are but few boys who can handle the violin better than he. Harold has gathered about him a company of eight young boys of about his age, 14 years, who spend their spare time in orchestra work. The orchestra sails under the name of the "High School Orchestra," and has furnished some exceptionally good music furnished some exceptionally good music at lodge, church and school functions.

When it comes to copying any of Gibson's work with the pen and ink Charles Means, age 14, exhibits great talent; so well does he execute the work that it is difficult to tell his copy from the original. The young man spends all of his leasure time at you work. of his leisure time at pen work.

# POLE VAULTING

THE POLE vault is probably the most difficult of all the dimcuit of all the events on the athletic program, for the reason that while the weight thrower must have strength, the immer agility jumper agility and the runner endurance, the athlete who wish-es to win success as a pole vaulter as a pole valuter must cultivate all three and excel in the two first named qualities.

Supposing the athlete to be of

athlete to be of average strength. it is the intelli-gent application gent application of that power and its gradual in-crease by practice that will bring success in this in-

success in this in-teresting event.
The first ques-tion that comes to the mind is, How can I ob-tain the kind of strength which is most needed?
The work can

strength which is most needed?

The work can be varied, for almost any exercise will assist in some degree to strengthen useful muscles. I would advise short distance running, hurdling, the broad and high jumps, and gymnustic exercises of all kinds, but don't do too much of any one thing.

After taking this preliminary courses as to limber up, commence the practice of the vault and cease the other work entirely. The number of times you should practice each week is a matter to be judged by the strength, but it should be at least three and not more than five. When competing cut the practice to twice on the preceding week.

The first thing for the beginner to do is to learn what is called the "shift," which is the handling of the pole previous to the actual jump.

The pole should be held with the hands two feet apart, the right hand, palm up, being uppermost, and the left hand with the palm down.

The nole should be held at the side.

The grey feet, three inches from the ground, and at the height of eleven feet, three or four inches below that height.

Any man or boy who can exceed that height can calculate the best place to grasp the pole.

As in all athletics, training is necessary habits.

The regular food can be eaten, but coffee and tea should be taken in moderation, and pastry left alone entirely.

Smoking must be left alone for many reasons, as it acts on the nerves to their detriment, but chiefly because it acts as a stimulant and increases the action of the heart in an unnatural way.

When this is combined with the natural and healthy increase of the heart's action by athletic exercise, the result is most unfavorable. Especially do cigartette height.

the palm down.

The pole should be held at the side, waist high, and pointing straight in

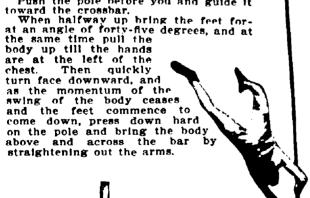

The pole should be held at the side, waist high, and pointing straight in front.

Take a few long strides as if approaching a jump, keeping the back straight, and then make the "shift," bringing the right hand above in front of the face and silding the left hand up to the other. This movement will naturally turn the point of the pole toward the ground ready to make the leap.

As soon as the "shift," is perfected the athlete can take a few jumps into the air, but keeping hold of the pole and endeavoring to travel a straight and not foo rapid course.

This part of the jump having been mastered, the beginner can try over a bar, at a low height, gradually increasing the height. Supposing the bar to be placed at eight feet, the pole should be grasped with the right hand at nine feet from the bar and the left hand two feet below. Start sixty feet away from the bar and, running with long, even strides, when you are within fifteen feet of a mark, just below the bar, perform the shift. Do not slow up in the run as you on this. You will then he within about nine feet of the bar, the pole pointing to the ground. As soon as it touches spring straight up into the air, keeping the elbows straight and the hands above and in front of the face and the back hollowed. Push the pole before you and guide it toward the crossbar.

When halfway up bring the feet forat an angle of foriv-five degrees, and at the left of the chest. Then quickly turn face downward, and as the momentum of the

By A. G. ANDERSON American Champion, 1902

A. G. ANDERSON

When the pole is within an inch or two of the bar, throw it back and the arms over the head, and you will be over.

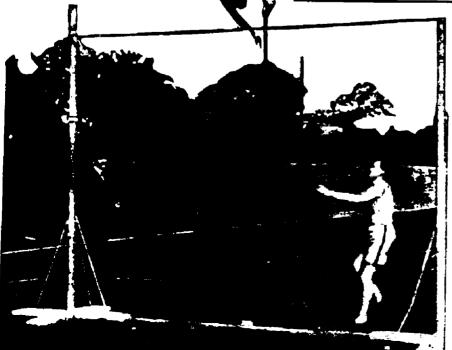

reasons, as it acts on the nerves to their detriment, but chiefly because it acts as a stimulant and increases the action of the heart in an unnatural way.

When this is combined with the natural and healthy increase of the heart's action by athletic exercise, the result is most unfavorable. Especially do cigarettes have this gifect.

The destruction of muscular tissue by athletic exercise makes it necessary that lots of sleep should be obtained, so that nature can not only repair the loss, but increase the strength little by little.

Every boy should take at least nine hours "sleep for this is just as essential as food; it means strength and stamina to those who sleep regularly.

The present prosperity in the South is very encouraging. For a long time the South is contrast to the activity and enthusiasm which prevailed from 1870 to 1832 in that section. In the part of the ground don't be in too great a hurry. It takes some time after you are once launched in the air to get up to a bar nine feet high, and a very much longer time to reach eleven feet. Holding the pole for jumps to reach eleven feet to reach el (Current Happenings in Amateurdom.)

#### The Reviewer

The Reviewer

(Comment on Current Amateur Papers.)

The Mcotchman, edited and published by Paul J. Campbell of Georgetown, Ill. is an ambitious undertaking creditably carried out. The magazine contains twenty pages (7x10 inches in size), and a cover appropriately adorned with a thistle. The contents are varied and unusually well written. The editor contributes a poem, which is graceful in sentiment, although the metre is not smooth. His Maristocracy of Brains' and "Talk with Recruits' are of excellent literary worth. Two good poems are "A Winter Evening," in which James L. Pearson celebrates the delights of the study when all is cold without, and "After the Years," by F. Curtis Wedge, who waxes a trife melancholy. The Mtudent, a monthly published by the undergraduates of Southern Kannas Academy, is rapidly approaching its one hundredth issue. Neat in size and typography. The Observer is hound to attract attention. It is edited and published by Howard V. O'Brien and Wetmore Hodges, who also act in the dual capacities of contributors under the pen names "A. B. C." and "X. Y. Z.," respectively. Their paper contains eight pages of the half-century (5x1 inches) size and a cover designed by the boys' teacher, Mr. E. A. Bates of the Chicago Latin School faculty. The stock of paper used is good and typographical errors are nowhere in evidence. It might be well to enlarge the margins along the sides of the page. A fair-sized margin is by no means a waste of valuable space, but often maken the printing stand out more artistically. A single sheet suffices for the second issue of The Little Jap, but the young editor, Clarence E. Dittmer of Manchester, Ia., has succeeded in compressing a great deal of matter thereon, including a poem dedicated to Marshal Oyama, local news items, advertisements and an interesting article on an evidently much-needed new schoolhouse. The youthful editor is agitating this public movement in his columns, also be broken at the spilable and part carried over to the next income and the proposed and (Comment on Current Amateur Papers.)

"HE'S NOT AS HANDSOME NOW AS I AM, MOTHER"

whin they insult my father, that's—"
"And what could they say bout your father?"

One fellow said too much.

"One fellow said too much."
"The spalpeen, and who did it?"
"Buck Andrews. An' he's not as handsome now as I am."
"And phat did yees do to him?"
"Ask him. Perhaps he'd give you his pickter. He's a beauty, but he'd have some trouble looking pleasant while he

some trouble looking pleasant while he got it took for you."
"Mickey, you're the son of your father—but, Mickey, yees oughtn't to be always fightin," replied Mrs. McCloskey, quickly checking herself, while the father, who had been a silent listener to the dialogue, evinced his satisfaction by lighting his pine and leaping back for by lighting his pipe and leaning back for

a smoke.

The story of the day was drawn out of the Irish lad, and the sequel was particularly pleasing to both of the parents. In the practice game on the morrow even Buck Andrews, who played behind the bat, seemed to forget the incidents

"I'll do him up in three seconds," soliloquized the boy from Frog Hollow.

Professor Walker, a witness of the fight of the morning, said nothing to the pupils, rather felicitating himself upon the complete defeat of the lord of the playground, whose authority no one cared to dispute; but to prevent any further clash he devent any further clash he derest at the close of the session.

Ben Murphy awaited the Frog Hollow boy's coming at faction. Then when Mickey batted

faction. Then when Mickey batted the ball into the brickyard and made the circuit of the bases with two men on the bags, Buck led in the cheering over the exploit that added three runs to the grammar school

Ten to twelve, favor of the gram-

"Ten to twelve, favor of the grammar school," announced the scorer as the Tunnel Hill team came in for the last half of the ninth inning.

The first batsman was retired at first by a clever pickup and throw from shortstop, and a cheer went up from the grammar school partisans, which was succeeded by yells of delight from the Tunnel Hill supporters when Luke Phillips missed an easy fly in right field and Jim Davis failed to stop a grounder along the third base line. Then expectation ran high when Paddy Welsh, the star batsman of the visitors, walked to the plate.

Jack Marshall, the pitcher, tried a

Jack Marshall, the pitcher, tried a low ball and Paddy reached for it, but missed. A high ball tempted him and again his bat fanned the

"Two strikes!" called the umpire,

"Two strikes!" called the umpire, and everybody breathed hard.
Paddy waited. A ball came moving swiftly at his waist line, the sharp report of the impact came and the ball moved in a hot drive toward center field, while the two base runners sped on in the effort to reach the home plate.

Down at second base there was a vision of a red head and a long left arm vaulting into the air, then a baseman fell sprawling upon his back with his hand still uplifted. Mickey McCloskey had the ball!
Springing to his feet, he plupged to second base and completed the play—and the game was won.

second base and completed the play—and the game was won.
Dashing down the field, the first man to reach the Frog Hollow boy was Buck Andrews, who led in the rousing cheers for the grammar school and Mickey McCloskey.
"A streak of greased lightning shooting into the air, a cloud of dust and a double play—bully boy, Mickey!" was Jim Davis's description of the finale as the second baseman was carried off in triumph. triumph.

French Creek dam, then a spacious skating park, was filled with a merry throng on Christmas day, while crowds watched the moving picture from the shores. A game of hockey was being hotly contested, with Buck Andrews and Mickey McCloskey as opposing goal tenders. The wooden ball was being worked towards the lower goal when a muscular ironworker sent it flying over the icy surface. Failing to prevent the score, Buck turned and sped swiftly after the ball. A hundred voices yelled a warning in unison as he skated towards the foundry forebay, but the goaltender's momentum carried him to the thin ice, then the crowd heard the crash and saw him disappear.

Buck rose to the surface and struggled to reach the firm ice, then exhausted by his efforts, found himself unable to resist the current that carried him towards the forebay and too weak to grasp the line that fell close to him. At the upper goal Mickey McCloskey was not at first aware of the cause of the commotion at the lower goal and reached the scene as Buck's hands grew

skater, paralyzed by the spectacle, a form sped across the ice to the south form sped across the ice to the south shore and lowered itself from the footlog to the top of the fender at the foundry forebay. It was Mickey McCloskey. The people watched with breathless interest as he cautiously crept to the center of the narrow ledge, his face as pale as that of the drowning boy, but his broad jaw set in grim determination. He waited a few seconds—seconds that seemed an hour to the throng—then as the unconscious form was almost beneath him, he dropped into the water. A cry of horror arose as Mickey, with Buck in his arms, was drawn under by the strong suction at the fender, but the brave Irish lad struggled to the surface with his burden and, seizing the end of the line that was thrown from the bank, he was dragged ashore, still holding Buck's head above the water.

Cheers rent the air, but they sank into

Cheers rent the air, but they sank into what was strangely like a sob as the body of Buck was carried to the foundry nearby. Mickey, chilled and exhausted though he was, refused to leave the side of his schoolmate until he saw Buck's eyes open. Then an arm was raised and it was placed about the neck of the kneeling hero from Frog Hollow.

A FORM SPED ACROSS THE ICE

"Mickey!" said a faint voice.

And the old feud was forever buried.

Dr. Cauffman sat silently watching the breathing of the sleeper upon the cot in the humble home of the McCloskeys in the Frog Hollow row. Buck Andrews and Ben Murphy tried to read the thoughts of the physician as he held the pulse of the sick boy, but his impassive face gave no sign.

"How's me boy, doctor?" anxiously inquired Mrs. McCloskey.

The doctor shook his head.

"Send for me to-night if you need me," he said, and a minute later the rumble of the wheels of his departing carriage was heard.

Mickey McCloskey's refusal to leave Buck's side until assured of returning consciousness had culminated that night in a heavy chill for Mickey, and for three days he had tossed with four

NONE OF THE BOYS COULD TELL JUST HOW IT HAPPENED

Ben Murphy awaited the Frog Hollow boy's coming at the gate.
"Now, Murphy," said Mickey as he came up, "you've picked yourself out for a fight, just help yourself."

"Mickey," said Ben in his calm tone, "I'm not a fighter am not here to pick a quarrel with you. It will never do to keep this thing way of and surveyed the effect of her toil with a critical eye "And don't yer fergit that yer grandfather was on the Dublin perlice force an' as fine a cop as iver walked the strates, an' that yer father fit with Meade and Hancock."

It was the first Monday in September at the close of the Civil War, and Mickey, who had supported his mother by his toil in the Phoenix iron mills during the three years his father was in the army fighting his country's battles, was about to re-enter school.

Red hair, freckled face, pug nose and stocky frame, Mickey McCloskey was

Ben Murphy, said Ben in his calm tone, "I'm not a fighter am not here to pick a quarrel with you. It will never do to keep this thing you. It will never do to keep this thing way of showing it."

"Hookey," said Ben in his calm tone, "I'm not a fighter am not here to pick a quarrel with you. It will never do to keep this thing you. It will never do to keep this thing way of showing it."

"I'd on't blame you for licking Buck."

"And I'll knock the head off any fellish lad hotly, clenching his fists. "Murphy, you'se fellows thinks you're friends."

The sense came up, "you've picked yourself out for a fight, just help yourself."

"It was the first Modon't yer fergit way of showing it."

"I'd on't blame you for licking Buck."

"And I'll knock the head off any fellish lad hotly, clenching his fists.

"Murphy, you'se fellows thinks you're triends."

The sentence was interrupted by Ben, who laid his hand kindly upon the shoulder of the Irish lad, and with the quick instinct of his race Mickey yielded to the touch of friendship, and a faint smile played about his mouth and his clenched hand relaxed.

"I've nothin' 'gainst you, Ben," he

fighting his country's battles, was about to re-enter school.

Red hair, freckled face, pug nose and stocky frame, Mickey McCloskey was not a handsome boy, and he was ill at ease in the new clothes his mother had just finished for his use.

"All right, mother." was his enerry response, "and the first spalpeen that sez a word about—"

"Now, now, Mickey," interrupted his mother, deprecatingly, "yees 'ill be in a fight afore the first bell rings."

But the scion of the McCloskeys was scaling the back fence before further maternal advice could be given. Ten minutes later, conscious that the eyes of all the boys on the playground were upon him, Mickey entered the school gate.

"Hello pretty boy! How's Frog Hole."

gate.

"Hello, pretty boy! How's Frog Hollow society?"

It was the greeting of Buck Andrews, the undisputed champion of the school.

"As good as the suckers in this pond," was the ready retort of the Irish lad,

"As good as the suckers in this pond," was the ready retort of the Irish lad, and Buck flushed under the laughter of the boys.

"Mister Mickey McCloskey, fellows!" continued the champion in mock introduction. "Pat's boy, the member of the Irish regiment who never smelt powder."

None of the boys could tell just how it happened, but in a minute's time a dark blue semi-circle fringed the space below each of Buck's eyes and the champion was being led across the street to the pump, to bathe his bloody nose, while Mickey stood alone, unharmed, glaring at the vanquished enemy. A new champion had suddenly ascended the throne at the Phoenixville grammar school.

Gathered in a corner of the school yard at recess, the boys excitedly discussed the absorbing theme, "Who will conquer Mickey McCloskey?" And unconsclous that he was the one subject of thought, the Irish soldier's boy from Frog Hollow, detained in school, puzzled his brain over an example in fractions, while Buck Andrews, for sufficient reasons, absented himself from the playground. But the problem of subjugation was still unsolved when the belt rang.

The conference was resumed at noon, but no David offered to meet the new

The conference was resumed at noon, but no David offered to meet the new Philistine.

"No such interviews for me," said Luke Phillips. "Buck looked like a fellow going through a corn sheller while the festivities were in progress this morning."

"Gentlemen of the grammar grade with please make no invidious remarks about the Irish regiment in future," interposed Jim Davis, the wit of the school. "The Irish battery shoots twelve ways at the stone."

knew.
"This would never have happened,"
put in Ben Murphy, a mild-mannered
boy, "had not Mickey been insulted as "We don't need any advice from you, Murphy," sneered Andrews, who had been a silent attendant upon the confer-

ence. "Till tend to Mickey McCloskey," replied Ben quietly.
"You, Ben!" exclaimed a dozen boys in

"I'll tell your mother that you died happy, Ben," put in Davis. "Let's go for the flowers, boys."

"Join the angels if you want to, Benny," said Luke Phillips; "but I'd se-

"Join the angels if you want to, Benny," said Luke Phillips; "but I'd select an easier route."

But despite the protests and predictions of disaster, Ben calmly insisted that he would undertake the conquest. The battle would be after school and he and Mickey must be alone.

A jangling chorus of objections filled the air, but Ben was firm and finally won a reluctant consent to his plan. Then the bell rang and the boys filed into the school room wondering over the outcome. Though cut off from the fellowship of the playground by the events of the morning, Mickey learned of the conferences and of Ben Murphy's self-imposed task. The Irish lad cast frequent glances at the earnest-looking boy who had undertaken to meet him in fistic combat and once or twice their eyes met. There was no hatred in Ben's look and Mickey was a bit puzzled.

Ben Murphy awaited the Frog Hollow boy's coming at

#### Oh, In Those Far-Away Days

Oh, for the far-away days grown dim.

And our dear little ancestors, quaint and prim,

Standing so straight in a stiff, solemn row.

Watching the tapestry grow and grow.

grow. Just think to yourself how those children would stare If I had been there if you had been

Oh, in the never-think days of to-day.

With our curly heads running on nothing but play;

We loll in our chairs and forget to

while grandmother, horrified, shows her surprise. Indeed, with good cause might our ancestors stare, If I had been there, if you had been there.

#### Jeu De Charret

By GEORGE HAWS FELTUS

TRANGENESS OF TITLE sometimes lends attractiveness. So I have placed at the head of this article the name of a very fascinating Swiss game. The name is pronounced something like this: Zher d' sharray, and means the "play of charret." Not so tedious or intricate as chess, it is more varied in moves than checkers and meduces a greater range of skill. It will afford much pleasure to the boy who will take the trouble to make the game according to the directions given. I have seen the same game under a Norwegian name, and have been told that it is similar to a former favorite called Nine Men Morris.

Morris.

On a smooth board, or the back of a crokinole board, draw accurately this diagram, making the outside square one foot, the middle ten inches, and the innermost eight inches. The squares may be larger or smaller than these measurements, but this will be found a convenient size.

venient size.

For the men, checkers may be used, or even buttons will do. Two sets of nine pieces are required, each player, of course having a different color.

RULES.

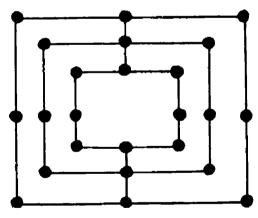

1. The immediate aim is to get three men of a color on consecutive spots on a straight line (not merely in a row, as on three corners).

2. Whenever a player succeeds thus in getting three of his men on a line he must remove from the board one of his opponent's men, except that he cannot take any one of three in a line, a combination which can be broken only by the owner at his pleasure.

3. The game is played in three parts:

(a) Play alternately from hand till the nine men are out, placing on the spots.

nine men are out, placing on the spots.

As often as either player succeeds in getting three of his men in a line he removes one of the opposite color, according to rule 2. (b) When all the men have been played on to the board, continue the game by moving in turn one spot at a time along connecting lines, trying, of course, to collect three in a line. (c) When either player has only three men left on the board, he is at liberty to move in his turn any one of these without regard to connecting lines, and still has the right of rule 2.

4. When either player is reduced to two men, being now unable to get three in a line, he fails and the game counts for his vanquisher.

for his vanquisher.

#### The Mysterious Tambourine

The Mysterious Tambourine

There was one trick which for a long time (that was before I knew anything about conjuring) puzzled me greatly, and that was the tambourine trick. The simplicity of the things used were not at all in accordance with the wonderful effect of the trick, yet when I learned the secret I really felt surprised that I should never have hit upon a solution of the mystery. Now, there may be some among my readers (and most probably not a few) who have seen this trick and yet have not been able to tumble to "how it is done."

For the benefit of such I will explain it. The conjurer first shows two wooden or brass rims of an ordinary tambourine, one of which is just a trifle larger than the other, and a sheet of newspaper. Taking the two rims in one hand and the paper in the other he informs his audience that he had intended giving them a few musical

he had intended giving them a few musical selections, but that, owing to an accident,

the tambourine had got smashed in the journey. However, he continues:

"I will endeavor, ladles and gentlemen, to extract something from these two rims and the piece of paper. I wish you to observe that otherwise I have nothing in my thands—except my palms; neither have I anything on my table, on which I shall lay the smaller rim. Over this P place the piece of newspaper stretching it tight, then, in order to make a sound tambourine I press over both the larger rim. Tearing away these paper edges you will see I have the required instrument."

He taps the paper with the wand, but fails to get much sound out of it; then, to let the music out, he thrusts his wand through, making a small hole. Immediately from this hole, comes at a rapid rate —assisted by the wand—yard upon yard of multi-colored paper ribbon until the performer has on the floor a heap a foot or two high. Now, where does all this come from? Certainly not from the conjurer's sleeve; certainly it is not placed in the hollow of the tambourine, for the performer continually turns the thing upside down during the progress of the trick.

Now, the whole matter rests with the sheet of paper and what it contains. If the price of paper and what it contains and it may destroy the sight.

Here, fix and similar seeds will grow on a plece of felt or other similar stuff it is kept wet contently and similar seeds will grow on a plece of felt or other similar stuff it is kept wet contently and similar seeds will grow on a plece of felt or other similar stuff it is kept wet contently and sill of the price of which, if I remember rigidly, is about 35 cents for a dozen. These useful additions to the conjurer's outlit when wound up (as supplied) measure about 354 in across and have a width of 156 in Elicit coil is generally in three colors, red, white and blue; in the center is a hole 54 in across and have a width of 156 in Elicit coil is generally in three colors, red, white and blue; in the center is a hole 55 in the procure two sheets of newspaper as near coils are used. For the tambourine trick procure two sheets of newspaper as near alike in printing matter as possible. Out of the center of one cut a square with a side five or six inches long. Then lay on the uncut paper a coil, and, having well gummed the edges of your centerplece, paste it down over the coil so that the protect the with of the pad, where will be funny, and if you will only give the other standard the reading matter is fairly regular.

It is very simple to make this kind of a long. Then lay on the uncut paper a coil, and, having well gummed the edges of your centerplece, will be contended to some the uncut paper a coil, and, having well gummed the edges of of the paper with your signature.

It is very simple to make this kind of a long. The lay of the center of the paper with your signature.

It is very simple to make this kind of a long the potential paper with your signature.

It is very simple to make this kind of a long the potential paper with your signature.

Pat or thump the paper with your hand after the most out," he really thrusta be the very simple to make the fold will be ex

wand through the center hole of the coil, catches hold of the tag end, and at once starts pulling the ribbon out, supporting the tambourine (paper side downwards, but occasionally turning it over to see where all the stuff comes from!) in one hand, bringing the colored ribbon out by the yard with the wand in the other.

When the coil is exhausted, he sticks the wand through the newspaper, tearing it all up, and hands round the rims for examination. This is a pretty trick, simple, and inexpensive of accomplishment, as a thirty-five cent box of coils will last a season.

#### A Famous Oriental Trick

The famous Oriental trick of making a mango plant grow from the ground in front of the beholder is one of the most fascinating of all "magical" tricks. It has held its interest for the world throughout the generations, although it is well-known now that there is no mystery about it at all, and that it is simply a feat of extraordinary clear juggiery.

ordinary clever jugglery.

But there is a way of making plants actually grow before the eyes of the observer, and the growth is natural. There is no jugglery or legerdemain about it at

all.

Set fire to a quantity of straw. Bean or pea straw is the best, because it contains the most fertilizing elements. Sieve the ashes thoroughly till you have the finest kind of powder. Now set it aside and soak some paraley or salad seed in strong brandy for twenty-four hours.

#### How to Make a Hectograph

A hectograph is very simply and easily made and by means of it many copies of writing can be obtained from a single orig-

inal.

Make a tray of either tin or pasteboard a little larger than the sheet of paper you ordinarily use and about ½-inch deep. Soak i ounce of gelatine in cold water over night and in the morning pour off the water. Heat 6½ ounces of glycerine to about 20 degrees F. (93 C.) on a water bath, and add the gelatine. This should give a clear glycerine solution of gelatine.

Place the tray so that it is perfectly level and pour in the gelatinous composition until it is nearly level with the edge of the tray. Cover it so the cover does not touch the surface of the composition and let it stand six hours, when it will be ready for use.

Make the copy to be produced on ordinary paper with aniline ink; using a steel pen, and making the lines rather heavy so they have a greenish color in the light. A good ink may be made of 1 ounce of aniline (2 R B or 3 B) dissolved in 7

strikes them and the ball impacts against a padded cushion at the back of the box. After striking the cushion, the ball drops down and rolls through an opening at the lower part of the box.

A nantical mile or knot is 6,080.27 feet. ready reference in which the various number of knots are reduced to land miles. The table will save a lot of figuring which would

# NESTING BOXES and BIRD NESTING Guide to Taxidermy

By H. A. SERVICE

T IS now acknowledged that birds are among the greatest friends of the grower of fruits or vegetation; and from the economic standpoint, they represent cash value far beyond previous bettlef. But to hope for the beneficial effects of their presence without first doing something to make them see that they are provided for and feel at home is to hope in vain.

The sooner this is done in the early spring the better it will be, hence it is hopd this article will be found at once timely and practical. New houses or boxes should have time to "weather" or let the newness wear off, before they are to be inspected by the feathered house-hunters. Birds have an appreciation of the appearance of stability and do not like to appropriate to their own uses structures that seem too recent or temporary. Of course, any structure placed out of doors will last longer if painted, and it is well to give bird houses a good outside conting of paint, but it must have time to thoroughly dry before the time for their occupancy.

Fig. A, represents a house-shaped structure in which many kinds of birds will nest. Yet we would advise the omission of the platform in front, as that is too convenient for English sparrows, and

ture in which many kinds of birds will nest. Yet we would advise the omission of the platform in front, as that is too convenient for English sparrows, and other native birds do not care for it. It has but one door and as many windows (with glass well set in with putty) as the person building the house may choose. It is not necessary to make any windows in a bird house, yet one or two will prove acceptable to the birds. The door or passage opening is the main feature of interest to the birds, and this should be made with care. In size it should conform to the size of the bird for which the house is built. For wrens and chickadees, it must be an inch and a quarter in diameter, for bluebirds two, and for the purple martins about two and one-half inches. This is in order that the desired occupant of the house may be able to hold it against possible intruders; for it must be borne in mind that the quarrelsome little English sparrow is constantly on the lookout for an opportunity to sink his bill into a little egg, or to drive off birds not of his own kind. There should be but one entrance to each compartment of the house, and if this is

or to drive off birds not of his own kind. There should be but one entrance to each compartment of the house, and if this is the right size for the birds living in it, intruders will not only find themselves at a disadvantage in attempting to fight from the outside, but they will find it impossible to force an entrance through a snug port hole fairly filled with the beak and head of the defender.

Mr. H. Nehrling, in "Our Native Birds of Song and Beauty," says that after actual experiment, it was found that the English sparrow will not nest in boxes that are, like that of Fig. B, without a peg, floor, or supporting perch just outside the entrance (perch and peg shown in A and G, respectively), while the bluehirds fly in and out readily and seem perfectly at home in such a house, as we

hirds fly in and out readily and seem perfectly at home in such a house, as we have proven by actual test.

It is also commonly said that the English sparrow will never nest in a box or house that swings freely, as does D.

Fig. B represents one of the neatest kinds of bird houses and one that is very acceptable to the birds; it is also quite easily made. It is nothing more than a section of a hollow log or limb with the ends boarded up and an augur hole bored for the entrance. For cheapness, neatness, rustic simplicity, case of construction, and suitability to many birds it cannot be improved upon. We heartily commend this as one of the most simple devices that man may use as an auxiliary commend this as one of the most simple devices that man may use as an auxiliary in his efforts to atone for past neglect of his most valuable allies. Figure B also shows a simple device to protect nests, whether on posts or in trees, from the ravages of cats, squirrels, etc. It is recognized that squirrels, especially the red equirrel or chickeree are among the recognized that squirrels, especially the red squirrel or chickaree, are among the greatest enemies of birds' eggs, but this simple device can be used very effective-iy on trees or posts in parks, lawns, or other places, without injury to trees, squirrels or birds. It consists merely of an inverted funnel-shaped sheet of tin about a foot across, fastened around the post or tree which contains the nest to be protected. If it is a living tree and one does not choose to drive nails in it, the tin can be fastened effectively by merely tying securely with strong string or wire. In fact, the spreading condition of the tin is not necessary, as a band of tin one and one-half or two feet in width one does not choose to drive nails in it, the tin can be fastened effectively by merely tying securely with strong string or wire. In fact, the spreading condition of the tin is not necessary, as a band of tin one and one-half or two feet in width lying close to the post or tree will prevent any animal climbing over it, as shown in Fig. E.

Fig. C shows how an empty tin can may be utilized to become, "some happy creature's home." The end that was cut open has been removed by heating it, and in its place has been nailed a circular board with a hole cut in for a passage way. We have known those very interesting

We have known those very interesting

We have known those very interesting little birds, the house wrens, to nest in a tin can without even the closed end, and were it not for their having to protect their home against intruders, such as the English sparrow or jay, there is no reason why an open can should not always be used. For wrens the boxes or cans should be placed only high enough to be out of the way of prowling animals. A fence corner in a clump of bushes, or the midst of an old brush pile, makes an ideal place for such birds to nest. I have had them rear two broads of young in one season in a chalk box fastened against our porch post, as shown in H. Of course, most birds, excepting martins and sometimes bluebirds, prefer to nest in places that are slightly concealed, or at most not openly conspicuous. It would be cruel to place a tin house or

appear to enjoy it.

It is desirable that one end of all bird houses and nesting boxes be detachable in order to clean them after the brood has departed, so that they will be accepted by the next family of bird tenants. For this purpose, the end of the box may be fastened with a hinge or hooks.

Some species of birds that will not nest in closed houses or boxes will readily oc-cupy some modification of the open box,

This is but a box like a chalk box (for school crayons) with the two ends cut. away to near the bottom and a protecting board fastened to slope over one side. Among the species of birds that will nest in these open boxes are the robin, pewce and phoebe.

above ground, while bluebirds do not care to live so high. From 10 to 15 feet above ground will suit them best. Chickadees and titmice will also nest at this

adees and titmice will also nest at this elevation or lower, while the cunning little wrens prefer to keep still closer to terra firma, and will often nest in low stumps or the hollow trunks of old apple or other trees.

Among the best devices that can be arranged for the home of many birds, including woodpeckers, nuthatches, wrens, chickadees, bluebirds, etc., is an old dead stump with holes in it, set upright in the ground like a post. We know of birds this present year commencing to nest in

ground like a post. We know of birds this present year commencing to nest in such a place.

It is important to arrange for lighting and ventilating these houses. There should be holes or cracks on one side large enough to admit some light and air, but so small as to exclude other birds. These ventilating openings should not be at opposite sides, as they would thus permit currents of air to blow over and chill the young birds.

at opposite sides, as they would thus permit currents of air to blow over and chill the young birds.

Another important consideration is to place the entrance near the top rather than at the bottom. This is because the nesting material fills the bottom of the house or box, and the birds prefer to enter at the top and hop down to their nests. Fig. F shows how a hollow log may be closed at one end and fastened in a tree along a stream for the wood duck, that "vanishing game bird," and most beautiful of ail American birds, which nest in such places.

Fig. G is reproduced from that beautiful and interesting book, "Our Native Birds of Song and Beauty," by Henry Nehrling, of Wisconsin (Pub. Geo. Brumdee & Co., Milwaukee). It shows how a section of a dead log may be attached to a living tree in order to accommodate certain species of birds that nest in cavities.

old boxes of small size, or paint kegs, may be very successfully utilized for bird nesting, but new or recently used tobacco boxes or cigar boxes should never be attempted. May the hint suffice.

The elevation above ground at which the house is placed should depend upon the kinds of birds for which it is intended. Martins prefer a house 25 or 30 feet

## MAKING A CAVE DWIGHT WOODBRIDGE

ERE'S A WAY to build a cave—a cave where a fire can be built, apples, corn and potatoes roasted, and jolly good times enjoyed.

Such a cave will appeal strongly to a boy's heart. Select a spot at the foot of a bit of rising ground—a little hill—and begin to dig into the bank, making the opening only large enough to crawl through, drawing out the earth and piling it up at one side of the opening After the opening has been carried farther into the bank, it can be made higher and wider, the roof being supported by boards held up on either side by a framework. One of the illustrations shows a sectional view through the cave that will give a good idea of the construction. A fireplace of rough stones can be constructed at one end, as suggested in the sectional view and in the cut of a front view of the fireplace. An opening for the smoke to escape can be made up through the bank, with a

up over the opening in the bank. Stakes are driven into the ground and boards nailed on as shown, after which the earth that has already been removed from the cave is heaped over this wooden tunnel, completely covering every part except the open end. This is well shown in the sectional view. Now, to

THE PIRE-PLACE

peted with sand, moss or leaves. Care should be taken to have the roof well supported that earth and stones may not loosen and drop down from overhead. Let some older person inspect this part of the work and see that the roof is made safe.

#### KOSCIUSZKO

N THE 7th of this month there will be unveiled in one of the parks in Cleveland, O., a statue of Tadeusz (Thaddeus) Kosciuszko, the Polish patriot, who assisted the American colonies in obtaining their independence.
Kosciuszko was born in Lithuania, Po-

Kosciuszko was born in Lithuania, Poland, February 12, 1746, and was educated at the Military Academy at Warsaw, and also in France, at the expense of the Polish government. In 1776 he arrived in Philadelphia, with a note of introduction to Washington, written by Benjamin Franklin.

"What do you want?" asked Washington

"I want to light as a volunteer for American independence," answered the Polish soldier. "What can you do?" asked Washing-

Polish soldier.

"What can you do?" asked Washington.

"Try me," was the quick reply.

The result was that in October of that year Kosciuszko was a colonel of engineers, and in the following year the principal engineer in constructing the works at West Point, on the Hudson. He received the thanks of Congress for his services in the army and was made a brigadier-general. In 1792 he was in Poland fighting against the Russians; again in 1794 he was at the head of the Polish insurgents as Dictator, with 5,000 peasants under him, armed mostly with scythes. Not until the Austrians had joined the Russians with 150,000 men did Kosciuszko yield, and not then until he had fallen covered with wounds, uttering the words, "Finis Poloniae."

He was a prisoner at St. Petersburg until Emperor Paul set him at liberty and offered him his sword. Kosciuszko refused to accept it, saying, "I have no need of a sword, since I have no country to defend." In 1797 he visited the United States, receiving a splendid welcome, together with a pension and a grant of land. Later he lived near Paris and still later in Switzerland, where he was killed by a fall from his horse October 15, 1817. His body lies in the Catholic church, Cracow, Poland. There is a fine monument of him at West Point, erected by the cadets of 1823.

#### FLORENCE NIGHTING-ALE

By H. D. MONTGOMERIE

THE OLDER readers of THE AMERI-CAN BOY who remember our war with Spain, and the Boer war, and are now reading the accounts of the appalling loss of human life in the struggle between Russia and Japan, know that women nurses form a most necessary part of the equipment of an

army
The work of Miss Clara Barton and the Red Cross Society is known everywhere, and yet fifty years ago such a thing as wounded and suffering soldiers being attended and cared for on the field by women was almost unknown.

It was a women who convinced men

hy women was almost unknown.

It was a woman who convinced men and women that the caring for the poor, stricken bodies of soldiers was peculiarly the work of women, and showed that instead of its making a woman indifferent and careless to pain and suffering, such work drew out the best and noblest of womanly traits. It is of this woman, whom the British people today call their "Angel of Mercy," that I want to tell the readers of THE AMERICAN BOY.

Florence Nightingale was born in May, 1820, in Florence, Italy. Her father was William Shore Nightingale, a gentleman who owned considerable property in England; thus Great Britain's future "queen of mercy and gentleness" was born and reared amid wealth and lux-

while yet a mere child Miss Nightingale was in the habit of accompanying her mother, carrying little delicacies, in her round of visits to the sick poor in her mother, carrying little delicacies, in her round of visits to the sick poor in the neighborhood of her home; as she on any particular subject? If so, join grew into maidenhood the desire to help one of our correspondence clubs. See the sick and the suffering so strongly page 168, April number.

appealed to her warm, loving nature that she determined to make nursing and the care of the helpless and afflicted her life-

To carry out her high resolve Miss

To carry out her high resolve Miss Nightingale made a long and comprehensive study of the large British hospitals and the institutions for training nurses in France and Germany.

In the spring of 1854 war broke out between Great Britain and Russia, and an army of 25,000 British soldiers was at once dispatched to the scene of conflict. On the 20th of September the celebrated battle of the Alma was won by Britain and her allies, but at a terrible cost in killed and wounded. Those who could be removed were speedily transferred to Scutari, where the great barracks erected by the Turkish Sultan had been converted into hospitals.

Most inadequate were the means of caring for the sick and helpless soldiers, no attention whatever being paid to decency or cleanliness; the commonest necessaries of a hospital were altogether lacking, and men were dying without the least effort being made to save them. When the tidings of these conditions reached Britain the whole nation was roused to wrath. A perfect storm of denunciation and abuse was hurled at the Secretary of War and the government officials.

Miss Nightingale, resting quietly at her

officials.

Miss Nightingale, resting quietly at her beautiful home in Derbyshire, recovering from illness brought on by her work ing from illness brought on by her work in connection with the organization of a sanitarium for governesses in London, also read the story of the horrible condition of England's wounded heroes in the far east. At once she wrote to the Secretary of War, offering her services for hospital work, and they being accepted, she, on October 21, accompanied by thirty-eight carefully selected nurses, quietly left London for the Crimea, where she arrived at Scutari on the day on which Inkerman was fought and won by the allies.

The task before Miss Nightingale was appailing, but she neither flinched nor faltered. The government having given her a free hand, she at once began the work of organizing. A sick kitchen for invalid cooking and a laundry for disinfecting and cleaning linen, were speedily erected.

In her work she encountered many difficulties, but her patience, persistence and firmness conquered. With the sick and suffering her sympathy and her smile succeeded where the orders of the doctors failed. Her efforts were crowned with success, as witness the fact that on her arrival the mortality among the wounded and diseased was 60 per cent, while during the last six months of her stay it went down to normal. One who saw her work wrote: "Her benignant presence is an influence for good comfort, even among the struggles of expiring nature. When all the medical officers have retired for the night she may be observed alone, with a little lamp in her hand, making her solitary rounds."

It was this incident of the lamp which inspired Longfellow to write:

"A lady with a lamp shall stand her work she encountered many dif-

"A lady with a lamp shall stand In the great history of the land, A noble type of good, Heroic womanhood."

With the fall of Sebastopol in Septem-With the fall of Sebastopol in September, 1855, negotiations for peace were entered into which put an end to the war, but it was not until the spring of 1856 that Miss Nightingale again set foot on the shores of England, arriving as quietly as she had departed. But honors soon came thick and fast. Queen Victoria, whose motherly heart had bled for her brave sons, sent her an autograph letter and a cross set with diamonds. The Sultan of Turkey forwarded to her a diamond bracelet. The British nation, to show its gratitude, subscribed a quarter of a million dollars to enable her to esof a million dollars to enable her to es-

#### Stamp Notes

650,000 telegraph stamps have been surcharged by Chile.

A 10-cent registration stamp has been issued for Panama.

There are about 700,000 stamp collectors in the United States.

Brenin—We have seen the 10c of the 1892 with inverted surcharge.

Salvador has issued 450 varieties of stamps which is a record for any one country. United States—A pair of ic postage due issue have been discovered imperforated.

Somali-The 50c green on vermilion 44 has been discovered with an inverted center. Hayt!—The 10c Commemorative series '93 has been discovered with a double surcharge.

Italy—The one lira postage due stamp has been discovered with figures of value inverted. The 3-pies gray of the Victorian type of England has been surcharged for use in Jhind.

The color of the 5 centimes adhesive of Caledonia is changed to brown and blue, the value in brown.

South Australia—The block of 4 of the 1 shilling stamps "postage" in thin letters imperforated vertically.

Great Britain has issued 205 different stamps, and for her colonies there has been issued 5,711 varieties.

The 80, 150, 300 and 1,000 reis stamps of Mozambique have been withdrawn. The 115 130, 400 and 700 reis have been issued to take their place. The 21/2 penny ultramarine of Great Britain

has been surcharged "Bechuanaland" and "Protectorate" for use in Bechuanaland, the surcharge is in black.

Last week the Bureau of Engraving in printing, over printed for the Philippines 100,000 of the 1c, 200,000 2c, 200,000 of the 5c, and 50,000 of the 8c. China has issued a series of due stamps, all of which are printed in the same color, blue. The denominations are the ½, 2, 4, 5, 10, 20 and 30 cents.

A lot of incased postage stamps of 1861 U. S. consisting of 14 pieces, all denominations, ic to 90c, in a recent auction brought the liberal record price of \$230.00.

#### New Issues

Austria-The 72 Heller has been reported

Austria—The 72 Heller has been reported as being on sale in Austria.

Dutch Indies—A new 50c red and brown has been on sale for some time.

Netherlands—A new value has been issued of the Current Postage Due stamps, the 7½c ultra-marine and brown.

Servia—A new set of stamps with the portrait of King Peter the First has been received, they were issued Jan. 14th, 1905. The stamps have the portrait of the king to the left in black in the center oval, and around the oval is a spray of laurel; in the upper right-hand corner is a small coat-of-arms, "Crbija" in plain Russian letters at its right.

#### The Numismatic Sphinx

A lot of incased postage stamps of 1881 U.

S. consisting of 14 pieces, all denominations, ic to 50c, in a recent suction brought the liberal record pitch of the stamps of 1897 white terms and the stamps of 1897 white terms are different to the stamps of pressing of 1886, should never be soaked in water to remove the paper as they were printed on material which is easily destroyed, the intention being to prevent cleaning and reuse.

Seychelles of the 1893, 90 and 98, only \$1.00 were issued, the catalogue values are \$3.00 and \$2.00 respectively, and would seem very pore figures for these stamps.

Two Austrian stamps, the 2k, iliac and the \$4k k green, have been surcharged for use in the Austrial offices in the Turksh empire. A interval is the stamp and the designer has succeeded in producing a very neat little stamp, which is quite un-Aslatic in the absence of the dragon.

The new Chinese Imperial postage stamps largely issued, are a great improvement on the old ones, and the designer has succeeded in producing a very neat little stamp, which is quite un-Aslatic in the absence of the dragon.

The new Chinese Imperial postage stamps has had the effect of making American money the basis for nearly all transactions being in an adjoining territory. At Barranquilla the consultation has been applied in violet to the sheet, every block of four are the Culmbian paper currency will be every stated in involces.

St. Helena Remainders—A large lot of 8t. Helena Remainders have come upon the market, and that it will be known as the beared diamond, cancellation has been applied in violet to the sheet, every block of four are thus cancelled or better disfigured. These stamps will be in a class by themselves, and will undoubtedly have market prices differing properties. The latter of the properties of the propert

# The Boy Photographer

Edited by HUGO ERICHSEN

THE AMERICAN BOY offers twelve prizes of Two Dollars each for the best Amateur Photograph received during the twelve months in the year, one prize for each month, also a second prize each month, of one dollar, for the next best photograph, the competition to be based upon the originality of the subject and the perfection of the photograph. The contest is open to subscribers only. Photographs will be returned if stamps are sent for the purpose. All photographs entered in the contest and not prize winners will be subject to our use unless otherwise directed by the sender, and fifty cents will be paid for each photograph that may be used, the prize photographs is any event to be our own, without further payment than the payment of the prizes. Write on the back of the photograph its title, with a description of the picture, said the full name and address of the contestant, who in every case must be the artist who took the picture.

FIRST PRIZE PHOTO By H. L. Goodson, St. Paul, Minn.

#### Please Note

In submitting photographs for our monthly contests, our subscribers are kindly requested to state, on the back of the print, the name of the plate employed, exposure given, developer used and variety of paper on which print is made. Use a soft pencil to avoid spoiling the print.

THE EDITOR.

#### Our Prize Pictures

H. L. Goodson, of 108 Winnipeg Ave., St. Paul, Minn., hit the builts eye with his "An American Boy's Mother." It is a photograph that would have done credit to a professional. The lighting is particularly good and the pose is natural. Apparently the old lady is just taking a moment's rest. "Leap Frog." by Theodore E. Rein, of 3628 La Salle St., Chicago, the second prize photo., is an excellent illustration of a street scene that requires no explanation.

#### Current Comments

Elvin Boydstun: Your "Lena and I" is toned correctly for Solio. John C. Evans: Technically your print is above criticism, but it is defective from a pictorial standpoint. It would do you good to read the last number of The Practical Photographer to which reference is made in this issue. Harry M. Biggin: Your group is praiseworthy. The dry-plate factories buy old negatives when offered by the thousand. A fuzzy image is a photograph that is not in focus.

#### Items of Interest

Items of Interest

One of the largest photographic lenses in existence is that purchased recently for the Cape Astronomical Observatory in South Africa. This giant has an aperture (opening) of about ten inches in diameter. The total weight of the lens with its mounting and cameras is over six thousand pounds, one hundred pounds being the weight of the glasses. This large lens forms microscopically sharp images of the stars throughout a negative fifteen inches square, the exposure being about two hours for each plate.—Photo-American.

Many amateurs are perplexed when their prints sometimes appear lighter in the center than at the edges; these effects are often caused by pouring the developer on to the center of the plate, instead of flooding the whole surface evenly and quickly with the solution. When using rapid action developers it is most essential to cover the whole plate almost simultaneously. To do the take the dish in the left hand, and the measure containing the solution in the right. Then, slightly tilting the dish away from you, run the measure quickly along the edge of the dish, at the same time emptying the solution over the plate.—The Photographic Times.

#### Honorable Mention

A few of the contentants given in the following list owe this coveted distinction to one photograph among a number that have been

WHEELING MY DOUBLE" The Same Boy in Two Positions; done by a Trick of the Camera. Photo by Peter C. Whyte, Carbondale, Pa.

submitted. In these instances we have deemed it advisable to append the name of the photograph. This month the oil of honor includes: E. E. Trumbull, Carrington McCallip (Electricity Building at Night, St. Louis, Exposition), D. A. Beck; Arthur H. Black, Theo. E. Rein (A Vase of Beauties), J. R. Williams, John L. Hopper, H. Ward Lewis, Chas. H. Moore (Diamond Joe Packet), Harold L. Tilton, Howard Mulhall, Chas. G. Voigt, Jr. (Apple-tree in Bloom), and Perry N. Trask,
